c) Embolisation is common and occurs in around 50% cases of HACEK endocarditis.
d) Valvular vegetations are seen in up to 85% of patients

549. Which of the following is least likely to be associated with Infective Endocarditis - *(AI 12)*
a) Small ASD b) Small VSD
c) Mild MR d) Mild MS

gspg Endocarditis culture sampling is done as -
a) 2 cultures 12 hrly *(NEET/DNB pattern)*
b) 1 culture 12 hrly
c) 2 culture 24 hrly
d) 3 culture separated by 1 hr over 24 hour

551. A female of 40 years presenting with intolerance to cold, constipation and hoarseness of voice was found to have cardiomegaly on chest roentgenogram. Which of the following investigations is the best to determine the cause of her cardiomegaly?
a) Coronary angiography *(AIIMS, May 12)*
b) Left ventricular angiography
c) Right ventricular angiography
d) Echocardiography

TUMOUR

552. Gradient in pulmonary artery wedge pressure and left venticular end diastolic pressure is seen in -
a) Aortic regurgitation *(AIIMS June2000)*
b) Constrictive pericarditis
c) Left atrial myxoma
d) Pulmonary thromboembolism

553. True statement about cardiac myxoma is - *(AI99)*
a) Commonest site is left atrium
b) Rarely recurrs after excision
c) Distant metastasis are seen
d) More common in females

554. All of the following are clinical features of myxoma, except- *(AI02)*
a) Fever b) Clubbing
c) Hypertension d) Embolic phenomenon

534) d 535) d 536) d 537) b 538) d 539) a 540)b 541) a 542) a 543) b 544) b 545) a 546) b 547) c
548) a 549) a 550) d 551) d 552) c 553) a,d 554) c

555. All of the following are usual features of left atrial Myxoma, except - *(KAR 95)*
a) Raised ESR
b) Pyrexia
c) Markedly enlarged left atrium
d) Systemic Embolism

556. Commonest benign tumour of heart is - *(TN 95)*
a) Adenoma b) Myxoma
c) Myoma d) Mabdomyosaxoma

557. Atrial myxoma is associated with the following except- *(UPSC06)*
a) Fever
b) Weight loss
c) Systolic murmur at apex
d) Subungual splinter haemorrhage

MJ. & ANGINA

558. Which one of the following is of highest predictive value in the morbidity of coronary heart disease -
a) Lipoprotein A *(ICS 98)*
b) Apolipoprotein B
c) Apolipoprotein A
d) Low density lipoprotein

559. Prinzmetal angina has the following characteristics except- *(JIPMER 95)*
a) Pain at rest
b) ST elevation during the attack
c) NormlaECG without pain
d) Represents transmural ischemia
e) ST depression with pain

560. Temporal profile of detection of the given serum enzyme in acute myocardial infarction is-*(UPSC 97)*
a) CPK, SGOT, LDH b) SGOT, CPK, LDH
c) CPK, LDH, SGOT d) SGOT, LDH, CPK

561. A 50-year old male has had precardial pain for four hours. On examination, his BP is 110/80 mm Hg. pulse is 120 beats /min. and respiratory rate is26/min. His ECG shows marked S-T segment elevation in leads V3-V6 and left ventricualr ectopics. The initial therapuetic modalities in this case would include - *(UPSC 9 7)*
a) Lignocaine and streptokinase
b) Streptokinase and morphine
c) Morphine and doubtamine
d) Lignocaine, streptokinase and morphine

562. Which one of the following is the drug of choice in a patient with acute myocardial infarction having premature ventricualr contractions - *(UPSC 96)*
a) Oraldigoxin b)Procainamide
c) Oral diphenyl-hydantoin d) IV xylocaine

563. Fibrous scar in myocardial infection in well established by- *(Kerala 97)*
a) 6 weeks b) 6 months
c) 6 days d) 30 days

564. The complications of MI are all except - *(AP 97)*
a) Pulmonary embolism
b) Systemic embolism
c) Dissection of aorta
d) Ventricular fibrillation

565. All of the following predispose to IHD except -
a) Smoking b) Alcoholism *(CMC 98)*
c) Obesity d) Sedentary habits
e) Diabetes

566. Drug of choice to relieve pain in myocardial infarction- *(TN 99)*
a) Morphine b)Fortwin
c) Diazepam d) NS AID

567. In acute myocardial infarction the best drug to cause thrombolysis and to start reperfusion-
a) Steptokianase *(JIPMER 2K)*
b) Urokinase
c) Tissue plasminogen activator
d) Anisoylated plasminogen steptonase activator complex

568. TMT is done - *(Burdwan 2 K)*
a) For evaluation of IHD
b) For evaluation of latent CAD
c) For testing maximum working capacity
d) All

569. Duration of pain is angina is - *(Orissa R)*
a) 2-5 mins b) 5-30 mins
c) 30-60 mins d) > 1 hour

570. Drug useful in acute M.I.are all except -*(MAHE 01)*
a) Nifedepine b) Aspirin
c) ACE inhibitors d) Metoprolol

571. The one organism which is responsible for coronary artery disease - *(JIPMER 01)*
a) Chlamydia b) Klebsiella
c) E. coli d) Mycoplasma

572. A 40 year old male is admitted with acute inferior wall myocardial infarction, half an hour later BP is 80/50 mmhg and heart rate is 40/mt with sinus rhythm. The most appropriate step in the manage ment of this patient would be - *(UPSC 01)*
a) Admission of normal saline 300 ml over 15 minutes
b) Immediate insertion of temporary pacemaker
c) Intravenous adminstration of atropine sulpate
d) Intravenous adminstration of isoprenaline 50 m/minute

573. Critical narrowing of coronary blood vessels is -
a) 70% b) 60% *(CUPGEE 99)*
c) 80% d) 90%

574. Hyper triglyceridemia is not caused *by-(UPSC 04)*
a) Diabetes Mellitus b) Obesity
c) Alcohol d) Cigarette smoking

575. The level of LDL cholesterol at which therapy should be initiated in a patient without coronary, artery disease and no risk factors is - *(Karn 04)*
a) 100mg./dl b) 130mg./dl
c) 160 mg./dl d) 190 mg./dl

555)c 556)b 557)c 558)b 559)c,e 560)a 561)b 562)None 563)a 564)c 565)b 566)a 567)c 568)a,c 569) a 570)a 571)a 572)c 573)a 574)d 575) d

576. Patient is having normal CK & CKMB after 2 days of chest pain which of the following is true -
a) Excludes diagnosis of MI *(SGPGI05)*
b) Reperfusion after MI
c) Extracardiac source of pain
d) Cardiac surgery

577. Which one of the following is an absolute contraindication to the use of thrombolytic agent in the setting of an acute anterior wall myocardial infarction - *(UPSC 05)*
a) History of CVA with hemiparesis one month ago
b) Diabetic retinopathy
c) Patient's age more than 70 years
d) Patient is on warfarin for A.F. with INR ration 1:8

578. What is diagnostic of fresh myocardial infarction inECG- *(MAHE05)*
a) QT interval prolongation
b) Pmitrale
c) ST segment elevation
d) ST segment depression

579. Long-term secondary prevention following myocardial infarction is recommended with which one of the following drugs - *(ICS 05)*
a) Antiplatelet drugs
b) Nitrates
c) Amiodarone
d) Calcium channel antagonist

580. Myocardial isoenzyme of CK which is specific for myocardial infarction is - *(SGPGI 05)*
a) CK-BB b) CK-MB
c) CK-MM d) All of the above

581. All the following are indication for Treadmill testing, except - *(J & k 05)*
a) To evaluate unstable angina
b) To evaluate unstable myocardial infarction
c) To assess outcome after coronary revascularization
d) To diagnose and evaluate the treatment of exercise induced arrhythmias

582. The best possible intervention for acute myocardial infarction is - *(AIIMS May 05)*
a) Streptokinase
b) Streptokinase and aspirin
c) Early primary coronary intervention
d) Streptokinase and heparin

583. LDH, / LDH_2 in acute MI is - *(COMED 06)*
a) >1.0 b)> 1.5
c) >2.0 d) > 2.5

584. Acute coronary Syndrome includes all except -
a) STEMI b)NSTEMI *(NIMHANS06)*
c) Stable angina d) Unstable angina

585. Which of the following is common risk factor for coronary heart disease except ? *(Manipal 06)*
a) Family H/O of IHD
b) Decreased homoscystinaemia
c) HDL<40mg/dL
d) Type 1 DM

586. With reference to right ventricular myocardial infarction, consider the following statements -
1. It may occur along with inferior wall myocardial infarction
2. The ECG shows ST segment elevation in right precordial leads.
3. Prognosis in right ventricular infarction is better than the left ventricular myocardial infarction
4. The treatment may include intravenous fluid challenge

Which of the statements given above are correct ?
a) 1,2 and 3 only b) 2,3 and 4 only
c) 1 and4 only d) 1,2,3 and4

587. ST depression and T wave inversion in VI to V6 and aVL leads indicate - *(Delhi PG Feb. 09)*
a) Anterolateral wall AMI b) Posterior wall AMI
c) Inferior AMI d) Lateral wall AMI

588. Which of the following components is not considered in the definition of 'Metabolic Syndrome'? *(Delhi PG*
a) High LDL b) Low HDL*Mar. 09)*
c) Abdominal Obesity d) Hypertension

589. A **30-year old male presents with severe pain chest, breathlessness, hypotension and ECG shows ST elevation in V3, V4, V5 and V6 leads. He will be best treated with:** *(Delhi PG Mar. 09)*
a) Streptokinase b)t-PA
c) Heparin d)PTCA

590. All of the following dietary goals are recommended for patients with high risk of coronary heart disease, Except- *(AI11)*
a) LDL cholesterol < 100 mg/dl
b) Saturated fat < 7% of total calories
c) Salt restriction < 6 gm/day
d) Avoid Alcohol

591. ECG is poor in detecting ischemia in areas supplied by which of the following vessels - *(AI 11)*
a) Left Anterior Descending (LAD)
b) Left Circumflex (LCx)
c) Left Coronary Artery (LC A)
d) Right Coronary Artery (RCA)

592. A 45-year-old man is hospitalised with acute inferior wall myocardial infarction. He develops sinus bradycardia at 40 beats per minute and his blood presure is 100/60 nunHg. Which of the following should be the first line intervention? *(UPSC111)*
a) IV atropine b) IV dopamine
c) IV isoproterenol d) Temporary pacemaker

593. A 56-year-old diabetic male patient who underwent a CABG for triple vessel disease is brought to the emergency with sudden-onset inability to speak since the last two hours. He can understand what is being said to him but cannot speak. His BP is 200/ 110 mmHg. The emergency CT scan of the head is normal. The next step in the management would be-
a) Wait and watch *(UPSC 111)*
b) dminister intravenous tPA
c) Control blood pressure
d) Administer a tablet of baby aspirin

576) a 577) a 578)c 579)a 580)b 581)a 582)c 583)a 584)c 585)b 586)d 587)a 588)a 589)d 590) d 591)b 592)a 593) c

DRUGS

594. A 40-years old male presents with headache and convulsions. His blood pressure is 210/140mm Hg. Fundus examination reveals papilloedema. Which one of the following drug combinations will suitable for this patient - *(UPSC 96)*
a) Diazoxide+Triamterene
b) Nitroprusside + Triamterene
c) Nitroprusside + Furosemide
d) None of the above

595. Angiotensin converting enzyme inhibitors are not used in congestive heart failure resulting from -
a) Mitral stenosis *(DELHI 96)*
b) Aortic regurgitation
c) Alcoholic cardiomyopathy
d) Aortic stenosis

596. Anti hypertensive causing impotence- *(DNB 2001)*
a) ACE b) Propranolol
c) Atenolol d)Nifedipin

597. Non ischaemic chest pain is caused by -*(Kerala 9 7)*
a) Bleomycin b) Vincristinum
c) Cyclophosphamide d) Cisplatinum

598. "Gyanecomastia" is caused by - *(AP 97)*
a) Phenytoin b) Cushing's syndrome
c) Conn's syndrome d) None

MISCELLANEOUS

599. Difference between upper and lower limb blood pressure is usually - *(PGIDec 01)*
a) 5mm b)10mm
c) 20mm d)30mm
e) 35 mm

600. Syphilis causes all except - *(PGIDec 99)*
a) Linear calcification of aorta
b) Aortic aneurysm
c) AR
d) Coronary ostial stenosis

601. During valsalva maneuver, impaired heart rate changes seen in - *(PGI June 98)*
a) Homer's syndrome
b) Autonomic insufficiency
c) Vestibular dysfunction
d) Cephalic ischemia

602. Concentric hypertrophy of left ventricle is seen in-
a) Essential hypertension *(AIIMSFeb97)*
b) Mitral regurgitation
c) Mitral stenosis
d) Hypertrophic cardiomyopathy

603. Most common cause of LVH is - *(PGIDec 97)*
a) MS b)AR
c) Hypertension d) Mitral valve prolapse

604. Dancing carotid is seen in - *(AIMS Dec 98)*
a) Thyrotoxicosis b) Hypothyroidism
c) AVFistuala d) Blow out carotid

605. Differential cyanosis is seen in - *(A196)*
a) ASD b)VSD
c) PDA d) All of the above

606. Clinical finding in AV fistula is one of the following- *(AIIMS Dec 98)*
a) Pericarditis b) Sinus tachycardia
c) Cardiac arryhthmia d) Hypothermia

607. A patient presents with tachycardia, BP<100mm systolic and postural hypotension. Diagnosis is- *(AIMS June 2000)*
a) Vasovagal attack b) Diabetic neuropathy
c) Shy drager syndrome d) Bleeding peptic ulcer

608. Cardiac output measured by thermodilution technique is unreliable in all of the following situations except - *(AI03)*
a) Ventricular septal defect
b) Tricuspid regurgitation
c) Low cardiac output
d) Pulmonary regurgitation

609. Carcinoid syndrome produces valvular disease primarily involving - *(AIMS May 05)*
a) Pulmonary valves b) Tricuspid valves
c) Mitral valve d) Aortic valve

610. Carcinoid syndrome produces valvular disease primarily of the - *(AIMS May 04)*
a) Venous valves b) Tricuspid valve
c) Mitral valve d) Aortic valve

611. In carcinoid syndrome, the part of heart mostly affected is - *(PGI Dec 9 7)*
a) Outflow tract of RV b) Inflow tract of RV
c) Inflow tract of LV d) Outflow tract LV

612. Haemorrhagic infarction is seen in - *(PGIDec 02)*
a) Venous thrombosis b) Thrombosis
c) Septicemia d) Embolism
e) Central venous thrombosis

613. False statement regarding hemodynamic changes occurring during exercise is which of the following- *(AIMS Nov 99)*
a) Venous return is augmented by the pumping action of skeletal muscles
b) The increased adrenergic nerve impulses to the heart as well as an increased concentration of circulating catecholamines help to augment the contractile state of the myocardium
c) Venoconstriction in exercising muscles as well as increased cardiac output leads to marked increase in systemic blood pressure
d) End-diastolic volume increases in the failing heart during exercise

614. Cardiac contractility is inhibited by - *(PGI June 03)*
a) Digitalis use b) Respiratory acidosis
c) Metabolic alkalosis d)$iP0_4$
e) Hypothermia

615. ACE inhibitor induced cough is mediated by-
a) Bradykinin b) Substance-P *(PGIDec 03)*
c) Prostaglandin d) Serotonin
e) Renin

---

594)c 595)d 596)b,c,d 597)a 598)a 599)a 600)None 601)b 602)a 603)c 604)a 605)c 606)b 607)d 608) None or a 609)b 610)b 611)b 612)a,b,d 613)c 614)b,d,e 615)a,b,c

616. Causes of nail bed infarctions -
a) HD.
b) Wegener's granulomatosis
c) Infective endocarditis
d) Surge strauss syndrome
e) PAN

617. The typical movement of mitral valve calcification is -
a) Upwards and downwards b) Couterclock wise
c) Side to Side d) Circular

618. Mycotic aneurysm is an aneurysm infected because of- *(AI06)*
a) Fungal infection
b) Blood-borne infection (intravascular)
c) Infection introduced from outside (extravascular)
d) Both intravascular and extravascular infection

619. A 45-year-old woman underwent a modified radical mastectomy 4 years ago. She was treated for multiple bone metastasis with cyclophosphamide, doxorubicin, and fluorouracil for 6 months. She is complaining of exertion on exercise, swelling of the legs, and swelling around eyes in the morning. On examination, she has bilateral rales in the lungs, Sj, S_2 audible, S_3, S_s gallop present. Her BP is 149/ 117 mmHg, PR is 80/min, and RR is 18/min. What is the most likely cause for her cardiac condition ?
a) Systolic dysfunction CHF *(AIIMS06)*
b) Drug induced cardiac toxicity
c) Metastatic cardiac disease
d) Pneumonia

620. Which of the following statements is true regarding fat embolism - *(AIIMS Nov 06)*
a) Most patients with major trauma involving long bones have urinary fat globules
b) All patients with urinary fat globules develop fat embolism
c) Peak incidence of respiratory insufficiency for pulmonary fat embolism is around day 7 after injury
d) Heparin as an anticoagulant decreases mortality and morbidity in fat embolism syndrome

621. True about fat embolism - *(PGI June 05)*
a) Seen one week after injury
b) Petechiae
c) Bradycardia
d) Fat globule in urine
e) Thrombocytopenia

622. Amyloidosis of heart presents with - *(PGIDec 06)*
a) Arrhythmia b)AV block
c) ted mass/voltage d)AS
e) Hypertrophic cardiomyopathy

623. Left ventricular hypertrophy is caused by all except-
a) MS b)MR *(ARMS May 09)*
c) AS d)AR

624. Cardiovascular complications of HIV infection include all of the following, except - *(ARMSMay 10)*
a) Pericardial effusion b) Cardiac tamponade
c) Cardiomyopathy d) Aortic Aneurysm

625. Most common cause of LVH is - *(NEET/DNB Pattern)*
a) MS b) AR
c) Hypertension d) Mitral valve prolapse

626. A 60 yr old male had a sudden fall in toilet. His BP was 90/50 mm Hg and pulse was 100/min. His relatives reported that his stool was black/dark in colour. Further careful history revealed that he is a known case of hypertension and coronary artery disease and was regularly taking aspirin, atenolol and sorbitrate. The most likely diagnosis is -
a) Gastric ulcer with bleeding . *(ARMS, May 12)*
b) Acute myocardial infarction with cardiogenic shock
c) Acute cerebrovascular accident
d) Pulmonary embolism

627. Pericardiocentesis is done in which intercoastal space - *(NEET/DNB Pattern)*
a) Left 5th intercostals space
b) Left 7th intercostal space
c)Right. 5th. intercostal space
j^lJpp^^^Kitecostal 'space^v^i^l^lgjg

628. Most common ca use of acute arterial occlusion -
a) Pulmonary emboli *(NEET/DNB Pattern)*
b) Atherosclerotic plaque
c) Emboli atrial fibrillation
d) Thrombosis of aneurysm

629. Hemochromatosis induced cardiomyopathy, Investigation of choice is- *(NEET/DNB Pattern)*
a) MRI b) ECG
c) CT scan d) Echocardiography

RESPIRATORY

GENERAL

630. False statement about type I respiratory failure is- *(AI 01)*
a) Decreased $Pa0_2$ b) Decreased $PaC0_2$
c) Normal $PaC0_2$ d) Normal A-a gradient

631. In type - H respiratory failure, there is -
a) Low $p0_2$ and low $pC0_2$ *(ARMS Nov 02)*
b) Low $p0_2$ and high $pC0_2$
c) Normal $p0_2$ and high $pC0_2$
d) Low $p0_2$ and normal $pC0_2$

632. All the following are true about Chronic Obstructive lung disease except - *(AI 94)*
a) Decreased FEV_1
b) Decreased MEFR
c) Increased RV
d) Decreased diffusion capacity

616) b,c 617)a 618)d 619)b 620)a 621)b,d,e 622)a,b,c 623)a 624)d 625)c 626)a 627)a 628)c 629)a
630) d 631)b 632) d

633. True about chronic obstructive pulmonary disease (COPD) - *(PGI Nov 09)*
a) FEV1 < 30 of predicted value
b) FEV1/FVC<0.7
c) *i* Residual volume
d) T Total lung capacity
e) Hypoxemia with hypercapnia

634. Extraparenchymal causes of respiratory failure include (s) - *(PGINov 09)*
a) Cardiac tamponade
b) Cervical spine trauma
c) Pneumothorax
d) Bronchial obstruction
e) Myasthenia gravis

635. Features of restrictive lung disease *\s-(AUMSJune 98)*
a) FEV j/FVC decreases and compliance decreases
b) FEVj/FVC increases and compliance increases
c) FEVj/FVC decreases and compliance increases
d) FEVj/FVC increases and compliance decreases

636. Lung function test in emphysema reveals -
a) Increased vital capacity *(PGI Dec 01)*
b) Decreased diffusion capacity for carbon monoxide
c) Increased diffusion capacity for carbon monoxide
d) Decreased total lung capacity
e) FEVj decreased

637. A 28 year old woman having limited cutaneous scleroderma for the last 10 years complains of shortness of breath for last one month. Her pulmonary function tests (PFT) are as follow -

PFT	Observed	Predicted
FVC	2.63	2.82
FEV1	88%	80%
DLCO	5 *26*	16.3

What is most likely diagnosis in this case *?(AI 06)*
a) Interstitial lung disease
b) Pulmonary artery hypertension
c) Congestive heart failure
d) Bronchiectasis

638. A patient with limited systemic sclerosis for the past 10 years complaints of shortness of breath for the past one year. His pulmonary function tests are as follows - *(AIIMS Nov 09)*

PFT	OBSERVED	PREDICTED
FVC	2.63	2.82
FEV1	88%	80%
DLCO	*52*	16.3

Which among the following is the probable diagnosis-
a) Interstitial lung disease
b) Pulmonary artery hypertension
c) Pnuemothorax
d) Diaphragmatic weakness

639. A 29 yr old unmarried female presents with dyspnea. Her chest X-ray is normal, FVC is 92%, FEV1/ FVC is 89% and DLCO is 59% of normal. On exercise her oxygen saturation drops from 92% to 86%. What is the likely diagnosis *l(Aiims Nov 08)*
a) Alveolar hypoventilation
b) Primary pulmonary hypertension
c) Interstitial lung disease
d) Anxiety

640. A 26 year old young unmarried female presents with progressively increasing breathlessness since 3 months. There is no history of cough and fever. Her FVC=95; FEV1/FVC-88. She is most likely suffering from? *(AI10)*
a) Hypoventilation b)PPH
c) Mitral stenosis d) Anxiety

641. The abnormal preoperative pulmonary function test in a patient with severe kyphoscoliosis includes -*(AI 05)*
a) Increased RV / TLC b) Reduced FEVj/FVC.
c) Reduced FEV 25-75 d) Increased FRC

642. All pulmonary function abnormalities are seen in COPD,Except- *(AIIMS June 97)*
a) Decreased FEVj
b) Decreased maximum expiratory flow rate
c) Increased residual volume
d) Decreased diffusing capacity

643. FEVj/FVC is reduced in case of - *(AIIMSMay 95)*
a) Pleural effusion b) Lung fibrosis
c) Asthma d) All of the above

644. Pulmonary function changes in acute bronchial asthma in untreated patient - *(PGI June 03)*
a) Ted peak expiratory flow b) Ted TLC
c) led FVC d)tedRV
e) Ted FEV

645. True about interstitial fibrosis - *(PGI June 99)*
a) FVCi b) FEVj/FVC normal or increased
c) FRC normal d)FEV_I/FVC'i

646. In an emphysematous patient with bullous leison which is the best investigation to measure lung volumes ? *(AIMS Nov 08)*
a) Body plethysmography
b) Helium dilution
c) Trans diaphragmatic pressure
d) DL_{ro}

647. True about interstitial lung disease -*(PGI June 07)*
a) Decreased FVC
b) Decreased FEVj
c) Decreased diffusion capacity
d) Presence of end inspiratory crackles

648. All are decreased in infiltrative lung disease, Except-
a) Vital capacity *(AIMSFeb 97)*
b) Alveolar arterial difference in $Pa0_2$
c) Total lung capacity
d) Lung compliance

633) a,b,d,e 634)b,c,d,e 635) d 636)b 637)b 638)b 639)b 640)b 641) a 642) d 643) c 644) c,d 645)a,b 646) a 647) All 648) b

649. A patient presents with decreased vital capacity and total lung volume. What is the most probable diagnosis ? *(AI07)*
a) Bronchiectasis b) Sarcoidosis
c) Cystic fibrosis d) Asthma

650. Investigation of choice for interstitial disease is >
a) Chest X-ray b) HRCT *(AIPGMEE08)*
c) Gallium-67 DTPA scan d)MRI

651. A 40 yr female progressive dyspnoea from 1 yr. She also has b/I bibasilar end inspiratpory crepitation. True statement are: *(PGI09)*
a) May be assocated with connective tissue disease
b) Residual volume Ted
c) T Total lung capacity (TLC)
d) HRCT is useful diagontic test
e) FEVjl/FVC ratio Ted

652. Bronchial breathing seen in all except-fPGT*Nov 09)*
a) Lobar pneumonia b) Chronic bronchitis
c) Consolidation d) Bronchopneumonia
e) Cavitary lesion

653. Decreased maximum mid expiratory flow rate indicate obstruction in - *(AlIMSMay 95)*
a) Small airways b) Large airways
c) Trachea d) Trachea and bronchi both

654. Decreased maximun mid-expiratory flow rate indicates obstruction in - *(AI 94)*
a) Small airways b) Trachea
c) Large airways d) Trachea & Bronchi both

655. Thickening of pulmonary memb. is seen in -
a) Asthma b) Emphysema *(PGIJune 98)*
c) Bronchitis d) Skeletal defect

656. The diffusion capacity of lung (DL_{co}) is decreased in all of the following conditions except - *(AI 03)*
a) Interstitial lung disease
b) Goodpasture's syndrome
c) Emphysema
d) Primary pulmonary hypertension

657. Carbon monoxide diffusion capacity decreases in all, Except - *(AIIMSFeb 97)*
a) Emphysema
b) Primary pulmonary hypertension
c) Alveolar haemorrhage
d) Infiltrative lung disease

658. Hypoxemia seen in - *(PGI June 02)*
a) Hypoventilation b) Decreased Fio_2
c) Myasthenia gravis d) Pulmonary emboli
e) Diazepam overdose

659. Central cyanosis is not seen with A/E -*(PGIDec 98)*
a) Below 5 gm/100ml reduced haemoglobin
b) Pulmonary aspergillosis
c) Status asthmaticus
d) Congenital pulmonary stenosis

660. Static lung compliance is decreased in- *(PGI June 2K)*
a) Asthma b) Radiation fibrosis
c) Scoliosis d) Emphysema
e) Fibrosing Alveolitis

661. One of the following condition is not associated with clubbing - *(AIIMS Dec 98)*
a) Primary biliary cirrhosis
b) Chronic bronchitis
c) Cryptogenic fibrosing alveolitis
d) Central bronchiectasis

662. The blood gas parameters: pH 7.58, $pC0_2$ 23 mm Hg $p0_2$ 300 mm Hg and oxygen saturation 60% are most consistent with - *(AI 03)*
a) Carbon monoxide poisoning
b) Ventilatory malfunction
c) Voluntary hyperventilation
d) Methyl alcohol poisoning

663. A patient develops acute respiratory distress, stridor, hyperinflation on one side of chest with decreased breath sound on that side. Most likely cause is - *(AIIMS June 2000)*
a) Asthma
b) Aspiration pneumonia
c) Foreign body aspiration
d) Pleural effusion

664. Blood gas measurements of a patient shows the foOowilng values pH 7.2, p $C0_2$ 80 mmHg,$p0_2$ 46 mmHg. Which of the following could be the most probable diagnosis - *(AIIMS Nov 2000)*
a) Acute asthma b) Acute exacerbation of COPD
c) ARDS d) Severe pneumonia

665. Paradoxical respiration is seen in - *(Kerala 95)*
a) Multiple fracture ribs b) Diaphragmatic palsy
c) Bulbar polio d) Severe asthma

666. Which is the latest antiviral drug for bronchitis due to RSV- *(TN95)*
a) Ribavarin b) Acyclovir
c) Amantadine d) Idoxuridine

667. Hemoglobin does not bind with - *(AMU 95)*
a) Oxygen b) Carbon dioxide
c) Carbon monoxide d) HCN

668. Chronic fibrosing mediastinitis is seen in- *(JIPMER95)*
a) Tuberculosis b)Histoplasmosis
c) Plague d) Sarcoidosis

669. In haemoptysis blood usually comes from- *(Kerala 95)*
a) Bronchial veins b) Pulmonary veins
c) Bronchial arteries d) Pulmonary arteries

670. Commonest site oflungabcess is- *(Kerala 95)*
a) Post segment of right upper lobe
b) Lingula
c) Post segment of left lower lobe
d) Post segment of right lower lobe

671. The typical feature of interstitial lung disease is- *(Delhi 96)*
a) End inspiratory ralesb) Expiratory rales
c) Inspiratory rhonchi d) Expiratory rhonchi

672. Hemoglobin does not blind with- *(AMU95)*
a) Oxygen b) Carbon dioxide
c) Carbon monoxide d) HCN

649)b 650)b 651)a,d,e 652)b 653)a 654)a 655)a 656)b 657)c 658)A11 659)c,d 660)b,e 661)b 662)b 663) c 664) b 665) b 666) a 667) d 668)a,b,d 669) c 670) a 671) a 672) d

673. In bronchiectasis the following are seen except-
a) Normal chest X-ray *(Kerala 97)*
b) Chest X-ray with cystic cavities and tramline appearance
c) Pleural effusion
d) Clubbing

674. Blood gas analysis in type I respiratory failure shows- *(ROHTAK98)*
a) $1pC0_2$ $ip0_2$ b) (n)pCO $lp0_2$
c) T $pC0_2$ T $p0_2$ d) 1 $pC0_2$ *t* $p0_2$
e) All are the false

675. All is true about respiration except- *(ROHTAK 98)*
a) Dead space is 150 ml.
b) $pC0_2$ decreased in acute bronchial asthma
c) $pC0_2$ increased in acute bomchial asthma
d) None

676. All the following are features of alveolitis (interstitial lung disease) except- *(UPSC 2K)*
a) Exertional dyspnoea
b) Early productive cough
c) Digital clubbing
d) Coarse crepitations during inspiration

677. Most common cause of hypoxemia is- *(Kerala 2K)*
a) Lowered inspired $P0_2$
b) Hypoventilation
c) Intracardiac shunting
d) Ventialtion perfusion mismatch
e) Decreased diffusing capacity

678. Silent chest is seen in- *(TN2001)*
a) Very severe asthma b) Chronic bronchitis
c) Emphysema d) Bronchiectasis

679. A 35 year old male presents with fever. He has lost 10 kgs. in 1 year. Chest X-ray shows bilateral basal infiltrates.He is most likely suffering from -
a) P. Carini pneumonia *(J &K 2001)*
b) Disseminated candidiasis
c) Bilateral bronchiectasis
d) Disseminated tuberculosis

680. Obstructive sleep apnoea *syndrome-(NIMHANS 01)*
a) Associated with sudden cardiac death
b) Road traffic accidents
c) Bulimia nervosa
d) Anorexia nervosa

681. In chronic obstructive pulmonary disease all are seen EXCEPT - *(Jipmer 03)*
a) LowFEVj
b) Increased FEVj / VC ratio
c) Smoking strongly associated
d) Partially reversible by broncho dilator therapy

682. Cyanosis cannot occur in severe anaemia because -
a) Anaemic blood has a higher 0_2 carrying capacity per gram of Hb *(SGPGI 05)*
b) It requires a critical concentration of reduced Hb in blood
c) Patient improves his alveolar oxygen as a compensation for anaemia
d) There is an increased blood flow through the skin

683. The key factor in the transport of carbon dioxide as bicarbonate is - *(SGPGI 05)*
a) The high solubility of $C0_2$ in H_20
b) The presence of Hb in blood
c) The presence of carbonic anhydrase in the erythrocytes
d) The acid nature of carbon dioxide and the alkaline nature of bicarbonate

684. One of the following condition is not associated with clubbing- *(MAHE 05)*
a) Primary biliary cirrhosis
b) Chronic bronchitis
c) Cryptogenic fibrosing alveolitis
d) Central bronchiectasis

685. Sequestration lung is best diagnosed *by-(MAHE 05)*
a) C.T. scan b)M.R.I.
c) Barium swallow d) Angiography

686. Which one of the following is not a feature of type 2 respiratory failure ? *(UPSC 06)*
a) $pCO_2$38mmHgand$pO_2$50mmHG
b) p $C0_2$ 68 mm Hg and $p0_2$ 50 mm Hg
c) Papilloedema
d) Asterixis

687. Pulmonary tuberculosis is more common in following associated diseases except -*(COMED 06)*
a) Acquired Immune Deficiencies syndrome
b) Diabetes
c) Chronic renal failure
d) Mitral stenosis

688. White lung is due to - *(COMED 06)*
a) Congential syphilis b) Toxoplasmosis
c) Congential tuberculosis d) Asbestosis

689. "Creola Bodies" in sputum are pathognomonic of -
a) Bronchial Asthma *(COMED 06)*
b) Chronic Bronchitis
c) Bronchogenic Carcinoma
d) Pulmonary Tuberculosis

690. Mediastinoscope can be visualize all of the following lymphnode except ? *(Manipal 06)*
a) Right paratracheal lymphnode
b) Aorto pulmonary window lymphnode
c) Anterior tracheal
d) Subcarinal

691. Loeffler's syndrome is characterized by- *(UPSC 07)*
a) Transient, migratory pulmonary infiltrations
b) Fibrosis in the pulmonary apices
c) Fibrosis in the base of one or both lungs
d) Miliary mottling

692. Cavitating pulmonary lesions can be seen in the following except - *(UPSC 0 7)*
a) Sarcoidoses b) Tuberculosis
c) Carcinoma of lung d) Histoplasmosis

693. Which one of the following is not likely to be associated with pulmonary fibrosis ? *(UPSC 0 7)*
a) Coalminers'lung
b) Primary sclerosis cholangitis
c) Primary biliary cirrhosis
d) Ankylosing spondylitis

673) c 674) b 675) c 676) b 677) d 678) a 679) d 680) a 681)b 682) b 683) c 684) b 685) d 686) a
687) d 688) d 689) a 690) b 691) a 692) None >a 693) b

694. Peripheral eosinophilia is not a characteristic feature of - *(UPSC 07)*
a) Hypersensitivity pneumonitis
b) Allergic aspergillosis
c) Tropical eosinophilia
d) Loeffler's syndrome

695. Which of the following diagnostic techniques is most specific for pulmonary embolism - *(Corned 07)*
a) Pulmonary angiography
b) Ventilation lung scanning
c) Perfusion lung scanning
d) Arterial blood gas analysis

696. The interstitial lung disease (ILD) showing granulomas on lung biopsy is - *(Corned 08)*
a) Usual interstitial pneumonitis
b) Sarcoidosis
c) Diffuse alveolar damage
d) Desquamative interstitial pneumonia

697. In an asthmatic patient which of the following pulmonary functions would show the greater improvement on inhaling a bronchodilator -
a) Tidal volume b)FEVl *(Corned 08)*
c) $FEF_{25\%\text{-}75\%}$ d)FVC

698. A ventilator pressure relief valve stuck in closed position can result in - *(Corned 08)*
a) Barotrauma b) Hypoventilation
c) Hypoxia d) Hyperventilation

699. Sudden onset of cough followed by increasing dyspnoea is characteristic of - *(Delhi PG Feb. 09)*
a) Pleural effusion b) Lobar pneumonia
c) Myocardial infarct d) Pneumothorax

700. Stony dull note on percussion is characteristic of- *(Delhi PG Feb. 09)*
a) Pleural effusion b) Consolidation
c) Pleurisy d) Tuberculosis cavity

701. FEVj/FEVC ratio is decreased in all, except: *(Delhi PG Feb. 09)*
a) Bronchiectasis b) Emphysema
c) Chronic bronchitis d) Tuberculosis

702. Pseudobronchiectasis is seen in- *(Delhi PG Feb. 09)*
a) Lung abscess b) Atelectasis
c) Bronchopneumonia d) Emphysema

703. The most likely cause of bihilar lymphadenopathy is- *(Delhi PG Feb. 09)*
a) Histoplasmosis b) Tuberculosis
c) Sarcoidosis d) Aspergillosis

704. All of the following are features of alveolitis (interstitial lung disease), except -
a) Exertional dyspnoea *(Delhi PG Feb. 09)*
b) Early productive cough
c) Digital clubbing
d) Coarse crepitations during inspiration

705. Shifting dullness is the characteristic sign of:
a) Hydropneumothorax *(Delhi PG Mar. 09)*
b) Pneumothorax
c) Consolidation
d) Collapse

706. Reduced FEV1, Reduced FVC and FEV1/FVC ratio of 0.8 is consistent with - *(Delhi PG Mar 09)*
a) Bronchial Asthma
b) Hypersensitivity penumonitis
c) Sarcoidosis
d) Polyarteritis nodosa

707. Profuse expectoration of two months durations and clubbing may be seen - *(Delhi PG Mar 09)*
a) Sarcoidosis
b) Polyarteritis nodosa
c) Pulmonary artery hypertension
d) Allergic bronchopulmonary aspergillosis

708. The most common cause of Bronchopulmonary aspergillosis is - *(COMED 09)*
a) Aspergillus fumigatus b) Aspergillus clavatus
c) Aspergillus flavus d) Aspergillus niger

709. "Shrinking lung" is a feature of - *(COMED 09)*
a) Rheumatoid arthritis
b) Systemic lupus erythematosus
c) Systemic sclerosis
d) Polymyositis

710. A 62-year-old patient has been diagnosed with a restrictive pulmonary disease. Which of his following lung measurements is likely to be normal-
a) FEV_1 b)FVC *(COMED 09)*
c) FEV_1/FVC d)FRC

711. True about pulmonary sarcoidosis - *(PGIMay 10)*
a) Schauman & asteroid bodies are athognomic finding
b) CD4/CD8<2.5inBAL
c) Non caseating granuloma
d) Intravascular granuloma
e) Perihilar & peribronchial granuloma

712. Cavitatory lesions in lung are seen in - *(AI11)*
a) Primary pulmonary Tuberculosis
b) Staphylococcal pneumonia
c) Preumoconiosis
d) Interstitial Lung disease

713. Pneumothorax - *(NEET/DNB Pattern)*
a) Trachea shifted to opposite side b) Dull
c) ↑ breath sound d) ↑TVF

ARDS

714. Acute lung injury is caused by all of the following except- *(AIIMSMay 02)*
a) Aspiration
b) Toxic gas inhalation
c) Cardiopulmonary bypass with heart lung machine.
d) Lung contusion.

715. ARDS is associated with - *(PGIDec 04)*
a) Acute pancreatitis
b) Trauma
c) Severe Falciparum malaria

716. All are seen in ARDS except - *(AIIMSMay 95)*
a) Pulmonary edema b) Hypoxia
c) Hypercapnia d) Stiff lung

694) a 695) a 696) b 697) b 698) a 699) b 700) a 701) d 702) b 703) c 704) b 705) a 706) a 707) d
708)a 709)b 710)c 711)c,d,e 712)b 713)a 714)None 715)a,b,c 716)c

717. Acute Lung injury/ARDS, characterized by -
a) Alveolar infiltrates *(PGI Dec 04)*
b) Hypoxemia
c) Pulmonary shunting
d) $Pa0_2/FI0_2$< 200mm of Hg
e) Tachycardia

718. Which of the following is *not* seen in ARDS - *(AI96)*
a) Pulmoanry edema b) Hypoxemia
c) Stiff lung d) Hypercapnia

719. In ARDS, not true is - *(PGI June 99)*
a) Increased pulmonary compliance
b) Increased pulmonary artery pressure
c) Increased left artrial artery pressure
d) Severe hypoxemia

720. Acute severe lung injury is characterised by -
a) Hypotension *(PG1 June 03)*
b) Shunting
c) Pulmonary vasodilatation
d) Cardiac tamponade
e) Cardiac irregularities

721. Feature of shock lung is - *(AIIMS Nov 07)*
a) Diffuse alveolar damage
b) Usual interstitial pneumonitis
c) Organizing pneumonia
d) Bronchilolitis

722. The point which distingushes ARDS from cardiogenic pulmonary edema is - *(Delhi 96)*
a) Normal $P0_2$
b) Normal pulmonary arterial wedge pressure
c) Normal arterial - alveolar gradient
d) Normal $PC0_2$

723. Which is not seen in ARDS - *(UP 96)*
a) Low protein edema
b) Low Pulmonary artery wedge pressure
c) Normal pulmonary artery wedge pressure
d) High pulmonary artery wedge pressure

724. Which is not a cause for ARDS- *(Kerala 97)*
a) Nitrofurantoin
b) CCF
c) Chlorine gas inhalation
d) Amniotic fluid aspiration

725. In ARDS all are seen EXCEPT - **(***Jipmer 03)*
a) Dilated bronchioles b) Edema
c) Fibrosis d) Alveolar damage

726. Which one of the following distinguishes ARDS (acute/adult respiratory distress syndrome) from cardiogenic pulmonary oedema ? *(UPSC-109)*
a) Normal Pao_2
b) Normal pulmonary arterial pressure
c) Normal arterial-alveolar gradient
d) Normal $Paco_2$

727. Which of the following is *not* seen in ARDS -
a) Pulmoanry edema *(NEET/DNB Pattern)*
z b) Hypoxemia V- (4 li
c) Stiff lung ;
£ d) Hypercapnia ~ -fLv pgfc . ft p

PNEUMONIA

728. All are features of primary tuberculosis; except- *(AIIMS June 98)*
a) Pleural effusion b) Consolidation
c) Pulmonary fibrosis d) Lymphadenopathy

729. True regarding presentation of Primary T.B. is -
a) B/L pleural effusion with negative tuberculin test
b) U/L hilar lymphadenopathy
c) Sustained chronic pyrexia
d) B/L pleural effusion with positive tuberculin test

730. Primary Pulmonary T.B. true about - *(PGI June 04)*
a) Cavitary lesion b) Pleural effusion
c) Fibrocaseous lesion d) Phlyctenular keratitis

731. Cavitatory lesions in lung are seen in - *(AI 10)*
a) Primary pulmonary tuberculosis
b) Staphylococcal pneumonia
c) Pneumoconiosis
d) Interstitial lung disease

732. False-negative tuberculin test is seen in all except-
a) After 4-6 weeks of measles attack *(AI 96)*
b) Immunodeficiency state
c) Miliary tuberculosis
d) Atypical mycobacterial infection

733. True about miliary tuberculosis - *(PGI June 05)*
a) Occurs following primary reactivation
b) Occurs following secondary reactivation
c) Both primary and secondary reactivation
d) Skin test always +ve
e) Commonly affects liver, kidney and spleen

734. Investigations in a clinically suspected case of tuberculosis - *(PGI June 07)*
a) Mantoux (in children) b) Sputum AFB
c) PCR d) Bactec

735. A man presents with fever, wt loss and cough: Mantoux reads an induration of 17 x 19 mm, Sputum cytology is negative for AFB. Most likely diagnosis is- *(AI01)*
a) Pulm tuberculosis b) Fungal infection
c) Viral infection d) Pneumonia

736. A 25-year-old man presented with fever and cough for two months. CT chest showed bilateral upper lobe fibrosis and mediastinal enlarged necrotic nodes with peripheral rim enhancement What is the most likely diagnosis - *(AIIMSMay 04)*
a) Sarcoidosis b) Tuberculosis
c) Lymphoma d) Silicosis

737. A 25 year old man presented with fever, cough, expectoration and breathlessness of 2 months duration. Contrast enhanced computed tomography of the chest showed bilateral upper lobe fibrotic lesions and mediastinum had enlarged necrotic nodes with peripheral rim enhancement Which one of the following is the most probable diagnosis-^ *03)*
a) Sarcoidosis b) Tuberculosis
c) Lymphoma d) Silicosis

717)All 718)d 719) a,c 720)b 721)a 722)b 723)a,d 724)a 725)a 726)b 727)d 728)None 729)b 730)b,c,d 731)b 732) d 733)a,b,c 734) All 735) a 736) b 737) b

738. Which of the following true about resistant - TB -
a) Sputum smear is positive after 5 month
b) Culture is positive after 3 months *(PGIDec 05)*
c) 3 .mantoux positive 10 mm.
d) Clinical deterioration
e) Active disease in chest X-ray

739. Diagnostic criteria for allergic bronchopulmonary aspergillosis - *(PGI June 04)*
a) Asthma b) Eosinophillia
c) Bilateral chest infiltrates d)TedlgG
e) Bronchiectasis

740. All the following are true *about* bronchopulmonary aspergillosis except - *(AI 95)*
a) Central bronchiectasisb) Pleural effusion
c) Asthma d) Eosinophilia

741. Diagnostic features of allergic bronchopulmonary aspergillosis (ABPA) include all of the following except -
a) Changing pulmonary infiltrates
b) Peripheral eosinophilia
c) Serum precipitins against Aspergillus fumigants
d) Occurrence in patients with old cavitary lesions

742. Which is not true about aspergillosis -
a) Aspergillus niger is the commonest cause of fungal otitis externa *(AIIMS May 95)*
b) It is highly contagious
c) Aspergilloma is common in preexisting TB, or cystic disease
d) Aspergillus fumigatus is cause of bronchus aspergillosis

743. A 40 year old man presented with repeated episodes of bronchospasm and hemoptysis. Chest X - ray revealed perihilar bronchiectasis. The most likely diagnosis is - *(AI 02)*
a) Sarcoidosis
b) Idiopathic pulmonary fiborsis
c) Extrinsic allergic alveolitis
d) Bronchopulmonary aspergillosis

744. All the following diseases are associated with peripheral blood eosinophilia *except-(AHMSNov 02)*
a) Allergic bronchopulmonary aspergillosis (ABPA)
b) Lofifler's syndrome
c) Pulmonary eosinophilic granuloma
d) Churg strauss syndrome

745. Pulmonary eosinophilic pneumonia associated with-
a) Loeffler syndrome *(PGINov 09)*
b) Cystic fibrosis
c) Churg strauss syndrome
d) Hypersensitivity pneumonitis
e) Allergic bronchopulmonary aspergillosis (ABPA)

746. Allergic bronchopulmonary aspergillosis diagnotic criteria are - *(PGIDec 05)*
a) Peripheral eosinophilia >0.1 x 10^9
b) Central lower lobe bronchiectasis
c) tlgG
d) Detection of Aspergillus in sputum
e) Asthma is always present

747. True about bronchopulmonary aspergillosis -
a) Eosinophil count > 1 x 10^9 / ml *(PGI Dec 04)*
b) Commonly associated with bronchial asthma
c) Sputum positive to- aspergillus antigen
d) TedlgG
e) Lower lobe predominance

748. 40 year old patient with history of prolonged exposure to Aspergillus presents with repeated episodes of breathlessness. Chest X-ray shows diffuse pulmonary infiltrates. Skin hypersensitivity test is positive for Aspergillus antigen Peripheral blood picture shows normal eosinophil count and serum IgE levels are normal. The most likely diagnosis is-
a) Allergic bronchial asthma
b) Allergic Bronchopulmonary aspergillosis (ABPA)
c) Extrinsic allergic alveolitis
d) Invasive pulmonary aspergillosis

749. The most common causative organism for lobar pneumonia is - *(AIIMSNov 04)*
a) Staphylococcus aureus
b) Streptococcus pyogenes
c) Streptococcus pheumoniae
d) Haemophilus influenzae

750. All of the following features are seen in viral pneumonia except - *(AI 05)*
a) Presence of interstitial inflammation
b) Predominance of alveolar exudates
c) Bronchiolitis
d) Multinucleate giant cells in the bronchiolar wall

751. Predisposing factor for pneumococal pneumonia -
a) CRF b) Lymphoma *(PGI June 01)*
c) Old age d) Thalassemia
e) Cystic fibrosis

752. Nosocomial pneumonia is most commonly caused by- *(4198)*
a) Gram-ve bacilli b) Gram + ve bacilli
c) Gram - ve cocci d) Mycoplasma

753. Complications of lobar pneumonia do not include -
a) Lung abscess *(AIIMS May 05)*
b) Amyloidosis
c) Suppurative arthritis
d) Infective endocarditis

754. Fever persisting even after treatment of pneumonia likely diagnosis is - *(AIIMS June 97)*
a) Empyema b) Fungal lesion
c) Hydrothorax d) All of the above

755. Most common cause of empyema is -*(AIIMSDec 97)*
a) Bronchopleural fistula b) Tubercular pneumonia
c) Bacterial pneumonia d) Pleurisy

756. Devi, a 28 year female, has diarohea, confusion, high grade fever with bilateral pneumonitis.The diagnosis is - *(AI 2000)*
a) Legionella
b) Neisseria meningitidis
c) Streptoccocos pneumoniae
d) H. influenzae

738) a,b,d 739)All 740) b 741) d 742) a 743) d 744) c 745)a,c,e 746) b,d 747)b,c,d 748) c 749) c 750) b 751)a,b,c 752) a 753) b 754) a 755) c 756) a

757. A 30 yr male has pneumonia & loose stool within 5 days of admission in a hospital. Treatment consist of- *(PGI June 09)*
a) Vancomycin b) Ciprofloxacin
c) Azithromycin d)Gentamycin
e) Tetracycline

758. True about Legionella penumonia include -
a) Occurs in epidemics *(PGI June 02)*
b) Treated with penicillin
c) Associated with splenomegaly
d) Diagnosed from sputum
e) More common in children

759. Which is not true about legionaire pneumonia -
a) Seen mainly in immunocompromised person
b) Erythromycin is drug of choice *(AIIMS May 95)*
c) Common in children and adult
d) Smoking and alcohol are risk factor

760. Characteristic histopathological feature of penumocystis carini pneumonia - *(PGIDec 2000)*
a) Interstitial pneumonitis
b) Increased eosinophills
c) Foamy vacuolated exudates
d) Mononuclear cell in bronchoalveolar lavage
e) Neutrophil infiltration

761. Pneumocystis carini pneumonia is diagnosed by -
a) Interstitial penumonia *(PGIDec 98)*
b) Eosinophils in septa
c) Alveolar type I cell damaged with eosinophils
d) All of the above

762. All of the following statements about Pneumocystis Jiroveci are true except - *(AI08)*
a) Usually associated with CMV infection
b) May be associated with Pneumatocele
c) Usually diagnosed by sputum examination
d) Causes disease only in the immunocompromised host

763. All the following are used in the treatment of pneumocystis carinii except - *(AI 94)*
a) Pentamidine b) Dapsone
c) Cotrimoxazole d) Fluoroquinolones

764. Pneumocystis carini pneumonia prophylaxis is given in - *(PGI Dec 03)*
a) If CD_4 count < 200ml
b) Tuberculosis
c) If the viral load is 25,000 copies/ml
e) Oral candidiasis

765. Treatment of choice in Chlamydia pneumoniae is- *(AIIMS Nov 93)*
a) Streptomycin b) Erythromycin
c) Cephalosporins d) Cotrimoxazole

766. TVeatment of chlamydia pneumonia \s-*(AUMS Sep 96)*
a) Erythromycin b) Ceftriaxone
c) Penicillin d) Sulphonamide

767. In mycoplasma pneumonia, following are seen except - *(PGI Dec 9 7)*
a) Diffuse infiltration of lungs
b) Cannot be cultured routinely
c) Best treatment by cefotaxime
d) Serology is useful in diagnosis

768. Drug of choice for Mycoplasma pneumoniae is- *(AIIMS May 94)*
a) Penicillin b) Tetracycline
c) Amphotericin B d) Cotrimoxazole

769. Drug of choice for Mycoplasma pneumoniae is -
a) Penicillin b) Tetracycline *(AIIMS Dec 94)*
c) Cefiuoxime d) Erythromycin

770. Features seen in Bronchiolitis obliterans with organizing Pneumonia include - *(PGIDec 01)*
a) Polypoid plugs in bronchioles
b) Ulceration and exudation of epithelium into the lumen
c) Exudation of proteinaceous material in terminal airways
d) Broncho constriction
e) Response to steroids

771. All the following are features of Tropical Pulmonary Eosinophilia except - *(AI 94)*
a) Eosinophilia > 3000/mm^3
b) Microfilaria in blood
c) Paroxysmal cough and wheezing
d) Bilateral chest mottling and increased broncho-vascular markings

772. Commonest sign of aspiration pneumonitis is -
a) Cyanosis b) Tachypnoea *(AIIMS Dec 94)*
c) Crepitations d) Rhonchi

773. Hemolysis is caused in which pneumonia -
a) Haemophilous b) Klebsiella *(AIIMSMay 93)*
c) Pseudomonas d) Streptococcus

774. Primary atypical pneumonia is caused by -
a) Mycoplasma *(Kerala 95)*
b) Mycobacterium kansasli
c) Photochromogens
d) Pneumocystis carinii

775. Aperson who has high fever, tachycardia, hemoptysis and a lobar consolidation on CXR has - *(IN95)*
a) Bronchopneumonia b) Lobar pnuemonia
c) Pulmonary edema d) Pulmonary infarction

776. All of the followimg statements are NOT true of Klebsiella pneumonia - *(Karanat 96)*
a) Upper lobe involvement
b) Bulging fissure sign
c) Ampicillin is drug of choice
d) It is otherwise known as Friedlander's pneumonia

777. All of the following organisms cuase interstitial pneumonia except - *(ICS 98)*
a) Pneumocystis carinii
b) Mycoplasma pneumoniae
c) Legionella pneumophilia
d) Haemophilus influenzae

757)b,c,e 758) a,d 759) b,c 760)a,c,d 761) a 762) a 763) d 764) a,e 765) b 766) a 767) c 768) b 769) d
770) a,c,e 771)b 772) b 773) d 774) a 775) b 776) c 777) d

778. Virus causing pneumonia are all except- *(JIPMER 95)*
a) Cytomegalo virus b) Mumps
c) Herpes d) Measles

779. Common presenting symptom of pneumocystis carini p neumonia is - *(COMEDK 05)*
a) Cavity on X-ray b) Haemoptysis
c) Breathlessness d) Purulent sputum

780. Broncho penumonia due to measles occurs due to- *(NIMHANS 05)*
a) Sinusitis b) Immunomodulation
c) Bronchial obstruction d) Aspiration

781. Cryptogenic organising pneumonia is characterised by all of the following except - *(KARNATAKA PGMEE06)*
a) Migratory pulmonary opacities
b) Obstructive pattern of pulmonary function
c) Arterial hypoxemia
d) Good response to corticosteroids

782. The single most useful clinical sign of severity of pneumonia in a person without underlying lung disease is - *(Corned 08)*
a) Temp more than 38.5°C
b) Heart rate more than 100/min
c) Systolic BP less than 90 mm Hg
d) Respiratory rate less than 30/min

783. Pneumonia alba is due to - *(Corned 08)*
a) Klebsiella b) Streptococci
c) Treponema pallidum d) Staphylococci

784. Broncho-pneumonia due to measles occurs due to- *(DelhiPGFeb. 09)*
a) Sinusitis b)Immunomodulation
c) Bronchial obstruction d) Aspiration

785. 'CURB-65' includes - *(Delhi PG Mar. 09)*
a) $Pa0_2$ less than 65 mm b) Coagulopathy
c) Severe Azotemia d) Base deficit (acidosis)

786. The following drugs can cause eosinophilic pneumonia except - *(UPSC-109)*
a) Nitrofurantoin
b) Amiodarone
c) Sulfonamides
d) Non-steroidal anti-inflammatory drugs (NSAIDs)

787. The drug of choice for the treatment of Pneumocystis jiroveci (Pneumocystis carinii) pneumonia is - *(COMED 09)*
a) Lamivudine b) Cotrimoxazole (TMP-SMX)
c) Doxycycline d) Itraconazole

788. Hypersensitivity pneumonitis is/are caused by -
a) Coal worker's pneumoconiosis *(PGINov. 10)*
b) Bagassosis
c) Silicosis
d) Sarcoidosis
e) Asbestosis

789. An old man presents to hospital an dis dianosed with pneumonia. His TLC is 20000/cu.mm & Cri teria for hospital admission are - *(PGINov. 10)*
a) Age 70 years b) Blood urea 56 mg/dl
c) SBP102 mmHg d) PC02 48
e) pH is 7.2

790. Characteristic pathological feature of pneumococcal pneumonia - *(NEET/DNB Pattern)*
a) Consolidation of airway
b) Interstitial pneumonitis
c) Increased eosinophils
d) Hilar lymphadenopathy

791. DOC in P. jeroveci - *(NEET/DNB Pattern)*
a) Clotrimazole b) Cotrimoxazole
c) Penicillin d)

PULMONARY EMBOLISM

792. Risk factors of pulm embolism - *(PGIDec 05)*
a) 30 yrs female of OCPs
b) Pregnancy
c) Leg paralysis
d) 50 yrs person with uncomplicated cholecystectomy
e) Behcet's disease

793. The most common source of pulmonary embolism is-
a) Amniotic fluid embolism *(AIIMS May 95)*
b) Renal artery embolism
c) Large veins of leg
d) Cardio thoracic surgery

794. All are true about pulmonary embolism, except - *(AIIMS May 94)*
a) Chest pain is the most common symptom
b) Most commonly presents within 2 weeks
c) More is the survival time, more is the chance of recovery
d) Arises from leg veins

795. D-dimer is the most sensitive diagnostic test for -
a) Pulmonary embolism *(AIIMS May 05)*
b) Acute pulmonary oedema
c) Cardiac tamponade
d) Acute myocardial infaraction

796. A 55 year old man who has been on bed rest for the past 10 days, complains of breathlessness and chest pain. The chest X-ray is normal. The next investigation should be - *(AI03)*
a) Lung ventilation-perfusion scan
b) Pulmonary arteriography
c) Pulmonary venous angiography
d) Echocardiography

797. A 55-year old man who has been on bed rest for the past 10 days, complains of breathlessness and chest pain. The Chest x-ray is normal. The next step in investigation should be - *(AI 04)*
a) Lung ventilation - perfusion scan
b) Pulmonary arteriography
c) Pulmonary venous wedge angiography
d) Echocardiography

798. The most definitive method of diagnosing pulmonary embolism is - *(AIIMS Nov 05)*
a) Pulmonary ateriography
b) Radioisotope perfusion pulmonary scintigraphy
c) EKG
d) Venography

778)None 779)c 780)b 781)b 782)c,d 783)c 784)b 785)c 786)b 787)b 788)b 789)a,b,e 790)a 791)b 792) a,b,c,e 793) c 794) a 795) a 796) a 797) a 798) a

799. Best investigation when there is clinical suspicion of pulmonary embolism in a patient is -
a) D - Dimer assay *(AIIMSNov 07)*
b) Multi detector CT angiography
c) Doppler ultrasound
d) Catheter angiography

800. True about pulmonary embolism - *(PGIDec 2000)*
a) ECG shows right ventricular strain pattern
b) P_A0_2-P_{a0_2} difference in normal
c) ECG also shows typical S, Q_3 T_3 pattern
d) Not a medical emergency

801. In acute pulmonary embolism, the most frequent ECG finding is - *(AIIMSMay 06)*
a) SjQ_3T_3 pattern b) P. pulmonale
c) Sinus tachycardia d) Right axis deviation

802. Treatment of choice in a patient of acute pulmonary embolism with right ventricular hypokinesia and compromised cardiac output but normal blood pressure is - *(AIIMSNov 01)*
a) Thrombolytic agent
b) Low molecular weight heparin
c) Warfarin
d) Iv filters

803. Most diagnostic investigation in pulmonary embolism is - *(ROHTAK 97)*
a) Angiography
b) X-ray chest
c) Ventilation - perfusion scan
d) CT scan
e) USG

804. Which of the following are featrues of pulmonary embolism- *(PG12K)*
a) Respiratory alkalosis b) Right axis deviation
c) Normal A-a Gradient d) Ventricular strain

805. Pulmonary embolism is most commonly produced by which of the following - *(SGPGI 05)*
a) Trauma
b) Atherosclerosis
c) Thrombosis of pelvic vessels
d) None

806. Most reliable investigation in the diagnosis of pulmonary embolism is - *(Jipmer 05)*
a) Lung scan b) Angiography
c) Differential gas tension d)ECG

807. What is the definitive method of diagnosing pulmonary embolism ? *(UPSC 06)*
a) Ventilation perfusion imaging
b) Positron Emission Tomography
c) High Resolution CT
d) Pulmonary angiography

808. Well's grading of pulmonary embolism is based on -
a) Doppler *(APPG06)*
b) Clinical symptoms
c) Hemoptysis
d) Heart Rate >100 beats per min

809. Gold standard for diagnosis of pulmonary embolism-
a) Chest X-ray *(Delhi PG Feb. 09)*
b) Pulmonary angiography
c) Ventilation perfusion scintiscan
d) CT

810. A 20 year old male presents with acute onset respiratory distress and tachypoea. His B.P. is 90/60. Loud P2 is +nt. True about his condition -
a) D-dimer assay should be done *(PGINov. 10)*
b) Increased saturation is seen
c) S wave in lead 1 and Q wave in lead 3 of ECG is seen
d) Streptokinase should be given
e) IV steroid

811. Prophylactic measure of DVT includes -
a) Warfarin *(PGI Nov. 10)*
b) Heparin
c) Graduated elatic compression stocking
d) Pneumatic compression devices
e) Dextran

ASTHMA

812. Bronchial asthma is characterized - *(PGI June 05)*
a) Inflammatory disease of airway
b) Allergic disease of airway
c) Hypo responsive ness of airway
d) Hyper responsiveness of airway
e) Treatment is mostly inhaled steroid

813. True about Asthma except - *(PGIDec 05)*
a) Inflammatory disease b) Hyper responsive
c) Necrosis of airway d) Mucous plug formation
e) Airway edema

814. True about morphology of Asthma - *(PGI Dec 04)*
a) Charcot- leyden crystal
b) Irreversible
c) Involve larger airways
d) Intermittent asthma is better responsive to bronchodilator therapy
e) Hypersensitive lung.

815. True about asthma - *(PGIDec 04)*
a) Increasing incidence day by day
b) Allergic asthma common in older patients
c) Increase in IgE in idiosyncratic asthma
d) Bronchoconstriction

816. True about intrinsic asthma - *(PGINov 09)*
a) More severe & persistent b) IgE normal
c) Allergic in nature d) Family history +ve
e) Skin test positive

817. Not a feature of acute severe asthma -*(PGI June 99)*
a) Tachycardia b) Respiratory acidosis
c) Pulsus paradoxus d) Cyanosis

818. Bronchial asthma can be diagnosed by-*(PGIDec 01)*
a) Wheeze b) Dyspnea
c) Normal FEVj d) Cough
e) Reversible obstruction

799) b 800) a,c 801) c 802) a 803) a 804)a,b,d 805) c 806) b 807) d 808)b,c,d 809) b 810)a,c,d 811)a,b,c,d 812)a,b,d,e 813)a,b,d,e 814)a,d,e 815)a,d 816)a,b 817) None 818)a,e

819. Universal finding is asthma is - *(PGI June 02)*
a) Hypoxia b) Hypercarbia
c) Hypoxemia d) Respiratory acidosis
e) Metabolic acidosis

820. Anti-inflammatory action of airways - *(PGI June 05)*
a) Fluticasone b) Ipratropium bromide
c) Budesonide d) Theophylline
e) Terbutaline

821. The recent terminlogy for status asthmaticus is -
a) Episodic asthma *(Kerala 97)*
b) Chronic asthma
c) Acute asthma
d) Severe actute asthma

822. Asthma is associated with all except - *(JIPMER 95)*
a) Hyper recactive airways b) Persistent cough
c) Episodic wheezing d) Normal Spirometry

823. Use of disodium cromoglycate as a preventive measure has been found to be of value in -
a) Intrinsic asthma *(UPSC 96)*
b) Excercise induced asthma
c) Chronic bronchitis
d) Famer'slung

824. One of the constituents of the commonly used metered dose inhalers in bronchial asthma which is an air pollutant & dangerous to earth's stratophere is - *(Delhi 96)*
a) Flurocarbons b)Salbutamol
c) Ozone d) Oxygen

825. Bronchial asthma patient on artificial ventilation requires - *(Karnataka 95)*
a) A low respiratory flow
b) An equal IE ratio of 1:1
c) An inverse ratio ventilation
d) An IE ratio 1:2.5

826. In bronchial asthma glucorticoids - *(UPSC 97)*
a) Act as potent bronchodilators
b) Reduce airway inflammation
c) Inhibit degranulation of mast cells
d) Block the action of humoral mediators

827. Excercise induced asthma is not precipitated by -
a) High altitude climb & excercise *(PGI 96)*
b) Cycling in cold weather
c) Swimming in hot water
d) Swimming in cold water

828. Which B_2 agonist is not given for acute bronchial asthma - *(Orissa R)*
a) Salbutamolb) Terbutaline
c) Salmeterol d) Methyl xanthine

829. Charcot - Leyden crystals are derived from -
a) Eosinophils b) Basophils *(Kerala 2K)*
c) Neutrophils d) Bronchial goblet cells
e) Mast cells

830. Which of the antiasthma medication is not a bronchodilator - *(Orissa 04)*
a) Salbutamol b) Adrenaline
c) Na+ cromoglycate d) Ipratropium bromide

831. The level of which one of the following compounds is elevated in bronchial asthama - *(UPSC 05)*
a) PGL, tyPGf^
c) Leukotrienes d) Thromboxane

832. Proximal bronchiecstasis and segmental collapse in a petient with chronic persistent asthma should make us suspect - *(J &k 05)*
a) Atypical mycobacterial infection
b) Mycoplasma infection
c) Lymphangitis carcinomatosis
d) Allergic bronchopulmonary aspergillosis

833. Mast cell stabilizer used in Bronchial Asthma is -
a) Raloxifene b)Ketotifen *(Orissa05)*
c) Azelastin d) Baclofen

834. To prevent exercise induced bronchial asthma drug used is - *(Delhi PG Feb. 09)*
a) Sodium chromoglycate b) Ipratropium bromide
c) Terbutaline d) Epinephrine

835. Which of the following drugs has been found to be useful in acute severe asthma ? *(Delhi PG Mar. 09)*
a) Magnesium Sulphate b)Anti-leukotrine
c) Cromolyn Sodium d) Cyclosporine

836. The following drugs can be used for the management of status asthmaticus except - *(UPSC 111)*
a) Magnesium sulphate b) Montelukast
c) Corticosteroid d) Adrenaline

837. Consider the following statements: During an acute attack of asthma-
1. Pulsus pradoxus develops when the VEV_1 is less than 25 per cent of the predicted value.
2. A normal to increased PaCO, signals a severe airway obstruction and impending respiratory failure.
3. The arterial PaCO, decreases and the arterial pH increases.
4. The presence of cyanosis is a reliable prognostic sign.

Which of the statements given above are correct?
a) 1,2 and 3 b) 2,3 and 4 *(UPSC 111)*
c) 1,3 and 4 d) 1,2 and 4

838. In asthma diagnosis is by- *(NEET/DNB Pattern)*
a) FEV1
b) Measurement of tidal volume
c) End expiratory flow rate
d) Total lung capacity

C.O.P.D.

839. All of the following drugs are useful in the treatment of a patient with acute bronchial asthma except -
a) Ipratropium b) Salbutamol *(AIIMSNov 03)*
c) Montelukast d) Hydrocortisone

840. All are used in bronchial asthma, except -
a) Salbutamol b) Morphine *(AIIMS June 97)*
c) Aminophylline d) Steroid

819) a 820) a,c 821)d 822)d 823)b 824) a 825) d 826)b 827)c 828)c 829) a 830)c 831)c 832)d
833) b 834)a 835)a 836)b 837)d 838)a 839)c 840) b

841. The most predictive and dangerous side effect of propranolol that makes it to be avoided in known patient of COPD is induction of- *(AIMSNov 01)*
a) Respiratory failure b) Acute asthmatic attack
c) Glaucoma d) Pleural effusion

842. Aspirin-sensitive asthma is associated with -*(AI95)*
a) Obesity b) Urticarisis
c) Nasal polyp d) Extrinsic asthma

843. True statements about emphysema - *(PGIDec 04)*
a) Breathlessness is always there
b) Diffusion rate for carbon monoxide is reduced
c) Restrictive pattern of lung disease
d) Long-term bronchodilator therapy is not effective

844. a_1 Antitrypsin deficiency is associated with -
a) Centriaciner emphysema *(AI 99)*
b) Panaciner-emphysema
c) Irregular emphysema
d) Paraseptal-emphysema

845. The most common cause of acute cor pulmonale is -
a) Pneumonia. *(AIMS Nov 02)*
b) Pulmonary thromboembolism.
c) Chronic obstructive pulmonary disease.
d) Primary spontaneous pneumothorax.

846. Which pf the following conditions commonly progress to cor pulmonale - *(PGIDec 04)*
a) Pulmonary thromboembolism
b) Bronchial asthma
c) COPD
d) Cystic fibrosis.
e) Airway foreign body

847. All the following are radiological features of Chronic Cor pulmonale except - *(AI 96)*
a) Kerley B lines
b) Prominent lower lobe vessels
c) Pleural effusion
d) Cardiomegaly

848. All are seen in emphysema except - *(Kerala 95)*
a) Decreased vital capacity b) Hyper inflation
c) Ronchi d) Damage to alveoli

849. All are true in difinition of chronic bronchitis except- *(Kerala 95)*
a) Cough 3 months
b) Productive cough
c) More than 2 consecutive months
d) Haemoptysis

850. Most common precipitating factor for COPD is -
a) Environment b) Smoking *(Orissa 05)*
c) Allergen d) All of the above

851. A patient presents with haemoptysis, copious sputum and 'tram lines' (abnormal air bronchogram) pattern on the chest X-ray. What is the most likely diagnosis?
a) Lung abscess *(UPSC 07)*
b) Pulmonary embolism with infarction
c) Bronchiectasis
d) Carcinoma of lung

852. Most likely precursor to bronchiectasis is- *(DelhiPGFeb. 09)*
a) Tuberculosis b) Carcinoma
c) Bronchial adenoma d) Bronchopneumonia

853. Which of the following is the first strategy in the management of chronic obstructive lung disease ?
a) Aminophylline *(Delhi PG Mar. 09)*
b) Anti-cholinergics
c) Cessation of smoking
d) Oral steroids

854. Which one of the following statements is NOT correct about chronic obstructive pulmonary diseases (COPD) ? *(UPSC-I 09)*
a) Respiratory flow rates are decreased
b) Total lung capacity is normal or increased
c) Residual volume is increased
d) Vital capacity is increased

855. All are used in bronchial asthma, except -
a) Salbutamol *(NEET/DNB Pattern)*
b) Morphine
c) Aminophylline
d) Steroid

856. Antibody in asthma treatment -*(NEET/DNB Pattern)*
a) Omalizumab b) Rituximab
c) Transtusuzumab d) Daclizumab

857. A person has asthma attacks more than once during day and once during night- *(NEET/DNB Pattern)*
a) Mild intermittent asthma
b) Mild persistent asthma
c) Moderate asthma
d) Severe asthma

858. Acute exacerbation of COPD is done by all except-
a) Pneumococcus *(NEET/DNB Pattern)*
b) Moraxella catarrhalis
c) H influenza
d) Staph aureus

LUNG CARCINOMA

859. Commonest type of lung carcinoma in nonsmokers is- *(AIMS Dec 94)*
a) Squamous cell carcinoma b) Adenocarcinoma
c) Alveolar cell carcinoma d) Small cell carcinoma

860. Most common bronchogenic carcinoma is -
a) Small cell carcinoma *(AIMS June 2K)*
b) Squamous cell carcinoma
c) Mixed cell carcinoma
d) Adenocarcinoma

861. Most common type of carcinoma lung is -
a) Small cell carcinoma *(AIMS May 93)*
b) Adenocarcinoma
c) Squamous cell carcinoma
d) Large cell carcinoma

841)b 842)c 843)a,b,d 844)b 845)b 846)c 847)b 848)c 849)d 850)b 851)c 852)d 853)c 854)d
855) b 856) a 857) d 858) d 859) b 860) d 861)b

862. What is TRUE regarding adenocarcinoma lung -
a) Causes 50% of lung cancers *(AIIMS Dec 94)*
b) More common in females
c) Associated with subcutaneous angiomyolipoma
d) Peripheral location

863. True about adenocarcinoma lung - *(PGI June 05)*
a) More common in female
b) Smoking is not associated with
c) Central cavitations
d) Upper lobe involvement is most common
e) Peripheral involvement

864. Most common symptom of lung carcinoma -
a) Cough b) Dyspnoea *(AIIMS 90)*
c) Weight loss d) Chest pain

865. Type of lung carcinoma producing superior vena cava syndrome - *(AIIMS June 97)*
a) Squamous cell carcinoma
b) Adenocarcinoma
c) Small cell carcinoma
d) Anaplastic carcinoma

866. Following hormonal levels are increased in small cell carcinoma of lung except - *(AI97)*
a) ACTH b) Growth hormone
c) ANF d)AVP

867. Clubbing is least common in - *(AIIMSDec 97)*
a) Squamous cell carcinoma
b) Adenocarcinoma
c) Small cell carcinoma of lung
d) Mesothelioma

868. Bronchial adenoma commonly present as - *(AI98)*
a) Recurrent hemoptysis b) Cough
c) Dysponea d)Chest pain

869. Lung carcinomas most frequently metastasize to -
a) Brain b)Liver*(AIIMS92)*
c) Adrenal d)Bone

870. Lung to lung metastasis is seen in -
a) Adenocarcinoma of lung *(AIIMS May 05)*
b) Squamous cell carcinoma
c) Small cell carcinoma
d) Neuroendocrine tumor of lung

871. Carcinoma lung responding best to chemotherapy -
a) Squamous cell type b) Oat cell type
c) Adenocarcinoma d) All respond equally

872. A patient comes with non-productive cough, hemoptysis and grade III clubbing, Chest X-ray shows upper left zone lesion. The likely cause is -
a) Small cell carcinoma lung *(AIIMS June 2000)*
b) Non-small cell carcinoma lung
c) Tuberculosis
d) Fungal infection of lung

873. In a chronic smoker, a highly malignant aggressive and metastatic lung carcinoma is -*(AIIMSMay 01)*
a) Squamous cell Carcinoma
b) Small cell Carcinoma
c) Adenocarcinoma
d) Large cell carcinoma

874. A 60 year old man presents with non productive cough for 4 weeks: He has grade HI clubbing, and a lesion in the apical lobe on xray. Most likely diagnosis here is - *(AI 01)*
a) Small cell ca b) Non small cell ca
c) Fungal infection d) Tuberculosis

875. A 55 year old man, a chronic smoker is brought to emergency with history of polyuria, polydipsia, nau sea and altered sensorium for last two days. He had been diagnosed as having squamous cell carcinoma of lung two months prior to this. On examination, he was lethargic and confused. An ECG was normal except for a narrowed QT interval. Which one of the following is the most likely metabolic abnormality? *(AIIMS Nov 03)*
a) Hypernatremia b) Hypercalcemia
c) Hypokalemia d) Hyponatremia

876. Small cell carcinoma features are - *(PGI June 06)*
a) Commonest malignancy of lung
b) Associated with paraneoplastic syndrome
c) Don't cause SVC syndrome
d) Chemosensitive
e) Commonly present with metastasis to brain

877. True about small cell lung cancer - *(AI 09)*
a) Bone marrow is uncommonly involved
b) Destruction of alveolar cells
c) Peripheral in location
d) Treatment is chemotherapy

878. TYue about occupational cancers - *(PGI June 01)*
a) Seen even after exposure is stopped
b) Site for occurance common to occupation
c) Usually not seen in younger persons
d) Scrotal cancer is common in dye industry workers

879. Which of the following tumor is most commonly associated with superior vena cava syndrome-(^4/*11)*
a) Lymphoma b) Small cell carcinoma
c) Non small cell carcinoma d) Metastasis

880. Granulomatous condition showing hypercalcemia A7 E- *(NEET/DNB Pattern)*
a) TB b) Sarciodosis
c) Berylliosis d)SLE

PLEURAL EFFUSION & PNEUMOTHORAX

881. Which of the following is true about pleural effusion-
a) Horizontal fluid level *(PGI Dec 05)*
b) Low lung volume
c) Muffled heart sounds
d) Decreased chest movements
e) Succussion splash

882. Transudative pleural effusion seen *in*-*(PGI June 02)***
a) Nephrotic syndrome b) Rheumatoid arthritis
c) Constrictive pericarditis d) Myxedema
e) Pulmonary embolism

862)d 863)a,e 864)a 865)c 866)b 867)c 868)a 869)a 870)a 871)b 872)b 873)b 874)b 875)b 876) b,d,e 877)b,d 878)a,b 879)b 880)d 881)b,c,d 882)a,c,d,e

883. TVansudative effusion occur in - *(PGINov 09)*
a) Chylothorax
b) Myxedema
c) Dialysis related effusion
d) Nephrotic syndrome

884. Exudative pleural effusion is seen in - *(AI03)*
a) Congestive heart failure b) Nephrotic syndrome
c) Mesothelioma d) Cirrhosis

885. Low glucose in pleural effusion is seen in all, except-
a) Dressier syndrome *(AIIMSMay 94)*
b) Empyema
c) Malignant pleural effusion
d) Rheumatoid arthritis

886. All of the following show low glucose in pleural fluid, except - *(AIIMSDec 94)*
a) Empyema
b) Malignant pleural effusion
c) Rheumatoid arthritis
d) Dressler's syndrome

887. Pleural fluid having low glucose is seen in all, except - *(AIIMS May 93)*
a) Tuberculosis b) Empyema
c) Mesothelioma d) Rheumatoid arthritis

888. Decreased glucose level in pleural effusion is found in- *(PGIJune 99)*
a) Rheumatoid arthritis b)SLE
c) Pneumococcal infection d) P.carinii infection

889. Amylase increased in pleural fluid is seen in following except - *(PGI June 2000)*
a) Rheumatoid arthritis b) Esophageal perforation
c) Malignancy d) Gall stone pancreatitis

890. A high amylase level in pleural fluid suggests a diagnosis of - *(AIIMS May 03)*
a) Tuberculosis b) Malignancy
c) Rheumatoid arthritis d) Pulmonary infarction

891. Tuberculous pleural effusion is characterized by all, except - *(AIIMS May 94)*
a) LDH > 60% of serum LDH
b) Hemorrhagic fluid
c) Increased mesothelial cells
d) Increased Deaminase

892. Presence of cholesterol crystals in pleural effusion is a feature of - *(AIIMS June 97)*
a) Myxoedema b) Hypertriglyceridemia
c) Hyperthyroidism b) Sarcoidosis

893. Left-sided pleural effusion seen in - *(PGI June 02)*
a) Pancreatitis b) Rheumatoid arthritis
c) Hypoproteinemia d) CCF
e) Esophageal rupture

894. Spontaneous pneumothorax is seen in -
a) Smokers b) Male sex *(PGI June 02)*
c) Old age d) Exercise
e) Short stature

895. Right hemithorax with right side shift of mediastinum is due to - *(PGI June 97)*
a) Collapse of Rt lung
b) Right side hemothorax
c) Hydrothorax Rt sided
d) Bronchiectasis

896. Which statement is TRUE regarding pneumothorax-
a) Decreased breath sounds *(AIMSDec 94)*
b) Decreased percussion note
c) Always needs chest tube insertion
d) Often needs chest tube insertion

897. Pneumothorax is seen in all, except -
a) Marfan syndrome *(AIMSMay 94)*
b) Assisted ventilation
c) Eosinophilic granuloma
d) Bronchopulmonary Aspergillosis

898. Tuberculous pleural effusion is characterised by all of the following features except - *(AI 97)*
a) Harmorrhagic effusion
b) Pleural fluid LDH more than 60% that of serum LDH
c) Protein in apirated fluid is increased.
d) t Mesothelial cells.

899. While inserting a central venous catheter, a patient develops respiratory distress. The most likely cause is- *(AI02)*
a) Hemothorax b) Pneumothorax
c) Pleural effusion d) Hypovolumia

900. Which one of the following conditions may lead to exudative pleural effusion ? *(AI 03)*
a) Cirrhosis
b) Nephrotic syndrome
c) Congestive heart failure
d) Bronchogenic carcinoma

901. Pleural glucose is < 60 mg/dl is seen in which of the following condition ? *(Manipal06)*
a) Malignancy b)TB
c) Fungal d) Pancreatitis

902. Pleural effusion with very low glucose is characteristically seen in - *(UPSC-109)*
a) Malignancy b) Tuberculosis
c) SLE d) Rheumatoid arthritis

903. Which of the following conditions can produce hemathorax ? *(Delhi PG Mar. 09)*
a) Myxoma
b) Congestive heart failure
c) Rheumatoid arthritis
d) Uremia

PNEUMOCONIOSIS

904. TVue Statement about silicosis - *(PGIDec 04)*
a) Produces pleural plaque
b) Associated with tuberculosis
c) Lower lobe infiltration
d) Hilar adenopathy

883) b,c,e 884) c 885) a 886) d 887) a 888) a,c 889) a 890) b 891) c 892) a 893) a,e 894) a,b 895) a 896) a,d 897) d 898) d 899) b 900) d 901)b 902) d 903) d 904) b,d

905. All of the following features are seen in asbestosis except- *(AIIMSNov02)*
a) Diffuse pulmonary interstitial fibrosis
b) Fibrous pleural thickening
c) Emphysema
d) Calcific pleural plaques

906. True statements about asbestosis - *(PGIDec 04)*
a) Causes Lung Ca
b) Pleural mesothelioma
c) Peritoneal mesothelioma
d) Pulmonary fibrosis

907. Pleural calcification is seen commonly in-
a) Silicosis *(Delhi 96)*
b) Asbestosis
c) Hyperparathyroidism
d) Bronchogenic carcinoma

908. 'Monday chest tightness' is characteristic of -
a) Asbestosis *(Kerela 2K)*
b) Coal worker's pneumoconiosis
c) Byssinosis
d) Berylliosis
e) Silicosis

909. Farmer's lung is caused by exposure to -*(UPSC01)*
a) Cryptostroma corticale
b) Asperigullus
c) Thermophilic actinomycetes
d) Grain dust

910. Which one of the following is the most common initial symtoms of byssinosis - *(UPSC 01)*
a) Chest tightness b) Wheezing
c) Cough d) Haemoptysis

911. Asbestosis is usually related to - *(Jipmer 98)*
a) Small cell carcinoma lung
b) Large cell carcinoma lung
c) Mesothelioma
d) Squamous cell carcinoma lung

912. Asbestosis is associated with all except-*(MAHE 01)*
a) Pleural fibroma b) Bronchogenic cancer
c) Gastric cancer d) Mesothelioma

913. Interstitial pulmonary fibrosis is associated with the following except - *(UPSC 05)*
a) Sarcoidosis b) Asbestosis
c) Carcinoid lung d) Radiation exposure

MISCELLANEOUS

914. Bronchiectasis is most common in which lobe- *(ARMS May 95)*
a) Right upper lobe b) Right middle lobe
c) Left upper lobe d) Left lower lobe

915. Which of the following is NOT a complication of bronchiectasis - *(A1IMS Sep 96)*
a) Lung abscess b) Lung cancer
c) Amyloidosis d) Empyema

916. Complication of bronchiectasis include all except -
a) Amyloidosis b) Lung abscess *(AI98)*
c) Cerebral abscess d) Bronchiogenic carcinoma

917. Kartagener's syndrome includes - *(PGI June 01)*
a) Situs inversus b) Bronchiectasis
c) Sinusitis d) Male infertility
e) Cystic fibrosis

918. True about kartagener's syndrome - *(PGIDec 04)*
a) Dextrocardia b) Infertility
c) Mental retardation d) Bronchiectasis

919. Not a cause of hemoptysis- *(PGI June 07)*
a) Pneumonia b) Bronchiectasis
c) Empyema d) Mitral stenosis

920. A lady presents with complaints of hemoptysis.Her chest X-ray appears to be normal. What is the next best investigation - *(ARMSNov 2000)*
a) Bronchoscopy b) High resolution CT
c) Sputum cytology d) Pulmonary function test

921. A 60 year old man is suspected of having bronchogenic ca: TB has been ruled out in this pt. What should be the next investigation - *(AI 01)*
a) CT guided FNAC b) Bronchoscopy and biopsy
c) Sputum cytology d) X - Ray chest

922. The commonest intrabronchial cause of haemoptysis is- *(ARMS May 95)*
a) Carcinoma lung b) Adenoma lung
c) Emphysema d) Bronchiectasis

923. A young man with tuberculosis presents with massive recurrent hemoptysis. For angiographic treatment which vascular structure should be evaluated first - *(ARMS May 03)*
a) Pulmonary artery b) Bronchial artery
c) Pulomary vein d) Superior vena cava

924. Rasmussen's aneurysm involves? *(ARMSMay 08)*
a) Bronchial aneurysm
b) Pulmonary aneurysm
c) Vertebral artery
d) Posterior intercostal artery

925. A patient presents with a cavitatory lesion in right upper lobe of Lung. The best investigation is -
a) Branchoscopy, lavage and brushing *(AI 2K)*
b) C. T. scan
c) X ray
d) FNAC

926. Rampal, 45 yr old man presents with history of recurrent hemoptysis and purulent sputum. His chest X-Ray is normal, which of the following will be the next best investigation for him*2(ARMSNov 01)*
a) HRCT b) CT guided angiography
c) Angiography d) Spiral CT

927. A drug is to be delivered by a nebuliser. The size of a droplet for its humidification is - *(AI2000)*
a) <5 b)5-10
c) 10-15 d) 15-20

928. IPPV can cause - *(AI 01)*
a) Barotrauma b) Pleural effusion
c) Missing d) None of the above

905)c 906)All 907)b 908)c 909)c 910)a 911)c,d 912)a 913)c 914)d 915)b 916)d 917)a,b,c,d
918)a,b,d 919)c 920)b 921)a 922)d 923)b 924)b 925)a 926)a 927)a 928)a

929. Which of the following is characteristically not associated with the development of inerstitial lung disease? *(AIMSMay 06)*
a) Organic dusts
b) Inorganic dusts
c) Toxic gases e.g. chlorine, sulphur dioxide
d) Inhalation of tobacco smoke

930. Hyperbaric oxygen is used in - *(PGI June 01)*
a) ARDS
b) CO-poisoning
c) Anaerobic soft tissue injury
d) During radiotherapy as desensitzer
e) Aconite poisoning

931. Bronchial hyperplasia may be caused by all except -
a) Smoking b) Theophylline *(AI98)*
c) Prematurity d) Allergy

932. True about primary pulmonary hypoventilation is-
a) Does not respond to chemical stimuli *(AIMSFeb 97)*
b) Hypocapnoea and normal $Pa0_2$
c) Common in children
d) Respiratory alkalosis is diagnostic

933. All are true regarding bronchial cyst, except-
a) 50-70% are seen in lung *(AUMSDec95)*
b) Usually seen in mediastinum
c) May be premalignant
d) Commonly gets infected

934. All are cavitating lesions in the lungs, except -
a) Caplan's syndrome *(AIIMSMay94)*
b) Hamartoma
c) Wegner's granuloma
d) Squamous cell carcinoma

935. Chest X-ray shows miliary mottling in all, except - *(AIMS Nov93)*
a) Carcinoma prostate b) Sarcoidosis
c) Hemosiderosis d) Histiocytosis

936. Most common cause of mediastinitis is - *(AI97)*
a) Tracheal rupture b) Esophagealrupture
c) Drugs d) Idiopathic

937. All are true about bilateral diaphragmatic paralysis, Except- *(AIMS May95)*
a) Sniff test is positive
b) Causes normocapnic failure
c) Diaphragmatic pacing is useful if any nerve is intact
d) None of the above

938. Cyanosis NOT improving with 100% oxygen in case of- *(AIMS May93)*
a) Cardiac asthma
b) Interstitial lung disease
c) Bronchial asthma
d) Tetralogy of Fallot (TOF)

939. "Sleep apnoea", is defined as a temporary pause in breathing during sleep lasting at least -
a) 40 seconds b) 30 seconds *(AIMSMay 03)*
c) 20 seconds d) 10 seconds

940. Unilateral clubbing seen in - *(PGI June 05)*
a) Samilial clubbing
b) Pancoast tumor
c) Pulmonary A-V fistula
d) Aortic aneurysm (arch)
e) Congenital cyanotic heart ds.

941. B/L ronchi are seen in - *(PGI June 08)*
a) Pulmonary edema
b) Pulmonary emobolism
c) Bronchiectasis

942. Smoking is generally not associated as a risk factor with- *(AI 06)*
a) Small cell carcinoma
b) Respiratory bronchiolitis
c) Emphysema
d) Bronchiolitis obliterans organizing pneumonia

943. Pleural calcification is seen in - *(PGIDec 04)*
a) Mesothelioma b) Haemothorax
c) Asbestosis d) Pulmonary fibrosis
e) Tubercular empyema

944. E.S.L.D. is caused by - *(PGI June 05)*
a) Sarcoidosis
b) Interstitial lung disease
c) Allergic bronchopulmonary aspergillosis
d) Amyloidosis
e) Emphysema

945. Platypnea is seen in - *(PGI June 05)*
a) Diaphragmatic palsy b) Pleural effusion
c) Pulmonary embolism d) Lt atrial tumor
e) Bronchial asthma

946. Which of the following collagen disorder is NOT commonly associated with pulmonary fibrosis -
a) SLE *(AIIMS Dec 94)*
b) Progressive systemic sclerosis
c) Dermatomyositis
d) Rheumatoid arthritis

947. Pulmonary fibrosis is associated with the use of -
a) Bleomycin b)Cisplatin *(AI 11)*
c) Methotrexate d) Actinomycin D

948. What is seen in pulmonary hemosiderosis ?
a) Hypoxemia *(PGIJune 07)*
b) Hypercarbia
c) Hyperplasia of type II pneumocytes

949. Which of the following is not true about idiopathic pulmonary Hemosiderosis - *(AI 09)*
a) Iron deficiency Anemia b) Eosinopenia
c) T Bilirubin d) t Reticulocyte count

950. Causes of pulmonary-renal syndrome -
a) Leptospirosis *(PGI June 07)*
b) Hanta virus
c) Paraquat poisoning

951. 3.5 kg term male baby, born of uncomplicated pregnancy, developed respiratory distress at birth, not responded to surfactant, ECHO finding revealed nothing abnormal, X-ray showed ground glass appearance and culture negative. Apgars 4 and 5 at

929)d 930)b,c 931)b 932)a 933)a,c 934)b 935)a 936)b 937)b 938)d 939)d 940)b,c,d 941)a,c

1 and 5 minutes. History of one month female sib ling died before. What is the diagnosis ?
a) TAPVC *(A1IMS Nov 07)*
b) Meconium aspiration
c) Neonatal pulmonary alveolar proteinosis
d) Diffuse herpes simplex infection

952. A truck driver has chronic cough with fever since one month. Chest x-ray show bilateral reticulonodular infiltrates in mid and lower zones. Which of the following is possible diagnosis?
a) Tuberculosis *(AI10)*
b) ILD
c) Pneumococcal pneumonia
d) Pneumocystis carini pneumonia

953. Minimum concentration of reduced hemoglobin required for cyanosis is - *(PGI Nov 09)*
a) lgm/dl. b) 3gm/dl
c) 5gm/dl d)7gm/dl
e) 9gm/dl

954. Granulomatous disease (s) is/are - *(PGINov 09)*
a) Lichen planus b) Histoplasmosis
c) Sarcoidosis d) Lupus erythromatosis
e) Asbestosis

955. Paradoxical respiration is seen in -*(DelhiPGFeb. 09)*
a) Multiple fracture ribs b) Diaphragmatic palsy
c) Bulbar polio d) Severe asthma

956. In cystic fibrosis the most common organism which causes infection is - *(Delhi PG Feb. 09)*
a) Pseudomonas b) Staphylococcus
c) Klebsiella d) Streptococcus

957. A 5-year-old woman presents with dry cough and progressive breathlessness of two years duration. Examination reveals clubbing, cyanosis and bibasilar crepts. What is the probable diagnosis -
a) Bronchiectasis *(UPSC-109)*
b) Lung abscess
c) Interstitial lung disease
d) Pulmonary tuberculosis

958. A patient has history suggestive of ABPA. The features(s) whcih would be seen includes -
a) Serum precipitins to aspergillus *(PGINov. 10)*
b) Elevated serum IgE
c) Peripheral eosinophilia
d) Central bronchiectasis
e) Bronchial asthma

959. A patient has recurrent URTI and CXR shows central bronchiectasis. Investigations to be done- *(PGI Nov. 10)*
a) al-antitrypsin level b)ANCA
c) Ds- DNA d) CT scan
e) Examination of sputum

960. Respiratory centre depression is caused by all except- *(AIIMSNov 10)*
a) Opium b) Strychnine
c) Barbiturates d) Gelsemium

961. Pulmonary fibrosis is associated with the use of -
a) Bleomycin b)Cisplatin *(AI11)*
c) Methotrexate d) Actinomycin D

962. The presence of multiple cavities in the lung with haematuria is suggestive of - *(UPSC I11)*
a) Wegener's granulomatosis b) Tuberculosis
c) Renal cell carcinoma d)SLE

963. The indications for surgery in patients with pulmonary tuberculosis include all of the following except- *(UPSC II11)*
a) Severe life-threatening haemoptysis
b) Drug resistant chronic tuberculous abscess
c) Aspergilloma within a tuberculous cavity with recurrent haemoptysis
d) AFB positive sputum with normal chest CT scan

964. Fibrosis of upper lobe is due to-*(NEET/DNB Pattern)*
a) Pneumonia
b) ABPA
c) Bronchiectasis in COPD
d) Rheumatoid arthritis

965. Primary, ciliary* dyskinesia is associated with all except- *(NEET/DNBiPattern)*
a) Sterility in males b) Hypothyroidism
c) Sinusitis d) Respiratory infection

966. 45 yr old on Mtx dev&ops respiratory symptoms?
a) Bacterial pneumonia *(NEET/DNB Pattern)*
b) TB due tb drug therapy
c) Nonspecific interstitial pneumonia
d) ARDS

967. Drug used in RSV infection in children- *(NEET/DNB Pattern)*
a) Rituximab b) Palivizumab
c) d) Omalizumab

IMMUNE

GENERAL

968. Histocompatibility complex associated with narcolepsy - *(JIPMER95)*
a) DR, b)DR_3
c)DR_4 d)B_4

969. Pleurisy is common in which one of the following connective tissue disease - *(Kamat96)*
a) System lupus erythematosis
b) Systemic sclerosis
c) Polyaritis nodosa
d) Mixed connective tissue disease

970. Interforons secrected by all except - *(IN99)*
a) Monocytes b) Macrophages
c) Fibroblast d)Lymphocytes

971. Which among the following does not secrete interleukin I alpha - *(JIPMER2K)*
a) Lymphocyte b) Fibroblast
c) Macrophage d) Neutrophils

952)d 953)c 954)b,c 955)b 956)b 957)c 958)All 959)a,d,e 960)b 961)a>c 962)a 963)d 964)b
965) b 966) c 967) b 968) a 969) a 970) None 971) d

972. Which one of the following statements about Natural (NK) cells is not correct - *(ICS 2K)*
a) NK Cells can lyse tumour cells and virus infected cell in vitro, without previous sensitization
b) Nk Cells are found in peripheral blood and lymphoid tissue
c) NK cells are CD_3 positive
d) NK cells lyse the target cells by antibody dependent cellular cytotoxicity

973. In children atopic dematitis is associated with increase in- *(UPSC 96)*
a) Immunoglobulin A b) Immunoglobulin E
c) Immunoglobulin G d) Immunoglobulin M

974. Amyloidosis is associated with - *(MP 98)*
a) 21P b) 22P
c) Y chromosome d) 17 Q

975. "Pathergy" Test is specific for - *(Karan.2001)*
a) Caplan's syndrome b) Sjogren's syndrome
c) Bechet's syndrome d) Felty's syndrome

976. In ataxia, telengiectasia which is seen -
a) Ig G absent b) Ig M absent*(Jirnper98)*
c) Ig A absent d) Ig A structureabnormality

977. Which of the following is a PAN B lymphocyte marker- *(Jharkand 03)*
a) CD 19 b)CD5
c) CD 10 d) CD 38

978. The type of Allergic reaction seen in Allergic fungal sinusitis is - *(AIIMS 04)*
a) Type 1 and Type 2 b) Type 2 and Type3
c) Type 1 and Type 3 d) Type 4 and Type1

979. Multiple small aneurym is seen on aortography in which condition - *(SGPGI05)*
a) Behcet'syndrome
b) PAN
c) Takayasu's artertis
d) Wegener's granulomatosis

980. HLA B27 antigen isassociated with all of the following disease except - *(SGPGI05)*
a) Ankylosing spondylitis b) Reiter's syndrome
c) Psoriatic arthorpathy d) Rheumatoid arthritis

981. B cell functions is tested by all of the following except? *(Manipal06)*
a) C H 50 count b) Amount of Ig G
c) PPD testing d) Cytokine

982. Which of the following is treatment of Type I hypersensitivity- *(Manipal06)*
a) Histamine b) IgA immunoglobulin
c) Sodium cromoglycate d) Interleukin 5

983. HLA B27 histocompatibility antigen is correlated with- *(Corned07)*
a) Sjogren's disease
b) Ankylosing spondylitis
c) Felty's syndrome
d) Scleroderma

984. Increased frequency of HLA-B 27 is seen in all the following diseases except - *(Corned 08)*
a) Ankylosing spondylitis b) Reiters syndrome
c) Acute anterior uveitis d) Myasthenia gravis

985. All are true regarding Hyper IgE syndrome except-
a) Inheritance is as a single locus Autosomal dominant trait with variable expression
b) Coarse facial features *(Delhi PG Mar. 09)*
c) Recurrent staphylococcal abscesses involving skin, lungs
d) High serum IgE with low IgG, IgA and IgM

986. Diagnosis of X linked agammaglobulinemia should be suspected if- *(Delhi PG Mar. 09)*
a) Absent tonsils and no palpable lymph nodes on physical examination
b) Female Sex
c) High Isohemagglutinins titers
d) Low CD 3

987. Screening tests for B cell defects -
a) Isohemagglutinin titers *(Delhi PG Mar. 09)*
b) CD 4 levels
c) Nitrobluetetrazolium dye test
d) Candida albicans intradermal skin test

988. Marker for NK cell activity is- *(Delhi PG Mar. 09)*
a) CD3 b)CD4
c) CD56 d)CD19

989. Which one of the following is not a correct statement regarding Raynaud's disease ? *(UPSC-II09)*
a) It is idiopathic
b) It commonly affects women
c) Exposure to cold precipitates vasoconstriction
d) The lower extremity involvement is symmetrical

990. The following immunoglobulin DOES NOT fix to complement - *(COMED 09)*
a) IgE b) IgM
c) IgA d)IgG

991. Reactive arthritis is a/w - *(PGIMay 10)*
a) Cjejuni b)Yersenia
c) Salmonella d) Chlamydia
e) Mycoplasma

992. Sclerodema like disorder is/are caused by -
a) Vinyl chloride *(PGI May 10)*
b) Bleomycin
c) Aromatic hydrocarbon
d) Pentazocin
e) Gold

993. Consider the following - *(UPSC 111)*
1. Goodpasture's syndrome
2. Myasthenia gravis
3. Guillain-Barre syndrome

In which of the above conditions may plasmapheresis be useful?
a) 1 only b) 1 and 2 only
c) 2 and 3 only d) 1,2 and 3

972) c 973)b 974)a 975)c 976)c 977)a 978)c 979)c 980)d 981)a 982)c 983)b 984)d 985) d
986) a 987) a 988) c 989) d 990) a 991)a,b,c,d 992)a,b,c,d 993) d

994. A 20-year-old male presents with pain in the knee joints for the last two weeks. He also has mild backache and stiffness. He had fever and diarrhoea four weeks previous to developing these complaints. The patient is afebrile and has no diarrhoea. His laboratory investigations reveal normal ESR and elevated CRP. What is the most probable diagnosis?
a) Ankylosing spondylitis *(UPSC111)*
b) Rheumatoid arthritis
c) Enteropathic arthritis
d) Reactive arthritis

995. Risk factors associated with development of Gout A/E- *(NEET/DNB Pattern)*
a) Female sex b) Alcohol
Pvi t ,eJiThiazide^ Rft d) Hypertension

RHEUMATOID ARTHRITIS

996. All of the following are seen in inflammatory polyarthritis, except - *(ARMS May 94)*
a) New bone formation
b) Spontaneous flare
c) Increased ESR
d) Morning stiffness more than one hour

997. Which part of the spine is most commonly affected in Rheumatoid arthritis - *(AI94)*
a) Cervical b) Lumbar
c) Thoracic d) Sacral

998. Part of spine, involved in Rheumatoid arthritis is -
a) Cervical b)Thoracic*(A1IMS Feb 97)*
c) Lumbar d) Sacral

999. Which of the following is true regarding Rheuma toid arthritis - *(AI 94)*
a) Typically involves small and large joints sym metrically but spares the cervical spine
b) Causes pleural effusion with low sugar
c) Pulmonary nodules are absent
d) Enthesopathy prominent

1000. Rheumatoid factor in rheumatoid arthritis is improtant because - *(AI 02)*
a) RA factor is associated with bad prognosis
b) Absent RA factor rules out the diagnosis of Rheumatoid arthritis
c) It is very common in childhood Rheumatoid arthritis
d) It correlates with disease activity

1001. Which of the following is the most specific test for Rheumatoid arthritis - *(ARMS Nov 06)*
a) Anti-ccp antibody b) Anti Igm antibody
c) Anti IgA antibody d) Anti IgG antibody

1002. RA is best diagnosed by? *(ARMS Nov 11)*
a) IgARF/ b) IgG RF/
c) IgMRF/ d) Anti CCP antibody

1003. All the following are true about Rheumatoid arthritis except - *(AI 94)*
a) Positives for Anti-IgG antibody
b) Juxta-articular osteoporosis
c) Morning stiffness
d) C Reactive protein indicates better prognosis

1004. Rheumatoid factor is - *(PGIDEC03)*
a) IgG b) IgM
c) IgA d)IgD
e)IgE

1005. False positive rheumatoid factor can be associated with all except - *(AI 09)*
a) Inflammatory bowel disease
b) HbsAg
c) VDRL
d) Coombs test

1006. Rheumatoid factor is-
a) IgG b) IgA
c) IgD d) IgE
e) IgM

1007. Which of the following HLA is specific to rheumatoid arthritis - *(PGIJUNE 01)*
a) HLADRj b)$HLADR_2$
c) HLADRj d) $HLADR_4$
e) $HLADR_3$

1008. Type of anemia seen in Rheumatoid arthritis is -
a) Microcytic hypochromic anaemia *(ARMSDec 97)*
b) Macrocytic hypochromic anaemia
c) Normocytic hypochromic anaemia
d) Normocytic normochromic anaemia

1009. All true about rheumatoid arthritis - *(PGINov 09)*
a) Limited to articular cartilage
b) Associated with HLA DR4
c) More common in women
d) Extraarticular in 20% cases
e) Hand, elbow & knee are common joint affected

1010. A 45 year old coal mine worker presents with cutaneous nodules, joint pain and occasional cough with dyspnoea. His chest radiograph shows multiple small (I -4 cm) nodules in bilateral lung fields. Some of the nodules show cavitation and specks of calcification. Most likely these features are diagnostic of - *(ARMS Nov 03)*
a) Sjogrens syndrome
b) Caplan's syndrome
c) Silicosis
d) Wegener's granulomatosis

1011. True regarding felty's syndrome is all, except -
a) Splenomegaly b) Rheumatoid arthritis
c) Neutropenia d) Nephropathy *(ARMSDec 97)*

1012. True about RA-
a) HLAD b) HLAB27
c) Anaemia d) Subcutaneousnodules
e) Joint deformity

1013. The following are rheumatoid disease modifying drugs except - *(AI 95)*
a) Chloroquineb) Gold
c) Penicillamine d) BAL

1014. Gold salts can be used in - *(AI 94)*
a) Ankylosing spondylitis b) Rheumatoid arthritis
c) Osteoarthritis d) Behcet's syndrome

994) d 995) a 996)a 997)a 998)a 999)b 1000) a,d 1001) a 1002) d 1003)d 1004)b 1005)a 1006)e 1007)d 1008)d 1009) b,c,e 1010)b 1011)d 1012) a,c,d,e 1013) d 1014)b

1015. Indication of systemic steroids in rheumatoid arthritis is - *(AI97)*
a) Mononeuritis multiplex
b) Carpul tunnel syndrome
c) Presence of deformities
d) Articular cartilage involvement

1016. What is the indication of using systemic steroids in a case of rheumatoid arthritis - *(AIIMSMay 94)*
a) Carpal tunnel syndrome
b) Presence of deformities
c) Mononeuritis multiplex
d) Involvement of articular cartilage

1017. Hemophilia with rheumatoid arthritis, analgesi of choice- *(PGIDEC98)*
a) Ibuprofen b) Aspirin
c) Aetaminophen d) Phenylbutazone

1018. Which is the most common site of subcutaneous nodules in rheumatoid arthritis - *(GUPGEE95) **
a) Elbow b) Wrist
c) Achilles tendon d) Occiput

1019. Rheumatoid factor is mainly- *(GUPGEE96)*
a) IgM b)IgA
c) IgG d) IgD

1020. A patient with rheumatoid arthritis is not responding to rotuine treatment. Which one of the following is to be indicated in further treatment-
a) Methotrexate b) Salazopyrine *(ICS 98)*
c) Endoxan d) Paracetamol

1021. The most common cardiac involvement in rheumatoid arthritis - *(ICS 2K)*
a) Pancarditis b) Pericarditis
c) Myocarditis d) Endocarditis

1022. Etanercept used in rheumatoid arthritis act by -
a) TNF alpha b) TFG beta *(JIPMER 2002)*
c) IL-2 d)IL-6

1023. Rheumatoid arthritis pericarditis is - *(PGI98)*
a) Serous b) Fibrinous
c) Serofibrinous d) Adhesives

1024. Which one of the following is not associated with rheumatoid arthritis - *(COMEDK 05)*
a) Pleural effusion
b) Pulmonary hypertension
c) Cricoarytenoid arthritis
d) Fibrosing alveolitis

1025. Which one of the following is least likely to occur in late extra articular sero-positive rheumatoid arthritis -
a) Neutropenia b) Dry eye
c) Leg ulcers d) Hepatitis

1026. Human leukocyte antigen (HLA) DR 4 occurs in about 70% of patients with rheumatoid arthritis HLA DR4 encoded in the major histocompatibility complex (MHC) region on - *(Karn 06)*
a) Chromosome 6 b) Chromosome 9
c) Chromosome 18 d) Choromosome 22

1027. Regarding rheumatoid arthritis, which one of the following statements is correct ? *(UPSC 07)*
a) NSAIDs are helpful in controlling the disease process
b) Corticosteroids, on long term basis, are to be given in all cases
c) DMARDs should be given early and preferably in combinations
d) Every patient of rheumatoid arthritis has a positive rheumatoid factor

1028. Extra - articular manifestations of RA are all except - *(PGlMay 10)*
a) Rheumatoid nodule b) Rnela failure
c) Spleen atrophy d) Scleritis
e) Pleural effusion

1029. Which of the following constitute Felty's syndrome?
a) Rheumatoid arthritis, splenomegaly and neutropenia *(UPSC 111)*
b) Rheumatoid arthritis, hepatomegaly and neutropenia
c) Rheumatoid arthritis, psoriasis and anaemia
d) Reactive arthritis, splenomegaly and anaemia

1030. Drugs used in treatment of acute gout - *(NEET/DNB Pattern)*
a) Ailopurinol b) Colchicine
c) Pamidronate d) Methotrexate

1031. Uretheritis is seen in - *(NEET7DNB Pattern)*
a) Reiter's syndrome b) Gout
c) Rheumatoid arthritis d) PAN

1032. Shrinking lung is a feature of - *(NEET/DNB Pattern)*
a) SLE b) Rheumatoid arthritis
c) Scleroderma** d) 'Sard6ido&s^

1033. Primary Sjogrens syndrome true is -
a) Can be seen in children *(NEET/&NB Pattern)*
b) Increased complement G4 leadsto thymoma
c) Associated With rheumatoid arthritis
d) Salivary gland enlargement

JOINTS

1034. Least common site to involved in osteoarthritis amongst the following is - *(AI 97)*
a) Hip joint
b) Knee joint
c) Carpometacarpal joint of thumb
d) Metacarpophalangeal joint

1035. Charcoat's j oint includes all of the following except-
a) Syringomyelia *(AIIMSNov06)*
b) Leprosy
c) Diabetes
d) Arthrogryposis multiplex congenita

1036. Most common cause of mononeuritis multiplex in India is ? *(AIIMS Nov 08)*
a) Hansen's disease b) Rheumatoid arthritis
c) Tuberculosis d) Polyarteritis nodosa

1015)a 1016)c 1017) a 1018)a 1019)a 1020)None 1021)b 1022)a 1023)b 1024) None 1025) d 1026)a 1027)c
1028)b,c 1029)a 1030)b 1031)a 1032)a 1033) d 1034)d 1035)d 1036)a

1037. A 60-year old man with diabetes mieelitus presents with painless, swollen right ankle joint Radiographs of the ankle show destroyed joint with large number of loose bodies. The most probable diagnosis is -
a) Charcot's joint b)Clutton's joint *(AI03)*
c) Osteoarthritis d) Rheumatoid arthritis

1038. A 35 - year old male develops involvements of PIFJHP and metacarpo phalangeal joints with sparing of wrist and carpometacarpal joints. The probable diagnosis is - *(AIIMS June 99)*
a) Psoriatic arthopathy b) Osteo arthritis
c) Rheumatoid arthritis d) Pseudo gout

1039. Proximal interphalangeal, distal interphalangeal & 1st metacarpophalangeal joint involvement and sparing of wrist is a feature of - *(AIIMS Dec 95)*
a) Rheumatoid arthritis b) Pseudogout
c) Psoriatic arthropathy d) Osteoarthritis

1040. Gout is a disorder of - *(AI10)*
a) Purine metabolism b) Pyrimidine metabolism
c) Ketone metabolism d) Protein metabolism

1041. What is not true about gout - *(AIIMSMay 95)*
a) Acute attack may be seen without any cause
b) Patient may be asymptomatic with high serum uric acid for years
c) Development of arthritis correlates with level of serum uric acid
d) Uric acid crystals are best seen by polarising light microscope

1042. Specific test for gout is - *(AIIMSSep 96)*
a) Raised serum uric acid level
b) Raised uric acid in synovial fluid of joint
c) Raised urea level
d) Raised urease enzyme level

1043. True about gout is - *(PGI June 02)*
a) Occurs due to accumulation of urate crystals in joint
b) Can be pptd by pyrazinamide
c) Birefringent cystals are present in joints
d) Occurs more in females
e) Due to decreased excretion of uric acid

1044. All of the following statements about primary Gouty arthritis are true, Except - *(AI 10)*
a) 90% of cases are caused by over production of uric acid
b) Uric acid levels may be normal at the time of an acute attack
c) Men are more commonly affected than women (Male > Females)
d) Definitive diagnosis requires aspiration of synovial fluid

1045. False regarding gouty arthritis is - *(AIIMSNov 93)*
a) Synovial fluid analysis is diagnostic
b) Allopurinol is the treatment of choice in acute gout
c) Arthritis occurs after long attack of hyperuricemia
d) Level of uric acid in blood and severity of gout has good correlation

1046. All of the following conditions are observed in Gout, except - *(AIIMS May 05)*
a) Uric acid nephrolithiasisOO
b) Deficiency of enzyme X anthine oxidase
c) Increase is serum urate concentration
d) Renal disease involving interstitial tissues

1047. All are seronegative (spondyloepiphyseal) arthritis with ocular manifestations, except - *(AIIMSNov 01)*
a) Ankylospondilitis b) Ritter's disease
c) Rheumatoid arthritis d) Psoriatic arthritis

1048. CIF of Gout-
a) Pain
b) Inflammation of joint
c) Small joint involvement
d) Crystal deposition at synovium
e) Chondrocalcinosis

1049. In case of gout preservation of urine sample is done in- *(AIIMS Dec 97)*
a) Normal saline b) Formaline
c) Alcohol d) Distilled water

1050. All are used in treatment of acute gout, EXCEPT -
a) Aspirin b) Naproxen *(AIIMS May 93)*
c) Allopurinol d) Colchinine

1051. Treatment of choice in seronegative spondylarthritis is - *(AIIMSNOV93)*
a) Phenylbutazone b) Aspirin
c) Indomethacin d) Corticosteroid

1052. Ankylosing spondylitis is associated with - *(AI 99)*
a) HLA-B27 b) HLA-B8
c) HLA-DW4/DR4 d)HLA-DR3

1053. HLA B27 is seen associated with - *(AIIMSNov 09)*
a) Rheumatoid arthritis
b) Ankylosing spondylitis
c) Sjogren syndrome
d) Scleroderma

1054. HLA B27 is associated with all *except-(PGIDec 98)*
a) Ankylosing spondylitis b) Pernicious anemia
c) Behcet's syndrome d) Reiter's sydrome

1055. All the following diseases are associated with HILA B - 27 & Uveitis, except - *(AI 2000)*
a) Bechcet's syndrome b) psoriasis
c) Ankylosing Spondylitis d) Reiter's syndrome

1056. All the following are features of Behcet's syndrome except- *(AI 94)*
a) Recurrent aphthous stomatitis
b) Multi-system involvement
c) Seen only in the tropics
d) Common in youngsters

1057. Behcet's syndrome is characterized by a/e -
a) Myocarditis *(PGI DEC 2K)*
b) Pyoderma gangrenosum
c) Genital & oral ulcers
d) Thrombophlebitis

1037) a 1038) a 1039)d 1040)a 1041)None 1042)b 1043)a,b,c,e 1044) a 1045) b 1046)b 1047)c 1048)A11 1049)c 1050) c>a 1051) c 1052)a 1053)b 1054)b,c 1055)a 1056)c 1057)a,b

1058. All are true regarding Reiter's syndrome, except - *(AIIMS NO V 93)*
a) Interstitial lung disease
b) Conjunctivitis
c) Occurs after sexual contact
d) Ulcers on palm and sole

1059. Most common organism associated with reactive arthritis is - *(AIIMS May 08)*
a) Staphylococcus b) Shigella
c) Chlamydia d) Yersinia

1060. A young man back from leisure trip has swollen knee joints & foreign body sensation in eyes. Likely cause is - *(AIIMSMay 10)*
a) Reiter's syndrome b) Sarcoidosis
c) Behcet's disease d)SLE

1061. True about lyme disease is- *(PGIDEC99)*
a) Arthritis is an early manifestation
b) Conduction block is not seen
c) Mood disorder is chronic neurological manifestation
d) Causative organism is Borrelia recurrentis

1062. Which one of the following drugs may precipitate gout- *(UPSC96)*
a) Ethambutol b)Isoniazid
c) Pyrazinamide d)Rifampicin

1063. Erosion of joint is seen in all except - *(M.P 98)*
a) SLE b) Osteoarthritis
c) Psoriatic arthropathy d) Rheumatoid arthritis

1064. Charcots joint is not seen in - *(MP 98)*
a) Ankle b) Knee
c) shoulder d) Elbow

1065. Most effective treatment of acute attack of gout is -
a) Aspirin b) Allopurinol *(CIP01)*
c) Colchicine d) Mefenemic acid

1066. Which of the following crystals may give rise to pseudo neuropathic arthropathy resembling Charcot's joint- *(UPSC 01)*
a) Monosodium uratehydroxy apatite
b) Hydroxy apatite
c) Calcium oxalate
d) Calcium pyrophosphate dihydrate

1067. True about gout is - *(PGI02)*
a) Occurs due to accumulation of urate crystals in joint
b) Can be pptd by pyrazinamide
c) Birefringent cystals are present in joints
d) Occurs more in females
e) Due to decreased excretion of uric acid

1068. A 38 year old male suffered from redness and swelling of first meta-tarso phalangeal joint thriceover the past two years. He was found to be hypertensive and the EEG showed inverted fiT' waves in precordial leads. Which one of the following investigation will be diagnostic - *(UPSC 96)*
a) Rheumatoid factor b) Serum uric acid
c) E.S.R d) C reactive protein

1069. Commonest degenerative joint disease in -
a) Gout *(Kerala 95)*
b) Osteoporosis
c) Rheumatoid arthritis
d) Osteo arthritis

1070. In Osteo arthritis, following is not a predisposing factor- *(Kerala 96)*
a) Diabetes mellitus
b) Defective joint position
c) Weight bearing joints
d) Incongruity of articular surfaces
e) Old age

1071. Disease where distal interphalangeal joint is characteristically involved- *(TN 99)*
a) Psoriatic arthritis b) Rheumatoid
c) SLE d)Gout

1072. Martel's sign is seen in - *(SGPGI05)*
a) Rheumatoid arthritis
b) Ankylosing spondylitis
c) Gout
d) Osteoarthritis

1073. Erosive arthritis is seen in all, except - *(MAHE 05)*
a) SLE b)Gout
c) Osteoarthritis d) Old age

1074. Which of the following is true of psoriatic arthritis- *(SGPGI 05)*
a) Involves distal joints of hand and foot
b) Pencil in cup deformity
c) Sacroilitis
d) All of the above

1075. All are seronegative (spondyloepiphyseal) arthritis with ocular manifestations, except- *(MAHA 05)*
a) Ankylospondylitis
b) Reiter's disease
c) Rheumatoid arthritis
d) Psoriatic arthritis

1076. Match list I with list II and select the correct answer using the code given below the lists - *(UPSC 07)*

List I (Type of hyperlipidemia)	**ListH** (Feature)
A. Hyperchylomicronaemia	1. Palmerplane xanthoma
B. Hyperbetalipoproteina-	2. Subcutaneous exte-emiansor tendon xantoma
C. Type III hyperlipoproteinaemia	3. Eruptive xanthoma over buttocks
D. Familial LPL deficiency	4. Tryglyceride level above 1000 mg%

Code:

	A	B	C	D
a)	3	1	2	4
b)	3	2	1	4
c)	4	1	2	3
d)	4	2	1	3

1058) a 1059)c 1060)a 1061)c 1062)a,c 1063)a 1064)None 1065)d 1066)d 1067)a,b,c,e 1068)None 1069)d 1070) None 1071)a 1072)c 1073)a 1074)d 1075)c 1076)d

1077. Which of the following joints findings is most suggestive of an inflammatory, rather than an osteroarthritic cause of joints pain ? *(Corned 07)*
a) Painful range of motion
b) Crepitus
c) Bony articular enlargement
d) Swelling and warmth

1078. Acute and recurrent pancreatitis is reported to occur in- *(Corned 08)*
a) Homocystinuria
b) Maple syrup urine disorder
c) Methyl malonic acidemia
d) Tyrosinemia

1079. Wilson's disease is characterized by - *(Corned 08)*
a) Low serum ceruloplasmin and low urinary copper
b) Low serum ceruloplasmin and high urinary copper
c) High serum ceruloplasmin and low urinary copper
d) High serum ceruloplasmin and high urinary copper

1080. All are true about gout except - *(Manipal 09)*
a) Is caused by purine metabolism disorder
b) Causes scleritis
c) Causes tophi in the extraocular muscle tendon
d) Is directly related to alcohol consumption

1081. Most specific diagnostic finding in gout is -
a) Uric acid crystals in urine *(UPSC-109)*
b) Raised serum uric acid
c) Presence of calcium pyrophosphate crystals in synovial fluid
d) Presence of monosdium crystals in synovial fluid

1082. Which one of the following disorders is not associated with carpel tunnel syndrome? *(UPSC-I09)*
a) Diabetes mellitus b) Hypothyroidism
c) Acromegaly d) Addison's disease

1083. "Telescope fingers" occur in - *(COMED09)*
a) Rheumatic arthritisb) Rheumatoid arthritis
c) Psoriatic arthritis d) Reiter's arthritis

SLE

1084. Cardiac lesion in SLE cause - *(Kerala 96)*
a) Verrucous endocarditis
b) Valvular incompetence
c) Heart block
d) Myocardial fibrosis
e) All of the above

1085. A 30 years old sexually active pregnant female suffers from SLE is having + ve VDRL. Next best step is - *(NIMS 96)*
a) Take the VDRL +ve as biological false +ve and do nothing
b) Do contact tracing
c) Treat her for syphilis
d) Do FTS-ABS test

1086. Antibodies most specific for drug induced lupus are- *(MAHE98)*
a) Anti ds DNA b) Antism
c) ANA d) Antihistone

1087. In active lupus nephritis which one of the following prostaglandin excretion is increased in the urine - *(SGPGI04)*
a) Prostaglandin E b) Prostagladin L
c) Prostaglndin A d)None

1088. Antinuclear-antibodiesare present in what percentage of cases of SLE ? *(UPSC 07)*
a) 50% b) 70%
c) 80% d) More than 90%

1089. Most common manifestation of cardiac lupus is- *(Corned07)*
a) Myocarditis b) Libman-Sacks endocardits
c) Pericarditis d) Aortic regurgitation

1090. Anti histone antibodies are characteristics of- *(Corned07)*
a) Drug induced lupus b) Cardiac lupus
c) Lupus nephritis d) MCTD

1091. A 23 years old woman has experienced episodes of myalgias, pleural effusion, pericarditis and arthralgias without joint deformity over course of several years. The best laboratory screening test to diagnose her disease would be -*(Delhi PG Feb. 09)*
a) CD lymphocyte count
b) Erythrocyte sedimentation rate
c) Antinuclear antibody
d) Assay for thyroid hormones

1092. A 30-year old lady presents with malar rash, photosensitivity, positive antinuclear antibody, and 24-hour proteinuria of 4 gram and pedal oedema, the most likely renal pathology in this patient will be- *(Delhi PG Mar. 09)*
a) Minimal change disease
b) Mesangioproliferative glomerulonephritis
c) Diffuse proliferative glomerulonephritis
d) Membranous nephropathy

1093. Anti ds DNA antibody is specific for -*(PGIMay 10)*
a) SLE b) Systemic sclerosis
c) CREST syndrome d) Sjogren's syndrome
e) Wegener's granulomatosis

1094. Indications for use of cyclophosphamide in SLE is-
a) Arthritis *(PGINov. 10)*
b) Anti DNA antibody + ive patients
c) Diffuse prolifereative glomerulonephritis
d) Oral ulcers
e) Discoid lipus

1095. All of the following can cause SLE like syndrome except- *(AIIMS Nov 10)*
a) INH b) Penicillin
c) Hydralazine d) Sulphonamide

VASCULITIS

1096. All the following are features of Scleroderma except-
a) Dysphagia *(AI95)*
b) Raynand's phenomenon
c) Skin contracture
d) Clacification in all the long bones

1077)d 1078)c 1079)b 1080)d 1081)d 1082)d 1083)c 1084)e 1085)d 1086)d 1087)b 1088)d 1089)c 1090)a
1091)c 1092)c 1093) a1094)c 1095)b 1096)d

1097. Features of systemic sclerosis are - *(PGI June 03)*
a) Calcinosis b) Sclerodactyly
c) Raynaud's phenomena d) Melanin deposition
e) Occurs in old age

1098. A 35 year old lady complains dysphagia, Raynaud's phenomenon, sclerodactyly. Investigations show antinuclear antibody. The likely diagnosis is -
a) Systemic lupus erythematosis *(AIIMS June 99)*
b) Systemic sclerosis
c) Mixed connective tissue disorder
d) Rheumatoid arthritis

1099. Anticentromere antibodies are most commonly associated with - *(AI06)*
a) Diffuse cutaneous systemic sclerosis
b) Mixed connective tissue disease
c) CREST syndrome
d) Polymyositis

1100. Vasanti, 28-year-old, presents with complaints of tightness of fingers. There is also history of dysphagia. Which of the following is the probable diagnosis - *(AIIMS Nov 2000)*
a) Dermatomyositis b) Scleroderma
c) Rheumatoid arthritis d) Polyarteritis nodosa

1101. True about generalized systemic sclerosis -
a) Raynaud's phenomenon seen *(PGI June 07)*
years before skin changes in fingers
b) Trunk involvement
c) Anti-centromere antibody

1102. A14yearoldgirlon_exposure_toxolcLhas_pallor-of—extermities followed by pain and cyanosis. In later ages of life she is prone to develop *l(Aiims Nov 08)*
a) Systemic lupus erythematosis
b) Scleroderma
c) Rheumatoid arthritis
d) Histiocytosis

1103. A 14 yrs old girl on exposure to cold has pallor of extremities followed by pain and cyanosis. In later ages of life she is prone to develp? *(AIIMSMay 11)*
a) Systemic lupus erythematosis
b) Scleroderma
c) Rheumatoid arthritis
d) Hisiocytosis

1104. Sclerodema like disorder is/are caused by -
a) Vinyl chloride *(PGI Nov 09)*
b) Bleomycin
c) Aromatic hydrocarbon
d) Pentazocin
e) Gold

1105. Anti-double stranded DNA is highly specific for -
a) Systemic sclerosis *(AIIMS June 97)*
b) SEE.
c) Polymyositis
d) Rheumatic sclerosis

1106. Specific antibody for SLE is - *(PGIDec 2000)*
a) Anti-Ro b)Anti-Jo
c) Anti-Sm d) Anti ds DNA
e) Anti-La

1107. Anti-ds DNA is most specific for - *(PGIDec 03)*
a) SLE b) Rheumatoid Arthritis
c) Scleroderma d) Polymyositis
e) Sjogrens syndrome

1108. Drug induced lupus can be identified by- *(AI06)*
a) Anti-histone antibodies
b) Double stranded DNA antibodies
c) Antinuclear antibodies
d) Anti-SM antibodies

1109. Antibody found in myositis is ? *(AIIMSNov 08)*
a) Anti Jo 1 b) Anti scl 70
c) Anti Sm d) Anti Ku

1110. A 23-year old woman has experienced episodes of myalgias, pleural effusion, pericarditis and arthralgias without joint deformity over course of several years. The best laboratory screening test to diagnose her disease would be - *(AI 03)*
a) CD_4 lymphocyte count
b) Erythrocyte sedimentation rate
c) Antinuclear antibody
d) Assay for thyroid hormones

1111. Diagnostic criteria of SLE is/are - *(PGI Nov 09)*
a) ANA b) Anti ds-DNA
c) Proteinuria > 500 mg/day d) Seizures
e) Leucopenia < 4000/ L

1112. Best marker for drug induced lupus is - *(AI 07)*
a) Anti histone antibodies b) Anti ds DNA
c) ANA d) Anti smith Ab

1113. GharacteristicfeatureofSLEJs^------ *(PGPDec 99)*-----
a) Uveitis b) Joint deformity
c) Polyserositis d) Cavitating lesion is lung

1114. Autoimmune destruction of platelet is seen in- *(AIIMS May 95)*
a) SLE b) Rheumatoid arthritis
c) Reiter disease d) Polyarteritis nodosa

1115. Features of SLE include all of the following except -
a) Recurent abortion *(AI 98)*
b) Sterility
c) Coomb's positive hemolytic anemia
d) Psychosis

1116. Shrinking lung is a feature of - *(PGI June 99)*
a) SLE b) Rheumatoid arthritis
c) Scleroderma d) Sarcoidosis

1117. In which of following arthritis erosions are not seen -
a) Rheumatoid arthritis *(AIIMS May 05)*
b) Systemic lupus erthematosus (SLE)
c) Psoriasis
d) Gout

1118. Deposition of anti ds DNA Ab in kidney, skin, choroid plexus and joints is seen in - *(AI 07)*
a) SLE b) Good pasture
c) Scleroderma d) Raynauds disease

1119. Joint erosions are not a feature of - *(AI 06)*
a) Rheumatoid arthritis
b) Psoriasis
c) Multicentric reticulohistiocytosis
d) Systemic lupus erthematosus

1097) a,b,c,d 1098)b 1099)c 1100)b 1101)b 1102)b 1103)b 1104)a,b,c,d 1105)b 1106)d 1107)a 1108)a
1109) a 1110) c 1111) All 1112) a 1113)c 1114)a 1115)b 1116)a 1117)b 1118)a 1119)d

1120. Wire loop lesions are often characteristic for the following class of lupus nephritis - *(AllMSMay 04)*
a) Mesangial proliferative glomerulonephritis (WHO class II)
b) Focal proliferative glomerulonephritis (WHO class m)
c) Diffuse proliferative glomerulonephritis (WHO class IV)
d) Membranous glomerulonephritis (WHO class V)

1121. In SLE, characteristic kidney lesion is -
a) Mesangial proliferation *(PGI Dec 98)*
b) Tubular fibrin deposits
c) Wire loops
d) IgG deposits

1122. True about drug induced lupus - *(PGI June 07)*
a) Anti histone antibody b) Rare anti-ds DNA
c) Renal involvement d) Serositis

1123. All of the following can cause SLE like syndrome except - *(AIIMS Nov 10)*
a) INH b) Penicillin
c) Hydralazine d) Sulphonamide

1124. Bad prognostic factors in Lupus Nephritis -
a) Anti-ds DNA *(PGIDec 03)*
b) Hypocomplementemia
c) Persistent proteinuria (> 3gm/day)
d) Anti-La(SS-B)

1125. Indications of steroids in SLE are all except -
a) Myocarditis *(AI98)*
b) Endocarditis
c) Thrombocytopenia
d) Neuropsychiatric symptoms

1126. Erosive arthritis is seen in all, except - *(AI2000)*
a) SLE b)Gout
c) Osteoarthritis d) Old age

1127. A middle aged female presents with polyarthritis with elevated rheumatoid factor ANA analevels, which among the following will help you to differentiate rheumatoid arthritis from SLE ? *(A Urns Nov 08)*
a) Soft tissue swelling at the proximal inter phalangial joint
b) Juxta articular osteoporosis or X-ray
c) Articular erosions on X-ray
d) Elevated ESR

1128. In SLE, true are - *(PGIDec 06)*
a) Autoimmune hemolytic anaemia
b) Joint deformity
c) Ted ANA
d) Anti-ds DNA
e) Raynaud's phenomena

1129. Sicca syndrome is associated with all, except -
a) Midline granuloma *(AIIMS Feb 97)*
b) Chronic active hepatitis
c) Rheumatoid arthritis
d) Scleroderma

1130. All the following is found in Sjogren syndrome except - *(AIIMS May09)*
a) Lymphoma b) Connective tissue disorder
c) Xerostomia d) Xerophthalmia

1131. Uveoparotitis is seen in - *(PGI June 98)*
a) SUB b) Sjogren's syndrome
c) Rheumatoid arthritis d) Sarcoidosis

1132. Primary extraglandular sjoren's **syndrome is seen in A/E-** *(PGI Dec99)*
a) Rheumatoid Arthritis b) Raynaud's phenomena
c) Lymphoma d) Splenomegaly

1133. All may be associated with Sicca syndrome, except - *(AIIMS Dec95)*
a) Sarcoidosis b) Rheumatoid arthritis
c) Midline granuloma d) Chronic active hepatitis

1134. Bilateral parotid enlargement occurs in all, except - *(AIIMS June97)*
a) Sjogren's syndrome b)SLE
c) Sarcoidosis d) Chronic pancreatitis

1135. Which of the following diseases is/are mediated through complement activation - *(PGIDec 03)*
a) Atopic dermatitis b) Graft versus Host disease
c) Photoallergy d) Necrotizing vasculitis
e) Urticaria

1136. IV immunoglobulin is used in - *(PGI June 02)*
a) Myasthenia gravis
b) Idiopathic thrombocytopenic purpura
c) Takayasu's arteritis
d) Hemolytic-uremic syndrome
e) Multiple myeloma

1137. I.V. Immunoglobulin is given in -
a) Kawasaki disease
b) PAN
c) Wegener's granulomatosis
d) Bruton's disease
e) Guilain Barre syndrome

1138. Intravenous immunoglobulin is given in - *(PGI June 04)*
a) Kawasaki disease b) GB syndrome
c) Heart block d) Atrial fibrillation
e) Myasthenia gravis

1139. Immunoglobulins used in Rx of - *(PGI Dec 06)*
a) Myasthenia b)I.T.P.
c) PAN d) Wegener's granulomatosis
e) Guillian Barre syndrome

1140. Immunoglobulins given in - *(PGI June 07)*
a) Wiskott Aldrich syndrome
b) X linked hypogammaglobulinemia
c) Kawasaki's disease
d) PAN

1141. Cavitating lesion in lung is seen in - *(PGIDec 99)*
a) PAN
b) SLE
c) Wegeners granulomatosis
d) Sjogren's syndrome

1120)c 1121) c 1122)a,b,d 1123)b 1124)a,b,c 1125)b 1126)a 1127)c 1128)a,c,d,e H29)a 1130)d 1131)d 1132) a 1133) c 1134)b 1135)d 1136)a,b 1137)a,b,e 1138)a,b,e 1139)a,b,e 1140)a,b,c 1141)c

1142. Small vessel vasculitis are - *(PGIDec 2000)*
a) Classical PAN
b) Wegener's granulomatosis
c) Giant cell arteritis
d) HSP
e) Churg-struass syndrome

1143. Small vessel vasculitis are seen in - *(PGINov 09)*
a) Wegener vasculitis
b) Microscopic polyangitis
c) Churg strauss syndrome
d) Kawasaki disease
e) Takayasu arteritis

1144. Granuloma is pathological feature of all, except -
a) Giant cell arteritis *(AIIMS Nov 01)*
b) Microscopic polyangitis
c) Wegner's granulomatosis
d) Churg strauss disease

1145. Vasculitis not commonly seen in adults -
a) Kawasaki disease *(AIIMS Nov 09)*
b) Henoch schonlein purpura
c) Temporal arteritis
d) PAN

1146. ANCA is found in- *(PGIJune 02)*
a) Wegener's granulomatosis
b) Churg-Strauss' disease
c) Microscopic polyangitis
d) Takayasu's arteritis
e) SLE

1147. pANCA is sensitive and specified *for-(AUMSDec 98)*
a) Post streptococcal glomerulonephritis
b) Idiopathic cresentic glomerulonephritis
c) Diffuse glomerulosclerosis
d) Diffuse glomerulosclerosis

1148. C-ANCA associated with - *(PGI June 08)*
a) Wegener's granulomatosis
b) Microscopic polyangitis
c) Churg straus syndrome
d) PAN

1149. c-ANCA is characteristic for - *(AIIMSDec 98)*
a) Polyarteritis Nodosa
b) RJP.GN.
c) Henoch's Schonlein Purpura
d) Wegeners granulomatosis

1150. C-ANCA positivity indicates, antibody formed against - *(AI07)*
a) Proteinase 3
b) Myeloperoxidase
c) Cytoplasmic antinuclear antibody
d) Anti centromere antibody

1151. ANCA is positive in - *(PGI Dec 06)*
a) Wegener's granulomatosis
b) Churg strauss syndrome
c) Microscopic PAN
d) Goodpasture's syndrome

1152. ANCA is NOT associated with which of the following disease - *(AIIMS Nov 2K)*
a) Wegener's granulamatosis
b) Henoch schonlein purpura
c) Microscopic PAN
d) Churg Strauss syndrome

1153. One of the following is a characteristic of Henoch-Schonlein Purpura - *(AIIMS 02)*
a) Blood in stool
b) Thrombocytopenia
c) Intracranial hemorrhage
d) Susceptibility to infection

1154. Henoch Schonlein purpura is characterized by all except- *(AI 94)*
a) Thrombocytopenia b) Glomerulonerphritis
c) Arthralgia d) Abdominal pain

1155. A 24 year old female presents with abdominal pain, hermaturia and arhthralgia. On examination, palpable purpuric rash was seen on trunk, limbs and buttocks. Coagulation tests were normal. What is the most probale diagnosis - *(AIPGMEE 08)*
a) Hemolytic uremic syndrome
b) Henoch-Schonlein purpura
c) Meningococcemia
d) Thrombotic thrombocytopenic purpura

1156. Henoch-Schonlein purpura is characterized by the deposition of the following immunoglobulin around the vessels - *(AIIMS Nov 05)*
a) IgM b) IgG
c) IgA d) IgE

1157. True about Henoch Schonlein Purpura -
a) Abdominal pain *(PGI June 07)*
b) Can lead to end stage renal disease
c) Palpable purpura
d) Intussusception

1158. Triie about HSP- *(PGIDec 2000)*
a) Palpable purpura
b) Kidneys commonly affected
c) C-ANCA positive
d) Thrombocytopenia

1159. A 8 year old male had non blanching rashes over the shin and swelling of knee joint with haematuria +++ and protein +. Microscopic analysis of his renal biopsy specimen is most likely to show -
a) Tubular necrosis *(AIIMS Nov 07)*
b) Visceral podocyte fusion
c) Mesangial deposits of IgA
d) Basement membrane thickening

1160. A child presented with non blanching purpura in the lower limb recurrent abdominal pain further in revealed deposition of IgA. What is the most probable diagnosis - *(PGI Nov 11)*
a) Henoch schonlein purpura
b) Wegeners granulomatosis
c) Kawasaki disease
d) Takayasu disease

1142) a,b,d,e 1143)a,b,c 1144)b 1145)a 1146)a,b,c,e 1147)b 1148)a 1149)d 1150)a 1151)a,b,c 1152)b 1153) a 1154) a 1155)b 1156)c 1157)A11 1158)a,b 1159)c 1160)a

1161. Feature of Henoch-Scholein purpura includes -
a) occur only in elderly person *(PG1 May 11)*
b) Palpable purpura
c) Thrombocytopenia
d) Arthralgia

1162. Kawasaki disease is associated with all of the following features *except* - *(AI96)*
a) Erythema
b) Posterior cervical Lymphadenopathy
c) Thromobocytopenia
d) Conjunctivitis

1163. All are manifestations of Kawasaki disease, Except-
a) Conjunctival congestion *(AlIMSFeb97)*
b) Thrombocytopenia
c) Aneurysm of coronary artery
d) Enlarged lymphnodes

1164. The following are components of Kawasaki disease except- *(AI07)*
a) Purulent conjunctivitis b) Pedal edema
c) Truncal rash d) Pharyngeal congestion

1165. Kawasaki disease is associated with all of the following clinical features except - *(AIIMSDec 98)*
a) Truncal rash
b) Posterior cervical lymphadenopathy
c) Thrombocytopenia
d) Conjunctivitis

1166. Which one of the following is the treatment of choice for Kawasaki's diseses? *(ARMSMay 05)*
a) Cyclosporine b) Dapsone
c) Intravenous immunoglobulin d) Methotrexate

1167. All of the following statement about Kawasaki's disease are true except - *(A1PGMEE08)*
a) It is the most common immune mediated vasculitis in children
b) Coronary artery aneurysm is seen in 25% of patients
c) Intravenous immunoglobulin is indicated only in patients with coronary artery aneurysm
d) Skin, mucus membranes and lymph nodes are involved

1168. Treatment of choice for Kawasaki diseae -
a) IV immunoglobulin b) Steroid *(ARMS May 09)*
c) Azathioprin d) Not recalled

1169. Treatment of choice of Kawasaki disease?
a) IV immunoglobulin b) Steroids *(ARMS Nov 11)*
c) Dapsone d) Methotrexate

1170. In polyarteritis nodosa, aneurysms are seen in all, except - *(ARMS Dec 95)*
a) Kidney b)Lung
c) Liver d) Pancreas

1171. Muscle biopsy in PAN shows - *(PGIJune98)*
a) Necrotising arteritis b) Atrophy
c) Granulomatous lesions d) Ring lesions

1172. A patient presents with melaena. normal renal function, hypertension and mononeuritis multiples. The most probable diagnosis is - *(ARMSNov 04)*
a) Classical polyarteritis nodosa
b) Microscopic polyangiitis
c) Henoch-Schonlein purpura
d) Buerger's disease

1173. A 20 year old woman presents with bilateral conductive deafness, palpable purpura on the legs and hemoptysis. Radiograph of the chest shows a thin-walled cavity in left lower zone. Investigation reveal total leukocyte count 12000/mm^3, red cell casts in the urine and serum creatinine 3mg/dl. What is most probable diagnosis - *(AI 04)*
a) Henoch-Schonlein purpura
b) Polyarteritis nodosa
c) Wegner's granulomatosis
d) Disseminated

1174. Feature of microscopic polyangitis is-*(PGIDec 99)*
a) IgG deposits in kidney
b) Broncho spasm
c) Renal involvement in 90% cases
d) All of the above

1175. An 18 years old boy presents with digital gangrene in third and fourth finger for last 2 weeks. On examination the blood pressure is 170/110 mm of Hg and all peripheral pulses were palpable. Blood and urine examinations were unremarkable. Antinuclear antibodies, Antibody to double standard DNA and antineutrophil cytoplasmic antibody were negative. The most likely diagnosis is -
a) Wegner's granulomatosis *(AI2004-2005)*
b) Polyarteritis nodosa
c) Takayasu's arteritis
d) Systemic lupus erythematosis (SLE)

1176. A 30 years old male patient presents with complaints of weakness in right upper and both lower limbs of last 4 months. He developed digital infarcts involving 2nd and 3rd fingers on right side and 5th finger on left side. On examination, BP was 160/140 mm Hg, all peripheral pulses were palpable and there was asymmetrical neuropathy. Investigations showed a Hb 12 gm, TLC -12000 Cu mm, Platelets 4,30,000, ESR- 49 mm. Urine examination showed proteinuria and RBC -10 -15/ hpf with no casts. Which of the following is the most likely diagnosis ? *(AI 05)*
a) Polyarteritis nodosa
b) Systemic lupus erythematosus
c) Wegener's granulomatosis
d) Mixed cryoglobulemia

1177. A 30-year-old male represents with numbness of both lower limbs and right upper limbs Examination reveals pulse 88/min and BP 16/110 mmHg. He also has digital gangrene involving right 2nd and 3rd finger, urine routine examination is unremarkable. Microscopic examination show RBCs, hemogram and serum biochemistru is within normal limits. What is most probable diagnosis ? *(ARMS 06)*
a) Systemic lupus erythematosis
b) Polyarteritis nodosa
c) Malignant hypertension
d) Chrug-Strauss syndrome

1161) b,d 1162)c 1163) b 1164)a 1165)c 1166)c 1167)a,c 1168)a 1169)a 1170)b 1171)a 1172)a 1173)c 1174)c 1175) b 1176) a 1177)b

1178. A 30-year-old male patient presents with complaints of weakness in right upper and both lower limbs for last 4 months. He developed digital infarcts involving 2nd and 3rd fingers on right side and 5th finger on left side. On examination. BP was 160140 mm Hg. all peripheral pulses were palpable and there was asymmetrical neuropath). Investigations showed Hb 12 gm%, TLC 12,000 per cu. mm. Platelets 4.30.000 and ESR 49 mm. Urine examination showed Proteinuria and RBC-10-15 hpf with no casts. What is the most likely diagnosis - *(AIIMS May 04)*
a) Polyarteritis nodosa
b) Systemic lupus erythematosus
c) Wegener's granulomatosis
d) Mixed cryoglobulinemia

1179. A 25 years old female develops serous otitis media of left ear with cough and occasional hemoptysis and hematuria and epistaxis for one & half months her hemoglobin is 7 gm. B.P.—> 170/100, ptoreinuria +++, RA -ve and ANCA -ve. the likely cause is - *(AIIMS June 99)*
a) Wegener's granulo matosis
b) Rheumiatoid arthritis
c) Rapidly proliferative glomerulonep hritis
d) Good pastern's syndrome

1180. Strawberry gingivitis seen in - *(AIIMSMay 10)*
a) Myelocytic infiltration
b) Phenytoin toxicity
c) Wegner granulomatosis
d) Klipel renaunay syndrome

1181. All of the following are true about Temporal Arteritis except - *(AI96)*
a) Polymyalgia Rheumatica b) Anemia
c) Low ESR d) Sudden blindness

1182. All are true about temporal arteritis, Except -
a) Polymyalgia rheumatica *(AIIMS May 95)*
b) Anaemia
c) Low ESR
d) Sudden blindness is a complication

1183. All are true about temporal arteritis except -
a) Can leads to sudden bilateral blindness
b) More common in females *(AIIMS May 10)*
c) Worsen on exposure to heat
d) Mostly affects elderly

1184. True about giant cell arteritis include the following except- *(AI09)*
a) Causes sudden bilateral blindness
b) Common in elderly
c) Females more commonly affected than males
d) Worsens on exposure to heat

1185. An elderly female presents with the features of fever, headache, diplopia. Biopsy of the artery revealed panarteritis. What is the most probable diagnosis -
a) Nonspecific arteritis *(AIIMS Nov 09)*
b) PAN
c) Wegeners granulomatosis
d) Temporal arteritis

1186. 21 Year old female presented with aortic arch aneurysm she underwent resection and the specimen was sent to histopathological examination. It showed all three layers were involved and giant cells were present. What is the probable diagnosis -
a) Tubercular aortitis *(AIIMS Nov 09)*
b) Wegeners granulomatosis
c) Giant cell arteritis
d) Nonspecific aortoarteritis

1187. Hypersensitivity vasculitis *m\o\\zs-(AIIMSMay 09)*
a) Capillary b) Arterioles
c) Postcapillary venules d) Medium sized arteries

1188. Hypersensitivity vasculitis affects - *(AIIMSMay 10)*
a) Post-capillary venules b) Arterioles
c) Veins d) Medium-sized arteries

1189. Feature of microscopic poly angitis is -
a) IgG deposits in kidney *(U.PPG.M.E.E. 04)*
b) Bronchospasm
c) Renal involvement in 90% cases
d) All of the above

1190. In takayasu arteritis there is - *(NIMHANS 05)*
a) Intimal fibrosis b) Renal hypertension
c) Coronary aneurysm d) All of the above

1191. Skin manifestations of polyarteritis include -
a) Livido reticulosis *(MAHE 05)*
b) Hyper pigmentation
c) Subcutaneous infarct
d) Bullous dermatitis

1192. All are the criteria of Kawasaki disease except -
a) Fever of 5 days duration *(APPGE 05)*
b) Mucopurulent conjunctivitis
c) Coronary aneurysms
d) Lymphadenopathy

1193. All of the following organs contain aneurysm in polyarteritis nodosa except ? *(APPG 06)*
a) Liver b)Lung
c) Kidney d) Pancreas

1194. A five year old girls presents with fever and conjunctivitis. Physical examination is significant for oral erythema and flssuring along with a generalised maculopapular rash and cervical lymphadenopathy. What is the most likely diagnosis?
a) Henoch-Schnolein purpura *(UPSC07)*
b) Polyarteritis nodosa
c) Kawasaki disease
d) Takayasu arteritis

1195. The most common leukocytoclastic vasculitis affecting children is - *(Delhi PG Feb. 09)*
a) Takayasu disease
b) Mucocutaneous lymph node syndrome (Kawasaki disease)
c) Henoch Schonelin purpura
d) Polyarteritis nodosa

1178) a 1179) a 1180)c 1181)c 1182)c 1183)c 1184)d 1185)d 1186)d 1187)c 1188)a 1189)c 1190)d 1191)a,c 1192)c>b 1193)b 1194)b 1195)c

1196. Multiple cavitatory lesion in lungs, hematuria and renal insufficiency are features in a patient with -
a) Polyarteritis nodosa *(Delhi PG Mar 09)*
b) Churg Strauss syndrome
c) Wegener's granulomatosis
d) Temporal arteritis

1197. Of the following vasculitides, coronary artery aneurysms are most often in - *(COMED 09)*
a) Kawasaki disease
b) Giant-cell arteritis
c) Wegener's granulomatosis
d) Leucocytoclastic vasculitis

1198. In giant cell arteritis : *(Manipal 09)*
a) Histological diagnosis is based on fragmentation of the internal intimal
b) C-reactive protein is always raised
c) Giant cell is needed for diagnosis
d) Anaemia is a feature

1199. A 20-year-old woman presents with bilateral conductive deafness, palpable purpura on the legs and hemoptysis. Radiograph of the chest shows a thin-walled cavity in left lower zone. Investigations reveal total leukocyte count 12,000/mm red cell casts in the urine and 12,000/mm serum creatinine 3 ing/dL. What is the most probable diagnosis ?
a) Henoch-Schonlein purpura *(Manipal 09)*
b) Polyarteritis nodosa
c) Wegener's granulomatosis
d) Disseminated tuberculosis

1200. An 18-year-old boy presents with digital gangrene in third and fourth fingers for last 2 weeks. On examination the blood pressure is 170/110 mm of Hg and all peripheral pulses were palpable. Blood and urine examinations were unremarkable. Antinuclear antibodies, antibody to double stranded DNA and antineutrophil cytoplasmic antibody were negative. The most likely diagnosis is :
a) Wegener's granulomatosis *(Manipal 09)*
b) Polyarteritis nodosa
c) Takayasu's arteritis
d) Systemic lupus erythematosus (SLE)

1201. All are true about Sjogren syndrome except - *(PGIMay 10)*
a) Interstitial nephritis b) Subcutaneous fibrosis
c) Lack of tear d) Xerostomia
e) More common in male

1202. Feature (s) of wegener's granulomatosis is/ar e - *(PGI May 10)*
a) Sinusitis b) CD4/CD8 ratio reversed
c) ANA positive d) Hypocomplementia

1203. A14 yrs old girl on exposure to cold has pallor of extremities followed by pain and cyanosis. In later ages of life she is prone to develp? *(AIIMSMay 11)*
a) Systemic lupus erythematosis
b) Scleroderma
c) Rheumatoid arthritis
d) Hisiocytosis

1204. A 45-year-old male has rhinitis, bronchial asthma, eosinophilia and systemic vasculitis. What is the probable diagnosis? *(UPSC111)*
a) Goodpasture's syndrome
b) Cryptogenic fibrosing alveolitis
c) Churg-Strauss syndrome
d) Sarcoidosis

1205. Which one of the following clinical features is not characteristic of Giant Cell Arteritis? *(UPSC111)*
a) Headache is usually the first symptom
b) Jaw pain during chewing
c) Palatal paralysis
d) Loss of visual acuity

1206. Which one of the following statements is best suited for isolated polymyalgia rheumatica? *(UPSC111)*
a) Temporal artery biopsy is necessary to confirm the diagnosis.
b) Resonse to oral corticosteroids typically occurs within seven days.
c) Corticosteroid therapy should be withdrawn after six months.
d) Sudden uniocular blindness suggests steroid-induced cataract

1207. ANCA is NOT associated with which of the following disease - *(NEET/DNB Pattern)*
a) Wegener's granulamatosis
b) Henoch schonlein purpura
c) Microscopic PAN
d) Churg Strauss syndrome

1208. Henoch Schonlein purpura is characterized by all except - *(NEET/DNB Pattern)*
a) Thrombocytopenia b) Glomerulonerphritis
c) Arthralgia d) Abdominal pain

1209. All are manifestations of Kawasaki disease, Except-
a) Conjunctival congestion *(NEET/DNB Pattern)*
b) Thrombocytopenia
c) Aneurysm of coronary artery
d) Enlarged lymphnodes

1210. Jaw tightness in proximal temporal arteries. Diagnosis - *(NEET/DNB Pattern)*
a) PAN
b) Coarctation of aorta
c) Giant cell arteritis
d) Wegner's granulomatosis

1211. A 50 year old male came to emergency department with complains of unilateral headache, diplopia and difficulty in chewing food. On evaluation, MRI was normal, ESR was persistently high. The most appropriate drug for treatment - *(AIIMS, May 12)*
a) Aspirin b) Coxibs
c) Prednisolone d) Sodium valproate

1212. Lupus pernio is seen in - *(NEET/DNB Pattern)*
a) Tuberculosis b) SLE
c) PAN d) Sarcoidosis

1196) c 1197) a 1198)c 1199)c 1200)b 1201)b,e 1202)a,c 1203)b 1204)c 1205)c 1206)b 1207)b 1208)a 1209) b 1210) c 121 l)c 1212) d

SARCOIDOSIS

1213. B/L hilar lymphadenopathy, along with non caseating granulomas is a characteristic feature of- *(AI97)*
a) Sarcoidosis b) Scleroderma
c) SLE d) Stein-leventhal syndrome

1214. All are correct regarding sarcoidosis except -
a) Often cavitate *(AlIMS 98)*
b) Spontaneous remission is usual
c) Tuberculine test is negative
d) B/L hilar lymphadenopathy

1215. Following cranical nerve is most commonly involved in patients with sarcoidosis - *(AlIMSNov 02)*
a) II Cranical neive. b) III Cranial nerve.
c) IV Cranial nerve. d) VII Cranial nerve.

1216. A woman is admitted with complains of low-grade feverof 6 weeks duration. Chest radiograph reveals bihilar adenopathy with clear lung. All of the following investigations will be useful in differential diagnosis wxcept- *(AI 04)*
a) CD4/CD8 counts in the blood
b) Serum ACE levels
c) CECT of chest
d) Galliun scan

1217. Serum angiotensin converting enzyme may be raised in all of the following,except - *(AI 05)*
a) Sarcoidosis b) Silicosis
c) Berylliosis d) Bronchogenic carcinoma

1218. True about sarcoidosis is- *(PG1DEC99)*
a) Kveim test in not helpful in diagnosis
b) May be assiciated with positive RA factor
c) Pleural effusion
d) Common is 50 years male

1219. Sarcoidosis causes all except - *(MP2K)*
a) Osteomalacia b) Addison's disease
c) Diabetes insipidus d) Hypercalcemia

1220. What is the most common presentation of sarcoidosis - *(UPSC 05)*
a) Erythema nodosum
b) Respiratory manifestation
c) Constitutional
d) Abnormal routine X-ray chest

1221. The following tests may be useful in the assessment of a patient with sarcoidosis - *(Manipal 09)*
a) Chest X-ray b)ACE
c) Conjunctiva biopsy d) Serum calcium
e) All the above

1222. Sarcoidosis - *(Manipal 09)*
a) Is associated with HLA Bj
b) Is commoner in elderly people
c) Causes caseating granuloma
d) Produces bilateral hilar lymphadenopathies in the absence of pulmonary symptoms

1223. A woman is admitted with complains of low-grade fever of 6 weeks duration. Chest radiograph reveals bihilar adenopathy with clear lung fields. All of the following investigations will be useful in differential diagnosis except: *(Manipal 09)*
a) CD4/CD8 counts in the blood
b) Serum ACE levels
c) CECT of chest
d) Gallium scan

1224. Cause of nephrocalcinosis in granulomatous ds -
a) Increased calcium absorption *(AlIMS Nov 10)*
b) Increased conversion to 1,25 OH
c) Dystrophic calcification
d) Mutation in calcium sensing receptor

HEMOCHROMATOSIS

1225. Apatient presents with Arthritis, hyperpigmentation of skin and hypogonadism, likely diagnosis is -
a) Hemochromatosis *(AI 01)*
b) Ectopic ACTH secreting tumour of the lung
c) Wilson's disease
d) Rheumatoid arthritis

1226. A patient presented with skin pigmentation, hyperglycemia and his serum ferrith level is 900 microgram/1, possible diagnosis- *(PG1 June 03)*
a) Aceruloplasminemia
b) Atransferrinemia
c) Sideroblastic anemia
d) Hereditary spherocytosis
e) Thalassemia

1227. Earliest phenotypic manifestation of Idiopathic hereditary hemochromatosis is - *(AlIMSMay 07)*
a) Post prandial increase in serum iron concentration
b) Elevated serum ferritin level
c) Slate grey pigmentation of skin
d) Increased transferrin saturation

1228. Lallo, aged 54 years, who is a known diabetic patient develops cirrlosis. There is associated skin hyperpigmentation and restrictive cardioncyopathy which of the following is the best initial test to diagnose this case.
a) Total iron binding capacity
b) Serum ferritin
c) Serum copper
d) Serum ceruloplasmin

1229. All are seen in hemochromatosis except -
a) Hypogonadism *(AIPGMEE08)*
b) Arthropathy
c) Bronze diabetes
d) Desferrioxamine is the treatment of choice

1230. True about hemochromatosis - *(AlIMSMay 10)*
a) Is genetically heterogenous
b) Cannot be treated by phlebotomy
c) Completely penetrant
d) More common in females

1213)a 1214)a 1215)d 1216)a 1217)d 1218)a 1219)a 1220)d 1221)d 1222)d 1223)c 1224)a 1225)a 1226) b 1227) d 1228)a 1229) d 1230)a

1231. True about hemochromatosis - *(AI09)*
a) Genetically heterogenous
b) More common in women than in men
c) Cannot be treated with phlebotomy
d) Fully penetrant

WILSON'S DISEASE

1232. All of the following are features of Wilson's disease, except -
a) Hemolytic anemia b) Testicular atrophy
c) Chorea d) Chronic active hepatitis

1233. A 12 years old girl with tremors and emotional liability has golden brown discolouration in Descement's membrane. The most likely diagnosis is- *(AI04)*
a) Fabry's disease
b) Wilson's disease
c) Glycogen storage disease
d) Acute Rheumatic fever

1234. Kayser-Fleischer rings (KF rings) are seen in -
a) Pterygium *(AI10)*
b) Hematochromatosis
c) Wilson's disease
d) Menke's kinked hair syndrome

1235. All of the following statements about. Wilson's disease are true, EXCEPT - *(AIIMS May 04)*
a) It is an autosomal recessive disorder
b) Serum Ceruloplasmin level is <20 mg/di
c) urinary copper exxretion is <100 mg/day
d) Zinc acetate is effective as maintenance therapy

1236. Which of the following statements about Wilson's disease is true - *(AI 10)*
a) Low serum ceruloplasmin and low urinary copper
b) Low serum ceruloplasmin and high urinary copper
c) High serum ceruloplasmin and low urinary copper
d) High serum ceruloplasmin and high urinary copper

1237. A14 year old boy presents wit recurrent episodes of hepatitis Opthalmoscopic evalution reveals KF rings and serum ceruloplasmin levels are < 20 mg/dl. The treatment of choice for initial therapy is -
a) Zinc
b) Pencillamine
c) Tetrathromolybdate
d) Hepatic transplantation

1238. All of the following are true about Raynaud's disease except- *(AI 07)*
a) More common in females
b) Positive antinuclear antibodies
c) Most common cause of raynaud's phenomenon
d) Has good prognosis

1239. Hyper extensibility with normal elastic recoil is a feature of - *(AIIMS May 10)*
a) Ehlers Danlos syndrome
b) Pseudoxanthoma elasticum
c) Cutis laxa
d) Scleroderma

1240. Plasmapharesis is used in all of the following except- *(AI 10)*
a) Myaesthenic crisis
b) Cholinergic crisis
c) Gullian Barre syndrome
d) Polymyositis

1241. Which is not autoimmune disease - *(AI 2011)*
a) SLE b) Grave's disease
c) Myasthenia Gravis d) Sickle cell disease

1242. True about wilson's disease A/E - *(NEET/DNB Pattern)*
a) Autosomal dominant
b) Hemolytic anemia
c) Low serum ceruloplasmin
d) Zinc acetate is effective as maintenance

1243. Pinch purpura around eyelids is one of the most common finding in - *(NEET/DNB Pattern)*
a) Fabry's disease
b) Primary systemic amyloidosis
c) Porphyria cutanea tarda
d)

1244. Most common cause of fracture in hemophilic arthropathy - *(NEET/DNB Pattern)*
a) Osteoporosis & restrictive joint movement
b) Cartilage destruction
c) Inflammatory arthropathy
d) Osteosclerosis

1245. Zellwenger syndrome, defect is in- *(NEET/DNB Pattern)*
a) Endoplasmic reticulum b) Lysosome
c) Mitochondria d) Peroxisome

FLUID & ELECTROLYTE

1246. Primary increase in CO_z in body is seen in -
a) Respiratory acidosis *(PGIDec. 99)*
b) Respiratory alkalosis
c) Metabolic acidosis
d) Metabolic alkalosis

1247. Respiratory acidosis is characterized by - *(May 93)*
a) Raised $PC0_2$ and elevated pH
b) Decreased plasma $HC0_3$ and decreased $PC0_2$
c) Increased $PC0_2$ and decreased pH
d) Decreased pH and decreased $PC0_2$

1248. ABG analysis of a patient on ventilator, shows decreased pCO_z, normal $p0_2$, pH 7.5, diagnosis is -
a) Resp. acidosis b) Metabolic alkalosis *(AI 01)*
c) Resp. alkalosis d) Metabolic acidosis

1249. A 40 years old male develops excessive hyperventilation. ABG reveals pH- 7.5 $pC0_2$ 24 mm Hg $P0_2$ 88 mm of Hg. True statement is - *(AIIMS June 99)*
a) Respiratory alkalosis b) Metabolic alkalosis
c) Respiratory acidosis d) Metabolic acidosis

1250. A female patient after inj ury comes to casualty. Her ABG shows low pH. $PC0_2$ high, bicarbonate normal. The diagnosis is - *(AIIMS Nov. 99)*
a) Respiratory alkalosis b) Respiratory acidosis
c) Metabolic acidosis d) Metabolic alkalosis

1231) a 1232) b 1233)b 1234)c 1235)c 1236)b 1237)a 1238)b 1239)a 1240)b 1241) d 1242)a 1243)b 1244)a 1245)d 1246) a 1247)c 1248)c 1249)a 1250)b

1251. In a patient $P0_2$ is 85 mm Hg, $PC0_2$ is 50 mm Hg, pH is 7.2 and $HC0_3$ is 20 meq/L is suffering from -
a) Respiratory acidosis with compensated metabolic alkalosis
b) Respiratory acidosis with decompensated metabolic acidosis
c) Metabolic acidosis
d) Metabolic alkalosis

1252. An ABG analysis shows, pH 7.2, raised $pC0_2$ decreased $HC0_3$ diagnosis is - *(AI01)*
a) Respiratory acidosis
b) Compensated metabolic acidosis
c) Respiratory and metabolic acidosis
d) Respiratory alkalosis

1253. PH. 7.2 $P0_2$ mm Hg 50 mm Hg, $HC0_3$– 13, the values goes in favour of - *(PGIDEC 99)*
a) Respiratory acidosis
b) Metabolic alkalosis
c) Respiratory alkalosis
d) Both respiratory and metabolic acidosis

1254. A patient with salicylic acid poisoning has the following arterial blood gas analysis report: pH is 7.12; $PC0_2$ is 18 mm Hg $HC0_3$' is 12 mmol/L. The resulting acid- base abnormality can be best labeled as- *(A1IMSNov. 2003)*
a) Metabolic acidosis with respiratory alkalosis
b) Metabolic acidosis with respiratory acidosis
c) Respiratory acidosis with metabolic alkalosis
d) Metabolic acidosis

1255. Arterial blood gas analysis of a patient reveals-pH 7.2, $HC0_3$ 36 mmol/L $pC0_2$ 60 mm of Hg. The abnormality is - *(AIMS June 99)*
a) Respiratory acidosis with metabolic alkalosis
b) Respiratory acidosis
c) Respiratory alkalosis with metabolic acidosis
d) Respiratory acidosis with metabolic acidosis

1256. pH is 7.2; PCO_z 12; $P0_2$ 55 most likely cause is -
a) Metabolic acidosis and respiratory alkalosis
b) Metabolic alkalosis *(PGI June 98)*
c) Respiratory acidosis
d) Respiratory alkalosis

1257. If blood gas analysis reveal pH = 7.52, pCO2=30; pO_z= 105. This will be compensated by ? *(AI10)*
a) Compensatory respiratory acidosis
b) Compensatory respiratory alkalosis
c) Compensatory metabolic acidosis
d) Compensatory metabolic alkalosis

1258. A 2 year old child is being evaluated for persistent metabolic acidosis. Blood tests show Na^+140 mEq/I, K+ 3 mEq/I, Ca^{2+} 8 mg/dL, mg^{24} 2 mg/dL, phosphate 3 mg/dl, pH 7.22, bicarbonate 16 mEq/I and chloride 112 mEq/I. The plasma anion gap is -
a) 9 b) 15 *(AIMS Nov 2004)*
c) 22 d)25

1259. A normal-anion-gap metabolic acidosis occurs in patients with - *(AIMS Nov 2003)*
a) Dirrhoea
b) Diabetic ketoacidosis
c) Methyl alcohol poisoning
d) Acute renal failure

1260. Hyperchloremic acidosis is seen in - *(PGI Dec 06)*
a) RTA b) Diarrhoea
c) DKA d) Dehydration

1261. All of the following cause high anion gap metabolic acidosis except - *(AMS Nov 2002)*
a) Lactic acidosis
b) Salicylats poisoning
c) Ethylene glycol poisoning
d) Ureterosigmoidostomy

1262. 10 year old boy which short stature presented with poluria and polydipsia. Lab values are : pH 7.34, CO, - 32 mm of Hg, $HC0_3$-16, Na 140, K-4.9, Cl 114, BUN-140 & creatinine -1.8. Likely acid-base picture will be - *(AIMS Nov 10)*
a) Metabolic alkalosis
b) Non-aniongap metabolic acidosis
c) Aniongap metabolic acidosis
d) Respiratory acidosis

1263. All are causes of increased anion gap except ?
a) DKA *(AIMS May 08)*
b) Starvation
c) Ethylene glycol poisoning
d) Glue sniffing

1264. Normal anion gap metabolic acidosis is caused by -
a) Cholera b) Starvation *(AI 03)*
c) Ethlene glycol poisoning d) Lactic acidosis

1265. The following condition is not associated with an increased anion-gap type of metabolic acidosis -
a) Shock *(AI 02)*
b) Ingestion of ante-freeze
c) Diabetic keto-acidosis
d) COPD

1266. Widened anionic gap is not seen in - *(AI 96)*
a) Acute renal failure b) Diarrhea
c) Lactic acidosis d) Diabetic Ketoacidosis

1267. Increased anion gap acidosis is seen in -
a) DKA b) RTA *(PGI DEC 02)*
c) ARF d) Organic aciduria
e) Diarrhoea

1268. Increased 'anion gap' is not seen in - *(AI 94)*
a) Salicylate poisoning
b) Renal tubular acidosis
c) Lactic acidosis
d) Ethylene glycol poisoning

1269. Increased anion gap metabolic acidosis is seen in all except - *(AIMS May 0 7)*
a) Starvation b) Salicylate poisoning
c) Lactic acidosis d) Diarrhoea

1251)b 1252) c 1253)d 1254)a 1255)a 1256)a 1257)c 1258)b 1259)a 1260)a,b 1261)d 1262)b 1263)d 1264) a 1265) d 1266)b 1267)a,c,e 1268)b 1269) d

1270. Tsed Anion gap acidosis seen in A/E - *(PGIDec 06)*
a) ARF b)RTA
c) DKA d) Ethylene glycol
e) Diuretics

1271. Lactic acidosis is *not* seen in - *(Al 96)*
a) Methanol poisoningb) Respiratory failure
c) Circulatory failure d) Tolbutamide

1272. Following conditions can themselves cause metabolic acidosis -
a) Diarrhea b) Diuretic
c) Ethylene d)RTA

1273. Persistant vomiting most likely causes - *(Al04)*
a) Hyperkalemia b) Acidic urine excretion
c) Hypochloraemia d) Hyperventilation.

1274. Features seen in a patient with chronic vomiting include - *(PGI Dec 01)*
a) Hyponatremia b) Hypochloremia
c) Metabolic alkalosis d) Hypokalemia
e) Metabolic acidosis.

1275. Which of the following doesn't cause metabolic acidosis - *(May 93)*
a) Pyloric stenosis b) Renal failure
c) Ureterosigmoidostomy d) Pancreatic Fistula

1276. Acute metabolic acidosis - *(Al 02)*
a) Has biphasic effect on K^+ excertion
b) Does not effect K^+ excretion significantly
c) Decreases urinary K^+ excertion
d) Increases urinary K^+ excretion

1277. A 50 kg man with severe metabolic acidosis has the following parameters: pH 7.05 $pC0_2$12mm Hg. $p0_2$108mm Hg. $HC0_3$ 5m Eq/L base excess-30 mEq/L. The approximate quantity of sodium bicarbonate that he should receive in half hour is -
a) 250 mEq. b) 350 mEq.
c) 500 mEq. d) 750 mEq.

1278. Increased osmolar gap is not seen in poisoning of -
a) Para-aldehyde b) Acetone *(A11MS Feb 97)*
c) Methanol d) Ethylene glycol

1279. Positive urinary anion gap is found in - *(A109)*
a) Alcholic ketoacidosis
b) Diabetic ketoacidosis
c) Renal tubular acidosis
d) Diarrhea

1280. Urinary anion gap an indication of excretion of -
a) Ketoacids b) NH_4 *(Al 02)*
c) H^+ ion d) K^+ ion

1281. Chloride responsive alkalosis causes -
a) Recurrent vomiting b) Bartter's syndrome
c) Milk alkali syndrome d) Over dose of diuretics
e) Cushing syndrome

1282. Causes of metabolic alkalosis include all the following except - *(Al 03)*
a) Mineralocorticoid deficiency
b) Bartter's syndrome
c) Thiazide diuretic therapy
d) Recurrent vomiting

1283. Metabolic alkalosis is seen in - *(AllMSNov 07)*
a) Primary mineralocorticoid excess
b) Deficiency of mineralocorticoid
c) Decreased acid excretion
d) Decreased base excretion

1284. Chloride responsive alkalosis, causes are -
a) Severe vomiting *(PGI June 06)*
b) Bartter's syndrome
c) Milk alkali syndrome
d) Frusemide therapy

1285. Cause of metabolic alkalosis includes -*(PGI May 11)*
a) Furosemide b) Addision disease
c) Hypokalemia d) Hyponatremia

1286. Metabolic alkalosis is seen in all except - *(Al 96)*
a) Thiazide diuretic therapy b) Prolonged vomiting
c) Uretero-sigmoidostomy d) Cushing's disease

1287. Respiratory alkalosis occur in - *(May 93)*
a) Excessive ventilation
b) Pyloric stenosis
c) Diabetic ketoacidosis
d) Primary hyperaldosteronism

1288. Metabolic alkalosis seen in following except - *(PGI June 9 7)*
a) Methanol poisoning b) Cushing's disease
c) Vomiting d) Diuretic therapy

1289. Metabolic alkalosis is associated - *(PGI DEC 01)*
a) Fanconi's anemia b) Acetazolamide
c) Spironolactone d) Triamterene
e) Hypocalcemia.

1290. Hyperkalaemia can occur in all, except- *(Nov 93)*
a) Insulin deficiency b) Metabolic acidosis
c) Acute renal failure d) Cushing's syndrome

1291. True about hyperkalemia - *(PGI Dec 03)*
a) Stop heart in systole
b) Insulin-Glucose is given
c) ECG is diagnostic
d) Serum potassium more than 5.2 mmol/L
e) ECG changes correlates with serum potassium

1292. A girl presented with severe hyperkalemia and peaked T waves on ECG Fastest way of shifting potassium intracellularly is - *(A1IMS May 10)*
a) Calcium gluconate IV b) Oral resins
c) Insulin + glucose d) Sodium bicarbonate

1293. All of the following are used for treatment of hyperkalemia except - *(AIIMS 06)*
a) Calcium gluconate
b) Sodium bicarbonate
c) Intravenous infusion of glucose with insulin
d) Beta blockers

1294. A 9 year old girl was admited for dialysis. On laboratory examination her potassium levels were 7.8 mEq/L. Which of the following would quickly lower her increased potassium levels - *(Al 09)*
a) IV calcium gluconate
b) IV Glucose and insulin
c) Oral kayexalate in sorbitol
d) IV$NaHC0_3$

1270) b,e 1271) d 1272)a,c,d 1273)borc 1274) a,b,c,d 1275)a 1276)c 1277)a 1278)a 1279)c 1280)b 1281)a,c,d 1282) a 1283) a 1284)a,b,d 1285)a,c 1286)c 1287)a 1288)a 1289)e 1290)d 1291) b,d 1292) c 1293) d 1294)b

1295. Rapid correction of severe hyperglycemia by insulin can cause - *(AI09)*
a) Hypokalemia b) Hyperkalemia
c) Hyponatremia d) Hypernatremia

1296. Hyperkalemia with no ECG finding. The drug that should not be used is - *(AIIMS Nov 09)*
a) Sodium bicarbonate b) Calcium gluconate
c) Glucose with insulin d) Resins

1297. Hyperkalemia without ECG changes may be treated with all except - *(AIIMS Nov 10)*
a) Calcium gluconate b) Salbutamol
c) Na bicarbonate d) Insulin with dextrose

1298. Treatment of hyperkalemia includes -*(PGIMay 11)*
a) IV dextrose infusion b) parenteral $NaC0_3$
c) Parenteral $CaC0_3$ d) Albuterol
e) Ipratropium

1299. Rapid infusion of insulin causes - *(AIIMSMay 10)*
a) Hyperkalemia b) Hypokalemia
c) Hypernatremia d) Hyponatremia

1300. Hyperkalemia with no ECG finding. The drug that should not be used is - *(AIIMS Nov 09)*
a) Sodium bicarbonate b) Calcium gluconate
c) Glucose with insulin d) Resins

1301. All are used in hyperkalemia *except-(AIIMSNov 09)*
a) 50 ml of 50% dextrose b) Sodium bicarbonate
c) Salbutamol d) Calcium gluconate

1302. Drugs not used for treatment of acute hyperkalemia-
a) Insulin + glucose *(AIIMS May 09)*
b) Potassium exchange resins
c) Calcium carbonate
d) Sodium bicarbonate

1303. In hyperkalamia - *(PGIDEC 02)*
a) Serum level >5.5 meq/L b) Serum level > 6.5 meql
c) T. wave inversion d) Peaking of T. wave
e) Venticular fibrillation

1304. All of the following may occur due to hyperkalemia, except -
a) Prolonged PR interval b) Prolonged QRS interval
c) Prolonged QT interval d) Ventricular asystole

1305. Treatment of Acute Hyperkalemia- *(PGI Dec 05)*
a) Ca gluconate given
b) Insulin & Glucose reduces hyperkalemia within 4 hrs
c) Dialysis not useful
d) Resin shows the response within minutes
e) IV $NaHC0_3$ given

1306. Hypokalemia is seen with - *(PGI June 02)*
a) Frusemide b) Cortisol
c) Metabolic acidosis d)Amiloride
e) Addison's disease

1307. Condition (s) associated with hypokalemia -
a) Type I Renal Tubular Acidosis (RT A) *(PGI 09)*
b) Type IIRTA
c) TypelVRTA
d) Pencillin therapy
e) Amphotericin B therapy

1308. Effects of hypokalemia - *(PGI June 0 7)*
a) Alkalosis b) Arrhythmia
c) Ileus of intestine d) Polyuria

1309. How much Potassium is present in the Ringer Lactate solution - *(AIIMS Nov 10)*
a) 1 mEq/L b) 4 mEq/L
c) 2 mEq/L d) 6 mEq/L

1310. A10 days old neonate is posted for pyloric stenosis surgery. The investigation report shows a serum calcium level of 6.0 mg/dl. What information would you like to know before you supplement calcium to this neonate ? *(AIIMS Nov 04)*
a) Blood glucose b) Serum protein
c) Serum bilirubin d) Oxygen saturation

1311. What is the cause of tetany in patients with hyperventillation ? *(AIIMS Nov 2001)*
a) Metabolic alkalosis
b) Decreased levels of potassium
c) Respiratory acidosis
d) Decreased plasma calcium levels

1312. Which is not true of hypocalcaemia - *(AI 95)*
a) Can occur in hypoparathyroidism
b) Latent tetany is seen
c) Prolonged QT interval
d) Inverse relation with $Mg^{*4,}$ levels

1313. Hypernatremic dehydration is characterized by-
a) S. Sodium > 150 meq/L *(PGIDec 03)*
b) Signs of dehydration are miniral
c) ECF volume 1 ed
d) Rapid correction is required
e) Shift of water from ECF to ICF

1314. Most dangerous dehydration is - *(PGI June 98)*
a) Hyponatremic b) Hypematremic
c) Isonatremic d)Non-diarrhoel cause

1315. All are features of hypernatremia, except -
a) Convulsion *(AIMSDec 97)*
b) Elevated intracranial tension
c) Periodic paralysis
d) Muscle twitching

1316. Ureterosigmoidostomy can complicate as -*(May 95)*
a) Carcinoma colon
b) Carcinoma bladder
c) Hyperchloremic acidosis
d) Hyperchloremic alkalosis

1317. Lysis of cells cause A/E- *(PGI Dec 98)*
a) Hyperuricemia b) Hypercalcemia
c) Hyper phosphatemia d) Hyperkalemia.

1318. Sweat chloride levels are increased in all of the following conditions except - *(AI 99)*
a) Ectodermal dysplasia
b) G-6 PD -deficiency
c) Heriditary nephrogenic-diabetes incipidus
d) Obesity

1295) a 1296) b 1297)a 1298)a,b,c,d 1299)b 1300)b 1301)a 1302)b 1303)a,b,e 1304)c 1305)a,e 1306)a,b 1307)a,b,d,e 1308) a,b,c,d 1309)b 1310)b 1311)d 1312)d 1313)a,b,c 1314)b 1315)c 1316)c 1317)b 1318)d

1319. Water-fluid balance is characterized by -*(PGI June 04)*
a) Maintained by endogenous water loss
b) Maintained by exogenous water loss
c) Daily fecal loss is 500 ml.
d) Daily respiratory loss is 500 ml.

1320. All are true regarding idiopathic edema of woman except- *(AI04)*
a) It is due to estrogen mediated sodium retention
b) It is not related to menstrual cycle
c) There is increased water retention in upright position
d) ACE inhibitors can be useful in some cases

1321. True about Ringer's Lactate - *(PGIDec 04)*
a) Isotonic
b) Colloidal solution
c) Potassium level is same as that of serum potassium
d) Helps in acidosis by acid neutralization
e) Automatic fluid of choice in hypotension

1322. A child suffering from acute diarrhoea is brought to the casualty and is diagnosed as having severe dehydration with pH of 7.23. Serum Na-125, Serum K-3, $HC0_3$' 16. The best I.V. fluid of choice is- *(AIIMS May 01)*
a) 3% Saline b) N/3 Saline + 10% dextrose
c) Normal saline d) N/3 saline + 5% dextrose

1323. Patient with pyloric stenosis secondary to peptic ulcer, complains of profuse vomitting and Na^+ -125 meq./L, K^+— > 23 meq/L and Cl—> 85 meq/L, BE-8meq/L should be given- *(AIMS June 2000)*
a) Half normal saline b) Normal saline
c) K^+ bolus d) Hypertonic saline

1324. Sine wave pattern in E.C.G is seen in-*(J1PMER 95)*
a) Hypokalemia b) Hyperkalemia
c) Hyponatremia d) Hypermatremia

1325. In hypokalaemia all ECG changes are seen except-
a) Decreased T-wave amplitude *(Kerala 98)*
b) Normal ST segment
c) Wide QRS complex
d) U-wave
e) None

1326. A paient after vomiting several times develops carpopedal spasm. The most approriate treatment would- *(UPSC 97)*
a) Intravenous injection of 20 ml 10% calcium gluconate solution
b) Intravenous infusion of isotonic saline
c) Oral ammonium chloride 2mg four times a day
d) 5% $C0_2$ inhalation

1327. The "sick cell syndrome" is characterized by- *(AP97)*
a) Hyponatremia b) Hypernatremia
c) Hypokalemia d) Hyperkalemia

1328. Causes of hyperkalemia includes all except -
a) Crush syndrome b) Haemolysis *(AMC99)*
c) Renal failure d) Intestinal obstruction

1329. In metabolic acidosis what happens to $PC0_2$ -
a) Increase b) Decrease *(AMC 99)*
c) Remain constant d) None

1330. In hyperkalemia with bradycardia treatment is - *(CMC VELLORE)*
a) Calcium gluconate b) Salbutamol
c) Steroid d)K+resin

1331. Hypokalaemia causes the following except -
a) Paralytic ileus *(Kerala 2K)*
b) Tetany
c) Orthostatic hypotension
d) Rhabdomyolysis
e) Prolonged Q-T interval and tall T waves

1332. Which one of the following is the example of metabolic acidosis with respiratory alkalosis -
a) Salicylate overdose *(UPSC 2001)*
b) Severe pulmonary oedema
c) Cardio-pulmonary arrest
d) Pregnancy with vomiting

1333. Which is not a cause of metabolic acidosis-
a) Starvation *(CUPGEE96)*
b) Alcoholism
c) Diabetic keto acidosis
d) Climbing to high altitudes

1334. Normal anionic gap is seen in one of the following -
a) Diarrhoea b) Uremia *(Jipmer03)*
c) Lactic acidosis d) Ketosis

1335. Increased "Anion gap' is a characteristic feature of- *(UPSC05)*
a) Hyperosmolar non-ketotic diabetic coma
b) Hypoglycaemic coma
c) Phenformin toxicity with coma
d) Renal tubulae acidosis

1336. The most appropriate route for administration of nutrition to a patient who is comatose for a long period after and automobile accident is - *(UPSC 05)*
a) Nasogastric tube feeding
b) Gastrotomy tube feeding
c) Jej unostomy feeding
d) Central venous hyperalimentation

1337. Which one of the following is the major determinant of plasma osmolality ? *(UPSC 06)*
a) Serum sodium b) Serum potassium
c) Blood glucose d) Blood urea nitrogen

1338. Which of the following is not associated with hyponaternia and normal osmolality - *(APPG 06)*
a) Hyperlipedemia
b) Hyperprotienemia
c) Irrigation of bladder after TURP
d) CHF

1339. Hyperkalemia is due to all of the following except - *(Manipal 06)*
a) Alkalosis b) Acute renal failure
c) Addison's disease d) Excess hemolysis

1319) b 1320) a 1321)a,c 1322)c 1323)b 1324)b 1325)b 1326)a 1327)a 1328)d 1329)b 1330)a 1331)b,e 1332)a
1333) d 1334) a 1335)c 1336)c 1337)a 1338)d 1339)a

1340. Tetany may be a feature of the following except -
a) Hyperventilation *(UPSC 07)*
b) Hypokalaemic alkalosis
c) Hypomagnesaemia
d) Hyponatraemia

1341. Of the various modalities used in the treatment of re-threatening effects of hyperkalemia which one of the following as the most rapid onset of action ?
a) Hemodialysis *(UPSC07)*
b) Sodium bicarbonate infusion
c) Insulin and glucose infusion
d) Intravenous calcium gluconate

1342. Magnesium level in blood increases in- *(Corned07)*
a) Uncontrolled DM b) Liver cirrhosis
c) Kidney failure d) Chronic alcoholism

1343. A newly posted junior doctor had difficulty in finding out base deficit/excess for blood in a given patient. An experienced senior resident gave him advice to find out quick method to determine acid-base composition of blood based on $pC0_2$. Which of the following method did the suggest ?
a) Redford nomogram *(Delhi PG Feb. 09)*
b) DuBio's nomogram
c) Goldman Constant
d) Siggaard-Anderson nomogram

1344. Arterial blood gas analysis of a patient admitted to the medical emergency is as follows: pH=7.2, $HC0_3$ = 38 mmoI/L, $pC0_2$ = 56 mm Hg. This indicates:
a) Metabolic acidosis *(Delhi PG Feb. 09)*
b) Metabolic acidosis with respiratory compensation
c) Respiratory acidosis
d) Respiratory acidosis with renal compensation

1345. pH 7.24, $Pa0_2$ 55 mm Hg, $PaC0_2$ 55 mm Hg, $HC0_3$ -30 mEq/L consistent with - *(Delhi PG Mar. 09)*
a) Respiratory acidosis b) Respiratory alkalosis
c) Metabolic acidosis d) Metabolic alkalosis

1346. Which one of the following is NOT correct about hypernatremicdehydration? *(UPSC-109)*
a) Neurological complications are more common
b) The most appropriate fluid for correction is N/2 - N/4 normal saline
c) The dehydration should be corrected over 12 hours
d) The skin ha a doughy feel

1347. Increased anion gap is found in the following disorders except - *(UPSC-109)*
a) Diabetic ketoacidosis b) Starvation ketosis
c) Renal tubular acidosis d) Lactic acidosis

1348. The causes of hypokalemia include the following except- *(UPSC-II09)*
a) Tamoxifen therapy
b) ACTH producing tumors
c) Non-bilious vomiting
d) Diabetic ketoacidosis

1349. An arterial blood gas report of pH 7.00; $Pa0_2$ 60 mm Hg; $PaC0_2$ 80 mm Hg; $HC0_3$ 28 *(COMED 09)*
a) Respiratory acidosis with normoxaemia
b) Metabolic acidosis with normoxaemia
c) Metabolic acidosis with hypoxaemia
d) Respiratory acidosis with hypoxaemia

1350. Manifestation (s) of hypokalemia includes-(PG/*May 10)*
a) Prominent U wave b) Rhabdomyolysis
c) Diarrhoea d) Tetany
e) Muscle cramp

1351. Feature of severe diarrhea - *(PGIMay 10)*
a) Metabolic acidosis b) Metabolic alkalosis
c) Normal anion gap d) Increased anion gap

1352. T Anion gap is seen in - *(PGINov. 10)*
a) Renal failure b) Lactic acidosis
c) Diarrhoea d) Alcoholics
e) Starvation

1353. Hyperkalemia is caused by - *(PGINov. 10)*
a) Gordon's syndrome b) Liddle's syndrome
c) Bartter's syndrome d) Vomiting
e) Cyclosporine

1354. How much Potassium is present in the Ringer Lactate solution - *(AIIMS Nov 10)*
a) 1 mEq/L b) 4 mEq/L
c) 2 mEq/L d) 6 mEq/L

1355. 10 year old boy which short stature presented with poluria and polydipsia. Lab values are: pH 7.34, CO2 - 32 mm of Hg, HCO_3-16, Na 140, K-4.9, Cl 114, BUN-140 & creatinine -1.8. Likely acid-base picture will be - *(AIIMS Nov 10)*
a) Metabolic alkalosis
b) Non-aniongap metabolic acidosis
c) Aniongap metabolic acidosis
d) Respiratory acidosis

1356. Hyperkalemia without ECG changes may be treated with all except - *(AIIMS Nov 10)*
a) Calcium gluconate b) Salbutamol
c) Na bicarbonate d) Insulin with dextrose

1357. A girl presented with severe hyperkalemia and peaked T waves on ECG Most rapid way to decreased serum potassium level.- *(AIIMS May 11)*
a) Calcium gluconate IV b) Oral resins
c) Insulin + glucose d) Sodium bicarbonate

1358. The acid base status of a patient reveals a p^H = 7.46 and pC02 = 30 mm Hg. The patient has a partially compensated primary- *(A111)*
a) Metabolic acidosis b) Metabolic alkalosis
c) Respiratory alkalosis d) Respiratory acidosis

1359. Which of the following metabolic disorders is associated with hypokalaemia? *(UPSC111)*
a) Metabolic acidosis b) Metabolic alkalosis
c) Respiratory acidosis d) Mixed acidosis

1360. Normal anion gap melabolic acidosis is caused by- *(NEET/DNB Pattern)*
a) Cholera b) Starvation
Ethlene glycol poisoning d) Lactic acidosis

1340) d 1341) a 1342)c 1343)d 1344)d 1345)a 1346)a 1347)c 1348)a 1349)d 1350)a,b,d,e 1351) a,c 1352)a,b,d,e 1353)a,e 1354)b 1355)b 1356)a 1357)c 1358)c 1359)b 1360)a

•■ ^v; a) Salifcylafe pbisoriing •'*; *(NEET/DNB Pattern)*
b) Renal tabular acidosis
c) Lactic acidosis
d) Ethylene glycol poisoning

1362. Acidosis i n sh'bck is best treated byi •
^InfereksfettveSfflafibn:^ *(NEEP/DNB'-Paitern)*
b) ^6%m£'resuscitation
c) Oj Support'
d) i.v., sckfe bicarbdbkte 'lMB'^^W^1^

1363. Fatigue, myalgia, weakness, which electrolyte -
a) Hypo K b) Hypo Na *(NEE'T/bNB*
c) Hypo Mg d) Hyper Mg *Pattern)*

1364. Tetany is seen in - *(NEET/DNB Pate*w*;
a) Respiratory alkalosis b) Respiratory acidosis
c) Metabolic acidosis d)Hyperkalemia

1365. Hypomagnesemia is not seen in-*(NEET/DNB Pattern)*
•••*> Barters syndrome b) Diabetes mel'litus
c) Diarrhea ..dl Q^lraan syndrome

HEMATOLOGY

ANEMIA

1366. Causes of iron deficiency anemia are-*(PGI June 01)*
a) CRF b) Young male
c) Celiac sprue d) Hook worm
e) Carcinoma cecum

1367. Iron absorption is increased in - (*PGIDec 01)*
a) Iron deficiency anemia b) Pregnancy
c) All types of anemia d) Malignancy
e) Macrocytic anemia

1368. Increased iron absorption is seen in -*(PGI June 03)*
a) Iron deficiency anaemia b) Hypoxia
c) Inflammation d) Acidic pH of stomach
e) Ferric iron

1369. The earliest sign of iron deficiency anaemia-
a) Increase in iron binding capacity *(AIIMSFeb 97)*
b) Decrease in serum ferritin level
c) Decrease in serum iron level
d) All the above

1370. Most sensitive and specific test for diagnosis of iron deficiency is - *(AI03)*
a) Serum iron levels
b) Serum ferritin levels
c) Serum transferrin receptor population
d) Transferrin saturation

1371. Best test for assessment of iron status is - *(AI 01)*
a) Transferrin b) Ferritin
c) Serum iron d) Hemoglobin

1372. Which is not seen in iron deficiency anaemia -
a) Hyper-segmented neutrophils *(AI 2000)*
b) Microcytosis preceeds hypochromia
c) MCHC<50%
d) Commonest cause of anaemia in India

1373. Which of the following findings is diagnostic of iron deficiency anemia - *(AI 07)*
a) Increased TIBC, decreased serum ferritin
b) Decreased TIBC, decreased serum ferritin
c) Increased TIBC, increased serum ferritin
d) Decreased TIBC, increased semi ferritin

1374. True about iron deficiency anemia - *(PGI June 07)*
a) Microcytic hypochromic anemia
b) Decreased TIBC
c) Increased ferritin
d) Bone marrow iron decreased earlier than serum iron

1375. Which of the following is true about oral therapy for iron deficiency anemia - *(PGI Dec 05)*
a) In 300 mg elemental iron given 100 mg get absorbed
b) Reticulocytosis appears in one to 2 weeks and then peaks in 3-4 weeks
c) Response to Rx seen in 4 weeks
d) Decrease in absorption with improvement of symptoms
e) Stop the Rx after normalizing the Hb

1376. All of the following cause microcytic hypochromic anaemia, EXCEPT - *(AIIMSDec 97, AI 95)*
a) Lead poisoning b) Thalessemia .
c) Iron deficiency d) Fanconi anaemia

1377. Microcytic hypochromic RBC is/are seen in all except - *(PGI Nov 09)*
a) Iron deficiency anaemia
b) Sideroblastic anemia
c) Sickle cell anemia
d) Hereditary spherocytosis can cause microcytic hypochromic anemia
e) Lead poisoning

1378. NOT a cause of microcytic hypochromic anemia -
a) Sickle cell disease *(AIIMS Dec 94)*
b) Aplastic anemia
c) Iron deficiency anemia
d) Hereditary spherocytosis

1379. Anemia in chronic renal failure (CRF) is due to -
a) Decreased erythropoietin production
b) Iron deficiency *(PGI June 01)*
c) Hypoplastic bone marrow
d) Decreased Vit-B_{12}
e) Decreased folate levels

1380. All are true regarding Anaemia of Chronic Diseases, except -
a) Decreased serum Fe
b) Decreased Ferritin
c) Decreased Total Fe Binding Capacity
d) Increased Bone Marrow Fe

1381. Seen in chronic inflammatory anemia is -*(PGIDec99)*
a) Serum iron *i* S. ferritin **T** and transferrin *i*
b) Serum iron **T** S. ferritin **t** and transferrin **T**
c) Serum iron *i* S. ferritin 1 and transferrin t
d) Serum iron T S. ferritin *i* and transferrin *i*

1361) b 1362)b 1363)a 1364)a 1365)a 1366)a,c,d,e 1367)a,b,d 1368)a,b,c,d 1369)b 1370)b 1371)b 1372)a
1373)a 1374) a,d 1375)d 1376)d 1377)c 1378)a,b 1379)a,b,e 1380)b 1381)a

1382. Anemia of chronic disease is characterized by all, except - *(AIIMS May 94)*
a) Decreased serum iron
b) Increased total iron binding capacity (TIBC)
c) Increased serum ferritin
d) Increased macrophage iron in bone marrow

1383. Anemia of chronic disease is differentiated from iron deficiency anemia by the presence of -
a) T TIBC *(PGI Nov 09)*
b) si TIBC
c) si Serum ferritin
d) T Serum ferritin
d) si Bone marrow iron store

1384. True regarding anaemia of chronic ds. are A/E -
a) Decreased TIBC *(AIIMS June 99)*
b) Increased macrophage iron in marrow
c) Decrease serum ferritin level
d) Decreased serum iron levels

1385. Anemia of chronic renal failure - *(PGIDec 05)*
a) Normocytic normochromic anaemia
b) Erythropoietin improves the symptoms
c) Dialysis causes severe anemia
d) Anemia is proportional to the kidney disease

1386. All are causes of sideroblastic anaemia, except -
a) Collagen vascular disease *(AIIMS May 93)*
b) l£on deficit
c) Lead poisoning
d) Cutaneous porphyria

1387. A patient presents with increased serum ferritin, decreased TIBC, increased serum iron, % saturation increased. Most probable diagnosis is -
a) Anemia of chronic disease *(Aiims Nov 06)*
b) Sideroblastic anemia
c) Iron deficiency anemia
d) Thalassemia minor

1388. Macrocytic anaemia occurs in all, except - *(AIIMS Sep 96, AI98)*
a) Thiamine deficiency b) Liver disease
c) Orotic aciduria d) Copper deficiency

1389. Megaloblastic anemia may be caused by all of the following except - *(AI 97)*
a) Phenytoin b) Methotrexate
c) Pyrimethamine d)Amoxycilline

1390. Megaloblastic anemia due to folic acid deficiency is commonly due to - *(AI 06)*
a) Inadequate dietary intake
b) Defective intestinal absorption
c) Absence of folic acid binding protein in serum
d) Absence of glutamic acid in the intestine

1391. A patient presents with macroglossia and loss of tongue papilla. His Hb is 11.5 and MCV is 100. What should be the next step in investigating this patient?
a) B12 estimation *(AI 08)*
b) Brush biopsy of the lesion
c) Fluconazole treatment
d) Incision biopsy

1392. Megaloblastic anemia should be treated be treated with both folic acid vitamin B12 because - *(AI 08)*
a) Folic acid alone causes improvement of hematologic symptoms but worsening of neurological symptoms
b) It is a Co factor
c) It is enzyme
d) None of the above

1393. Megaloblastic anemia in blind loop syndrome is due to- *(AI 99)*
a) VitamenB_{12} malabsorption
b) Bacterial overgrowth
c) Frequent diarrhoea
d) Decrease iron intake

1394. A patient has Hb 6 gm% folic acid 82g/ml, vitamin B_{12} 60 pg/ml, serum iron 180g/dl, and MCV-104. The diagnosis is- *(AIIMS Nov 99)*
a) Iron deficiency anaemia
b) Vitamin B_{12} deficiency
c) Folic acid deficiency
d) Pyridoxine deficiency

1395. Patient with MCV = 60, Hb = 5 gm % MCHC = 20 & PCV = 32 %, causes of anemia in him can be- *(PGI Dec 2000)*
a) Phenytoin b) Blind loop synd
c) Hook worm infection d)CRF
e) Renal dialysis

1396. A 29 year old woman was found to have a hemoglobin of 7.8 g/dl. with a reticulocyte count of 0.8%. The peripherial blood smear showed microcytic hypochromic anemia, Hemoglobin A_2 and hemoglobin F levels were 2.4% and 1.3% respectiverly. The serum irom and the total iron binding capacity were 15 micro g/dl, and 420 micro g/dl, respectively. The most likely cause of anemia is - *(AIIMSNov 02)*
a) Iron deficiency anemia
b) Beta-thalassemia minor
c) Sideroblastic anemia
d) Anemia due to chronic infection

1397. A child has Hb-6.5gm%, MCV-65,MCH-15 and protoporphyria with red cell distribution width much less is most likely to be suffering from - *(AIIMS June 2000)*
a) Thalassemia b)Iron deficiency anaemia
c) Porphyria d) Megaloblastic anaemia

1398. A 25 yr old female presented with malaise and generalized weakness since 6 months. Her appetite is reduced and she has giddiness and palpitations on and off. There was no organomegaly. Laboratory study showed normochromic to hypochromic anaemia, RDW=60, and MCV=50. What is the diagnosis? *(AI 10)*
a) Thalasemia minor
b) Iron deficiency anaemia
c) Chronic malaria
d) Folate deficiency

1382) b 1383) b,d 1384)c 1385)a,b,d 1386)b 1387)b 1388)d 1389)d 1390)a 1391)a 1392)a 1393)b 1394)b 1395) c,d 1396) a 1397)b 1398)b

1399. A nine month old boy of Sindhi parents presented to you with complaints of pregressive lethargy, irritability & pallor since 6 months of age. Examination revealed severe pallor. Investigation showed Hb-3.8 mg%; MCV-58 fl; MCH-19.4 pg/ cell. Blood film shows osmotic fragility is normal (target cells and normoblasts). X-ray skull shows expansion of erythroid marrow. Which of the following is the most likely diagnosis - *(AI04)*
a) Iron deficiency anemia
b) Acute lymphoblastic anemia
c) Hemoglobin D disease
d) Hereditary spherocytosis

1400. A 60 yr old female with H/O 8 blood transfusion in 2 years. Her Hb- 60g/L, TLC-5800, platelet-3.4 lakhs, MCV 60, RBC-2.1 lakhs/mm3. He is having hypochromic microcytic anemia. Which investigation is not needed - *(AIIMS Nov 10)*
a) Evaluation for pulmonary hemosiderosis
b) Urinary hemosiderin
c) Bone marrow examination
d) G I endoscopy

1401. Ayoung female has the following lab values: MCV-70 Hb 10 gm% serum iron 60, serum feritin 100, the diagnosis is - *(AI 09)*
a) Thalassemia trait
b) Chronic iron deficiency anemia
c) Megaloblastic anemia
d) Anaemia of chronic infection

1402. A patient with microcytic hypochromic anemia, Hb-9%, serum iron is 20 ?/dl, ferritin level 800 mg/ml, transferrin percentage saturation is 64. What is possible diagnosis - *(AIIMS Nov 10)*
a) Atransferrinemia b) Iron deficiency anemia
c) DMT 1 mutation d) Hemochromatosis

1403. Type of anaemia caused by pulmonary TB -
a) Iron-deficiency *(AIIMS Nov 09)*
b) Megaloblastic
c) Sideroblastic
d) Microcytic Hypochromic anaemia

1404. Hemolytic anemia may be characterized by all of the following except - *(AIIMS May 05)*
a) Hyperbilirubinemia
b) Reticulocytosis
c) Hemoglobinuria
d) Increased plasma haptoglobin level

1405. Features seen in hemolytic anemia are all except - *(AIIMSMay 07)*
a) Tear drop and Burr cells b) >1 Haptoglobin
c) Reticulocytosis d) Hemoglobinuria

1406. Common features of haemolytic anemia are -
a) *i* RBC life span *(PGI June 04)*
b) T Haptoglobulin
c) Unconjugated hyperbilirubinemia
d) Bile salt and bile pigments in urine
e) Erythroid and Myeloid ratio altered

1407. Reticulocytosis is NOT a feature of -
a) Paroxysmal nocturnal hemoglobinuria
b) Following acute bleeding *(AIIMSDec 94)*
c) Hereditary spherocytosis
d) Anemia in CRF

1408. Reticulocytosis is seen in all except -
a) P.N.H. *(AIIMS May 07)*
b) Hemolysis
c) Nutritional anemia
d) Dyserythropoietic syndrome

1409. All are features of hemolytic anaemia except -
a) Thrombocytopenia *(AIIMS Dec 95)*
b) Hemosiderinuria
c) Decreased haptoglobin
d) Raised indirect bilirubin

1410. A normotensive patient with normal hemoglobin suffered massive blood loss. The following findings would be present in him except - *(AI 0 7)*
a) Increased PCV > b) Increased MCV
c) Thrombocytosis d) Reticulocytosis

1411. Which of the following conditions is associated with Coomb's positive hemolytic anaemia - *(AIIMS*
a) Thrombotic thrombocytopenic purpura *May 03)*
b) Progressive systemic sclerosis
c) Systemic lupus erythematosus.
d) Polyarteritis nodosa

1412. Autoimmune hemolytic anemia is seen In -
a) Sickle cell anemia *(AIIMS May 94)*
b) Chronic lymphocytic leukemia (CLL)
c) Acute myelocytic leukemia (AML)
d) Multiple myeloma

1413. Cold haemagglutinin is associated with - *(AI 08)*
a) antilgM b)antiIgG
c) anti IgA d) Donath landsteiner antibody

1414. Warm autoimmune hemolytic anaemia may be seen in all of the following conditions except - *(AI 9 7)*
a) Systemic lupus erythematosus
b) a-Methyl dopa therapy
c) Non Hodgkin's lymphoma
d) Mycoplasma pneumonia

1415. In which leukemia, autoimmune hemolytic anemia is most common - *(AIIMS Nov 93, AI 01)*
a) ALL b)AML
c) CML d)CLL

1416. Autoimmune hemolytic anemia is associated with malignancy of which lineage - *(AI 07)*
a) T cell b) B cell
c) PreBcell d)PreTcell

1417. Coomb's positive hemolytic anemia associated with-
a) TTP b)PAN *(AI09)*
c) SLE d)HUS

1418. Coomb's + ve Hemolytic Anaemia is seen in all except- *(AI 2000)*
a) Alcoholic cirrhosis
b) Chronic active hepatitis
c) Primary biliary cirrhosis
d) Primary sclerosing cholangitis

1399) a 1400) a 1401) d 1402) a 1403) d 1404) d 1405) a 1406)a,c,e 1407) d 1408) c 1409) a 1410) a 141 l)c 1412)b,d 1413) d 1414)d 1415)d 1416)b 1417)c 1418)a

1419. Viral infection with haemolysis is seen in -
a) Hepatitis-B b) Hepatitis-C *(PGIDec02)*
c) Prolong fever d) Hepatiitis-A
e) CMV

1420. Primaquine may cause hemolysis in - *(AI98)*
a) G- 6-PD deficiency
b) NADP - deficiency
c) Methemoglobin reductase deficiency
d) Crabb's disease

1421. Which does't cause hemolysis in G 6 PD deficiency-
a) Oestrogen b) Salicylates *(PGIDec 99)*
c) Primaquine d) Nitrofurantoin

1422. Osmotic fragility is increased in - *(AIIMSNov 93)*
a) Sickle cell anaemia *PGI June 98)*
b) Thalassemia
c) Hereditary spherocytosis
d) Chronic lead poisoning

1423. Decreased osmotic fragility is seen in -
a) Hereditary spherocytosis *(PGI Dec 2000)*
b) Sickle cell ds
c) Autoimmune hemolytic anemia
d) Thalassemia

1424. Features of hereditary spherocytosis include all of the following except - *(AI 98)*
a) T Osmotic fragility
b) TMCHC
c) TMCV
d) Decrease surface area per unit volume

1425. Feature of fetal R.B.C.- *(AIIMS June 98)*
a) Alkali denaturation resistant
b) Small in size
c) Has more 2,3 DPG level
d) More iron than adult RBC.

1426. All are true regarding fetal RBC's Except -
a) Elevated2,3 DPG *(AIIMS Dec 97)*
b) Decreased carbonic anhydrase activity
c) Decreased life span
d) High RBC volume

1427. Haemoglobin F is raised in - *(AIIMS Dec 97)*
a) Juvenile chronic myeloid leukemia
b) Hereditary spherocytosis
c) Congenital red cell aplasia
d) Myasthania gravis

1428. HbA_2 is increased in - *(PGI June 02)*
a) Alfa-thalassemia b) Iron deficiency anemia
c) Beta-thalassemia d) Sickle cell trait
e) Megaloblastic anemia

1429. In Beta thalassemia, there is - *(AIIMSMay 01)*
a) Increase in beta chain ,decrease in alpha chain
b) Decrease in beta chain increase in alpha chain
c) Decrease in beta chain,decrease in alpha chain
d) Increase in beta chain, increase alpha chain

1430. In Beta thalassemia, the most common gene mutation is - *(Aiims Nov 06)*
a) Intron 1 inversion b) Intron 22
c) 619 bp deletion d) 3.7 bp deletion

1431. A child aged 2 year presents with nonspecific symptoms suggestive of anemia. On peripheral blood smear target cells are seen, He has hypochromic microcytic picture and Hb of 6 gm. He also has 'a positive family history'. Next investingation of choice is - *(AI 01)*
a) Hb electrophoresis b) Coombs test
c) Liver function tests d) Osmatic fragility test

1432. A 5 year old girl came with history of progressively increasing pallor since birth and hepatosplenomegaly. Which of the following is the most relevant test for achieving diagnosis -
a) Hb electrophoresis *(AI 04)*
b) Peripheral smear examination
c) Osmotic fragility test
d) Bone marrow examination

1433. A 25-year female presented with mild pallor and moderate hepatosplenomegaly. Her hemoglobin was 92g/L and fetal hemoglobin level was 65%. She has not received any blood transfusion till date. She is most likely to be suffering from -
a) Thalassemia major *(AIIMS Nov 02)*
b) Thalassemia intermedia
c) Hereditary persistent fetal hemoglobin, homozygous state
d) Hemoglobin D, homozygous state

1434. A 32-year-old female, asymptomatic, not requiring blood transfusion, presents with Hb 13.0 gm/dl. Her HbF levels are 95%, Hb $A_2$1.5%. Which of the following is the most likely diagnosis - *(AIIMS May 04)*
a) Hereditary persistence of fetal hemoglobin
b) Beta homozygous thalassemia
c) Thalassemia intermedia
d) Beta heterozygous thalassemia

1435. All of the following are true about b thalassemia trait, Except - *(PGI June 08)*
a) Microcytic hypochromic picture
b) T ed HbA2
c) TedHbf
d) Patient requires blood transfusion

1436. True about a-thalassemia trait - *(PGI June 06)*
a) Increased HbF b) Increased HbA
c) Microcytosis d) Severe anemia [2]

1437. HbH is characterized by - *(AI 2011)*
a) Deletion of three alpha chain genes
b) Deletion of three alpha chains and one beta chain genes
c) Deletion of two alpha and two beta chain genes
d) Deletion of four alpha chain genes

1438. A 30-yrs old female, RBC count 4.5 million, MCV 55ft, TLC 8000, no history of blood transfusion?
a) Iron deficiency anemia *(AIIMS Nov 11)*
b) Thalessemia major
c) Thalessemia minor
d) Megaloblastic anemia

1419)a,d,e 1420)a 1421)a 1422)c 1423)d 1424)c 1425)a 1426)a 1427)a 1428)c 1429)b 1430)a 1431)a 1432)a 1433)b 1434)a 1435)d 1436)c 1437)a 1438)c

1439. True about a-thalassemia trait - *(PGI June 06)*
a) Increased HbF b) Increased HbFA2
c) Microcytosis d) Severe anemia

1440. All of the following are true about b thalassemia trait, Except - *(PGI June 08)*
a) Microcytic hypochromic picture
b) TedHbA$_2$
c) **Ted** HbF
d) Patient requires blood transfusion

1441. A patient presents with macroglossia and loss of tongue papilla. His Hb is 11.5 and MCV is 100. What shuld be the next step in investigating this patient ?
a) B_{12} estimation *(AI08)*
b) Brush biopsy of the lesion
c) Fluconazole treatment
d) Incision biopsy

1442. Coomb's positive hemolytic anemia associated with-
a) TIP b)PAN *(AI09)*
c) SLE d)HUS

1443. A pt with an Hb of 6, WBC count of 2000, has a normal Different count except for having 6% blasts; platelets are reduced to 80,000; moderate splenomegaly is present; possible diagnosis is -
a) Leukemia b) Aplastic anemia *(AI01)*
c) Hemolysis d)ITP

1444. Aplastic anemia in hereditary spherocytosis precipitated by - *(PGI Dec 05)*
a) Parvo virus b) HIV
c) FKV

1445. A 23 year old female presenting with anemia, jaundice, for 2 years, peripheral smear showing spherocytes, the best investigation to be done -
a) Reticulocyte count *(AIIMS Nov 06)*
b) Osmotic fragility test
c) Coombs test
d) Bone marrow aspiration

1446. A 20 year old female presenting with anemia, mild jaundice for 2 years, peripheral smear showing sperocytes, the best investigation to be done is- *(AIPGMEE 08)*
a) Reticulocyte count
b) Osmotic fragility test
c) Coombs test
d) Bone marrow aspiration

1447. A 21 year old male presents with anemia and mild hepatosplenomegaly. His hemoglobin is 5 gm/dL history of single blood transfusion is present till date. Most probable diagnosis is - *(AIIMS May 0 7)*
a) Thalassemia major
b) Thalassemia minor
c) Thalassemia intermedia
d) Autoimmune hemolytic anemia

1448. Hair on end appearance is seen in X-ray skull in- *(AIIMS June 97)*
a) Thalassemia b) Hydrocephalus
c) Chronic malaria d) Sickle cell analuria

1449. Ayoung female has the following lab values: MCV-70 Hb 10 gm% serum iron 60, serum feritin 100, the diagnosis is - *(AI 09)*
a) Thalassemia trait
b) Chronic iron deficiency anemia
c) Megaloblastic anemia
d) Anaemia of chronic infection

1450. Basic defect in HbS is - *(AI 09)*
a) Altered function b) Altered solubility
c) Altered stability d) Altered 0_2 binding capacity

1451. The primary defect which leads to sickle cell anemia is -
a) An abnormality in porphyrin part of hemoglobin
b) Replacement of glutamate by valine in B-chain of HbA
c) A nonsence mutation in the B-chain of HbA
d) Substitution of valine by glutamate in the A-chainofHbA.

1452. Sickle cell trait patient do not have manifestations as that of Sickle cell disease, because -
a) 50% HbS is required for occurrence of sickling
b) HbA prevents sickling *(AIIMS Nov 01)*
c) 50% sickles
d) HbA prevents polymerazitation of Hbs

1453. Commonest presentation of sickle cell anaemia is-
a) Priapism b) Bone pain *(AIIMS Dec 98)*
c) Fever d) Splenomegaly.

1454. Which the following is not seen in a chronic case of Sickle cell anemia - *(AI 96)*
a) Hepatomegaly b) Pulmonary hypertension
c) Cardiomegaly d) Splenomegaly

1455. All of the following statements are true about sickle cell disease except - *(AI 04)*
a) Patient may require frequent blood transfusions
b) Acute infection is the most common cause of mortality before 3 years of age
c) There is positive correlation between cone. HBS and polymerization of HBS.
d) Patient presents early in life before 6 months of age

1456. Which of the following is not seen on hemoglobin electrophoresis in sickle cell anemia - *(AI 01)*
a) HbA b) HbA2
c) HbF d) HbS

1457. Crew haircut appearance in X-ray skull and Gandy gamma bodies are seen in - *(AIIMS Nov 93)*
a) G-6-PD deficiency
b) Hodgkin's lymphoma
c) Hereditary spherocytosis
d) Sickle cell anaemia

1458. All are true for sickle cell anemia, except -
a) Pulmonary arterial hypertension *(AIIMS May 94)*
b) Fish vertebra
c) Leukopenia
d) Increased size of heart

1439) c 1440)d 1441)a 1442)c 1443)a 1444)a 1445)c 1446)c 1447)d 1448)a 1449)d 1450)b 1451)b 1452)a
1453)b 1454) d 1455) d 1456) a 1457) d 1458) c

1459. Sickle cell disease true is - *(PGI June 08)*
a) Mutation in a chain
b) Symptoms ameliorated by HbF
c) Venoocclusive crises is cause of morbidity
d) Bone pain is presenting feature

1460. All the following are examples of diseases causing Aplastic anemia except - *(AI 95)*
a) PNH b) Hepatitis
c) Pregnancy d) Cold hemoglobinuria

1461. Aplastic anaemia is seen in - *(PGIDec 03)*
a) PNH b) Chloramphenicol
c) Ataxia Telengiectasia d) Hepatitis A
e) HIV

1462. Pancytopenia with cellular marrow is seen in all except - *(A iims Nov 06)*
a) Megaloblastic anemia
b) Myelodysplasia
c) paroxysmal Nocturnal hemoglobinuria
d) G6PD deficiency

1463. Pancytopenia with a cellular marrow is seen in all except - *(AIIMS Nov 07)*
a) PNH
b) Megaloblastic anemia
c) Myelodysplastic syndrome
d) Congenital dyserythropoietic anemia

1464. All of the following statements about Fanconi's anemia are true, except - *(AI 10)*
a) Autosomal dominant inheritance
b) Hypocellular bone marrow
c) Congenital Anomalies
d) Usually normocytic/macrocytic cell morphology

1465. All of the following are causes pf pancytopenia with cellular bone marrow except - *(AIPGMEE 08)*
a) Paroxysomal noctural hemoglobinuria
b) Congential dyserythropoietic anemia
c) Megaloblastic anemia
d) Hairy cell leukemia

1466. Vasanti, a 25-year-old-girl, presents with complaints of fever and weakness. On examination there is splenomegaly of 3 cm below the costal margin. Hb is 8 gm/dL, TLC is 3,000/mm^3, platelet count is 80,000 mm^3. Which of the following is the least likely diagnosis - *(AIIMS Nov 2000)*
a) Acute lymphocytic leukemia
b) Anemia of chronic disease
c) Aplastic anemia
d) Megaloblastic anemia

1467. A patient aged 65 years, is diagnosed to have severe aplastic anemia. HLA compatible sibling is available. The best option of treatment is - *(AIIMS May 06)*
a) Anti-thymocyte globulin followed by cyclosporine
b) A conventional bone marrow transplantation from the HLA identical sibling
c) A non-myeloablative bone marrow transplantation from the HLA identical sibling
d) Cyclosporine

1468. A 20 yrs adult presents with severe hypo plastic anemia, what is most effective treatment - *(AI 02)*
a) a-interferon b)IL-2
c) ATG therapy d) Bone marrow transplant

1469. A stem cell disorder affecting all the three cell lines; platelets, RBCs and leucocytes is -
a) Hemolytic anaemia *(AIIMS May 01)*
b) Paroxysmal cold haemoglobinuria
c) Paroxysmal nocturnal haemoglobinuria
d) Blackfan Diamond syndrome

1470. Which of the following is NOT seen in Paroxysmal Nocturnal Hemoglobinuria - *(AIIMSNov 2000)*
a) Hypocellular bone marrow b) Hemosiderinuria
c) Increased LAP score d) Pancytopenia

1471. All are true regarding paroxysmal nocturnal haemoglobinuria, except- *(AIIMS Dec 97)*
a) Haemosiderinuria
b) Pancytopenia
c) Increased alkaline phosphatase
d) Cellular marrow

1472. True about PNH is/are - *(PGI Dec 2000)*
a) Hypocellular marrow b) Budd-chiari syndrome
c) Thrombosis d) LAP Score low

1473. PNH is associated with all of the following condition, except- *(AI02)*
a) Aplastic anemia b) Ted LAP scores
c) Venous thrombosis d) Iron deficiency anemia

1474. HAM test is done for - *(AIIMSNov 06)*
a) G.P.I. anchor protein
b) Complement defect
c) Spectrin defect
d) Mannose binding protein

1475. Plasmapheresis (plasma exchange therapy) is used in the treatment of - *(AIIMS May 0 7)*
a) Autoimmune hemolytic anemia
b) Disseminated intravascular coagulation
c) Thrombotic thrombocytopenic purpura
d) Hemolytic uremic syndrome

1476. The virus most commonly causing aplastic crisis in hemolytic anemia is - *(Delhi 96)*
a) HIV b) Herpes virus
c) Parvovirus d)HTLV

1477. Most common cause of myelophthisic anaemia -
a) Multiple myeloma b)NHL *(JIPMER2K)*
c) Leukaemia d) Multiple secondaries

1478. Spur cell anemia is seen in - *(TN 95)*
a) Drug induced anemia b) hepatocellular disease
c) Renal disease d) Alcoholism

1479. Iron level is deceased in all except - *(Delhi 96)*
a) Hookworm anemia
b) Anemia dut to chronic infection
c) Sideroblastic anemia
d) Anemia due to gastric ulcer (Bleeding ulcer)

1480. Mucosal tranfer of iron in GIT by- *(Kerala 96)*
a) Transferrin b)Apoferritin
c) Apotransferrin d) Ferritin

1459) b,c,d 1460) d 1461)a,b,e 1462)d 1463)d 1464)a 1465)b 1466)c 1467)a 1468)d 1469)b 1470)c 1471)c 1472) a,b,c,d 1473) b 1474) a 1475) c 1476) c 1477) d 1478) b 1479) c 1480) a

1481. All are true of long standing sickle cell anemia except - *(Karnat 96)*
a) Normocytic normochromic anemia
b) Recurrent jaundice
c) Cholelithiasis
d) Massive splenomegaly

1482. Pernicious anemia is due to - *(AP 96)*
a) Iron deficiency b) Atrophic gastritis
c) Low folic acid d)None

1483. A 16 year old female presents with generalised weakness and palpitations. Her Hb is 7g/dl and peripheral smear shows microcytic hypochromic anaemia, reticulocyte count=0.8 % serem bilirubin = 1 mg%. The most likely diagnosis is - *(UPSC97)*
a) Iron deficiency is b) Haemolytic anaemia
c) Aplastic anaemia d) Folic acid deficiency

1484. Microcytic hypochromic anaemia is seen in all except- *(MP 98)*
a) Beta thalassemia b) Iron deficiency
c) Malaria d) Lead poisoning

1485. Patients with sickle cell anemia are prone to infections with- *(MAHE98)*
a) Staph, aureus b) Pneumococcus
c) H. influenza d) Gonococcus

1486. Best test to detect iron deficiency anaemia in a community with lwo prevelance of iron deficiency is - *(Kerala98)*
a) FCV b) Serum iron
c) Serum ferritin d) Iron binding capacity

1487. Which of the following is not a characteristic of Fanconi anaemia - *(Karnat99)*
a) Hematologic abnormalities in infancy
b) Pancytopenia
c) Skeletal anomalies
d) Chromosome fragility

1488. The following statements about Fanconi's anaemia are true except- *(Kerala2K)*
a) Progressive pancytopenia
b) Simultanagnosia
c) Visual object agnosia
d) Increased chromosomal fragility
e) Associated skeltal abnormalities involving thumb and radius

1489. All are the following are features sideroblastic except- *(UPSC2K)*
a) Microcytosis with hypochromia
b) Increased iron stores in bone marrow
c) Responds to pyridoxine therapy
d) Responds to folic acid therapy

1490. Bone marrow transplantation is not indicated in-
a) Aplastic anaemia *(Orissa 98)*
b) Congenital spherocytosis
c) Thalassemia
d) Acute myeloid leukaemia in first remission

1491. Which of the following statements about paroxysmal cold hemoglobinuria is NOT true - *(Kerala 2K)*
a) Chronic autoimmune form responds well to splenectomy
b) Results from formation of Donath-Landsteiner antibody
c) Attacks are associated with hemoglobinuria
d) Can occur secondary to syphilis
e) Natural history of the disease often extends over many years

1492. Earliest response to iron therapy is - *(Kerala 95)*
a) Increase in Hb% b) Reticulocytes
c) Increased PCV d) Increased neutrophils

1493. Auto haemolysis test is positive in - *(Jipmer 95)*
a) Beta thalessemia b) Hereditary spherocytosis
c) Vit E deficiency d) Sickle cell disease

1494. Paroxysmal Nocturnal Hemoglobinuria (PNH) is screened by - *(Karnataka 02)*
a) Acid ham test
b) Sucrose lysis test
c) Serum hapten levels
d) Low serum complement levels

1495. Commonest presentation of sickle cell anemia is -
a) Priapism b) Bone pain *(Jipmer 04)*
c) Fever d) Splenomegaly

1496. All causes microcytic anemia except - *(APPGE 04)*
a) Hookworm infestation
b) Thalassemia
c) Orotic aciduria
d) Pyridoxine deficiency

1497. Haemoglobinuria does not occur in- *(MAHE05)*
a) $CuS0_4$ poisoning
b) Snakebite
c) Mismatched blood transfusion
d) Thalassemia

1498. Bone marrow transplantation is not indicated in-
a) Aplastic anaemia *(SGPGI05)*
b) Congenital spherocytosis
c) Thalassemia
d) Acute myeloid leukaemia in first remission

1499. Plasma ferritin levels may be reduced in all of the following conditions, except - *(J&k 05)*
a) Iron deficiency b) Vitamin C deficeincy
c) Liver disease d) Hypothyroidism

1500. Hemolytic anemia may be characterized by all of the following except - *(AIIMS May 2005)*
a) Hyperbilirubinemia
b) Reticulocytosis
c) Hemoglobinuria
d) Increased plasma haptoglobin level

1501. Adult haemoglobin consists of which one of the following tetramer of chains ? *(UPSC 06)*
a) **2a+2p** **b)2a + 25**
c) **2p + 2y** **d)2a + 2y**

1502. Reticulocyte count in Hemolytic jaundice is -
a) 0.8 -1 % b) 1 - 2 % *(NIMHANS 06)*
c) >2.5% d) < 2%

1481) d 1482)b 1483)a 1484)c 1485)b,c 1486)c 1487)a 1488)b,c 1489)d 1490)b 1491) a 1492)b 1493)b 1494)a,b 1495) c 1496) c 1497)d 1498)b 1499)c 1500)d 1501)a 1502)c

1503. Warm-antibody immunohemolytic anemia is seen in all except - *(COMED 06)*
a) SUE b) **a** - Methyladopa ingestion
c) Quinidine d) Infectious mononucleosis

1504. Aplastic anemia in sickle cell anemia is due to infection of - *(APPG 06)*
a) Herpes b) Parvovirus B19
c) CMV d) Papova

1505. Hemoglobin with zeta 2 and gamma 2 chains are seen in which of the following - *(APPG 06)*
a) Gower 1 b) Gower II
c) Poland Hb d) Fetal Gb

1506. What is the definitive finding of G6PD- *(Manipal 06)*
a) Bite cells b) Intravascular hemolysis
c) Splenomegaly d) Hemoglobinuria

1507. Acquired intrinsic defect in Hymolytic anemia is seen in - *(Manipal 06)*
a) Sickle cell anemia
b) Hereditary spherocytosis
c) Thalasemmia
d) Paroxysmal nocturnal hemoglobinuria

1508. A man who had undergone total gastrectomy remains well for five years. Then he develops anaemia. What is the most likely cause of this anaemia ? *(UPSC 07)*
a) Protein deficiency b) Zinc deficiency
c) Folic acid deficiency d) Vitamin B_{12} deficiency

1509. Match list I with list H and select the correct answer using the code given below the lists - *(UPSC 07)*

List I *(Type of anaemia)*	Listn *(Cause)*
A. Macrocytic anemia	1. Iron deficiency
B. Microcytic anaemia	2. Hypothyroidism
C. Haemolytic anaemia	3. Vitamin B_{12} deficiency
D. Megaloblastic anaemia	4. Alpha methyl dopa

Code:

	A	B	C	D
a)	3	1	4	2
b)	3	4	1	2
c)	2	1	4	3
d)	2	4	1	3

1510. Pancytopenia may occur in the following except -
a) Megaloblastic anaemia *(UPSC 07)*
b) Severe iron-deficiency anaemia
c) Hypoplastic anaemia
d) Paroxysmal nocturnal haemoglobinuria

1511. Which one of the following is the most appropriate clinical tests to confirm the iron-deficiency anaemia? *(UPSC 07)*
a) Red blood cell indices
b) Serum ferritin level
c) Bone-marrow examination
d) Urinary iron clearance

1512. Which one of the following is not associated with a high reticulocyte count ? *(UPSC 07)*
a) Acute bleed
b) Haemolytic anaemia
c) Megaloblastic anaemia
d) Response to treatment in nutrition deficiency anaemia

1513. In shigella dysentery associated hemolytic uremic syndrome, the false statement is - *(Delhi PG Feb. 09)*
a) Leucocytosis b) Neurological abnormalities
c) Hepatic failure d) Thrombotic angiopathy

1514. Which of the following manifestations is not a clinical manifestation of parvovirus infection?
a) Erythema infectiosum *(Delhi PG Mar. 09)*
b) Polyarthropathy
c) Pure Red Cell aplasia
d) Tropical sprue

1515. A 37-year-old multipara construction labourer has a blood picture showing hypochromic anisocytosis. This is most likely indicative of -
a) Iron deficiency
b) Folic deficiency
c) Malnutrition
d) Combined iron and folic acid deficiency

1516. With regard to sickle cell disease - *(Manipal 09)*
a) 25% of the black population have sickle cell disease
b) The most severe form of sickle cell retinopathy is associated with SS disease
c) Optic disc is the first site of neovascularization in patient with severe retinal ischamia
d) None of the above

1517. Which one of the following is NOT consistent with the diagnosis of aplastic anemia? *(UPSC-109)*
a) Hematopoietic cells occupying < 25% of marrow space
b) Hematopoietic cells morphology should be normal
c) Normocytic normochromic anemia
d) Splenomegaly

1518. A low mean corpuscular volume with a normal red cell distribution width suggests - *(COMED 09)*
a) Iron deficiency anaemia
b) a Thalassaemia trait
c) Anaemia of chronic disease
d) Sideroblastic anaemia

1519. Thrombotic thrombocytopenic icroangiopathies are- *(PGIMaylO)*
a) TTP b)DIC
c) HUS d) Polycythemia

1520. An 48 year old male with pallor, MCV-70, RDW-21 Bald tongue and WBC - 3000. Previous attempts to treat anaemia with iron alone failed. Stool for occult blood is negative. Investigations required are - *(PG1 Nov. 10)*
a) B12 estimation b) Anti-tTG antibodies
c) H. Pylori detection d) Colonoscopy
e) Electrophoresis

1503)d 1504)b 1505)c 1506)b 1507)d 1508)d 1509)c 1510)b 1511)b 1512)c 1513)c 1514)d 1515)a 1516)d 1517) d 1518) b 1519)a,b,c 1520)b,d

1521. Feature of Hereditary spherocytosis is- *(PGI Nov 10)*
a) TMCV b) T MCHC
c) iRDW d)T Reticulocytes in peripheral blood
e) t Direct bilirubin

1522. Atypical finding in aplatic anaemia is- *(PGINov 10)*
a) Echymosis b) Pallor
c) Lymphadenopathy d) Leukoplakia
e) Splenomegaly

1523. Cause of alpha thalasemia - *(AIIMS May 11)*
a) Delection of alpha genes
b) Delection of beta genes
c) Excess of alpha genes
d) Single amino acid substitution in alpha chain

1524. Which of the following is not true about hereditary spherocytosis? *(UPSC 111)*
a) Splenomegaly b) Increased RBC life span
c) Pigment gall stones d) Effective splenectomy

1525. In a patient of anaemia, the most convenient test for assessment of iron status is - *(UPSC111)*
a) Transferrin b) Serum iron
c) Haemoglobin d) Serum ferritin

1526. Seen in chronic inflammatory anemia is - *(NEET/DNB Pattern)*
a) Serum iron 1S. ferritin t and transferrin *i*
b) Serum iron t S. ferritin T and transferrin t
c) Serum iron 1S. ferritin 1 and transferrin T
d) Serum iron t S. ferritin *i* and transferrin 1

1527. Iron dextran is given in A/E - *(NEET/DNB Pattern)*
a) Macrocytic anemia b) Severe blood loss
c) Iron deficiency anemia d) Hookworm anemia

1528. A patient with previously normal heamoglobin suffered a sudden massive acute hemorrhage. He is most likely to show all of the following except -
a) High reticulocyte count *(ARMS, May 12)*
b) High neutrophil count
c) High packed cell volume
d) Low mean corpuscular volume

1529. Which of the following is associated with an intrinsic defect in the RBC membrane? *(ARMS, May 12)*
a) Autoimmune hemolytic anemia
b) Hereditary spherocytosis
c) Microangiopathic hemolytic anemia
d) Thermal injury anemia

1530. Indirect coombs test detect - *(NEET/DNB Pattern)*
a) Antibodies attached to RBC surface
b) Antigen in serum
c) Antibodies in the serum
d) Antigen attached to RBC surface

1531. Primaquine may cause hemolysis in - *(NEET/DNB Pattern)*
a) G-6-PD deficiency
b) NADP - deficiency
c) Methemoglobin reductase deficiency
d) Crabb's disease

1532. Which of the following is not seen in hereditary spherocytosis - *(NEET/DNB Pattern)*
a) Direct Coombs test + ve
b) Increased osmotic fragility
c) Leg ulcers
d) Splenomegaly

1533; Haemoglobin F is raised in - *(NEET/DNB Pattern)*
a) Juvenile chronic myeloid leukemia
b) Hereditary spherocytosis
c) Congenital red cell aplasia
d) Myasthania gravis

1534. NESTROFT test is used in screening of 4 u> *(NEET/DNB Pattern)*
a) Thalassemia
b) Autoimmune hemolytic anemia
c) Spherocytosis
d) G6PD deficiency

1535. CML treatmeiat^i^^ft' *Am^fEE^DN^Pattept)*
a) Vincristine v b)Imatinib
c) Cyclophospham^Cff/' d) Methotrexate

1536. Polycythemia vera is absolute venous hematocrit of > - *(NEET/DNB Pattern)*
a) 45% b) 55%
c) 65% d) 70%

1537. Which of the following statements about Hemolytic Uremic Syndrome is least correct - *(AI12)*
a) Usually follows hemorrhagic colitis
b) Often self-limited
c) Fever is usually mild of absent
d) Serotoxin has no role in pathogenesis

1538. A 25-year old pregnant lady presents with thrombocyto-penia (Platelet count < 50,000) and fragmented RBC's in peripheral smear. Which of the following is the least likely dififerentail diagnosis ? *(All 2)*
a) Thrombotic Thrombocytopentic Purpura (TTP)
b) Disseminated Intravascular Coagulation (DIC)
c) HELLP syndrome
d) Evan's syndrome

1539. Difference between haemolytic uremic syndrome & TTP - *(NEET/DNB Pattern)*
a) Thrombocytopenia is seen in TTP
b) C.N.S. manifestations are dominant in TTP
c) Microangiopathic hemolytic anemia
d) Renal failure more common in TTP

1540. A 25-year-old female presented with history of recurrent abortions. The most relevant investigation to identify the cause is- *(ARMS, May 12)*
a) Bleeding time
b) Prothrombin time
c) Dilute russel viper venom time
d) Clot solubility test

1541. The following is the finding seen in DIVC - *(AI 12)*
a) Increased fibrinogen, increased antithombin III, increased thrombin-antithrombin III complexes
b) Increased FDP, decreased PT, Increased antithrombin III
c) Increased FDP, prolonged PT, decreased thrombin-antithrombin complexes
d) Increased FDP, prolonged PT, reduced Platelets

1521)b,d 1522)e 1523)a 1524)b 1525)d 1526)a 1527)a 1528)c,d 1529)b 1530)c 1531)a 1532)a 1533)a 1534) a 1535)b 1536)b 1537)d 1538)d 1539)b 1540)c 1541)d

MYELOPROLIFERATIVE DISORDER

1542. Which of the following is NOT a myeloproliferative disease - *(AIMS Nov 2000)*
a) Polycythemia rubra vera
b) Acute myeloid leukemia
c) Chronic myeloid leukemia
d) Essential thrombocytosis

1543. Laboratory evaluation for the differential diagnosis of chronic myeloproliferative disorders includes all the following except- *(A11MS Nov 04)*
a) Chromosomal evaluation
b) Bone marrow aspiration
c) Flow-cytometric analysis
d) Determination of red blood cell mass

1544. A peripheral smear with increased neutrophils, basophils, eosinophils, and platelets is highly suggestive of - *(AIIMS May 06)*
a) Actute myeloid leukemia
b) Acute lymphoblastic leukemia
c) Chronic myelogenous leukemia
d) Myelodysplastic syndrome

1545. A 60 year old man presented with fatigue, weight loss and heaviness in left hypochondrium for 6 months. The hemogram showed Hb. lOgm/dL, TLC 5 lakhs/mm^3, platelet count 4 lakhs/mm^3, DLC: neutrophil 55%, lymphocutes 4%, monocytes 2%, basophils 6%, metamyelocytes 10%, myelocytes 18%, promyelocytes 2% and blasts 3%. The most likely cytogenetic abnormality in this case is - *(AIIMS May 03)*
a) t(l;21) b)t(9;22)
c) t (15; 17) d) Trisomy 21

1546. Which one of the following is not a criterion for making a diagnosis of chronic myeloid leukemia in accelerated phase - *(AIIMSNov 04)*
a) Blasts 10-19% of WBC's in peripheral blood
b) Basophils 10-19% of WBC'S in peripheral blood
c) Increasing spleen size unresponsive to therapy
d) Persistent thrombocytosis (>1000 * 10^9 /L) unresponsive to therapy

1547. In a patient suffering from chronic myeloid leukemia, Hb falls from llg% to 4g% in a short span of time, and splenomegaly occurs. The cause could be - *(PGI June 02)*
a) Accelerated phase
b) CML in blast crisis
c) Ineffective erythropoiesis
d) Myelofibrosis

1548. All of the following are features of juvenile CML except- *(AI94)*
a) Thrombocytopenia
b) Fetal Hb is increased
c) Philadelphia chromosome is positive
d) Lymphadenopathy

1549. Which of the following is not compatible with a diagnosis of chronic myelomonocytic leukemia? *(AIIMS Nov 03)*
a) Peripheral blood monocytosis more than 1 10^9L
b) Absence of Philadelphia chromosome
c) More than 20% blasts in blood or bone marrow
d) Absent or minimal dysplasia in myeloid lineages.

1550. Which of these is true regarding CML - *(Aiims 99)*
a) Size of splenomegaly indicates prognosis
b) Phagocytic activity of WBC is reduced
c) Sudan black stain is specific for myeloblast
d) Myeloblast, granuloblast and lymphoblast become PH chromosome +ve. -ve following remission

1551. Best Rx for CML is - *(PGIDec 98)*
a) Autologous BMT b) Allogenic BMT
c) Alpha interferon d) Hydroxyurea

1552. Which is not seen in polycythemia vera -
a) Increased vitamin B_{12} binding capacity
b) Increase erythropoietin level *(AIIMS Feb 97)*
c) Increase RBC count
d) Ocular congestion

1553. All of the following are seen in polycythemia rubra vera EXCEPT - *(AIIMSNov 2000)*
a) Increased Vit B_{12} binding capacity (>9000 micromols/dL)
b) Decreased LAP score
c) Leucocytosis
d) Increased platelets

1554. Essential WHO criteria for polycythemia vera?
a) Tyrosine kinase JAK2 V617F and other mutations
b) Low levels of erythropoietin levels *(AI10)*
c) Thrombocytosis
d) Increased MCV

1555. In Policythemia vera, all the following are seen except - *(AIIMS May 01)*
a) Thrombocytopenia b) Increased GI bleed
c) Thrombosis d) Transient visual loss

1556. Which of the following is not commonly seen in Polycythemia Vera - *(AI 02)*
a) Thrombosis
b) Hyperuricemia
c) Prone for acute leukemia
d) Spontaneous severe infection

1557. Tumor associated with polycythemia vera is -
a) Sarcoma *(AI 01, 95)*
b) Pitutary adenoma
c) Cerebellar haemangioblastoma
d) None of the above

1558. Erythropoietin is increased in all of the following conditions except - *(AI 07)*
a) Hepatocellular carcinoma
b) Renal cell carcinoma
c) Cerebellar Hemangioblastoma
d) Pancreatic carcinoma

1559. True about polycythemia rubra vera is all except -
a) Bleeding b) Thrombosis *(PGIDec 97)*
c) iedESR d) Infection

1542)b 1543)c 1544)c 1545)b 1546)d>b 1547)a,b 1548)c 1549)c 1550)a 1551)b 1552)b 1553)b 1554)a 1555) a 1556)d 1557)c 1558)d 1559)d

1560. A 59-year-old male came with Hb 18.0 gm/dl on three occasions. The resident doctor wants to exclude Polycythemia Vera. Which of the following is the most relevant investigation - *(ARMSMay 04)*
a) Hematocrit b) Total leukocyte count
c) Red cell mass d) Reticulocyte count

1561. All of the following are the causes of relative polychthemia except - *(AI05)*
a) Dehydration
b) Dengue haemorrhagic fever
c) Gaisbock syndrome
d) High altitude

1562. Differences between primary and secondary polycythemia - *(PGI June 08)*
a) Increased red cell mass
b) Pruritis
c) Hypertension
d) Arterial oxygen tension < 92%

1563. Features suggesting secondary polycythemia -
a) Smoking b) Stress *(PGI June 07)*
c) Bum d) High altitude
e) CO poisoning

1564. A pt. being investigated for anemia has a dry marrow tap ; peripheral smear reveals tear drop cells, likely diagnosis is : *(AI 01)*
a) Leukemia b) Lymphoma
c) Myelofibrosis d) Polycythemia rubra vera

1565. A patient has the following findings-splenomegaly, low RBC count, normal WBC, and platelet count and peripheral blood smear shows teat drop cells. Repeated BM aspiration is unsuccessful. The probable diagnosis is - *(AIIMS1999)*
a) Thalassemia
b) Chronic myeloid leukemia
c) Iron deficiency anaemia
d) Myelofibrosis

1566. In which of the foilwing age group myelodysplastic syndromes (MDS) are most common - *(AI 06)*
a) 2-10 b)15-20
c) 2540 d)> 50 years

1567. Which is the most common cytogenetic abnormaltiy in adult myelodysplastic syndrome (MDS) - *(AI04)*
a) Trisomy 8 b)20q-
c) 5q- d) Monosomy 7

1568. Ringed sideroblasts are seen in - *(AIPGMEE 08)*
a) Iron deficiency anemia
b) Myelodysplastic syndrome
c) Thalassemia
d) Anemia of chronic disease

1569. A 42 -year old man was referred with a 2 week history of fever weakness and bleeding gum. Peripherial smear showed pancytopenia. The bone marrow examination revelaed 26% blasts frequently exhibiting Auer rods and mature myeloid cells. An occasional neutrophil with pseudo Pelger-Huet anomaly was also noted : Which of the following cytocheimcal stains is most likely to be positive ?
a) Acid phosphatase *(ARMS Nov 02)*
b) Non specific esterase
c) Myeloperoxidase
d) Toluidine blue

1570. A patient presents with a platelet count of 700 x 10^9/L with abnormalitites in size, shape and granularity of platelets. WBC count of 12 x 10^9 L, hemoglobin of llg/dl and the absence of the Philadelphia chromosome. The most likely diagnosis would be- *(ARMS May 06)*
a) Polycythemia vera
b) Essential thrombocythemia
c) Chromic myeloid leukemika
d) Leukemoid reaction

1571. A 45 year old female patient presents with symptoms of easy bruisability and frequent headaches. Physical examination show a moderate splenomegaly. Blood counts shows a normal leucocyte count and a platelet count of 1000 x 10^3/ cu mm. The leucocyte alkaline phosphatase score is normal. Which one of the following is the drug of choice for the treatment of this patient?
a) Hydroxyurea *(ARMS Nov03)*
b) Radioactive phosphorus
c) Anagrelide
d) Interferon alpha

1572. Leukocyte alkaline phosphate is increased in all, except - *(ARMS May 94)*
a) Polycythyemia vera b)CML
c) Myelofibrosis d) Myeloid metaplasia

1573. Splenomegaly is least likely associated with -
a) CML *(ARMS Nov 10)*
b) Polycythemia ruba vera
c) Idiopathic myelofibrosis
d) Primary thrombocytosis

1574. Polycythemia may be a features of all of the following except- *(UPSC 95)*
a) Gastric carcinoma b) Hepatoma
c) Cushing's syndrome d) Hypernephroma

1575. All are true of polycythemia vera except-
a) Myeloproliferative disorder *(Karnat 96)*
b) Increased red cell mass
c) Increased ESR
d) Thrombotic episodes

1576. Following are features of polycythemia rubra vera except - *(UP 9 7)*
a) Increased red cell mass
b) Normal arterial oxygen sturation
c) High leucocyte alkaline phosphatase score
d) Splenomegaly

1577. Causes of secondary polycythemia may include -
a) Chronic cor pulmonale *(NIMHANS 05)*
b) Renal carcinoma
c) Cerebellar haemangioblastoma
d) All of the above

1560)c 1561) d 1562) b,d 1563)a,d,e 1564)c 1565)d 1566)d 1567)d 1568)b 1569)c 1570)b 1571)c,d 1572)b 1573) d 1574) a 1575) c 1576) None 1577)d

1578. Which of the following is not commonly seen in Polycythemia Vera - *(MAHE 05)*
a) Thrombosis
b) Hyperuricemia
c) Prone for acute leukemia
d) Spontaneous severe infection

1579. The tumor causing polycythemia due to erythropoietin production is - *(Corned 08)*
a) Cerebellar hemangioma b) Medulloblastoma
c) Ependymoma d) Oligodendroglioma

1580. The following are features of polycythemia rubra vera, except - *(Delhi PG Feb. 09)*
a) Increased red cell mass
b) Low arterial oxygen saturation
c) Presence of JAK2 mutation
d) Splenectomy

1581. Which one of the following laboratory tests differentiates leukemoid reaction from chronic myeloid leukemia ? *(UPSC-109)*
a) LAP (leukocyte alkaline phosphatase)
b) LCA (leukocyte common antigen)
c) MPO (myelo-peroxidase)
d) TRAP (tartrate resistant alkaline phosphatase)

1582. The first-line drug therapy in chronic myeloid leukemia is - *(UPSC-109)*
a) Hydroxycarbamide b) Alpha-interferon
c) Busulphan d)Imatinib

1583. Isolated deletion of which chromosome causes myelodysplastic syndrome - *(COMED 09)*
a) 2q b)5q
c) 8q d) llq

1584. An example of chronic myeloproliferative disorder is- *(COMED 09)*
a) Neutrophilic leukaemoid reaction
b) Essential thrombocythaemia
c) Plasmacytosis
d) Hairy cell leukaemia

1585. Splenomegaly is least likely associated with -
a) CML *(AIIMS Nov 10)*
b) Polycythemia ruba vera
c) Idiopathic myelofibrosis
d) Primary thrombocytosis

1586. A patient is admitted with severe diarrhoea and vomiting. On examination, he is hypertensive and dehydrated. His haemoglobin is 19 gm%. The most likely reason for raised haemoglobin is -
a) Relative polycythaemia *(UPSCI11)*
b) Secondary polycythaemia
c) Polycythaemia vera
d) Essential thrombocythaemia

LYMPHOMA

1587. Cells charcteristic of Hodgkin's disease are -
a) Lacunar cells b) Red - Sternberg cells
c) Giant cells d)Eosiphils

1588. Diagnostic criteria of Hodgkin's disease are A/E -
a) RS cells *(PGIDec99)*
b) Atypical cells in background
c) Sclerosing pattern
d) CD 30 absent

1589. Classical markers for Hodgkin's disease is - *(AIPGMEE 08)*
a) CD 15 and CD 30 b) CD 15 and CD 22
c) CD 15 and CD 20 d) CD 20 and CD 30

1590. The subtype of Hodgkin's disease, which is histogentically distinct from all the other subtypes, is - *(AI05)*
a) Lymphocyte predominant
b) Nodular sclerosis
c) Mixed cellularity
d) Lymphocyte depleted

1591. The lymphocytic and histiocytic variant of Reed-Sternberg cell is seen in - *(AIIMS Nov 05)*
a) Follicular center lymphoma
b) Lymphocyte depleted Hodkin's disease
c) Nodular sclerosis Hodkin's disease
d) Lymphocyte predominant Hodkin's disease

1592. All are true regarding Hodgkin's lymphoma, except-
a) CNS is the commonest site of involvement
b) Characteristic cell is a Reed Sternberg cell *(AI2K)*
c) Mediastinal involvement is common in nodularsclerosis type.
d) Eosinophils, plasma cells and neutrophils increase

1593. Best prognostic type of Hodgkin's lymphoma is -
a) Lymphocytic predominant *(AIIMS June 98)*
b) Lymphocytic depletion *AI96)*
c) Mixed cellularity
d) Nodular sclerosis

1594. All of the following are the good prognostic features for Hodgkin's disease except - *(AI 04)*
a) Haemoglobin > 10 gm/dl
b) WBC count < 15000/mm^3
c) Absolute lymphocyte count < 600/ 1
d) Age < 45 yrs

1595. Poor prognostic factors for Hodgkin's disease are -
a) Younger age *(PGIDec 01)*
b) Systemic manifestations
c) Lymphocyte depletion
d) Mediastinal disease
e) stomach involvement

1596. Most common type of hodgkin's lymphoma in india is- *(AI94)*
a) Nodular sclerosing b) Lymphocyte predominance
c) Mixed cellularity d) Lymphocyte depletion

1597. A patient with Hodgkin's lymphoma is having a single cervical lymphnode. Biopsy showed lymphocyte predominant variant. Which of the following is the treatment of choice- *(AIIMSNov2K)*
a) Chemotherapy with Radiotherapy
b) Chemotherapy only
c) Radiotherapy only
d) No treatment needed

1578) d 1579) a 1580)b 1581)a 1582)d 1583)b 1584)b 1585)d 1586)a 1587)b 1588)b,d 1589)a 1590)a
1591) d 1592) a 1593)a 1594)c 1595)b,c,d,e 1596)c 1597)c

1598. True for Hodgkin's stage IA is - *(PGIDec 05)*
a) Chemotherapy is best
b) Radiotherapy is best
c) Total radiation therapy is best treatment
d) Fever and wt loss is always present

1599. Treatment of Hodgkin's disease- *(PGI Dec 06)*
a) CHOP b) MOPP
c) ABVD

1600. Hodkin lymphoma treatment - *(PGI June 07)*
a) ABVD is more commonly used regimen
b) Sterility is common in ABVD regimen
c) WBC > 16 x 10^9/L is good prognostic factor

1601. Which of the following statements on lymphoma is not True- *(AIMSMay 06)*
a) A single classification system for Hodgkin's disease (HD) is almost universally accepted
b) HD more often tends to remain localized to a single group of lymph nodes and spreads by contiguity
c) Several types of non Hodgkin's lymphoma (NHL) may have a leukemic phase
d) In general follicular (nodular)NHL has worse prognossis compared to diffuse NHL

1602. The classification proposed by the International Lymphoma Study Group for non - Hodgkin's lymphoma is known as - *(AI05)*
a) Kiel classification
b) REAL classification
c) WHO classification
d) Rappaport classification

1603. Intermediate form of Non hodgkin's lymphoma is -
a) Small noncleaved cell
b) Diffuse, small cleaved cell
c) Lymphoblastic
d) Large cell immunoblastic

1604. Most malignant form of NHL is -
a) Diffuse large cell
b) Small cell lymphocytic lymphoma
c) Follicular cleavage
d) Large cell follicular

1605. Intermediate grade of NHL are all except- *(AI2K)*
a) Diffuse small cell cleaved b) Diffuse large cell
c) Mycosis fungoides d) Diffuse mixed

1606. In Burkitts lymphoma , translocation seen is chromosome - *(AIMS May 01)*
a) 12-14 translocation b) 8 - 14 translocation
c) 4 - 8 translocation d) 12-18 translocation

1607. Burkitt's lymphoma is - *(PGI June 02)*
a) B cell lymphoma
b) 6,14 translocation
c) Can present as abdominal mass
d) Radiotherapy is used in tr eatment

1608. Stage of Hodgkins lymphoma with right sided neck nodes and left inguinal node without fever -
a) la b) Ha *(KERALA 95)*
c) Hla d)IVa

1609. Poor prognostic factor of non Hodgkin's lymphoma is-
a) Age > 60 years *(AMU 05)*
b) Weight loss > 10%
c) Night sweats with loss of weight
d) All of the above

1610. IgA lymphoma invloves- *(Jipmer 05)*
a) Large intestine b) Lymph nodes
c) Small intestine d) Spleen

1611. Popcorn type of Reed-Sternberg cell is seen in the following type of Hodgkin's lymphoma - *(Corned 07)*
a) Lymphocyte rich
b) Mixed cellularity
c) Lymphocyte predominance
d) Lymphocyte depletion

1612. All of the following are the good prognostic features for Hodgkin's disease except - *(Manipal 09)*
a) Hemoglobin > lOg/dl
b) WBC count < 15000/mm3
c) Absolute lymphocyte count < 600/uI
d) Age < 45 years

BLEEDING DISORDER

1613. Converging point of both pathways in coagulation is at - *(PGI June 99)*
a) Factor Vm b) Stuart factor X
c) Factor IX d) Factor VII

1614. A9 year old boy with elevation in both PT and APTT. What is the diagnosis - *(AIMS Nov 10)*
a) Defect in extrinsic pathway
b) Defect in intrinsic pathway
c) Platelet function defect
d) Defect in common pathway

1615. In which condition Thrombin time is raised -
a) Afibrinogenemia *(AIMS Nov 93)*
b) Hemophilia
c) Factor XII deficiency
d) von Willebrand's disease

1616. A child underwent a tonsillectomy at 6 years of age with no complications. He underwent a preoperative screening for bleeding at the age of 12 years before an elective laparotomy, and was found to have a prolonged Partial Thromboplastin time but normal Prothrombin time. There was no family history of bleeding. The patient is likely to have -
a) Acquired vitamin K deficiency *(AIMS Nov 04)*
b) Acquired liver disease
c) Factor XII deficiency
d) Mild hemophilia A

1617. A35 yr old lady with normal PT and increased aPTT. 2 year back, she was operated for cholecystectomy & did not have any bleeding episoe. What is next investigation for clinical diagnosis- *(AIMS Nov 10)*
a) Factor VIII assay
b) Anti viper venom assay
c) Platelet aggregation test
d) Ristocetin Cofactor assay

1598)b 1599)a,b,c 1600)a 1601)d 1602)b 1603)b 1604)a 1605)c 1606)b 1607)a,c 1608)c 1609)d 1610)c 1611) c 1612)c 1613)b 1614)d 1615)a 1616)c 1617)b

1618. Which of the following is not true about coagulation factor VH- *(AI09)*
a) Deficiency is autosomal recessive inheritance
b) TPT
c) With Hageman Factor is has longer half life
d) Its half life is 8-12 hrs

1619. The presence of small sized platelets on the peripheral smear is characteristic of -
a) Idiopathic thrombocytopenic purpura
b) Bernard soulier syndrome *{AIIMS Nov 03)*
c) Disseminated intravascular coagulation
d) Wiskott Aldrich syndrome

1620. A patient has the following findings-splenomegaly, low RBC count, normal WBC, and platelet count and peripheral blood smear shows teat drop cells. Repeated BM aspiration is unsuccessful. The probable diagnosis is - *(AIIMS 1999)*
a) Thalassemia
b) Chronic myeloid leukemia
c) Iron deficiency anaemia
d) Myelofibrosis

1621. All of the following statements are true about wiskott aldrich syndrome except ? *(AiimsNov08)*
a) It is an autosomal recessive disorder
b) There is failure of aggregation of platelets in response to agonists
c) Thrombocytopenia is seen
d) Patient presents with eczema

1622. The blood in the vessels normally does not clot because -
a) Vitamin K antagonists are present in plasma
b) Throbin has a positive feedback on plasminogel
c) Sodium citrate in plasma chelates calcium ions
d) Vascular endothelium is smooth and coated with glycocalyx

1623. A patient with cirrhosis of liver has the following coagulation parameters, Platelet count 2,00,000, Prothrombin time 25s/12s, Activated partial thromboplastin time 60s/35s, thrombin time 15s/15s. In this patient - *(AIIMS May 04)*
a) D-dimer will be normal
b) Fibrinogen will be < 100 mg
c) ATIII will be high
d) Protein C will be elevated

1624. TRUE regarding Von-Willebrand disease is -
a) Prolonged bleeding time *(AIIMS Dec 97)*
b) Decreased factor VIII
c) Platelets do not adhere to glass surface
d) Defects detected with ristocetin

1625. Best assay for deficiency of von Willebrand factor is-
a) Bleeding time *(PGIDecOI)*
b) APTT
c) BT+APTT
d) BT + APTT + vWF-ristocetin factor assay
e) PT

1626. The coagulation profile in a 13 - year old girl with Menorrhagia having von Willebrands disease is -
a) Isolated prolonged PTT with a normal PT
b) Isolated prolonged PT with a normal PTT
c) Prolongation of both PT and PTT
d) Prolongation of thrombin time

1627. IVue about Haemophilia A are all except- *(AI01)*
a) PTT increased
b) PT increased
c) Clotting time is increased
d) Serum levels of factor VIII are decreased

1628. All are true about hemophilia, except -
a) Increased Bleeding time (BT) *(AIIMS May 94)*
b) Decreased factor VIII
c) Decreased factor IX
d) Increased partial thromboplastin time (PTT)

1629. Hemophilic A has following diagnostic features except - *(AI 97)*
a) f VIII factor b)tPTT
c) TPT d) Normal BT

1630. A 9 yr old girl has bleeding diathesis, with prolonged aPTT but norml PT, and normal platelet count. The diagnosis is - *(AI 09)*
a) Factor V deficiency b) Haemophilia A
c) HaemophilaB d) Von Willebrand's disease

1631. In a patient of Hemophilia to be taken for dental extraction true is all, EXCEPT'- *(AIIMSNov2K-01)*
a) All patients should be screened for HTV
b) Extraction should be done under general anaesthesia and skilled anaesthetic care
c) Factor VIII or cryoprecipitate can be needed
d) Dose of Lignocaine required for anaesthesia is same as that for normal individuals

1632. Platelet function assessed by - *(PGIDec02)*
a) Platelet adhesion b)BT
c) CT d)PTT
e) iedTLC

1633. Platelet function defect is seen in - *(PGI June 03)*
a) Glanzmana syndrome
b) Bernard soulier syndrome
c) Wiskot Aldrich syndrome
d) Von-Willebrand disease
e) Weber Christian disease

1634. Platelet function defect is seen in - *(PGINov 05)*
a) Gray platelet syndrome
b) Glanzmann syndrome
c) VonWilebrand's disease
d) Chediak higashi syndrome

1635. A patient on aspirin, will show the following finding?
a) Prolonged BT b) Prolonged PT *(AI07)*
c) Prolonged APTT d) Prolonged CT

1636. Which of the following is the finding in functional defect in platelets - *(AI 2011)*
a) Normal platelet counts and prolonged bleeding time
b) Normal platelet count and bleeding time
c) Prolonged bleeding time, prothrombin time and PTT
d) Thrombocytopenia and prolonged bleeding time

1618)c 1619) d 1620)d 1621)a 1622)d 1623)a 1624)a,d 1625)dl626)a 1627)b 1628)a 1629)c 1630)d 1631)b 1632) a,b 1633)a,b,d 1634) All 1635) a 1636) a

1637. Which is not true regarding Bernard soulier syndrome? *(AI07)*
a) Ristocetin aggregation is normal
b) Aggregation with collagen and ADP is normal
c) Large platelets
d) Thrombocytopenia

1638. Thromboasthenia there is a defect in -
a) Platelet adhesion b) Platelet aggregation
c) ADP secretion d) Platelet contraction

1639. All of the following can cause megakaryocytic thrombocytopenia, except - *(AIIMS Nov 04)*
a) Idiopathic thrombocytopenic purpura
b) Systemic lupus erythematosus
c) Aplastic anemia
d) Disseminated intravascular coagulation (DIC)

1640. Platelet count is decreased in all of the following condition except - *(AIIMSDec 98)*
a) H. S. Purpura
b) Idiopathic thrombocytopenic purpura
c) Thrombotic thrombocytopenic pupura
d) Systemic lupus erythematosus

1641. Thrombocytopenia is not seen in - *(AI 96, AI 06)*
a) H.S. purpura b)DIC
c) Leukemia d) Metastasis

1642. Cause of ITP is - *(AIIMS Feb 97)*
a) Vasculitis
b) Antibody to vascular epithelium
c) Antibody to platelets
d) Antibody to clotting factors

1643. A Pt. has ecchymoses and petechiae all over the body with no hepatosplenomegaly. All are true except - *(AIIMS Nov 99)*
a) Increased megakaryocytes in bone narrow.
b) Bleeding into the joints
c) Decreased platelet in blood
d) Disease resolves itslef in 80% of Pt. in 2-6 weeks.

1644. The following laboratory determinants is abnormally prolonged in ITP - *(AI 02)*
a) APTT b) Prothrombin time
b) Bleeding time d) Clotting time

1645. Not true about Immune Thrombocytopenic purpura (ITP)- *(PGI09)*
a) Autoimmune mediated
b) Massive splenomegaly
c) T Megakaryocytes in bone marrow
d) I. V immunoglobulin is given
e) Chronic ITP is self limiting condition

1646. A patient is admitted with 3rd episode of deep venous thrombosis. There is no history of any associated medical illness. All of the following investigations are required for establishing the diagnosis except- *(AIIMS Nov 04)*
a) Proteing C deficiency
b) Antithrombin III deficiency
c) Antibodies to factor VIII
d) Antibodies to cardiolipin

1647. Thrombotic event is seen in all of following except -
a) PNH b) DIC *(AIIMS May 11)*
c) ITP d) Heparin induced thrombocytopenia

1648. Predisposing factor for arterial thrombosis -
a) AT III deficiency b) Proteins S deficiency
c) Protein C deficiency d) Homocysteinemia

1649. Most common inherited thrombotic disorder is -
a) Protein C deficiency *(PGI Dec 05)*
b) Protein S deficiency
c) Factor V leiden mutation
d) tPA deficiency

1650. Platelet transfusion is not indicated in - *(AI 96)*
a) Dilutional Thrombocytopenia
b) Immunogenic Thrombocytopenia
c) Aplastic Anemia
d) DIC

1651. What is the most common cause for Budd chiary syndrome - *(AIIMSNov 2000)*
a) Right ventricular failure b) PNH
c) Valve in hepatic veins d) Polycythemia vera

1652. Most common cause of Budd Chiari syndrome is -
a) Idiopathic *(AIIMS May 94)*
b) Valves in hepatic veins
c) Hepatocellular carcinoma
d) Thrombosis of hepatic veins

1653. In Budd Chiari syndrome, the site of venous thrombosis is - *(AI 04)*
a) Infrahepatic inferior vena cava
b) Infrarenal inferior vena cava
c) Hepatic veins
d) Portal veins

1654. Commonest cause of Budd Chiari syndrome is -
a) Valve in the IVC (*AI97)*
b) Hepatocellular carcinoma
c) Paroxysmal nocturnal hemoglobinuria
d) Renal cell carcinoma

1655. What is differential diagnosis for thrombotic microangiopathic anemia? *(PGIDec 05)*
a) Sepsis b) Hemolytic uremic syndrome
c) MI d) Eclampsia
e) Scleroderma renal crisis

1656. Hemolytic uremic syndrome is associated with all except - *(AIIMS May 0 7)*
a) EHEC b) Shigella
c) Campylobacter d) Vibrio cholera

1657. Hemolytic Uremic Syndrome is characterized by-
a) Microangiopathic haemolytic anaemia
b) ledLDH *(PGIDec 03)*
c) Thrombocytopaenia
d) Renal failure
e) Positive Coomb's test

1658. All are features of haemolytic uremic syndrome, EXCEPT- *(AIIMSDec 95)*
a) Hyperkalemia
b) Anaemia
c) Renal microthrombi
d) Neuro psychiatric disturbances

1637) a 1638) b 1639)c 1640)a 1641)a 1642)c 1643)b 1644)c 1645)b,e 1646) c 1647) c 1648)d 1649)c 1650)b
165 l)d 1652) d 1653) c 1654) c 1655) b 1656) d 1657) a, c,d 1658) d

1659. A 10 year old child develops hematuria after 2 days of diarhoea. Blood film shows fragmented RBCs. Which of the following is likely diagnosis-
a) Acute pyelonephritis *(AIIMSJune 99)*
b) Disseminated intravascular coagulopathy
c) Haemolytic uremic syndrome
d) Haemolytic crises

1660. A 20 year - old male has features of acute renal failure. Blood examination shows thrombocytopenia and Hb-10 gm%. Likely cause is -
a) Haemolytic uremic syndrome *(AIIMSJune 99)*
b) Hereditary spherocytosis
c) Haemolytic crises
d) Chronic glomerulonephritis

1661. Micro angiopathic hemolytic anaemia is seen in all of the following diseases except - *(Aiims Nov 08)*
a) Antiphosphlipid antibody syndrome
b) Thrombotic thrombocytopenic purpura
c) Microscopic polyangitis
d) Metallic cardiac valves

1662. All of the following feature may be seen in thrombotic thrombocytopenic purpura, *except-(AHMS June 90)*
a) Fever b) Haemolysis
c) Hypertension d) Low platelets count

1663. All of the following feature may be seen in thrombotic thrombocytopenic purpura, except - *(AI02)*
a) Fever b) Haemolysis
c) Hypertension d) Low platelets count

1664. All of the following statements are true about Hemolytic uramic syndrome except - *(AI 9 7)*
a) Uraemia
b) Hypofibhrinogenemia
c) Thrombocytopenia
d) Positive coomb's test

1665. Shigella associated hemolytic uramic syndrome is associated with all of the following except - *(AI 98)*
a) Hyperkalemia b)Thrombocytopenia
c) Neurological symptom d) Renal microthrombi

1666. All are true about thrombotic thrombocytopenic purpura except ? *(AIIMS Nov 08)*
a) Microangiopathic hemolytic anemia
b) Thrombocytopenia
c) Normal complement level
d) Grossly abnormal coagulation tests

1667. A person has fever, tremor & altered sensorium. Laboratory finding are: Platelet count-20000/mn, S. creatinine -3.0 mg% Hb g% & fragmented red blood cells. Which of the following will be included in management - *(PGI June 09)*
a) IV Ig b) plasmapharesis
c) IV steroid d) 5 % Dextrose
e) Immunotherapy

1668. All are true regarding lupus anticoagulant except - *(AIIMS Sep 96)*
a) Thrombocytosis b) Increased abortions
c) Rashes d) Arterial thrombosis

1669. The following condition is not associated with an Anti-phospholipid syndrome - *(AI 02)*
a) Venous thrombosis
b) Recurrent foetal loss
c) Thrombocytosis
d) Neurological manifestations

1670. All are true regarding Lupus anticoagulant, except - *(AIIMS Nov 93)*
a) Increased abortions b) Arterial thrombosis
c) Rashes d) Increased PT

1671. Lupus anticoagulants may cause all of the following except- *(AI 98)*
a) Recurrent abortion
b) False +ve VDRL results
c) Increase prothrombin time
d) Arterial thrombosis

1672. A35 yr old lady with Normal PT and increased aPTT. 2 year back, she was operated for cholecystectomy & did not have any bleeding episode. What is next investigation for clinical diagnosis -
a) Factor VIII assay *(AIIMS Nov 10)*
b) Anti viper venom assay
c) Platelet aggregation test
d) Ristocetin cofactor assay

1673. A patient has normal PT and platelet count with increased aPTT, factor 8 levels given as 60 iu/ml, no bleeding history. Diagnosis? *(AIIMSNov 11)*
a) Factor IX deficiency b) Thalassemia
c) Factor VIII inhibitors d) Lupus anticoagulant

1674. True about lupus anticoagulant include the following except - *(AI 09)*
a) Bleeding episodes can be life threatening
b) taPTT
c) May occur without clinical signs
d) May be associated with recurrent mid trimester abortions

1675. Antiphospholipid antibody (APLA) syndrome is associated with all of the following except - *(AI 10)*
a) Bleeding disorders b) Thrombotic disorders
c) Coagulation disorders d) Recurrent fetal loss

1676. True about antiphospholipid antibody syndrome include following - *(AI 10)*
a) Bleeding b) Thrombosis
c) Recurrent fetal loss d) Autoimmune disease

1677. Which of the following is recommended in a woman with antiphospholipid antibodies and history of prior abortions / still birth - *(AI 10)*
a) Aspirin only
b) Aspirin + Low molecular weight Heparin
c) Aspirin + Low molecular weight Heparin + Prednisolone
d) No treatment

1678. Bleeding in DIC is most closely related to -
a) Raised fibrin degradation products level in blood
b) Prolong prothrombin time *(AIIMS June 98)*
c) Low serum fibrinogen level
d) Raised thrombin time

1659) c 1660) a 1661)d 1662)c 1663)c 1664)d 1665)c 1666)d 1667)b,c,e 1668)a 1669)c 1670)d 1671)c 1672)b 1673) a,d 1674)a 1675)a 1676)a 1677)b 1678)c

1679. False statement regarding DIC is - *(AI01)*
a) Thrombocytopenia b) Decreased fibnrinogen
c) Decreased PTT d) Increased PT

1680. Disseminated intravascular coagulation (DIC) differs from thrombotic thrombocytopenic purpura. In this reference the DIC is most likely characterized by - *(AI 04)*
a) Significant numbers of schistocytes
b) A brisk reticulocytosis
c) Decreased coagulation factor levels
d) Significant thrombocytopenia

1681. The following set of finding is seen in DIVC - *(AI 07)*
a) Increased fibrinogen, increased antithrombin III, increased thrombin-antithrombin III complexes
b) Increased FDP, decreased PT, increased antithrombin III
c) Increased FDP, prolonged PT, increased thrombin-antithrombin complexes
d) Increased FDP, prolonged PT, reduced platlets

1682. DIC is commonly seen in - *(AIPGMEE 08)*
a) Ml AML b) M2 AML
c) M3 AML d)M4AML

1683. Vitamin K-dependent factor is - *(AI 96)*
a) n b) m
c) IV d) VI

1684. Which is most likely to be increased in Vit K deficiency - *(AI2000)*
a) PT.T. b)PT.
c) Platelet count d) Fibrinogen time

1685. Feature of hemorrhagic disease of new born is -
a) Prolonged prothrombin time *(AIIMS June 97)*
b) Defective platelet count
c) Prolonged bleeding time
d) Prolonged thrombin time

1686. A 78 year old man who lives alone and prepares his own food is found to have ecchymotic patches over posterior aspect of his lower extremities. He has haemorrhagic areas around hair follicles, hair are fragmented and splinter haemorrhages are present in nail beds and several hematomas are present in the muscles of arms and legs. PT and CT are normal. This clinical syndrome is most likely due to- *(AIIMSNov 99)*
a) Vitamin K deficiency b) Vitamin C deficiency
c) Pyridoxine deficiency d) Vitamin A deficiency

1687. A young person presents with a history of severe menorrhagia. She has palpable spleen. Her bleeding time is prolonged with a normal clotting time. Platelet count is normal .The most likely diagnosis is - *(UPSC 96)*
a) Haemophilia
b) Henoch-Scholeim purpura
c) Thrombosthenic purpura
d) Allergic purpura

1688. Haemophilia A is characterrised by the presence of following features, except - *(UP 97)*
a) Bleeding into soft tissues, muscles & joints
b) Loss of VIII levels
c) Prolonged partial thromboplastin time
d) Prolonged prothrombin time

1689. Which of the following is the best source of factor Vffl- *(KARNAT 98)*
a) Fresh food b) Fresh frozen plasma
c) Cryoprecipitate d) Platelet concentrate

1690. All the following are preliminary investigations in primary coagulation defects except - *(NIMS96)*
a) Bleeding time b) Platelet count
c) Prothrombin time d) Platelet aggregation studies

1691. Hess's (Tourniquet) test is a feature of - *(Korn 02)*
a) Idiopathic Thrombocytopenic Purpura (I.T.P)
b) Secondary thrombocytopenia
c) Allergic purpura
d) Senile purpura

1692. Most specific investigation in disseminated intravascular coagulation is - *(Jipmer 03)*
a) D - dimer assay b) Bleeding time
c) Clotting time d) Fibrinegen level

1693. Thrombocytopenia with widespread thrombosis?
a) Antiphospholipid antibody syndrome *(Bihar 03)*
b) CML
c) Hairy cell leukemia
d) Hemolytic uremic syndrome

1694. Which one of the following platelet counts is usually associated with increased incidence of spontaneous bleeding- *(UPSC 05)*
a) Greater tha 80,000/mm^3 b) 40,000/mm^3
c) 20,000mm^3 d) Less than 20,000mm^3

1695. The following condition is not associated with an Anti phospholipid syndrome- *(MAHE 05)*
a) Venous thrombosis
b) Recurrent foetal loss
c) Thrombocytosis
d) Neurological manifestation

1696. Anti phospholipid antibody syndrome is characterized by all the following features except -
a) Thrombocytosis *(Korn pgmee 06)*
b) Arterial and venous thrombosis
c) Recurrent abortions
d) Livedo reticularis

1697. Pawn ball megakaryocytes are characteristic of-
a) Myelodysplastic syndrome *(Corned 08)*
b) idiopathic thrombocytopenic purpura
c) Thrombotic thrombocytopenic purpura
d) Chloramphenicol toxicity

1698. All are true about Wiskott-Aldrich syndrome except- *(Delhi PG Mar. 09)*
a) Bloody diarrhea during infancy
b) Low IgM and elevated IgA and IgE
c) Large size platelets
d) Atopic dermatitis

1679)c 1680) c 1681)d 1682)c 1683)a 1684)b 1685)a 1686)b 1687)c 1688)d 1689)c 1690)c 1691)a 1692)a 1693) a 1694)d 1695)c 1696)a 1697)a 1698)c

1699. The agent of choice for controlling heparin induced bleeding is - *(UPSC-I 09)*
a) Protamine sulphate b) Injectable vitamin K
c) Whole blood d) Fresh frozen plasma

1700. Thrombocytosis may be seen in the following conditions except - *(UPSC-I 09)*
a) Idiopathic myelofibrosis
b) Chronic myeloid leukemia
c) Essential thrombocythemia
d) Hypersplenism

1701. Increased PT is seen with - *(PGI Nov. 10)*
a) Warfarin administration
b) Heparin administration
c) Factor 8 deficiency
d) Factor 9 deficiency
e) Vit. K deficiency

1702. Congenital cause of hypercoagulable states are all except- *(AHMS Nov 10)*
a) Protein C deficiency b) Protein S deficiency
c) MTHFR mutation d) Lupus antigoagulant

1703. A35 yr old lady with normal PT and increased aPTT. 2 year back, she was operated for cholecystectomy & did not have any bleeding episoe. What is next investigation for clinical diagnosis -
a) Factor VIII assay *(ARMS Nov 10)*
b) Anti viper venom assay
c) Platelet aggregation test
d) Ristocetin Cofactor assay

1704. Thrombotic event is seen in all of following except -
a) PNH *(AIIMS May 11)*
b) DIC
c) ITP
d) Heparin induced thrombocytopenia

1705. An orally active anticoagulant under development with an advantage of not requiring the monitoring of anticoagulant effect is - *(UPSC111)*
a) Fondaparinux b) Ximelagatran
c) Snake venom derivative d) Ancrod

1706. The following are the common features of Idiopathic Thrombocytopenic Purpura except - *(UPSC II11)*
a) Epistaxis b)Cutaneous ecchymoses
c) Massive splenomegaly d)Thrombocytopenia

MYELOMA

1707. Multiple myeloma is characterized by all except -
a) Presence of light chains *(PGI 2000)*
b) Monoclonal gammopathy
c) Polyclonal gammopathy
d) Hypergammaglobulinemia

1708. TYue about Multipal Myeloma- *(PGI2000)*
a) Bence Tones protein in urine
b) Hypogammaglobulinemia
c) Amyloidosis
d) Plasmacytosis <10 %
e) Renal failure

1709. All seen in multiple myeloma, Except -
a) Lytic bone lesion *(ARMS May 95)*
b) Hypercalcemia
c) Plasmacytosis of bone marrow > 2%
d) Decreased serum alkaline phosphatase activity

1710. Which one of the following is not a feature of multiple myeloma? *(ARMS May 05)*
a) Hypercalcemia
b) Anemia
c) Hyperviscosity
d) Elevated alkaline phosphatase

1711. True regarding multiple myeloma is all, EXCEPT-
a) Bone pain *(ARMSDec 97)*
b) Lytic lesions
c) Increased alkaline phosphatase
d) Tarterate resistance, acid phosphatase positive

1712. Which is not seen in multiple myeloma -
a) Lytic lesions in bone *(ARMS Feb 97)*
b) Increase in alkaline phosphatase
c) Hypercalcemia
d) Hypercalciuria

1713. Commonest site of lytic lesion in multiple myeloma is -
a) Vertebral columan b) Femur
c) Clavicle d) Pelvis

1714. Which of the following is not a major criteria for diagnosis of multiple myeloma ? *(A106)*
a) Lytic bone lesions
b) Plasmacytoma on tissue biopsy
c) Bone marrow plasmacytosis > 30%
d) ^{C}M' spike > 3g% for Ig G, > 2g% for IgA

1715. All of the following are minor criteria for multiple myeloma except - *(ARMS Nov 10)*
a) Plasmacytosis 20%
b) Multiple lytic lesion
c) IgA < 100 mg/dl and IgG < 600 mg/dl
d) Plasmacytoma on tissue biopsy

1716. All of the following are true about multiple myeloma except - *(AI94)*
a) Osteolytic bone disease
b) t(18-14) translocation
c) Light chain proliferation
d) Bence-Jones proteins in urine

1717. What is the best prognostic indicator of multiple myeloma at the time of diagnosis - *(ARMS Nov 2K)*
a) Number of myeloma cells in the marrow
b) Beta 2 microglobulin
c) Alkaline phosphatase level
d) Hypercalcemia

1718. Maximum ESR is seen in - *(AI 98)*
a) CHF b) Polycythemia vera
c) Multiple myeloma d) Sickle cell anemia

1719. The following is the least useful investigation in multiple myeloma - *(AI 07)*
a) ESR b) X-Ray
c) Bone scan d) Bone marrow biopsy

1699) a 1700)d 1701)a,b,e 1702)d 1703)b 1704)c 1705)b 1706)c 1707)c 1708)a,b,c,e 1709)c 1710)d 171 l)c 1712) b 1713)a 1714)a 1715)d 1716)b 1717)b 1718)c 1719)c

1720. All are true for multiple myeloma except -
a) Hypercalcemia *(PGI Nov 09)*
b) Hyperuricemia
c) T Serum alkaline phosphatase
d) Monoclonal M band
e) Bone marrow plasma cell <5%

1721. Bad prognosis in multiple myeloma is indicated by -
a) WBC > 20000 *(PGI June 99)*
b) Azotemia
c) Hypocalcemia
d) Low or normal M component production

1722. A patient of multiple myeloma presents with bony lesions. What is the best marker for prognosis of the disease - *(AIIMS June 99)*
a) Bone marrow plasma cell b) Serum calcium level
c) Beta2 micro globulin d) Betal micro globulin

1723. Ramla,65yrs old male presents with low backpain especially at L3, anaemia and fatiguability) His investigation profile reveals -Hb =7gm%, TLC-9000/cmm, DLC -N- 55%, L-30%, M-10%, E-1%, B-2%,Serum proteins-8gm %, ratio-2.9/5.9, ESR-90 and serum creatinine-3.2 mg%. Likely diagnosis is- *(AIIMS Nov 01)*
a) Waldenstroms macroglobulinemia
b) Multiple myeloma
c) TB spine
d) Secondaries in spine

1724. A patient with multiple myeloma and serum ca2+l 5mg/dl; the treatment - *(PGI June 04)*
a) Oral pamidronate
b) Less than 15mg/dl serum calcium dose not causes symptoms
c) Mithramycin
d) Glucocorticoids

1725. Drug (s) used in the treatment of multiple myeloma is/are - *(PGI 09)*
a) Bortezomib b) Melphalan
c) Hydroxyorea d) Ketoconazole
e) Cyclophosphamide

1726. Russell body is found in - *(AIIMS June 97, A195)*
a) WBC b)RBC
c) Mast cells d) Plasma cells

1727. Russell bodies are found in - *(AI96)*
a) Multiple Myeloma b) Gonadal tumor
c) Parkinsonism d) Intracranial neoplasms

1728. In multiple myeloma following are seen except -
a) Anion gap raised *(PGIDec 97)*
b) Lytic bone lesion
c) Polyarticular pains
d) M spike present with polyarticulopathy

1729. True about Myeloma is all, except -*(AIIMSNov 01)*
a) Plasma cell clonal proliferation
b) Common after 50 yrs of age
c) Amyloidosis can occur
d) Protein casts in urine are made up of complete Ig chains

1730. Ramesh 60 years, presents with generalized bone pain. On examination there is elevated ESR of 100 mm, serum globulin 7, lytic lesions in the skull, serum creatinine of 3.5 mg/dL and serum calcium of Ilmg/dL. What is the most likely diagnosis -
a) Waldenstrom's macroglobulinemia
b) Multiple myeloma *(AIIMS Nov 2k)*
c) Hyperparathyroidism
d) Osteomalacia

1731. A 58 year old woman, who had backache and recurrent chest infections for 6 months, develops sudden weakness of the legs and urinary retention. Her investigations show a hemoglobin of 7.3 gm/dl, serum calcium 12.6 mg/dl, phosphate-2.5 mg/dl, alkaline phosphatase-100u/I, serum albumin-3 gm/dl, globulin - 7.1 gm/dl and urea -178 mg/d. What is the most likely diagnosis - *(AI 06)*
a) Lung cancer
b) Disseminated tuberculosis
c) Multiple myeloma
d) Osteoporosis

1732. A 50 year old man presented with orbital mass. Systemic examination revealed anaemia and investigations revealed hypergammaglobulinemia. The patient should be investigated to rule out: -
a) Squamous cell carcinoma *(AIIMS Nov 03)*
b) Optic nerve glioma
c) Multiple myeloma
d) Malignant melanoma

1733. Which one of the following is not a feature of multiple myeloma - *(AIIMS May 05)*
a) Hypercalcemia
b) Anemia
c) Hyperviscosity
d) Elevated alkaline phosphatase

1734. In multiple myeloma following are seen -*(PGI June 05)*
a) Increase Calcium b) Sclerotic bone lesion
c) Gone deposition d) Renal failure

1735. All the following are seen in Multiple myeloma except- *(AI 95)*
a) Visual Disturbance
b) Bleeding tendency
c) Proteinuria
d) Dystrophic calcification

1736. True about smoldering myeloma is - *(PGI June 08)*
a) Monoclonal gammopathy
b) Lytic bone lesion
c) Hypercalcemia
d) Bone marrow plasma cell > 10%

1737. An 80 year old asymptomatic woman was detected to have a monoclonal spike on serum electrophoresis (IgG levels 1.5 g/dl). Bone marrow revealed plasma cells of 8%. The most likely diagnosis is - *(AI 04)*
a) Multiple myeloma
b) Indolent myeloma
c) Monoclonal gammopathy of unknown significance
d) Waldenstorm's macroglobulinemia

1720)c,e 1721)b 1722)c 1723)b 1724)a,c,d 1725)a,b,e 1726)d 1727)a 1728)a 1729)d 1730)b 1731)c 1732)c 1733)d 1734) a,d 1735)d 1736)a,b 1737)c

1738. Which of the following statement is not true-^47*05)*
a) Patients with IgD myeloma may present with no evident M - spike on serum electrophoresis
b) A diagnosis of plasma cell leukemia can be made if circulating peripheral blood plasmableasts comprise 14% of peripheral blood white cell count of 1 x 10^9/ L and platelet count of 88 x 10^9/ L
c) In smoldering myeloma plasma, cells constitute 10 - 30% of total bone marrow cellularity.
d) In a patient with multiple myeloma, a monoclonal light chain may be detected in both serum and urine

1739. Which of the following is associated with Bence Jones myeloma? *(AI10)*
a) *y* chain disease b) a chain disease
c) *X* chain disease d) chain disease

1740. In lymphoplasmacytoid lymphoma which of the following monoclonal immunoglobulin is seen ?
a) IgA b) IgD *(A110)*
c) IgG d) IgM

1741. The single most powerful predictor of survival in multiple myeloma is - *(UPSC 2002)*
a) 'M' component production
b) Bone marrwo plasmocytosis
c) Serum beta 2-microglobulin level
d) Serum calcium level

1742. Drug of choice in multple myeloma is - *(AIIMS 85)*
a) Mechlorethamine b) Vincristine
c) Vinblastine d) Melphalan

1743. A 45 year old female patient presents with symptoms of easy bruisabilty and frequent headaches. Physical examination shows moderate splenomegaly. Blood counts show a normal leucocyte count and platelet count of 1000 x 10^3/cu mm. The leukocyte alkaline phosphatase score is normal. Which of the following is the drug of choice for the treatment of this patient?
a) Hydroxyurea b) Radioactive phosphorous
c) Anagrelide d) Interferon alpha

1744. Bence j ones proteins are - *(MAHE 05)*
a) Heavy chain IgG
b) Present in bone marrow
c) Seen in lymphoma
d) Light chain IgG

1745. Most common plasma cell tumor is - *(Orissa 05)*
a) Plasmacytoma
b) Waldenstorm's macroglobinemia
c) Multiple myeloma
d) Primary amyloidosis

1746. Classical 'Rain drop' lesions seen in - *(Corned 07)*
a) Burkitt's lymphoma b) Hodgkin's lymphoma
c) Multiple myeloma d) Haemophilia

1747. Bad prognosis is multiple myeloma is indicated by -
a) WBC > 20000 *(Delhi PG Feb. 09)*
b) Azotemia
c) Hypocalcemia
d) Low or normal M component production

1748. Features of multiple myeloma are - *(PG1 May 10)*
a) B cell clonal proliferation
b) B cell in bone marrow
c) B cell in peripheral blood
d) Plasma cell secretes immunoglobulin

1749. All of the following are minor criteria for multiple myeloma except - *(AIIMS Nov 10)*
a) Plasmacytosis 20%
b) Multiple lytic lesion
c) IgA < 100 mg/dl and IgG < 600 mg/dl
d) Plasmacytoma on tissue biopsy

1750. Which of the following is the least common feature of Multiple Myeloma - *(AI 12)*
a) Bone pain
b) Normocytic Normochromic Anemia
c) Susceptibility to bacterial Infection
d) Hyperviscosity syndorome

1751. All of the following are true about multiple myelomaexcept- *(NEETYDNB Pattern)*
a) Osteolytic bpne disease;
b) t (18-14) translocation
c) Light chain proliferation
d)-Bencfe-Jones proems in urine *

1752:N6taffected in multiple myeloma - -
a) IgG b) IgA *(NEET/DNB Pattern)*
c) IgM d) IgD

LEUKEMIA

1753. A 5 year old child presents with history of fever off - and-on for past 2 weeks and petechial spots all over the body and increasing pallor for past 1 month. Examination reveals splenomegaly of 2 cms below costal margin. The most likely diagnosis is -
a) Acute leukemia
b) Idiopathic thrombocytopenic purpura
c) Hypersplenism
d) Aplastic anemia

1754. Auer rods are seen in - *(AIIMSMay 1993)*
a) AML b) CML
c)ALL d)CLL

1755. The biochemical marker of lymphocytic leukemia is - *(AIIMS Dec 1990)*
a) Enolase b) Peroxidase
c) Choline esterase d) Periodic and Schiff

1756. Which of the followings combination of cytogenetic abnormality and associated leukemia/lymphoma is incorrect ? *(AIIMS Nov 2004)*
a) t (8:14) Burkitts lymphoma
b) t(15:17)AML-M3
c) 1(9:22) CML
d) t (9:20) ALL

1757. The marker for B lymphocyte is-
a) CD 19 b) CD 68
c) CD 34 d) CD 4

1738) b 1739)c 1740)d 1741)c 1742)d 1743)a 1744)d 1745)c 1746)c 1747)b 1748)a,b,d 1749)d 1750)d
1751) b 1752)?? 1753) a 1754)a 1755)d 1756)d 1757)a

1758. Which of the following is a pan-T lymphocyte marker- *(AI2003)*
a) CD2 b)CD3
c) CD19 d)CD25

1759. Memory T cells can be identified by using the following marker - *(AI 2003)*
a) CD45RA b)CD45RB
c) SD45RC d) CD45RO

1760. Marker specific for myeloid lineage-(/12ZMS' *Nov 95)*
a) CD 33 b)CD 14
c) CD 13 d)cMPO

1761. A 63 - year old man presented with massive and splenomegaly, lymphadenopathy and a total leucocyte count of 17000 per mm^3. The flow cytometery showed CD 23 negative and CD 5 positive monoclonal B-cells with bright kappa positively comprising 80% of the peripheral blood lymphoid cells. The most likely diagnosis is - *(AI 03)*
a) Mantle cell lymphoma
b) Splenic lymphoma with villous lymphocytes
c) Follicular lymphoma
d) Hairy cell leukemia

1762. A 48 year old women was admitted with a history of weakness for two months. On examination, cervical lymph nodes were found enlarged and spleen was palpable 2 cm below the costal margin. Her hemoglobin was 10.5 g/dl, platelet count 2.7 x 10^9/L and total leukocyte count 40 x KF/L, which included 80% mature lymphoid cells with coarse clumped chromatin. Bone marrow revealed nodular lymphoid infiltrate. The peripheral blood lymphoid cells were positive for CD 19, CD 5, CD20 and CD23 and were negative for CD 79 B and FMC - 7.
The histopathological examination of the lymph node in this patient will most likely exhibit effacement of lymph node architecture by - *(AI 2005)*
a) A pseudofollicular pattern with proliferation centers
b) A monomorphic lymphoid proliferation with a nodular pattern.
c) A predominantly follicular pattern
d) A diffuse proliferation of medium to large lymphoid cells with high mitotic rate.

1763. A 48 year of woman was admitted with a history of weakness for two months. On examination cervical lymph nodes were found enlarged and spleen was palpable 2 cm below the costal margin. Her hemoglobin was 10.5 g/dl. platelet count 237 x 10^9/ L, and total leukocyte count 40 x 10^9/L, which include 80% mature lymphoid cell with coarse clumped chromatin. Bone marrow revealed a nodular lymphoid infiltrate. The peripheral blood lymphoid cells were positive for CD 19, CD5, CD20 and were negative for CD79B and FMC(-7). Which one of the following statements in not true about this disease? *(AIIMS Nov 2004)*
a) Trisomy 12 correlates an aggressive clinical course
b) Abnormalities of 13q 14 are associated with long term survival
c) Case with llq22-23 deletions have excessive lymphadenopathy
d) t (11; 14) translocation is present in most of the cases

1764. True about CLLis - *(PGI June 08)*
a) Can present as acute leukaemia
b) Diagnosed in routine blood test
c) Leukocytosis
d) More T lymphocytes seen

1765. In a patient with acute leukemia, immunophenotype pattern is CD 19+ve, CD 10+ve, CD33+ve, CD13+ve. He may probably have - *(AIIMS May 04)*
a) Biphenotypic leukemia b)ALL
c) AML-IV^ d)AML-M_0

1766. A four year old boy was admitted with a history of abdominal pain and fever for two months maculopapular rash for ten days, and dry cough, dyspnea and wheezing for three days. One examination liver and spleen were enlarged 4 cm and 3 cm respectively below the costal margins. His hemoglobin was 10.0 g/dl, plate^t count 37 x l(r/L and total leukocyte count 70 x 10 /L, which included 80% eosinophils Bone marrow examination revealed a cellular marrow comprising of 45% blasts and 34% Eosinophils and eosinophilic precursors. The blasts stained negative for myeloperoxidase and non-specific esterase and were positive for CD19, CD10, CD22 and CD20. Which one of the following is the most likely diagnosis? *(AIIMSNOV2004)*
a) Biphenotypic acute leukemia (lymphoid and eosinophil lineage)
b) Acute eosinophilic leukemia
c) Acute lymphoblastic leukemia with hyper-eosinophilic syndrome
d) Acute myeloid leukemia with cosinophilia

1767. A four year old boy was admitted with a history of abdominal pain and fever for two months maculopapular rash for ten days, and dry cough, dyspnea and wheezing for three days. On examination liver and spleen were enlarged 4 cm and 3 cm respectivley below the costal margin. His hemoglobin was 10.0 g/dl, platelet count 3.7 x 10^9/L and total leukocyte count 70 x 10^9/L, which included 80% eosinophils Bone marrow examination revealed a cellular marrow comprising of 45% blasts and 34% Eosinophils and eosinophil precursors. The blasts stained negative for my eloperoxidase and non-specific esterase and were positive for CD19, CD10, CD22 and CD20. Which one of the following statements is not true about disease? *(AI2005)*
a) Eosinophils are not part of the Neoplastic clone.
b) t(5:14) rearrangement may be detected in blasts.
c) Peripheral blood eosinophilia may normalize with chemotherapy
d) Inv (16) is often detected in the blasts and the eosinophils

1758) b 1759)d 1760)d 1761)a 1762)d 1763)d 1764)b,c 1765)a 1766)c 1767)d

1768. 80 year old, asymptomatic man present with a Total leucocyte count of 1 lakh, with 80% lymphocytes and 20% PMC's. What is the most probable diagnosis - *(AI07)*
a) HIV b)CML
c) CLL d)TB

1769. All of the following statements about Hairy cell leukaemia are true except *(AI 2004)*
a) Splenomegaly is conspicuous
b) Results from an expansion of neoplastic T lymphocytes
c) Cells are positive for Tartrate Resistant Acid phosphatase
d) The cells express CD25 consistently

1770. CD 19 positive, CD 22 positive, CD 103 positive monoclonal B-cells with bright kappa positivity were found to comprise 60% of the peripheral blood lymphoid cells on flow cytometric analysis in a 55 year old man with massive splenomegaly and a total leucocyte count of 3.3 x 10^9/L. Which one of the following is the most likely diagnosis?
a) Splenic lymphoma with villous lymphocytes
b) Mantle cell lymphoma *(AIIMSNOV2004)*
c) B-cell prolymphocytic leukemia
d) Hairy cell leukemia

1771. Treatment of choice in hairy cell leukemia is -
a) Steroids b) Cladiribine *(AI 95)*
c) Splenectomy d) Pentostatin

1772. Which of the following is NOT used in treatment of hairy cell leukemia - *(AHMSFeb 97)*
a) Steroid b) Pentostatin
c) Splenectomy d) alpha-interferon

1773. All of the following are poor prognostic factors for acute myeloid leukemias, except - *(AI 03)*
a) Age more than 60 years
b) Leucocytes count more than 1,00,000/ 1
c) Secondary leukemias
d) Presence oft (8:21)

1774. A.M.L. with worst prognosis - *(AIIMSMay07)*
a) 8/21 translocation b) Inversion 16
c) Normal cytogenetics d) Monosomy 7

1775. Poorest prognosis in AML is seen in which cytogenetic abnormality - *(AIPGMEE 08)*
a) Monosomy 7 b) No cytogenetic abnormality
c) t (15,17) d)inv. 16

1776. Bad prognosis in AML is indicated by -
a) Monosomy *(AIIMS Nov 10)*
b) Deletion of X or Y chromosome
c) T (8:21)
d) Nucleophosmin mutation

1777. A 15-year-old boy presented with one day history of bleeding gum, subconjunctival bleed and purpuric rash. Investigations revealed following results: Hb-6.4 gm/dL; TLC-26,500/mm^3 platelet 35,000 mm^3; prothrombin time-20 sec with a control of 13 sec; partial thromboplastin time-50sec; and Fibrinogen lOmg/dL. Peripheral smear was suggestive of acute myeloblastic leukemia. Which of the following is the most likely? *(AIIMSMay 2006)*
a) myeloblastic leukemia without maturation
b) Myeloblastic leukemia with maturation
c) Promyelocytic leukema
d) Myelomonocytic leukemia

1778. In PML, all of the following are seen except - *(AI 07)*
a) Retinoic acid is used in treatment
b) 15/17 translocation may be seen
c) CD 15/34 both seen in same cell
d) Associated with Disseminated intravascular coagulation (DIVC)

1779. Arsenic is used in treatment of - *(AIIMS May 07)*
a) Acute promyelocytic leukemia
b) A.L.L.
c) CML
d) Transient myeloproliferative disorder

1780. Which of the following presents as mediastinal enlargement- *(AI 1994)*
a) Promyelocytic Leukemia
b) CML
c) ALL
d) Diffuse histiocytic lymphoma

1781. A 17-year-old boy presented with TLC of 138 x 10^9/ L with 80% blasts on the peripheral smear. Chest X-ray demosnstrated a large mediastinal mass. Immunophenotyping of this patent's blasts would most likely demonstrate - *(AIIMS May 2006)*
a) No surface antigens (null phenotype)
b) An immature T cell phenotype (Tdt/CD34/CD7 positve)
c) Myeloid markers, such as CD 13, CD33 and CD 15
d) B cell markers, such as CD 19, CD20 and CD22

1782. Poor prognostic indicator of ALL is -
a) Female sex *(AIIMS May 02)*
b) Leukocyte count < 50,000
c) Age greater than 1 year
d) Hypodiploidy

1783. Poor prognostic factor in ALL are- *(PGI09)*
a) Philadelphia chromosome b) Male sex
c) High WBC count d) Hyperploidy
e) Age < 2 year

1784. The poor prognostic factor associated with ALL in children is - *(AIIMS Nov 09)*
a) Total leucocyte count 4000-100000
b) Age less than 2 years
c) Testicular involvement
d) Blast in peripheral smear

1785. L-asparaginase is partcularly used in which type of leukemia- *(AI 1996)*
a) AML b) CML
c) ALL d)CLL

1786. Treatment of choice of intracranial ALL is -
a) Intrathecal methotrexate *(PGI June 99)*
b) Vincristine and predinisolone
b) Intrathecal vincristine
b) Prednisolone

1768) c 1769) b 1770)d 1771)b 1772)a 1773)d 1774)d 1775)a 1776)a 1777)c 1778)c 1779)a 1780)c 1781)b 1782) d 1783) a,b,c,d 1784) c 1785) c 1786) a

1787. In which of the following types of leukemia is methotrexate administered for CNS prophylaxis -
a) ALL b) AML
c)CLL d)CML

1788. Treatment of ALL- *(PGIDEC02)*
a) Hydroxyurea b) All trans retinoic acid
c) Prednisodone d) L-asparginase
e) Vincristine

1789. L-aspraginase is used in which type of Leukemia -
a) AML b) CML *(AIIMSJune 1993)*
c) ALL d)CLL

1790. A 22 year old man presents with history of bleeding from gums for the last 6 months. On investigation the Hb was found to be 8.2 gm% TLC 4400/mm, DLC N 64%, L 27%, E 3%, M 6% and platelet count of 20,000 /cu mm. Which one of the following investigation would be most useful in establishing the diagnosis - *(UPSC 97)*
a) Bleeding time and clotting time
b) Prothrombin time
c) Partial thromboplastin time
d) Bone marrow examination

1791. Gum hypertrophy is seen in - *(AMU 95)*
a) Myelogenous leukemia
b) Myelomococytic leukemia
c) Lymphocytic leukemia
d) None

1792. All are used in hairy cell leukemia except -
a) Steroids b) Alpha interferon
c) Pentostatin d) Splenectomy

1793. A 55 year old male presents with enlarged glands over the left side of neck. On examination, Spleen is enlarged 4 cm below the costal margin and liver is enlarged 2 cm below costal margin. Blood examination shlow a total leucocyte count of 80,000/ cumm. Mostly lymphocytes and a few prematurecells the mostly likely diagnosis is - *(UPSC 97)*
a) Infective adenopathy
b) Acute leukaemoid reaction
c) Lymphatic leukaemia
d) Hodgkin's disease

1794. Blast crisis in CML is indicated by all except -
a) Lymphadenopathy *(MP 98)*
b) High fever
c) Sudden enlargement of spleen
d) Bleeding tendencies

1795. For acute leukaemia the blast cells should be more than----------% - *(AMC 2K)*
a) 10 b) 20
c) 30 d)40

1796. Acute promyelocytic leukaemia (AML-M3) includes which of the following subtypes - *(Kerala 2K)*
a) Hyper granular and hypo granular type
b) Hyper granular and hyper segmented
c) Hyper granular and micro granular type
d) Hypo granular and micro granular type
e) Hypo granular and inclusion type

1797. Gum hypertrophy is seen in which type of AML-
a) Ml b)M2 *(APPGE04)*
c) M3 d)M4

1798. Treatment of choice for Hairy cell leukaemia ?
a) IFNX b) Splenectomy *(PUNJAB 06)*
c) Cladirabine d)None

1799. A 40 year old male patient is hospitalised with huge splenomegaly, marked sternal tenderness, and a total leucocyte count of85,000 per cubic millimetre with large percentage of myeocytes and meta myelocytes, which one of the following drugs is best indicated for his disease ? *(UPSC 07)*
a) Cyclophosphamide b) Chlorambucil
c) Melphation d) Hydroxyurea

1800. During the treatment of chronic myeloid leukemia, cytogenetic is least likely to occur with which one of the following modalities of treatment ? *(UPSC 07)*
a) Hydroxyurea
b) Imatinib mesylate
c) Interferon-alpha
d) Bone marrow transplantation

1801. A patient, on treatment for leukemia, develops chest pain, pulmonary infiltrates and pleural effusion. The cause is - *(Delhi PG Mar. 09)*
a) Daunorubicin b) Hydroxyurea
c) Cytarabine d) Tretinoin

1802. Drug used in treatment of Acute promyelocytic leukemia - *(PGI May 10)*
a) Arsenic oxide b) Tretinoin
c) Gefitinib d) Dasatinib
e) Retinoic acid

1803. Bad prognosis in AML is indicated by-
a) Monosomy *(AIIMSNovlO)*
b) Deletion of X or Y chromosome
c) T (8:21)
d) Nucleophosmin mutation

1804. Which of the following is a poor prognostic factor in Acute Lymphoblastic Leukemia (ALL) - *(AI11)*
a) Hyperdiploidy b) t (9;22); t (4; 11)
c) 2-8 years of age d) WBC count < 50,000

1805. Enzyme usedin Leukemia *v(NEEX/DNB Pattern)*
a) Asparginase b) Lipase
c) Amylase d) Transminase

BLOOD TRANSFUSION

1806. True about blood transfusion reaction -
a) Complement mediated severe haemolysis *(PGI June 04)*
b) Renal blood flow is decreased
c) Transfusion should not be stopped
d) Death is not seen

1807. True about blood transfusion - *(PGI June 98)*
a) Antigen 'D' determines Rh positivity
b) Febrile reaction is due to HLA antibodies
c) Anti-D is naturally occuring antibody
d) Cryoprecipitate contains all coagulation factors

1787) a 1788) c,d,e 1789)c 1790)d 1791)b 1792)a 1793)c 1794)a,c 1795)b 1796)c 1797)d 1798)c 1799)d 1800) a 1801) d 1802)a,b,e 1803)a 1804)b 1805)a 1806)a,b 1807)a,b

1808. Which of the following investigations should be done immediately to best corfirm a non matched blood transfusion reaction - *(AI10)*
a) Indirect Coomb's test
b) Direct Coomb's test
c) Antibody in patient's serum
d) Antibody in donor serum

1809. Complications of blood transfusion- *(PGIDec 04)*
a) Dilutional thrombocytopenia
b) Metabolic acidosis
c) Metabolic alkalosis
d) Hyperkalemia

1810. True about complication of massive blood transfusion is/are all except - *(PGI Dec 2000)*
a) Hyperkalemia b) Alkalosis
c) Acidosis d) Hypercalcemia
e) Hypothermia

1811. MC blood transfusion reaction is - *(A1PGMEE 08)*
a) Febrile nonhemolytic transfusion reaction
b) Hemolysis
c) Transmission of infections
d) Electrolyte imabalnce

1812. All of the following infections may be transmitted via blood transfusion, except - *(AI 02)*
a) Parvo B-19 b) Dengue virus
c) Cytomegalo virus d) Hepatitis G virus

1813. All are transmitted by blood except-fAZZMS'*May 09)*
a) Parvovirus B-19 b) Hepatitis G
c) Epstein Bar virus d) Cytomegalovirus

1814. All of the following are major complications of massive transfusion, except - *(AI 06)*
a) Hypokalemia b) Hypothermia
c) Hypomagnesemia d) Hypocalcemia

1815. Complication of massive blood transfusion -
a) Acidosis b) Alkalosis
c) Increased K^+ d) Decreased K^+
e) Increased Ca

1816. Complication of blood transfusion can be all except - *(AIIMS May 09)*
a) Hyperkalemia b) Citrate toxicity
c) Metabolic acidosis d) Hypothermia

1817. Blood components products are all except -
a) Whole blood *(PGIDec 05)*
b) Plate lets
c) Fresh frozen plasma
d) leukocyte reduced RBC

1818. Cryoprecipitate contains all except -*(AIIMSNov 07)*
a) Factor VIII b) Factor IX
c) Fibrinogen d)VWF

1819. Blood for acid base gas (ABGO analysis in a bottle containing heparin can cause decreased value of-
a) $pC0_2$ b) $HC0_2$ *(PGI June01)*
c) pH d)$p0_2$
e) base excess

1820. Cross matching is not required for transfusion of -
a) Cryoprecipitate *(AIIMS Nov 09)*
b) Single donor platelets
c) FFP transfusion
d) Platelet rich plasma transfusion

1821. Transfusing blood after prolonged storage could lead to- *(UPSC97)*
a) Citrate intoxication
b) Potassium intoxication
c) Circulatory overload
d) Haemorrhagic diathesis

1822. Which one of the following is the cause of non - cardiogenic pulmonary oedema seen in immunologic blood transfusion reaction -*(UPSC 01)*
a) Antibody to IgA in donor plasma
b) Antibody to donor leukocyte antigen
c) Donor antibody to leukocyte of patient
d) RBC incomapatibility

1823. Stored blood as compared to fresh blood *has-(MAHE 98)*
a) More2,3DPG b) High extracellular K^+
c) High extracellular Hb d) Increased platelets

1824. Cyoprecipitate is rich in factor - *(AP 96)*
a) n b)V
c) **vn** **d)vm**

1825. What happens when normal erythrocytes (blood group matched) are transfused in to a patient with anaemia secondary to an intracorpuscular defect ?
a) Donor cells are destroyed *(UPSC 06)*
b) Donor cells have normal survival
c) Depends on the saverity of anaemia
d) Depends on whether the donor cells are fresh or stored (older than a week)

1826. Following blood transfusion, non-cardiogenic pulmonary oedema may sometimes occur because of-
a) RBC incompatibility *(UPSC 07)*
b) Antigen-antibody mechanism involving human leucocyte antigen
c) Platelet surface antigen reaction
d) Antibody to IgA in donor plasma

1827. The following is not true of platelet transfusion -
a) Useful in ITP *(Delhi PG Feb. 09)*
b) Used in DIC
c) Effective for 9-10 days
d) Effect decrease with repeated usage

MISCELLANEOUS

1828. Neutrophilia caused by - *(PGIDec 05)*
a) Epinephrine b) Glucocorticioids
c) NSAIDS d) Clozapine
e) Methotrexate

1829. Most common site of histiocytosis is -
a) Bone b)Skin *(AIIMSMay 07)*
c) Lung d) Liver

1808)b 1809) All 1810)d 1811)a 1812)b 1813)c 1814)a 1815)a,b,c 1816)c 1817)None>a 1818)b 1819)c 1820) a 1821) b 1822)c 1823)b 1824)d 1825)d 1826)b 1827)c 1828)a,b,c 1829)a

1830. A 2-year-old child comes with discharge, seborrheic dermatitis, polyuria and hepatosplenomegaly. Which of the following is the most likely diagnosis -
a) Leukemia *(AIIMSMay04)*
b) Lymphoma
c) Langerhan's cell histiocytosis
d) Germ cell tumour

1831. *True* about Eosinophillic granuloma - *(PG.I Dec. 04)*
a) M.C. in 20-45 years of age
b) More common in female
c) Osteolytic lesion
d) Skull is commonly affected
e) Lung is commonly affected.

1832. A child presents with seborrheic dermatits, lytic skull lesions, ear discharge and hepatosplenomegaly, likely diagnosis - *(AI2000)*
a) Leukemia b) Lymphoma
c) Histiocytosis X d) Multiple myeloma

1833. Mycosis fungoides which is not true -
a) It is the most common form of cutaneous lymphoma *(ARMS Nov 06)*
b) Pautriers microabscess
c) Indolent course and easily amenable to treatment
d) Erythroderma seen and spreads to peripheral circulation

1834. Howel-Jolly bodies may be seen after- *(AI99)*
a) hepatectomy b) Splenectomy
c) Pancreatectomy d) Cholecystectomy

1835. Huge splenomegaly is found in - *(PGIDec 03)*
a) hairy cell Leukemia b)CLL
c) CML d) Lymphoma

183 6. In which of the following conditions Splenectomy is not useful? *(AI 05)*
a) herediatary spherocytosis
b) Porphyria
c) Thalassemia
d) Sickle cell disease with large spleen

1837. Pancytopenia with massive/moderate splenomegaly is seen in - *(PGI JUNE 01)*
a) Myelofibrosis b) Thalassemia
c) PRV d) hairy cell leukemia
e) CML

1838. Which viral infection is associated with neutropenia-
a) Hepatitis A b) Influenza *A(May 95)*
c) HIV d) All of the above

1839. Leukoery throblastic picture may be seen in all of the following except - *(AI 03)*
a) Myelofibrosis b) Metastatic carcinoma
c) Gaucher's disease d) Thalassemia

1840. Blood turbulence is increased in which of the following situations - *(AIMS Nov 2000)*
a) Multiple myelomab) Leukemia
c) Polycythemia d) Anemia

1841. Lack of Leucocyte adhesion molecules (LAM) is associated with - *(AI 1998)*
a) Delayed closure of umblical cord
b) Normal chemotaxis
c) Compliment opsinization
d) Neutropenia

1842. True about plummer-vinson syndrome -
a) Microcytic hypochronic anemia *(PGI June 01)*
b) Sideroblastic anemia
c) Common in old age
d) Post cricoid carcinoma is common
e) Oesophageal webs

1843. A man presents with mass at duoenojejunal flexor invading renal papilae. Histopathology reports it as lymphoma: true statement is - *(AI 01)*
a) IIE stage
b) III E stage
c) IV E stage
d) Staging cannot be done until bone marrow examinatiion is performed

1844. Side effects of erythropoietin - *(PGIDec. 04)*
a) Hypertension b) Increased ferritin
c) Tk^+ d) Thrombocytosis
e) Increased phosphate

1845. Indications of Bone marrow transplantation are all except- *(PGINov 09)*
a) CML b)AML
c) Hereditaryspherocytosis d) SCID
e) Thalassemia major

1846. A 25 year old man who is an alcoholic,presents with easy fatiguability and moderate pallor for the past six months. His Hb is 5.2G% and serum iron level is 190 microgram per dl. The treatment of choice for him would be - *(UPSC 95)*
a) Iron b)Pyridoxine
c) Ascorbic acid d)$VitB_{12}$

1847. "M" spike on serum electrophorosis is seen in -
a) Lymphoblastic leukemia *(UPSC 95)*
b) Waldenstrom's macroglobulinaemia
c) Alpha-chain disease
d) AIDS

1848. Bone marrow transplantation is indicated in all of the following except- *(Karn 95)*
a) Chronic myeloid leukemia
b) Thallasamia major
c) Hypoplastic anemia
d) Myelofibrisis

1849. In hemolytic uremic syndrome characteristic finding in peripheral smear is - *(Kerala 96)*
a) Burr cell
b) Anisopoikilocytosis
c) Leukemoid reaction
d) Burr cells with fragmented RBC's
e) Punctuate basophilia

1830)c 1831)c,d 1832) c 1833)c 1834)b 1835)A11 1836)b 1837)a,d 1838)d 1839)d 1840)d 1841)a 1842)a,d,e 1843)c 1844) a 1845)c 1846)b 1847)b 1848) None 1849)d

1850. Decreased RBC production is seen in -
a) Intramuscular folate administration *(MAHE98)*
b) Renal failure
c) Post gastrectomy
d) Prosthetic valve hemolysis

1851. Bone marrow transplantation as a treatment modality can be advised in all of the following cases which are newly diagnosed except - *(MAHE98)*
a) Combined immunodeficiency b)CML
c) Aplastic anemia d)ALL

1852. The following disease without splenomegaly for which splenectomy is effective - *(JIPMER 02)*
a) Sickle cell disease
b) Idiopathic thrombocytopenic purpura
c) Aplastic anaemia
d) Thalassemia

1853. Thrombocytosis is a recognised feature of -
a) Myelofibrosis *(UPSC 97)*
b) Systemic lupus erythematosis
c) Azidothymidine therapy
d) Myelodysplastic syndrome

1854. All are hypercoagulable states except - *(NIMS 96)*
a) Polycythemia
b) Protein C deficiency
c) Proteins dificiency
d) Antibrino lytic therapy

1855. All of the following statements regarding pathological inclusions are true except -*(UPSC 01)*
a) Howell-jolly bodies occur in splenectomised patients
b) Basophilic stippling is seen in lead intoxication patients
c) Cabot rings occur in iron deficiency anaemia
d) Heinz bodies are seen in thalassemia

1856. Anti CD 20 antibody is now the treatment of choice for- *(SGPGI04)*
a) All low grade non-hodgkin's lymphomas
b) Relapsed B cell follicular lymphomas
c) Relapsed Hodgkin's disease
d) Chronic lymphatic leukaemia

1857. Side effects of erythropoietin - *(PGI04)*
a) Hypertensionb) Increased ferritin
c) *i* K^+ d) Thrombocytosis
e) $iP0_4$

1858. What is the Neutrophil count for moderate neutropenia ? *(Manipal 06)*
a) < 500/mm^3b) 500 - 1000/mm^3
c) > 1000/mm^3 d) 100/mm^3

1859. Which is the most common cytogenetic abnormality in adult Myelodysplastic syndrome (MDS) ?
a) Trisomy 8 b) 20q *(Manipal 09)*
c) 5q d) Monosomy 7

1860. Stage I mycosis fundoides treatment A/E -
a) Topical corticosteroid *(NEET/DNB Pattern)*
b) Skin electron beam therapy
c) Radiation
d)UVB therapy

1861. Pancytopenia with spleenomegaly seen in all except- *(NEET/DNB Pattern)*
a) Aplastic anemia b) Myelofibrosis
c) Hairy cell leukemia d) PolyCytheiiiia vera

ENDOCRINOLOGY

GENERAL

1862. Weight loss may be seen in all of the following except- *(AI98)*
a) Uremia b) Pheochromocytoma
c) Adrenal insufficiency d) Insulinoma

1863. For differentiating between Insulinoma and Sulfonylurea related hypoglycemia, the test which is useful is ? *(AIIMS May 08)*
a) Antibody to Insulin b) Plasma C-peptide level
c) Plasma Insulin level d) Insulin: Glucose ratio

1864. Hypoglycemia is a recognized feature of all of the following conditions, except - *(AI 02)*
a) Uremia b) Acromegaly
c) Addison's disease d) hepatocellular failure

1865. Causes of fasting hypoglycemia are following except-
a) Excess glucagon *(AI 2011)*
b) Glucose 6 phosphatase deficiency
c) Uremia
d) Glycogen synthatase deficiency

1866. Hypoglycemia is seen in - *(AIIMSMay 2001)*
a) Acromegaly b) Cushing syndrome
c) Hypothyroidism d) Hypopitutarism

1867. Which of the following tests is not used in the diagnosis of insulinoma - *(AI 11)*
a) Fasting blood glucose
b) Xylose test
c) C-peptide levels
d) Insulin/Glucose Ratio

1868. All of the following statements about Nesidioblastosis are true, Except - *(AI 11)*
a) Hypoglycemic episodes may be seen
b) Occurs in adults more than children
c) Histopathology shows hyperplasia of islet cells
d) Diazoxide may be used for treatment

1869. Weight gain occurs in all, except - *(ARMS June 97)*
a) Pheochromocytoma
b) Cushing's syndrome
c) Hypothyroidism
d) Insulin secreting tumor

1870. All cause weight gain, except - *(ARMS Sep 96)*
a) Pheochromocytoma
b) Cushing's syndrome
c) Hypothyroidism
d) Insulin secreting tumor

1871. Weight gain in seen in all, except - *(ARMS June 99)*
a) Phaeochromocytoma b) Insulinoma
c) Myxoedema d) Cushing's disease

1850)b 1851) d 1852)b 1853)a,d 1854)a 1855)c 1856)a 1857)a 1858)b 1859)a 1860)c 1861)a 1862)d
1863) None 1864)b 1865)a 1866)d 1867)b 1868)b 1869)a 1870)a 1871)a

1872. Obesity is not a feature of - *(AIIMSMay 95)*
a) Hypothyroidism b) Pheochromocytoma
c) Hypogonadism d) Cushing's syndrome

1873. Galactorrhea my be associated with the use of all the following drugs except - *(UPSC95)*
a) Methyldopa b) Tricyclic antidepressants
c) Pyridoxine d) Phenothiazine

1874. New born 7 days old with vomiting and dehydration clinical examination was normal except for hy perpigmentation of nipple. Electrolytes Na: 120 meq. K: 9 meq. mostlikelydiagnosis - *(MAHE 98)*
a) Primary hypothyroidism
b) Cong, adrenal hyperplasia
c) Panhypopituitarism
d) Pyloric stenosis

1875. Two litres of normal saline in 4 hours will stimulate secretion of- *(Jipmer 04)*
a) Atrial natriuretic peptide b) IL - 2
c) TNF - alpha d) Prostaglandins

1876. The level of which one of the following hormones is likely to increase after hypothalamic ablation ?
a) Growth hormone b) Prolactin *(UPSC 07)*
c) FSH d)ACTH

PITUITARY

1877. Which of the following is the most common type of pituitary adenoma? *(AIIMS May05)*
a) Thyrotropinoma b) Gonadotropinoma
c) Prolactinoma d) Corticotropinoma

1878. All are causes of hyperprolactinemia, except - *(AIIMS May94)*
a) Bromocriptine b) Phenothiazine
c) Methyldopa d) Metoclopramide

1879. Which of the following is true regarding galactorrhea - *(PGI June01)*
a) Bilateral
b) Seen in pregnancy and lactation
c) Associated with prolactinomas and other endocrinopathies

1880. All of the following are known to cause hyperprolactenemia except - *(AI97)*
a) Methyldopa b) Phenothiazines
c) Bromocriptine d) Betoclopramide

1881. A 30 year ols woman presented with secondary amenorrhoea for 3 years along with galactorrhoea. The most likely cause of her symptoms would be -
a) Craniopharyngioma *(AI 04)*
b) Prolactinoma
c) Meningioma
d) Sub-arachnoid haemorrhage

1882. Ramkali Bai, a 35 year old female presented with one year history of menstrual irregularity and galactorrhoea. She also had off and on headache her examination revealed bitemporal superior quadrantopia. Her fundus examination showed primary optic atrophy. Which of the following is most likely diagnosis in this case - *(AIIMS Nov 04)*
a) Craniopharyngioma
b) Pituitary macroadenoma
c) Ophthalamic IcAAneurysm
d) Chiasmal Glioma

1883. A 40 year old lady with temporal field defects and glactorrhoea is most likely to have - *(AI 09)*
a) Pituitary macroadenoma
b) Craniopharyngioma
c) Lactational failure
d) Pregnancy

1884. A Young women with secondary amenorrhoea and galactorrhoea. MR1 shows a tumous of < 10mm diameter in the pituitary fossa. TYeatment is - *(PGI June 04)*
a) Hormonal therapy for withdrawal bleeding
b) Radiotherapy
c) Chemotherapy
d) Bromocriptine
e) Surgery

1885. Investigation of choice of hyper-prolactinemia-
a) TRH estimation *(AIIMS Nov 93)*
b) LH estimation
c) Prolactin estimation
d) Estradiol estimation

1886. A person sustains head trauma leading to transection of pituitary stalk. All can be consequence of this, except- *(AIIMS Dec 97)*
a) SIADH b) Diabetes mellitus
c) Diabetes incipidus d) Hyperprolactinemia

1887. A patient meets with an accident with resultant transection of the pituitary stalk; what will NOT occur- *(AI 01)*
a) Diabetes mellitus b) Diabetes insipidus
c) Hyperprolactinemia d) Hypothyroidism

1888. Which of the following is the most common cause of hypergonadotrophic hypogonadism in males-(ýf/10)
a) Viral orchitis b) Klinefelter's syndrome
c) Kallman's syndrome d) Noonan syndrome

1889. All of the following are associated with hyper-gonadotrophic hypogonadism in males, except-*(AI 10)*
a) Viral orchitis b) Klinefelter's syndrome
c) Kallman's syndrome d) Noonam syndrome

1890. Which drug is essential in Sheehan's syndrome -
a) Estrogen b) Cortisone *(AI 96)*
c) Thyroxin d) Growth hormone

1891. Confirmatory investigation for acromegaly is -
a) Insulin induced hypoglycemia test *(PGI June 01)*
b) GH assay
c) ACTH infusion test
d) IGF levels

1892. Paradoxical response of GH release to TRH is seen in- *(AIIMS Dec 98)*
a) Prolactinoma b) Acromegaly
c) Malnutrition d) Pitutary adenoma

1872)b 1873)c 1874)b 1875)a 1876)b 1877)c 1878)a 1879) a,c 1880) c 1881)b 1882)b 1883)a 1884)d 1885)c
1886)b 1887) a 1888)b 1889)c 1890)b 1891)b 1892)b

1893. Nelson's syndrome is most likely seen after - *(AIIMS May 05)*
a) Hypophysectomy b) Adrenalectomy
c) Thyroidectomy d) Orchidectomy

1894. All are associated with pituitary apoplexy except - *(AIIMS May 0 7)*
a) Hyperthyroidism b) Diabetes mellitus
c) Sickle cell anemia d) Hypertension

1895. SIADH secretion is seen in all except - *(AI94)*
a) Lung abscess b) Interstitial Nephritis
c) Vinka alkaloids d) Bronchial adenoma

1896. SIADH is associated with - *(AIIMSDec 97)*
a) Small cell carcinoma lung
b) Adeno cercinoma lung
c) Squamous cell carcinoma lung
d) Mixed cell tumor lung

1897. All are true regarding SIADH, except -
a) Increased level of ADH *(AIIMS Nov 93)*
b) Urine hypoosmolar
c) Hyponatremia
d) Adequate hydration status

1898. Hyponatremia may be seen in all of the following conditions except - *(AI 97)*
a) Mucoviscidosis b) SIADH
c) Diabetes insipidus d) Adrenal hyperplasia

1899. Dilutional hyponatremia is seen in - *(PGI June 98)*
a) Addison's disease b)DI
c) Diuretic therapy d)None

1900. SIADH-all are features except- *(AIIMS Nov 07)*
a) Decreased sodium, maintaining the concentrating ability of the urine osmolality (> 100 mOsm)
b) Normal sodium balance maintained indicating excess urinary sodium is due to efficient sodium intake
c) Hypouricemia
d) Low blood pressure due to volume depletion

1901. The syndrome of inappropriate antidiuretic hormone is characterized by the following - *(AI 03)*
a) Hyponatremia and urine sodium excretion > 20 meq/1
b) Hypernatremia and urine sodium excretion > 20 meq/1
c) Hyponatremia and hyperkalemia
d) Hypernatremia and hypokalemia

1902. SIADH true is all except - *(AIIMS Nov 11)*
a) Serum Na can be less than 135 meq/1
b) Urine sodium is normal or slightly low
c) Vaptans are new FDA approved drugs for its Rx
d) Water loading test can be used

1903. Inapproprite ADH secretion is characterised by the following except - *(AI 2000)*
a) Hypo-osmolar urine b) Water intoxication
c) Expanded fluid volume d) Hypomagnesemia

1904. Which of the following is the drug of choice for the treatment of inappropriate anti-diuretic hormone secretion - *(AIIMS Nov 05)*
a) Frusemide b) Hydrochlorothiazide
c) Spironolactone d) Demeclocycline

1905. Which drug is not used in SIADH - *(AI96)*
a) Fludrocortisone b) Demeclocycline
c) Desmopressin d) Hypertonic saline

1906. Rx of DI - *(PGIDec 02)*
a) ADH b) Thiazide
c) Loop diuretics d) Insulin
e) Chlorpromazine

1907. All of the following conditions are known to cause diabetes insipidus except - *(AI 05)*
a) Multiple sclerosis b) Head injury
c) Histiocytosis d) Viral encephalitis

1908. All of the following conditions are known to cause diabetes insipidus, except - *(AIIMS May 04)*
a) Multiple sclerosis b) Head injury
c) Histiocytosis d) Viral encephalitis

1909. Choose the best Lab value for a patient with central diabetes insipidus - *(AI 2000)*

	Urinary Osmolality	Serum Osmolality
a)	50	300
b)	500	260
c)	50	260
d)	500	100

1910. A 33 year old lady presents with polydipsia and polyuria. Her symptoms started soon after a road traffic accident 6 months ago. The blood pressure is 120/80 mm Hg with no postural drop. The daily urinary output is 6-8 liters. Investigation showed, Na 130 mEq/L, IC3.5 mEq/L, urea 15mg/dL, sugar-65 mg/dL. The plasma osmolality is 268 mosmol/L and urine osmolatity 45 mosmol/L. The most likely diagnosis is - *(AIIMS Nov 02)*
a) Central diabetes insipidus
b) Nephrogenic diabetes insipidus
c) Resolving acute tubular necrosis
d) Psychogenic polydipsia

1911. A patient following head injury was admitted in intensive care ward with signs of raised intracranial pressure. He was put on ventilator and started on intravenous fluids and diuretics. Twenty four hours later his urine output was 3.5 liters, serum sodium 156 mEq/1 and serum osmolarity of 316 mOsm/kg. The most likely diagnosis based on these parameters is- *(AIIMSNov 04)*
a) High output due to diuretics
b) Diabetes insipidus
c) Too much infusion of normal saline
d) Cerebral salt retaining syndrome

1912. Which of the following statements about Diabetes Insipidus is true - *(AI 11)*
a) Urine osmolality should be > 300 mosm/L
b) Plasma osmolality should be < 280 mmol/L
c) Water deprivation test is required
d) Plasma osmolality should be > 300 mosm/L prior to water Deprivation

1893)b 1894) a 1895)b 1896)a 1897)b 1898)c 1899)d 1900)d 1901)a 1902)c 1903)a 1904)d 1905)c 1906)a,b 1907) a 1908) a 1909)a 1910)d 1911)a 1912)c

1913. In a woman with polyuria of 6 L/day, which are the 2 most important investigations to be done -
a) Water deprivation test *(PGIDec 01)*
b) Water loading
c) Plasma and urine osmolality
d) Plasma osmolality
e) Skull X-ray

1914. Which of the following agents is the drug of choice for Central Diabetes Insipidus - *(AI11)*
a) Desmopressin b)Demeclocycline
c) Thiazide Diuretics d) Lithium

1915. A vasopressin analogue does not produce therapeutic effect through vasopressin V-2 receptor in which of the following - *(AlIMSMay03)*
a) Central diabetes insipidus
b) Bleeding esophageal varices
c) Type I van Willebrand's disease
d) Primary nocturnal enuresis

1916. SIADH is associated with the following drug-(^4/*07)*
a) Vincristine b) Erythromycin
c) 5-FU d) Methotrexate

1917. In SIADH all are found except - *(JIPMER 95)*
a) Normla urine b) Hyponatremia
c) Hypotonic urine d) Hyperuricemia

1918. A 30 year old women presents a history of amenorrhoea and impaired vision of six month's duration. Physical examination shows everything except for pale optic discs and diminished visual acuity. The most likely diagnosis is - *(UPSC 95)*
a) Pituitary adenoma
b) Craniopharyngioma
c) Hypothalamic glioma
d) Benign intracranial hypertension

1919. Central diabetes insipidus is characterised by -
a) Low plasma and low urine osmolality (*UPSC 96)*
b) High plasma and high urine osmolality
c) Low plasma and high urine osmolality
d) Low urine and high plasma osmolality

1920. All of the following are features of acromegaly, except- *(UP 97)*
a) Glucose intolerance
b) Nonsuppressibility of growth hormone by glucose ingestion
c) Raised levels of plasma somatomedin D
d) Low serum phophate

1921. A 40 year old women presented with a CT scan of head showing an enlarged sella tursica. Neurological and endocrine work up in detail were found to be normal. The most likely diagnosis is - *(UPSC 97)*
a) Prolactinoma b) Chromophobe adenoma
c) Craniophobe d) Empty sella syndrome

1922. Cutting of the pituitary stalk decreases all of the following hormones except - *(AP 9 7)*
a) ACTH b)GH
c) Prolactin d)FSH

1923. In a 60 year old female with polydipsia, water deprivation test was preformed and the values obtained are as following - *(MAHE 98)*
Baseline: Na -139 mEq, K-3.6mEq. Osm.plasma-274 mosm/1, Osm. urine-150 after vasopressin: Na-142mEq, K-3.9mEq, Plasma osm-271 mosm/1,Urine osm - 489 mosm/1. These finding suggest a diagnosis of-
a) Cranial diabetes insipidus
b) Psychogenic polydypsia
c) Nephrogenic diabetes insipidus
d) SAIDH

1924. Cause of hypopituitarism are all, except - *(CIP 01)*
a) Cancer breast b) Cancer bronchus
c) Chromophilic adenoma d) Acidophilic tumour

1925. Pituitary tumor most responsive to medical therapy is - *(SGPGI04)*
a) Growth hormone secreting tumor
b) ACTH secreting tumor
c) Prolactinoma
d) Thyrotropin secreting tumors

1926. Grwoth factors promote cell growth by acting on- *(NIMHANS 05)*
a) C. AMP b) Tyrosine Kinase
c) C.GMP d)TRM

1927. A 35-year-old lady is diagnosed to have postpartum hypopitutarism. The correct order of hormone substitution in her case would be - *(UPSC-109)*
a) Thyroxin, steroids, oral contraceptives
b) Glucocorticoids, thyroxin, and contraceptives
c) Oral contraceptives, thyroxin, glucocorticoids
d) Glucocorticoids, oral contraceptives, thyroxin

1928. The following features are correct in the case of syndrome of inappropriate anti-diuretic hormone (SIADH) except - *(UPSC-109)*
a) Low-normal plasma urea
b) Low serum sodium
c) High plasma osmolality
d) Urine sodium not minimally low

1929. Drug causing Nephrogenic diabetes insipidus are - *(PGI May 10)*
a) Li b) Demeclocyclin
c) Acyclovir d) Amphotericin B

1930. Which of the following statements about Diabetes Insipidus is true - *(AI 11)*
a) Urine osmolality should be >300 mosm/L
b) Plasma osmolality should be < 280 mmol/L
c) Water deprivation test is required
d) Plasma osmolality should be > 300 mosm/L prior to H_20 Deprivation

1931. Which of the following agents is the drug of choice for Central Diabetes Insipidus - *(AI 11)*
a) Desmopressin b)Demeclocycline
c) Thiazide Diuretics d) Lithium

1913) a,c 1914)a 1915)b 1916)a 1917)a,c 1918)a 1919)d 1920)d 1921)d 1922)c 1923)a 1924)d 1925)c 1926)b 1927)b 1928) c 1929)a,b,d 1930)c 1931)a

1932. A 26-year-old woman presents with scanty menstrual bleeding and milk secretion from the breasts. On examination, she has galactorrhoe and dry skin. A lateral skull radiograph shows enlargement of the sella. The test that will be most helpful in the diagnosis is - *(UPSC111)*
a) Serum prolactin level b) Serum ACTH level
c) Serum ADH level d) Serum TSH level

1933. Middle aged female with mass in sella turcica hormone increased is - *(NEET/DNB. Pattern)*
a) Prolactin b) Thyroxine
c) ADH

ADRENAL

1934. Cushing's syndrome is not a feature of -
a) Adrenal carcinoma *(AIIMSMay95)*
b) Oat cell carcinoma of lung
c) Medulloblastoma
d) Pituitary adenoma

1935. The most common cause of Cushing's syndrome is - *(AI95)*
a) Pituitary adenoma b) Adrenal adenoma
c) Ectopic ACTH d) Iatrogenic steroids

1936. Intake of exogenous steroid causes - *(PG1 June 97)*
a) Addison's disease b) Cushing's syndrome
c) Pheochromocytoma d) Conn's syndrome

1937. A common cause of Cushing syndrome is -
a) Cancer producing ectopic ACTH *(AlIMSMay 93)*
b) Pituitary adenoma
c) Adrenal tuberculosis
d) None of the above

1938. Cushing syndrome is characterized by all except -
a) DM b) HT *(PGIJune 98)*
c) Proximal myopathy d) Centripetal obesity

1939. True about cushing syndrome - *(PGIJune 08)*
a) Red striae present
b) T sed adrenalin
c) Proximal muscle weakness
d) Edema

1940. Features not seen in Cushing's Syndrome *i$-(AI97)*
a) Hypoglycemia b) Hypertension
c) Frank psychosis d) Hypokalemia

1941. All are features of cushings disease except - *(AIIMS Nov 07)*
a) Central obesity b) Episodic hypertension
c) Easy bruising d) Glucose intolerance

1942. About cushing syndrome, true is - *(PG1 June 2000)*
a) Low dose dexamethasone suppress cortisone secretion
b) CA of adrenal is more common than adenoma
c) Pituitary adenoma size > 2 cm (usually)
d) TACTH secretion is the commonest cause

1943. Lalloo, 50 years old, a chronic smoker, presents with history of hemoptysis. He was having truncal obesity and hypertension. He had an elevated ACTH level which was not suppressible with high dose dexamethasone. What would be the most probable diagnosis - *(AIIMS Nov 2000)*
a) Bilateral adrenal hyperplasia
b) Adrenal adenoma
c) Pituitary tumour
d) Ectopic ACTH producing lung cancer

1944. In a chronic smoker with mild haemoptysis. He also gave a history of hypertension and obesity. Lab data showed raised ACTH levels, which were not suppressed by dexamethasone. The cause for the Cushing's syndrome in the patient is -
a) MEN I *(AlIMSMay 02)*
b) Pituitary adenoma
c) Adrenal cortical adenoma
d) Ectopic ACTH secreting tumor

1945. A patient with cushinoid features presents with hemoptysis: he shows no response to dexamethasone supression test; most likely diagnosis here is -
a) Adrenal hyperplasia *(AI 01)*
b) Adrenal adenoma
c) Ca lung with ectopic ACTH production
d) Pituitary microadenoma

1946. Which of the following is the earliest manifestation of Cushing's syndrome - *(AI 04)*
a) Loss of diurnal variation
b) Increased ACTH
c) Increased plasma Cortisol
d) Increased urinary metabolites of Cortisol

1947. The differentiating feature b/w Ectopic ACTH secretion and Cushing syndrome is -
a) Hypokalemic alkalosis *(AIIMS Dec 98)*
b) Clinical features of cushing syndrome
c) Hyperpigmentation
d) Hypertension

1948. Cushing's disease presents with - *(AIPGMEE 08)*
a) Increased ACTH and increased cortisol
b) Decreased ACTH and decreased cortisol
c) Increased ACTH and decreased cortisol
d) Increased catecholamines

1949. Most common cause of Conn's syndrome is -
a) Adrenal hyperplasia *(AIPGMEE 08)*
b) Adrenal carcinoma
c) Adrenal adenoma
d) Pituitary ACTH hypersecretion

1950. NOT a feature of primary hyperaldosteronism is- *(AIIMS Dec 94)*
a) Pedal edema b) Diastolic hypertension
c) Polyuria d) Hypokalemia

1951. Which is NOT a feature of primary hyperaldosteronism - *(AlIMSMay 93)*
a) Hypokalemia b) Hypertension
c) Hypernatremia d) Increased renin level

1932) a 1933) a 1934)c 1935)a 1936)b 1937)b 1938) None 1939) c,d 1940)a 1941)b 1942) d 1943)d 1944)d
1945)c 1946) a 1947)a 1948)a 1949)a 1950)a 1951)d

1952. Criteria for primary hyperaldosteronism, all except-
a) Diastolic hypertension without edema
b) Metabolic acidosis present *(AIIMSNov 11)*
c) Low secretion of rennin
d) Low secretion of aldosterone in spite of reduced volume fluid

1953. The following are features of primary hyperaldosteronism except - *(PGI June 97)*
a) Polyuria b) Hypertension
c) Hypokalemia d) Hyperkalemia

1954. True about conn's syndrome - *(PGI Dec 02)*
a) TK^+
b) iK^+
c) Proximal myopathy
d) Ted plasma renin activity
e) Edema

1955. All of the following are features of primary hyperaldosteronism except - *(AI98)*
a) Pedal edemab) Polyurea
c) Hypokalemia d) Hypertension

1956. Conn's syndrome is associated with all, except -
a) Hypertensionb) Muscle weakness
c) Hypokalemia d) Edema *(AI02)*

1957. In conn's syndrome the following is/are true -
a) Diastolic HTN without oedema *(PGI Dec 06)*
b) Systolic HTN without oedema
c) Pseudotetany
d) Hyper Na^+
e) Hyper K^+

1958. True about primary aldosteronnism - *(PGI June 05)*
a) Pedal oedema b) Increased renin
c) Increased Na^+ d) Decreased K^+
e) Hypertension

1959. Tumours associated with primary aldosteronism -
a) Adrenal adenoma *(PGI June 05)*
b) Adrenal hyperplasia
c) Von Hippel-Lindau syndrome
d) Adrenal carcinoma

1960. A young hypertensive patient has serum K+ 2.8 meq/L and aldosterone level with *i* ed plasma rennin activity. The likely cause is/are - *(PGI Dec 04)*
a) Renal artery stenosis b) Ectopic ACTH syndrome
c) Diuretic therapy d) Conn's syndrome
e) Liddle's syndrome

1961. Excess Aldosterone is associated with all the following except - *(AI 95)*
a) Hypokalemia b) Hyperkalemia
c) Sodium retention d) Hypertension

1962. In primary adrenal hyperplasia, incorrect is- *(AIMS May 94)*
a) Hypokalemia b) Hyponatremia
c) Hypernatremia d) Water retention

1963. Hyperaldosteronism is characterized by the following except - *(AI 09)*
a) Hypernatremia b) Metabolic acidosis
c) Hypokalemia d) Low plasma rennin levels

1964. Most common cause of adrenal insufficiency in India is- *(AIMS May 94)*
a) Autoimmune b) Surgery
c) Steroid withdrawal d) Tuberculosis

1965. Most common cause of Addison's disease in India -
a) Tuberculosis b) Post-partum
c) Autoimmune d) *HIV (AIMS Nov 11)*

1966. Addison's disease is characterized by all except -
a) Hyperglycemia b) Hypotension *(AI95)*
c) Hyperkalemia d) hyponatremia

1967. Chronic adrenal insufficiency is characterized by all of the following except - *(AIMS May 05)*
a) Excess pigmentation
b) Asthenia
c) Weight gain
d) Hypoglycemic episodes

1968. Addison's disease is characterized by following except - *(PGI June 97)*
a) Hyperkalemia b) Hypotension
c) Hyponatremia d) Hypocalcemia

1969. Which is NOT a clinical feature of Addison's disease - *(AIMS Feb 97)*
a) Hypoglycemia b) Hyponatremia
c) Hypocalcemia d) Hyperkalemia

1970. Regarding Addisonian pigmentation, all are true except - *(AIMS May 01)*
a) Involves moles and scars
b) Involves palmer creases
c) Does not involve oral mucosa
d) Decreased fibrosis

1971. Addisons's disease is associated with all except -
a) Cardiac atrophy *(AIMS May 07)*
b) Decreased diastolic B.P
c) Serum cortisol < 8
d) Low renin levels

1972. In addison's disease, most diagnostic test is -
a) Serum Na^+, K^+, renin *(PGI Dec 97)*
b) S. Na^+, K^+, saline suppression
c) Serum creatinine/urea ratio
d) ACTH stimulation test

1973. Extra-adrenal pheochromocytoma secretes -
a) Norepinephrine b) Epinephrine *(PGI June 03)*
c) Metanephrine d) Dopamine
e) VMA

1974. Pheochromocytoma predominantly secretes -
a) Epinephrine b) Norepinephrine
c) Dopamine d) DOPA *(AIMS Nov 01)*

1975. All are clinical features of pheochromocytoma, except - *(ARMS Feb 97)*
a) Increased hematocrit
b) Orthostatic hypotension
c) Low cortisol level
d) Impaired glucose tolerance

1976. All of the following are features of pheochromocytoma except - *(AI 02)*
a) Hypertensive paraoxysm b) Headache
c) Orthostatic hypotension d) Wheezing

1952)b,d 1953) d 1954)b,c 1955)a 1956)d 1957)a,d 1958)c,d,e 1959)a,b,d 1960)d 1961)b 1962)b 1963)b 1964)d 1965) a 1966)a 1967)c 1968)d 1969)c 1970)None 1971)d 1972)d 1973)a 1974)a 1975)c 1976)d

1977. All of the following are features of MEN Ha, except -
a) Pituitary tumor *(AI01)*
b) Pheochromocytoma
c) Medullary carcinoma thyroid
d) Neuromas

1978. Type I MEN involves all, except - *(AIMSMay 93)*
a) Pancreas b) Adrenal
c) Pituitary d) Parathyroid

1979. A 36 year old female with symptoms of hyperparathyroidism, tumor in pancreas, adrenal cortical hyperplasia, pituitary adenomas, islet cell tumor with cutaneous angiofibromas. What is the diagnosis ? *(ARMS Nov 07)*
a) MEN1 b) MEN 2 A
c) MEN2B d)MEN2 C

1980. Which of the following endocrine tumors is most commonly seen in MEN I ? *(A107)*
a) Insulinoma b) Gastrinoma
c) Glucagonoma d) Somatostatinoma

1981. Most common pancreatic tumor in MEN-i is -
a) Gastrinoma b) Insulinoma *(A1PGMEE08)*
c) Glucagonoma d) Somatostatinoma

1982. Phaeochromocytoma arises from - *(PGIJune08)*
a) Adrenal gland b) Mediastinum
c) Chest wall d)Neck
e) Abdomen

1983. Pancreatitis, pituitary tumor and phaeochromocytoma may be associated with -*(AI05)*
a) Medullary carinoma of thyroid
b) Papillary carinoma of thyroid
c) Anaplastic carinoma of thyroid
d) Follicular carinoma of thyroid

1984. All are associated with MEN-2 except-
a) Pheochromocytoma *(ARMSMay 07)*
b) Islet cell hyperplasia
c) Medullary carcinoma thyroid
d) Parathyroid adenoma

1985. A patient presents with intermittent headache. On examination there is hypertension and a thyroid nodule. Which of the following steps is to be taken next - *(ARMS Nov 2000)*
a) Urine HIAA levels
b) Urine VMA and aspiration of the thyroid nodule
c) Ultrasound abdomen
d) Echocardiography

1986. A young patient presented with HTN and VMA 14 mg/24, the causes is/are - *(PGIJune 05)*
a) Medullary carcinoma thyroid
b) Von Hippel Lindau syndrome
c) Grave's disease
d) Pseudohypoparathyroidism
e) Sturge weber syndrome

1987. Multiple submucosal neuromas is most likely associated with - *(AIMS May 05)*
a) Medullary carcinomos of the thyroid
b) Ovarian carcinoma
c) Testicular teratoma
d) Pancreatic beta cell carcinoma

1988. A 25 year old young woman has recurrent episodes of headache and sweating. Her mother had renal calculi and died after having a neck mass. The physical examination reveals a thyroid nodule but no clinical sign of thyrotoxicosis. Before performing thyroid surgery, the surgeon should order -
a) Measurement of thyroid hormones *(AIMS Nov*
b) Serial determinations of serum calcium, *02)* phosphorus, protein and alkaline phosphatase
c) 24-hours urine test for 5 hydroxyindoleacetic acid excretion
d) Serial 24 hours test for catecholamines, meta-nephrines and vanillylamandelic acid excretion

1989. Investigation useful for detecting extraadrenal pheochromocytoma - *(PGIMay 'll)*
a) USG
b) (XT
c) T2-weighted MRI with gadolinium contrast
d) MIBG

1990. Activation of the renin stimulates - *(UPSC 96)*
a) Water excretion
b) Potassium retention
c) Sodium retention
d) Magnesium excretion

1991. Primary hyperaldosteronism does not have -
a) Ankle oedema b) Polyuria
c) Hypertension d) Hypokalemia

1992. Metyrapone inhibits - *(CUPGEE 95)*
a) 11-B-hydroxylase b)21-B-hydroxylase
c) Both d) None

1993. A 25 year old male presnents with weakness, occasional vomiting hypotension, skin and mucous membrane pigmentgation. The diagnosis can be best established by - *(UPSC 9 7)*
a) Metyrapone test
b) Basal plasma cortisol levle
c) 24-hour urinary 17-Ketosteroid
d) ACTH stimulation test

1994. Werner's syndrome (multiple endocrine neoplasia type I) is characterised by all of the following except - *(UPSC 95)*
a) Tumours of anterior pituitary
b) Tumours of parathyroids
c) Pancreatic adenomas
d) Phaeochromocytoma

1995. Pheochromocytoma is associated with - *(MAHE 98)*
a) Vitiligo
b) Cafe-au-lait spots
c) Ash leaf amelanotic macules
d) Acanthosis Nigricans

1996. Characteristic feature of primary aldosteronism is- *(MAHE 98)*
a) Low serum sodium b) High plasma renin
c) Low serum potassium d) High serum creatinine

1977) a >d 1978) b 1979)a 1980)b 1981)a 1982)a,b,d,e 1983)a 1984)b 1985)b 1986)a,b,e 1987)a 1988)d 1989) c,d 1990)c 1991)a 1992)a 1993)d 1994)d 1995)b 1996)c

1997. Adrenal aldosteronoma is best diagnosed by -
a) HRCT b) MRI *(J&K 2001)*
c) IVP d)KUB

1998. Sushila, 25 year old young lady presented with complaint of acute hirsuitism and hoarseness of voice. Which of the following should be the best investigation to be done for the diagnosis - *(AI02)*
a) Blood pregnenolone levels
b) Blood DHEA levels
c) 17-ketosteroids level
d) LH and FSH levels

1999. In the adrenal gland, androgens are produced by the cells in the - *(ICS 98)*
a) Zona glomerulosa b) Zona reticularis
c) Zona fasciculata d) Medulla

2000. Hypertension with androgenisation of a female child is a feature of congenital adrenal hyperplasia due to deficiency of- *(UPSC 95)*
a) C-21 hydroxylase b) C-l 1 hydroxylase
c) C-l7 hydroxylase d)Desmolase

2001. Regarding Addisonian pigmentation, all are true except- *(Jipmer04)*
a) Involves moles and scars
b) Involves palmer creases
c) Does not involve oral mucosa
d) Decreased fibrosis

2002. Medical adrenalectomy is seen with - *(SGPGI04)*
a) Vincristine b) Vinblastine
c) Mitotane d) Methotrexate

2003. TVue about cushing's syndrome is - *(SGPGI05)*
a) Adrenomedullary hyperplasia in association with MEN syndrome is common cause
b) Bronchial & Mediastinal carcinoid causes cushing syndrome
c) It is diagnosed by hypokalemia in association with increased adrenal secretion
d) It is often fatal due to its coronary and cerebrovascular accidents

2004. Conn's syndrome is characterised by all except -
a) Polyuria b) Polydipsia *(SGPGI 05)*
c) Weakness d) Anasarca

2005. Hypokalemia may be a feature of all following diseases, except - *(J & k 05)*
a) Addison's disease
b) Cushing's syndrome
c) Barter's syndrome
d) Gitelman's syndrome

2006. Conn's syndrome is characterized by - *(Corned07)*
a) Hyperinsulinism b) Hyperthyroidism
c) Hypoadrenalism d) Hyperaldosteronism

2007. The following are consistent with pheochromocytoma except - *(UPSC-109)*
a) Episodic diarrhea
b) Episodic flushing of skin
c) Episodes of hypertension
d) Paroxysm, palpitation and sweating

2008. False statement about extraadrenal pheochromocytoma - *(PGIMay 10)*
a) Constitute 50% of total b) May occur in Bladder
c) May occur in thorax d) Involve carotid body

2009. Features of Cushing's syndrome are-*(PGINov. 10)*
a) Proximal muscle weakness
b) Hyponatremia
c) Hirsutism
d) Edema
e) Weightloss

2010. All are true about pheochromocytoma except-*(AI 11)*
a) 90% are malignant
b) 95% occur in the abdomen
c) They secrete catecholamines
d) They arise from sympathetic ganglions

2011. Lady with central obesity & abd. Skin showing purple striae - *(NEET/DNB Pattern)*
a) Conn's syndrome b) Cushing's syndrome
c) Addison's disease d) Hypothyroidism

2012. DOC in adrenal insufficiency?*(NEET/DNB Pattern)*
a) Hydrocortisone b) Adrenaline
c) Dexamethasone d) Fludrocortisone

2013. Investigation of choice in pheochromocytoma is - *(NEET/DNB Pattern)*
a) CT scan b) Urinary catecholamines
c) MIBG scan d) Urinary calcium measurement

2014. Most common symptom of pheochromocytoma - *(NEET/DNB Pattern)*
a) Headache
b) Palpitation
c) Abdominal pain
d) Hypotension

BONE & MINERAL METABOLISM

2015. Increased alkaline phosphate are in seen \n-*(AI 99)*
a) Multiple myeloma
b) Primary hyperparathyroidism
c) Chronic renal failure
d) Osteoporosis

2016. Indicators of osteoblastic activity - *(PGI June 01)*
a) Alkaline phosphatase b) Osteocalcin
c) Hydroxyproline d) Acid phosphatase

2017. Alkaline phosphatase is elevated in all, except - *(AIIMS Dec 9 7)*
a) Rickets b) Osteomalacia
c) Hypoparathyroidism d) Hypophosphatemia

2018. Raised serum alkaline phosphatase is seen in all, EXCEPT- *(AIIMS Dec 94)*
a) Paget's disease b) Multiple myeloma
c) Osteomalacia d) Hyperthyroidism

2019. Alkaline phosphatase is decreased in-
a) Hypophosphatasia *(AIIMS Nov 09)*
b) Primary biliary cirrhosis
c) Hyperphosphatemia
d) Hepatitis A

1997)a 1998)b 1999)b 2000)b 2001)c 2002)c 2003)b 2004)d 2005)a 2006)d 2007)a 2008)a 2009)a,c,d 2010)a 2011)b 2012)c>a 2013)b 2014)b 2015)b 2016)a,b 2017)d 2018)b 2019)None

2020. Most common cause of hyperparathyroidism -
a) Iatrogenic *(ARMS Nov 93)*
b) Medullary carcinoma thyroid
c) Parathyroid adenoma
d) Parathyroid hyperplasia

2021. The commonest cause of primary hyperparathyroidism is - *(ARMS May 95)*
a) Carcinoma parathyroid
b) Solitary adenoma of parathyroid
c) Chronic renal failure
d) Hyperplasia of the parathyroid

2022. A common cause of Primary hyperparathyroidism is- *(AI95)*
a) Multiple parathyroid adenomas
b) Solitary parathyroid adenoma
c) Adrenal hyperplasia
d) Ectopic PTH production

2023. Most common cause of hyperparathyroidism is- *(A197)*
a) Solitary adenoma b) Chief cell hyperplasia
c) Multiple adenoma d) Werner's syndrome

2024. In hyperparathyroidism, which of the following is not seen - *(PGI Dec 01)*
a) Normal alkaline phosphatase
b) Decreased phosphate in urine
c) Increased calcium
d) Hypophosphatemia
e) Decreased alkaline phosphatase

2025. In hyperparathyroidism, all are seen except -
a) Osteopetrosis b) Osteoporosis *(PGIDec 98)*
c) Cysts d) Brown tumor

2026. Not a marker for hyperparathyroidism is -
a) Increase in serum calcium *(ARMS June 98)*
b) Increase in 24 hour urinary calcium excretion
c) Increase in serum calcitonin
d) Subperiosteal resorption of phalanges.

2027. All are TRUE about hyperparathyroidism, except -
a) Commonly occurs after thyroidectomy
b) May cause hypercalcemia *(ARMSMay 93)*
c) Solitary adenoma is the most common cause
d) None of the above

2028. Tfrie statement about primary hyperparathyroidism-
a) Adenoma commonest cause *(PGIMay 11)*
b) T serum calcium
c) Surgery if biochemical finding is abnormal in asymptomatic patient
d) MIBG isotope is useful in localization of tumor
e) Familial variation occur with adenoma

2029. Thfting of the terminal phalanges is seen in -*(AI95)*
a) Hypoparathyroidism b) Hyperparathyroidism
c) Hyperthyroidism d) Hypothyroidism

2030. TVue about pseudohypoparathyroidism -
a) Heterotopic calcification *(PGI Dec 02)*
b) **t** ed Ca^{2+}
c) ied$P0_4$
d) ted PTH
e) t ed response of urinary CAMP on PTH

2031. Which of the following statements about Pseudohypoprathyroidism is true - *(AI 11)*
a) Caused by 'Gain of function' inherited mutation in Gsa subunit
b) Decreased formation of cyclic GMP is observed
c) Decreased formation of Inositol triphosphate is observed
d) Decreased formation of c-AMP is observed.

2032. A patient has hyperphosphatemia with short metacarpals and associated cataract The diagnosis is - *(PGI June 99)*
a) Pseudohypoparathyroidism
b) Hypophosphatasia
c) Hyperparathyroidism
d) Osteomalacia

2033. All of the following statements about Pseudohypoparathyroidism are true, except -
a) *i* Serum PTH *(AI 10)*
b) *i* Serum calcium
c) T Serum phosphate
d) Albright's hereditary osteodystrophy

2034. Which of the following is associated with secondary hyperparathyroidism - *(ARMS Dec 94)*
a) Parathyroid adenoma
b) Marked hypercalcemia
c) Chronic renal failure
d) Parathyroidectomy relieves the symptoms

2035. Low calcium and high phosphate is seen in -*(AI 10)*
a) Hyperparathyroidism b) Hypoparathyroidism
c) Hyperthyroidism d) Hypothyroidism

2036. Estimation of S. Ca2+ should be done only after - *(PGI June 03)*
a) Urine calcium b) Total plasma protein
c) S. Phosphate d)S.K+
e) PH

2037. A patient presents with low serum calcium, high phosphorus and elevated PTH. Which of the following investigations is least contributory to establish a diagnosis- *(AI 11)*
a) Vitamin D levels
b) Serum creatinine levels
c) Cyclic AMP response to PTH
d) Urine myoglobin

2038. Which of the following is seen in Vitamin D deficiency - *(PGIDec 01)*
a) Increased alkaline phosphatase
b) Decreased phosphate in urine
c) Hypophosphatemia
d) Decreased alkaline phosphatase
e) Decreased serum calcium

2039. All of the following are seen in reckets, except -
a) Bowlegs b)Gunstockdeformity
c) Potbelly d) Cratio tabes *(ARMSMay 03)*

2020)c 2021)b 2022)b 2023)a 2024)b,e 2025)a 2026)c 2027)a 2028)a,b,c,e 2029)b 2030)a,d 2031)d
2032) a 2033) a 2034) c 2035) a 2036)b,c,e 2037) a 2038)a,c,e 2039) b

2040. True about rickets - *(PGI June 01)*
a) Increased alkaline phosphatase
b) Hyperphosphatemia
c) Hypophosphatemia
d) Hypophosphaturia
e) Decreased alkaline phosphatase

2041. Renal osteodystrophy differs from nutritional and genetic forms of osteomalacia in having - *(AI02)*
a) Hypocalcaemia b) Hypercalcemia
c) Hypophostaemia d) Hyerphosphatemia

2042. A common finding in osteomalacia is-*(PGI June 99)*
a) Low serum phosphate
b) Normal level of1,25 di-hydroxy vit D_3
c) Low serum calcium
d) Increased hydroxy proline in urine

2043. A patient Shweta with raised serum alkaline phosphatase and raised parathormone level along with low calcium and low phosphate level is likely to have- *(AJIMS June 99)*
a) Primary hyperparathyroidism
b) Paget's disease
c) Osteoporosis
d) Vitamin D deficiency

2044. Abnormalities of bone metabolism is associated with excess of which vitamins - *(PGI June 02)*
a) Vitamin Ab) Thiamine
c) Vitamin B_{I2} d) Vitamin D
e) Tocoferol

2045. Features of tumor lysis syndrome are-*(PGI Dec 2K)*
a) Hypocalcemia b) Hyperphosphatemia
c) Alkalosis d) Hypokalemia

2046. Hypercalcemia is not a feature of one of the following conditions - *(AI 97)*
a) Primary hyperparathyroidism
b) Multiple myeloma
c) Tumourlysis syndrome
d) Sarcoidosis

2047. Features of tumour lysis syndrome - *(PGI June 06)*
a) Hyperuricemia b) Hypercalcemia
c) Hyperphosphatemia d) Hypernatremia
e) Hyperkalemia

2048. TVue about tumor lysis syndrome - *(PGIMay 11)*
a) Hyperkalemia b) Hypercalcemia
c) Hypermagnesemia d) Hyperurecemia
e) Lactic acid

2049. Tumour lysis syndrome all occurs except -
a) Hyperkalemia *(AIIMS May 09)*
b) Hypercalcemia
c) Hyperuricemia
d) Hyperphosphatemias

2050. True about tumour lysis syndrome are A/E- *(PGIDec 03)*
a) Hyperuricemia b) Hypercalcemia
c) Hyperkalemia d)Hyperphosphatemia
e) Hypocalcemia

2051. Thmor lysis syndrome is associated with all of he following laboratory feature except -*(ARMSNov 03)*
a) Hyperkalemia b) Hypercalcemia
c) Hyperuricemia d) Hyperphosphatemia

2052. Hypercalcemia is not seen in - *(AI 95)*
a) Lithium therapy b) Chronic renal failure
c) Multiple myeloma d) Vitamin A deficiency

2053. Hypercalcemia is seen in all except-fl4//MS*Nov 07)*
a) Lithium b) Multiple myeloma
c) Loop diuretics d) Hypervitaminosis D

2054. Surgical causes of hyper Ca^{2+}- *(PGIDec 06)*
a) Hyperparathyroidism b)MEN
c) Hyperthyroidism d) Pheochromocytoma

2055. Hypercalcemia is caused by - *(PGIDec 03)*
a) Thyrotoxicosis b) Vit D intoxication
c) Saroidosis d)Furosemide
e) Thiazide

2056. Increased serum calcium is seen in all except - *(PGI Dec 01)*
a) Myxedema b) Multiple myeloma
c) Sarcoidosis d) Primary hyperparathyroidism
e) Hyperthyroidism

2057. Hyper calcemia is seen in all, except-
a) Acute pancreatitis *(ARMS June 99)*
b) Parathyroid adenoma
c) Breast cancer
d) Hodgkin's lymphoma

2058. All are causes of hypercalcemia, except -
a) Thyrotoxicosis *(ARMS Dec 97)*
b) Sarcoidosis
c) Vitamin A toxicity
d) Phenytoin toxicity

2059. Hypercalcemia is NOT seen in - *(ARMSDec 94)*
a) Primary hyperparathyroidism
b) Tumour lysis syndrome
c) Multiple sclerosis
d) Sarcoidosis

2060. Hypercalcemia is seen in all, except-
a) Acute pancreatitis *(ARMS May 93)*
b) Hypervitaminosis D
c) Addison's disease
d) Hyperparathyroidism

2061. Hypercalciuria is seen in - *(PGIJune 2000)*
a) Hyperparathyroidism b) Vit D intoxication
c) Sarcoidosis d)All

2062. Most common cause of hyper calcemic crisis is -
a) Carcinoma breast *(ARMS May 93)*
b) Parathyroid hyperplasia
c) Parathyroid adenoma
d) Paget's disease

2063. Asymptomatic hyper - calcemia in a 30 year old young male is due to - *(AI 2000)*
a) Occult primary malignancy
b) Primary Hyperparathyroidism
c) Familial hypocalciuria
d) Hyper-nephroma

2040)a,c2041)d 2042)a 2043)d 2044)a,d 2045)a,b 2046)c 2047)a,c,e 2048)a,d 2049)b 2050)b 2051)b 2052)d 2053)c 2054)A11 2055)a,b,c,e 2056)a 2057)a 2058)d 2059)b 2060)a 2061)d 2062)a,c 2063)b

2064. Which ofthe following is not a feature of hypercalcemia?
a) Diarrhea b) Polyuria *(AI06)*
c) Depression d) Vomiting

2065. Features of hypocalcemia are A/E - *(AIIMS May 10)*
a) Numbness & tingling
b) Circumoral paresthesis
c) Depressed tendon reflexes
d) Skin irritability & sensitivity

2066. Raised calcium and phosphorus are seen in -
a) CRF *(PGI June 02)*
b) Vitamin D intoxication
c) Hyperparathyroidism
d) Pseudohypoparathyroidism

2067. Cause of nephrocalcinosis in granulomatous ds -
a) Increased absorption *(AlIMSNovlO)*
b) Increased conversion to 1,25 OH
c) Dystrophic calcification
d) Mutation in calcium sensing receptor

2068. Hypocalcemia with hyperphosphatemia are seen in-
a) CRF *(PGI Dec 2000)*
b) Pseudohypoparathyoidsm
c) Vit-D deficiency
d) Magnesium deficiency

2069. Hypophosphatemia is seen in - *(PGIDec 02)*
a) Pseudohypoparathyropdism
b) CRF
c) Rickets
d) Hyperparathyroidism
e) Respiratory acidosis

2070. Hypophosphatemia is seen in all except - *(AI07)*
a) Acute renal failure
b) Resolving phases of diabetic ketocidosis
c) Respiratory alkalosis / COPD
d) Chronic alcoholism

2071. Treatment of hypercalcemia includes, all, except - *(AIIMS Dec 9 7)*
a) Gallium nitrate b)Plicamycin
c) Etidronate d) Rizol

2072. A 75 years female patient with fracture neck of femur 1 month back, presents with 2 days history of altered sensorium & decreased urine output. Urea is 140 mg/dl, creatinine is 2 mg/dl, Ca is 15.5 mg/dl. All of will be useful in immediate treatment except -
a) Give NS b)Furosemide *(AlIMSNovlO)*
c) Hemodialysis d) Bisphosphonates

2073. Treatment of acute hypercalcemia - *(PGI June 03)*
a) Normal saline with forced diuresis with chlorthiazide
b) Plicamycin
c) Gallium nitrate
d) Mithramycin
e) Bisphosphonates

2074. Treatment of Hypercalcemia - *(PGI Dec 04)*
a) Calcitonin b) Gallium nitrate
c) Orthophosphate d) Thyroxin

2075. Rugger jersy spine is seen in - *(PGI June 98)*
a) Myeloma b) TB spine
c) CRF d) Ankylosing spondylitis

2076. A45 year old man, known case of chronic renal failure develops rugger jersy spine. The probable cause it -
a) Aluminium intoxication *(AI 2000)*
b) Secondary hyperparathyroidism
c) Osteoporosis
d) Osteomalacia

2077. True about Hypercalcemia - *(PGI June 04)*
a) Rx of the primary cause
b) Malignancy dose not produce hypercalcemia
c) I. V. fluid with Frusemide is given
d) amidronate is not effective

2078. All are used in treatment of hypercalcemia, except- *(AIIMS May 93)*
a) Phosphate b) Mithramycin
c) Vitamin D in high dose d) Any of the above

2079. All of the following can cause osteoporosis, except -
a) Hyperparathyroidism b) Steroid use *(AI 05)*
c) Flurosis d) Thyrotoxicosis

2080. All of the following are the known causes of osteoporosis except - *(AI 06)*
a) Fluorosis b) Hypogonadism
c) Hyperthyroidism d) Hyperparathyroidism

2081. Osteoporosis is seen in all the following except- *(AI94)*
a) Thyrotoxicosis b) Rheumatoid arthritis
c) Hypoparathyroidism d) Steroid therapy

2082. All are causes of osteoporosis, except -
a) Rheumatoid arthritis *(AIIMS June 97)*
b) Hypoparathyroidism
c) Chronic heparin therapy
d) Thyrotoxicosis

2083. Osteoporosis is seen in - *(AI 94)*
a) Thyrotoxicosis b) Cushing's disease
c) Menopause d) All of the above

2084. Osteoporosis is caused by all except - *(AI 96)*
a) Sarcoidosis b) Old age
c) Hypo-parathyroidism d) Steroid therapy

2085. Osteoporosis may be seen in all except - *(AI98)*
a) Hyperparathyridism b) Hypoparathyridism
c) Thyrotoxicosis d) Heparin administration

2086. Osteoporosis may be seen in all except - *(AI98)*
a) Hypoparathyroidism
b) Osteogenesis imperfecta
c) Hypogonadism
d) Hypophosphatasia

2087. All are causes of Osteoporosis, except - *(AI2000)*
a) Thyrotoxicosis b) Hypothyroidism
c) Chronic heparin therapy d) Old age

2088. The most common manifestation of osteoporosis is -
a) Compression fracture of the spine *(AI 94)*
b) Asymptomatic, detected incidentally by low serum calcium
c) Bowing of legs
d) Loss of weight

2064)a 2065)c 2066)b 2067)a 2068)a,b 2069)c,d 2070)a 2071)a,b,d 2072)b 2073)e 2074)a 2075)c 2076)b 2077) a,c 2078) b,c 2079) c 2080) a 208 l)c 2082) b 2083) d 2084) c 2085) b 2086) a 2087) b 2088) a

2089. A man was diagnosed to have myositis ossificans progressiva at the age of 20 years. He died five years later. What is the most probable cause of his death - *(AIIMS Nov 2000)*
a) Starvation and chest infection
b) Myocarditis
c) Hypercalcemia
d) Hyperphosphatemia

2090. Anterior scalloping of vertabrae seen in -
a) Obsteogenesis imperfecta *(PGIJune 01)*
b) Aortic aneurysm
c) Metastasis
d) Renal Cell Ca
e) T.B.

2091. Retardation of skeletal maturity can be caused by all except - *(Al 04)*
a) Chronic renal failure
b) Hypothyroidism
c) Protein energy malnutrition (PEM)
d) Congenital adrenal hyperplasia

2092. Treatment of osteoporosis includes - *(PGI May 11)*
a) Conjugated equines estrogen
b) Estradiol valerate c) Raloxifene
d) Biphosphonate e) Calcium

2093. Osteoporosis is caused by all except - *(CMC 98)*
a) Methotrexate b) Glucocorticoids
c) Heparin d) Estradiol

2094. The formation of 25-hydroxycholecalciferol takes palce in the - *(UPSC 96)*
a) Liver b) Kidney
c) Intestines d) Pancreas

2095. Magnesium deficiency is caused by - *(Kerala 96)*
a) Prolonged artificial ventilation
b) Small bowel resection
c) Renal disease
d) Liver cirrhosis

2096. Calcitionin is secreted from - *(UPSC 95)*
a) Ancinar cells of thyroid
b) Chief cells of parathyroid
c) "C" cells of thyroid
d) Oxyphil cells of parathyroids

2097. Hypomagnesemia is associated with which of the following - *(CUPGEE96)*
a) Alcoholism b) Hypothyroidism
c) Both d)None

2098. Tetany may be present in all the following conditions except - *(UPSC 97)*
a) Acute pancreatitis
b) Hysterical Hyperventiltion
c) Hyperkalemia
d) Hypomagnesemia

2099. All of the following are causes of hypercalcemia except - *(CIP 2001)*
a) Sacroidosis b) Cancer bronchus
c) Hypothyroidism d) Lithium toxicity

2100. In osteoporosis there is - *(TN 2001)*
a) Decrease in absolute amount of bone mass
b) More common in male
c) Radiographs show normal bone density
d) Hormonal replacement therapy

2101. In tumor lysis syndrome all are seen except- *(JIPMER 02)*
a) Hyperuricemia b) Hyperphosphatemia
c) Hyperkalemia d) Hypercalcemdia

2102. All of the following drugs alter calcium hemostasis except- *(KARNAT 99)*
a) Flouride b)Indomethacin
c) Mithramycin d) Thiazides

2103. Steroid super family receptors are associated with- *(MP 2K)*
a) Gastrin b) Vitamin D_3
c) Encephalin d) Insulin

2104. Osteitis fibrosa cystica is seen in *(AI89)*
a) Hyperparathyroidism
b) Hypoparathyroidism
c) Hypothroidism
d) Hyperthyroidism

2105. Following are features of Paget's disease except -
a) Deformity of bones *(KARNAT 96)*
b) Secondary osteosarcoma
c) Lowered serum alkaline phosphatase
d) Increased Urinary excretion of hydroxyproline

2106. Calcium content of bone is increased in -
a) Prolonged immobilisation *(MAHE 98)*
b) Glucocorticoid administration
c) Hyperparathyroidism
d) estrogen supplementation in post menopausal women

2107. Drug therapy of Paget's disease (Osteitis Deformans) include all except- *(KARNA TAKA 01)*
a) Alendronate b) Etidronate
c) Calcitonin d)Plicamycin

2108. Hyperostosis is associated with all except -
a) Hypothyroidism *(JIPMER 95)*
b) Vit A intoxication
c) Cushings syndrome
d) Radiation osteoma

2109. Following malignancies most frequently cause hypercalemia except - *(SCTIMS 98)*
a) Breast b) Kidney
c) Lung d) Heart

2110. Rugger jersy sign is seen in - *(CMC 98)*
a) Ankylosing spondylitis b) TB spine
c) Osteoarthritis d) Myeloma
e) Chronic renal failure

2111. In hyperparathyroidism all seen except -
a) Osteopetrosis b)Osteoporosis
c) Cysts d) Brown tumor

2112. Drug used in severe hypercalcemia - *(Jipmer04)*
a) Frusemide b) Prednisolone
c) Pamidronate d)All

2089)a 2090)b,e 2091)d 2092)A11 2093)d 2094)a 2095)b,c 2096)c 2097)a 2098)c 2099)c 2100)a,d 2101)d 2102)b 2103)b 2104)a 2105)c 2106)d 2107)d 2108)c 2109)d 2110)e 2111)a 2112)d

2113. Alkaline phosphatase is found in all organs, except-
a) Bone b) Heart *(Orissa 05)*
c) Placenta d) Lungs

2114. Picture frame vertebrae is seen in - *(COMED 06)*
a) Ankylosing spondylitis b) Paget's disease
c) Multiple myeloma d) Histioctosis

2115. Advanced bone age is seen in all except-^PPG *06)*
a) Marfan's syndrome
b) Congenital adrenal hyperplasia
c) Precocious puberty
d) Obesity

2116. The drug used in the treatment of idiopathic hypercalciuria is - *(Corned 08)*
a) Allopurinol b)Frusemide
c) Acetazolamid d) Thiazide

2117. The following are characteristic of tumour lysis syndrome except - *(UPSC-109)*
a) Hyperkalemia b) Hypercalcemia
c) Hyperuricemia d) Hyperphosphatemia

2118. A 10-year-old boy has a fracture of femur. Biochemical evaluation revealed Hb 11.5 gm/dl and ESR 18 mm 1 hour, serum calcium 12.8 mg/dl, serum phosphorus 2.3 mg/dl, alkaline phosphatase 28 KA units and blood urea 32 mg/dl. Which of the following is the most probable diagnosis in his case? *(Manipal 09)*
a) Nutritional rickets b) Renal rickets
c) Hyperparathyroidism d) Skeletal dysplasia

2119. An old lady presents with s.calcium 12 mg/dl & creatinine 2.0 mg/dl. What should to be done in her management - *(PGINov. 10)*
a) Prednisolone b) Give NS
c) Hemodialysis d) Furosemide
e) Biphosphonate

2120. A 75 years female patient with fracture neck of femur 1 month back, presents with 2 days history of altered sensorium & decreased urine output. Urea is 140 mg/dl, creatinine is 2 mg/dl, Ca is 15.5 mg/dl. All of will be useful in immediate treatment except -
a) Give NS b) Furosemide *(AIIMSNov 10)*
c) Hemodialysis d) Bisphosphonates

2121. Which of the following statements about Pseudohypoprathyroidism is true - *(AI11)*
a) Caused by 'Gain of function' inherited mutation in Gsa subunit
b) Decreased formation of cyclic GMP is observed
c) Decreased formation of Inositol triphosphate is observed
d) Decreased formation of c-AMP is observed

2122. A patient presents with low serum calcium, high phosphorus and elevated PTH. Which of the following investigations is least contributory to establish a diagnosis- *(AI 11)*
a) Vitamin D levels
b) Serum creatinine levels
c) Cyclic AMP response to PTH
d) Urine myoglobin

2123. Hypercalcaemia caused by which one of the following is most likely to respond to treated with corticosteroids? *(UPSC111)*
a) Primary hyperparathyroidism
b) Milk alkali syndrome
c) Sarcoidosis
d) Paget's disease

2124. The most common site for a parathyroid adenoma is- *(UPSC II11)*
a) Intra-thyroid
b) In the superior parathyroid lobe
c) In the inferior parathyroid lobe
d) Mediastinal

2125. Which of the following most strongly suggests the diagnosis of primary hyperparathyroidism -
a) Serum acid phosphatase above 120IU/L
b) Serum calcium above 11 mg/dL *(UPSCII11)*
c) Urinary calcium below lOOmg/day
d) S erum alkaline phosphatase above 120 IU/L

2126. Primary hyperparathyroidism is suggested by -
; a) Increased serum calcium *(NEET/DNB Pattern)*
b) Low urinary calcium < 200
**rf.V'. c),TDe^€^d^aMiiii^hdspMtasd t **
d) Calcitonin level

2127. Increased Ca, decreased *T*04A)mgnosi-(NEET/DNB*
a) Primary hyperparathyroidism *Pattern)*
b) Secondary hyperparathyroidism due to Vt D deficiency
c) Malignancy
d) Osteoporosis

2128^ Treatnteht of choice for Renal osteodystrophy -
a) Phosphorus *(NEET/DNBPattern)*
b) Olendronate
c) Calcium restriction
d) Phosphate binder

2129. Hypophostemia is a caused by- *(NEET/DNB Pattern)*
a) Primary hypothyroidism
r *iw* ≥ «. b) Primary hyperparathyroidism ;•; iv f
c) Primary hyperthyroidism
d) Hypoparathyroidism

2130. Tumor lysis syndrome is associated with all of he following laboratory feature except- *(NEET/DNBPattern)*
a) Hyperkalemia b) Hypercalcemia
j? *J* > c) Hyperuricemia rv. % d) Hyperphosphatemia

2131. TOC for post menopausal osteoporosis is- *(NEET/*
a) Raloxifene b) Tamoxifehe *DNB Pattern)*
c) Estrogen; d) Alendronate

DIABETES

2132. Which of the following statements is true regarding type 1 diabetes mellitus - *(PGI Dec 01)*
a) Family history is present in 90% cases
b) Dependent on insulin to prevent ketoacidosis
- c) Time of onset is usually predictable
d) Autoimmune destruction of beta cells occur
e) Mostly occurs in children

2113) b,d 2114)b 2115)a 2116)d 2117)b 2118)c 2119)b 2120)b 2121)d 2122)a 2123)c 2124)c 2125)b 2126)a 2127)a 2128)d 2129)b 2130)b 2131)d 2132)b,d,e

2133. In type I DM true about - *(PGIDec 06)*
a) 90% family H/O
b) Antibodies aganist p cells
c) Insulin given to Rx DKA
d) D.K.A occurence

2134. Correct statement about Type-I DM - *(PGIDec 03)*
a) Mumps
b) Autoimmune
c) Family history of Type-2 DM

2135. Which type diabetes is HLA associated - *(AI02)*
a) Type I diabetes
b) Type II diabetes
c) Malnutrition related type disease
d) Pregnancy related type diabetes

2136. In a patient with N1DDM which of the following condition is seen - *(AIMSMay 02)*
a) Ketosis commonly occurs on stopping treatment.
b) Hypertriglyceridmia never occurs
c) Pancreatic beta cells stop producing insulin
d) There are increased levels of insulin in blood

2137. A **29-years-old male taking oral hypoglycemic drug never had ketonuria in his life. His BMI is 20.5. His grandfather had diabetes and his father who is only son of his grandfather too had the disease. Which type of DM this person will be most likely -** *(AI 09)*
a) Pancreatic b)MODY
c) Type I d) Type II

2138. A 29-years-old male taking oral hypoglycemic drug never had ketonuria in his life. His BMI is 20.5. His grandfather had diabetes and his father who is only son of his grandfather did not have the disease. Which type of DM this person will be most likely -
a) pancreatic b)MODY *(AI09)*
c) Type I d) Type II

2139. A 42 year old male has strong positive Benedict's test, random blood sugar is > 163 mg%, fasting blood sugar is > 200 mg% Next line of investigation is- *(AIMS June 99)*
a) Urine glucose charting 5 hourly
b) Oral GTT
c) Repeat benedict's test
d) 24 hr urine sugar estimation

2140. Diabetes mellitis diagnosed when - *(AIMSNov 11)*
a) Fasting blood glucose is 100 and post prandial 140
b) Fasting blood sugar 125 and 2 hour postprandial blood sugar is 199
c) Insulin level.....
d) HbA_{1c}>6.5%

2141. Impaired oral GTT indicated by - *(PGIDec 02)*
a) Fasting plasma sugar > 126 mg/dl
b) Random blood sugar > 200 mg/dl
c) Fasting blood sugar < 90 mg/dl
d) Fasting blood sugar < 140 mg/dl and two after glucose load > 200 mg/dl
e) 2 hrs. after glucose load 140-200 mg/dl fasting blood sugar <126 mg/dl

2142. At what value of one hour glucose challenge test will you recommend a standard glucose tolerance test- *(AIMS May 05)*
a) 120 mg/dl b) 140 mg/dl
c) 150 mg/dl d) 160 mg/dl

2143. Which is not a test for diabetes mellitus -
a) Fasting blood sampling *(AIMSNov 10)*
b) Random blood sampling
c) D-xylose
d) Oral glucose tolerance test

2144. HbA, AC level in blood explains- *(AI 04)*
a) Acute rise of sugar
b) Long terms status of blood sugar
c) Hepatorenal syndrome
d) Chronic pancreatitis

2145. Diabetes control is best monitored by -*(PGIDec 98)*
a) Serum glucose b) Post prandial blood glucose
c) HbA 1 AC d) HbA2 AC

2146. Serum fructosamine can be used in all except-
a) Screening of diabetes *(AIMS May 09)*
b) Rapid change in DM treatment
c) Short term control DM
d) Screening of DM in pregnancy

2147. Most useful investigation in diagnosis of diabetic ketoacidosis - *(PGI June 98)*
a) Ketonemia b) pH of blood
c) Urinary sugar d) Urine ketone

2148. Which of the following statements about Diabetic Ketoacidosis is true - *(AI 11)*
a) Decreased Bicarbonate b) Increased Lactate
c) Normal anion gap d) Glucose < 250 mg/dl

2149. All are seen in DKA except - *(AIMS Nov 07)*
a) Tachypnoea b) Dehydration
c) Bradycardia d) Abdominal pain/tendemess

2150. Treatment of 42 year old obese man with blood glucose 450 mg, urine albumin 2+ Sugar 4+ Ketone 1+ is -
a) Insulin b) Glibenclamide *(ARMSJune 98)*
c) Glipizide d) Metformin

2151. An obese patient presented in casualty in an unconscious state. His blood sugar measured 400mg% urine tested positive for sugar and ketones Drug most useful in management is - *(AI 01)*
a) Glibenclamide b) Troglitazone
c) Insulin d) Chlorpropamide

2152. An obese lady aged 45 years, was brought to emergency in a semi comatose condition. The laboratory investigations showed K+ (5.8 mmol/L); Na+ (136 mmol/L); blood pH (7.1), HC03 (12 mmol/L),' ketone bodies (350 mg/dl). The expected level of blood glucose for this lady is - *(AIMSMay 03)*
a) < 45 mg/dl. b) < 120 mg/dl.
c) >180 mg/dl. d)< 75 mg/dl.

2153. Two most important tests to be done in a comatose patient with blood glucose of750 mg/dl will be -
a) Sr. creatinine b) Sr. sodium *(PGIJune 01)*
c) CSF examination d) Blood pH
e) Blood urea

2133)b,c,d 2134)a,b,c 2135)a 2136)d 2137)b 2138)d 2139)b 2140)d 2141)e 2142)b 2143)c 2144)b 2145)c 2146)a 2147)a 2148)a 2149)c 2150)a 2151)c 2152)c 2153)a,d

2154. A diabetic patient with blood glucose of600mg/dL and Na 122 mEq/L was treated with insulin. After giving insulin the blood glucose decreased to 100 mg/dL. What changes in blood Na level is expected -
a) Increased in Na^+level *(AI02)*
b) Decrease in Na^+level
c) No change would be expected
d) Na+ would return to previous level spontaneously on correction of blood glucose.

2155. An obese NIDDM patient present with FBS=180 mg% and PPBS=260 mg% Management include-
a) Glibenclamide *(PGlJune02)*
b) Diet therapy+exercise
c) Diet therapy+exercise+metformin
d) Insulin
e) Chlorpropamide

2156. A 45-year old woman visited her physician with complaints of increased appetite and thirst with increased frequency of urination. She also had the symptoms of diminished or impalpable pulses in the feet, besides gangrene of the feet. Her laboratory findings on the oral glucose tolerance test are as follows -

Parameters	Fasting	lhr	2hr
Blood glucose (mg/dl)	155	270	205
Urine glucose	-ve	+++	-H-
Ketone bodies	-ve	-ve	-ve

Which of the following statements is not correct for the above mentioned case - *(AI 04)*
a) She was suffering from insulin dependent diabetes mellitus
b) She was suffering from non-insulin dependent diabetes mellitus
c) She was treated with oral hypoglycemic drugs only when diet and exercise could not control the pathological situation
d) Knowledge of family history of diabetes mellitus is useful in predicting the nature of the diabetes

2157. Role of insulin in type 2 DM - *(PGIJune 08)*
a) Acute illness b) Pregnancy
c) Secondary OHA failure d) Obese patient

2158. All of the following statements regarding Diabetes Mellitus are true, Except - *(AI 11)*
a) Insulin is not used in Type II Diabetes mellitus
b) Insulin levels may be increased in patients with Type II Diabetes mellitus
c) Insulin is essential to reverse Diabetic Ketoacidosis
d) Intravenous Insulin is administered as a sliding scale in the hospital setting

2159. In which of the following intensive management of diabetes needed except - *(AIIMS Nov 07)*
a) Autonomic neuropathy causing postural hypotension
b) Pregnancy
c) Post kidney transplant in diabetic nephropathy
d) DM with acute MI

2160. 39 year old obese patient present with features of UTI and RBS-200 mg/dl, urine shows pus cells, true about therapy is - *(PGI June 08)*
a) Glipizide is D.O.C.
b) Insulin can be given
c) Ciprofloxacin
d) Test for micro albumin to be bone
e) Metformin can be given

2161. The characteristic and common presentation of diabetic neuropathy is - *(PGI Dec 98)*
a) Amyotrophy
b) Mononeuropathy
c) Symmetrical sensory neuropathy
d) Autonomic neuropathy

2162. Hypoglycemic unawareness that occurs in diabetic patients when transfered from oral hypoglycemics to insulin, is due to - *(AI 2000)*
a) Autonomic neuropathy b) Insulin resistance
c) Lipodystrophy d) Somogi phenomenon

2163. All are used in painful diabetic neuropathy, except- *(AIIMS Dec 9 7)*
a) Phenytoin b) Local use of capsicum
c) Dextroamphetamine d)Amitriptiline

2164. Diabetes mellitus can lead to - *(PGI June 02)*
a) Vitreous hemorrhage b) Rubeosis iridis
c) Retinal detachement d) m, IV, and VI nerves palsy
e) Hypermetropia

2165. Features of diabetic nonproliferative retinopathy are - *(PGI June 01)*
a) Hard exudates b) Soft exudates
c) Micro aneurysms d) IRMA
e) RD

2166. A patient has IDDM diagnosed at age of 15 years. The most reliable indicator for diabetic nephropathy is - *(AIIMS Nov 99)*
a) Urine albumin <50 mg per day in 3 consecutive samples
b) Urinary protein >550 mg per day for 3 consecutive samples
c) Development of diabetic retinopathy
d) Hematuria

2167. The characteristic finding in diabetic nephropathy is - *(PGI June 99)*
a) Diffuse glomerulosclerosis
b) Nodular glomerulosclerosis
c) Armani - Ebstein reaction
d) Fibrin caps

2168. True about diabetic nephropathy - *(PGI June 05)*
a) Microalbuminiuria is not an indicator of long term cardiovascular morbidity.
b) Strict glycemic control cannot prevent microalbuminuria
c) p-islet cell/pancreatic transplantation can improve the proteinuria in early stage.
d) Angiotensin receptor blockers have no additive advantage over other drugs except B.R control.
e) Protein restriction is not helpful

2154)a 2155)b,c 2156)a 2157)a,b 2158)a 2159)a 2160)b,c,e 2161)c 2162)a 2163)c 2164)a,b,c,d 2165)b,c 2166)b 2167)b 2168)c

2169. A 50 year old male with type 2 diabetes mellitus is found to have 24-hr urinary albumin of 250 mg. Which of the following drugs may be used to retard progression of renal disease - *(AIIMS Nov 04)*
a) Hydrochlorthiazide b)Enalapril
c) Amiloride d) Aspirin

2170. In diabetes mellitus which is/are not found-(PG/ *June 03)*
a) Encephalopathy b) Myelopathy
c) Neuropathy d) Myopathy
e) Retinopathy

2171. Life threatening complications of diabetes mellitus are all except - *(AIIMS May 0 7)*
a) Malignant otitis externa
b) Rhinocerebral mucormycosis
c) Emphysematous pyelonephritis
d) Emphysematous appendicitis

2172. Ulcers in Diabetes precipitated by - *(PGI Dec 06)*
a) Trophic ulcers
b) Neuropathy
c) Microangiopathic changes in blood vessels
d) Macroangiopathy

2173. A 35 years old man Ramu has fasting and post prandial blood sugar within normal limit but urine sugar is 3 plus (+++). The diagnosis is -
a) Renal Glycosuria *(AIIMS June 99)*
b) Pancreatic insufficiency
c) Alimentary glycosuria
d) High carbohydrate diet taken in the morning

2174. Recombinant human insulin is made by -
a) CDNA from any eukaryote cell *(AIIMS June 2K)*
b) Genome of any eukaryote
c) CDNA of pancreatic cell
d) Genome of pancreatic cell

2175. A patient presents with symptoms of hypoglycemia. Investigations reveal decreased blood glucose and increased insulin levels. C-peptide assay is done which shows normal levels of C-peptide. The most likely diagnosis is - *(AI10)*
a) Insulinoma
b) Accidental sulfonylurea ingestion
c) Accidental exogenous insulin administration
d) Accidental metformin ingestion

2176. Insulin resistance is seen in all, except-
a) Werner's syndrome *(AIIMS June 98)*
b) Addison's disease
c) Ataxia telengiectasia
d) Lipodystrophy

2177. Insulin resistance syndrome includes-(PG7 *June 06)*
a) Dyslipidemia b) Hypertension
c) Hyperuricemia d) High HDL

2178. Dawn phenomenon refers to - *(AP96)*
a) Early morning hyperglycemia
b) Early morning hypoglycemia
c) Hypoglycemia followed by hyperglycemia
d) High insulin livels

2179. Diabetes mellitus is present in all except-
a) Fanconis anemia *(JIPMER95)*
b) Noonans syndrome
c) Ataxia telangiectasia
d) Myotonic dystrophy

2180. Factitious hyperinsulinemia is differentiated from insulinoma by- *(JIPMER95)*
a) C- peptides b) Insulin antibodies
c) Serum glucose levels

2181. Which of the following is seen in 95% of patient with diabetes mellitus - *(TN95)*
a) HLAB27 b)HLAB3-B4
c) HLADR3-DR4 d) HLA A3

2182. In diabetic nephropathy all of the following are true, except- *(Karn95)*
a) Cardiovascular abnormalities can occur
b) Micro and macro albuminuria can occur
c) ACE inhibitors can reduce micro albuminuria
d) Insulin requirement becomes high

2183. Which is true in diabetes mellitus type II-*(Ker. 96)*
a) Insulinitis of B cells b) Hyalinisation of B cells
c) Atrophy of B cells d) Hyperplasia of B cells
e) Degeneration of B cells

2184. In hypersmolar hyperglycemic non ketotic coma the blood glucose level is around - *(CUPGEE 96)*
a) 55 mmol/1 b) 20 mmol/1
c) 80 mmol/1 d) 5 mmol/1

2185. Dawn phenomenon refers to - *(AP 96)*
a) Early morning hyperglycemia
b) Early morning hypolgycemia
c) Hypoglycemia followed by hyperglycemia
d) High insulin levels

2186. All of the following are associated with insulin resistance except - *(UP 97)*
a) Acanthosis nigricans b) Lipodystrophy
c) Gout d) Werner's syndrome

2187. Which one of the following statements about non insulin dependent diabetes mellitus (NIDDM) is NOT true- *(UPSC97)*
a) Circulating islet cell antibodies are usually found
b) There is no HLA associaton
c) Ketosis is rare
d) Relative resistance to insulin is present

2188. The following statement concerning diabetic ketoacidosis are correct except - *(MP 98)*
a) Pyrexia is uncommon even in the presence of infection
b) Dehydration is out of proportion to the severity of vomiting
c) Low dose insulin therapy is treatment of choice
d) Leucocytosis is highly suggestive of associated infection

2189. Dose of insulin in stable diabetics is reduced in-
a) Thyrotoxicosis *(MP 98)*
b) Propanolol therapy
c) III trimester of pregnancy
d) CRF

2169)b 2170)a,b,d 2171)d 2172)a,b,d 2173)a 2174)c 2175)c 2176)b 2177)a,b 2178)a 2179)a,b 2180)a
2181)c 2182)d 2183)None 2184)a 2185)a 2186)c 2187)a 2188)d 2189)d

2190. A 30 year old male with NIDDM has a blood pressure of 150/90. His urine examination reveals persistent albuminuria in traces. The most appropriated line of treatment would be -
a) Non treatment *(UPSC 2K)*
b) Regular examination of urine and monitoring of blood sugar
c) Administering lisinopril and restriction of sodium
d) Restriction of sodium only

2191. Necrobiosis lipoidica is seen in - *(Kerala 2001)*
a) DI b) Lyme disease
c) Diabetes mellitus d) Symmonds disease

2192. Insulin stress test assay estimates - *(TN 99)*
a) Diabetes mellitus b) Growth hormone
c) Glucagon assay d) Catecholaines

2193. To diagnose hyperglycemia of two weeks old the best investigation retrospectively is - *(Jipmer 95)*
a) Ketones bodies
b) Glycosylated haemoglobin
c) Glucose in the blood
d) Chromosomal study

2194. Which is a feature of Dawn phenomenon-
a) Early morning hypoglycemia
b) Early morning hyperglycemia
c) Breakfast hypoglycemia
d) Post prandial coma

2195. Which of the following tests is most suited for early detection of diabetic nephropathy? *(Kam 03)*
a) Ultrasonography b) Creatinine clearance
c) Urine albumin d) Serum creatinine

2196. If a diabetic patient being treated with an oral hypoglycemicagent, evelopsdilutional hyponaïermia, which one of the following could be responsible for this effect -
a) Chlorpropamide b) Tolazamide
c) Glyburide d) Glimepride

2197. Antabuse like effect caused by the oral hypoglycemic drug- *(Orissa 04)*
a) Acrabose b) Chlorpropamide
c) Metaformin d)Gliclazide

2198. Which one of the following oral hypoglycemic agents is not an insulin secretogogue ? *(UPSC 04)*
a) Gliclazide b) Glimiperide
c) Repaglinide d) Rosiglitazone

2199. Which one of the following investigations is most sensitive for early diagnosis of diabetic nephropathy-
a) Serum creatinine level *(UPSC 05)*
b) Creatinine clearance
c) Glucose Tolerance Test
d) Microalbuminuria

2200. Dehydration in ketoacidosis is best treated with- *(MAHE 05)*
a) Isolyte P. b) Isolyte M.
c) Normal saline d) Molar 1/6 lactate

2201. Diabetes mellitus is associated with all except- *(NIMHANS 06)*
a) Pendred syndrome b) Down's syndrome
c) Turner's syndrome d) Klinefelters syndrome

2202. With reference to non-ketotic, hyperglycemia, hyperosmolar coma, consider the following statements - *(UPSC 07)*
1. It is common in second and third decade of life
2. It is typically seen in Type 1 diabetes mellitus
3. Blood sugar is usually above 500 mg/dl

Which of the statements given above is/are correct?
a) 1 and 2 only b) 3 only
c) 2 and 3 only d) 1,2 and 3

2203. A 50 years old male with 2 diabetes mellitus is found to have 24 hour urinary albumin of 250 mg. Which of the following drugs may be used to retard progression of renal disease - *(Delhi PG Feb. 09)*
a) Hydrochlorthiazide b)Enalapril
c) Amiloride d) Aspirin

2204. A 40-year old diabetic patient presents with proptosis of one eye and black eschar over palate. The likely organism is : *(Delhi PG Mar. 09)*
a) Pseudomonas b) Candida
c) E. coli d) Mucor

2205. Glycated haemoglobin reflects blood glucose of preceding - *(COMED 09)*
a) 01-week b) 2-3 weeks
c) 4-5 weeks d) 6-8 weeks

2206. A diabetic patient in hypoglycemia does not regain consciousness despite blood glucose restoration to normal. Which one of the following is the not likely condition or explanation ? *(UPSC-109)*
a) Cerebral edema b) Alcohol intoxication
c) Post-ictal state d) Cerebral haemorrhage

2207. Which is not a test for diabetes mellitus -
a) Fasting blood sampling *(A1IMS Nov 10)*
b) Random blood sampling
c) D-xylose
d) Oral glucose tolerance test

2208. All of the following statements regarding Diabetes Mellitus are true, Except - *(AI11)*
a) Insulin is not used in Type II Diabetes mellitus
b) Insulin levels may be increased in patients with Type II Diabetes mellitus
c) Insulin is essential to reverse Diabetic Ketoacidosis
d) Intravenous Insulin is administered as a sliding scale in the hospital setting

2209. Which of the following statements about Diabetic Ketoacidosis is true - *(AI 11)*
a) Decreased Bicarbonate b) Increased Lactate
c) Normal anion gap d) Glucose < 250 mg/dl

2210. Which one of the following is HLA associated Diabetes mellitus? *(UPSC 111)*
a) Type I Diabetes mellitus
b) Type II Diabetes mellitus
c) Stress related Diabetes mellitus
d) Gestational Diabetes mellitus

2190)c 2191)c 2192)b 2193)b 2194)b 2195)c 2196)a 2197)b 2198)d 2199)d 2200)c 2201)a 2202)b 2203)b 2204) d 2205) d 2206)b 2207)c 2208) a 2209)a 2210)a

2211. A 65-year-old woman with history of Type 2 Diabetes mellitus for the last eight years dies in a hospital. She-had no other significant medical history. Which of the following is the most likely cause of her death?
a) Diabetic ketoacidosis *(UPSC111)*
b) Myocardial infarction
c) Renal failure
d) Stroke

221^' Tolvaptatfis approvedfdtftise *w-(NE£T/DNB Pattern)*
I |) High Na S- 1 b) High Kp I *
c) High Ca d) Low Na

2213. Treatment of lithium induced diabetes insipidus -
a) Vasopressin *(NEET/DNB Miieph)*
b) Mineralocorticbid antagonist
c) Amiloride
d) Loop diuretic

2214. Mody false is - *(NEET/DNB Pattern)*
a) Age < 25 years
H! b) Impaired secretion of insult®?^ g §|| H
c) Responds to sulfonylureas
d) Insulin dependent igl i|

2215. For diagnosis of diabetes mellitus, Fasting blood glucose levelhould bemore *thm-(NEET/DNB Pattern)*
a) 126 mg/dl b) 140 mg/dl
c) 100 mg/dl d) 200 mg/dl

2216. Glycemic control indiabetes is best .assessed by- *(NEET/DNB Pattern)*
a) HbAIC b) Urinary glucose
O Fasting glucose d) Post predial glucose

2217. The earliest feature of diabetic nephropathy is-
■ a) Microalbuminuria *^E'ET/DNB Patteim)}*
b) Increased serum creatinine *I **
c) Nephrotic syndrome
d) Hematuria

2218. Diabetes mellitus associated with-(^£J/DA© T *attern)*
|s gj ^Ytat |r m ;f b) ↑ Triglycerides
c) 1 Triglycerides d) *i* Cholesterol

2219. Diabetic foot gangrene classification -(NEE) T/DNB
a) Texas classification b) *Pattern)*
c) d)

2220. Weight gain is seen in all except-(NEET/DNB Pattern)
|4|^%€pshmgs syndjpm^r^'iiyp^fil^^sfe ' /'
c) Pheochrotnocytoma d) Insulinoma ;

THYROID

2221. Decreased Radio iodine uptake is/are seen in -
a) Toxic multinodular goiter *(PGIDec 2000)*
b) Grave's disease
c) Subacute thyroiditis
d) Factitious thyroiditis

2222. Diffuse toxic goitre is characterized by -
a) Primary thyroid disease *(PGI June 04)*
b) Secondary thyroid disease
c) It is due to autoimmune thyroid stimulating hormone (TSH) antibody
d) It is due to TSH receptor antibody

2223. Thyroid carcinoma associated with hypocalcemia is- *(AIIMS Dec 94)*
a) Follicular carcinoma
b) Medullary carcinoma
c) Anaplastic carcinoma
d) Papillary carcinoma

2224. Hashimoto's thyroiditis, all are TRUE, EXCEPT-
a) Neutrophilic infiltration *(AIIMS May 93)*
b) Maximum incidence in child
c) Pain in hyoid
d) None of the above

2225. The Lab investigation of patient shows >1T3, *i* T4, & *i* TSH. It can not be - *(AI 2000)*
a) Primary hypothyrodism b) Pan - hypopitutarism
c) Liver disease d) None of the above

2226. The Lab investigation of a patient shows *i* T4, & t TSH. Which of the following is the most likely diagnosis - *(AI 11)*
a) Grave's disease b) Hashimoto's disease
c) Pituitary failure d) Hypothalamic failure

2227. The best marker to diagnose thyroid related order is- *(AI 04)*
a) T_3 b) T_4
c) TSH d) Thyroglobulin

2228. Increased T_4 seen in - *(PGI June 08)*
a) Hyperparathyroidism
b) X-linked TBG deficiency
c) Familial dysalbuminemic hyperthyroxinemia
d) Low T_3 syndrome
e) Pregnancy

2229. All of the following conditions are associated with Hyperthyroidism, except - *(AI 11)*
a) Hoshimoto's Thyroiditis
b) Grave's Disease
c) Toxic Multinodular Goiter
d) Struma ovary

2230. The occurrence of hyperthyroidism following administration of supplemental iodine to subjects with endemic iodine deficiency goiter is known as -
a) Jod-Basedow effect *(AI04)*
b) Wolff-Chaikoff effect
c) Thyrotoxicosis factitia
d) De Quervain's thyroiditis

2231. True about thyroid storm - *(PGI June 05)*
a) Bradycardia b) Hyperthermia
c) Hypercalcemia d) Hypotension
e) Cardiac arrhythmia

2232. Cardiopulmonary manifestation of hyperthyroidism-
a) Tachycardia *(PGIDec 04)*
b) Sinus bradycardia
c) Cardiomegaly
d) Low output cardiac failure

2233. In Thyrotoxicosis, JJ-blockers do *not* control -
a) Anxiety b) Termors *(AI 94)*
c) Tachycardia d) Oxygen consumption

221 l)b 2212)d 2213)c 2214)d 2215)a 2216)a 2217)a 2218)b 2219)a 2220)c 2221)c,d 2222)a,d 2223)b 2224) a,b,c 2225) a 2226) b 2227) c 2228) c,e 2229) a 2230) a 2231)b,c,e 2232) a,c 2233) d

2234. A 40 yrs old female who is known case of ischemic heart disease (IHD) is diagnosed having hypothyroidism. Which of the following would be most appropriate line of management for her -
a) Start levothyroxine at low dose *(AI2011)*
b) Do not start levothyroxine
c) Use levothyroxine
d) Thyroid extract is a better option

2235. All of the following are features of thyrotoxicosis, except - *(A1IMS June 99)*
a) Diastolic murmur
b) Soft non ejection systolic murmur
c) Irregularly, irregular pulse
d) Scratching sound in systole

2236. Cardiac manifestations of Grave's disease would include all of the folloing except - *(UPSC 95)*
a) Wide pulse pressure
b) Atrial fibrillation
c) Pleuropericardial scratch
d) Aortic insufficiency

2237. The laboratory test of choice to confirm myxoedema coma is - *(UPSC 95)*
a) Thyroid stimulating hormone (TSH)
b) Thyrotropine releasing hormone (TRH)
c) Tri-iodothyronine (T3)
d) Tetra iodothyronine (T4)

2238. The most common differential diagnosis of hyper-thyrodism in a young female is - *(Delhi 96)*
a) Hysteria b) Essential tremor
c) Anxiety neurosis d) Parkinsonism

2239. Hang up angle reflex seen in - *(N1MHANS2K)*
a) Hypothyroidism b) Thyrotoxicosis
c) Sipple syndrome d) Wermer syndrome

2240. Storage form of thyroid hormone - *(N1MHANS 01)*
a) Tri-iodo tyrosine b) Tri - iodo tyronine
c) Thyroglobulin d) Di-iodo thyrosine

2241. Goitrous hypothyrodism commonly occurs in all of the following except - *(Kamat96)*
a) Hashimoto's thyroiditis
b) Dyshoromonognesis
c) Thyroprivic hypothyroidism
d) Iodine deficiency

2242. The commonest cause of congenital hypothyroidism-
a) Thyroid dysgenesis *(AP97)*
b) Pendred syndrome
c) Defective release
d) Deficiency of deiodinase

2243. Which of the following is found in primary hypothyroidism - *{JIPMER95)*
a) T3 decrease, T4 decrease, TSH increase
b) T3 decrease, T4 increase, TSH decrease
c) T3 normal, T4 normal, TSH increase
d) T3 decrease, T4 decrease, TSH normal

2244. Two years ago, a 30-year old lady had undergone near total thyroidectomy for paillary carcinoma. During the follow up visits, she was found to have multiple, discrete, mobile, left, deep cervical lymph nodes measuring 1 to 1.5 cms in size, the ideal treatment for this lady would be - *(UPSC 97)*
a) Iodine 131 ablation
b) External irradiation to the neck
c) Thyroxine therapy
d) Modified redical neck dissection

2245. A 52 years old male with toxic adenoma, treatment of choice is - *(JIPMER 98)*
a) Surgical-removal of adenoma
b) Radiotherapy
c) Radioactive I_2
d) Medical treatment

2246. A large toxic retrosternal goiter is best treated by- *(UPSC 05)*
a) Antithyroid drugs b) Radio iodine
c) Surgical resection d) Lugol's iodine

2247. The drug of choice for treatment of hyperthyroidism during lactation period is - *(J & k 05)*
a) Carbimazole b) Propylthiouracil
c) Methimizole d) Radioactive iodine

2248. The occurrence of hyperthyroidism following administration of supplemental iodine to subjects with endemic iodine deficiency goiter is known as - *(Manipal 09)*
a) Jod-Basedow effect
b) Wolff-Chaikoff effect
c) Thyrotoxicosis factitia
d) De Quervain's thyroiditis

2249. The best marker to diagnose thyroid related disorders is- *(Manipal 09)*
a) T_3 b) T_4
c) TSH d) Thyroglobulin

2250. Consider the following statements regarding thyroid hormones - *(UPSC-109)*
1. Majority of the circulating T_3 remains in bound form
2. Only 50% of the circulating T_3 is secreted by thyroid
3. TSH estimation is not a sensitive test for diagnosis of primary hypothyroidism.
4. Fatel pituitary-thyroid axis is dependent to a large extent on maternal pituitary-thyroid axis

Which of the statements given about is/are correct?
a) 1 only c) 1 and 2 only
c) 2 and 4 only d) 1,2,3 and 4

2251. Which one of the following is NOT the appropriate treatment of hyperthyroidism due to subacute lymphocytic thyroiditis ? *(UPSC-109)*
a) Propylthiouracil
b) Radioactive iodine ablation
c) Subtotal thyroidectomy
d) Beta blockers

2252. What is the best and most sensitive investigation for hypothyroidism ? *(UPSC-I109)*
a) TSH levels b) TRH levels
c) T_3, T_4 levels d) Radioactive I_2 uptake

2234)a 2235)a 2236)d 2237)a 2238)c 2239)a 2240)c 2241)c 2242)a 2243)a 2244)a 2245)c 2246)c 2247)b 2248) a 2249) c 2250) a 2251) d 2252) a

2253. Which of the following is NOT a feature of hypothyroidism ? *(COMED 09)*
a) Mental retardation b) Large head
c) Calf muscle hypertrophy d) Microcephaly

2254. A 28-year-old lady has put on weight (10 kg over a period of 3 years), and has oligomenorrhoea followed by amenorrhea for 8 months. The blood pressure is 160/100 mm of Hz. Which of the following is the most appropriate investigation ? *(Manipal 09)*
a) Serum electrolytes
b) Plasma cortisol
c) Plasma testosterone and ultrasound evaluation of pelvis
d) T3, T4 andTSH

2255. Which of the following statements regarding treatment of hypothyroidism in a patient with ischemic heart disease is true - *(A111)*
a) Low dose of levothyroxine
b) Normal dose of Levothyroxine
c) Do not use Levothyroxine
d) Use thyroid extract

2256. All of the following conditions are associated with Hyperthyroidism, except - *(A111)*
a) Hoshimoto's Thyroiditis b) Grave's Disease
c) Toxic Multinodular Goiter d) Struma ovary

2257. The Lab investigation of a patient shows 4 T4, & T TSH. Which of the following is the most likely diagnosis- *(A111)*
a) Grave's disease b) Hashimoto's disease
c) Pituitary failure d) Hypothalamic failure

2258. In a patient of primary hypothyroidism, the hormonal profile will read - *(UPSC111)*
a) Low T_y 1o w T_4, lowTSH
b) Low $T_{3>}$ low T_4, high TSH
c) High T_3, high T_4, high TSH
d) Low T_3, low T_4, normal TSH

2259. The best marker for hyperthyroidism -
a) **T3** b)T4 *(NEET/DNB Pattern)*
QTSII d) Thyroglobulin

2260. Which of the following most closely represents the lowest detection limit for third generation TSH Assays- *(A112)*
a) OAmlU/L - - & &)O.04mlU/L^U feW
c) 0.004 mlU/L d}O.0OO4mlU/L

2261. Most common cause of hyperthyroidism-
a) Thyroid hyperplasia - *(NEET/DNB Pattern)*
b) Thyroid adenoma
c) Thyroid carcinoma
d) Grave disease

2262. Wolf Chaikoff effect - *(NEET/DNB Pattern)*
a) Excess iodine intake causes hypothyroidism
b) Iodine induced hyper thyroidism
c) Thyrotoxicosis due to excessive amount Of iodine ingestion
d) Drug induced hyperthyroidism

2263. Yellowing of the skin occurs in hypothyrodism because of - *(NEET/DNB Pattern)*
a) Increased bilirubin b) Increased cholesterol
c) Increased carotene d) Increased

PARATHYROID

2264. Secondary hyperparathyroidism are seen in all except- *(AIIMSNovlO)*
a) Rickets b) Osteomalacia
c) Osteoporosis d) Renal failure

GONADS

2265. Not seen in a female on oral pilles is - *(UP 96)*
a) Budd chiari syndrome
b) Cholestasis
c) Angisarcoma
d) Nodular hyperplasia liver

2266. Karyotype of testicular feminisation-(M47?E *2001)*
a) 45X0 b)47XXY
c) 46 XY d)46XXY

2267. Precocious puberty is treated by administering -
a) LHRH b) Testosterone *(J1PMER 95)*
c) Oestrogen d) Gonadotrophin

2268. Menopause is defined as cessation of menstruation for - *(Kerala 2K)*
a) 3 consecutive months
b) 6 consecutive months
c) 9 consecutive months
d) 12 consecutive months
e) 15 consecutive months

2269. A 25-years old female developed secondary amenorrhoea of 6 month duration. Even after administration of oestrogen and progesterone for two weeks, there was no vaginal bleeding. The underlying cause could be in the - *(UPSC 99)*
a) Pituitary glands b) Hypothalamus
c) Uterus d) Ovary

2270. Primary amenorrhea with anosmia is seen in- *(Kerala 2001)*
a) Kallman syndrome b) Rokitanky syndrome
c) Refenstein syndrome d) Turner syndrome

2271. Which of the following is not used to induce ovulation- *(UP 96)*
a) Danazol b)Clomiphene
c) HMG d)HCG

2272. All the following drugs are used for the induction of ovulation except - *(UPSC 99)*
a) Clomiphene citrate b) Gonadotrophins
c) Danazol d) Corticosteroids

2273. All the following are the micro-manipulative methods in Assisted reproductive technique except-
a) Intra-cytoplasmic sperm injection *(UPSC 2K)*
b) Intra-uterine insemination
c) Zona drilling
d) Zona cracking

2253)d 2254)d 2255)a 2256)a 2257)b 2258)b 2259)c 2260)b 2261)d 2262)a 2263)c 2264)c 2265)c,d 2266)c 2267)a 2268)d 2269)c 2270)a 2271)a 2272)c,d 2273)b

2274. Testoesterone receptor antagonist is - *(SGPG105)*
a) Cyproterone acetate b) Miflpristone
c) Danazol d)Nonoxynol

2275. Hirustism may be found in any of these disorders, except- *(J & k 05)*
a) Cushing's syndrome
b) Hypothyroidism
c) Congenital adrenal hyperplasia
d) Polycystic ovarian syndrome

2276. All are true regarding idiopathic edema of women except - *(Manipal 09)*
a) It is due in estrogen mediated sodium retention
b) It is not related to menstrual cycles
c) There is increased water retention in upright position
d) ACE inhibitors can be useful in some cases

2277. Estimation of the following hormones is useful while investigating a case of gynecomastia except-
a) Testosterone b) Prolactin *(Manipal 09)*
c) Estradiol d) Luteinising hormone

MISCELLANEOUS

2278. Which of the following has a normal level of alpha fetoprotein value in serum? *(AIIMS May 05)*
a) Ovarian dysgerminoma b) Hepatoblastoma
c) Embroynal carcinoma d) Yolk sac tumours

2279. Migratory necrolytic erythema is seen in -
a) Glucagonoma syndrome *(AIIMS May 05)*
b) Peutz-Jeghers syndrome
c) Sarcoidosis
d) Amyloidosis

2280. Which of the following does not occur in a patient with gastrinoma - *(AIIMS May 05)*
a) Epigastric pain
b) Diarrhoea
c) Basal acid output (BAO) less than 15 mEq/litre
d) Serum gastrin levels >200 pg/ml

2281. Which of the following statements is correct regarding adrenal histoplasmosis - *(AIIMSMay 06)*
a) In active disease, calcification is commonly seen
b) Lymphadenopathy is not seen
c) The adrenal glands are usually symmetrically enlarged
d) Adrenal insufficiency is uncommon

2282. A 28 year old lady has put on weight (10 kg over a period of 3 years), and has oligomenorrhoea followed by amennorrhoea for 8 months. The blood pressure is 160/100 mm of Hg. Which of the following is the most appropriate investigations - *(AI04)*
a) Serum electrolytes
b) Plasma cortisol
c) Plasma testosterone and ultrasound evaluation of pelvis
d) T3,T4 and TSH

2283. Alcohol induced testicular atrophy -*(AIIMSMay 94)*
a) Occurs due to increase in blood viscosity
b) Occurs due to peripheral neuropathy
c) Occurs due to hepatic involvement
d) Occurs due to veno-occlusion

2284. Hormone resistinis secreted by - *(PGI June 07)*
a) Adipose tissue b) Pancreas
c) Pituitary

2285. Match List I with List II and select the correct answer using the code given below the lists - *(UPSC111)*

List I (Medical condition)	**Listn (Presentation)**
a. Myxoedema	1.Anosmia
b. Kallmann syndrome	2. Hypouricaemia
c. Hyper-aldosteronism	3. Alkalosis
d. Hepatic failure	4. Pseudomyotonia

Code:

	A	B	C	D
a)		21	3	4
b	4	1	3	2
c)	2	3	14	
d)	4	3	12	

2286. A 36-year-old woman presents with muscle weakness. Her serum K^+ value is 2.0 mEq/L. Consider the following as the possible causes:
1. Persistent vominting
2. Acute intravascular haemolysis
3. Conn's syndrome
4. Rhabdomyolysis

Select the correct answer using the code given below-
a) 1 only b) 1 and 3 only *(UPSC 111)*
c) 2 and 4 only d) 3 and 4 only

2287. AU of the foUowmg cause osteonecrosis-^^T^DA®
a) Sickle cell anemia b) Corticosteroid use *Pattern)*
c) DIC d) SLE. ■

GIT

GENERAL

2288. A young patient presenting with massive hematemesis was found to have splenomegaly. In this case the most likely source of bleeding is - *(AIIMS Nov 04)*
a) Duodenal ulcer
b) Esophageal varices
c) Erosive mucosal disease
d) Gastric ulcer

2289. A 70-year old male patient presented to the emergency department with pain in epigastrium and difficulty in breathing for 6 hours. On examination, his heart rate was 56 beats per minute and the blood pressure was 106/60 mm Hg. Chest examination was normal. The patient has been taking omeprazole for gastroesophageal reflux disease for last 6 months. What should be the intial investigation -
a) AnECG *(AIIMS Nov 05)*
b) An upper GI endoscopy
c) Urgent ultrasound of the abdomen
d) An x-ray chest

2274)a 2275)b 2276)a 2277)b 2278)a 2279)a 2280)c 2281)c 2282)b 2283)c 2284)a 2285)b 2286)b 2287)d 2288)b 2289)a

2290. Ayoung pt presents with jaundice. Total bilirubin is 21, direct is 9.6, alkphos is 84 KA units. Diagnosis is - *(AI01)*
a) Hemolytic jaundice b) Viral hepatitis
c) Chronic active hepatitis d) Obstructive jaundice

2291. A young male with galbladder stones shows the following test results, serum bilirubin 2.5, Hb 6, urine test positive for urobilinogen, diagnosis is -
a) Hemolytic jaundice *(A101)*
b) Obstructive jaundice
c) Hepatocellular jaundice
d) Protoporphyria

2292. All are true regarding Plummer Vinson syndrome, except - *(A1IMSDec 9 7)*
a) Oesophageal web
b) Predisposes to malignancy
c) Koilongchia
d) Common in elderly males

2293. A girl presents with complaints of malena. On examination there are pigmented lesions involving her mouth and lips. Two of her sisters also had similar complaints. Which of the following is the most probable diagnosis - *(AIIMS Nov 2000)*
a) Komkhite Canada syndrome
b) Puetz Jegher's syndrome
c) Gardner's syndrome
d) Turcot's syndrome

2294. A patient gives chronic history of diarrhoea and blood in stool presents with multiple fistulae in the perineum and multiple stricture in small intestine. The diagnosis is - *(AIIMS June 2000)*
a) Crohn's disease b) Radiation enteritis
c) Ulcerative colitis d) Ischemic bowel disease

2295. Which of the following colonic polyps is not pre-malignant - *(AI06)*
a) Juvenile polyps
b) Hamartomatous polyps associated with Peutz-Jeghers syndrome
c) Villous adenomas
d) Tubular adenomas

2296. Which of the following is the commonest cause of lower GI bleed - *(PGI Dec 04)*
a) Angiodysplasia b) Enteric fever
c) Diverticulosis d) Colonic polyps
e) Hemorrhoids

2297. Which is useful to decrease mortality and renal failure in acute liver disease due to alcoholism -
a) Pentoxyfylline b) Orlistat *(AIIMSMay*
c) S-Adenosyl methionine d)Syrlamysin *07)*

2298. Liver transplantation is done in - *(PGI 09)*
a) Hemochromatosis
b) Primary billiary cirrhosis
c) Sclerosing cholangitis without uncerative colitis
d) Sclerosing cholangitis with uncerative colitis
e) Billiary atresia

2299. What causes secretory diarrhea ? *(PGI June 07)*
a) Cholera
b) Laxatives
c) Excess Phenolphthalein intake
d) Clostridium difficile

2300. Indication of use of antibiotics in diarrhea -
a) Dysentery *(PGI June 07)*
b) High grade fever
c) Immunocompromised

2301. Which is used in drug induced ulcers- *(UP 2K)*
a) Antacids b)Ranifidine
c) Omeprazole d) Misopristol

2302. Secretory diarrhoea is found in- *(Jipmer 95)*
a) Thyrotoxicosis b) Shigella infection
c) Lactase deficiency d) Glucose intake

2303. Following causes distension of abdomen-fCMC*98)*
a) Hirschsprungs b) Hypokalemia
c) Hyperkalemia d) Hypomagnesmia

2304. Total capacity of the stomach is markedly reduced in-
a) Cauliflower growth of stomach *(UPSC 96)*
b) Hourglass stomach
c) Pyloric stenosis
d) Linitis plastica

2305. Klatskin tumour is tumour - *(JIPMER 95)*
a) At the juncture of cystic duct and bile duct
b) At bile duct
c) At ampulla of vater
d) At the junction of the bile duct

2306. Factors which reduce postprandial glycaemia include all of the following except - *(SGPGI04)*
a) Small particle size of food
b) Presence of enzyme inhibitors in food
c) Inadequate cooking of starch
d) resence of protein and fat in association with carbohydrate

2307. All of the following are causes of fasting hypoglycemia, except - *(AI 11)*
a) Glucagon Excess
b) Glucose- 6- Phosphatase deficiency
c) Glycogen- synthase deficiency
d) Uremia

2308. The following statements regarding small bowel tuberculosis are correct except - *(UPSC II11)*
a) There are two types : ulcerative and hyperplasic
b) The strictures are common in the ulcerative type
c) In the ulcerative type, the bowel serosa is studded with tubercles
d) The ulcerative type occurs when the virulence of the organism is greater than the host defence

LIVER

2309. Bilirubin is absent in urine because it is -
a) Distributed in the body fat *(AIIMS Nov 99)*
b) Conjugated with glucoronide
c) Not filterable
d) Lipophilic

2290) d 2291) a 2292) d 2293) b 2294) a 2295) a 2296) e 2297) a 2298)b,c,d 2299) a,b,c 2300) a,b,c 2301) b,c 2302) b 2303) a,b,d 2304) d 2305) d 2306) a 2307) a 2308) a 2309) c,d

2310. A male child with gall bladder stone has Hb-6 gm%, serum bilirubin 2.5 mg % and high urobilinogen in urine. The diagnosis is - *(AIIMS June 99)*
a) Haemolytic jaundice
b) Obstructive jaundice
c) Secondary biliary cirrhosis
d) Hepato cellular jaundice

2311. Following are causes of unconjugated hyperbilirubinemia except - *(AIIMSDec 94)*
a) Hemolytic anemia b) Large hematoma
c) Rotor syndrome d) Megaloblastic anemia

2312. Conjugated hyperbilirubinemia is seen in -
a) Gilbert's syndrome *(AIIMS May 06)*
b) Criggler Najj ar syndrome
c) Breast milk jaundice
d) Dubin Johnson syndrome

2313. Unconjugated hyperbilirubinemia- *(PGIDec05)*
a) 85% of the total should be indirect
b) Hemolytic anemia
c) ↑ Haemoglobin destruction (↑ bilirubin production)
d) 50% of the total should be indirect
e) It is seen in Biliary atresia and neonatal hepatitis

2314. True about Crigger Najjar type II syndrome is -
a) Diglucuronide deficiency *(PGIDec97)*
b) Recessive trait
c) Kemictems is seen
d) Phenobarbitone not useful

2315. Conjugated hyperbilirubinemia is seen in -
a) Gilbert's syndrome
b) Criggler Najjar syndrome
c) Breast milk jaundice
d) Dubin Jhonson syndrome

2316. A patient presents with unconjugated hyperbilirubinemia and presence of urobilinogen in urine. Which amongst the following is the least likely diagnosis - *(AI10)*
a) Hemolytic jaundice b)Crigler Najjar syndrome
c) Gilbert's syndrome d) Dubin Johnson syndrome

2317. A patient presents with unconjugated hyperbilirubinemia and elevated urobilinogen levels in urine. The most likely diagnosis is - *(AI 10)*
a) Hemolytic Jaundice b)Crigler Najjar syndrome
c) Gilbert's syndrome d) Dubin Johnson syndrome

2318. A 30 year old male has jaundice. Blood examination shows total serum bilirubin 21 mg%, direct bilirubin 9.6 mg % and alkaline phosphatase 84 KA units. The diagnosis is - *(AIIMS June 99)*
a) Haemolytic jaundice b) Viral hepatitis
c) Chronic active hepatitis d) Obstructive jaundice

2319. The test used to diagnose Dubin Johnson syndrome is - *(AI 07)*
a) Serum transaminases
b) Bromsulphalein test (BSP)
c) Hippurate test
d) Gamma glutamyl transferase level

2320. A 56-year old man presents to his internist with jaundice. The patient is receiving no medication and his only symptomatic complaint is mild fatigue over the past 2 months. Physical examination is remarkable only for the presence of scleral icterus. The patient has no significant past medical history. Analysis of serum chemistry reveals the following-
SGOT : 0.58 microkat/L (35U/L)
SGPT : 0.58 microkat/L (35U/L)
Total bilirubin: 91.7 micron mol/L(7mg/dL)
Direct Bilirubin:85.5 micron mol/L (5 mg/dL)
Alkaline phosphatase: 12 micron kat/L(720 U/L)
Which of the following is the next most appropriate diagnostic step ? *(AIIMSNov 99)*
a) Ultrasound
b) Liver biopsy
c) Review of peripheral blood smear
d) Endoscopic retrograde cholangiopan creatography (ERCP)

2321. Abnormal excretory function of hepatocytes assessed by- *(PGI June 07)*
a) Increased PT
b) Increased ALT
c) Increased Alkaline Phosphatase
d) Increased gamma GT

2322. 5' - Nucleotidase activity is increased in - *(AI 05)*
a) Bone diseases b) Prostate cancer
c) Chronic renal failure d) Cholestatic disorders

2323. Patient with jaundice and white stools. Which of the following enzymes is not raised - *(AIIMSNov 11)*
a) 5' nucleotidase
b) Alkaline phosphatase
c) Glutamate reductase
d) Gamma glutamyl transpeptidase

2324. Which of the following enzyme assay is useful to diagnose alcoholism - *(AIIMS Dec 99)*
a) SGOT
b) SGPT
c) Alkaline phosphatase
d) Glutamyl aminotransferase

2325. A 40 year male have H/o jaundice & ascites. He is a well known alcoholic. True statement is/are:
a) AST/ALT <2 b)PMN>5500/L *(PGI09)*
c) TS.LDH d) *i* Liver span
e) TS.ALP

2326. Ratio of AST/ALT > 1 present in - *(AIIMS May 07)*
a) Non alcoholic steatohepatitis
b) Alcoholic hepatitis
c) Wilson's disease
d) All of the above

2327. Which is not true about alcoholic hepatitis -
a) Gamma glutamyl transferase is raised
b) SGPT is raised *(AIIMS May 99)*
c) SGOT is raised
d) Alkaline phosphatase is raised

2310)a 2311)c 2312)d 2313)a,b,c 2314)b 2315)d 2316)d 2317)a 2318)d 2319)b 2320)a 2321)c,d 2322)d 2323) c 2324) a,b,d 2325) a,b,e 2326) d 2327) None

2328. A 50 year old lady presented with history of pain upper abdomen, nausea, and decreased appetite for 5 days. She had undergone cholecystectomy 2 years back. Her bilirubin was 10 mg/dl, SGOT 900IU/L SGPT 700 IU/L and serum alkaline phosphatase was 280 IU/L. What is the most likely diagnosis -
a) Acute pancreatitis *(AIIMS Nov 05)*
b) Acute cholangitis
c) Acute viral hepatitis
d) Posterior penetration of peptic ulcer

2329. Which one of the following serum levels would help in distinguishing an acute liver disease from chronic liver disease - *(A105)*
a) Aminotransaminase b) Alkaline phosphatase
c) Bilirubin d) Albumin

2330. In a child with acute liver failure, the most important prognostic factor for death is - *(AIIMS 06)*
a) Increasing transaminases
b) Increasing bilirubin
c) Increasing prothrombin time
d) Gram negative sepsis

2331. A patient with cirrhosis of liver has the following coagulation parameters, Platelet count 2,00,000, Prothrombin time 25s/12s, Activated partial thromboplastin time 60s/35s, thrombin time 15s/ 15s. In this patient - *(AIIMS May 04)*
a) D-dimer will be normal
b) Fibrinogen will be < 100 mg
c) ATIII will be high
d) Protein C will be elevated

2332. How will you check the quantitative assessment of liver function - *(PGIDec 05)*
a) Degree of T Transaminases
b) Degree of T Alkaline phosphatase
c) Galactose metabolism

2333. All of the following are causes of microvesicular fatty liver except - *(AIIMS May 05)*
a) Reye's syndrome
b) Obesity
c) Acute fatty liver of pregnancy
d) Valproic acid

2334. Which of the following is true regarding non alcoholic fatty liver - *(PGI June 01)*
a) Seen in diabetic
b) Clofibrate is used in treatment
c) Commonest cause of cryptogenic cirrhosis
d) Associated with transaminitis

2335. Non-alcoholic steatohepatitis seen in- *(PGI June 05)*
a) DM b) Obesity
c) IHD d) Gall stone
e) Hyper tryglyceridemia

2336. Normal portal venous pressure is - *(AI94)*
a) 3-5 cm saline b) 5-10 cm saline
c) 10-15 cm saline d) 15-20 cm saline

2337. In patients with cirrhosis of the liver the site of obstruction in the portal system is in the - *(A104)*
a) Hepatic vein b) Post sinusoidal
c) Extra hepatic portal vein d) Sinusoids

2338. In hepatic cirrhosis, which of the following is increased - *(PGI June 97)*
a) Alpha 1 globulin b) Alpha 2 globulin
c) Gammaglobulin d) All of the above

2339. Micronodular cirrhosis is commonly seen in all except- *(AIIMS Nov 07)*
a) Chronic hepatitis B
b) Alcoholic liver disease
c) Hemochromatosis
d) Chronic extrahepatic biliary obstruction

2340. Chylous acities is caused by all of the following except - *(AIIMS Nov 02)*
a) Colloid carcinoma of stomach
b) Tuberculosis
c) Trauma
d) Nephrotic syndrome

2341. Transudative ascites is/are associated with -
a) Myxedema *(PGI May 11)*
b) Budd chairi syndrome
c) Acute pancreatitis
d) Portal vein thrombosis
e) Congestive heart failure

2342. True about ascites - *(PGI June 05)*
a) In hemorrhage ascites R.B.C. count is> 1000 mm^3.
b) In SBP, WBC count is >500/mm3 .
c) Norfloxacin is the drug of choice in SBP.
d) USG can detected as little as 100 ml of peritoneal fluid.
e) Large volume paracentasis is indicated in SBP

2343. First line of treatment in severe ascites -
a) Bed rest and salt restriction *(PGI June 98)*
b) Heavy peracentesis
c) Shunt
d) Large dose of diuretics

2344. Feature of acute fulminant hepatic failure includes-
a) Hyperglycemia *(PGIJune 01)*
b) Hepatorenal syndrome
c) Hypermagnesemia
d) Mostly drug induced
e) Fetor hepaticus

2345. Which of the following is not a precipitating factor for hepatic encephalopathy in patients with chronic liver disease - *(AIIMSMay 05)*
a) Hypokalemia b) Hyponatremia
c) Hypoxia d) Metabolic acidosis

2346. Hepatic encephalopathy is predisposed by -
a) T K^+ b) Dehydration *(PGI June 03)*
c) Constipation d)GI. bleeding
e) S.B.P.

2328) c 2329) d 2330) c 2331) a 2332) c 2333)b 2334)a,c,d 2335)a,b,e 2336) c 2337) d 2338) c 2339) a 2340) a 2341)a,b,d,e 2342) d 2343) b 2344)b,d,e 2345) d 2346)b,c,d,e

2347. A symmetric high-voltage, triphasic slow wave pattern is seen on EEG in the following -
a) Hepatic encephalopathy *(AIIMSMay06)*
b) Uremic encephalopathy
c) Hypoxic encephalopathy
d) Hypercarbic encephalopathy

2348. Cause of vasodilatation in spider *ne\i-(AIIMSMay 10)*
a) Estrogen b) Testosterone
c) Hepatotoxins d) FSH

2349. Nodular regenerating hyperplasia is associated with- *(AIIMS May 09)*
a) Budd-chiari syndrome b) Alcohol
c) Drug d) Hepatitis B

2350. Hepatic-encephalopathy may be precipitated by all of the following except - *(AI99)*
a) Anemia b) Barbiturates
c) Hyperkalemia d)Hypothyroidism

2351. Child criteria include A/E- *(PGIMay 11)*
a) Neutritional status b) S.Bilirubin
c) S. creatinine d) Acid phosphate
e) Ascites

2352. A 40 year old patient, a known case of cirrhosis develops acute episode of GI bleed. Initial therapy given for 6 hours. Which of the following procedure is useful - *(AIIMS June 99)*
a) Nasogastric aspiration b) Urgent endoscopy
c) Sedation d) Ultrasound

2353. A young boy, Rahul presents with massive hemetemesis. He had fever for 15 days few days back which was treated. Clinical examination reveal moderate splenomegaly No other history is positive Probable diagnosis is- *(AIIMS Nov 01)*
a) Drug induced gastritis b) Oesophageal tear
c) Bleeding duodenal ulcer d) Oesophageal varices

2354. A10 year old male child complaints of pain in left hypochondrium since 2 days. Hb-9.69%. His mother gives history of passing black colored stools 7 days and 2-3 occasions since 2 yrs. During these episodes he had fatiguability while playing and was not able to play with his peers. Which of the following will maximally help to arrive at a clinical diagnosis - .
a) Pallor b) Jaundice *(AIIMS Nov 10)*
c) Palpable spleen d) Free fluid in the abdomen

2355. A 20 year old male has presented with repeated episodes of hematemesis. There is no history of jaudice or liver decompensation. On examination the significant findings include splenomegaly (8 cms below costal margin), and presence of esophageal varices. There is no ascites or peptic ulceration. The liver function tests are normal. The most likely diagnosis is - *(AIIMS Nov 04)*
a) Extahepatic portal venous obstruction
b) Non cirrhotic portal fibrosis
c) Cirrhosis
d) Hepatic venous outflow tract obstruction

2356. An 18 yr old male presents with massive hematemesis, he has history of fever for the past 14 days for which he was managed with drugs, moderate spleenomegaly is present, diagnosis is - *(AI 01)*
a) NS AID induced duodenal ulcer
b) Drug induced gastritis
c) Esophageal varices
d) None of the above

2357. A 45 - year old cirrhotic patient presented with severe haematemesis. The management of choice is- *(AIIMS June 99)*
a) Whole blood transfusion is the best
b) Colloids are preferred over crystalloids
c) Normal saline infusion
d) IV fluid with diuretics

2358. A child presents with massive hemetemesis and systemic hypotension) He has no fever or other significant history) Examination reveal massive splenomegaly but no hepatomegaly)Likely diagnosis is- *(AIIMS Nov 01)*
a) Hepatocellular carcinoma
b) Bleeding duodenal ulcer
c) Extrahepatic portal venous obstruction
d) Non-cirrhotic portal fibrosis

2359. All can be used as endoscopic sclerosants in the treatment of variceal bleeding, except -
a) Polydochyl b) Cynoacrylate *(AIIMSNov 01)*
c) Alcohol d) Acetic acid

2360. All are features of hepatocellular carcinoma, Except-
a) Not common in Asian *(AIIMS Sep 96)*
b) Liver biopsy is diagnostic
c) Raised titre of HBV and HCV antibodies
d) Fibrolameller type is having good prognosis

2361. 38 year old man Babbu, a chronic alcoholic, presents with pain in abdomen. On examination his liver is enlarged and serum a fetoprotein is elevated. The most likely diagnosis is - *(AI 2000)*
a) Hepatocellular carcinoma
b) Liver cell hyperplasia
c) Hepatic adenoma
d) Hepatitis

2362. Lalloo, 60 years of age, a known case of cirrhosis liver, presents with increased levels of Alpha feto protein, hepatomegaly 3 cm below costal margin.USG showed lesions involving the right lobe of the liver. What is the most probable diagnosis - *(AIIMS Nov 2000)*
a) Focal nodular hyper-plasia
b) Hepatocellular carinoma
c) Hepatic adenoma
d) Metastasis

2363. About fibrolamellar carcinoma, TRUE is -
a) Diffuse in nature *(AIIMS May 94)*
b) Occurs after 60 years of age
c) Cirrhosis is the most common presenting feature
d) Has better prognosis

2347) a 2348)a 2349) c 2350) c 2351)c,d 2352) b 2353) d 2354) c 2355)b 2356) c 2357) a 2358) c 2359)d 2360) a 2361) a 2362) b 2363) d

2364. Following liver transplantation, recurrence of primary disease in the liver most likely occurs in -
a) Wilson's disease *(AIIMSNov 05)*
b) Autoimmune hepatitis
c) Alpha-1 antitrypsin deficiency
d) Primary biliary cirrhosis

2365. Chronic active hepatitis is distinguished from chronic persistent hepatitis by - *(Karanat 96)*
a) Characteristic liver pathology
b) HBS Ag in serum
c) Extrahepatic manifestations
d) Presence of anti smooth muscle antibody

2366. Plasma alkaline phosphatase is highest *w-(Kam 98)*
a) Biliary cirrhosis b) Alcoholic cirrhois
c) Postnecrotic cirrhosis d) Cardiac cirrosis

2367. All the following drugs are used in hepatic encephalopathy, except - *(Kamal 96)*
a) Mannitol b) Metronidazole
c) Lactulose d) Phenobarbitone

2368. Earliest sign in hepatic encephalopathy is -
a) Asterixes *(CMC Vellore)*
b) Alternate constriction and dilated pupil
c) Constructional apraxia
d) Psychiatric abnormalities

2369. False about jaundice is- *(Orissa R)*
a) Detected when bilirubin > 2mg%
b) High scleral elastin affinity
c) Green hue of conjunctiva seen in unconj. Hyperbilirubinemia
d) Carotinemia does not cause scleral icterus

2370. Most common cause of liver abscess in South India-
a) Amoebic b) Bacterial *(AP96)*
c) Trauma d) Cancer

2371. Which one of the following clinical features suggest alcoholism as a cause of liver cirrhosis -*(UPSC2K)*
a) Spider angioma b) Ascitis
c) Absence of ankle jerk d) Gynaecomastia

2372. All of the following ae indications for liver transplantation except - *(Delhi PG 96)*
a) Hepatocellular Carcinoma b) Cirrhosis
c) Alcoholic-Hepatitis d) Biliary atresia

2373. Treatment for portosystemic encephalopathy includes all excepts- *(AP 96)*
a) High protein diet b) Lactulose
c) Oral neomycin d) Enema

2374. Minnsesota tube is used for the control of variceal bleeding in portal hypertension has - *(Orissa 98)*
a) One lumen b) Two lumen
c) Three lumen d) Four lumen

2375. Bleeding in a case of obstructive jaundice is treated with- *(JIPMER2K)*
a) Fresh frozen plasma b) Cryo precipitate
c) Whole blood d) Buffy coat extract

2376. Tender hepatomegaly is not seen in - *(UPSC04)*
a) Viral hepatitis b) Typhoid fever
c) Right heart failure d) Liver abscess

2377. Acute hepatocellular failure in a patient of cirrhosis of liver is precipitated by - *(SGPGI05)*
a) Upper gastrointestinal bleeding
b) Large carbohydrate meal
c) Portal vein thrombosis
d) Intravenous albumin infusion

2378. Obstructive jaundice may be seen as a side effect of therapy with - *(SGPGI 05)*
a) Isoniazid b) Reserpine
c) Chlorpromazine d)Furosemide

2379. Palmar erythema seen in all except - *(HPU05)*
a) Pregnancy b) Anemia
c) Cirrhosis d) Wilson disease

2380. Earliest sign in hepatic encephalopathy is -
a) Asterixes *(NIMHANS 05)*
b) Alternate constriction and dilated pupil
c) Constructional apraxia
d) Psychiatric abnormalities

2381. Gilberts syndrome disease all are true, except -
a) Conjugated hyperbilirubinemia *(Jipmer05)*
b) Fasting hypoglycaemia
c) Normal liver Histology
d) Liver enzymes normal

2382. Microvesicular steatosis is seen in all except -
a) Alcoholic liver disease *(APPGE 05)*
b) Acute fatty liver of pregnancy
c) Methotrexate toxicity
d) Reye's sydrome

2383. With reference to the treatment of chronic Hepatitis B infection, consider the following drugs -
1. Lamivudine 2. Alpha interferon
3. Ribavirin 4. Acyclovir
Which of the above drugs are useful in the treatment of chronic Hepatitis B infection ? *(UPSC 07)*
a) 1 and 2 only b) 1 and 3 only
c) 2 and 3 only d) 1,2,3 and 4

2384. The following can be associated with fatty liver except - *(UPSC 0 7)*
a) Amiodarone b) Zidovudine
c) Sodium valproate d) Chlorpropamide

2385. In alcoholic hepatitis, the specific enzyme raised is
a) Alanine amino transferase (ALT) *(Corned 07)*
b) Aspartate amino transferase (AST)
c) Alkaline phosphatase (ALP)
d) Gamma glutamyl transpeptidase (GGT)

2386. Which of the following disease is not a cause of indirect Hyperbilirubinemia ? *(Delhi PG Mar. 09)*
a) Rotor's syndrome b) Criggler Najjar syndrome
c) Gilbert syndrome d) Hereditary spherocytosis

2387. A 55-year-old woman presents with progressively deepening jaundice, uncontrollable pruritus, pain in the abdomen (right upper quadrant) and yellow coloured urine. Investigations revealed -
a) Viral hepatitis *(UPSC-109)*
b) Cirrhosis of liver
c) Carcinoma of head of the pancreas
d) Hepatocellular carcinoma

2364)b 2365)a 2366)a 2367)a,d 2368)a 2369)a 2370)a 2371)a 2372)c 2373)a 2374)d 2375)a 2376)d
2377) a 2378) c 2379)b 2380) a 2381) a 2382) c 2383) a 2384) d 2385)None 2386) a 2387) c

2388. An increase in serum bilirubin level on prolonged fasting is seen in - *(COMED09)*
a) Dubin-Johnson syndrome
b) Gilbert's syndrome
c) Pancreatic tumours
d) Crigler-Najjar syndrome

2389. In acute liver injury- *(PGIMay 10)*
a) AST/ALT ratio < 1 occur in most of the hepatocellular conditions
b) AST/ALT ratio > 2:1 suggestive of alcoholic liver disease
c) Synthesis of AST is inhibite by ethanol
d) In alcoholic liver disease AST/ALT ratio < 1

2390. Not a risk for cholangio carcinoma - *(PGIMay 10)*
a) Hepatolithiasis b) Hepatitis C
c) Clonorchi sinensis d) Choledocholithiasis
e) Primary sclerosing cholangitis

2391. All are metabolic causes of liver disease except- *(PGI Nov. 10)*
a) Histiocytosis b) Hemochromatosis
c) Gaucher's disease d) Wilson's disease
e) Galactosemia

2392. A10 year old male child complaints of pain in left hypochondrium since 2 days. Hb-9.69%. His mother gives history of passing black colored stools 7 days and 2-3 occasions since 2 yrs. During these episodes he had fatiguability while playing and was not able to play with his peers. Which of the following will maximally help to arrive at a clinical diagnosis -
a) Pallor b) Jaundice *(AlIMSNov 10)*
c) Palpable spleen d) Free fluid in the abdomen

2393. All are true except - *(AIIMS Nov 10)*
a) LKM 1 - Autoimmune hepatitis
b) LKM 2 - Drug induced
c) LKM 1 - Chronic hepatitis C
d) LKM 2 - Chronic hepatitis D

2394. A young patient presents to the emergency department with fever and right upper quadrant pain. Clinical examination reveals obvious hepatomegaly but there is no jaundice. Ultrasound reveals a solitary, homogeneous, hypoechoic lesion in the right lobe measuring 5 cm 5 cm 4 cm. Test for hydatid disease were negative. Which of the following is the best recommendation for initial treatment. - *(AI11)*
a) Multiple Aspirations and antiamoebies/antibiotics
b) Catheter drainage and antiamoebics/ antibiotics
c) Antiamoebics/ antibiotics alone
d) Hepatectomy followed by antiamobics/ antibiotics

2395. Which of the following agents is recommended for medical treatment of variceal bleed - *(AI 11)*
a) Octreatide b) Desmopresin
c) Vasopressin d) Nitroglycerine

2396. Which of the following statements about cysticercosis is true? *(UPSCI11)*
a) The causative agent is Echinococcus granulosus
b) The definitive host is man
c) Human cysticercosis is transmitted by the ingeston of ova
d) Levamisole is the treatment of choice

2397. A young patient preseted in the emergency with haematemesis and was found to have massive splenomegaly. The following conditions are associated with the above clinical presentation except- *(UPSCII11)*
a) Malaria
b) Kala-azar
c) Portal hypertension
d) Idiopathic thrombocytopenic purpura

2398v WhiChistrue abt primary sclerosing cholangitis-
a) Alkaline phosphatase levels ate normal *(NEET/DNB Pattern)*
b) Bilirubinm levels are increased
c) Liver enzymes are not increased
d) No risk of malignancy

2399. Triphasic waveforms in hepatic encephalopathy occurs in stage of - *(NEET/DNB Pattern)*
a) Coma stage-IV b) Confusion stage-I
c) Deep coma stage-V d) Drowsiness stage-II

2400. Signs of chronic liver failure are all except -
a) Subcutaneous nodules *(NEET/DNB Pattern)*
b) Palmer erythema
c) Spider nevi
d) Testicular atropy

2401. A man presents with history of hemetemesis of about 500ml of blood. On examination, spleen is palpable 5 cms below the left costal margin. The most likely diagnosis is - *(AI 12)*
a) Portal Hypertension b) Gastric ulcer
c) Dfhg%duc'ed d) Mallory Weiss Tear

2402. What is the uppermost intercostals space used for hepatic biopsy - *(NEET/DNB Pattern)*
a) 7^{th} b) 10^{th}
c) 5^{th} d) 9^{th}

2403. H.pylori elimination confirmation test -
a) Urea breath test *(NEET/DNB Pattern)*
b) Culture
c) Serological test
d) Biopsy urease test

t: A/E- *(NEET/DNB Pattern)*
a) Gentamycin b) Clarithromycin
c) Metronidazole d)Amoxicillih

HEPATITIS

2405. Earliest manifestation of hepatitis B *is-(PGIDec 99)*
a) HBeAg b) HBs Ag IgM
c) HBcIgM d) HBeAg lgm

2388)b 2389)a,b 2390)None 2391)a 2392)c 2393)d 2394)c 2395)a 2396)b 2397)d 2398)b 2399)a 2400)a 2401)a 2402)a 2403)a 2404)a 2405)a

2406. True about hepatitis B is - *(PGI June 08)*
a) HbsAg is positive throughout symptomatic period & beyond
b) HbsAg levels start disappearing after appearance of anti-Hbs
c) Serum transaminases increases before Tse in HbsAg
d) HbsAg present only after onset of jaundice

2407. Acute infection of hepatitis B virus is diagnosed by-
a) IgM antibody of Hb_sAg *(AlIMSFeb 97)*
b) IgM antibody of Hb_c Ag
c) IgM antibody of Hb_s Ag
d) IgG antibody of Hb_e Ag

2408. A 35-year-old male patient presented with history of jaundice for 15 days. The onset was preceded by a prodromal illness. His serum tested positive for HBsAg. A clinical diagnosis of acute Hepatitis B was made. What should be the next best confirmatory investigation - *(ARMS May 04)*
a) Anti-HBeAg antibody b) HBe antigen
c) Anti-HBe IgM antibody d) HBV DNA by PCR

2409. The following is a marker of acute hepatitis B infection - *(ARMS Nov 0 7)*
a) DNA polymerase b) Hepatitis core antigen
c) Anti HBs d) IgG to core antigen

2410. Early diagnosis of acute hepatitis-B infection is made by- *(ARMS Nov 03)*
a) Presence of HbeAg in serum
b) Presence of IgM anti-HBc in serum
c) Presence of HbsAg in serum
d) Presence of IgG anti-HBc in serum

2411. Early diagnosis of active hepatitis B infection is done by- *(ARMS June 2000)*
a) IgM HBcAg antibody b) HBsAg
c) HBcAg d) IgE HBsAg antibody

2412. In a patient only Anti HBsAg is positive in serum, all other viral markers are negative. This indicates-
a) Acute hepatitis *(ARMS June 2000)*
b) Chronic active hepatitis
c) Persistent carrier
d) Immunized person with Hepatitis B vaccine

2413. A blood donor is not considered for safe translation, if he has - *(AI 2000)*
a) Anti HBs Ag +ve
b) Anti HBs Ag and HBc Ag +ve
c) Hbs Ag +ve & IgM anti HBc +ve
d) Anti HBc +ve

2414. A person screened for blood donation, which of the following serology is safe for blood donation -
a) Anti HBsAg positive *(PGIJune 03)*
b) HBsAg positive
c) Anti-HBc (IgM positive)
d) Anti HBc positive and anti HBsAg positive
e)HBeAg positive

2415. HepatitisBinfectivity is indicated by- *(AI94)*
a) Anti-HBsAg
b) HBsAg + HBeAg
c) Anti-HBsAg + Anti-HBc
d) Anti-HBeAg + Anti-HBsAg

2416. HBV replication is indicated by - *(PGIDec 06)*
a) HBV DNA b) DNA polymerase
c) HBeAg d) IgM Anti-HBc
e) Anti-HBe

2417. A thirty-year man presented with nausea, fever and jaundice of 5 days duration. The biochemical tests revealed a bilirubin of 6.7 mg/dl (conjugated 5.0 mg/dl) with SGOT/SGPT(AST/ALT) of 1230/900IU/ml. The serological tests showed presence of HBs Ag., IgM anti-HBc and HbeAg. The most likely diagnosis is - *(ARMS Nov 02)*
a) Chronic hepatits B infection with high infectivity
b) Acute hepatitis B infection with high infectivity
c) Chronic hepatitis B infection with low infectivity
d) Acute hepatitis B infection with low infectivity

2418. A 30-year-old patient presented with history of jaundice for 10 days. His liver function tests showed bilirubin of 10 mg/dl, SGOT/SGPT 1100/1450, serum alkaline phosphatase 240 IU. He was positive for HbsAg. What should be the confirmatory test to establish acute hepatitis B infection ? *(ARMSMay 06)*
a) IgM anti-HBc antibody b) HbeAg
c) HBV DNA by CPR d) Anti-HBc antibody

2419. All except one are true for hepatitis B -
a) Vertical transmission more important than horizontal *(ARMS Nov 10)*
b) Age of onset determines prognosis
c) Period of communicability lasts several months
d) Virus can be found in blood 1 month before jaundice

2420. Acute hepatitis B is diagnosed by - *(PGIDec 04)*
a) HBsAg b)HbeAG
c) Anti t HBs Ag d) IgM anti - HBc
e) HBV DNA

2421. The commonest hepatotropic virus causing increased chronic carrier state is -*(ARMSMay 01)*
a) HEV b)HAV
c) HBV d)HCV

2422. Which of the following markers in the blood is the most reliable indicator of recent hepatitis B-infection- *(ARMS May 03)*
a) HBsAg b) IgG anti - HBs
c) IgM anti-HBc d) IgM *qnti* - HBe

2423. Reverse transcriptase of hepatitis B virus is coded on the following gene - *(AI 2000)*
a) C gene b) S gene
c) P gene d) X gene

2424. Chronic liver disease is caused by: *(AI 2000)*
a) Hepatitis B b) Hepatitis A
c) Hepatitis C d) Hepatitis E

2406)a 2407)b 2408)? 2409)a 2410)b 2411)a 2412)d 2413)c 2414)a,d 2415)b,d 2416)a,b,c 2417)b 2418)a 2419) a 2420) a,d 2421) d 2422) c 2423) c 2424) c

2425. Chronic hepatitis is caused by - *(PGIJune03)*
a) Hepatitis A b) Hepatitis B
c) Hepatitis C d) Hepatitis E
e) Hepatitis G

2426. Non-parenteral hepatitis is - *(AI 2000)*
a) Hepatitis E b)HepB
c) Hep C d) Hep D

2427. Which of the following hepatitis viruses has significant perinatal transmission - *(AI03)*
a) Hepatitis E virus b) Hepatitis C virus
c) Hepatitis B virus d) Hepatitis A virus

2428. Most common type of hepatitis responsible for epidemics in India is - *(AI 97)*
a) Hepatitis A b) Hepatitis B
c) Hepatitis C d) Hepatitis E

2429. The most common route of spread in hepatitis E is -
a) Blood transfusion b) Feco-oral *(AI 95)*
c) Intercourse d) IV injection

2430. True regarding hepatitis E virus is- *(AIIMSDec 98)*
a) Seen in Post transfusion cases
b) Associated with increased mortality in pregnant female
c) Associated with hepatitis B virus
d) Acquired by feco oral route

2431. During an epidemic of hepatitis E, fatality is maximum in - *(AI 2000)*
a) Pregnant women b) Infants
c) Malnourished males d) Adolescent

2432. Which hepatitis B is most dangerous in pregnancy-
a) Hepatitis A b Hepatitis B *(AUMSMay95, Feb 97)*
c) Hepatitis C d) Hepatitis E

2433. True about hepatitis A include- *(PGI June 02)*
a) Virus is destroyed by boiling for 5 minutes
b) Spreads by faco-oral route
c) Incubation period of45-180 days
d) Predisposes to cirrhosis
e) IgG anti-HIV antibodies used for diagnosis

2434. The liver biopsy in acute hepatitis due to hepatitis B virus is likely to show all of the following, except-
a) Ballooning change of hepatocytes
b) Ground glass hepatocytes *(AIIMS May 04)*
c) Focal or spotty necrosis
d) Acidophil bodies

2435. Hepatitis C virus is associated with - *(AI2000)*
a) Anti LKM -1 antibody b) Scleroderma
c) Cryoglobulinemia d) Polyarteritis nodosa

2436. In Chronic Viral Hepatitis - *(AIIMS May 04)*
a) Hepatitis A virus infection is a common cause in children
b) Morphological classification into Chronic Active Hepatitis and Chronic Persistent Hepatitis are important
c) Fatty change is pathognomic of Hepatitis C virus infection
d) Grading refers to the extent of necrosis and inflammation

2437. All of the following are seen in active chronic hepatitis B except - *(AIIMS Nov 07)*
a) IgM against core antigen b) Total core antibody
c) HbeAg d) HbsAg

2438. Which of these is not a marker of active replicative phase of chronic hepatitis B ? *(Aiims Nov 08)*
a) HBVDNA b) HBV DNA polymerase
c) Anti HBC d) AST & ALT

2439. COUNCILMAN BODIES are seen *in-(AIIMSNov 07)*
a) Wilson disease
b) Alcoholic hepatitis
c) Acute viral hepatitis
d) Auto immune hepatitis

2440. Extrahepatic manifestation of HCV - *(PG1 June 04)*
a) Lichenoid eruption b) Coeliac disease
c) Glomerulonephritis d) Cryoglobulinemia
e) Arthritis

2441. Hepatits C is associated with all except -
a) PAN *(PGlJune08)*
b) Dermatomyositis like syndrome
c) Lichen planus
d) Psoriasis

2442. Extrahepatic manifestation of Hepatitis B are - *(PGI June 01)*
a) Aplastic anemia b)Cryoglobuline
c) Peptic ulcer d) Gallstones
e) Gullian-Barre-synd

2443. A patient presented with arthritis and purpura. Laboratory examination showed monoclonal and polyclonal cryoglobulins. Histopathology showed deposits of cryoglobulins around the vessels. The patient should be tested for which of the following ?
a) HBV b)HCV *(AIIMS May 10)*
c) EBV d) Parvovious

2444. HbsAg positive person can have following association/s - *(PGIDec 06)*
a) Membraneous glomerulonephritis
b) MCD
c) RPGN
d) FSGS
e) MPGN

2445. Autoimmune hepatitis asso with - *(PGIDec 06)*
a) Anti LKM antibody b) ANA
c) ANCA d) SLA-antibody

2446. All are true except - *(AIIMS Nov 10)*
a) LKM1 - Autoimmune hepatitis
b) LKM2 - Drug induced
c) LKM1 - chronic hepatitis C
d) LKM2 - chronic hepatitis D

2447. All are true except - *(AIIMS Nov 10)*
a) LKM 1 - Autoimmune hepatitis
b) LKM 2 - Drug induced
c) LKM 1 - Chronic hepatitis C
d) LKM 2 - Chronic hepatitis D

2425) b,c 2426) a 2427) c 2428) d 2429) b 2430) b,d 2431) a 2432) d 2433) a,b 2434) b 2435) Oa 2436) d 2437)a 2438)c,d 2439)c 2440)a,c,d,e 2441)a,b,d 2442)a,b 2443)b 2444)a,e 2445)a,b,d 2446)d 2447)d

2448. A 27 year old male is is incidentally HBsAg positive. DNA-PCR for hepatitis B revealed 1000 copies/ml. The patient is suffering from? *(AI10)*
a) Active HBV carrier b) Acute hepatitis B
c) Chronic hepatitis B d) Inactive HBV carrier

2449. A 29 year old male found HBsAg positive with highly increased SGOT levels but HBeAg negative. Which of the following is true about the status of the patient?
a) Precore mutant *(AI 10)*
c) Core-promoter mutant
c) Wild type mutant
d) Surface mutant

2450. Heera lal 35 years old man was found +ve for HBs Ag & HBeAg accidently during screening on blood donation. On lab examination SGOT and SGPT are normal. What should you do next - *(AI 02)*
a) Liver biopsy b) Interferon therapy
c) Observation d) HBV - DNA estimation

2451. Which one of the pair is not correct regarding hepatitis B management - *(AIIMS Nov 10)*
a) Supportive care - acute viral hepatitis B
b) Antiviral drugs - chronic viral hepatitis B
c) Supportive care - chronic viral hepatitis B
d) Antiviral drugs - acute viral hepatitis B

2452. Interferons in chronic hepatitis B given in -
a) Early onset *(PGI June 07)*
b) HBV replication
c) Normal ALT

2453. A young man presents with HBsAg positive anti HBcIgM positive, HBeAg negative and normal levels of AST and ALT. He is asymptomatic. What is the next line of management. *(AIPGMEE 08)*
a) Wait and Watch b) Lamivudin
c) Immunoglobulin d) Liver Transplant

2454. Rx of chronic HBV infection - *(PGI June 05)*
a) Interferon b)Adefovirdipivoxil
c) Lamivudine d) Famcyclovir
e) Ganciclovir

2455. Which one of the pair is not correct regarding Hepatitis B management - *(AIIMS Nov 10)*
a) Supportive care - acute viral hepatitis B
b) Antiviral drugs - chronic viral hepatitis B
c) Supportive care - chronic viral hepatitis B
d) Antiviral drugs - acute viral hepatitis B

2456. A 55 year old male patient was diagnosed to have chronic hepatitis C. He responded to treatment with interferon. However, after one year of follow up he showed a relapse of disease. Which of the following would be the next most appropriate choice?
a) Ribavarin and interferon *(AIIMS Nov 03)*
b) Lamivudine and interferon
c) Nevirapine and lamivudine
d) Indinavir and ribavarin.

2457. A 30 Year old patients with H/O antibodies to HCV for 6 months duration & his AST/ALT is normal. There is no symptom or stigmata of liver disease. The most appropriate approach - *(PGI June 04)*
a) Re-assure the patient
b) Repeat titre every 3 years
c) Repeat enzymes every year
d) Do liver biopsy & start antiviral drugs accordingly

2458. Factors that determine the sustained response with antiviral therapy (a-IFN+Ribavirin) in Hepatitis C patient are - *(PGI Dec 04)*
a) tHCVRNA b) Age < 40 years
c) Genotype 1 d) Female sex
e) Patient is without cirrhosis

2459. Which is the usual marker for detection of hepatitis- *(CUPGEE95)*
a) HBs Ag b) HBs Ab
c) HBeAg d)HBcAb

2460. The most common type ofhepatitis associated with blood transfusion- *(CUPGEE 95)*
a) Hepatitis C b) Hepatitis B
c) Hepatitis A d) Hepatitis D

2461. The disease associated with hepatitis C virus -
a) Leprosy b) Lichen planus *(Karnat 99)*
c) Psoriasis d) Vitiligo

2462. All circulate in blood except- *(Karnat 99)*
a) HB Ag b)AntiHBC
c)$HBC_{\acute{e}}Ag$ d)$HBA_{\acute{s}}g$

2463. Hepatitis B virus is associated with- *(MP 2K)*
a) SLE
b) Polyarteritis nodosa
c) Sjogren's syndrome
d) Wegener granulomatosis

2464. All the following hepatitis viruses are transmitted by parenteral route except- *(UPSC 2001)*
a) Hepatitis B virus b) Hepatitis C virus
c) Hepatitis D virus d) Hepatitis E virus

2465. Cirrhosis of liver in adult population is commonly due to all of the following except - *(ICS 98)*
a) Hepatitis A b) Hepatitis B
c) Hepatitis C d) Hepatitis E

2466. The likehood of becoming an HbsAg carrier after acute HBV infection is high in- *(Kerala 2K)*
a) Neonates
b) Chronic hemodialysis patients
c) Persons with Down's syndrome
d) Persons with HIV infection
e) All of the above

2467. Acute liver injury associated with hepatitis B virus is due to- *(UPSC 97)*
a) Direct cytopathic effect of the virus
b) Sensitized cytolytic T-cells
c) Immune-complex mediated tissue damage
d) Vasculitis

2468. 'Histological scoring' of chronic hepatitis does not include - *(AMC 99)*
a) Periportal inflamation b) Portal fibrosis
c) Bridging necrosis d) Cholestasis

2448)d 2449)a 2450)c 2451)d 2452)b 2453)a 2454)a,b,c 2455)d 2456)a 2457)d 2458)e 2459)a 2460)b 2461)b 2462)a 2463)b 2464)d 2465)a,d 2466)e 2467)b 2468)d

2469. Highest chance of transmission after needle stick injury is for - *(J & K 2001)*
a) Hepatitis B b) Hepatitis C
c) Hepatitis D d) hepatitis G

2470. All the following statements regarding Hepatitis B are true except - *(Karnat. 96)*
a) Delta hepatitis can occur as a co-infection or superinfection
b) Hepatitis e antigen indicates that avtive viral replication
c) Steroids are the drug of choice in chronic Hepatits B
d) Can lead to Hepato Cellular Carcinoma

2471. In the treatment of Hepatitis - C inferferon is combined with which drug? *(Jipmer 03)*
a) Acyclovir b)Ribavarin
c) Lamivudine d) Indinavir

2472. Indicators of active multiplication of hepatitis B virus is - *(UPSC 04)*
a) HbsAg b) HbcAg
c) HbeAg d) Anti Hbs

2473. Which among the following anti-HTV drugs is also used to treat viral Hepatitis B ? *(COMED 09)*
a) Enfuviritide b) Lamivudine
c) Efavirenz d) Ritonavir

2474. Which one of the pair is not correct regarding hepatitis B management - *(AIIMS Nov 10)*
a) Supportive care - acute viral hepatitis B
b) Antiviral drugs - chronic viral hepatitis B
c) Supportive care - chronic viral hepatitis B
d) Antiviral drugs - acute viral hepatitis B

2475. All except one are true for hepatitis B -
a) Vertical transmission more important than horizontal *(AIIMS Nov 10)*
b) Age of onset determines prognosis
c) Period of communiciability lasts several months
d) Vims can be found in blood 1 month before jaundice

2476. Which one of the following is the correct sequence of appearance for the Hepatitis B virus serological markers- *(UPSC1I11)*
a) Anti-HBe, HBsAg, Anti-HBc, HBeAg
b) HBs Ag, HBeAg, Anti-HBc, Anti-HBe
c) Anti-HBc, HBsAg. Anti-HBe, HBeAg
d) HBeAg, Anti-HBe, Anti-HBc, HBsAg

2477. Acute liver failure is more common ■*vnthi'(NEET/*
a) Hep A b) Hep B *DNB Pattern)*
c) Hep C & vir* d)HepE *f, Hyl*

GALL BLADDER

2478. Most common causative organism for ascending cholangitis is - *(AIIMSDec 94)*
a) Streptococcus b) Proteus
c) E. coli d) Anaerobes

2479. Air in biliary tract is seen in all, Except -
a) Gall stone ileus *(AIIMS May 95)*
b) Sclerosing cholangitis
c) Carcinoma gall bladder
d) Endoscopic papillotomy

2480. Ingestion of arsenic causes - *(AIIMSMay 2001)*
a) Hepatic carcinoma
b) Hepatic adenoma
c) Noncirrhotic portal fibrosis
d) Hepatic cirrhosis

2481. Which of the following is the most common presenting symptom of non-cirrhotic portal hypertension ? *(AI06)*
a) Chronic liver failure
b) Ascites
c) Upper gastrointestinal bleeding
d) Encephalopathy

2482. A patient of esophageal varices with liver span of 19 cm. Likely causes - *(PGIDec 04)*
a) Haemochromatosis
b) Alcoholic liver disease
c) Veno- occlusive disease
d) Post necrotic cirrhosis
e) Budd- chiary syndrome

2483. Enlarged liver with Hepatocellular dysfunction seen in - *(PGI June 05)*
a) Wilson's disease b) Budd. Chiari syndrome
c) Alcoholic hepatitis d)NASH
e) Post necrotic cirrhosis

2484. The amount of GI bleed that can be detected by angiography - *(PGI Dec 04)*
a) 0.5 ml/min b) 0.1 ml/min
c) 0.05 ml/min d) 5 ml/min
e) 2 ml/min

2485. A patient presenting with jaundice the HIDA scan would be most useful for which of the following:-
a) Biliary atresia *(AIIMSMay 2002)*
b) Cholelithiasis
c) Bile duct carcinoma
d) Benign biliary disease

2486. Bland cholestasis is seen with - *(PGIDec 04)*
a) OCP b) Androgen
c) Chlorpromazine d) Erythromycin

2487. Risk factors for gall stones - *(PGIDec 04)*
a) Hormone replacement therapy
b) Female sex
c) OCP
d) Acute weight loss

2488. Granulomatous hepatitis may be seen with - *(AI96)*
a) Carbamazepine b)Allopurinol
c) Phenylbutazone d) All of the above

2489. Most common symptom of primary biliary cirrhosis is- *(AIIMS Sep 96)*
a) Pruritis b) Abdominal pain
c) Jaundice d) Bleeding

2469)a 2470)c 2471)b 2472)c 2473)b 2474)d 2475)a 2476)b 2477)b 2478)c 2479)b 2480)c 2481)c 2482) a,b,c,e 2483)a,b,c,d 2484) a 2485) a 2486) a,b 2487)a,b,c,d 2488) d 2489) a

2490. Primary sclerosing cholangitis, true are -
a) T Females *(PGIJune06)*
b) Associated with IBD
c) Involves intra & extrahepatic ducts
d) ERCP not helpful

2491. Which of the following statement are correct about cirrhosis - *(PGIDec 03)*
a) Antimitochondrial antibodies positive in primary biliary cirrhosis
b) In late stage of PSC treatment is liver transplantation
c) In advanced stages major blood supply is through hepatic vein
d) Elevated lipoprotein-X in PBC

2492. Gold standard investigation for stone in bile-duct is-
a) USG b) ERCP *(Rohtak 97)*
c) Cholangiography d) CT scan
e) MRI

2493. Lithogenic bile contains an increased amout of -
a) Bile acid b) Bile salt *(MAHE 01)*
c) Cholesterol d) Bilirubin

2494. Whenever there is stone in the bile duct which of the following raises - *(JIPMER 95)*
a) Bile salts b) Bilirubin
c) Amylase d) SGPT

2495. Which is the treatment for mucocele of gall bladder- *(CUPGEE 96)*
a) Cholecystectomy b) Cholecystostomy
c) Conservative treatment d) None

2496. Which of the following is a contraindication for medical management of Gall stones - *(AI11)*
a) Radioopaque stones
b) Radioluscent stones
c) Normal functioning gall bladder
d) Small stones

STOMACH

2497. All are true regarding Menetrier's disease, except-
a) Protein loss *(AIIMSDec94)*
b) Exophytic growth
c) Hypertrophy of gastric mucosa
d) Premalignant condition

2498. Which is not true about erosive gastritis -
a) Endoscopy is investigation of choice
b) Pain is absent *(AIIMSMay 95)*
c) It may be drug induced
d) Barium meal may clinch the diagnosis

2499. Endoscopic biopsy from a case of H.pylori related duodenal ulcer is most likely to reveal -
a) Antral predominant gastritis *(AIIMSNov04)*
b) Multifocal atrophic gastritis
c) Acute erosive gastritis
d) Gastric atrophy

2500. H. Pylori is known to cause all of the following except- *(AI 99)*
a) Gastric ulcer b) Duodenal ulcer
c) Gastric lymphoma d) Fundal gastritis

2501. TVue about mucosa associated lymphoma -
a) H. Pylori predisposes *(PGI June 05)*
b) Chemotherapy sensitive
c) Multiple lymphomas
d) Stromal polyp

2502. All are true regarding Helicobacter pylori except -
a) Less prevalent in developing countries
b) Toxigenic strains usually causes ulcers
c) Urea breath is positive
d) Gram negative organism

2503. Diagnostic tests for H. Pylori include all of the following except - *(AI 99)*
a) Urea-breath test
b) Rapid urease test
c) Gastric biopsy & Warthin-starry stain
d) SAFA test

2504. Epidemiological studies of H. Pylori are done by using - *(AI 99)*
a) Urea-breath test b) Serological markers
c) Culture d) Gastric-biopsy urease test

2505. A patient with H. pylori infection is treated with drugs. The best method to detect presence of residual H. pylori infection in this person is - *(AI 07)*
a) Rapid urease test
b) Urea breath test
c) Endoscopy and biopsy
d) Serum anti H. pylori titre

2506. Which drug is not effective against H.pylori-fyl*/ 95)*
a) Colloidal Bismuth b) Metronidazole
c) Amoxicillin d) Erythromycin

2507. All are used in treatment of Helicobactor pylori, EXCEPT- *(AUMSDec 97)*
a) Colloid bismuth b) Cisapride
c) Clarithromycin d)Metronidazole

2508. All of the following drugs are commonly used in regimens against H. pylori except - *(AI07)*
a) Oxytetracycline b) Amoxicillin
c) Bismuth subcitrate d) Omeprazole

2509. Which of the following statements about peptic ulcer disease is true - *(AIIMSMay 03)*
a) Helicobacter pylori eradication increases the likelihood of occurrence of complications.
b) The incidence of complications has remained unchanged.
c) The incidence of Helicobacter pylori reinfection in India is very low.
d) Helicobacter pylori eradication does not alter the recurrence ratio.

2510. All of the following are true regarding a patient with acid peptic disease except - *(AI 01)*
a) Misoprostol is the drug of choice in patients on NSAIDS
b) DU is preventable by the use of single night time H_2 blockers
c) Omeprazole may help ulcers refractory to H2 blockers
d) Mesoprostol is DOC in pregnant patients

2490)b,c 2491)a,b,d 2492)b 2493)c 2494)a,b 2495)a 2496)a 2497)b 2498)b,d 2499)a 2500)d 2501)a,b 2502) a 2503) d 2504) b 2505) b 2506) d 2507) b 2508) a 2509) b 2510)a,d

2511. Stress ulcers seen in burns are - *(PGIDec 2000)*
a) Curling' ulcer b) Cushing's ulcer
c) Meleney's ulcer d) Rodent ulcer

2512. Early gastric cancer generally indicates - *(AIIMS*
a) Gastric adencarcinoma detected early *Nov 04)*
b) Gastric adenocarcinoma confined to the mucosa
c) Gastric adenocarcinoma confined to the mucosa & submucosa
d) Gastric adenocarcinoma less than 1 cm. In size

2513. Cell present in large numbers in the peritonei fluid of Tuberculous peritonitis are- *(Karn 98)*
a) Eosinophils b) Polymorphs
c) Lymphocytes d) Monocytes

2514. Treatment of drug induced gastritis - *(JIPMER 99)*
a) Mesoprostol b) H_2 receptor blockers
c) Antacids d) Famotidine

2515. Ulcer in lesser curvature in 65 year old male biopsy negative for malignancy not healing after 6 weeks of H_2 blocker next treatment is - *(KERALA 95)*
a) Repeat biopsy
b) Total gastrectomy
c) Partial gastrectomy
d) Hydrogen blocker for another 6 weeks

2516. Least irritant fluid to peritoneum - *(DNB 01)*
a) Blood b) Urine
c) Bile d) Pancreatic fluid

2517. Progressive dysphagia is seen in- *(MAHE 05)*
a) Carcinoma esophagus b) Globus hystericus
c) Presbyesophagus d) Achalasia

2518. Stress ulcers seen in burns are - *(PGI 2000)*
a) Curling's ulcer b) Cushing's ulcer
c) Meleney's ulcer d) Rodent ulcer

2519. Most common cause of decrease in incidence of H.pylori in west is d/t - **(***SGPGI05)*
a) Change in the style
b) Increased use of PPI
c) Chemotherapy
d) Mutation in organism

2520. In the Forrest classification for bleeding peptic ulcer with a visible vessel or pigmented protuberance is classified as - *(J & k 05)*
a) FI b) F Ha
c) Fllb d) F lie

2521. Treatment of H. pylori is required in all of the following expect ? *(APPG 06)*
a) Gastro esophageal reflex disease
b) Gastric ulcers
c) Duodenal ulcers
d) Gastric lymphoma

2522. True regarding GERD is all except - *(Manipal 06)*
a) Avoid coffee & Tea
b) Transient lower esophageal relaxation
c) Lower esophageal sphincter length and its pressure is important
d) Proton pump inhibitor is the treatment of choice

2523. Eradication of helicobacter pylori has been proved to be beneficial in which of the following disorders of the stomach - *(Karnataka 06)*
a) Low grade malt lymphoma
b) Prosive gastritis
c) Carcinoma stomach
d) Gastroesophageal disease

2524. Gastic erosions are likely to be associated with the following conditions except - *(UPSC 0 7)*
a) Pernicious anaemia b) Cor pulmonale
c) Polycythemia rubra vera d) Hepatic cirrhosis

2525. Hydrogen breath test is/ae used for -*(PGIMay 10)*
a) Lactose intolerance
b) GERD
c) H.Pylori
d) Irritable bowel syndrome
e) Bacterial ovrgrowth syndrome

PANCREAS

2526. All the following are causes of Acute Pancreatitis except- *(AI94)*
a) Gall stones b) Alcohol
c) Hemochromatosis d) Hypercalcemia

2527. Somatostatin is secreted by - *(AIIMSFeb 97)*
a) D-cell b) A-cell
c) B-cell d)Dl-cell

2528. Ranson's critaria for prognosis in acute pancreatitis include all except - *(AI 98)*
a) WBC>16,000 cells/cumm b) Age over 55 years
c) AST>250U/l00ml d)S.amylase>350I.U.

2529. Ranson scoring for acute pancreatitis includes -
a) Age > 55 yr *(PGIMay 11)*
b) WBC> 16000/ 1
c) Sequestration fluid <3L
d) BUN> lOmg/dl
e) LDH>700IU/I

2530. Definitive diagnosis of acute pancreatitis is done by-
a) Amylase b) Lipase
c) S. alkaline phosphatase d) Increased Ca
e) Hyperglycemia

2531. Medical treatment of pancreatitis are all, except - *(AIIMS May 94)*
a) Cholestyramine b)Aprotinin
c) Calcium d) Glucagon

2532. Most common complication of acute pancreatitis is- *(AIIMS May 95)*
a) Pancreatic abscess b) Pseudocyst
c) Phlegmon d) Pleural effusion

2533. All are true about pseudopancreatic cyst of pancreas except -
a) Common after acute pancreatitis
b) Present as an abdominal mass
c) Serum amylase is increased
d) Most common site is in head of pancreas

251 l)a 2512)c 2513)c 2514)b,d 2515)d 2516)a 2517)a 2518)a 2519)a 2520)a 2521)a 2522)c 2523)a 2524) a 2525) a,d,e 2526) c 2527) a 2528) d 2529) a,b 2530) a,b 2531)a,b,d 2532) b 2533) d

2534. Raised serum amylase levels are used to diagnose -
a) Autoimmune disease b) Degenerative disease
c) Acute cholecystitis d) Acute pancreatitis

2535. Increased amylase may be seen in all of the following except- *(AI97)*
a) Pancreatic pseudocyst
b) Appendicitis
c) Perforated peptic ulcer
d) Ruptured ectopic pregnancy

2536. Serum amylase level is raised in A/E - *(PGI June 98)*
a) Blocked salivary duct b) Ruptured ectopic
c) Appendicitis d) Pancreatitis

2537. Cause of sudden loss of vision in alcoholic pancreatitis is - *(AIIMS June 99, AI 95 & 2000)*
a) Central retinal artery obstruction
b) Acute congestive glaucoma
c) Purstchner retinopathy
d) Sudden alcohol withdrawl

2538. Pancreatic cholera is characterized by all except -
a) Hypochlorhydria b) Hyokalemia *(AI 96)*
c) Glucose intolerance d) Hypocalcemia

2539. Hypergastrinemia with hypochlorhydria is seen in -
a) Zollinger Ellison Syndrome *(AI 02)*
b) VIPoma
c) Penicious anemia
d) Glucagonoma

2540. The triad originally described by Zollinger Ellison syndrome is characterized by - *(AI 02)*
a) Peptic ulceration, gastric hypersecretion, non beta cell tumour
b) Peptic ulceration, gastric hypersecretion, beta cell tumour
c) Peptic ulceration, achlorhydria, non beta cell tumour

2541. Zollinger Ellison syndrome is characterized by all of the following except -
a) Post bulbar ulcer
b) Recurrent duodenal ulcer
c) Severe diarrhoea
d) Massive HCL in response to histamine injection

2542. Most important investigation for diagnosis of Zollinger Ellison-syndrome is - *(AI 99)*
a) Ca** infusion test
b) Secretin injection test
c) ACTH stimulation test
d) Steroid assay

2543. All are true regarding Zollinger Ellison syndrome, except - *(AIIMS Dec 9 7)*
a) Diarrhoea
b) Recurrence after operation
c) Hypergastrinemia
d) Decreased ratio of BAO to MAO

2544. Drug of choice in Zollinger Ellison syndrome is -
a) Ranitidine b) Omeprazole *(AIIMS May 95)*
c) Antacids d) (3-blocker

2545. Treatment of choice for Zollinger Ellison syndrome (ZES)is- *(A107)*
a) PPI b) Somatostatin analogues
c) Streptozocin d) Sucralfate

2546. Insulinoma true are -
a) Present in pancreas
b) Mostly malignant
c) Surgical therapy indicated if diagnosed

2547. Gold standard investigation for diagnosis of insulinoma- *(AI 09)*
a) Blood glucose level less than 30 mg%
b) 72 hrs fasting
c) C peptide levels less than 32 r|m
d) Serum insulin levels

2548. Which of the following is not used in diagnosis of insulinoma - *(AI 2011)*
a) 72 hours fasting blood glucose levels
b) C peptide levels
c) Insulin/glucose ratio
d) D-xylose test

2549. Which of the following is NOT secreted in pancreatic tumour - *(AIIMS Sep 96)*
a) VIP b) Insulin
c) Somatostatin d)ACTH

2550. Selective protein loss is seen in - *(AIIMSMay 94)*
a) Celiac disease b) Giardiasis
c) Lymphangiectasis d) Tropical sprue

2551. Organism which causes pancreatitis - *(Assam 95)*
a) Mumps b) Measles
c) Candida d) Treponema

2552. Does not affect prognosis in acute pancreatitis -
a) Leucocytosis > 19000 *(JIPMER 99)*
b) Amylase > 8000IU
c) Albumin < 3.2 gm/dl
d) Age > 60 yrs.

2553. Best diagnosis of pancreatic cancer (head) is by -
a) Ultrasound b) ERCP *(PGI 78, DELHI 86)*
c) CAT scan d)PTC

2554. Ectopic ACTH syndrome is seen most commonly with- *(AI96)*
a) Renal cell carcinoma b) Lymphoma
c) Bronchogenic carcinoma d) Pituitary adenoma

2555. Carcinoma pancrease attains largest size when it is sited in - *(AIIMS 95)*
a) Head b) Ampulla
c) Body & tail d) Periampullary

2556. Increased C-peptide is seen in - *(AP97)*
a) Glucagoma b) Insulinoma
c) Gastrinoma d) Hepatoma

2557. Investigation of choice for pancreatic islet cell tumour is - *(J&K2001)*
a) CT scan b) MRI
c) Nuclear scan d)USG

2558. Serum amylase level is raised in all except -
a) Acute pancreatitis *(AI91)*
b) Perforation of stomach
c) Strangulated small intestine
d) Acute appendicitis

2534)d 2535)b 2536)c 2537) c 2538)d 2539)c 2540)a 2541)d 2542)b 2543)d 2544) b 2545)a 2546)a 2547)b 2548)d 2549)None 2550)c 2551)a 2552)b 2553)b 2554)c 2555)c 2556)b 2557)c 2558)d

2559. Which one of the following tyOpes of pancreatitis has the best prognosis - *(UPSC 95)*
a) Gall stone pancreatitis b) Alcoholic pancreatitis
c) Idiopathic pancreatitis d) Traumatic pancreatitis

2560. Raised serum amylase is not seen in - *(Kerala 97)*
a) Appendicitis
b) Pancreatitis
c) Blocked salivary duct
d) ectopic pregnancy ruptured

2561. Which one of the following is best avoided in the treatment of acute pancreatitis - *(UPSC 9 7)*
a) Antibiotics b) Nasogastric suction
c) Anti cholinergics d) Morphine

2562. The following can be associated with acute pancreatitis EXCEPT - *(UPSC 02)*
a) Hyperparathyroidism b) Hyperthyroidism
c) Hypercalcemia d)Hypertriglceridemia

2563. The most common hormone other than gastrin, contained in the gastric - secreting islet cell tumour is - *(KERALA 2K)*
a) ACTH
b) Glucagon
c) Melanocyte stimulating hormone
d) Growth hormone releasing factor
e) Insulin

2564. Most common tumor of pancreas is - *(SGPGI05)*
a) Insulinoma b) Gastrinoma
c) APUD's omas d) VTPoma

2565. Complications of chronic pancreatitis include the following except - *(UPSC 05)*
a) Portal hypertension
b) Obstructive jaundice
c) Duodenal obstruction
d) Renal artery aneurysm

2566. Most important screening test for acute pancreatitis is- *(KARANT05)*
a) Serum amylase b) Serum lipase
c) CT (Abdomen) d)ERCP

2567. Carcinoma pancrease attains largest size when it is sited in - *(Jipmer05)*
a) Head b) Ampulla
c) Body & tail d) Periampullary

2568. The triad of DM, gall stones and steatorrhoea is associated with which one of the following tumours?
a) Gastrinomas b) Somatostatinomas
c) VTPomas d) Glucagonomas *(Corned 07)*

2569. The triad of DM, gall stones and steatorrhoea is associated with which one of the following tumours? *(Corned07)*
a) Gastrinomas b) Somatostatinomas
c) VTPomas d) Glucagonomas

2570. Which of the following DOES NOT cause an increase in serum amylase - *(Corned08)*
a) Pancreatitis b) Carcinoma lung
c) Renal failure d) Cardiac failure

2571. * Best'testTor diagnosis of gastrinoma -
a) Ca*4" infusion test *(NEET/DNB Pattern)*
; v b) Secretm injection test *z&l % f - i*
c) ACTH stimulation test;
d) Steroid assay

2572. In Zollinger Ellison syndrome what is r aised-
a) Insulin b) VIP *(NEET/DNB Pattern)*
c) Gastrin d) Glucagon

2573 . Symptoms of VIPOMA- *(NEET/DNB Pattern)*
a) Gall stones b) Secretory diarrhoea
c) Fat malabsorption d) Flushing

DISORDER OF ABSORPTION

2574. Best test for Small intestine malabsorption of carbohydrates is - *(AT97)*
a) Lund meal test b) Shilling test
c) D-Xylose test d) Follacintest

2575. False positive D-xylose test is seen *in-(PGI June 01)*
a) Ascites b) Blindloop syndrome
c) Renal failure d) Aspirin
e) Hepatic failure

2576. False positive D-xylose test seen in - *(PGIDec 06)*
a) Blind loop syndrome b) Ascites
c) Renal failure d) Antibiotic therapy
e) Pyloric stenosis

2577. A person has history of steatorrhoea of long duration. D-sylose was ordered. 5 hour urine sample show <4.5 g excretion after giving 25g D-xylose. What is/are the probable diagnosis - *(PGI 09)*
a) Celiac disease b) Pancreatitis
c) Blind loop syndrome d) Heal disease
e) Intestinal lymphangiecgtasia

2578. A 41 year old patient presented with chronic diarrhoea for 3 months. A d-xylose absorption test was ordered to look for - *(AIIMS Nov 2002)*
a) Carbohydrate malabsorption due to mucosal disease
b) Carbohydrate malabsorption due to chronic pancreatitis
c) Fat malabsorption dure to mucosal disease
d) Fat malabsorption due to chronic pancreatitis

2579. A 12 year old girl has history of recurrent bulky stools and abdominal pain since 3 year of age. She has moderate pallor and her weight and height are below the 3rd percentile. Which of the following is the most appropriate investigation to make a specific diagnosis ? *(AIIMS Nov 2004)*
a) Small intestinal biopsy b) Barium studies
c) 24-hr- fecal fat estimation d) Urinary d-xylose test

2580. Diffuse specific lesions on intestinal biopsy are seen in- *(PGINov 09)*
a) Celiac sprue
b) Whipples disease
c) Agammaglobulinemia
d) Abetalipoproteinemal
e) Tropical sprue

2559)a 2560)a 2561)c 2562)b 2563)a 2564) a 2565)d 2566)a 2567)c 2568)b 2569)b 2570)d 2571)b 2572)c 2573) b 2574) c 2575) a,b,c 2576)a,b,c 2577) a,c 2578) a 2579) a 2580)b,c,d

2581. Absorptive function of the mucosa of intestine can be best assessed by - *(AI09)*
a) d-Xylose test b) NBT- PABA test
c) Stool fat estimation d) Urobilin levels

2582. Best Test for intestinal malabsorption-£4/ZMSMzy *10)*
a) D-xylose test b) NBT-PABATEST
c) Fecal fatestimation d) Schilling test

2583. In which of the following conditions of malabsorption, an intestinal biopsy is diagnostic - *(AIIMSMay 05)*
a) Celiac disease b) Tropical sprue
c) Whipple's disease d) Lactose intolerance

2584. Most common CNS manifestation of Whipple's disease is - *(AI 99)*
a) Cerebellar ataxia
b) Supranuclear ophthalmoplegia
c) Seizure
d) Dementia

2585. Which of the following is a histological feature of Whipple's disease - *(AIPGMEE 08)*
a) Infiltration of histocytes in the lamina propria
b) Granuloma in the lamina
c) Macrophages with PAS (+) material inside the lamina propria
d) Eosinophils in the lamina propria

2586. Proved association of celiac sprue is with-*(PGI Dec*
a) Dermatitis herpeitformis b) Scleroderma *2K)*
c) Pemphigus d) Pemphigoid

2587. Celiac disease asso. with - *(PGI Dec 06)*
a) Dermatitis herpetiforms b) Type 1 DM
c) Lymphoma d) Atrophic gastritis
e) IBD

2588. Celiac sprue diagnosed by - *(PGI DEC 02)*
a) Intestinal biopsy
b) Unequivocal response to gluten restriction
c) Finding of organism
d) Improveent on dapsome treatment
e) H/O fat malabsorption

2589. A 30 year old lady presents with features of malabsorption and iron deficiency anemia. Duodenal biopsy shows complete villous atrophy. Which of the following antibody is likely to be present.
a) Antiendomysial antibodies *(AIIMS Nov 05)*
b) Anti-goblet cell antibodies
c) Anti-Saccharomyces cerevisae antibodies
d) Antineutrophil cytoplasmic antibodies

2590. Biopsy finding (s) of celiac disease is/are all except:
a) Cryptitis *(PG109)*
b) Villous atrophy
c) Crypt hyperplasia
d) T ed Intraepithelial lymphocyte
e) Presence of Giardia lambalia

2591. Which of the following circulating antibodies has the best sensitivity and sepcificity for the diagnosis of celiac disease - *(AIIMS May 05)*
a) Anti-endomysial antibody
b) Anti-tissue transglutaminase antibody
c) Anti-gliadin antibody
d) Anti-reticulin antibody

2592. 30 year male with chronic diarrhoea, anemia, raised liver enzymes. Most likely associated with -
a) Antimitochondrial antibody *(AIIMSMay 07)*
b) Anti-endomysial antibody
c) Anti-smooth muscle antibody
d) Antinuclear antibody

2593. The grain which can be used safely in Celiac sprue is- *(PGI Dec 01)*
a) Com b)Rye
c) Soyabean d)Rice
e) Barely

2594. A patient presents with chronic small bowel diarrhea, Duodenal biopsy shows villous atrophy. Anti endomysial antibodies and IgA TTG antibodies are positive. What is the treatment of choice ?
a) Gluten free diet b) Antibiotics *(AI07)*
c) Loperamide d) 5-ASA

2595. What a patient with gluten hypersensitivity can consume - *(PGIDec 06)*
a) Rice b) Barley
c) Oat d)Com
e) Rye

2596. Which does not cause malabsorption in India -
a) Tropical sprue b)Amoebiasis *(PGI June 97)*
c) Giardiasis d) Intestinal TB

2597. All are complication of ileal resection, Except -
a) Megaloblastic anaemia *(AIIMS June 97)*
b) Iron deficiency anaemia
c) Gastric hyposecretion
d) Malabsorption syndrome

2598. The short bowel syndrome is characterized by all of the following except - *(AI 04)*
a) Diarrhea b) Hypogastrinemia
c) Weight loss d) Steatorrhoea

2599. Most specific change in biopsy is seen in-*(UP 2K)*
a) Tropical spme b) Giardiasis
c) Abetalipoproteinemia d) Malnutrition

2600. Antibiotics are useful in all of the following conditions except - *(SGPGI05)*
a) Whipple disease b) Tropical spme
c) Celiac disease d) Blind loop syndrome

2601. The following are causes of secretory diarrhoea except- *(UPSC 05)*
a) Vibrio cholerae
b) Inflammatory bowel disease
c) Lactose intolerance
d) Gastrinoma

2602. Treatment for portosystemic encephalopathy includes all excepts- *(MAHE 05)*
a) High protein diet b) Lactulose
c) Oral neomycin d) Enema

2603. Schilling Test is Abnormal in- *(NEET/DNB Pattern)*
a) Intrinsic factor deficiency
b) Amylase deficiency
c) Lipase deficiency
d) Pancreatic insufficiency

2581)a 2582)a 2583)c 2584) b 2585)c 2586)a 2587)a,b,c,d 2588)b 2589)a 2590)e 2591)a 2592)b 2593)a,d 2594)a 2595)a,d 2596)a 2597)b,c 2598)b 2599)c 2600)c 2601)b,c 2602) a 2603)a

INTESTINE

2604. A young girl presents with abdominal pain and a recent change in bowel habit, with passage of mucus in stool. There is no associated blood in stool and symptoms are increased with stress. The most likely diagnosis is - *(AI10)*
a) Irritable bowel syndrome b) Ulcerative colitis
c) Crohn's disease d) Amebiasis

2605. Which one of the following is not a feature of irritable bowel syndrome - *(AIIMS May 05)*
a) Abdominal pain b) Constipation
c) Rectal bleeding d) Bloating

2606. TVue about irritable bowel syndrome -
a) Associated with anxiety
b) Stress predisposes
c) Constipation
d) Diarrhea
e) Predisposes to malignancy in long term

2607. The most common site for amebiasis is - *(AI 95)*
a) Sigmoid colon b) Transverse colon
c) Cecum d) Hepatic flexure

2608. Investigation of choice for invasive amebiasis is -
a) Indirect heamagglutination *(AI 02)*
b) ELISA
c) Counter immune electrophoresis
d) Microscopy

2609. All are true regarding typhoid ulcer, except -
a) Ileum is common site *(AIIMSDec 95)*
b) Bleeding is common
c) Stricture is usual and causes obstruction
d) Perforation is common

2610. A patient present with lowe gastrointestinal bleed. Sigmoidoscopy shows ulcers inthe sigmoid. Biopsy from this area shows flask-shaped ulcers. Which of the following is the most appropriate treatment -
a) Intravenous ceftriaxone *(AIIMS Nov 05)*
b) Intravenous metronidazole
c) Intravenous steroids and sulphasalazine
d) Hydrocortisone enemas

2611. A 40 year old male presents with chronic diarrhea for one year. On investigation, the findings obtained were crypt abcess, crypt atrophy, cryptitis and mucositis. Most likely diagnosis is - *(AIPGMEE 08)*
a) Crohn's disease b) Ulcerative colitis
c) Microscopic colitis d) Collagenous colitis

2612. Drug effective in ulcerative colitis is -
a) 5 amino salicyclic acid(5-ASA) *(AIIMSFeb 97)*
b) Steroids
c) Salazopyrin
d) Antibiotics

2613. What is drug of choice for ulcerative colitis -*(AIIMS*
a) Salazopyrine b) Predinisolone *May 95)*
c) Sulphasalazine d) 5-amino salicylic acid

2614. A 41 year old male patient presented with recurrent episodes of bloody diarrhea for 5 years. Despite regular treatment with adequate doses of sulfasalazine, he has had several exacerbations of his disease and required several weeks of steroids for the control for flares. What should be the next line of treatment for him? *(AIIMS Nov 03)*
a) Methotrexate b) Azathioprine
c) Cyclosporine d)Cyclophospl

2615. Which one of the following conditions commonly predisposes to Colonic carcinoma ? *(AI 05)*
a) Ulcerative colitis b) Crohn's disease
c) Diverticular disease d) Ischaemic colitis

2616. The presence of anti-Saccharamyces cerevisae antibody is a surrogate marker of one of the following - *(AI 06)*
a) Celiac disease b) Crohn's disease
c) Ulcerative colitis d) Tropical sprue

2617. A 25 yrs women presents with bloody diarrhea & is diagnosed as a case of Ulcerative colitis. Which of the following condition is not associated - *(AI 02)*
a) Sclerosing cholangitisb) Iritis
c) Ankylosing spondylitis d) Pancreatitis

2618. Extra intestinal manifestations disease-(PG/ *June 05)*
a) Uveitis b) Sclerosing cholangitis
c) Osteoarthritis d) Skin nodules

2619. "Intestinal angina" is a symptom complex of the following - *(AIIMS May 06)*
a) Postprandial abdominal pain, weight loss, acute mesenteric vessel occlusion
b) Postprandial abdominal pain, weight loss, chronic mesenteric vessel occlusion
c) Preprandial abdominal pain, weight loss, chronic mesenteric vessel occlusion
d) Preprandial abdominal pain, weight gain acute mesenteric vessel occlusion

2620. A patient with leukemia on chemotherapy develops acute right lower abdominal pain associated with anemia, thrombocytopenia and leukopenia. Which of following is the clinical diagnosis - *(AI 06)*
a) Appendicitis b) Leukemic colitis
c) Perforation peritonitis d) Neutropenic colitis

2621. All of the following statements stand true for telengiectasis of colon except - *(AI 98)*
a) May be seen in person less than 40 years of age
b) May be seen in person more than 60 years of age
c) Common site is caecum
d) 50% involve rectum

2622. A 25-year old male had pigmented macules over the palm, sole and oral mucosa. He also had anemia and pain in abdomen. The most probable diagnosis is -
a) Albright's syndrome *(AIIMS May 05)*
b) Cushing's syndrome
c) Peutz-Jegher's syndrome
d) Incontinentia pigmenti

2604)a 2605)c 2606)a,b,c,d 2607)c 2608) b 2609)c 2610)b 261 l)a 2612)a 2613)d 2614)b 2615)a 2616)b 2617)d 2618)c 2619)b 2620)d 2621)d 2622)c

2623. Fatal gastroenteritis is caused by - *(TN 2002)*
a) Typhoid b)Amoebiasis
c) Anthrax d) Giardiasis

2624. All are true about short bowel syndrome except -
a) Intestinal transmit time is increased *(Jip. 95)*
b) Nutritional deficiency present
c) Site atorrhea present
d) None

2625. Punctuate yellow exudates in colon, found on endoscopic examiantion are indicative of -*(Jip. 95)*
a) Balantidium coli
b) Ulceratice colitis
c) Antibiotic colitis
d) Gluten induced enteropathy

2626. Acute appendicitis is best diagnosed by - *(TN95)*
a) History b) Physical examination
c) X-ray abdomen d)Bameal

2627. Rectal stricture is a common manifestation of-
a) Syphilis *(Karn. 96)*
b) Lymphogranuloma inguinale
c) Granuloma inguinale
d) Chancroid

2628. The most common cause of painless bleeding P.R. in a man is- *(CUPGEE95)*
a) Fissure-in-ano b) Diverticulosis
c) Piles d)None

2629. Non-propulsive peristalsis is a feature of -*(Karn 04)*
a) Paralytic ileus
b) Impacted faeces
c) Mesenteric vascular occlusion
d) Incarceration

2630. Pseudomyxoma peritonie is seen with -*(SGPGI05)*
a) Thecoma ovary
b) Mucin secreting ovarian carcinoma
c) Carcinoid appendix
d) Mesothelioma

2631. Meconium ileus is a manifestation of - *(SGPGI 05)*
a) Hirschprungs disease
b) Achalasia cardia
c) Fibrocystic disease of pancrease
d) Coeliac disease

2632. Earliest pathological change is X-ray in Ulcerative Colitis - *(NIMHANS 06)*
a) Loss of haustration
b) Aphthous ulcerattions
c) Mucosal granularity
d) Skip tensions

2633. Celiac sprue causes malabsorption syndrome due to- *(UPSC07)*
a) Coliform infection of small bowel
b) Lactase deficiency
c) Hypersensitivity to dietary gluten
d) Ischaemia of celiac artery

2634. The schilling test is performed to determine the cause of- *(UPSC07)*
a) Lactose malabsorption
b) Fatty acid malabsorption
c) Amino acid malabsorption
d) Cobalamin malabsorption

2635. All are features of irritable bowel syndrome except - *(Corned 07)*
a) Vomiting b) pain abdomen
c) Diarrhoea d) Constipation

2636. Antigliadin antibodies are delectable in -*(Corned 08)*
a) Tropical sprue b) Whipple's disease
c) Celiac disease d) Intestinal lymphoma

2637. Which of the following organs is not involved in Whipple's disease ? *(Delhi PG Mar. 09)*
a) Heart b)CNS
c) Lungs d)GI Tract

2638. Which of the following manifestation of CD not respond to treatment/occur after treatment -
a) Pyoderma gangrenosum *(PGIMay 10)*
b) Primary scleorosing colitis
c) Erythema nodosum
d) Nephrolithiasis
e) Ankylosing spondylitis

2639. Type (s) of Inflammatory bowel disease is/are -
a) Crohn's disease *(PGINov. 10)*
b) Ulcerative colitis
c) Toxic colitis
d) Amoebic colitis

2640. Which of the following is he most prominent feature of immunoproliferative small intestinal disease (IPSID) - *(AIIMS, May 12)*
a) Malabsorption b) Obstruction
c) Bleeding d) Abdominal pain

2641. Which of the following drugs is used for Irritable Bowel Syndrome of the constipating type - *(AI12)*
a) Lubiprostone b) Cholestyramine
c) Alosetron d)Rifaximin

2642. Secretory diarrhea is not seen in-*(NEET/DNB Pattern)*
a) Magnesium injection b)Celiac disease
c) Cholera d) Ulcerative colitis

2643. Antiemetic of choice in chemotherapy induced vomiting - *(NEET/DNB Pattern)*
a) Methclopramide b) Ondansetron
c) Prochlorperazine d) Nabilone

2644. Gastric motility decreases in - *(NEET/DNB Pattern)*
a) Diabetes b) Upper abdominal surgery
c) Head injury d) Hyperthyroid ■*/>

2645. Gastric motility decreases in *A!E-(NEET/DNB Pattern)*
a) Diabetes b) Upper abdominal surgery
c) Head injury d) Hyperthyroid

OESOPHAGUS

2646. Hamman's sign is seen in - *(Karn. 2001)*
a) Achalasia Cardia
b) Diffuse Oesophageal Spasm
c) Oesophageal perforation
d) Carcinoma Oesophagus

2623)a 2624)a 2625)c 2626)b 2627)b 2628)c 2629)c 2630)b 263l)c 2632)c 2633)c 2634)d 2635)a 2636)c
2637)c 2638)a,b,d,e 2639)a,b 2640)d 2641)a 2642)b 2643)b 2644)d 2645)d 2646)c

2647. Recurrence rate is highest with which modality of treatment for achalasia cardia - *(AI02)*
a) Pneumatic dilatation
b) Botulinum toxin injection
c) Heller's operation
d) Laparoscopic myotomy of sphincter

2648. Crack-Nut oesophagus seen in - *(HPU05)*
a) Carcinoma oesophagus
b) Cardiospam
c) Achalasia cardia
d) Barrett's oesophagus

2649. Which of the following viruses does not produce viral esophagitis ? *(Delhi PG Mar. 09)*
a) Herpes simplex b) Adenovirus
c) Varicella d)Cytomegalovirus

2650. Motility disorders of the oesophagus are best diagnosed by - *(UPSC-II09)*
a) Barium meal b) Manometry
c) Radiography d) Endoscopy

2651. True statement about GERD - *(PGIMay 10)*
a) Associated with H. pylori
b) Fundoplication is done
c) Smoking is protective
d) PPI is used in treatment
e) Bernstein test is done

2652. True about Mallory-Weis tear- *(PGINov. 10)*
a) >90% above GE junction
b) Surgery is mainstay treatment
c) Presents with hematemesis
d) Longitudinal tear near GE junction
e) Forceful vomiting is predisposing factor

SPLEEN

2653. Splenectomy is to be avoided in children because of-
a) Loss of blood forming tissue *(USPC 96)*
b) Increased risk of infection
c) Hypercoagulable state
d) Increased risk of lymhoma

2654. Splenectomy is most successful in - *(SGPGI05)*
a) Hereditary spherocytosis
b) Chronic myeloid leukemia
c) Idiopathic thrombocy topenic purpura
d) Aplastic anaemia

2655. Which one of the following does not cause post-splenectomy septicemia - *(UPSC 05)*
a) Streptococcus pneumoniae
b) Neisseria miningitides
c) Haemophilus influenza
d) Staphylococcus aureus

2656. All are indications for splenectomy, except:
a) Hereditary spherocytosis *(Delhi PG Feb. 09)*
b) Hairy cell leukemia
c) ITP
d) Chediak higashi syndrome

2657. Consider the following statements regarding splenectomy - *(UPSC-II 09)*
1. It corrects anemia in congenital hereditary splenocytosis.
2. Postponed until the age of 4 years if possible
3. Polyvalent pneumococcal vaccine to be administered to all before the surgery

Which of the statements given above are correct?
a) 1,2 and 3 b) 1 and 2 only
c) 2 and 3 onlyd) 1 and 3 only

KIDNEY

2658. Urinalysis shows RBC casts; likely source is -
a) Kidney b) Ureter*(AI01)*
c) Bladder d) Urethra

2659. Presence of which of the following correlates best with renal pathology - *(AIIMS June 2000)*
a) Hyaline castb) Coarse granular cast
c) Broad cast d) Epithelial cast

2660. RBC casts are found in - *(PGIMay 11)*
a) DM b) Wegeners Granulomatosis
c) SLE d) Ankylosing spondylitis
e) Acute glomerulonephritis

2661. Which of the following is pathognomonic of renal disease- *(AIIMS May 2001)*
a) Hyaline casts b) Coarse granular casts
c) Cystine Oxalate cells d) Epithelial cells

2662. In hematuria of glomerular origin the urine is characterized by the presence of all of the following except - *(AI 04)*
a) Red cell casts b) Acanthocytes
c) Crenated red cells d) Dysmorphic red cells

2663. Presence of which of the following in the urine is diagnostic of glomerular injury - *(AIIMS June 99)*
a) Bright red cells
b) 20% dysmorphic RBC's
c) 100RBC per high power field
d) Beta 2 micro globulin

2664. Features of glomerular haematuria -*(PGI June 05)*
a) Dysmorphic R.B.C.
b) Fragmeneted R.B.C.
c) Full of R.B.C. in high power field
d) Gross haematuria
e) R.B.C. cast

2665. In renal disease, Albumin is first to appear in urine because - *(AIIMS May 04)*
a) Of its high concentration in plasma
b) Has molecular weight slightly greater than the molecules normally getting filtered
c) High Albumin: Globulin ratio
d) Tubular epithelial cells are sensitive to albumin

2666. Glomerular range proteinuria differentiated by non glomerular protein urea by - *(PGI June 05)*
a) Proteinuria> 3.0 - 3.5 g/day
b) Globulin > albumin
c) Albumin to p_2 microglobulin ratio 100:1
d) Tamm Harsfall protein

2647)b 2648)b 2649)b 2650)b 2651)b,d,e 2652)c,d,e 2653)b 2654)a 2655)d 2656)d 2657)a 2658)a 2659)c 2660)b,c,e 2661)b 2662)b 2663)b 2664)a,e 2665)b 2666)a

2667. Proteinuria caused by tubule-interstitial renal disease is confirmed by excretion of - *(PGIMay 11)*
a) Albumin b) Light chain
c) Immunoglobulin A d) Tamm-Horsfall protein
e) P_2 microglubulin

2668. A patient presents with acute renal failure with normal ultrasound abdomen report Next most useful investigation is - *(AIIMS June 99)*
a) Intravenous pyelography
b) DTPA scan
c) Retrograde pyelography
d) X-ray abdomen and CT scan.

2669. In a child, non-functioning kidney is best diagnosed by- *(AIOS)*
a) Ultrasonography b)IVU
c) DTPA renogram d) Creatinine clearance

2670. The neotatal kidney achieves concertrating ability equivalent to adult's kidney by - *(A104)*
a) One year of age
b) Eighteen months of age
c) Three to six months of age
d) Just before puberty

2671. Iso osmolar urine is seen in - *(PGIDec 2000)*
a) ATN b) Severe dehydration
c) Diabetes insipidus d) PCKD

2672. Most unlikely cause of acute tubular necrosis amongst the following is - *(AI99)*
a) Severe bacterial infection
b) Massive bum
c) Severe cursh injury in the foot
d) Rupture of aortic aneurysm

2673. Causes of ATN - *(PGI June 07)*
a) Radiocontrasts b) Paraproteins
c) Amphotericin B d) Abruptio placentae

2674. Drugs causing ATN - *(PGI Nov 09)*
a) Calcineurin inhibitor b) Amphotericin B
c) Rifampicin d) Aminoglycosides

2675. 28 year old male met with an accident and sustained severe crush injury. He is most likely develop -
a) Acute renal failure *(AIIMS Nov 09)*
b) Hypophosphatemia
c) Hypercalcemia
d) Acute myocardial infarction

2676. Prerenal and renal azotemia is differentiated on the basis of - *(PGIDec 99)*
a) Creatinine clearance
b) Serum creatinine level
c) Sodium fraction excretion
d) Urine bicarbonate level

2677. Pre-renal azotemia is associated with one of the following characteristic feature - *(ARMSDec 98)*
a) Urinary Na+ <10 mmol/L
b) Renal failure index > 1
c) Osmolality < 500
d) Urinary creatinine/P. creatinine ratio < 20

2678. Which of the following values are suggestive of acute tubular necrosis - *(ARMS Nov 2000)*
a) Urine osmolality > 500
b) Urine sodium > 40
c) Blood urea nitrogen plasma creatinine > 20
d) Urine creatinine/plasma creatinine > 40

2679. In tubular necrosis, ratio of urine plasma creatinine is- *(PGI Dec 99)*
a) 20 b)40
c) 20-30 d) 30-40

2680. Plasma urea / creatinine ratio of 20:1 may be seen in- *(AI10)*
a) Rhabdomyolysis
b) Ureteric calculi
c) Pre-renal failure
d) Chronic glomerulonephritis

2681. Which differentiating prerenal azotemia with ATN features favoring pre-renal azotemia - *(PGIDec 02)*
a) Urine osmolality > 500 mosmol/kg
b) Sodium spot excretion <10 ml/L
c) Plasma transferrin/Ig ratio
d) Fractional excretion of sodium > 1
e) Plasma BUN/creatinine ratio < 20

2682. True about pre renal azotemia - *(PGI June 05)*
a) Urine output < 500 ml
b) Urinary cr. / Plasma cr. > 40
c) FeNa< 1
d) FeNa> 1
e) Urinary urea plasma urea > 3

2683. Fractional excretion of sodium < 1 is seen in -
a) Pre renal azotemia *(ARMS Nov 07)*
b) Acute tubular necrosis
c) Acute ureteral obstruction
d) Interstitial nephritis

2684. Pre-renal Azotemia is characterized by all of the following. Except - *(AI 10)*
a) Fractional excretion of Na< 1%
b) Urinary osmolality > 500 mosm/kg
c) Urinary sodium concentration > 40 meq/1
d) Reversible with replacement fluids

2685. True about acute tubular necrosis - *(PGI June 07)*
a) Urine specific gravity > 1.020
b) Urine osmolality > 300 mosmoles/kg
c) Urine Na< lOmeq/L
d) Blood urea: creatinine ratio < 20

2686. Disproportionately increased blood urea levels compared to serum creatinine (urea creatinine ratio 20:1) can be seen in the following except - *(AI 10)*
a) Prerenal failure b)CCF
c) Intrinsic renal failure d) Hypovolumia

2687. Oliguric phase of renal failure, all are TRUE, except- *(ARMS May 93)*
a) Hypercalcemia b) Hyponatremia
c) Anaemia d) Hyperkalemia

2667) b,c,d,e 2668) b 2669) c 2670) a 2671) a 2672) d 2673)a,b,c,d 2674)a,b,e 2675) a 2676) c 2677) a 2678) b 2679) a 2680) c 2681) a,b 2682)a,b,c 2683) a 2684) c 2685) d 2686) c 2687) a

2688. A patient had the following blood biochemical values. Calcium 6; uric acid 13; Phosphorus 12; Creatinine 6. Which could be the possible diagnosis -
a) Kraitbite *(PGIJune99)*
b) Uric acid nephropathy
c) Hypercalcemic nephropathy
d) Rickets

2689. Metabolic complication in CRF include all of the following except- *(AI98)*
a) Hyperkalemia b) Hypophosphatemia
c) Hypocalcemia d) Hypokalemia

2690. Central nervous system manifestion in chronic renal failure are a result of all of the following except -
a) Hyperosmolarityb) Hypocalcemia *(AI 03)*
c) Acidosis d) Hyponatremia

2691. Clinical feature of CRF - *(PGIJune 05)*
a) Broad cast in urineb) Hypomagnesemia
c) Hypokalemia d) Impotence
e) Decreased

2692. All the following indicates CRF w.r.t. to ARF -
a) Anaemia *(PGI Nov 09)*
b) Small kidneys
c) Creatinine > 7 mg%
d) Constrictive pericarditis
e) Peripheral neuropathy

2693. All are features of renal tubular acidosis type I except - *(Sep 96)*
a) Stone in kidney b) No anion gap
c) Hypokalemia d) Fanconi syndrome

2694. Proximal & distal renal tubular acidosis is differentiated by all except - *(AIIMS June 98)*
a) Stones in kidney
b) Hypokalemia
c) Daily acid secretion
d) Presence of Fanconi syndrome

2695. Type I RTAis characterized by- *(PGI May 11)*
a) High anion-gap acidosis
b) Low serum potasium
c) Nephrocalcinosis
d) Negative urine anion gap

2696. Feature of type 4 RTA- *(PGI May 11)*
a) Mild renal failure
b) Hyperkalemia
c) Hypochloremic acidosis
d) Occur in diabetic nephropathy
e) Salt wasting

2697. All are true of Nephrotic syndrome, except -*(AI 2K)*
a) RBC casts in urine b) Hypo-proteinemia
c) Oedema d) Hyperlipidemia

2698. All of the following are decrease in Nephrotic syndrome except - *(AI 97)*
a) Transferrin b) Ceruloplasmin
c) Fibrinogen d) Albumin

2699. Which is seen in nephrotic syndrome-fPG/*June 99)*
a) Low serum calciumb) Raised AT-III
c) Low lipid d) Platelet activation

2700. In nephrotic syndrome hypercoaguability occurs due to- *(PGINov 09)*
a) 1 Antithrombin III b) *i* Protein C
c) TFactors d)T Factor VIII
e) 1 Plasminogen

2701. Which of the following is not found in nephritic syndrome - *(PGI Dec 04)*
a) T LDL - Cholesterol b) t TG
c) t HDL - cholesterol d) *i* VLDL - cholesterol
e) iTG

2702. All of the following decrease in Nephrotic syndrome except- *(AI 94)*
a) Fibrinogen b) Thyroxin
c) Transferrin d) Albumin

2703. In Nephrotic syndrome, all serum proteins are reduced except - *(AIIMS Dec 95 & May 93)*
a) Transferrin b) Fibrinogen
c) Albumin d) Ceruloplasmin

2704. Reflux disease which cause proteinuria of nephrotic range - *(Aiims Nov 06)*
a) Membranous glomerulonephritis
b) Focal segmental glomerulosclerosis
c) Nodular glomerulosclerosis
d) Crescenteric glomerulonephritis
d) Low pitched murmur

2705. Most common cause of nephrotic range proteinuria in an adult is - *(AI 07)*
a) Diabetes Mellitus
b) Amyloidosis
c) Hypertensive nephropathy
d) Wegner's Granulomatosis

2706. Clinical feature of minimal change glomerulonephritis are all except - *(AI 96)*
a) Hypertension b) Edema
c) Selective proteinuria d) Fever

2707. A 7 year old boy presented with generalized edema. Urine examination revealed marked albuminuria. Serum biochemical examinations showed hypoalbuminaemia with hyperlipidemia. Kidney biopsy was undertaken. On light microscopic examination, the kidney appeared normal. Electron microscopic examination is most likely to reveal - *(AIIMS Nov 03)*
a) Fusion of foot processes of the glomerular epithelial cells
b) Rarefaction of glomerular basement membrane
c) Deposition of electron dense material in the basement membrane
d) Thin basement membrane

2708. True about light microscopy in minimal change disease is - *(AIIMSNov 01)*
a) Loss of foot process seen
b) Anti GBM Abs seen
c) IgA deposits seen
d) No change seen

2688)b 2689)b 2690)b 2691)a,c,d 2692)a,b,e 2693)d 2694)b 2695)b,c 2696)a,b,d,e 2697)a 2698)c 2699) a,d 2700)a,b,d,e 2701) a,b 2702) a 2703) b 2704) b 2705) a 2706) a 2707) a 2708) d

2709. A child had hematuria and nephrotic syndrome (minimal change disease) was diagnosed. True about it is- *(ARMS Nov 01)*
a) A type of focal segmental GN
b) IgA deposition on basement membrane
c) Foot process of glomerular membrane normal
d) Glomerular function is lost due to loss of poly charge on both sites of glomerular foot process.

2710. True about Light microscopic changes in Minimal Change Glomerulonephritis is - *(A195)*
a) No abnormality
b) Fusion of foot process
c) Absence of Immunoglobulins
d) Absence of complement

2711. Minimal change disease is/are caused by -
a) Rifampicin b)IFN-a *(PGlNov09)*
c) NS AIDS d) Gold
e) Mercury

2712. Minimal change glomerulopathy may be seen in association with all of the following except -
a) Hepatitis B *(AIIMS Nov 05)*
b) HIV
c) Drug-induced interstitial nephritis
d) Hodgkin's disease

2713. Renal vein thrombosis is most commonly associated with- *(AI02)*
a) Diabetic nephropathy
b) Membranous glomerulopathy
c) Minimal change disease
d) Membrano-proliferative glomerulonephritis

2714. Cause for renal vein thrombosis could be -
a) Membranous nephropathy *(PGIDecOl)*
b) Lupus nephritis
c) Membranoproliferative glomerulonephritis
d) Post streptococcal glomerulonephritis
e) Renal amyloidosis

2715. Renal vein thrombosis is/are caused by -
a) Nephrotic syndrome *(PGI Nov 09)*
b) Invasive renal cell carcinoma
c) Pregnancy
d) Dehydration
e) Trauma

2716. A10 year old child develops hematuria after 2 days of diarrhoea. Blood film shows fragmented RBCs & thrombocytopenia. Ultasound shows marked enlargement of both kidneys. The likley diagnosis is - *(PGI June 05)*
a) Acute pyelonephritis
b) Disseminated intravascular coagulopathy
c) Haemolytic uremic syndrome
d) Renal vein thrombosis

2717. Membranous glomerulonephritis is associated with-
a) Renal venous thrombosis *(PGI June 02)*
b) Hodgkin's disease
c) Sub epithelial immune deposits
d) Hematuria
e) Acute nephritis

2718. A patient with nephrotic syndrome on longstanding cortico-steroid therapy may develop all the following except- *(A102)*
a) Hyperglycemia
b) Hypertrophy of muscle
c) Neuropsychiatric symptoms
d) Suppression of hypothalemic pituitary adrenal axis

2719. All can cause R.P.GN. except - *(ARMS June 97)*
a) Minimal change glomerulonephrits
b) Poststreptococcal glomerulonephritis
c) Wegener granulomatosis
d) S.L.E.

2720. Following are features of acute GN except -
a) Polyuria b) Haematuria *(PGI June 97)*
c) Red cell cast d) Oliguria

2721. Crescent formation is characteristic of the following glomerular disease - *(ARMSDec 90)*
a) Minimal change disease
b) Rapidly progressive glomerulonephritis
c) Focal and segmental glomerulonephritis
d) Rapidly non progressive glomerulonephritis

2722. The prognosis of rapidly proliferating glomerulonephritis (Crescentric GN) depends upon - *(ARMS Nov 01)*
a) Number of crescents
b) Size of crescents
c) Shape of crescents
d) Cellularity of crescents

2723. RPGN occurs in A/E - *(ARMS Sept 96)*
a) SUE
b) Post streptococcal glomerulonephritis
c) Diabetic nephropathy
d) Good pastures syndromes

2724. Hypocomplementemia is seen - *(ARMS June 01)*
a) PSGN b) Membranous GN
c) Focal segmenalGN d)MPGN
e) Infective endocarditis

2725. Persistent low C3 complement level is not found in -
a) Post streptococcal glomerulonephritis
b) Mesangiocapillary glomerulonephritis
c) Cryoglobulinemia *(AiimsNov06)*
d) SLE

2726. All are non proliferative GN except - *(AIPGMEE 08)*
a) Membranous GN
b) Mesangiocapillary GN
c) Diabetic glomerulosclerosis
d) Amyloidosis

2727. Which of these does not cause crescentric glomerulonephritis - *(AIPGMEE 08)*
a) Rapidly progressive glomerulonephritis
b) Alport syndrome
c) Goodpasture syndrome
d) Henoch schonlein purpura

2709)d 2710)a 2711)A11 2712)a 2713)b 2714)a,c,e 2715)AH 2716)d 2717)a,c,d 2718)b 2719)a 2720)a 2721)b 2722)a 2723)c 2724)a,d,e 2725)a 2726)b 2727)b

2728. Post-infective glomerulonephritis present as-
a) ARF *(AI96)*
b) Nephrotic syndrome
c) Nephritic syndrome
d) Asymptomatic hematuria

2729. A 60 year old woman presents with generalized edema, skin ulceration and hypertension. Urine examination shows subnephrotic proteinuria (< 2gm) and microscopic haematuria. Serum complement levels are decreased and she is positive for anti-hepatitis c antibodies. The likely diagnosis is -
a) PSGN *(AI07)*
b) Essential mixed cryoglobulinemia
c) Membrano proliferative glomerulonephritis
d) Focal segmental glomerulosclerosis

2730. A 30 year old man presents with generalized edema and hypertension. Urine examination shows subnephrotic proteinuria (< 2gm) and microscopic hematuria. Serum complement levels are decreased and he is positive for antihepatitis C antibodies. The most likely diagnosis is - *(AI07)*
a) Post streptococcal Glomerulonephritis (PSGN)
b) Mixed cryoglobulinemia
c) Membranoproliferative glomerulonephritis (MPGN)
d) Focal symentat glomerular sclerosis (FSGS)

2731. Recurrent gross hematuria is seen in-*(PGIDec 2K)*
a) Alports's syndrome b) IgA nephropathy
c) Focal seg. GN d) DM

2732. True about Post-Streptococcal Glomerulonephritis is - *(AI2000)*
a) 50% of cases occur after pharyngitis
b) Early treatment of Pharyngitis eliminates the risk ofP.S.GN.
c) Glomerulonephritis, secondary to skin infection, is more common in summer
d) Recurrence is seen

2733. IgA-nephropathy is seen in - *(AIIMSJune 2000)*
a) Membranous glomerulonephritis
b) Mesangioproliferative glomerulonephrtis
c) Focal glomerulonephritis
d) Cresentic glomerulonephritis

2734. A female patient Nandini presents with upper respiratory tract infection. Two days after. She develops hematuria. Probable diagnosis is -
a) IgA nephropathy *(AIIMSJune 99)*
b) Wegener's granulomatosis
c) Henoch sholein purpura
d) Post streptococcal glomerulonephritis

2735. A child comes with hematuria following respiratory tract infection. He gives similar history about 5-10 months back also. All are true, except -
a) C_3 complement level normal *(AIIMSNov99)*
b) Progressive renal failure with each attack
c) Biopsy shows focal and diffuse proliferative change in 50% of patient
d) Anti streptococcal antibody titre may not rise after each attack

2736. A six year old male baby presents to a hospital with recurrent gross hematuria for 2 years. There is no h/o burning micturition or pyuria. Urine routine examination demonstrated no pus cells and urine culture was sterile. Serum C3 levels were normal. What is the most probable *diagnosis~(AIPGMEE 08)*
a) Wilm's tumour
b) IgA nephropathy
c) Post-streptococcal glomerulonephritis
d) Urinary tract infection

2737. 12 years old Shyam presented with gross hematuria with 80% dysmorphic RBC's 2 days after a attack of upper respiratory tract infection diagnosis is -
a) Microangiopathic thrombotic anaemia
b) IgA Nephropathy *(AIIMSNov 01)*
c) PSGN
d) H.S. purpura

2738. A young man develops gross hematuria 3 days after an attack of URTI; likely renal pathology is -*(AI 01)*
a) Acute glomerulonephritis
b) Minimal change disease
c) IgA nephropathy
d) Membranous glomerulonephritis

2739. A feature of Renal vasculitis in children is -
a) IgA raised *(AIIMS Sept 96)*
b) Antinuclear antibody in serum
c) Low complement level
d) Cytoplasmic antinuclear Ab in serum

2740. Marker for the renal vasculitis in children is -
a) Increased IgA level *(AI 98)*
b) Low complement level
c) T Antineutrophilic cytoplasmic antibody titre
d) Increase antinuclear antibody

2741. Good-pasture syndrome is characterized by -
a) Anti GBM antibody *(PGIJune 99)*
b) Crescents
c) Pulmonary haemorrhage
d) Diffuse alveolar damage

2742. A case of nephritis, presents with haematuria & hemoptysis, antinuclear membrane antibody are presents. Likely diagnosis is - *(AI 97)*
a) Good pasteur syndrome
b) Nephritic syndrome
c) Nephrotic syndrome
d) Gullian barre syndrome

2743. Goodpasture's disease is characterized by all except-
a) Glomerulonephritis *(AIIMS May 08)*
b) Leukocytoclastic vasculitis
c) Diffuse alveolar hemorrhage
d) Presence of antibodies to BM

2744. Which of these is the characteristic of membranoproliferative glomerulonephritis -
a) Sub epithelial deposits
b) Foamy cells
c) Splitting of glomerular basement membrane
d) Sub endothelial deposits

2728) c 2729) b 2730) c 273 l)b 2732) c 2733) b 2734) a 2735) c 2736) b 2737) b 2738) c 2739) a 2740) a 2741)All 2742) a 2743) b 2744) c>d

2745. All are steroid resistant except - *(AI96)*
a) Post-streptococcal glomerulonephritis
b) Minimal change glomerulonephritis
c) RPGN
d) Recurrent hematuria

2746. Salt losing nephropathy is seen in - *(AIIMSMay 94)*
a) Protein Energy malnutrition
b) Post streptococcal glomerulonephritis
c) Amyloidosis of kidney
d) Interstitial nephritis

2747. Salt losing nephritis is a feature of -*(ARMSDec 95)*
a) Interstitial nephritis b) Polycystic kidney
c) Lupus nephritis d) Renal amyloidosis

2748. Interstitial nephritis is seen with all except -
a) Beta lactam inhibitors *(ARMSMay 07)*
b) INH
c) Diuretics
d) Allopurinol

2749. Salt losing nephritis is feature of - *(AI97)*
a) Interstitial nephritis
b) Amyloidosis of kidney
c) Post streptococcal GN
d) PEM

2750. In acute intersitial nephritis, proteins associated -
a) Amyloid *(PGI June 06)*
b) Fibrinogen
c) Vitamin D binding protein
d) Albumin
e) Light chain

2751. Salt losing nephritis is a feature of - *{AI2000)*
a) Interstitial nephritis
b) Renal amyloidosis
c) Lupus nephritis
d) Post streptococcal Glomerulonephritis

2752. HIV associated nephropathy is a type of-
a) Membranous glomerulonephritis *(ARMS Nov 04)*
b) Immunotaetoid glomerulopathy
c) Collapsing glomerulopathy
d) Fibrillary glomerulopathy

2753. Most characteristic GN in HIV is - *(PGIDec 99)*
a) FSGN b)MPGN
c) MCD d)RPGN

2754. Collapsing glomerulopathy, features are -
a) Tuft necrosis *(ARMS Nov 07)*
b) Mesangiolysis
c) Parietal epithelial proliferation
d) Hypertrophy and necrosis of visceral epithelium

2755. Proliferative glomerular deposits in kidney are found in- *(AI2000)*
a) Amyloidosis
b) Diabetes millitus
c) IgA nephropathy
d) Membranous glomerulonephritis

2756. Pathological changes of diabetic nephropathy are all except- *(AI95)*
a) Fibrin caps and capsular drops
b) Intercapillary glomerulosclerosis
c) Focal sclerosis
d) Capillary basement membrane thickening

2757. Not a cause of granular contracted kidney -
a) Diabetes mellitis *(ARMS Dec 94)*
b) Chronic pyelonephritis
c) Benign nephrosclerosis
d) Chronic glomerulonephritis

2758. All of the following are causes of granular contracted kidney except - *(AI 9 7)*
a) Benign nephrosclerosis
b) Chronic pyelonephritis
c) Diabetes mellitus
d) Chronic glomerulonephritis

2759. Necrotizing papilitis is seen in all of the following except - *(ARMS May 02)*
a) Salicylate poisoning
b) Renal vascular thrombosis
c) PNH
d) Diabetes mellitus

2760. Which investigation should be avoided in a proven case of renal papillary necrosis - *(ARMS Nov 11)*
a) Urine acidification test
b) Sickling test
c) TB-PCR-urine
d) Bacterial culture of urine

2761. Cause of large kidney in CRF are a/e-(PG/*Dec2000)*
a) DM b) Amyloidosis
c) Benign nephrosclerosis d) Diffuse GN

2762. Which characteristic feature is seen in the kidney in Malignant hypertension - *(AI94)*
a) Hyaline necrosis b) Fibrinoid necrosis
c) Medial wall hyperplasia d) Micro-aneurysm

2763. Common pathological changes seen in kidney in benign hypertension are - *(AI 9 7)*
a) Fibrinoid necrosis b) Microaneurysm
c) Hyaline arteriosclerosis d) Thining of walls

2764. The most common cause of renal scaring in a 3 year old child is - *(AI 05)*
a) Trauma
b) Tuberculosis
c) Vesicoureteral reflux induced pyelonephritis
d) Interstitial nephritis

2765. Which of the following is the most common renal cystic disease in infants is - *(AI 05)*
a) Polycystic kidney
b) Simple renal cyst
c) Unilateral renal dysplasia
d) Calyceal cyst

2766. Adult polycystic kidney is inherited as - *(AI 97)*
a) Autosomal-co-dominant
b) Autosomal dominant
c) Autosomal recessive
d) X-linked dominant

2745) b 2746) d 2747) a 2748) b 2749) a 2750) a,e 275 l)a 2752) c 2753) a 2754) d 2755) c 2756) c 2757) a 2758) c 2759)c 2760)a 2761)c 2762)b 2763)c 2764)c 2765)c 2766)b

2767. Chromosomes involved in adult polycystic kidney disease (APKD) - *(PGI June 01)*
a) 6 & 11 b)4& 16
c) 7 & 17 d)4& 12
e) 4&17

2768. In adult polycystic kidney, all are true except -
a) Hypertension is rare *(AIIMSMayOl)*
b) Hematuria is a common symptom
c) Cysts are seen in liver spleen and pancreas
d) Autosomal dominant transmission is seen

2769. Which of the following is associated with adult polycystic kidney disease - . *(A1IMS Nov 01)*
a) Berry aneurysms in Circle of Willis
b) Saccular aneurysms of aorta
c) Fusiform aneurysms of aorta
d) Leutic aneurysms

2770. Which one of the following statements is wrong regarding adult polycystic kidney disease -
a) Kidneys are enlarged in size *(AIlMSMay04)*
b) The presentation is unilateral
c) Intracranial aneurysms may be associated
d) Typically manifests in the 3rd decade

2771. Polycystic disease of the kidney may have cysts in all of the following organs except - *(AI04)*
a) Lung b) Liver
c) Pancreas d) Spleen

2772. Which of the following is the common extrarenal involvement in autosomal dominant polycystic kidney disease - *(AIIMSNov 04)*
a) Mitral valve prolapse b) Hepatic cysts
c) Splenic cysts d) Colonic diverticulosis

2773. True about adult polycystic kidney disease is all, excpet - *(ARMS Nov 01)*
a) Autosomal dominant inheritance
b) Hypertension is rare
c) Can be associated with cysts in liver, lungs and pancreas
d) Pyelonephritis is common

2774. Which one of the following statements is wrong re garding adult polycystic kidney disease -
a) Kidney are enalrged in size *(AIIMS May 04)*
b) The presentation is unilateral
c) Intracranial aneurysms may be associated
d) Typically manifests in the 3rd decade

2775. An 8 year old child suffering from recurrent attacks of polyurea since childhood presents to the paediatrics OPD. On examination the child is short statured vitals and B.P. are normal. Serum Creatinine - 6 mg%, $HC0_3$ -16 meq, Na -134, K^+ 4.2 On USG bilateral small kidneys are seen. Diagnosis is - *(AIIMSMay 01)*
a) Reflux Nephropathy
b) Nephronophthisis
c) Polycystic kidney disease
d) Medullary cystic kidney disease

2776. Regarding medullary sponge kidney-fPG/ *June 02)*
a) Autosomal dominant b) Nephrocalcinosis
c) ARF d) Minimal proteinuria
e) More common in females

2777. A 12-year-old boy is referred for evaluation of nocturnal enuresis and short stature. The blood pressure is normal. The blood urea is 112 mg/dl, creatinine 6 mg/dl, sodium 119 mEq/1, potassium 4 mEq/1, calcium 7 mg/dl, phosphate 6 mg/dl and alkaline phosphatase 400 U/l. Urinalysis shows trace proteinuria with hyaline casts; no red and white cells are seen. Ultrasound shows bilateral small kidneys and the micturating cystourethrogram is normal. The most likely diagnosis is -
a) Alport's syndrome *(AIIMSNov 03)*
b) Medullary sponge kidney
c) Chronic glomerulonephritis
d) Nephronophthisis

2778. Which of the following is true - *(PGI June 01)*
a) HSP is associated with IgG deposition
b) HUS causes thrombocytopenia
c) Inulin clearance is best measure of GFR
d) PSGN is associated with increased complement

2779. Medullary cystic disease of the kidney is best diagnosed by - *(AI 02)*
a) Ultrasound b) Nuclear scan
c) Urography d) Biopsy

2780. Unilateral renal agenesis is associated with -
a) Polycystic disease of pancreas *(AIIMS May 95)*
b) Hiatus Hernia
c) Single umbilical artery
d) Hypogonadism

2781. Nephrocalcinosis is a feature of A/E -
a) Primary hyperparathyroidism *(PGI June 2000)*
b) Medullary sponge kidney
c) Vitamin D intoxication
d) Pseudo hypoparathyroidism

2782. Nephrocalcinosis is seen - *(PGIDec 05)*
a) Medullary sponge disease
b) Acute pyelonephritis
c) Acute glomerulonephritis
d) Chronic pyelonephritis
e) Hyperparathyroidism

2783. Nephrocalcinosis is seen in all except -
a) Sarcoidosis *(AIIMSMay 07)*
b) Distal RTA
c) Milk alkali syndrome
d) Medullary cystic kidney

2784. True of the following - *(PGI June 01)*
a) Interstitial nephritis is associated with salt losing nephropathy
b) Idiopathic hypercalciuria is a X-linked recessive disease
c) Calcitonin deficiency causes hyperphosphatemia
d) Idiopathic hypercalciuria commonly presents with hematuria

2767) b 2768) a 2769) a 2770) b 2771) a 2772) b 2773) b 2774) b 2775) b 2776)a,b,d 2777) d 2778) b,c 2779) d 2780) c 2781) d 2782) a,e 2783) d 2784) a

2785. All are features of Barters syndrome, except - *(AIIMS Dec 95)*
a) Polyuria b) Metabolic alkalosis
c) Periodic paralysis d) Hypertension

2786. Mutation in alpha 5 chain of collagen 4, the diagonisis - *(Aiims Nov 06)*
a) Alport's syndrome
b) Thin membrane disease
c) Nodular glomerulosclerosis
d) Good pasture syndrome

2787. Association of deafness & nephritis is seen in -
a) Pickwickian syndrome *(AIIMS May 93)*
b) Alport's syndrome
c) Fabry's disease
d) Lawrence Moon Biedl syndrome

2788. First manifestation of Alport syndrome is -
a) Microscopic haematuria *(AIIMSFeb 97)*
b) Proteinuria
c) Oliguria
d) Sensorineural deafness

2789. A man 25 yrs old presents with renal failure. His uncle died of renal failure 3 yrs ago. On slit lamp examination, keratoconus is present. Diagnosis is-
a) ADPCKD *(AIIMS Nov 10)*
b) ARPCKD
c) Aloport's syndrome
d) Denysh-Drash syndrome

2790. Rhabdomyolysis occurs in - *(PGI June 99)*
a) Volume depletion b) Cocaine intoxication
c) Hyperphosphatemia d) None of the above

2791. Which of the these can cause both rhabdomyolysis and myoglobinuria- *(PGI June 02)*
a) Hyperpyrexia b) Viper snake venom
c) Multiple hornet stings d) Prolonged coma
e) Anemia

2792. Which may cause rhabdomyolysis ? *(PGI June 07)*
a) Clostridium perffingens
b) Streptococcus
c) Clostridium difficile

2793. Rhabdomyolysis with myoglobinuria seen in -
a) Viper bite *(PGIDec 06)*
b) Heat stroke
c) Malignant hyperthermia
d) Multiple hornet stings

2794. 28 year old male met with an accident and sustained severe crush injury. He is most likely develop -
a) Acute renal failure *(AIIMS Nov 09)*
b) Hypophosphtemia
c) Hypercalcemia
d) Acute myocardial infarction

2795. True about Rhabdomyolysis - *(PGIDec 04)*
a) Hyperuricemia b) Hyperphosphatemia
c)TCa^{2+} d) T CPK - MB

2796. Feature of Rhabdomyolysis - *(PGI Dec 04)*
a) Present with acute muscular weakness
b) Calf muscles commonly ruptured
c) Myoglobinuria
d) Hemoglobinuria
e) Acute renal failure is most common

2797. Rhabdomyolysis is characterized by - *(PGI June 05)*
a) Proximal muscle weakness b) Increased Mg**
c) Increased Ca^ d) Urinary cast
e) Increased K^+

2798. True about rhabdomyolysis - *(PGI June 07)*
a) Hypocalcemia
b) Pain in calf muscles
c) Generalized body weakness
d) Coma

2799. In urinary system disease, GI symptoms appears because of - *(AIIMS June 98)*
a) Chemical reaction b) Renogastric reflex
c) Peritoneal reaction d) Reflux phenomenon

2800. Causes of sterile pyuria without UTI include -
a) Cortical abscess *(PGI June 02)*
b) Pyelonephritis
c) Gonococcal infection
d) Urolithiasis
e) Analgesic nephropathy

2801. Renal damage due to amphotericin B are all, except - *(AIIMS Nov 01)*
a) Azotemia
b) Renal tubular acidosis
c) Glomerulonephritis
d) Hypokalemia

2802. Urinary K^+ excrection is increased in -
a) Bronchiecstasis b) Meningitis *(AIIMS June 98)*
c) Osteomyelitis d) Hepatitis

2803. Disease, does not recur in the kidney after renal transplant is - *(AIIMS Feb 97)*
a) Alport syndrome
b) SLE with renal involvement
c) Good Pasteur's syndrome
d) Diabetic nephropathy

2804. Which one of the following gram positive organisms is the most common cause of urinary tract infection (UTI) among sexually active women - *(AIIMSNov 04)*
a) Staphylococcus epidermidis
b) Staphylococcus aureus
c) Staphylococcus saprophyticus
d) Enterococcus

2805. Which of the following is the drug of first choice for Non-Gonococcal Urethritis - *(AI04)*
a) Ceftriaxone b) Ciprofloxacin
c) Doxycycline d) Minocycline

2806. The most common infectious agent associated with chronic pyelonephritis is -
a) Proteus vulgaris
b) Klebsiella pneumonia
c) Staphylococcus aureus
d) Escherichia coli

2785) d 2786) a 2787) b 2788) a 2789) c 2790) a,b 2791) a,c 2792) a,b 2793) d 2794) a 2795) b 2796)a,b,c 2797) e 2798) a,b,c 2799) b 2800) e 2801) c 2802) d 2803) a 2804) c 2805) c 2806) d

2807. Organisms causing UTI - *(PGI June 06)*
a) Proteus vulgaris b) Chlamydia
c) Nocardia

2808. A boy is suffering from acute pyelonephritis. Most specific urinary finding will be - *(AIMSMay 07)*
a) W.B.C. casts b) Leucocyte esterase test
c) Nitrite test d) Bacteria in gram stain

2809. Sterile Pyuria is characteristically seen in -*(AI11)*
a) Renal Tuberculosis
b) Chronic Hydronephrosis
c) Wilm's Tumor
d) Neuroblastoma

2810. A young lady present with symptoms of Urinary Tract Infection. All of the following findings on a midstream urine sample support the diagnosis of 'Uncomplicated Acute Cystitis', Except - *(AI 11)*
a) Positive Nitrite Test
b) CFU count < 1000/ml
c) Detection of one bacteria/ field on Gram stain
d) > 10 WBC/HPF

2811. In case of renal transplant, most common infection within one month is - *(PGI June 97)*
a) Pneumococcus b) Gram-ve organism
c) Pneumocystis carinii d) Cryptococcus

2812. In chronic dialysis, most common CNS manifestation is - *(PGI June 97)*
a) Sensory loss b) Paralysis
c) Dementia d) Depression

2813. In a uremic patient, dialysis can reverse all these conditions except - *(AIMS Nov 08)*
a) Peripheral neuropathy b) Seizures
c) Pericarditis d) Myopathy

2814. All are true for transplanted kidney except -
a) Humoral antibody responsible for rejection
b) CMI responsible for rejection *(PGI Dec 99)*
c) Donor's antibody on transfusion can cause rejection
d) HLA identity similarity is seen in 1:100 people

2815. Which of the following drugs is not a part of the 'Triple Therapy' immunosuppression for post-renal transplant patients ? *(AI 06)*
a) Cyclosporine b)Azathioprine
c) FK506 d) Prednisolone

2816. Long term complication (>10yr) renal transplantation is/are - *(PGI June 05)*
a) Bacterial infection
b) Malignancy
c) Viral infection
d) Acute graft versus host reaction
e) Psychosis

2817. AI toxicity - *(PGI Dec 05)*
a) Dementia b) Bone disease
c) Cardiomyopathy d) Anemia

2818. Which drug is not used to prevent contrast nephropathy - *(AIMS Nov 10)*
a) Fenoldopam
b) N-acetylcysteine
c) Infusion of Hair normal saline
d) Hemodialysis

2819. Orthostatic proteinuria - *(PGI Dec 2000)*
a) Seen in recumbant position
b) Is benign
c) Future risk of nephrotic synd
d) > 300 mg/day

2820. Which of the following statements is incorrect with regard to heptorenal syndrome in a patient with cirrhosis - *(AIMSNOV2004)*
a) The creatinine clearance is > 40 ml/min
b) The urinary sodium is less than 10 mmol/L
c) The urine osmolality is lower than the plasma osmolality
d) There is poor response to volume expansion

2821. Hepatorenal syndrome feature are - *(PGI June 06)*
a) Urine sodium <10 mEq/L
b) Normal renal histology
c) Renal function abnormal even after liver become normal
d) Proteinuria <500 mg/day

2822. In renal vascular hypertension true is-
a) T Aldosterone b)T Renin *(PGI June 05)*
c) Hypokalemia d) 1 Angiotensin II
e) Hyponatremia

2823. Kidney lesions are common in - *(PGI June 06)*
a) PAN b) Type II DM
c) SLE

2824. Nail and half nail sign, seen in uremia is -
a) Due to melanin deposition *(AIMS May 07)*
b) Increased capillary density at the distal half of nails
c) Hypoproteinemia
d) Circulating toxin

2825. Restless leg syndrome seen in - *(AI09)*
a) Chronic renal failure b) hyperkalemia
c) Hypocalcemia d) Hyperphosphatemia

2826. A10 year old child develops hematuria after 2 days of diarrhoea. Blood film shows fragmented RBCs & thrombocytopenia. Ultrasound shows marked enlargement of both kidneys. The likely diagnosis is- *(AIMS June 99)*
a) Acute pyelonephritis
b) Disseminated intravascular coagulopathy
c) Haemolytic uremic syndrome
d) Renal vein thrombosis

2827. ACE inhibitors are contraindicated in bilateral renal artery stenosis because - *(AIMS 98)*
a) Angiotensin II is required for GFR
b) Hyperrenism which occurs in long term therapy is dangerous to the kidney which secondary damages kidney causing decreased renal bloodfoow
c) Bradykinin motabolism is affected
d) Prostaglandin levels are altered

2807)a,b 2808)a 2809)a 2810)? 2811)b 2812)c 2813)d 2814)c,d 2815)c 2816)b,c,e 2817)a,b 2818)a 2819)b 2820) a 2821) a,b 2822)a,b,c,d 2823) a,b,c 2824) b 2825) a 2826) d 2827) a

2828. Chronic renal failure is often complicated by all of the following except - *(UPSC 95)*
a) Myopathy
b) Haemolytic-uraemic syndrome
c) Peripheral neuropathy
d) Ectopic calcification

2829. All of the following are examples of tubulointerstitial disorder of the kidney except -
a) Hypercalcemic nephropathy *(UP 97)*
b) Lupus nephritis
c) Gouty mephropathy
d) Hypokalemic nephropathy

2830. Recurrent hematuria ina deaf mute is seen in- *(JIPMER98)*
a) Fanconis anemia b) Alport's syndrome
c) Renal cytes d) Nephrotic syndrome

2831. Polyuria is feature of all of the following except- *(UPSC97)*
a) Hypocalcemia b) Hypokalemia
c) Lithium toxicity d) ADH deficiency

2832. Investigation in a patient of oliguria revealed Urine osmolity 620 mosm/kg Urine sodium : 12mmol/L Urine /plasma urea ratio :13:1 - The most likely diagnosis is - *(UPSC97)*
a) Prerenal acute renal failure
b) Acute tubular recrosis
c) Acute cortical necrosis
d) Urinary tract obstruction

2833. Regarding fanconi syndrome all are correct except-
a) Usually presents by 6 months,but may present later *(AP 98)*
b) Linear growth is impaired
c) Uricosuria is a feature
d) Polyuria, polydipsia are features

2834. The anemia in CRF is due to - *(AMC 99)*
a) Decreased erythropoiesis
b) Increased haemolysis
c) Both
d) None

2835. Non-oliguric acute renal failure is commonly seen in- *(UPSC 2K)*
a) Pre-renal azotemia
b) Aminoglycoside toxicity
c) Acute glomerulonephritis
d) Septic shock

2836. All of the following are uremic manifestation improve with dialysis except - *(UPSC 2K)*
a) Metabolic acidosis
b) Osteodystrophy
c) Asterixis
d) Nausea,vommiting and anorexia

2837. RBC cast in the microscopic examination of the urine is an indicator of - *(UPSC 2K)*
a) Acute glomerulonephritis
b) Acute Pyelonephritis
c) Chronic glomerulonephritis
d) Nephrotic syndrome

2838. Microalbuminuria refers to urinary albumin excretion rate of - *(ICS 2K)*
a) 30-300mg/24hour b) 400-600 mg/24 hour
c) 700-900 mg/24 hour d) >1000 mg/24 hour

2839. Macroproteinuria is defined as protein excretion of-
a) < 350mg/d b) < 400mg/d *(KERELA 2K)*
c) <450mg/d d)>500mg/d
e) >550mg/d

2840. Which of the following values are suggestive of acute tubular necrosis -
a) Urine osmolarity >500
b) Urine sodium > 40
c) Blood urea nitrogen/plasma cratinine >20
d) Urine creatinine/plasma creatinine >40

2841. The absolute indications for dialysis include the following except- *(KERALA 2K)*
a) Persistent or severe hyperkalaemia
b) Congestive cardiac failure
c) Pulmonary odema
d) Hyperphosphataemia
e) Severe acidosis

2842. In type II RTA (Renal tubular acidosis) serum postassium level is - *(TN 2001)*
a) Low b) Normal
c) 5.7mEq d)>7mEq

2843. Young adult normotensive patient with painless gross hematuria, most likely diagnosis -
a) Minimal change disease *(MAHE 2001)*
b) IgA nephropathy
c) CresenticGN
d) Membrano proliferative

2844. A patient presents with multiple pulmonary cavities hematuria and red cells casts. The most likely diagnosis is - *(UPSC 2002)*
a) Anti GBM disease
b) Churg - Strauss allergic granulomatosis
c) Wegner's granulomatosis
d) Systemic lupus erthematous

2845. A 55 year old woman who has a history of severe depression and had radical mastectomy for carcinoma of breast one year back, develops polyuria noctiuria and excessive thirst -
Laboratory values are as follows *(UPSC 2001)*
Serum sodium 149 m Eq/L
Serum potassium 3.6 m Eq/L
Serum calcium 9.5 mg/dl
Glucose 110 mg.dl
Bun 30 mg/dl
Urine osmolatity 150 m Osm kg
The most likely clinical diagnosis would be -
a) Psychogenic polydipsia b) Renal glycosuria
c) Hypercalcicuria d) Diabetes insipidus

2846. Hyperkalemia is characterise of which type of Renal Tubular Acidosis - *(JIPMER 2002)*
a) Type I b) Type II
c) Type III d) Type IV

2828)b 2829) b 2830) b 2831) a 2832) a 2833) None 2834) a 2835) b 2836) b 2837) a 2838) a 2839) None
2840)b 2841)d 2842)a 2843)b 2844)c 2845)d 2846)d

2847. Acute tubular necrosis can be caused *by-(UPSC 01)*
a) Contrast media b) Hemolysis
c) Crush injury d) Shock

2848. In pyelonephritis the diagnostic urinary finidng is - *(KARNAT 96)*
a) Pus cell cast b) RBC cast
c) Pus cells d) RBCs

2849. All are decreased in Nephrotic syndrome except -
a) Albumin b)Tranferrin
c) Ceruloplasmin d) Fibrinogen

2850. Hypocomplementemia is seen in - *(A.P 97)*
a) Lupus nephritis
b) Focal glomerulonephritis
c) Minimal change disease
d) All

2851. Immume complex mediated gloomerular damage is seen in all except - *(Kerala 95)*
a) Membranoproliferative GN
b) Good pasture's syndrome
c) Crescentric GN
d) Focal segmental GN

2852. A child comes with abdomen pain, arthralgia, hematuria, hypertension diagnosis is -
a) Hemolytic uremic syndrome *(JIPEMR 98)*
b) Porphyria
c) Rheumatic fever
d) Dengue

2853. The accurate diagnostic aid in renal artery stenosis is - *(Karn 96)*
a) Selective renal angiography
b) Ultrasound
c) CT scan
d) MJ

2854. Recovery of renal functions after renal transplant usually takes - *(ROHTAK 97)*
a) 15 days b) 1 month
c) 3 months d) 6 months
e) 7 days

2855. Ultrasound and radionuclids studies are primary imaging modalities used for assessment of -
a) Renal trauma *(Orissa98)*
b) Renovascular hypertension
c) Renal tuberculosis
d) Renal transplant

2856. A pt. presents with hematuria of several days and dysmorphic RBS casts in urine. The site of origin is - *(SCTIMS01)*
a) Kidney b) Ureter
c) Bladder d) Urethra

2857. Renal tubular acidosis with hyperkalemia is seen in - *(Jipmer03)*
a) Type I b) Type II
c) Type III d) Type IV

2858. Most common cause of death in renal transplant patient in India - *(Orissa 04)*
a) Rejection b) Infection
c) Uremia d) Haemorrhage

2859. The term end stage renal disease (ESRD)[f] is considered appropriate when GFR falls *to-(UPSC 04)*
a) 50% of normal b) 25% of normal
c) 10-25% of normal d) 5 -10% of normal

2860. Normal sized to enlarged kidneys in a patient with chronic failure is indicative of - *(UPSC 04)*
a) Benign nephrosclerosis
b) Chronic glomerulonephritis
c) Chronic interstitial nephritis
d) Primary amyloidosis

2861. All are features of barters syndrome, except- *(Jipmer 04)*
a) Polyuria b) Metabolic alkalosis
c) Periodic paralysis d) Hypertension

2862. Kidney normally does not allow transglomercular passage of - *(SGPGI05)*
a) (3_2 microglobulin b) Lysozyme
c) Myoglobin d) Immunoglobin

2863. All are features of Acute Renal Failure (ARF) except- *(HPU05)*
a) Hypotension b) Metabolic acidosis
c) Hyperkalemia d) Hypertension

2864. The most specific marker of renal function is- *(UPSC05)*
a) Creatinine clearance b) Insulin clearance
c) Blood area d) Serum creatinine

2865. Nephrotic syndrome may be caused by the following except- *(UPSC05)*
a) Renal cell carcinoma
b) Minimal change nephropathy
c) Diabetes mellitus
d) Rheumatoid arthritis

2866. Regarding membranous glomerulonephritis, which of the following is not correct - *(ICS 05)*
a) Thickening of the basement membranes is usually present
b) A marked increase in cellular infiltrate within the glomerulus is usually present
c) This entity is most common in adults
d) Significant proteinuria is uaually present

2867. The most common cause of chronic renal failure is- *(J & k 05)*
a) Diabetes mellitus b) Hypertension
c) Glomerular diseases d) Interstitial diseases

2868. Renal damage due to amphotericin Bare all, except-
a) Azotemia *(MAHA05)*
b) Renal tubular acidosis
c) Glomerulonephritis
d) Hypokalemia

2869. A female patient Nandini presents with upper respiratory tract infection. Two days after, she develops hematuria. Probable diagnosis is -
a) IgA nephropathy *(MAHA05)*
b) Wegener's granulomatosis
c) Henoch scholein purpura
d) Post streptococcal glomerulonephritis

2847)All 2848)a 2849)d 2850)a 2851)b 2852)b 2853)a 2854)b 2855)d 2856)a 2857)d 2858)b 2859)d 2860)d 2861)d 2862)a 2863)d 2864)d 2865)d 2866)b 2867)a 2868)c 2869)a

2870. Salt losing nephritis is a feature of - *(MAHE 05)*
a) Interstitial nephritis
b) Renal amyloidosis
c) Lupus nephritis
d) Post streptococcal glomerulonephritis

2871. Hematuria with dysmorphic RBCs is a feature of which one of the follwing ? *(UPSC 06)*
a) Acute cystitis
b) Prostatitis
c) Hereditary nephritis
d) Cyclophosphamide toxicity

2872. All of the following are components of nephrotic syndrome except - *(COMED 06)*
a) Edema b) Hypercoagulability
c) Hypocholesterolemia d) Infection

2873. Nephrolithiasis occurs with the toxicity to -
a) Ritonavir b) Saquinavir *(COMED 06)*
c) Indinavir d)Nelfinavir

2874. Salt losing nephropathy - *(APPG06)*
a) Interstitial nephritis
b) Lupus nephritis
c) Amyloidosis
d) Post-streptococcal GN

2875. Consider the following conditions - *(UPSC 07)*
1. Central diabetes insipidus
2. Uncontrolled diabetes mellitus
3. Mannitol infusion
4. Post - obstructive diuresis

Which of the above result in solute diuresis?
a) 1 and 2 only b) 1,2 and 3
c) 2, 3 and 4 d) 1,3 and 4

2876. A patient presents with acute gastroenteritis in a dehydrated state. Which of the following conditions is highly suggestive of pre-renal renal failure ?
a) Urinary sodium > 40 m mol; Urine osmolality < 350 mosm/L *(UPSC 07)*
b) Urinary sodium > 40 m mol; Urine osmolality > 500 mosm/L
c) Urinary sodium < 20 m mol; Urine osmolality > 500 mosm/L
d) Urinary sodium < 20 m mol; Urine osmolality <350 mosm/L

2877. Chronic renal failure with inappropriately high haemoglobin levels may be seen with - *(UPSC 07)*
a) Hypertensive nephropathy
b) Ischaemic nephropathy
c) Diabetic nephropathy
d) Polycystic renal disease

2878. Which one of the following is not a feature of proximal renal tubular acidosis - *(UPSC 07)*
a) Growth failure b) Hypertonia
c) Acidic urine d) Polyuria

2879. Microalbuminuria is defined as protein levels os -
a) 100-150 mg/L b) 151-200 mg/L *(Corned 08)*
c) 201-300mg/L d)301-600mg/L

2880. Which of the following tests is most sensitive for detecting early diabetic nephropathy - *(Corned 08)*
a) Serum Creatinine b) Creatinine clearance
c) Microalbuminuria d) Ultra sonography

2881. Berger nephropathy disease is due to mesangial deposition of - *(Corned 08)*
a) Fibrin & C_3 b) IgD & C_3
c) IgE & C_3 d) IgA & C_3

2882. Which of the following is not a characteristic of Fanconi's anemia ? *(Delhi PG Feb. 09)*
a) Hematologic abnormalities in infancy
b) Pancytopenia
c) Skeletal anomalies
d) Chromosome fragility

2883. Common feature of Gitelman syndrome is:
a) Hyperkalemia *(Delhi PG Mar. 09)*
b) Metabolic alkalosis
c) Hypermagnesemia
d) High calcium excretion

2884. Serum C3 is persistently low in the following except- *(Manipal 09)*
a) Post streptococcal glomerulonephritis
b) Membranoproliferative glomerulonephritis
c) Lupus nephritis
d) Glomerulonephritis related to bacterial endocarditis

2885. Alport's syndrome is associated with all except-
a) Neuro-sensory deafness from birth
b) Posterior lenticonus *(Manipal 09)*
c) Peripheral retinal fleck
d) Haemorrhage nephritis

2886. A 20-year-old male is presented with end stage renal failure. Since 13 years of age, he has had progressive renal insufficiency initially with episodes of painless haematuria. He also has progressive deafness. His brother suffers from similar illness. What is the most likely diagnosis - *(UPSC-109)*
a) Alport syndrome
b) Henoch-Schonelin vasculitis
c) Familial lupus
d) Wegener's granulomatosis

2887. Hyperkalemia is observed in which one of the following conditions - *(UPSC-109)*
a) Type 1 renal tubular acidosis
b) Type 2 renal tubular acidosis
c) Type 4 renal tubular acidosis
d) Bartter's syndrome

2888. The following features are true about membranous glomerulopathy except - *(UPSC-109)*
a) Heavy proteinuria
b) Hyperlipidemia
c) Early onset of renal failure
d) Response to steroids

2889. In which one of the following conditions, is a renal biopsy contraindicated - *(UPSC-109)*
a) Acute renal failure
b) Uncontrolled hypertension
c) Nephrotic syndrome
d) Isolated hematuria

2870)a 2871)c 2872)c 2873)c 2874)a 2875)c 2876)c 2877)d 2878)b 2879)b 2880)c 2881)d 2882)a 2883)b 2884)c 2885)b 2886)b 2887) c 2888)c 2889)b

2890. Following the immunotherapy, in patients undergoing renal transplantation, the skin cancer most commonly seen is - *(UPSC-II09)*
a) Skin tumors b) Kaposi's sarcoma
c) Hepatomas d) Mycosis fungoides

2891. The commonest systemic abnormality associated with renal cell carcinoma is - *(COMED 09)*
a) Hypertension b) Polycythaemia
c) Elevated ESR d) Pyrexia

2892. The completeness of a 24-hour urine collection is best assessed by the simultaneous measurement of urinary- *(COMED 09)*
a) Volume b) Urea
c) Creatinine d)pH

2893. True about CF - *(PGIMay 10)*
a) Incidence is 1:2000
b) Positive Sweat test
c) Mutation in CFTR gene
d) May presents as meconium ileus
e) X-linked disorder

2894. Which drug is not used to prevent contrast nephropathy - *(AIIMS Nov 10)*
a) Fenoldopam
b) N-acetylcysteine
c) Infusion of Hair normal saline
d) Hemodialysis

2895. A patient is passing stones recurrently in urine for past few years. All are due to be restricted in diet except - *(AIIMS Nov 10)*
a) Protein restriction b) Calcium restriction
c) Salt restricted diet d) Phosphate restriction

2896. A man 25 yrs old presents with renal failure. His uncle died of renal failure 3 yrs ago. On slit lamp examination, keratoconus is present. Diagnosis is-
a) ADPCKD *(AIIMS Nov 10)*
b) ARPCKD
c) Aloport's syndrome
d) Denysh-Drash syndrome

2897. Sterile Pyuria is characteristically seen in - *(AI11)*
a) Renal Tuberculosis
b) Chronic Hydronephrosis
c) Wilm's Tumor
d) Neuroblastoma

2898. A young lady present with symptoms of Urinary Tract Infection. All of the following findings on a midstream urine sample support the diagnosis of 'Uncomplicated Acute Cystitis', Except - *(AI 11)*
a) Positive Nitrite Test
b) CFU count < 1000/ml
c) Detection of one bacteria/ field on Gram stain
d) > 10 WBC/HPF

2899. The most accurate measure of Glomerular Filtration Rate (GFR) can be obtained by - *(UPSC111)*
a) Creatinine clearance
b) Calculated urea clearance
c) Simultaneous determination of creatinine and urea clearance
d) Radioisotope ^I-iothalamate clearance

2900. Which one of the following is not a feature of renal artery stenosis? *(UPSC 111)*
a) Hypertension responds well to drugs
b) Kidneys may be asymmetrical
c) Atherosclerotic plaques are common
d) Serum creatinine may increase with ACE inhibitors

2901. Consider the following statements regarding membranous nephropathy - *(UPSC 111)*
1. Idiopathic membranous nephropathy has strong association with HLA - DRw3.
2. Microscopic haematuria is commonly detected in 60% of patients.
3. Hypertension is a common association.
4. Renal vein thrombosis may occur in nearly 50% of patients.

Which of the statements given above are correct?
a) 1,2 and 3 b)l,3and4
c) 1,2 and 4 d) 2, 3 and 4

2902. The following can lead to acute renal failure due to intrinsic renal disease except - *(UPSC 111)*
a) Systemic lupus erythematosus
b) Leptospirosis
c) Hepatoreanal syndrome
d) Hemolytic uraemic syndrome

2903. Consider the following categories of patients -
1. Young woman *(UPSC 111)*
2. Pregnant woman
3. Elderly woman
4. Post-renal transplant woman

Which of the above warrant active treatment for asymptomatic bacteriuria?
a) 1 and 2 b) 3 and 4
c) 1 and 3 d) 2 and 4

2904. Decreased fractional excreion of sodium is caused by - *(NEET/DNB Pattern)*
a) Prerenal azotemia b) Cortical ischemia
c) Glomerulonephritis d) Renal tubular acidosis

2905. In renal failure diuretic phase occur on -
a) 1st day b) 3rd day *(NEET/DNB Pattern)*
c) 28-35 day d) 14-18 day

2906. Most common cause of CRF in adults is -
a) TB b) HTN *(NEET/DNB Pattern)*
c) DM d) Scleroderma

2907. Azotemia occurs when - *(NEET/DNB Pattern)*
a) GFR 50% of normal
b) GFR 80% of normal
c) GFR 20% - 50% of normal
d) GFR 25% of normal

2908. What is not seen in CRF - *(NEET/DNB Pattern)*
a) Hypercalcemia b) Hyperkalemia
c) Hyperphosphatemia d) Hypocalcemia

2909. CRF with anemia best treatment - *(NEET/DNB Pattern)*
a) Iron b) Erythropoietin
c) Blood transfusion d) Folic acid

2890)a 2891)c 2892)c 2893)b,c,d 2894)a 2895)b 2896)c 2897)a 2898)b 2899)d 2900)a 2901)None 2902)c 2903) d 2904)a 2905) d 2906)c 2907)c 2908) a 2909)b

2910. Distal renal tubular acidosis is associated with-
a) Oxalate stones b) Citrate *(NEET/DNB Pattern)*
c) Calcium stones d) Uric acid stones

2911. The most common presentation of IgA nephropathy is - *(NEET/DNB Pattern)*
a) Nephritic syndrome
b) Nephrotic syndrome
c) Microscopic hematuria
d) Repeated gross hematuria

2912. HIV renal specific nephropathy-*(NEET/DNB Pattern)*
a) FSGS
b) Membrano proliferative
c) Mesangioproliferative G.N.
d) [illegible] hritis

2913. In Barter's Syndri ome, what is seen-
a) Metabolic Alkalosis *(NEET/DNB Pattern)*
b) Hypokalemia
c) Hyperkalemia
d) Decrease in urinary calcium

2914. Maximiy^siu^aa^rcapieter induced infection-
a) E.coli *(NEET/DNB Pattern)*
b) Pseudomonas
c) Staphy ioepccus epidermidis
d) Proteus

2915. Most common symptom of genitourinary TB - *(NEET/DNB Pattern)*
a) Renal colic b) [illegible]
c) Hematuria d) Painful micturition

2916. Kidney complication of renal transplant A/E -
a) Viral infection *(NEET/DNB Pattern)*
b) Graft Vs h(^tr^actidfc
c) Malignancy
d) Dementia

2917. Child with kidney transplant developed lympho-proliferative cancer. This is due to which viral infection- *(NEET/DNB Pattern)*
a) CMV b) Varicella
c) HPV d) EBV

2918. Post transplant lymphoma is most associated with -
a) EBV b) CMV *(AIIMS, May 12)*
c) Herpes simplex d) HHV-6

2919. Virus responsi Ml iro^p o s t|p:f ansplant lymphoproliferativ *(NEET/DNBPattern)*
a) HSV
c) CMV d) HIV

2920. Most ccunmou viral infection in kidney -
a) EBV b) HSV *(NEET/DNB Pattern)*
c) CMV d) HBV

2921. Most common }£& use lotcrdeai^^f|4i^f^5 patient - *(NEET/DNB Pattern)*
a) Cardiovascular b) Infection
c) Malignancy d) Anemia

2922. Indication of dialysis is all except-
a) Pericarditis *(NEET/DNB Pattern)*
b) Persistent hyperkalemia
c) Uremic encephalopathy
d) Severe volume overload

2923. Which drug is not used to prevent contrast nephropathy - *(NEET/DNB Pattern)*
a) Fenoldopam
b) N-acetylcysteine
c) Infusion of Hair normal saline
d) Hemodialysis

2924. True about hepatorenal syndrome-*(NEET/DNB Pattern)*
a) Seen in advanced stage of cirrhosis
b) Type II more serious prognosis than type I
c) Due to intense hypoperfusion of kidney
d) Renal insult is the primary injury

2925. Most common renal manifestation of leprosy -
a) Minimal change G.N. *(NEET/DNB Pattern)*
b) Crescentric G.N.
c) Mesangioproliferative G.N.
d) FSGS

2926. Treatment of renal crises in scleroderma is-
a) β-blocker *(NEET/DNB Pattern)*
b) Losartan
c) ACE inhibitor
d) Nitrates

CENTRAL NERVOUS SYSTEM

GENERAL

2927. UMN lesion is characterised by - *(AI99)*
a) Weakness & spasticity
b) Fasciculations
c) Rigidity
d) Localised muscle atrophy

2928. All are features of pyramidal tract lesion, Except -
a) Involuntary movement *(AI Sep. 96)*
b) Positive Babinski's sign
c) Spasticity
d) Increased deep tendon reflexes

2929. Features of UMN lesion - *(PGI June 06)*
a) Spasticity b) Rigidity
c) Babinski positive d) Hyperreflexia
e) Weakness

2930. Fasciculations are seen in - *(AI 95)*
a) Motor neuron disease
b) Duchenne's muscular dystrophy
c) Polymyositis
d) None of the above

2931. Fasciculation is seen in - *(PGIDec. 03)*
a) UMN type of lesion
b) LMN type of lesion
c) Myoneural junction
d) Peripheral neuropathy

2932. Which among the following does not cause exaggerated jaw jerk - *(PGI June 99)*
a) Multiple sclerosis b) Motor neurone disease
c) Pseudobulbar palsy d) Syringomyelia

2910)c 291 l)d 2912)a 2913)b 2914)a 2915)b 2916)d 2917)d 2918)a 2919)b 2920)c 2921)a 2922)d 2923)a 2924)c 2925)c 2926)c 2927)a 2928)a 2929)a,c,d,e 2930)a 2931)b 2932)d

2933. Bulbar palsy is seen in - *(PGI Dec 2000)*
a) Myesthania gravis b) M.N.D.
c) Arsenic poisoning d) Lead poisoning
e) Polio

2934. Spinal shock is characterised by - *(PGIJUNE 03)*
a) Spasticity b) Wasting
c) Sensory loss d) Urinary retention
e) Areflexia

2935. Spinal shock is characterized by all except- *(PGI 09)*
a) Spastic paralysis
b) Flaccid paralysis
c) Urinary bladder involvement
d) Areflexia
e) Sensory loss

2936. Which of the following signs is not suggestive of a cervical spinal cord injury -
a) Flaccidity
b) Increased rectal sphincter tone
c) Diaphragmatic breathing
d) Priapism

2937. Cervical cord injury does not cause - *(PGI June 99)*
a) Homer's syndrome
b) Loss of sensation over face
c) Spasticity of foot
d) Wasting with fasciculations of lower limb

2938. Painless burn in hand is a characteristic feature of-
a) Syrinyomgelia *(AI99)*
b) Thalamic syndrome
c) Cord compression
d) Systemic-lupus-erythematosis

2939. Feature (s) of syringomyelia is/are - *(PGI 09)*
a) Dissociated sensory loss
b) Wasting of small muscles of hand
c) Symmetrical involvement
d) Ascending weakness
e) Frequent bladder- bowel involvement

2940. Type of sensation lost on same side, in Brown sequard syndrome is- *(NOV 93)*
a) Pain b) Touch
c) Proprioception d) Temperature

2941. The following are components of Brown sequard syndrome except - *(AI 0 7)*
a) Ipsilateral extensor plantar response
b) Ipsilateral pyramidal tract involvement
c) Contralateral spinothalamic tract involvement
d) Contralateral posterior column involvement

2942. All except in brown sequard syndrome -
a) Ipsilateral pyramidal tract features
b) C/L dorsal column *(AIIMS Nov 11)*
c) C/L spinothalmic
d) Ipsilateral planter extensor

2943. All of the following statements about Conus syndrome are true except - *(AIPGMEE 08)*
a) Saddle anaesthesia is present
b) Flexor plantar response is seen
c) Knee and ankle jerks are absent
d) Bowel and bladder involvement is prominent

2944. All of the following statements about extramedullary tumours are true except - *(AIPGMEE 08)*
a) These can lead to brown sequard syndrome
b) Radicular pain is often prominent
c) Early sacral sensory loss occurs
d) Spastic weakness in the legs is early feature

2945. Dissociated sensory loss in a case of tumor of central spinal cord is due to lesion of - *(AIIMSNov 09)*
a) Dorsal column fibres
b) Anterior Spinothalmic tract
c) Decussating fibres of lateral spinothalmic tract
d) Cilio spinal centre of spinal cord

2946. Beevor sign is seen in - *(AIIMS May 09)*
a) Abdominal muscle b) Respiratory muscle
c) Facial muscle d) Hand muscle

2947. Which is not affected in lesion of posterior column of spinal cord ? *(PGI June 07)*
a) Romberg's sign b) Temperature sense
c) Vibration sense d) Ataxia

2948. Paraplegia lesion is located in - *(PGI June 08)*
a) Cervical b) Upper thoracic
c) Lower thoracic d) Lumbar
e) Lumbosacral

2949. Spinal shock is characterised by - *(PGIJUNE 03)*
a) Spasticity b) Wasting
c) Sensory loss d) urinary retention
e) Areflexia

2950. Which is pathognomic for motor neuron disease -
a) Fasciculation *(Dec 95)*
b) Bladder, bowel involvement
c) Pseudohypertrophy
d) Sensory loss in patchy manner

2951. Motor neuron disease, TRUE is - *(May 94)*
a) Sensory involvement
b) Ocular motility is impaired
c) Involvement of anterior and lateral columns of spinal cord
d) Intellectual improvement

2952. Spinomuscular atrophy is seen in lesion of- *(PGI Dec 98)*
a) Anterior horn b) Peripheral nerve
c) Neuromuscular junction d) Any of the above

2953. A middle aged man presents with progressive atrophy and weakness of hands and forearms. On examination he is found to have slight spasticity of the legs, generalized hyper-reflexia and increased signal in the cortico-spinal tracts on T2 weighted MRI. The most likely diagnosis is- *(AIIMSNov 2004)*
a) Multiple selerosis
b) Amyotrophic latetal sclerosis
c) Subacute combined degeneration
d) Progressive spinal muscular atrophy

2954. Pathology in motor neuron disease is at? *(AI 10)*
a) Anterior horn cells
b) Posterior column tracts
c) Spinothalamic tract
d) Peripheral nervous system

2933)a,b,e 2934)c,d,e 2935)a 2936)b 2937)b,d 2938)a 2939)a,b 2940)c 2941)d 2942)b 2943)c 2944)a
2945)c 2946) a 2947)b 2948)c,d,e 2949)c,d,e 2950) a 295l)c 2952) a 2953) b 2954) a

2955. Amyotrophic lateral sclerosis involve-(PG/ *June 03)*
a) Anterior horn cell b) Posterior horn cell
c) Dorsal root ganglia d) Ventral root ganglia
e) Myoneural junction

2956. Spastic paraplegia can be caused by the following except- *(AI09)*
a) Motor neuron disease
b) Chronic lead poisoning
c) VitaminBl2 deficiency
d) Cervical spondylosis

2957. Localised regional cerebral atrophy is seen in- *(PGIDec 02)*
a) Alzheimer's disease b) Frontotemporal dementia
c) PML d) C.J. disease
e) Friedreich's ataxin

2958. Earliest presentation of Friedrich's ataxia is-
a) Ataxia b) Seizures *(AIIMSNov 93)*
c) Optic atrophy d) Stuttering

2959. Absent ankle jerk and extensor plantar response is found in - *(PGD June 98)*
a) Friedreich's ataxia b) Tabes dorsalis
c) SACD d) Vit B deficiency

2960. 65 year old man presents with anaemia and posterior column dysfunction, the likely cause is - *(May 95)*
a) Bj-deficit b) B_{l2}-deficit
c) SSPE d) Multiple selerosis

2961. Subacute combined degeneration due to to Vit B_{12} deficiency mainly involves - *(PGIDEC 03)*
a) Peripheral nerve b) Corticospinal tract
c) Posterior column d) Spinocerebellar tract
e) Spinothalamic tract

2962. All are true about subacute combined degeneration of spinal cord except - *(AI 99)*
a) Due to deficiency of vitamin B_{12}
b) Posterior column involvement
c) Corrticospinal involvement
d) Absent deep tendon reflexes

2963. Bilateral loss of tendon jerk and extensor plantar response is seen in - *(AIIMSDec 98)*
a) Amyotrophic lateral sclerosis
b) Freidrich's ataxia
c) Tabes dorsalis
d) Lead poisoning

2964. All are features of tabes dorsalis, except -
a) Ataxia *(AIIMS Dec 97)*
b) Argyll Robertson's pupil
c) Bladder disturbances
d) Hyperreflexia

2965. Pyramidal tract involvement with absent arikle j erk is seen in - *(AIIMSMay 2001)*
a) Fredericks ataxia
b) Subacute combined degeneration of the spinal cord
c) Lathyrism
d) Tabes dorsalis

2966. Causes of facial palsy are - *(PGI Dec 2000)*
a) Bell's palsy b) Herpes infection
c) Ramsay Hunt syndrome d) Acoustic neuroma

2967. Most common cause of LMN facial palsy is- *(PGIJune97)*
a) Disseminated sclerosis b) Bell's palsy
c) DM d)Leprosy

2968. TRUE regarding upper motor neuron Vllth nerve paralysis is - *(AIIMS Dec95)*
a) Ipsilateral upper face paresis
b) Ipisilateral lower face paresis
c) Contralateral upper face paresis
d) Contralateral lower face paresis

2969. After a minor head injury a young patient was unable to close his left eye and had drooling of saliva from left angle of mouth. He is suffering from -
a) Vllth nerve injury *(AIIMSMay 2003)*
b) Vth nerve injury
c) IHrd nerve injury
d) Combined Vllth and IHrd nerve injury

2970. LMN type Facial palsies - *(PGIDec 02)*
a) Bell's palsy most common
b) Cornea should be protected
c) Bilateral paralysis is seen in Melkerson syndrome
d) Unilateral paralysis is seen in Mobius syndrome
e) Prognosis affected before repeated electric stimulation

2971. Facial nerve palsy at stylomastoid canal can cause -
a) Hperacusis *(AIIMS June 99)*
b) Loss of corneal reflex at side of lesion
c) Loss of lacrimalion at side of lesion.
d) Loss of taste sensation on anterior 2/3 of ipsilateral tongue

2972. Horner's syndrome. All true except-
a) Miosis *(AIIMS May 11)*
b) Anhydrosis
c) Hyperchromatic iris
d) Apparent exophthalmos

2973. Horner's syndrome is seen in all except -
a) Carotid artery aneurysm *(AIIMS Nov 10)*
b) Medial medullary syndrome
c) Can occur following surgery for raynaud's syndrome
d) Multiple sclerosis

2974. The condition where babinski sign is positive but deep tendon jerks are absent is- *(Delhi 96)*
a) Cerebral hemorrhage b) Cerebral palsy
c) Cerebral tumour d) Fredericks ataxia

2975. All of the following is used for gradation of coma in Glasgow coma scale except- *(UP 9 7)*
a) Eye opening b) Motor response
c) Verbal response d) Bladder function

2976. Ataxia is a complication of- *(Karnat 98)*
a) Chicken pox b) Measles
c) Mumps d) Glandular fever

2955)a 2956)b 2957)b 2958) a 2959)a 2960)b 2961)b,c 2962)d 2963)b 2964)d 2965) a 2966)All 2967)b 2968) d 2969) a 2970) a,b 2971) b 2972) d 2973) b 2974) d 2975) d 2976) a

2977. Cervical sympathetic lesion causes all except -
a) Miosis b) ptosis *(KeralaE 95)*
c) Enophthalmos d) Increased sweating

2978. Which herniation is the one that leads to brain stem injury- *(JIPMER 95)*
a) Cingulate b) Hippocampal
c) Subfalcine d) Cerebellar tonsils

2979. Which of the following causes pseudotumour cerebrii- *(TN 95)*
a) Chronic subdural hematoma
b) Cerebellar tumours
c) Hypervitaminosis A
d) Cerebral hemangiomas

2980. All of the following are recognised features of psuedotumour cerebrii, except - *(UP 97)*
a) Papilloedma
b) Absece of localizing neurological deficit
c) Increased protein content in the CSF
d) Normal sized ventricles on CT scanning

2981. Juvenile huntington's disease is marked by-
a) Chorea b) Athetosis
c) Tremors d)Tics

2982. Inverted lasegue sign is seen in lesions of-
a) LI b)L2 *(JIPMER95)*
c) 13 d)L4

2983. Meningioma arises from- *(JIPMER95)*
a) Extra dural arteries b) Extra cranial muscles
c) Venous sinuses d) Arachnoid cap cells

2984. A 40 year old female presents with a history of sudden onset of headache and nausea which passed off with rest and analgesics.Later she developed blurring of vision for a few days. On the day of admission she had developed third nerve palsy with neck rigidity. The temperature was 100°F.The most likely diagnosis is-
a) Acute attack of migraine *(UPSC95)*
b) Viral encephalitis
c) Sub-arachnoid haemorrhage
d) Severe hypertension

2985. Lesions of the posterior column causes- *(TN 95)*
a) Ataxia b) Anaesthesia
c) Rigidity d) Paralysis

2986. One of the characteristic bedside features of Korsakoff's psychosis is- *(UPSC 96)*
a) Astereogenesis b) Apraxia
c) Confabulation d) Hallucination

2987. Spironolactone bodies are seen in- *(Assam 95)*
a) Neuron b) Mitocnondria
c) Hippocampus d) None of the above

2988. In recent memory loss probable lesion is in- *(AMU95)*
a) Thalamus b) Temporal lobe
c) Frontal lobe d) None

2989. Flapping tremors are not seen in- *(UP 96)*
a) Wilson's disease b) Thyrotoxixosis
c) $C0_2$ narcosis d) Uremia

2990. Which is not a characteristic of paradoxical sleep-
a) High heart rate *(CUPGEE96)*
b) HighB.P.
c) High respiratory rate
d) Muscle hypertonia

2991. Unicinate fits are seen in tumours of the- *(UP 97)*
a) Frontal lobe b) Parietal lobe
c) Temporal lobe d) Occipital lobe

2992. An 80 year old person has started forgetting the names of familiar persons and places. There has been noconfabulation.He tends to forget whether he has had his meals.Clinical and neurological examination reveals no abnormality.CT scan of the brain showed symmetrical enlargement of lateral ventricles and wider sulci. The most likely diagnosis is- *(UPSC 97)*
a) Confusional state
b) Alzheimer's disease
c) Alcholol dementia
d) Chronic cerebrovascular insufficiency

2993. The most common cause of facial palsy is -*(AP97)*
a) Bell's palsy b) Cuillain-Bare syndrome
c) Parotid tumour d) Injury to the facial nerve

2994. Personality chages is seen in lesions of- *(MP 98)*
a) Temporal lobe lesions b) Parietal lobe
c) Frontal lobe d) Occipital lobe

2995. Pseudocoma results from infarction or haemorrhage in- *(ICS 98)*
a) Pons b) Mid-brain
c) Medulla d) Hypothalamus

2996. The most common physical sign of cerebral metastasis- *(Karnat 98)*
a) Epilepsy b) Focal neurological deficit
c) Papilloedema d) Visual defects

2997. Hang up knee jerk is seen in- *(Kerala 98)*
a) Chorea b) Cerebral palsy
c) Athetosis d)None

2998. All of the following are true of early onsets Alzheimer's disease except - *(Kerala98)*
a) Associated with chromosomal anomalies
b) Profound retardation seen
c) Necrosis of brain neurons seen
d) None

2999. Not given intrathecally- *(Kerala98)*
a) Methotrexate b)Taxol
c) 5FU d)Cyclophosphamide

3000. Arnold-Chiari malformation- All are true except-
a) Cerebellomedullary malformation *(SCTIMS 98)*
b) Almost always associated with severe spina bifida
c) There is obstruction to the flow of CSF
d) 4th ventricle lies above the level of formen magnum

3001. Senile plaques in brain is a feature of-*(JIPMER 2K)*
a) Multiple sclerosis b) Parkinsonism
c) Alzheimer's desease d) Wilson's disease

2977) d 2978) d 2979) c 2980)c 2981)a 2982)c 2983)d 2984)c 2985)a 2986)c 2987)d 2988)a,b 2989)b2990)d
2991)c 2992)b 2993)a 2994)c 2995)a 2996)b 2997)a 2998)d 2999)b 3000)d 3001)c

3002. Foster's test is used in the diagnosis of-
a) Spastic type of cerebral palsy *(JIPMER 2K)*
b) Hypotonic CP
c) Choreo athetotic CP
d) Myasthenia gravis

3003. Frenkel's exercise is done in case of-*(Calcutta 2K)*
a) MND b) Myopathy
c) Syringomyelia d) Tabes dorsalis

3004. Prosopagnosia is- *(Orissa R)*
a) Inability to recognise faces
b) Inability to know time
c) Inability to recognise places
d) None of the above

3005. Features of Balint's syndrome include which of the following? *(Kerala 2 K)*
a) Prosopagnosia b) Simultanagnosia
c) Visual object agnosia d) Construction apraxia
e) Dressing apraxia

3006. Intellectual detoriation in a 8 year boy with myoclonus is seen in- *(NIMHANS 2K)*
a) SSPE b) C-J disease
c) GSS d) Kuru

3007. Prosopongnoisa- *(NIMHANS 2K)*
a) Inability to do fine movement
b) Inability to recognise face
c) Seen in Baline syndrome
d) Associated with Grestman syndrome

3008. Brain death means loss of- *(DNB 2001)*
a) Cortical function b) Brain stem function
c) Spinal reflexes d) Corneal reflex

3009. Progressive multifocal leukoencephalopathy (PML) is characterised by all of the below except-
a) Caused by JC virus *(Karnataka 01)*
b) Late manifestation of AIDS
c) Cognitive impairment common
d) Brainstem can be involved

3010. Which of the following is not true about prion disease-
a) Infective proteins *(J & K 2001)*
b) Neurodegenerative disease
c) Brain biopsy is specific
d) Prions cannot be killed by routine methods

3011. In facial palsy, food accumulated in the mouth dueto paralysis of - *(NIMHANS 2001)*
a) Masseter b) Temporalis
c) Mentalis d) Buccinator

3012. Bilateral facial palsy is seen in- *(NIMHANS2001)*
a) Myaesthania gravis
b) GuillainBarre
c) Muscular dystrophy
d) Duchnene muscular dystrophy

3013. Golden hour in thrombolytic therapy for cerebral stroke- *(TN 2002)*
a) 3hrs b)6hrs
c) 12hrs d)24hrs

3014. Which IV fluid should not be used in a patient with head injury - *(SCTIMS 2K)*
a) 5% Dextrose b) Normal saline
c) Dextrose normal saline d) All of the above

3015. Investigation of choice in cerebral abscess is -
a) Plain X-ray b) Ultrasound *(SCTIMS 98)*
c) CTScan d)MRI

3016. NormalCSF pressure is- *(SCTIMS 98)*
a) 110-180 mm CSF b)180-300mm
c) 200-400 mm d) 5-10 mm

3017. Brain space occupying lesions causes death by -
a) Acute Hypertension (*Delhi 84, 86,*
b) Brain herniation *UPSC 82, PGI83, 87)*
c) Cushing syndrome
d) Hypotension

3018. A 10 year old boy presents with superior quadrantanopia and headache. Most likely diagnosis is - *(Jipmer 03)*
a) Temporal lobe tumour b) Optic atrophy
c) Pituitary adenoma d)Craniophara

3019. In hepatic encephalopathy the EEG shows- *{Jipmer 03)*
a) a - activity waves b) a (delta) - waves
c) e (theta) - waves d) Rapid a - waves

3020. In Balint syndrome all are seen *except-(Manipal 04)*
a) Simultagnosia b) Dysgraphia
c) Ataxia d) Apraxia

3021. Picket Fence Fever is seen in - *(Bihar 03)*
a) Lateral Sinus Thrombosis
b) Petrositis
c) Meningitis
d) Temporal lobe abscess

3022. Coast of California sign is seen in -
a) Neurofibromatosis b) Fibrous dysplasia
c) Tuberous sclerosis d) Sturge weber syndrome

3023. Examples of PRION disease include -
a) Creutzfeldt-Jakob disease *(Karnataka 04)*
b) Subacute sclerosing panencephalitis
c) Alzheimer's disease
d) None of the above

3024. The most common physical sign of cerebral metastasis - *(Jipmer 05)*
a) Epilepsy b) Focal neurological deficit
c) Papilloedema d) Visual defects

3025. In amyotrophic lateral sclerosis true statement is-
a) Present with seizures *(MAHE 05)*
b) Lesion in ant. horn cells
c) Corticospinal tract
d) Hyporeflexia

3026. All of the following are true about Frederich's ataxia except- *(SGPGI05)*
a) Autosomal recessive
b) Spinal cord, dorsal root ganglion cell are primarily involved
c) Weakness in lower limbs
d) Plantar flexor response

3027. All of the following are signs of cerebellar disease except - *(COMEDK 05)*
a) Resting tremors b) Past pointing
c) Nystagmus d) Ataxic gait

3028. In Alzheimer's disease which area of brain in involved- *(HPU05)*
a) Cerebral cortex b) Hippocampus
c) Cerebellum d) A+B

3029. Lesion is Alzheimer's disease are commonest at- *(HPU05)*
a) Amygdala b) Nucleus of Meynerts
c) Pineal gland d) Prefrontal sulcus

3030. Guillain-Barre syndrome is characterized by the presence of the following except - *(UPSC 05)*
a) Quadriparesis
b) Depressed/absent deep tendon jerks
c) Objective evidence of sensory loss
d) Albumino-cytological dissociation in CSF

3031. Isolated 3rd nerve palsy is seen in- *(Jipmer 05)*
a) Frontal lobe tumour
b) Webers syndrome
c) Diabetes
d) Lateral medullary syndrome

3032. Brain abscess in cyanotic heart disease is commonly located in - *(AI06)*
a) Cerebellar hemisphere b) Thalamus
c) Temporal lobe d) Parietal lobe

3033. The following treatment options are useful in the management of Guiilain-Barre Syndrome except -
a) Intra-venous immunoglobulin *(UPSC 06)*
b) Intra-venous methotrexate
c) Plasmapheresis
d) Physical medical rehabilitation

3034. Alzeihmer's disease is associated with -
a) Chr 21 b) Chr 19 *(NIMHANS 06)*
c) Chr.21 d) Chr. 22

3035. Senile plaques in Alzeihmer's diseasae are rich in-
a) Amyloid *(NIMHANS 06)*
b) Tau protein
c) ApoE
d) Neuroglia

3036. Earliest feature in Multiple sclerosis is -
a) Optic neuritis *(NIMHANS06)*
b) Inter nuclear ophthalmologia
c) Ataxia
d) Weakness

3037. Kluver - Bucy Syndrome is associated with lesion in- *(NIMHANS06)*
a) Hippocampus b) Amygdala
c) Mamillary body d) Cerebral cortex

3038. Single most common finding in Aphasic Patients is - *(NIMHANS06)*
a) Anomia b) Apraxia
c) Alexia d) Agraphia

3039. Astasia - Abasia is seen in - *(NIMHANS 06)*
a) Parkinsonism b) Alzeihmer's
c) Schizophrenia d) Hysterical conversion disorder

3040. The following are preventable risk factors for dementia - *(COMED 06)*
a) Hypertension b)ApoE4
c) Age d) Lowered Homocysteine

3041. The annual conversion rate to dementia in patients with mild congnitive impairment is - *(COMED 06)*
a) 10% b) 20%
c) 30% d) 40%

3042. Which of the following is true about multiple sclerosis except - *(APPG 06)*
a) Nystagmus on abducting eye
b) Nystagmus on adducting eye
c) One and half syndrome
d) Pendular nystagmus

3043. In cranial synostosis scaphyocephaly there is premature closure of which suture ? *(APPG 06)*
a) Sagittal suture b) Coronal suture
c) Lamdoid suture d) All above

3044. All of the following are true regarding progressive multifocal leukoencephalopathy except - *(Kam 06)*
a) Only manifestation of JC virus infection
b) Late manifestation of AIDS
c) Cerebellar involvements is unknown
d) Paradoxical worsening with anti-retroviral therapy

3045. Bilateral inter nuclear ophthalmoplegia is pathognomonic of- *(Kam 06)*
a) Multiple sclerosis
b) Pontine glioma
c) Lateral medullary syndrome
d) Pontine haemorrhage

3046. Werneks's encephalopathy is characterized by all except - *(NIMHANS06)*
a) Global confusionb) Ataxia
c) Aphasia d) Abducent nerve paralysis

3047. Following is a clinical feature of cerebellar disease-
a) Paralysis b) Sensory deficit *(Corned07)*
c) Ataxia d) Resting tremors

3048. Cortical lesions are usually accompanied by word blindness due to involvement of *(Corned07)*
a) Angular gyrus b) Laterla geniculate body
c) Occipital cortex d) Edinger-Westphal nucleus

3049. All of the following are signs of cerebellar disease EXCEPT- *(Corned07)*
a) Resting tremorsb) Past pointing
c) Nystagmus d) Ataxic gait

3050. Unilateral steppage gait occurs in all except -
a) L 5 radiculopathy *(Corned08)*
b) Sciatic neuropathy
c) Peroneal neuropathy
d) Distal polyneuropathy

3051. According to the Glasgow Coma Scale (GCS), a verbal score of 1 indicates - *(Delhi PG Feb. 09)*
a) No response
b) Inappropriate words
c) Incomprehensible sounds
d) Disoriented response

3028)d 3029) b 3030) c 303l)c 3032) d 3033) b 3034) a,b 3035) a 3036) a 3037) b 3038) a 3039) d 3040) a 3041) a 3042)b 3043)a 3044)c,d 3045)a 3046)b 3047)c 3048)a 3049)a 3050)b 3051)a

3052. Reduced blink reflex occurs in all except -
a) Alcohol intoxication *(Manipal 09)*
b) Parkinsonism
c) Progressive supranuclear palsy
d) Myasthenia gravis

3053. Features of tentorial herniation include -
a) Vomiting *(Manipal 09)*
b) Deterioration of consciousness
c) Dilated pupil
d) All the above

3054. The following are true about benign paroxysmal positional vertigo except - *(UPSC-109)*
a) Fatigability b) Good reproducibility
c) Habituation d) Latency

3055. All of the following are signs of cerebellar disease except - *(COMED 09)*
a) Resting tremorsb) Past pointing
c) Nystagmus d) Ataxic gait

3056. Treatment of increased ICT are - *(PGINov. 10)*
a) Loop diureticsb) Mannitol
c) Hypercarbia d) Ventriculostomy catheter
e) Hypertonic saline

HEADACHE

3057. A female aged 30 presents with episodic throbbing headache for past 4 years. It usually involves one half of the face and is associated with nausea and vomiting. There is no aura, most likely diagnosis is-
a) Migraine b) Cluster headache
c) Angle closure glaucoma d) Temporal arteritis

3058. A female has episodic, recurrent headache in left hemicranium with nausea and parasthesia on right upper and lower limbs, is most probably suffering from - *(AIIMS June 2000)*
a) Migraine
b) Glossopharyngeal neuralgia
c) Herpes zoster infection of trigeminal Nerve
d) Brain tumour

3059. Ophthalmoplegic migraine *means*-*(AIIMSMay 03)*
a) When headache is followed by complete paralysis of the III and VI nerve on the same side as the hemicrania
b) When the headache is followed by partial paralysis of the III nerve on the same side as the hemicrania without any scotoma.
c) Headache associated with III, IV and VI nerve paralysis
d) Headache associated with optic neuritis

3060. Ophthalmoplegic migraine is characterized by -
a) Transient diplopia *(AI11)*
b) Headache with vomiting episodes
c) Headache with benign recurrent 3rd N. palsy
d) Headache with complete vision loss

3061. Drugs used in management of migraine include the following except? *(AI 10)*
a) Valproate b) Ethosuximide
c) Topiramate d) Verapamil

3062. Drugs used for Prophylaxis of migraine include the following except? *(AI 10)*
a) Sumitriptan b) Valproate
c) Serotonergic drugs d) TCAs

3063. All of the following durgs are used in prophylaxis of migraine, except - *(AI11)*
a) Propanolol b) Flunarizine
c) Tapiramate d) Levetiracetam

3064. What is drug of choice for acute attack of migraine-
a) Methysergide b) Caffeine *(May 95)*
c) Amitryptiline d) Sumatriptan

3065. A 45-year old man presents with a daily headache. He describes two attacks per day over the past 3 weeks. Each attack lasts about an hour and awakens the patient from sleep. The patient has noted associated tearing and reddening of his right eye as well as nasal stuffiness. The pain is deep, excruciating, and limited to the right side of the head. The neurologic examination is nonfocal. The most likely diagnosis of this patient's headache is - *(AIIMSNov 99)*
a) Migraine headache b) Cluster headache
c) Tension headache d) Brain tumour

3066. A woman has bilateral headache that worsens with emotional stress : she has two children, both doing badly in school diagnosis is - *(AI 01)*
a) Migraine b) Cluster headache
c) Tension headache d) Trigeminal neuralgia

3067. A 64 year old lady Kamla complains of severe unilateral headache on the right side and blindness for 2 years. On examination there is a thick cord like structure on the lateral side of the head. The ESR is 80 mm/hr in the first hour. The most likely diagnosis is - *(AIIMSMay 2001)*
a) Temporal arteritis b) Migraine
c) Cluster headache d) Sinusitis

3068. A 35 year old lady Malti has unilateral headache, nausea, vomiting and visual blurring. The diagnosis is- *(AIIMS June 99)*
a) Cluster headache
b) Glaucoma
c) Subarachnoid haemorrhage
d) Posterior fossa cyst.

3069. A 45 years old hypertensive male presented with sudden onset severe headache, vomiting and neck stiffness. On examination he did't have any focal neurological deficit. His CT scan showed blood in the Sylvain fissure. The probable diagnosis is -
a) Meningitis *(AIIMS May 2003)*
b) Ruptured aneurysm
c) Hypertensive bleed
d) Stroke

3052) d 3053) d 3054) b 3055) a 3056)a,b,d,e 3057) a 3058) a 3059) b 3060) c 306 l)b 3062) a 3063) d 3064) d 3065)b 3066)c 3067)a 3068)b 3069)b

3070. Sudden excruciating headache is seen in- *(PG1 Dec.*
a) SAH b) Aneurysmal bleeding *02)*
c) Epilepsy d) Intracerebral hemorrhage
e) Hysteria

3071. A patient presented with thunder clap headache. Followed by unconsciousness with progressive 3rd cranial nerve palsy - *(AIIMS Nov 09)*
a) Extradual hemorrhage
to) Aneurysmal subarachnoid hemorrhage
c) Basilar migraine
d) Cluster Headache

3077!. A patient presented with thunder clap headache followed by unconsciousness with pregressive III ranial nerve palsy. Likely diagnosis is -
a) Extradural hemorrhage *(AIIMS Nov 10)*
b) Aneurysmal subarachnoid hemorrhage
c) Basilar migraine
d) Cluster headache

3073. A woman complains of headache associated with paresthesias of the right upper and lower limb : likely diagnosis is - *(AI01)*
a) Trigeminal neuralgia
b) Gossopharyngeal neuralgia
c) Migraine
d) Cluster headache

3074. An adolescent female has headache which is intermittent in episode in associated with tinnitus, vertigo and hearing loss. There is history of similar complains in her mother. Most likely diagnosis -
a) Basilar migraine *(AIIMS Nov 09)*
b) Cervical spondylosis
c) Temporal arteritis
d) Vestibular neuronitis

3075. A young girl presents with repeated episodes of throbbing occipital headache associated with ataxia and vertigo. The family history is positive for similar headaches in her mother. Most likely diagnosis is - *(AI 11)*
a) Vestibular Neuronitis b) Basilar migraine
c) Cluster headache d) Tension headache

3076. Prophylaxis for migraine - *(NIMHANS 05)*
a) Sumitriptan b) Amytriptiline
c) Nifidipine d) Diazepam

3077. A 35-year-old man presents with daily headache. He describes two attacks per day over the last 3 weeks. Each attack lasts about an hour and awakens him from sleep. The patient has noticed associated teatringand reddening of the right eye as well as nasal stuffness. The pain's deep, excruciating, and limiting to the right side of the head. The neurological examination is normal. What is the most likely diagnosis ? *(UPSC-109)*
a) Migraine headache b) Tension headache
c) Cluster headache d) Brain tumour

3078. All of the following drugs can be used for the prophylaxis of migraine except - *(COMED 09)*
a) Propranolol b) Sumatriptan
c) Armitriptyline d) Flunarizine

3079. TVue about migraine - *(PGINov. 10)*
a) U/Ipain
b) Throbbing type of pain
c) A/W Nausea & vomitting
d) A/W Photophobia
e) Movement cause aggregation of pain

3080. A patient presented with thunder clap headache followed by unconsciousness with pregressive III ranial nerve palsy. Likely diagnosis is -
a) Extradural hemorrhage *(ARMS Nov 10)*
b) Aneurysmal subarachnoid hemorrhage
c) Basilar migraine
d) Cluster headache

3081. A young girl presents with repeated episodes of throbbing occipital headache associated with ataxia and vertigo. The family history is positive for similar headaches in her mother. Most likely diagnosis is - *(AI11)*
a) Vestibular Neuronitis b) Basilar migraine
c) Cluster headache d) Tension headache

3082. All of the following durgs are used in prophylaxis of migraine, except - *(AI11)*
a) Propanolol b) Flunarizine
c) Tapiramate d) Levetiracetam

3083. Migraine is due to - *(NEET/DNB Pattern)*
a) Dilatation ot cramaTartenes
b) Constriction of cranial arteries
c) Cortical spreading dissociation
d) Meningial inflammation

3084. Most common cause of headache- *(NEET/DNB Pattern)*
a) Tension headache b) Migraine
c) Cluster headache d) Trigeminal neuralgia

EPILEPSY

3085. Absence seizures are seen in - *(AIIMS Dec. 98)*
a) Grand mal epilepsyb) Myoclonic epilepsy
c) Petitmal epilepsy d) Hyperkinetic child

3086. Absence seizures are characterized on EEG by -
a) 3 Hz spike & wave *(AI 03)*
b) 1-2 Hz spike & wave
c) Generalized poly spikes
d) Hypsarrythmia

3087. All of the following are features of absence seizures except - *(AIIMS May 2005)*
a) Usually seen in childhood
b) 3-Hz spike wave in EEG
c) Postictal confusion
d) Preciptation by hyperventilation

3070)a,b 307l)b 3072)b 3073)c 3074)a 3075)b 3076)b 3077)c 3078)b 3079)All 3080)b 308l)b 3082)d 3083)c 3084)a 3085)c 3086)a 3087)c

3088. All of the following are features of juvenile Myoclonic epilepsy, except - *(AIIMS May 2004)*
a) Myoclonus on awakening
b) Generalized tonic-clonic seizures
c) Automatism
d) Absence seizures

3089. True about juvenile mycoclonic epilepsy -
a) Focal seizure *(PGI Dec 03)*
b) Generalised seizure
c) Myoclonus
d) Responses to Sodium Valproate
e) Spike and waves in EEG

3090. Myoclonic seizure typically seen in - *(PGIDec 98)*
a) SSPE b) Cerebellar lesion
c) Pontine lesion d) Thalamic lesion

3091. Commonest type of seizure in newborn -
a) Clonic b) Tonic *(AIIMSNov 07)*
c) Subtle d) Myoclonic

3092. All of the following drugs are used for managing status epilepticus except - *(AIIMS Nov 2004)*
a) Phenytoin b) Diazepam
c) Thiopentone sodium d) Carbamazepine

3093. All of the following drugs are used for managing status epilepticus except - *(AIIMS 06)*
a) Phenytoin b) Diazepam
c) Thiopentone sodium d) Carbamazepine

3094. Generalized Tonic clonic Status epilepticus, Rx of choice -
a) Ethosuxamide b) Sodium valprorate
c) Lamotrigine d)Lorazepam
e) Vigabatrinf) Propofol

3095. All are used in status epUepticus, except-(yt//MS' *May 93)*
a) Phenytoin b) Carbamazepine
c) Diazepam d) Phenobarbitone

3096. The drug of choice for absence seizures-
a) Valproate b) Gabapentin *(AIIMS Nov 06)*
c) Carbamazepine d) phenytoin

3097. A15 year old boy with epilepsy on treatment with combination of valproate and phenytoin has good control of seizures. Levels of both drugs are in the therapeutic range. All of the following adverse effects can be attributed to valproate except - *(AI04)*
a) Weight gain of 5 kg
b) Serum alanine aminotransaminase 1501U/L
c) Rise in serum ammonia level by 20 g/dl
d) Lymphadenopathy

3098. A patient who is being treated for temporal lobe epilepsy (complex partial seizures) and who is having recurrent seizures on his chronic regimen of carbamazepine is given phenobarbital as a second drug. However, the seizures increase in frequency. What is the probable reason for the apparent deleterious effect df adding phenobarbital -
a) Intracerebral bleeding from worsening bone marrow supression *(AIIMS Nov 99)*
b) Decreased carbamazepine level
c) Decreased stability of CNS neuronal membranes
d) Hypokalemia

3099. The term post traumatic epilepsy refers to seizures occuring- *(ALUMS Nov. 02)*
a) Within moments of head injury
b) Within 7 days of head injury
c) Within several weeks to months after head injury
d) Many years after head injury

3100. A 4 month pregnant lady on treatment with valproate regularly asked for your advice regarding taking the drug during pregnancy. What is the best course of action - *(AIIMS Nov 11)*
a) Immediately tape off valproate and start lamotrigine
b) Change to carbamazepine
c) Continue valproate and monitor blood levels
d) Slowly tape dose of valproate

3101. All of the following are characterisitic features of petitmal siezures except - *(UP 97)*
a) Short duration of seizures
b) Absence of motor activity during the seizures
c) On set after the age of 14 years
d) 3 Hz spike and wave pattern in EEG

3102. Simple partial seizure is diagnosed by -
a) EBG b) BEAR *(NIMHANS 2K)*
c) CT scan d) MRI

3103. In case of hepatic porphyria the safe anti con Vulsant-
a) Phenytoinb) Carbamazepine
c) Valparate d) Paraldehyde *(NIMHANS 01)*

3104. Side effects of diphenyl hydantion may include alll EXCEPT- *(Karnataka 02)*
a) Gingival hyperplasia
b) Acute cerebellar syndrome
c) Inter - nuclear opthalmoplegia
d) Megaloblastic anemia

3105. Carbmazepine is the drug of choice in *(MAHE05)*
a) Absence attacks b) Partial compl ex siezures
c) Myoclonus d) Innantile spams

3106. All the following are indications for br ain imaging in epilepsy, except- *(J & k 05)*
a) Epilepsy starts after the age of 5 years
b) Seizures have focal features clinical
c) EEG shows a focal seizure source
d) Control of seizures is difficult

3107. Well-recognised side effects of prolonged[1] Phenytoin use include the following except - *{UPSC 06)*
a) Hirsutism b) Lymphadenopathy
c) Ataxia d) Hypoglycaemia

3108. Which is most epileptogenic - *(NIMHANS 06)*
a) Lacunar infarct b) Embolic stroke
c) Thrombotic stroke d) Haemorrhagic stroke

3109. Mesial temporal lobe epitepsy is associated with -
a) Simple partial *(NIMHANS 06)*
b) Generalised Tonic Clonic
c) Complex partial
d) Atonic seizures

3088)c 3089)b,c,d,e 3090)a 3091)c 3092)d 3093)d 3094)d 3095)b 3096)a 3097)d 3098)b 3099)c 3100>c 3101)c 3102)a 3103)d 3104)c 3105)b 3106)a 3107)d 3108)a 3109)c

3110. Gustatory hallucinations are most commonly associated with - *(Corned 08)*
a) Temporal lobe epilepsy b) Grand mal epilepsy
c) Anxiety disorders d) Tobacco dependence

3111. All are the features of absence seizures except -
a) Usually seen in childhood *(Manipal 09)*
b) 3-Hz spike wave in EEG
c) Postictal confusion
d) Precipitation by hyperventilation

3112. The following are common causes of seizures in adults older than 60 years of age except -
a) Cerebrovascular disease *(UPSC-109)*
b) Central nervous system neoplasia
c) Degenerative disease
d) Mesial temporal lobe sclerosis

3113. False statement about mesial temporal lobe epilepsy - *(PGI May 10)*
a) Respond well to medical treatment
b) Associated with Tonic clonic seizure
c) MRI should be done
d) Surgery is treatment of choice
e) Hippocampal sclerosis

3314. Tt/t of choice in status cpilepticus-jT^^ *T/DNB Pattern)*
a) Im/diazepam ; ; ; v " b) iv; diazepam
c) Im phenytoin d) i.v, p^nytoin

3115. Pronator drip is a sign of - *(NEET/DNBI attern)*
a) UMN lesion of upper limb
b) **,LMN** lesion - | |g § S
c) Dorsal syringomyelia
d) Carpel tunnel syndrome

3116. A ventrolateral cordotomy is performed to produce relief of pain from the right leg. It is effective because it interrupts the - *(AI12)*
a) Left Dorsal Column
b) Left Lateral Spinothalamic Tract
c) Right Lateral Spinothalamic Tract
d) Right corticospinal Tract

3117. A patient with traumatic paraplegia due to injury of the thoracic cord of ^{6}T3 level' is observed to have blood pressure of 210/120. What should be the initial management ? *(AI 12)*
a) Subcutaneous LMWH
b) Steroids
c) Nifedipine
d) Normal saline / Dextrose

3118. Unilateral high stepping gait is seen in -
a) L5 radiculopathy *(NEEI/DMBPattern)*
b) Distal, radiculopathy
c) Cauda ecjuina syndrome =-k
d)

3119. Friedrich's ataxia is caused by which type of mutation - *(NEET/DNB Pattern)*
a) Point mutation
b) Expanded trinucleotide reoeat
S H ^fissense mutation
d)i n version

CEREBROVASCULAR ACCIDENT

3120. Most common cause of cerebrovascular accident is - *(Sep. 96)*
a) Embolism b) Arterial thrombosis
c) Venous thrombosisd) Haemorrhage

3121. Commonest cause of cerebral infarction is -
a) Embolism b) Arteritis *(AI98)*
c) Thrombosis d) Cysticercosis

3122. Most common cause of intracranial haemorrhage is- *(ASMS Dec 98)*
a) Sub arachnoid haemorrhage
b) Intracerebral haemorrhage
c) Subdural haemorrhage
d) Extradural haemorrhage

3123. The commonest cause of Intracerebral Bleed is -
a) Thrombocytopenia b) Diabetes *(AI 95)*
c) Hypertension d) Berry aneurysm

3124. Which of the following is the most common location of hypertensive haemorrhage- *(AI03)*
a) Pons
b) Thalamus
c) Putamen/extemal capsule
d) Subcortical white matter

3125. Which of the following is the commonest location of hypertensive *hsiemorrhsige-(AIIMSMay03, Nov 02)*
a) Pons b) Thalamus
c) Putamen/extemal capsule d) Cerebellum

3126. The most common location of hypertensive intracranial hemorrhage is - *(AI06)*
a) Subarachnoid spaceb) Basal ganglia
c) Cerebellum d) Brainstem

3127. Most common site of intracranial hemorrhage in hepertensive hemorrhage is - *(AIIMSMay 07)*
a) Basal ganglia b) Brainstem
c) Cerebellum d) Hippocampus

3128. Most common cause of subarachnoid hemorrhage is- *(ASMS Dec 98)*
a) Hypertension
b) Berry aneurysm
c) Intracranial tumors
d) Arterio-venous malformations *(AVM)*

3129. Most common cause of spontaneous sub-arachnoid haemorrhage is - *(May93)*
a) Trauma
b) Hypertension
c) Berry aneurysm rupture
d) Raised intracranial tension

3130. Most common cause of subarachnoid hemorrhage is - *(AIIMS May 2004 & AI 98, AI 99)*
a) Hypertension
b) Aneurysm
c) Arterio-venous malformation
d) Bleeding disorders

3110)a 3111)c 3112)d 3113)a,b3114)b 3115)a 3116)b 3117)c 3118)a 3119)b 3120)a 3121)a 3122)b 3123)c 3124)c 3125)c 3126)b 3127)a 3128)b 3129)c 3130)b

3131. Which is least common site of berry aneurysm -
a) Basilar artery *(Dec 95)*
b) Vertebral artery
c) Anterior cerebral artery
d) Posterior cerebral artery

3132. The most common site of Berry aneurysm is -
a) Junction of anterior communicating artery with anterior cerebral artery *(AI94)*
b) Junction of posterior communicating artery with internal carotid artery
c) Bifurcation of middle cerebral artery
d) Vertebral artery

3133. Berry aneurysm - Defect lies in - *(AIIMSMay 11)*
a) Degeneration of internal elastic lamina
b) Deposition of mucoid material in media
c) Degeneration of media/muscle cell layer
d) Disturbance in vessel wall

3134. The common cause of subarachnoid hemorrhage is-
a) Arterio-venous malformation *(AI06)*
b) Cavernous angioma
c) Aneurysm
d) Hypertension

3135. A lesion in the paracentral lobule causes -
a) Contralateral foot weakness *(PGI June 99)*
b) Seizures only
c) Migraine
d) Cognitive Loss

3136. The characteristic feature of a frontal lobe tumor is -
a) Abnormal gait b) Aphasia *(AI 94)*
c) Distractibility d) Antisocial behavior

3137. Following sensory impairments occur in extensive damage to somatosensory area of cerebral cortex. EXCEPT- *(Dec 94)*
a) Pressure
b) Sensory localization
c) Exact weight determination
d) Pain

3138. In right handed person temporoparietal lobe injury leads to all, Except - *(AIIMSJune 98)*
a) Wernicke's aphasia
b) Urinary incontinence
c) Acalculia
d) Superior quadrantic anopsia

3139. A medial temporal lesion produces - *(PGI June 99)*
a) Visual amnesia only b) Auditory amnesia
c) Aparaxia d) Anterograde amnesia

3140. Hemiplegia is most commonly caused by thrombosis of- *(AIMS June 97)*
a) Anterior cerebral artery
b) Middle cerebral artery
c) Posterior cerebral artery
d) Basilar artery

3141. Hemiplegia is commonly associated with infarction of the area of distribution of the - *(AI 94)*
a) Anterior cerebral artery
b) Middle cerebral artery
c) Posterior cerebral artery
d) Anterior communication artery

3142. A patient being evaluated for aphasia is unable to repeat sentences correctly or to name objects properly. However the patient's speech is effortless and melodic. There are frequent errors in word choice and obvious difficulties in comprehension. The remainder of the patient's neurologic examination is normal. Damage in which area of the brain would account for this type of aphasia -
a) Posterior temporal and parietal lobes, dominant hemisphere *(AIIMS Nov 99)*
b) Frontal and parietal lobes, dominant hemisphere
c) Prefrontal and frontal regions, dominant hemisphere
d) Posterior parietal and temporal lobes, nondominant hemisphere

3143. Which of the following is not a feature of right middle cerebral artery territory infarct -
a) Aphasia *(AIIMS Nov 2002)*
b) Hemiparesis
c) Facial weakenss
d) Dysarthria

3144. Damage to categorical hemisphere usually leads to-
a) Normal speech *(AIIMSMay08)*
b) Increased speech
c) Decreased speech
d) Senseless, fluent speech

3145. Neuro-physiological defects present in right lobe involvement all, except - *(AIIMS May 09)*
a) Visuo-spatial defect b) Anosognosia
c) Dyscalculia d) Dysgraphia

3146. Which of the following is not a usual feature of right middle cerebral artery territory infarct -
a) Aphasia *(AIIMSMay 03)*
b) Hemiparesis
c) Facial weakness
d) Dysarthria

3147. Anterior cerebral artery occlusion can cause -
a) Urinary retention *(May 93)*
b) Contralateral lower leg weakness
c) Hemianaeshsia of opposite side of face
d) Hemianopia

3148. Following are features of ischemia in Anterior choroidal artery territory except- *(AI 2011)*
a) Hemiparesis
b) Hemisensory loss
c) Homonymous hemianopia
d) Predominant involvement of the anterior limb of internal capsule

313l)b 3132)a 3133)c 3134)c 3135)a 3136)c,d 3137)d 3138)b 3139)d 3140)b 3141)b 3142)a 3143)a 3144)d 3145)c 3146)a 3147)b 3148)d

3149. Memory impairment occurs in embolism of posterior cerebral artery because of damage to - *(Dec 94)*
a) Hipppocampal gyrus
b) Superior temporal gyrus
c) Prefrontal gyrus
d) Angular gyrus

3150. Which of the following sites is not involved in a posterior cerebral artery infarct - *(AI11)*
a) Midbrain b) Thalamus
c) Temporal lobe d) Anterior Cortex

3151. Anterior spinal artery throbosis is characterized by-
a) Loss of pain & touch *(PGI Dec 2000)*
b) Loss of vibration sense
c) Loss of power in lower limb
d) Sphincter dysfuction

3152. Lacunar infarcts are caused by - *(AI 01)*
a) Lipohyalinosis of penetrating arteries
b) Middle carotid artery involvement
c) Emboli to anterior circulation
d) None of the above

3153. Lacunar infarcts manifests as -
a) Pure sensory weakness b) Pure motor weakness
c) Ataxic paresis d) Dysarthria
e) Quadriparesis

3154. Manifestation of lacular infarcts are -
a) Pure motor loss b) Pure sensory loss
c) Ataxia d) Dysarthria
e) Quadriplegia

3155. Lateral medullary syndrome is caused by thrombosis of- *(Dec 95)*
a) Anterior inferior cerebral artery
b) Posterior interior cerebellar artery
c) Vertebral artery
d) Basilar artery

3156. Wallenberg's syndome does not involve -
a) IX b)X *(PGI June 99)*
c) XI d)XII

3157. Lesion of posterior inferior cerebellar artery at brain involves/affects - *(PGI DEC 03)*
a) Spinal tract of trigeminal nerve
b) Tractus Solitarius
c) Spinothalamic tract
d) Corticospinal tract

3158. Abdul Khan presents with pain, numbness and impaired sensation over half of the face along with ataxia, nystagmus, dysphagia and hoarseness of voice. His pain and thermal sensations over opposite half ane impaired Horner's syndrome is present. Likely cause of the disease is thrombosis of which vessel? *(AIIMS Nov 01)*
a) AICA (Anterior inferior cerebellar artery)
b) PICA (Posterior inferior cerebellar artery)
c) Basilar
d) Pontine vessels

3159. Lateral medullary syndrome (Wallenberg syndrome) is characterized by all, Except - *(June 97)*
a) Giddiness
b) Dysphagia
c) Crossed hemianaesthesia
d) Homer's syndrome is rare

3160. All are features of Wallenberg's syndrome, except- *(AIIMS Feb 97)*
a) Ipsilateral loss of pain and temperature
b) Ipsilateral loss of taste sensation
c) Ipsilateral loss of posterior column sensations
d) Ipsilateral involvement of lower cranial nerves.

3161. C/F of lateral medullary syndrome -
a) Ipsilateral numbness of arm, trunk
b) Ipsilateral 12th nerve palsy
c) Ipsilateral Homer's syndrome
d) Contralateral pyramidal tract sign.

3162. Lateral medullary syndrome, features are -
a) Ipsilateral numbness of face and trunk
b) Homer's syndrome *(PGIJune 07)*
c) Ipsilateral ataxia
d) Contralateral paralysis

3163. Pontine stroke is associated with all except - *(AI07)*
a) Bilateral pin point pupil b) Pyrexia
c) Vagal palsy d) Quadriparesis

3164. All of the following statements are true about Benedikt's syndrome except - *(AI 07)*
a) Contralateral tremor
b) 3rd nerve palsy
c) Involvement of the penetrating branch of the basilar artery
d) Lesion at the level of the pons

3165. Millard gubler syndrome includes the following except- *(AI 07)*
a) 5^{th} nerve palsy b) 6^{th} nerve palsy
c) 7^{th} nerve palsy d) Contralateral hemiparesis

3166. In Millard Gubler syndrome all are involved except - *(AIIMS May 08)*
a) 5^{th} cranial nerve b) 6^{th} cranial nerve
c) 7^{th} cranial nerve d) Contralateral hemiplegia

3167. A hypertensive individual had a sudden headache and became unconscious within a few minutes. On regaining consciousness, there was complete flaccid hemiplegia with no involvement of upper face, absence of tendon reflexes and a positive Babinski sign. Which one of the following arteries could have ruptured - *(AIIMS Nov 2003)*
a) Lateral striate branch of middle cerebral
b) Medial striate branch of anterior cerebral
c) Posterolateral branch from posterior cerebral
d) Posterior choroidal branch of posterior cerebral

3168. A 45 year old hypertensive male patient presented in the casualty with two hours history of sudden onset of severe headache associated with nausea and vomiting. On clinical examination the patient had necks stiffness and right sided ptosis. Rest of the

3149)a 3150)d 3151)a,c,d 3152)a 3153)a,b,c,d 3154)a,b,c,d 3155)c 3156)d 3157)a,b,c 3158)b 3159)d 3160)a 3161)a,c 3162)a,b,c 3163)c 3164)d 3165)a 3166)a 3167)a 3168)c

neurological examination was normal. What is the clinical diagnosis - *(AIIMS Nov 2003)*
a) Hypertensive brain haemorrhage
b) Migraine
c) Aneurysmal subarachnoid haemorrhage
d) Arteriovenous malformation haemorrhage

3169. Nerve compressed by aneurysm of posterior communicating artery is - *(AIIMS May 08)*
a) Occulomotor nerve b) Optic nerve
c) Hypophysis cerebri d) Trochlear nerve

3170. A 28 years old male, who was known case of mitral valvular heart disease developed weakness on right side of body which gradually recovered completely over a period of 2 weeks. Blood pressure of the patient was normal and laboratory studies did not reveal any significant abnormality. What is the diagnosis? *(AI10)*
a) TLA
b) Ischemic stroke
c) Hemorrhagic stroke
d) Cerebral salt wasting syndrome

3171. Most common cause of stroke in young women in India among OCP users - *(PGI Dec 98)*
a) Cortical vein thrombosis b) Moyamoya disease
c) Atherosclerosis d)HT

3172. A 62 year old diabetic patient presented with history of progressive right-sided weakness of one-month duration. The patient was also having speech dificulty. Fundus examination showed papilledema. Two months ago, she also had a fall in her bathroom and struck her head against a wall. The most likely clinical diagnosis is - *(AIIMS Nov 2004)*
a) Alzheimer's disease
b) Left parietal glioma
c) Left MCA territory stroke
d) Left chronic subdural haematoma

3173. Most common type of intracranial haemorrhage in boxers - *(Dec 95)*
a) Intra ventricularb) Extradural
c) Subdural d) Cerebellar

3174. A nondiabetic, non hypertensive adult male develops sudden severe headache with altered sensorium, likely diagnosis is - *(AI 99)*
a) Brain tumourb) Sub arachnoid haemorrhage
c) Encephalitis d) Meningitis

3175. A 25-years-old male had severe headache followed by unconsciousness. CSF tap revealed red blood cells. Most likely diagnosis is - *(Dec 94)*
a) Sub dural hematoma b) Embolism
c) Tumour d) Ruptured aneurysm

3176. 56 years female presents with severe headache and neck stiffness of abrupt onset. She tells she never had such a headache before. On further asking she tells she is nausceated and has photophobia. Diagnosis is - *(AIIMS May 09)*
a) Viral encephalitis b) Migraine
c) Sub arachnoid hemorrhage d) Hydrocephalus

3177. Subdural haematoma most commonly results from -
a) Rupture of intracranial aneurysm
b) Rupture of cerebral AVM *(AIIMS May 2004)*
c) Injury to cortical bridging veins
d) Hemophilia

3178. A 24 year old man falls on the ground when he is struck in the right temple by a baseball. While being driven to the hospital, he lapses into coma. He is unresponsive with the dilated right pupil when he reaches the emergency department. The most important step in initial management is - *(AI 02)*
a) Craniotomy
b) CT scan of the head
c) X-ray of the skull and cervical spine
d) Doppler ultrasound examination of the neck

3179. Transtentorial herniation causes all except -
a) Neck stiffness *(AIIMS May 2001)*
b) Post cerebral artery infarct.
c) Contralateral hemeiparesis
d) 3rd Nerve palsy with contralateral pupillary dilatation

3180. Duret hemorrhage seen in - *(PGI June 08)*
a) Brain b) Kidney
c) Heart d)Lung

3181. Which of the following is specifically used for grading of SAH? *(AI 10)*
a)
b) Glasgow coma scale
c) Glasgow scale
d) Hunt and Hess scale

3182. Which is true about carotid stenosis-*(PGI June 2K)*
a) Ipsilateral hemiplegia by embolism of MCA
b) Bruit indicates severity of stenosis
c) Common in External carotid artery
d) Aspirin reduces risk of TIA

3183. Which of the following is the most common cause of late neurological deterioration in a case of cerebro-vascular accident - *(AIIMS Nov 2000)*
a) Rebleeding b) Vasospasm
c) Embolism d) Hydrocephalus

3184. Lesion in which of the following structure leads to Kluver-Bucy syndrome - *(AIIMS May 2004)*
a) Amygdala b) Hippocampus
c) Hypothalamus d) Temporal lobe

3185. The only thrombolytic agent approved for the treatment of acute ischemic stroke is -
a) Tissue Plasminogen activator *(AIIMSMay 04)*
b) Streptokinase
c) Urokinase
d) Pro-urokinase

3186. Which one of the following agents has been associated with hemorrhagic stroke ? *(AI 06)*
a) Phenylpropanolamine b) Terfenadine
c) Quinidine d) Fenfluramine

3169)a 3l70)b 3171)a 3172)d 3173)c 3174)b 3175)d 3176)c 3177)c 3178)a 3179)a,d 3180)a 3181)d 3182)d 3183)b 3184)a 3185)a 3186)a

3187. Most common nerve involved in intracranial aneurysm is - *(AI98)*
a) Trochlear b)VII
c) VIE d) Occulomotor

3188. Diffuse axonal injury is characterized by all except-
a) Due to shearing force *(A1PGMEE 08)*
b) Predominant white matter haemorrhages, in basal ganglia and corpus collasoum
c) Increased intracranial tension is seen in all cases
d) Most common at junction of grey and white matter

3189. Damage to superior branch of middle cerebral artery results in - *(Delhi 96)*
a) Personality change b) Motor aphasia
c) Urinary incontinence d) Sensory aphasia

3190. The pheonomenon of "sparing of the macula" is due to the collateral circulation between- *(Kam 95)*
a) Middle and posterior cerebral arteries
b) Anterior and middle cerebral arteries
c) Anterior and posterior cerebral arteries
d) Anterior, middle and posterior cerebral artries

3191. All are sites of intracranial aneurysms except -
a) Post inferior cerebellar artery *(AP 96)*
b) Bifurcation of MCA
c) Junction of ICA & post, communicating artery
d) None

3192. Presence of hemiplegia with diminution of vision in the contralateral eye suggests occlusion of -
a) Middle cerebral artery *(UP 97)*
b) Basilar artery
c) Anterior cerebral artery
d) Internal carotid artery

3193. Hemianopia cortical blindness, amnesia and thalamic pain are associated with the occlusion of -
a) Anterior cerebral artery *(UPSC97)*
b) Middle cerebral artery
c) Posterior cerebral artery
d) Basilar artery

3194. Following is true regarding cerebral venousinuses
a) Transverse sinus is unequal *(NIMHANS 2K)*
b) CVT causes enophthalmos
c) CVT causes empty delta sign
d) Communicate with subdural space

3195. Lateral medullary syndrome is associated with -
a) Ipsilateral pain temp loss *(NIMHANS2K)*
b) Contralateral vibration loss
c) Contralateral pain and temp loss
d) Ipsilateral hemiplegia

3196. Sudden onset of hemiplegia with contra lateral ophthlamoplegia the probable lesion is in- *(NIMHANS01)*
a) Pons b) Lateral medulla
c) Mesencephalon d) Forebrain

3197. Visual cortex is supplied by - *(M.P 98)*
a) Anterior cerebral arerys
b) Medial cerebral artery
c) Posterior cerebral artery
d) Anterior inferior cerebellar artery

3198. Commonest site of aneurysm is - *(SCTIMS 98)*
a) Middle cerebral artery
b) Vertebrobasilar system
c) Anterior communicating artery
d) Internal carotid artery

3199. A 45 year old hypertensive male patient presented in the casualty with 2 hour history of sudden onset of severe headache associated with nausea and vomiting. On clinical examination the patient had neck stiffness and right sided ptosis. Rest of the neurological examination was normal. What is the clinical diagnosis ? -
a) Hypertensive brain haemorrhage
b) Migraine
c) Aneurysmal subarachnoid haemorrhage
d) Arterio venous malformation haemorrhage

3200. Most common nerve involved in intracranial aneurysm is- *(SGPGI05)*
a) mCN b)VICN
c) VCN d)VICN

3201. In adult male person presents with drowsiness, vertigo & unconsciousness which artery is involved-
a) Anterior cerebral artery *(AMU05)*
b) Middle cerebral artery
c) Posterior cerebral artery
d) Anterior choroidal artery

3202. All are predisposing causes of cerebral venous thrombosis except - *(COMEDK05)*
a) Hypotension b) Oral contraceptives
c) Pregnancy d) Aplastic anaemia

3203. In a patient with ischaemic stroke, intravenous recombinant tissue plasminogenactivator has mainly been found to be useful during the initial -
a) 3 hours b) 6 hours *(UPSC 07)*
c) 12 hours d) 24 hours

3204. Hemiparesis is NOT a feature of - *(Corned 08)*
a) Carotid artery occlusion
b) MCA occlusion
c) ACA occlusion
d) Vertebral artery occlusion

3205. A 20-year old male presents with severe headache, vomiting and altered sensorium of 2 days duration. Which of the following disease will not be considered in the differential diagnosis ? *(Delhi PG Mar. 09)*
a) Acute viral encephalitis
b) Subarachnoid hemorrhage
c) Migraine
d) Cortical venous thrombosis

3206. Angioid streaks occur in - *(Manipal 09)*
a) Sturge-Weber's syndrome
b) Sickle cell disease (SS)
c) Pseudoexfoliation syndrome
d) Septo-optic dysplasia

3187)d 3188)c 3189)b 3190)a 3191)a 3192)d 3193)c 3194)a,c 3195)c3196)c 3197)c,d 3198)c3199)c 3200)d 3201) c 3202) d 3203) a 3204) d 3205) c 3206) b

3207. In benign intracranial hypertension- *(Manipal 09)*
a) There is a restriction of upgaze
b) Normal ventricles is found in 50% of cases
c) Brain scan in important in young woman to exclude sagittal sinus thrombosis
d) Optic nerve fenestration should be performed early before the vision is affected

3208. Features of carotid-cavernous fistula include -
a) Dilated superior ophthalmic vein on CT scan
b) Blood in the Schlemm's canal *(Manipal 09)*
c) Proptosis of contralateral eye suggests bilateral carotid-cavernous fistula
d) Traumatic fistula rarely close spontaneously

3209. Cranial nerve most commonly involved in posterior communicating artery aneurysm is - *(UPSC-109)*
a) Oculomotor b) Facial
c) Optic d) Trigeminal

3210. Drugs associated with ischemic stroke include the following except - *(UPSC-109)*
a) Cocaine b) Oral contraceptives
c) Amphetamines d) Barbiturates

3211. Delayed neurological deficits in a case of aneurysmal rupture occurs due to - *(PGINov 10)*
a) Rerupture b) Vasospasm
c) Hypothermia d) Hyponatremia
e) Hypokalemia

3212. Berry aneurysm - Defect lies in - *(AIIMSMay 11)*
a) Degeneration of internal elastic lamina
b) Deposition of mucoid material in media
c) Defect in muscular layer
d) Disturbance in vessel wall

3213. All of the following are true about anterior choroidal artery syndrome except - *(A111)*
a) Hemiparesis
b) Hemisensory loss
c) Homonymous Hemianopia
d) Involvement of anterior limb of internal capsule

3214. Which of the following sites is not involved in a posterior cerebral artery infarct - *(AI11)*
a) Midbrain b) Thalamus
c) Temporal lobe d) Anterior Cortex

3215. Most common cause of spontaneous SAH - *(NEET/DNB Pattern)*
a) Trauma
b) Aneurysm
c) AV malformation
d) Hypertension

3216. Cerebral Ischemia occur when cerebral blood flow is less than- *(AI 12)*
a) 10 ml/1 OOg/minute b) 20 ml/1 OOg/minute
c) 40 ml/1 OOg/minute d) 50 ml/1 OOg/minute

3217. Following sensory impairments occur in extensive damage to somatosensory area of cerebral cortex. *(NEET/DNB Pattern)*
a) Pressure
b) Sensory localization
c) Exact weight determination
d) Pain

3218. Most common site of spontaneous SAH - *(NEET/DNB Pattern)*
a) Left inferior frontal b) Parietal
c) Temporal, occipital d) Cerebellum

3219. Unable to consolidate long term memory. Which lobe of the brain is involved - *(NEET/DNB Pattern)*
a) Frontal b) Parietal
c) Temporal d) Occipital

3220. Gerstmahs sy ndromeallexcepl- *(NEEI/DNB- Pattern)*
a) Acalculia b) Agraphia
c) Aphasia d) Agnosia

3221. Which of the following is most likely to be affected in an anuerysm of posterior cerebral artery (PCA)? *(AIIMS, May 12)*
a) Hypophysis cerebri
b) Trochlear nerve
c) Oculomotor nerve
d) Optic nerve

3222. Lateral medullary syndrome is caused by thrombosis of- *(NEET/DNB Pattern)*
a) Anterior inferior cerebellar artery
b) Posterior interior cerebellar artery
c) Vertebral artery
d) Basilar artery

3223. A patient with suspected subarachnoid haemorrhage presents with blood isolated in the fourth ventricle on a CT scan. Aneurysmal rupture is likely to have resulted from - *(AI 12)*
a) Posterior Inferior Cerebellar Artery Aneurysm
b) Anterior Communicating Artery Aneurysm
c) Posterior Communicating Artery Aneurysm
d) Basilar Artery Tip Aneurysm

3224. Pontine hemorrhage most common cause is - *(NEET/DNB Pattern)*
a) Hypertension
b) Diabetes
c) Trauma
d) Aneurysmal rupture

3225. An adult hypertensive male presented with sudden onset severe headache and vomiting. On examination, there is marked neck rigidity and no focal neurological deficit was found. The symptoms are most likely d/t - *(NEET/DNB Pattern)*
a) Intracerebral parenchymal hemorrhage
b) Ischemic stroke
c) Meningitis
d) Subarachnoid hemorrhage

PERIPHERAL NERVE AND MUSCLES

3226. All are true about peripheral-neuropathy except - *(AI 99)*
a) Glove and stocking anaesthesia
b) Poximal muscle weakness
c) Nerve-conduction deficit
d) Decreased reflexes

3227. Sensory motor neuropathy is caused by -
a) DM b) Lead poisoning *(PGI Dec. 02)*
c) Arsenic d) Leprosy
e) AIDS

3207)c 3208)c 3209)a 3210)d 3211)a,b,d 3212)b 3213)d 3214)d 3215)b 3216)b 3217)d 3218)c 3219)c 3220) c 3221) c 3222) c 3223) a 3224) a 3225) d 3226) b 3227)a,c,d,e

3228. All can cause peripheral neuropathy, Except -
a) Uraemia b) Porphyria (*June 97)*
c) Lead toxicity d) Hypothyroidism

3229. Dying back neuropathy is seen in all except -
a) Arsenic neuropathy *(AIPGMEE08)*
b) Gullain Barre syndrome
c) Diabetic neuropathy
d) Vasculitic neuropathy

3230. In small fiber neuropathy presents *as-(PGI June 08)*
a) Burning pain b) Tingling & numbness
c) Foot drop d) Burning sensation
e) Cramp

3231. Polyneuropathy is seen in -
a) Vitamin deficiency b) Osteoporosis
c) DM d)Myxoedema
e) Amyloidosis

3232. Neuropathy is not seen in- *(PGI June 03)*
a) Tuberculosis b)SLE
c) Diabetes Mellitus d) Polyarteritis nodosa
e) Sarcoidosis

3233. All of the following are predominant motor neuropathy except - *(AIIMS 06)*
a) Acute inflammatory demyelinating polyradiculo neuropathy
b) Porphyric neuropathy
c) Lead intoxication
d) Arsenic intoxication

3234. All of the following can cause neuropathies with predominant motor involvement except - *(AI04)*
a) Acute inflammatory demyelinating polyneuropathy
b) Acute intermittent porphyria
c) Lead intoxication
d) Arsenic intoxication

3235. Pure motor paralysis is seen in - *(AI 2000)*
a) Polio
b) Guillain Barre syndrome
c) Diabetes mellitus
d) Sub-Acute Combined Degeneration

3236. Predominantly sensory neuropathy is/are caused by- *(PGI June 01)*
a) Cisplatin b) Pyridoxineexcess
c) Suramin d)Diphtheria
e) Guillain-Barre syndrome

3237. Inflammation of nerve is seen in - *(PGI DEC 03)*
a) Leprosy b) Diabetes
c) Guillain Barre Syndrome d) Diphtheria

3238. All causes ascending motor paralysis, except -
a) Diabetes mellitus b) Diphtheria *(A12K)*
c) Guillain Barre syndrome d) Porphyria

3239. True about autonomic neuropathy are all except -
a) Resting tachycardia *(AIIMS May 08)*
b) Silent MI
c) Orthostatic hypotension
d) Bradyardia

3240. Episodic generalized weakness can occur due to all of the following acute electrolyte disturbances, EXCEPT- *(AIIMS May 06)*
a) Hypokalemia b) Hypocalcemia
c) Hyponatremia d) Hypophosphatemia

3241. Episodic muscular weakness is seen in -
a) lK^+ *(PGI June 03)*
b) Lambert Eaton syndrome
c) Myasthenia Gravis
d) Tuberculosis
e) Multiple sclerosis

3242. The differential diagnosis of Botulism includes all the following except - *(AI 95)*
a) Myasthenia Gravis
b) Guillain Barre syndrome
c) Polio
d) Clostridial myonecrosis

3243. All of the following can lead to trophic ulcers in the fingers EXCEPT - *(AIIMS Nov 2000)*
a) Cervical disc prolapse
b) Subacute combined degeneration of spinal cord
c) Leprosy
d) Syringomyelia

3244. Intestinal hypomotility is seen in all of the following except - *(AI 95)*
a) Diabetes b) Parkinsonism
c) Amyloidosis d) All of the above

3245. Trophic ulcers are seen in a/e - *(PGIDec 2000)*
a) Polio b) Syringomyelia
c) Leprosy d) TB. Meningitis

3246. Muscular weakness due to deficiency of magnesium is enhanced by presence of - **(***PGI June 97)*
a) Hyperkalemia b) Metabolic alkalosis
c) Metabolic acidosis d) Hypernatremia

3247. All are congenital myopathies except -
a) Central core myopathy *(AIIMS Nov 01)*
b) Nemaline myopathy
c) Z band myopathy
d) Centronuclear myopathy

3248. All are congential myopathies except-
a) Central Core myopathy *(AIIMS May 11)*
b) Centronuclearmyopathy
c) Z band myopathy
d) Nemalin myopathy

3249. Demyelination is seen in - *(PGI Dec 02)*
a) Multiple sclerosis b) AIDS
c) Human leukoencephalopathy d) Polio
e) Leukodystrophy

3250. Thymoma can be associated with all, except -
a) Superior mediastinum syndrome *(AIIMS Dec 95)*
b) Myasthenia gravis
c) Hypergammaglobulinemia
d) Pure red cell aplasia

3228) d 3229) b 3230) a,b 3231)a,c,d,e 3232) a 3233) d 3234) d 3235) a 3236) a,b 3237)a,c,d 3238) b 3239) d 3240) b 3241)a,b,c,e 3242) d 3243) b 3244) d 3245) a,d 3246) c 3247) c 3248) c 3249)a,b,c 3250) c

3251. Which of the following is not associated with thymoma- *(AI 01)*
a) Red cell aplasia
b) Myasthenia gravis
c) Hypergammaglobulinemia
d) Compression of the superior mediastinum

3252. Thymoma is associated with - *(AI2000)*
a) Myasthenia gravis
b) Scleroderma
c) Oesophageal atresia
d) Hypergammaglobulinemia

3253. All of the foilwing may be associated with thymoma, Except - *(AI 10)*
a) SIADH
b) Myaesthenia gravis
c) Hypogammaglobulinemia
d) Cushing's syndrome

3254. Thymoma is associated with - *(AI94)*
a) Myasthenia gravis
b) Scleroderma
c) Oesophageal atresia
d) Hypergammaglobulinemia

3255. Thymoma commonly presents with - *(A1PGMEE 08)*
a) Myasthenia gravis
b) Renal failure
c) Hepatic failure
d) Testicular fiminization

3256. Myasthenia gravis is associated with-
a) Decreased acetylcholine at nerve endings
b) Decreased myosin *(PGIDEC 01)*
c) Absent troponin C
d) Decreased myoneural junction transmission

3257. All are clinical features of myasthenia gravis, except - *(AIIMS Fed 9 7)*
a) Spontaneous remission
b) Absent deep tendon reflexes
c) Proximal muscle involvement
d) Worsen by exertion

3258. The most sensitive test for the diagnosis of myasthenia gravis is - *(AI 05)*
a) Elevated serum ACH-receptor binding antibodies
b) Repetitive nerve stimulation test
c) Positive edrophonium test
d) Measurement of jitter by single fibre electromyography

3259. 21 year old female presents with history of mild bilateral ptosis, proximal muscle weakness and easy fatiguability which among the following is best in diagnosing this condition - *(AIIMS Nov 09)*
a) Muscle biopsy
b) Edrophonium test
c) Repetitive nerve stimulation
d) Electro myography

3260. A Thirty five year old female has proximal weakness of muscles, ptosis and easy fatigability. The most sensitive test to suggest the diagnosis is -
a) Muscle Biopsy b)CPK levels *(AI11)*
c) Edrophonium test d) Single fiber EMG

3261. A thirty five year old female has proximal weakness of muscles, ptosis and easy fatigability. The most sensitive test to suggest the diagnosis is -
a) Muscle Biopsy b)CPK levels *(AI 11)*
c) Edrophonium test d)EMG

3262. True about myasthenia gravis - *(PGINov 09)*
a) Associated with thymomoa in % of cases
b) Incremental response seen with repetitive electric stimuli
c) Skeletal muscle function improve after rest
d) Edrophonium test negative
e) T Aceytylcholine receptor

3263. Drug of choice for myasthenia gravis- *(PGI Dec 99)*
a) Gallamine b) Succinylocholine
c) D. tubocurare d) Pyridostigmine.

3264. In myasthenia gravis, correct statement regarding thymectomy is -
a) Should be done in all cases
b) Should be done in cases with ocular involvement only
c) Not required if controlled by medical management
d) Should be done only in cases that are associated with thymoma

3265. Muscles supplied by following nerve is affected least by myasthenia gravis - *(PGI June 06)*
a) m b)rv
c) VI d)IX
e) xn

3266. Which one of the following is correct regarding Eaton-Lambert syndrome - *(AIIMS Nov 2004)*
a) It commonly affects the ocular muscle
b) Neostigmine is the drug of choice for this syndrome
c) Repeated electrical stimulation enhances muscle power in it
d) It is commonly associated with adenocarcinoma of lung

3267. True about polymyositis is - *(PGI June 99)*
a) Ocular muscle involvement
b) Pharyngeal involvement
c) Muscle atrophy
d) Brisk reflexes common

3268. Primary idiopathic polymyositis does not involve -
a) Pelvic girdle muscles *(AIIMSDec 97)*
b) Neck muscles
c) Ocular muscles
d) Pharyngeal muscles

3269. Which is NOT a feature of polymyositis -
a) Ocular muscle involvement *(AIIMSFeb 97)*
b) Gottron's rash
c) Proximal muscle involvement
d) Pain in limbs

325l)c 3252)a 3253)a 3254)a 3255)a 3256)d 3257)b 3258)c 3259)b 3260)d 3261)c 3262)c 3263)d 3264)a 3265)? 3266) c 3267) b,c 3268) c 3269) a,b

3270. In dermatomyositis which is not *seen-(AlIMSNov 09)*
a) Salmon patch b) Gottron's papules
c) Peringual telangiectasia d) Mechanic finger

3271. True about Dermatomyositis- *(PGI Nov 09)*
a) Gottron sign
b) ANA is positive in all cases
c) All cases a/w internal malignancy
d) Proximal muscle wasting
e) Steroid maintenance

3272. In idiopathic polymyositis, following are seen except-
a) Ocular muscles commonly involved
b) Pharyngeal muscles involved *(PGI June 97)*
c) Cutaneous manifestations
d) Proximal limb muscles invariably involved

3273. Which one of the following clinical findings excludes the diagnosis of polymyositis ? *(AI06)*
a) Neck muscle involvement
b) Extraocular muscle involvement
c) Dysphagia
d) Abdominal muscle involvement

3274. Gene for myotonic dystrophy is coded on chromosome number- *(AI 99)*
a) 19 b) 20
c)21 d)24

3275. Inverted champagne bottle muscle atrophy occurs in- *(May 93)*
a) Peroneal muscular atrophy
b) Duchenne's muscular dystrophy
c) Progressive muscular atrophy
d) Amyotrophic lateral sclerosis

3276. In Duchenne's muscular dystrophy, which muscle is not involved - *(AIIMS Feb 9 7)*
a) Gastrocnemius b) Vastus medialis
c) Brachioradialis d) Infraspinatus

3277. Which of the following is not a limb girdle dystrophy- *(AIIMS Nov 06)*
a) Sarcoglycan dystrophy
b) Dystrophin dystrophy
c) Dysferin dystrophy
d) Calpain dystrophy

3278. Which of the following is not a limb girdle dystrophy - *(AIIMS Nov 11)*
a) Sarcoglycan dystrophy
b) Dystrophin dystrophy
c) Dysferlin dystrophy
d) Calpain dystrophy

3279. In primary idiopathic polymyositis, the following group of muscles is almost never affected - *(UP 97)*
a) Proximal limb girdle muscles
b) Pharyngeal muscles
c) Extensor neck muscles
d) Ocular muscles

3280. Cardiac involvement is present in all except -
a) Fascio scapulo humeral dystrophy *(Jipmer 95)*
b) Ducchenes dystrophy
c) Fredreick's ataxia
d) Myotonic dystrophy

3281. Wading gait is seen in - *(TN 95)*
a) Bilateral dislocation of hip
b) Myopathies
c) Common peroneal nerve injury
d) Unilateral dislocation of the hip

3282. Duchennes pseudo muscular hypertrophy is inherited as - *(TN 95)*
a) Authosomal recessive
b) Autosomal dominant
c) X-linked dominant
d) X-linked recessive

3283. A raised serum creatinine phosphokinase level in unusual in - *(UPSC97)*
a) Acute alcoholic myopathy
b) Viral polymyositis
c) Myopathy of cushing's syndrome
d) Duchenne's muscular dystrophy

3284. In primary idiopatic polymyositis the following groups of muscles is almost never affected -
a) Proximal limb girdle muscles *(UP SC9 7)*
b) Pharyngeal muscles
c) Extensor neck muscles
d) Ocular

3285. Autonomic neuropathy has all except - *(N1MS 96)*
a) Gustatory sweating b) Tachycardia
c) Diarrhoea d) Pupillary dilatation

3286. Relapsing polyneuropathy is seen in - *(KERAL 97)*
a) Refsums disease
b) Acute intermittent porphyria
c) Diabetes mellitus
d) None of the above

3287. The cause of segmental peripheral neuropathy is - *(KERALA 97)*
a) Gullain-barre syndrome b) Amyloidosis
c) Syringomyelia d) Poliomyelitis

3288. High carbohydrate diet can precipitate -
a) Hypokalemic periodic paralysis *(JIPMER 98)*
b) Hyperkalemic periodic paralysis
c) Hysterical paralysis
d) Myasthenia gravis

3289. Mononeutritis multiplex is a major presenting feacture of - *(MP98)*
a) Systemic necrotising vasculitis
b) Wagner's granulomatosis
c) Hypersensitivity vasculitis
d) Mucocutaneaous lymphnode syndrome

3290. Aggravation of myasthenia is a feature of all the following drugs except - *(MAHE98)*
a) Gentamicin b) Neomycin
c) Edrophonium d) Succinyl

3291. Thymoma is associated with all except -
a) Graves disese *(JIPMER95)*
b) Hyper gamma globulinemia
c) Red cell aplasia
d) Thrombocytopenia

3270) a 3271)a,d,e 3272) a,c 3273) b 3274) a 3275) a 3276) b,d 3277) b 3278) b 3279) d 3280) a 3281)a,b
3282)d 3283)c 3284)d 3285)a 3286)b 3287)b 3288)a 3289)a 3290)c 3291)b

3292. All are true about patients with neuro fibromatosis except that they are prone for- *(Kerala 95)*
a) Gliomas b) Retinoblastoma
c) Swachonoma d) Meningioma

3293. Lisch nodules in neurofibromatosis are - *(IN98)*
a) Iris pearls b) Hamartomas
c) Granulomas d) None of the above

3294. Toxic focal myopathy is adverse affect of - *(JIPMER*
a) Aminoglycosides b) Narcotics *95)*
c) Insulin d) Penicillin

3295. The electromyogram (EMG) is least useful for the diagnosis of - *(Karnataka 03)*
a) Cerebral palsy
b) Spinal muscular atrophy
c) Charcot - Marie - Tooth disease
d) Myasthenia gravis

3296. Generally speaking, the distal, burning, painful dysesthesias with reduced pinprick and thermal sensation but with sparing of proprioception and motor functions is seen in - *(Karnataka 03)*
a) Small fibre neuropathy
b) Large fibre neuropathy
c) Neuromuscular junction disease
d) Anterior horn cell disease

3297. Most common presenting finding of multiple sclerosis is - *(UPSC 04)*
a) Intranuclear ophthalmoplegia
b) Optic neuritis
c) Transverse myelitis
d) Cerebellar ataxia

3298. Which one of the following is not true in the case of myotonic dystrophy ? *(UPSC 04)*
a) Cardiac defects b) Cataract
c) Enlarged testis d) Frontal baldness

3299. Antibody found in patients of myaesthenia gravis is directed against - *(SGPGI05)*
a) Acetycholine
b) Acetycholine receptors
c) Acetycholine vesicles in nerve terminal
d) Actin-myosin complex of the muscle

3300. All of the following are X-linked disorders except -
a) Emery-Dreifüss dystrophy *(SGPGI 05)*
b) Becker's dystrophy
c) Duchenne's dystrophy
d) Myotonic dystrophy

3301. Which of the following is not associated with peripheral neuropathy - *(SGPGI 05)*
a) Urticaria pigmentosa
b) Diabetes mellitus
c) Nitrofürantion
d) Infectious mononucleosis

3302. All are congenital myopathies except - *(MAHA 05)*
a) Central core myopathy
b) Nemaline myopathy
c) Z band myopathy
d) Centronuclear myopathy

3303. Lambert Eaton syndrome is associated with -
a) Thymoma *(MANIPAL06)*
b) Oat cell syndrome
c) Myasthenia gravis
d) Adenocarcinoma of lung

3304. Which one of the following is not a feature of Gullain Barre syndrome ? *(UPSC07)*
a) Albumino-cytological dissociation
b) Transient bladder disturbances
c) Areflexia
d) Babinski plantar response

3305. Serum creative kinase-3 (CK-3) is elevated in - *(Corned07)*
a) Muscular dystrophy b) Myocardial infarction
c) Alcoholic cirrhosis d) Brain tumours

3306. An increase in protein without pleocytosis in cerebrospinal fluid is seen in - *(Corned08)*
a) Froin's syndrome
b) Guillain Barre syndrome
c) Pyogenic meningitis
d) Tuberculous meningitis

3307. All of the following can cause neuropathies with predominant motor involvement except-
a) Acute inflammatory demyelinating polyneuropathy
b) Acute intermittent porphyria *(Manipal 09)*
c) Lead intoxication
d) Arsenic intoxication

3308. In which of the following conditions is cardiac involvement NOT a usual feature ? *(UPSC-109)*
a) Facio-scapulo-humeral dystrophy
b) Duchenne's muscular dystrophy
c) Friedreich's ataxia
d) Myotonic dystrophy

3309. The enzyme level used for evaluation of myopathies is - *(COMED09)*
a) Gamma glutamyl transferase (GGT)
b) Creatine kinase
c) Lactic dehydrogenase (LDH)
d) Alanine amino transferase (ALT)

3310. TVue aboutMG- *(PGlMay 10)*
a) Defect at myoneural junction
b) t Ach receptor
c) 1 Ach receptor
d) Thymoma occur
e) Autoimmune disease

3311. Feature of NF1 are- *(PGlMay 10)*
a) Axillary freckle b) Ash leaf macules
c) Optic glioma d) Acoustic neuroma
e) Family history

3312. A 9 yr old girl has difficulty in combing hairs and climbing upstairs since 6 months. She has Gower's sign positive and maculopapular rash over metacarphalangeal joints. What should be the next appropriate investigation to be done?
a) ESR b) RA factor *(AIIMS May 11)*
c) Creatine kinase d) Electromyography

3292)b 3293)b 3294)b 3295)a 3296)a 3297)b 3298)c 3299)b 3300)d 3301)a 3302)c 3303)b 3304)d 3305)a 3306)b 3307)d 3308)a 3309)b 3310)a,c,d,e 3311)a,c,e 3312)c

3313. All are congential myopathies except-
a) Central Core myopathy *(AIIMS May 11)*
b) Centronuclearmyopathy
c) Z band myopathy
d) Nemalin myopathy

3314. A Thirty five year old female has proximal weakness of muscles, ptosis and easy fatigability. The most sensitive test to suggest the diagnosis is -
a) Muscle Biopsy b)CPK levels *(AI11)*
c) Edrophonium test d) Single fiber EMG

3315. Which one of the following myopathies is correctly matched? *(UPSCI11)*
a) Facioscapulohumeral : Autosomal recessive
b) Limb girdle type : Autosomal dominant
c) Dystrophia myotonica : Autosomal dominant
d) Duchenne muscular dystrophy : X-linked recessive

3316. The most common finding associated with fibromyalgia syndrome is - *(UPSC111)*
a) HighESR
b) Muculoskeletal pain without local tenderness
c) Sontaneous resolution of symptoms
d) Tiredness and insomnia

3317. Conduction velocity of nerve is reduced in all of the following conditions, except- *(AI12)*
a) Acute Motor Axonal Neuropathy (AMAN)
b) Acute Inflammatroy Demyelinating Neuropathy (AIDP)
c) Hereditary Sencory Motor Neuropathy (HSM)
d) Multifocal Motor Neuropathy

3318. All of the following are classified as 'Small fiber' neuropathies except- *(AI 12)*
a) Vitamin B_{12} dificiency b) HTV Induced
c) Hansen's disease d) Amyloidosis

SSI **Sensory neuropathy is caused by all** *except-(NEET/*
a) Lead b) Pyridoxine *DNB Pattern)*
c) Cisplatin d) Paraneoplastic

3320. Thymoma is associated with -*(NEETf.DNB Pattern)*
a) Myasthenia gravis b) Polycythemia
c) Ectopic ACTH d) Polyarteritis nodosa

Wm Myasthenia gravis is associated withr *(NEET/DNB*
a) Antibodies against Ach receptors *Pattern)*
b) Decreased myosin
c) Absent troponin C
-^ I^cre^ed myoneural junction transmissipn g/. ?

3322. Most sensitive test for myaesthenia gravis-
a) Edrophonium test *hi* *(NEE f/DNB jpatt$rn)*
b) S^g)^fi|yelEMG' \Z \ V\
c) Multiple fibre EMG
d) Repetitivemeryp,stimulation

bu **Eaton Lambert syndrome is seen with -**
a) Ca breast b) Ca liver *(NEET/DNB Pattern)*
$)£& lung d) CNS tumors

3324. A young adult presents with proximal weakness of upper limbs, features of facial palsy and winging of scapula. The most likely diagnosis is- *(AI 12)*
a) Facio-Scapulo-Humeral Dystrophy
b) Limb-Girdle Dystrophy
c) Scapuloproneal Dystrophy
d) Duchene Muscular Dystrophy

3325. Lesion of globus pallidus causes-fA^/sT/DA^ *Pattern)*
a) Chorea b) Athetosis
i ?) Hemibalismus; f^d^lejgptiv dystotfia *(j*

3326. Which of the following is the most commonly used site for Deep Brain Stimulation to reduce frequency of Parkinsonism symptoms - *(AI12)*
a) Striatus b) Globus Pallidus
c) Subthalamic Nucleus d)Putamen

3327. Deep Brain Stimulation of which part of brain has been shown to reduce frequency of symptoms in Parkinsonism- *(AI12)*
a) Striatus b) Globus Pallidus Extemus
c) Subthalamic nucleus d)Putamen

3328. Which of the following areas of brain is most resistant to Neurofibrillary tangles in Alzeimer's disease -
a) Entorhinal cortex *(AI12)*
b) Hippocampus / Temporal lobe
c) Lateral Geniculate Body
d) Visual Association Area

3329. Which of the following regarding small vessel disease (SVD), cerebral amyloid angiopathy (CAA) and Alzheimer's disease (AD) is not true?
a) SVD is related to CAA *(AIIMS, May 12)*
b) SVD is not correlated to AD
c) SVD is related to AD
d) CAA is associated with AD

3330. Age related dementia has been associated with increased levels of - *(AI 12)*
a) Homocysteine b) Cysteine
c) Tourine d) Methionine

3331. A 60-year old female presented with decreased movements for the last 2 years with rigidity and vertical large square wave jerks. The most likely diagnosis is - *(AIIMS, May 12)*
a) Parkinson's disease
b) Lewy body dementia
c) Multisystem atrophy
d) Progressive supranuclear palsy

PARKINSONS DISEASE

3332. Chorea occurs due to lesion in -
a) Cerebellum b) Motor cortex
c) Caudate Nucleus d) Subthalamas

3333. Extrapyramidal symptoms are seen in all except -
a) Paralysis agitans *(AIIMS Nov 2000)*
b) Carbon monoxide poisoning
c) Cerebro vascular accident
d) Multiple sclerosis

3334. All are features of Parkinson's disease, except -
a) Resting tremors *(Sep 96)*
b) Brady or hypokinesia
c) Rigidity
d) Preserved postural reflexes

3313)c 3314)d 3315)b,c,d 3316)d 3317)a 3318)a 3319)a 3320)a 3321)a 3322)b 3323)c 3324)a 3325)b
3326) c 3327) c 3328) c 3329) c 3330) a 333 l)d 3332) c 3333) d 3334) d

3335. In Parkinsonism, what is not present - *(May 94)*
a) Tremors at rest b) Past pointing
c) Akinesia d) Rigidity

3336. Features of parkinsons disease- *(PGIJune 06)*
a) Decreased Blinking
b) Spasticity
c) On-off phenomenon
d) Objective 1 muscle power
e) Tremor

3337. Which of the following is not seen in parltinsonism-
a) Preserved postural reflexes *(AI96)*
b) Hypokinesia
c) Rigidity
d) Static tremors

3338. Parkinsonism is characterised by all of the following characteristic features except - *(AI 97)*
a) Rigidity b) Akinesia
c) Tremors at rest d) Past pointing

3339. Dinesh, a 56 yr aged man presents with complaints of slowness of movements, postural instability, tremors, rigidity and memory loss. Most likely diagnosis is - *(AI 01)*
a) Multi infarct dementia b) Alzheimer's disease
c) Parkinsonism d) None of the above

3340. Trinucleotide repeat sequence is seen in -
a) Huntington disease *(PGI June 03)*
b) Ataxia telengiectasia
c) Wiskott Aldrich syndrome
d) Spinocerebellar ataxia
e) Tuberous sclerosis

3341. A family consist of husband, wife and children wifes's father has huntington's chorea. Which statment is true- *(AIIMSNov 99)*
a) Chance of getting disease in child is 1:4
b) Can occur upto age of 50
c) If wife does not get disease till age 50 children are not affected
d) Huntingion's chorea is due to point mutation in gene

3342. Huntington's disease is due to the loss of -
a) Nigro striatal dopaminergic neurons
b) Intrastiatal cholinergic neurons
c) Intrastriatal GABA ergic neurons
d) Intrastriatal cholinergic and GABA ergic neurons

3343. All are true about Huntington's disease except -
a) Chorea *(AI01)*
b) Behavioral disturbance
c) Early onset of memory loss
d) Cog- wheel rigidity.

3344. The following is not a feature of Alzheimer's disease-
a) Neurofibrillary tangles *(AI 04)*
b) Senile (neuritic) plaques
c) Amyloid Angiopathy
d) lewy bodies

3345. Alzheimer's disease, which is involved ?
a) Frontal cortex *(AIIMS May 08)*
b) Cortical atrophy of temporoparietal cortex
c) Frontal and parietal cortex
d) Occipital cortex

3346. True about aetiopathogenesis of Alzheimers disease-
a) Absence of tau protein *(PGIJune 04)*
b) Involvement of Apolipoprotein E
c) Preseneline-1 and 2 involved
d) Mutation in chromosome 21
e) Preseneline 2 is not involved

3347. True about Alzheimer's disease - *(PGI June 03)*
a) Mutation in APP gene
b) Autoantibody
c) Aluminium is a risk factor
d) Viral infection has increased risk
e) Hereditary

3348. All of the following are known predisposing factors for Alzheimer's disease except - *(AI 99)*
a) Down-syndromeb) Low education level
c) Smoking d) Female sex

3349. Alzheimers disease, true is all except- *(PGIDec 98)*
a) Anterograde amnesia
b) Dysdiadochokinesia
c) Receptive aphasia
d) Recognition of familiar faces is absent

3350. A 80-year old female present with progressive loss of memory, difficulty in recalling names, difficulty in speech and irritability. Along with neurofibrillary tangles what will be found in brain - *(AIIMSMay 09)*
a) Beta amyloid b) Ceramidease
c) Lewy bodies d) Pick's bodies

3351. Which of the following is false about alzheimers disease - *(AIIMS Nov 11)*
a) Plaques are formed by amyloid protein
b) Neurofibrillary tangles can appear extra cellularly even before intracellular lesions
c) Neurofibrillary tangles are made of tau protein
d) Number of NF tangles correlates with dementia

3352. Which is not seen in Alzhiemer's disease -
a) Aphasia b) Apraxia *(AIIMSNov 11)*
c) Acalculia d) Agnosia

3353. A chromosomal anomaly associated with alzheimer's dementia is - *(AI 01)*
a) Trisomy 18 b) Patau syndrome
c) Trisomy 21 d) Turners syndrome

3354. Alzheimer's disease is associated with - *(AI99)*
a) Delerium b) Delusion
c) Dementia d) Depression

3355. All of the following casues subcortical dementia except - *(AIIMS May 09)*
a) Alzhimer's disease
b) Parkinsonism
c) HTV encephalopathy
d) Progressive supra nuclear palsy

3335)b 3336)a,c,e 3337)a 3338)d 3339)c 3340)a,b,d 3341)c 3342)d 3343)c 3344)d 3345)b 3346)b,c,d 3347) a,c,d 3348) c 3349) b 3350) a 3351) b 3352) d 3353) c 3354) c_5d 3355) a

3356. Elongated filaments in Pick's disease consist of -
a) Hyperphosphorylated tau *(AIPGMEE 08)*
b) Ubiquitin
c) Alpha-synuclein
d) Beta-synuclein

3357. Which of the following exclusively involve neurouns-
a) Spinocerebellar ataxia *(AIIMSNov06)*
b) Supranuclear palsy
c) Corticobasilar degeneration
d) Multiple system atrophy

3358. In which of the following conditions, neurons are exclusively affected - *(A1IMS Nov 11)*
a) Spinocerebellar ataxia
b) Supranuclear palsy
c) Corticobasal degeneration
d) Multisystem Atrophy

3359. TViad of normal-pressure hydrocephalus includes -
a) Tremor, aphasia dementia *(A199)*
b) Ataxia, aphasia, gait disorder
c) Gait disorder, urinary incontinence, dementia
d) Gait disorder, urinary incontinence, lower cranial nerve palsy

3360. Normal pressure Hydrocephalus is characterized by all except - *(A196)*
a) Aphasia b) Dementia
c) Ataxia d) Urinary incontinence

3361. Clinical features of normal pressure hydrocephalus include all of the following except - *(AI9 7)*
a) Dementia b) Aphasia
c) Gait disturbance d) Urinary incontinence

3362. A 60 years old alcoholic male presented with urinary incontinence and abnormal gait since 3 months. He also complains of loss of memory. What is the diagnosis? *(AI 10)*
a) Huntington's disease
b) Normal pressure hydrocephalus
c) Wernicke's encephalopathy
d) Cynocobalamine deficiency

3363. A 45 year old man presents with history of frequent falls. He has difficulty in looking down also. What is the most probable diagnosis - *(AIIMSNov 2000)*
a) Normal pressure hydro-cephalus
b) Parkinson's disease
c) Alzheimer's disease
d) Progressive supranuclear palsy

3364. In steel richardson syndrome following are seen except- *(PGIDEC97)*
a) Convulsion
b) Ataxia
c) Progressive supranuclear palsy
d) Dementia

3365. A 76 year old male comes with a history of frequent falls and difficulty in looking downwards and laterally. The diaganosis is - *(AlIMSMay 2001)*
a) Alzheimer's disease
b) Supranuclear palsy
c) Amyotropic lateral sclerosis
d) Oculomotor nerve nerve palsy

3366. Punch drunk state is associated with - *(PGIDec 99)*
a) Alcoholism b) Chorea
c) Parkinonism d)All

3367. Memory impairment is most likely to occur in -
a) Downs Syndrome *(A1IMS Nov 99)*
b) Alkaptonuria
c) Attention deficit disorder
d) Conduct disorder

3368. Impotence is a feature of which of the following-
a) Multiple sclerosis *(AIIMS Nove 2000)*
b) Poliomyelitis
c) Amyotropic lateral sclerosis
d) Meningitis

3369. Extrapyramidal symptoms is best treated with- *(J1PMER95)*
a) Procyclidine b) Metochlopramide
c) Haloperidol d) Trihexyphenidyl

3370. An acute syndrome of abnormal involuntary movements resembling tardive dyskinesia is associated with excessive dosage of - *(Kam 95)*
a) Reserpine b) Propranolol
c) Clonidine d) Levodopa

3371. Freqeuncy of Rest tremor in Parkinson's disease is - *(SCTIMS 98)*
a) 2/sec b) 14/sec
c) 4-6/sec d) 8/sec

3372. The first line of drug to be preferred for the treatment of akathesia is - *(Karnat 99)*
a) Benzhexol
b) Trihexy phenedyl hydrochloride
c) Promethazine
d) Propranolol

3373. Drug used to halt process of degeneration of dopaminegric neurons in nigrostrial pathway is - *(NIMHANS 2k)*
a) VitE b) VitA
c) Propranolol d) Levodopa

3374. 55 year old male with recurrent episode of fall, rigidity and autonomic insufficiency -
a) Railey day syndrome *(NIMHANS 2K)*
b) Shy-dragger syndrome
c) Basal ganglionic lesion
d) Parkinsonism

3375. A patient with parkinsonism suddenly presented with trembling, dizziness and upward reeling of eyes. It may be due to - *(CUP GEE 02)*
a) Oculygyric crisis b) Cholinergic crisis
c) Cerebrellar infarct d) Cerebral infarct

3376. Parkinsonism is induced by all drugs except -
a) Reserpine b) Metaclopramide *(AP 96)*
c) Chlorpromazine d) Amantadine

3377. Which one of the following drugs is most suitable for management of essential tremors-
a) Diazepam b) Levodopa*(COMEDK05)*
c) Metoprolol d) Propranolol

3356)a 3357)a 3358)a 3359)c 3360)a 3361)b 3362)b 3363)d 3364)a 3365)b 3366)c 3367)a 3368)a 3369)d 3370)a 3371)c 3372)d 3373)a 3374)b 3375)a 3376)d 3377)d

3378. All the following statements are true regarding Parkinsonism disease developing in people > 70 years of age, except - *(J & k 05)*
a) The long-term side effects of levodopa such as dyskinesia are less
b) They are more likely to develop autonomic disturbances
c) Cognitive changes and dementia are more common
d) Prognosis is worse

3379. All are true regarding progressive supranuclear palsy except - *(COMED 09)*
a) Tremors b) Unsteadiness
c) Dysarthria d) Gaze palsy

3380. Most common tumor associated with *(NEET/DNB Pattern)*
a) Optic glioma b) 2nd nerve schwannoma
c) Astrocytoma d) Bilateral acoustic neuroma

3381. Lisch Nodules are seen- *(NEET/DNB Pattern)*
a) Neurofibromatosis I
b) Sturge weber's syndrome
c) Tuberous sclerosis
d) Von hippel lindau syndrome

MENINGITIS

3382. CSF glucose level is - *(AIIMSjune 2000)*
a) Half the plasma glucose
b) 2/3 of plasma glucose
c) 1/3 of plasma glucose
d) Same as plasma glucose

3383. Acute meningitis in adolescents and young adults is caused by - *(PGI June 04)*
a) N. meningitidis b) H. Influenzae
c) Staphylococcus d) Streptococcus
e) E.coli

3384. True about meningitis is /are - *(PGI June 04)*
a) Epidemic is caused by H. influenzae
b) E.coli, Group B Streptococci is MC cause in neonatal period
c) Hib vaccine is effective in prevention of meningitis
d) Epidemics caused by meningococcus group B

3385. True about C.S.F. finding in pyogenic meningitis is- *(AI98)*
a) Protein T sugar *i* b) Protein *i* sugar T
c) Chloride T protein *i* d) *i* Protein *i* chloride

3386. True about CSF finding in pyogenic meningitis is -
a) CSF contains no organisms *(AI93)*
b) *i* Chloride *i* glucose
c) T Glucose T protein
d) T Chloride, *i* glucose

3387. Patient with fever had a lumbar puncture done as part of workup for fever. The CSF revealed high proteins with normal sugar and marked increase in lymphocytes. The diagnosis is likely to be -
a) Tubercular meningitis *(PGIDec 01)*
b) Bacterial meningitis
c) Viral meningitis
d) Partially treated pyogenic infection
e) Neurocysticercosis

3388. A patient's CSF report reads as follows sugar of 40, protein of 150. chloride of 550; lymphocytosis present: the picture is suggestive of - *(AI 01)*
a) Fungal meningitis b) Viral meningitis
c) TB meningitis d) Leukemia

3389. Aten year old girl presents with fever, convulsion, neck rigidity. CSF - Findings arc protein 150mg/dl. Sugar 40mg/dl. chloride 2500 meq/litre with lymphadenopathy - *(AIIMS Dec 98)*
a) Viral Meningitis
b) Pyogenic Meningitis
c) Cryptococcal Meningitis
d) Tubercular Meningitis

3390. Lab report CSF with N glucose, Tprotein and marked lymphocytosis diagnosis is - *(PGIDec 06)*
a) T.B. Meningitis
b) Viral meningitis
c) Partialy Rx pyogenic infection
d) Pyogenic infection

3391. The CSF findings in TB meningitis are all the following *except* - *(AI 95)*
a) Raised protein b) Low sugar
c) Low chloride d) High RBC count

3392. CSF picture in viral meningitis *(PGIDec 03)*
a) Lymphocytic pleocytosis
b) WBC count > 1500/mL
c) Sugar is normal
d) Sugar is very low
e) Protein is elevated

3393. Meningitis with normal glucose is seen in -
a) TB b) Cryptococcus *(PGI Dec 99)*
c) Coxsackie d) Listeria

3394. A15- year -female patient develops loss of appetite, cough followed by neck rigidity. CSF examination shows- glucose 40 mg%,protein 150mg%. chloride 52 meq/lit. with full of lymphocytes. The likely diaganosis is - *(AIIMS June 99)*
a) Tubercular meningitis b) Brain abscess
c) Bacterial meningitis d) Viral encephalitis

3395. Which of the following is the classical CSF finding seen in TBM ? *(AI 07)*
a) Increased protein, decreased sugar, increased lymphocytes
b) Increased protein, sugar and lymphocytes
c) Decreased protein, increased sugar and lymphocytes
d) Increased sugar, protein and neutrophils

3396. Neurological complications of meningitis include all of the following, except - *(AIIMS Nov 2002)*
a) Seizures.
b) Increased intra-cranial pressure
c) Cerebral hamartoma
d) Subdural effusions.

3378)d 3379)a 3380)a 3381)a 3382)b 3383)a 3384)b,c 3385)a 3386)b 3387)a 3388)c 3389)d 3390)a 3391)d 3392) a,c,e 3393) c 3394) c 3395) a 3396) c

3397. Acute Pyogenic Meningitis true is/are -
a) Purulent exudates within leptomeninges
b) CSF cloudy with PMN *(AIIMS Nov 02)*
c) Spreads to ventricle
d) Causes ventricular enlargements.

3398. Characteristic finding in CT in a TB case is -
a) Exudate seen in basal cistern *(AI01)*
b) Hydrocephalus is noncommunicating
c) Calcification commonly seen in umbellium
d) Ventriculitis is a common finding

3399. All are complications of tubercular meningitis except - *(PGI DEC 99)*
a) Hydrocephalus
b) Infarction
c) Obliterative endarteritis
d) Sinovenous thrombosis

3400. A 25 year old lady presented with fever of 1 month duration, ataxia and head ache. Brain imaging showed dilated ventricles with basal exudates. Which among the following is the most likely CSF finding - *(AIIMS Nov 11)*
a) Lymphocytosis, low glocose, high protein
b) Lymphocytosis, normal glucose, high protein
c) Lymphocytosis, low glucose, high protein

3401. Which of the following is true about TB meningitis-
a) Exudates are formed on the convexities of brain
b) CSF stored at 4°C in the time of transportation
c) Hydrocephalus is common sequalae
d) Meningoencephalitis is common manifestation

3402. Subdural empyema is most commonly caused by -
a) H. influenzae *(AI 2000)*
b) Staphylococus aureus
c) Streptococcus pneumoniae
d) E.Coli

3403. The most common cause of sporadic viral encephalitis is - *(AIIMS May 2004)*
a) Japanese B encephalitis
b) Herpes simplex encephalitis
c) Human immunodeficiency virus encephalitis
d) Rubeola encephalitis

3404. Most common cause of viral meningoencephalitis?
a) Enterovirus b) Arbovirus *(AI 10)*
c) Herpes virus d) CMV

3405. Commonest cause of sporadic encephalitis is -
a) Japanese B virus *(AI 03)*
b) Herpes Simplex virus
c) Human Immunodeficiency virus
d) Rubeola virus

3406. Which of the following viruses is not a common cause of viral encephalitis - *(AI 04)*
a) Herpes simplex virus type 2
b) Japanese encephalitis virus
c) Nipah virus
d) Cytomegalovirus

3407. True about HSV encephalitis is/are - *(PGI June 04)*
a) Caused by HSV-1
b) Haemorrhagic lesion seen
c) Frontal lobe lesion seen
d) Eosinophilic inclusion bodies seen
e) Xanthochromia not seen

3408. A young male develops fever, followed by headache, confusional state, focal seizures and right hemiparesis, the MRI performed shows bilateral frontotemporal hyperintense lesion. The most likely diagnosis is - *(AI 04)*
a) Acute pyogenic meningitis
b) Herpes simplex encephalitis
c) Neurocysticercosis
d) Carcinomatous meningitis

3409. A 24 year old male patient with h/o primary syphilis in the form of genital ulcer & mucocutaneous lesions, presents with features suggestive of neurosyphilis in the form of meningitis for which appropriate treatment was started. What will you do for monitoring of treatment - *(AIIMS Nov 10)*
a) Venereal disease Research Laboratory test (VDRL)
b) TPI
c) FTS-AB
d) ELISA

3410. Herpes simplex encephalitis is diagnosed by -
a) MRI *(PGI Dec 02)*
b) Biopsy
c) Corneal scrapping and culture
d) EEG periodic lateralised
e) CSF PCR of HSV DNA

3411. The drug of choice in Herpes Simplex Encephalitis is- *(AI94)*
a) Acyclovir b) Zidovudine
c) Amantadine d) Vidarabine

3412. The drug of choice in Cryptococcal Meningitis is -
a) Pentostatinb) Amphotericin B *(AI95)*
c) Clotrimazole d) Zidovudine

3413. An old patient of tubercular meningitis is not responding to treatment. A new combination of drugs has to be prescribed for a prolonged period.Which one of the following should not be prescribed in this case - *(ICS 98)*
a) Rifampicin b) Ofoxacin
c) Dehydrostreptomycin d) Pyraxinamide

3414. The most common fungus producing meningitis in immuno compromised host is - *(UPSC 2001)*
a) Cryptococcus b) Blastomycetes
c) Candida d) Histoplasma

3415. In TB meningitis which drug is not used in the treatment protocol - *(Jipmer 03)*
a) Streptomycin b) Rifampicin
c) Ethambutol d) Pyrazinamide

3397)All 3398)a 3399)d 3400)a 3401)b,c,d 3402)c 3403)b 3404)c 3405)b 3406)a 3407)A11 3408)b 3409)a 3410)a,b,d,e 3411)a 3412)b 3413)c 3414)a 3415)a

3416. Complications of tuberular meningitis include all except- *(DelhiPGMar. 09)*
a) Hydrocephalus
b) Cortical venous thrombosis
c) Cerebral Artery Thrombosis
d) Cranial Nerve Palsy

3417. Ayoung male develops fever, followed by headache, confusional state, focal seizures and a right hemiparesis. The MRI performed shows bilateral frontotemporal hyperintense lesion. The most likely diagnosis is - *(Manipal 09)*
a) Acute pyogenic meningitis
b) Herpes simplex encephalitis
c) Neurocysticercosis
d) Carcinomatous meningitis

3418. The typical CSF profile in cases of viral meningitis after 48 hours of onset is - *(UPSC-109)*
a) Lymphocytic pleocytosis, normal glucose level, normal or slightly elevated protein level
b) Neutrophilic pleocytosis, raised glucose level normal protein level
c) Lymphocytic pleocytosis, low glucose level, low protein level
d) Neutrophilic pleocytosis, normal glucose level, elevated protein level

3419. A 25-year-old man presents with fever and altered sensorium. The CSF analysis revealed-(T/RS·C-/ *09)*
Pressure : **Raised**
Appearance : Opalescent and on standing cobweb formation seen
Protein : 220 mg%
Sugar : 30 mg%
Cells : 1250 per field mostly lymphocytes
Globulin : Positive
Which one of the following is the most likely diagnosis ?
a) Meningococcal meningitis
b) Subarachnoid haemorrhage
c) Cryptococcal meningitis
d) Tuberculous meningitis

3420. Adenosine deaminase in CSF is significantly higher in- *(COMED09)*
a) Tuberculosis meningitis b) Bacterial meningitis
c) Viral meningitis d) Syphilitic meningitis

3421. CSF picture in viral *memñgiti$-(NEET/DNB Pattern)*
a) Lymphocytic pleocytosis b) WBCcdunt> 1500/mL
c) Sugar is reduced d) Protein is decreased

3422. Basal exudates, infarcts and hydrocephalus are findings observed in Brain imagine studies. The most likely diagnosis is - *(AI12)*
a) Tubercular Meningitis b) Viral Meningitis
c) Herpes encephalitis d) Cerebral Malaria

3423. A 45-year-old female is diagnosed as a case of pneumococcal meningitis. Her blood sample were sent for culture sensitivity. In the mean time best drug to start as an empirical treatment is -
a) Penicillin G *(AIIMS, May 12)*
b) Doxycycline
c) Streptomycin
d) Vancomyin + Ceftriaxone

3424. Penumococcal meningitis is associated with the following CSF findings - *(AI 12)*
a) Pleocytosis with low protein and low sugar
b) Pleocytosis with high protein and low sugar
c) Lymphocytosis low protein and low sugar
d) Lymphocytosis high protein and low sugar

smi ~ **In herpes encephalitis A/E -***(NEET/DNB Pattern)*
a) Focal symptoms common
b) Temporal lobe involved
c) MRI is diagnostic
d) CT scan better than MRI

3426. An elederly male presented with headache, fever and hemiparasis of right side. On further examination and investigation a diagnosis of brain abscess was made. Which of the following antibacterial/ antibacterials is effective in this patient -
a) Gentamycin *(AIIMS, May 12)*
b) Doxycycline
c) Streptomycin
d) A combination of Cephalosporin and Metronidazole

3427. Soap bubble appearance is seen in which meningo-encephalitis - *(NEET/DNB Pattern)*
a) Cryptococcus b) Mucormycosis
c) Tubercular d) HSV

3428. Commonestpresentattohofneurocysticef ocosis is-
a) Seizures *(NEET/DNB Pattern)*
1 ^ ;/b) jFocalneurolo^&Slffilfrc^P^^w^^S^Vj^^ :
c) Dementia
d) Radiculopathy

3429. Neurocysticercosis DOC- *(NEET/DNB Pattern)*
a) Praziquantel b) Albendazole
c) Niclosemide ,? v, *rt%* (<. d) Flubendazole ; .

APHASIA

3430. Jargon aphaisa is seen in- *(JIPMER2001)*
a) Wernicke's aphasia
b) Broca's aphasia
c) Conduction aphasia
d) Kosarkoff psychosis

3431. Crossed aphasia means- *(JIPMER2002)*
a) Right hemispherical lesion in right handed person
b) Right hemispherical lesion in left handed person
c) Left hemispherical lesion in left handed person
d) Left handed lesion in right handed person

3432. Broca's area : which is true - *(AP 96)*
a) Present bilaterally in brain
b) Supplied by MCA
c) Lesion causes laryngel palsy
d) Present in the temporal lobe

3433. Which is a feature of Normal Pressure hydrocephalus - *(NIMHANS 06)*
a) Gait Disturbance b) Aphasia
c) Global confusion d) Opthalmoplegia

3416)b 3417)c 3418)a 3419)d 3420)a 3421)a 3422)a 3423)d 3424)b 3425)d 3426)d 3427)a 3428)a 3429)b 3430)a 3431)a 3432)b 3433)a

DRUGS

3434. Drug avoided in patient with non-ketotic hyperglycemia with seizure is - *(NIMHANS 2K)*
a) Carbamazepine b)Valporate
c) Phenytoin d) Clobazam

3435. High oral: Parenteral activity ratio is seen with- *(TN 03)*
a) Morphine b) Diacetyl morphine
c) Oxymorphine d) Methadone

3436. Consider the following disorders - *(UPSCI11)*
1. Sydenham's chorea
2. Migraine
3. Mania
4. Obsessive compulsive disorder

Valproic acid is used in which of the above disorders?
a) 1 and 3 only b) 2 and 4 only
c) 1,2 and 3 d) 2,3 and 4

MISCELLANEOUS

3437. Most common Intracranial neoplasm in adults is- *(AIIMS May 93)*
a) Meningioma b) Astrocytoma
c) Posterior fossa tumor d) Ganglioneuroma

3438. Must common intacranial tumour *is-(AIIMSMay 94)*
a) Meningioma b) Giloma
c) Craniopharyngioma d) Metastasis

3439. Which of the following is the most common type of Glial tumors ? *(AI06)*
a) Astrocytomas b) Medulloblastomas
c) Neurofibromas d) Ependymomas

3440. In childern, most common posterior fossa tumour is-
a) Meningioms *(Dec 95)*
b) Astrocytoma
c) Medulloblastoma
d) Glioblastoma multiforme

3441. Tumor with best prognosis is - *(May 94)*
a) Ependymoma
b) Medulloblastoma
c) Cerebellar astrocytoma
d) Glioblastoma multiforme

3442. Most common site of sub ependymal astrocytoma (giant cell) - *(ARMS Nov 07)*
a) Trigone of lateral ventricle
b) Foramen of munro
c) Temporal horn of lateral ventricle
d) 4th ventricle

3443. Which of the following statement about astrocytoma is false- *(A1PGMEE08)*
a) Low grade tumors ae more common in children
b) These are mostly infratentorial in children
c) Pilocytic astrocytoma is most common childhood brain tumor
d) There are more common in males than females

3444. Which of the following brain tumors does not spread via CSF - *(AI04)*
a) Germ cell tumors b) Medulloblastoma
c) CNS lymphoma d) Craniopharyngoma

3445. Which is the most common childhood CNS tumor to metastasize outside brain? *(ARMSMay 10)*
a) Ependymoma
b) Glioblastoma multiforme
c) Choroid plexus tumor
d) Medulloblastoma

3446. Chang staging is used for - *(ARMSMay 10)*
a) Retinoblastoma b) Medulloblastoma
c) Ewing's sarcoma d)Rhabdomyos

3447. Absence of Corpus callosum leads to-
a) Hemiparesis *(ARMS Nov 07)*
b) Hemisensory loss
c) Astereognosis
d) No neurological manifestations

3448. Von Hippel Lindau is associated with all except -
a) Endo lymphatic sac tumors *(ARMSNov 07)*
b) Hemangioendotheliomas
c) Pheochromocytoma
d) Islet cell tumors

3449. All of the following tumors are malignant except -
a) Glioma *(AI 97)*
b) Astrocytoma
c) Hemangioblastoma
d) Ependymoma

3450. All of the following may cause metaststic tumour casusing spinal cord compressions except - *(AI 98)*
a) Lung carcinoma b) Breast carcinoma
c) Lymphoma d) Meningioma

3451. All the following are true of Craniopharyngioma except- *(AI 94)*
a) Derived from Rathke's pouch
b) Contains epithelial cells
c) Present in sella or intrasellar location
d) Causes visual disturbances

3452. A 6 year old boy has been complaining of headache, ignoring to see the objects on the sides for four months. On examination, he is not mentally retarded, his grades at school are good, and visual acuity is diminished in both the eyes. Visual charting showed significant field defect.CT scan of the head showed suprasellar mass calcification.Which of the following is the most probable diagnosis- *(ARMS Nov 04)*
a) Astrocytoma b)Craniophary
c) Pituitary adenoma d) Meningiona

3453. Most radiosensitive brain tumour is - *(Sep 96)*
a) Ependymoma b) Medulloblastoma
c) Glioblastoma multiforme d) Astrocytoma

3454. The diagnosis of a patient presenting with seizures, Mental retardation and Sebaceous adenoma is -
a) Hypothyroidism b) Tuberous sclerosis *(AI 95)*
c) Toxoplasmosis d) Down syndrome

3434)$_c$ 3435) d 3436) c 3437)b 3438) b 3439) a 3440) b 3441) c 3442) b 3443)d 3444) d 3445) d 3446)b 3447) d
3448)b 3449) c 3450) d 345l)c 3452) b 3453)b

3455. What is NOT a feature of Sturge Weber syndrome -
a) Rail track appearance *(Dec 94)*
b) Hemiatrophy of the brain
c) Convulsion
d) Empty sella

3456. Which of the following is the most common tumor associated with type I neurofibromatosis?
a) Optic nerve glioma. *(AHMSMay 2003)*
b) Meningioma.
c) Acoustic Schwannoma.
d) Low grade astrocytoma.

3457. Neurofibromatosis type-II is associated with -
a) B/L acoustic schwannoma *(PGl Dec 2000)*
b) Multiple cafe-au-let spots
c) Chromosome-22
d) Lisch nodule
e) Posterior subcapsular lenticular cataract

3458. True about neurofibromatosis is all the following except- *(AI09)*
a) Autosomal recessive b) Scoliosis
c) Cataract d) Neurofibromas

3459. Neurofibromatosis I is most commonly associated with- *(AIIMSNov 07)*
a) Brain stem gliomas
b) Optic pathway glioma
c) Sub ependymal pilocytic astrocytoma
d) Glioblastoma multiforme

3460. Brain tumour is associated with A/E - *(PGI Dec 99)*
a) Tuberous sclerosis
b) Von hippel lindau syndrome
c) Neurofibromatosis
d) Sturge weber syndrome

3461. CNS tumor seen in Von hippel lindau syndrome is- *(PDI Dec 99)*
a) Meningioma b) Cerebellar hemangioblastoma
c) CNS lymphoma d) Glioma

3462. Lhermitte duclos disease true is - *(AIIMSMay 08)*
a) Thickened cerebeller folli
b) Atrophic cerebeller folli
c) Vermian hypoplasia
d) Septum pelluidumagenesis

3463. A middle aged female presents with slowly progressive weakness of lower limbs, spasticity and recent onset hestancy of Micturition. On neurological examination there is evidence of dorsal myelopathy. MRI scan of spine reveals middorsal intradural contrast enhancing mass lesion diagnosis is- *(AIIMS Nov 11)*
a) Intradural lipoma b) Dermoid cyst
c) Meningioma d) Epidermoid cyst

3464. Investigation of choice for leptomeningeal carcinomatosis - *(AIIMS Nov 11)*
a) PET b) SPECT
c) Gd enhanced MRI d) CT scan

3465. Which of the following statement is true regarding Landry Guillian Barre Syndrome - *(PGI Dec 01)*
a) Facial nerve palsy occurs
b) Proximal muscle weakness
c) Areflexia
d) Pyramidal signs
e) Distal muscle weakness

3466. All are true regarding GB syndrome, Except -
a) Predominant motor involvement *(June 97)*
b) Absence of myelocytosis in CSF
c) Residual disability if treatment is delayed
d) Sparing of bladder function

3467. All the following are features of Guillain-Barre syndrome except - *(AI96)*
a) Predominant motor involvement
b) Residual disability
c) Absence of pleocytosis in CSF
d) Sparing of bladder function

3468. All of the following are true about Guillan Barre syndrome (GBS), except - *(AI 10)*
a) Ascending paralysis
b) Flaccid paralysis
c) Sensory level
d) Albumino-cytological dissociation

3469. Which of the following is LEAST suggestive of infection with polio virus - *(AIIMS Nov 99)*
a) Low grade fever and malaise with complete resolution in 2 to 3 days
b) Biphasic illness with several days of fever, then meningeal symptoms and asymmetric flaccid paralysis 5 to 10 days later
c) Descending motor paralysis with preservation of tendon reflexes and sensation
d) Failure to isolate a virus from the cerebrospinal fluid in the presence of marked meningismus

3470. Neuronophagia is seen in - *(AI 94)*
a) Amoebic encephalitis
b) Poliomyelitis
c) Tuberculer meningoencephalitis
d) Cerebral malaria

3471. Polio virus infection can result in all, except -
a) Anterior horn cell damage *(AIIMS Dec 94)*
b) Autonomic involvement
c) Respiratory involvement
d) Paralysis in > 70% of cases

3472. Kenny Packs were used in the treatment of- *(AIIMS May 2003)*
a) Poliomyelitis b) Muscular dystrophy
c) Polyneuropathies d) Nerve Injury

3473. Which of the following is the most common location of intracranial neurocysticercosis -
a) Brain parenchyma b) Subarachnoid space
c) Spinal cord d) Orbit

3474. Which of the following is the most common central nervous system parasitic *infestation-(AIIMSMay 03)*
a) Echinococcosis b) Sparganosis
c) Paragonimiasis d)Neurocysti

3454) b 3455) d 3456) a 3457) a,c,e 3458) a 3459) b 3460) d 346l)b 3462) a 3463) c 3464) c 3465)a,b,c,e 3466)c 3467)b 3468)c 3469)c 3470)b 3471)d 3472)a 3473)a 3474)d

3475. Neurocysticercosis is treated by all the following drugs, except - *(AIIMS May 93)*
a) Albendazoleb) Niclosamide
c) Flubendazole d) Praziquantel

3476. Commonest presentation of neurocysticerocosis is-
a) Seizures b) Focal neurological deficits
c) Dementia d) Radiculopathy *(AI03)*

3477. Treatment of Neurocysticercosis includes all of the following except - *(AI 98)*
a) Praziyuantelb) Albendazole
c) Niclosemided) Flubendazole

3478. IVue statement about neurocysticercosis is -*(AI01)*
a) Seizures due to neurocysticercosis are resistant to anti epileptic drugs
b) Albendazole is superior to praziquantel in the T/T of above condition
c) Common presentation is 6th CN palsy and hemiparesis
d) Steroids are used in the mangament of hydrocephalus

3479. Prion includes - *(AIIMS Nov 07)*
a) DNA and RNA b) Only RNA
c) Proteins d) Only DNA

3480. Which one of the following is not a prion associated disease - *(AIIMS Nov 2004)*
a) Scrapie
b) Kuru
c) Creutzfeldt-Jakob's disease
d) Alzheimer's disease

3481. All of the following statements about Creutzfeldt-Jakob disease are true, Except - *(AIIMSMay 2004)*
a) It is a neurodegenerative disease.
b) It is caused by infectious proteins
c) Myoclonus is rarely seen
d) Brain biopsy is specific for diagnosis.

3482. Fatal familial insomnia is associated with- *(AI99)*
a) Prion disease b) Degenerative disease
c) Neoplastic disease d) Vascular disease

3483. IVue about Creutzfeldt-Jacob's disease is -
a) Inheritable disease *(TGI June 02)*
b) Corneal implants can transmit disease
c) Caused by RNA containing organism
d) Caused by DNA containing organism
e) Arthropod borne disease

3484. Prions diseases are- *(PGI June 03)*
a) Alzheimer's disease
b) Gerstmann straussler Scheinkan syndrome
c) Familial Fatal insomnia
d) Frontotempotal dementia
e) Creutz- feldt Jakob disease

3485. All of the following statements are true regarding central nervous system infections, except-
a) Measles virus is the causative agent for subacute sclerosing pan encephalitis (SSPE)
b) Cytomegalo virus causes bilateral temporal lobe hemorrahagic infarction *(AIIMS Nov 04)*
c) Prions infection causes spongiform encephalopathy
d) JC virus is causative agent for progressive multifocal leucoencephalopathy

3486. All of the following statements regarding progressive multifocal leucoencephalopathy are true except - *(AIIMSNov 08)*
a) Patient commonly presents with visual disturbances and speech defects
b) It is most commonly seen in immunocompromised persons
c) Diagnosis is frequently suggested by MRI
d) It follows an indolent course and patient usually dies within 6 months

3487. Inclusions in oligodendrogliocytes is a feature of -
a) Creutzfeldt-J akob disease *(AIIMS Nov 10)*
b) CIDP
c) HSV
d) Progressive multifocal leukoencephalopathy

3488. A young female patient with long history of sinusitis presented with frequent fever along with personality changes and headache of recent origin. The fundus examination revealed papilledema. The most likely diagnosis is - *(AIIMS Nov 2004)*
a) Frontal lobe abscess
b) Meningitis
c) Encephalitis
d) Frontal bone osteomyelitis

3489. Regarding Progressive multifocal leucoence-phalopathy, all are true, except - *(PGI June 06)*
a) Caused by JC virus
b) Diffuse cortical matter involvement
c) Disease of white matter
d) Disease of grey matter

3490. A 60 yr old man with C/O progressive dementia for the past 6 months with intermittent jerky movement involving whole body from 2 days. EEG showed sharp bipolar spikes. Diagnosis is - *(AIIMS Nov 10)*
a) Alzheimer's
b) Creutzfeld Jakob disease
c) Lewy body dementia
d) Herpes simplex encephalitis

3491. A 60 year old man with progressive dementia of recent onset presents with intermittent irregular jerky movemets. EEG shows periodic sharp biphasic waves. The most likely diagnosis is - *(AI 11)*
a) Alzheimers's disease
b) Creutzfeldt Jakob disease
c) Lewy body dementia
d) Herpes simplex Encephalitis

3492. Sea saw nystagmus is seen in - *(AIIMS June 97)*
a) Anterior longitudinal fasiculus
b) Craniopharyngioma
c) Medullary lesion
d) GB. Syndrome

3475) b 3476) a 3477) c 3478) b 3479) c 3480) d 3481) c 3482) a 3483) a,b 3484)b,c,e 3485) b 3486) a 3487) d 3488) a 3489) a,c 3490)d 349l)b 3492)b

3493. Downbeat nystagmus is characteristic of -
a) Posterior fossa lesion *(PGIJune 97)*
b) Vestibular lesion
c) Labyrinthine lesion
d) Cerebellar lesion

3494. Metabolic encephalopathy presents with -
a) Broca's aphasia *(AIIMS June 99)*
b) Anomic aphasia
c) Transcortical sensory aphasia
d) transcortical motor aphasia.

3495. Narcolepsy is characterized by all of the folowing except - *(ARMS Nov 02)*
a) Sleep paralysis b) Cataplexy.
c) Hallucination. d) Snoring.

3496. Opso myoclonus is seen in - *(PGIDec 98)*
a) Neuroblastoma b) Nephroblastoma
c) Retinoblastoma d)Melanoma

3497. Opsoclonus is - *(PGI June 99)*
a) Arryhthmic conjugate eye movements
b) Conjugate chaotic movements
c) Conjugate, chaotic, continuous movements
d) Chaotic, disconjugate movements

3498. In metabolic encephalopathy, feature is- *(PGIJune 97)*
a) Tonic clonic seizures b) Chorea
c) Asterixis d) Paraplegia

3499. Which of these can cause 3rd nerve paralysis -
a) Posterior communicating artery (PCA) aneurysm
b) Tolosa-Hunt syndrome *(PGI June 02)*
c) Midbrain infarct
d) Pons infarct
e) Lateral medullary lasions

3500. A man with painful opthalmoplegia, cavernous sinus dilatation: diagnosis is - *(ARMSMay 08)*
a) Gradinego syndrome
b) Tolosa Hunt syndrome
c) Cavernous sinus thrombosis
d) Orbital pseudotumour

3501. Third nerve palsy with pupillary sparing is seen in-
a) Hypertension *(ARMSMay 95)*
b) Aneurysm of posterior communicating artery
c) Diabetes mellitus
d) Craniopharyngioma

3502. All the following are features of pseudotumor cerebri except- *(AI96)*
a) Normal-sized ventricles on CT scan
b) Increased protein in CSF
c) Papilledema
d) Absence of focal neurological deficit

3503. All the following are features of Pseudotumor cerebri except - *(AI94)*
a) Increased intracranial tension
b) Convulsions
c) Papilledema
d) Normal CT scan

3504. Brain abscess in cyanotic heart disease is commonly located in - *(AI 06)*
a) Cerebellar hemisphere b) Thalamus
c) Temporal lobe d) Parietal lobe

3505. Spinal segment in knee jerk include all of the following except - *(AI 9 7)*
a) LI b)L2
c) L3 d)L4

3506. All of the following are neurologic channelopathies except- *(ARMS May 04)*
a) Hypokalemic periodic paralysis
b) Episodic ataxias
c) Familial hemiplegic migraine
d) Huntington's disease

3507. All os the following are calcium channelopathies, except - *(ARMS May 05)*
a) Episodic ataxia-1
b) Spinocerebellar ataxia -6
c) Familial hemiplegic migraine
d) Hypokalemic periodic paralysis

3508. Pain insensitive structure - *(AI 09)*
a) Middle cerebral arteryb) Choroid plexus
c) Dural sheath d) Falx cerebri

3509. APACHE-II score includes - *(PGI June 08)*
a) Age b) Blood pressure
c) $Pa0_2$ d) Respiratory rate
e) Chronic medical abnormality

3510. Causes of acute flaccid paralysis - *(PGI June 08)*
a) Poliomyelitis
b) Tick paralysis
c) Acute inflammatory demylination polyneuropathy
d) ADEM

3511. Spontaneous CSF leak associated with all except -
a) Increased intracranial tension *(ARMS Nov 08)*
b) Partial or complete empty sella syndrome
c) Pseudotumour cerebri
d) Low risk encephalocoele

3512. Non-noxious stimulus is perceived as pain in -
a) Allodynia b) Hyperalgesia *(AIIMS May 08)*
c) Paraesthesia d) Hyperpathia

3513. Flapping tremors are seen in the following conditions except - *(ARMSMay 2005)*
a) Uremic encephalopathy
b) Parkinsonism
c) Hepatic encephalopathy
d) Carbon dioxide narcosis

3514. C/F of cerebello pontine angle tumours - *(PGI June 05)*
a) Tinitus b) Deafness
c) Loss of corneal reflex d) Vertigo

3515. The causes of systemic secondary insult to injured brain include all of the following except- *(ARMS 06)*
a) Hypercapnia b) Hypoxemia
c) Hypotension d) Hypothermia

3493) a,d 3494) b 3495) d 3496) a 3497) a 3498) c 3499)a,b,c 3500) b 3501) a,c 3502) b 3503) b 3504) d 3505)a 3506)d 3507)a 3508)b 3509)A11 3510)A11 3511)a 3512)a 3513)b 3514)b 3515)d

3516. A head injured patient, who opens eyes to painful stimulus, is confused and localizes to pain. What is his Glassgow coma Score - *(AIIMSNov 05)*
a) 7 b) 9
c) 11 d) 13

3517. A 45 year old woman, presenting with the history of diplopia and dysphagia worsening as the day progresses, can be diagnosed to *ha\e-(AUMSNov 05)*
a) Thyrotoxicosis b) Myastheniagravis
c) Musculardystrophy d) Brain tumor

3518. All of the following hereditary conditions predispose to CNS tumors, except - *(AIIMS May 2005)*
a) Neurofibromatosis 1 & 2
b) Tuberous sclerosis
c) Von-Hippel-Lindau syndrome
d) Xeroderma pigmentosum

3519. "Prosopagnosia" is characterized by - *(AI99)*
a) Inability to read b) Inability to identify faces
c) Inability to write d) Inability to speak

3520. Prosopagnosia is inability to - *(AIIMS June 2000)*
a) Recognise normal daily object by feel and touch
b) Correct grammatical mistakes
c) Smell properly
d) Read and write sentences

3521. Drug not used in multiple *sc\erosis-(AHMSNov 11)*
a) Interferon-P-la b) Interferon-(3-lb
c) Glatiramer acetate d) Mycophenolate

3522. Drug used in multiple sclerosis - *(AIIMSNov 11)*
a) Inferferon alpha b) Interferon beta
c) Interferon gamma d) Infliximab

3523. Treatment for multiple sclerosis - *(AIIMSNov 06)*
a) Interferon alpha b) Interferon beta
c) Infliximab d) Interferon gamma

3524. Increased ICT is characterised by *A/E-(PGIDec 02)*
a) Headache and vomiting b) Intellectual change
c) Tremors d) Papilloedema
e) Tachycardia

3525. Increased ICT is associated with all except - *(AI07)*
a) Paraparesis b) Abducent paralysis
c) Headache d) Visual blurring

3526. Regarding raised intracranial tension in adults, true is - *(AIIMS May 93)*
a) Sutural diastasis
b) No Papilloedema
c) May present with vomiting, headache and blurred vision
d) No systemic symptom

3527. Best method to monitor intracranial pressure is -
a) Intraventricular catheter *(AIIMSMay 07)*
b) Subarachnoid bolt
c) Intraparenchymal catheter
d) Epidural cathetar

3528. All of the following are used to decrease intracranial pressure, except - *(Sep 96)*
a) Frusemide b) Mannitol
c) Steroid d) Hyperventilation

3529. Indications of glucocorticoids in raised ICT-
a) Cerebral abscess b) Brain tumour *(PGI June 04)*
c) Head injury d) Cerebral Haemorrhage

3530. All the following are features of cerebellar disease except- *(AI 96)*
a) Intention tremors b) Past pointing
c) Hypertonia d) Ataxia

3531. Which of the following is not a feature of lateral cerebellar lesion? *(AI 10)*
a) Resting tremor
b) Dysarthria
c) Nystagmus
d) Loss of Co-ordination of movements

3532. Hypotonia, tremor and ataxia are seen in lesion or- *(PGI Dec 98)*
a) Basal gangliab) Medullary pyramid
c) Cerebellum d) Pons

3533. CNS tumor seen in Von Hippel Lindau syndrome is-
a) Meningioma *(PGI Dec 99)*
b) Cerebellar hemangioblastoma
c) CNS lymphoma
d) Glioma

3534. AD the following statements are true about Lambert Eaton syndrome except - *(AI 09)*
a) Positive tensilon test
b) Spares occulomotor nerve
c) Decremental response to repeated electrical stimulation
d) Associated with adenocarcinoma of lung

3535. NARP syndrome is a type of- *(AI 11)*
a) Mitochondrial function disorder
b) Glycogen storage disorder
c) Lysosomal storage disorder
d) Lipid storage disorder

3536. A patient presents with quadriparesis. CSF shows protein 1 g%, sugar 40 mg% and no cells. He should be treated with: *(Delhi PG Mar. 09)*
a) Antisnake venum
b) 5% dextrose
c) Intravenous immunoglobulin
d) I. V. Potassium chloride

3537. All the following are recognized association except - *(Manipal 09)*
a) Abetalipoproteinaemia and acanthocytosis
b) Refsum's disease is associated with cerebellar ataxia
c) Spinocerebellar ataxia in Friedrich's ataxia
d) Homocystinuria and recurrent deep vein thrombosis

3538. Which one of the foUowing is NOT a characteristic or tuberous sclerosis - *(UPSC-109)*
a) Seizures
b) Adenoma sebaceum
c) X-linked recessive inheritance
d) Shagreen patches

3516)c 3517)b 3518)d 3519)b 3520)None 3521)d 3522)b 3523)b 3524)c,e 3525)a 3526)c 3527)a 3528)a 3529) a,b 3530) c 3531) a 3532) c 3533) b 3534) a,c 3535) a 3536) c 3537) d 3538) c

3539. True statement about gliobastoma multiforme -
a) Common in 3rd decade *(PGIMay 10)*
b) Common in 6th decade
c) Most common location is supratentorial
d) Mostly located in posterior fossa
e) It has good prognosis

3540. *True* statement about Neurocysticercosis -
a) Caused by Taenia solium *(PGIMay 10)*
b) Caused by echinococcus granulosus
c) Albendazole is durg of choice
d) Thiabendazole is used
e) Demonstration of parasite in eye by fundoscopy is an absolute criteria for diagnosis of neurocysticercosis

3541. A young female has severe pain in abdomen, constipation, irrelevant talking, BP 160/110, heart rate 120/min, fever and +ive Watson-Schwartz test in urine. Which of the following drugs should not be used in this condition- *(PGINov 10)*
a) Na Valproate b) Alcohol
c) Propranolol d) Griseofulvin
e) Danazol

3542. Features of Variant Creutzfeldt-Jakob disease (vCJD) are - *(PGINov. 10)*
a) Viral disease
b) Prion disease
c) Occur d/t consumption of beef meat from cattle with bovine spongiform encephalopathy (BSE).
d) Manifest as dementia

3543. A 60 yr old man with C/O progressive dementia for the past 6 months with intermittent jerky movement involving whole body from 2 days. EEG showed sharp bipolar spikes. Diagnosis is - *(AIIMSNov 10)*
a) Alzheimer's
b) Creutzfeld Jakob disease
c) Lewy body dementia
d) Herpes simplex encephalitis

3544. A 24 year old male patient with h/o primary syphilis in the form of genital ulcer & mucocutaneous lesions, presents with features suggestive of neurosyphilis in the form of meningitis for which appropriate treatment was started. What will you do for monitoring of treatment - *(AIIMS Nov 10)*
a) Venereal disease Research Laboratory test (VDRL)
b) TPI
c) FTS-AB
d) ELISA

3545. Horner's syndrome is seen in all except -
a) Carotid artery aneurysm *(AIIMS Nov 10)*
b) Medial medullary syndrome
c) Can occur following surgery for raynaud's syndrome
d) Multiple sclerosis

3546. A girl aged 20 yrs complains of headache while studying. Her vision is found to be normal. All of the following should be further evaluated except -
a) Family history of headache *(AIIMS Nov 10)*
b) Menstrual history
c) Self worth
d) Her interest in studies

3547. Horner's syndrome. All true except- *(AIIMSMay 11)*
a) Miosis b) Anhydrosis
c) Hyperchromatic iris d) Apparent exophthalmos

3548. All of the following are true about delirium tremens, except- *(AI11)*
a) Visual Hallucinations
b) Tremors
c) Ophthalmoplegia
d) Clouding of consciousness

3549. A 60 year old man with progressive dementia of recent onset presents with intermittent irregular jerky movemets. EEG shows periodic sharp biphasic waves. The most likely diagnosis is - *(AI 11)*
a) Alzheimers's disease
b) Creutzfeldt Jakob disease
c) Lewy body dementia
d) Herpes simplex Encephalitis

3550. A thirty five year old female has proximal weakness of muscles, ptosis and easy fatigability. The most sensitive test to suggest the diagnosis is -
a) Muscle Biopsy b) CPK levels *(AI 11)*
c) Edrophonium test d)EMG

3551. NARP syndrome is a type of- *(AI 11)*
a) Mitochondrial function disorder
b) Glycogen storage disorder
c) Lysosomal storage disorder
d) Lipid storage disorder

3552. Which drug among the following can produce pseudotumour cerebri? *(UPSC 111)*
a) Nalidixic acid b)Ampicillin
c) Chloramphenirol d) Ceftriaxone

3553. Consider the following - *(UPSCI11)*
1. Diabetes mellitus and thallium poisoning
2. Guillain-Barre syndrome and Amyloidosis
3. Porphyria and Diabetes mellitus
4. Steele-Richardson-Olszewski syndrome and Amyotrophic lateral sclerosis

Autonomic dysfunction is a feature in which of the above?
a) 1 and 3 only b) 2 and 3 only
c) 1, 3 and4 only d) 1,2,3 and4

3554. A 37-year-old woman presents to her physician with the complaint of difficulty in reading and fatigue. She reports having had "pins and needles" feeling in her left arm several months ago that resolved without treatment. On examination, she has visual field deficits and mild hyperreflexia. The MRI examination confirms the suspected diagnosis. Which of the following is the underlying mechanism responsible for the patient's disease? *(UPSCI 11)*
a) Antibodies to acetylcholine receptors
b) Axonal degeneration
c) Demyelination of neurons
d) Posterior column degeneration

3539)b,c 3540)a,c,e 3541)a,b,d,e 3542)b,c,d 3543)d 3544)a 3545)b 3546)c 3547)d 3548)c 3549)b 3550)c 3551) a 3552)a 3553)d 3554)c

3555. Part of brain involved in narcolepsy -
a) Neocortex *(NEET/DNB Pattern)*
b) Hypothalamus
c) Cerebellum
d) Putamen

3556. Pseudotumor cerebri is seen in - *(AIIMS, May 12)*
a) Obese women in the age group 20-40 yrs.
b) Obese males 20-40 yrs.
c) Thin females 50-60 yrs.
d) Thin males 50-60 yrs.

3557. All the following arefeaturespfpseiidotumpE cerebri i;%:: except- *(9VEET/GNB Paiu-mj*
a) Normal-sized ventricles on CT scan
b) Increased protein in CSF
c) Papilledema
d) ogical deficit

3558. Most common c^userof pidural abscess -
a) Staphylococcus *(NEET/DNB Pattern)*
b) Streptococcus
c) Gram negativeEacillL
d) Microaerophilic anaerobic streptococci *WffmSk*

3559. Pt. is able to recognise person by name but not by face. Lesion is in - *(NEET/DNB*
a) Pos 1 parietal region
b) Fro
c) Th
d) Oc Jipito temporal art a

3560. Untoff phenomenon is- *(NEET/DNB Pattern)*
a) Worsening of symptom with cold
b) Relief of symptom with cold
c) Worsening of symptom with heat and exertion
d) palsy ot syniptom with heat and excretion

356L Whatis not#] feature of raised ICT- *(NEET/DNB*
a) Hypertension b) Tachycardia *Pattern)*
c) Vomiting d) Blurring of vision

3562. Dysmetria - *(NEET/DNB Pai&m)*
11 Cerebellum bKercbmm
c) Basal ganglia d) Thalamus

3563. Which of the following statements about Von-Hippel Lindau syndrome is true - *(AI12)*
a) Multiple tumors are rarely seen
b) Craniospinal hemangioblastomas are common
c) Superatentorial lesions are common
d) Tumors of Schwann cells are common

3564. All of the following are correctly metched except -
a) Neurofibromatosis - renal artery stenosis
b) Moyamoya disease - aortic aneurysm
c) Marfan's disease - dural ectasia *(AIIMS, May 12)*
d) Mulibreynanism - constrictive pericarditis

3565. Type of wave in Metabolic Encephalopathy -
a) Alpha b) Beta *(AIIMS, May 12)*
c) Gamma d) Delta

3566. Stimulation of which of the following areas of brain is experimentally used to control intractable pain - *(AI 12)*
a) Periaqueductal grey matter
b) Mesencephalon
c) Subthalmic nucleus
d) Medical fore brain bundle

3567. Which of the following is not involved in Wernicke's Korsakoff psychosis- *(AI 12)*
a) Mamillary body b) Thalamus
c) Periventricular Grey matter d) Hippocampus

3568. Which of the following sites is responsible for the amnestic defect in Wernicke's Korsakoff - syndrome- *(AI12)*
a) Mamillary body
b) Thalamus
c) Subthalmic nucleus
d) Medical fore brain bundle

3569. Criteria for Brainstem death includes- *(AI 12)*
a) Positive Doll's eye Reflex
b) Absent pupillary light reflex and delated pupils
c) Pinpoint pupils
d) Positive vestibulo-ocular reflex

3570. Frey's syndrome is associated with- *(NEET/DNB Pattern)*
4) Sympath etie fibres-of auriculo temporal nerve
3b) Pafasympahetic fibres of trigeminal nerve
c) Parasympathetic fibres of aurieuld temporal nerve
d) Motor fibres of facial nerve-

3571. Hypotonia with brisk tendon reflexes are seen in - *(NEET/DNB**&**aft<erri)*\
a) Hypotonic cerebral palsy b) G BS
pflS d) ;Spmal;nipscle atrdpy 1,, d) Infaritile tremor

3572. Maralgia paresthetica is not caused t y- *(NEET/DNB*
a) Ascites b) Alcohol consumption *Pattern)*
c) Obesity d) Pelvic surgery

3573. Shagreen patch is seen in - *(NEET/DNB Pattern)*
a) Tuberous sclerosis
b) Neurofibromatosis
c) Sturge weber syndrome
d) Neurofibromatosis I

3574. Diarrhoea with acantholysis in urine- *(NEET/DNB*
a) Whipples disease b) Celiac sprue *Pattern)*
c) Abetalipoproteinemia d) Ulcerative colitis

GENETICS

3575. Which of the following is an example of disorders of sex chromosomes ? *(AIIMS May 06)*
a) Marfan's syndrome
b) Testicular feminization syndrome
c) Klinefelter's syndrome
d) Down's syndrome

3576. All are causes of Gynaecomastia, except -
a) Cimetidine therapy *(AIIMS May 93)*
b) Androgen therapy
c) Leprosy
d) Small cell carcinoma lung

3577. Estimation of the following hormones is useful while investigating a case of gynaecomastia except -
a) Testosterone b) Prolactin *(AI04)*
c) Estradiol d) Lutenizing hormone

3555) b 3556) a 3557) b 3558) a 3559) a 3560) c 3561) b 3562) a 3563) b 3564) b 3565) d 3566) a 3567) d 3568) b 3569)b 3570)c 3571)a 3572)b 3573)a 3574)c 3575)c 3576)b 3577)b

3578. A combination of gynaecomastia, decreased serum testosterone and LH in a male patient is seen in- *(AUMS Dec 97)*
a) Testicular failure b) Sertoli cell tumor
c) Gonadotrophins d) Androgen resistant state

3579. A 30-year old male complains of loss of erection; he has low testosterone and high protecting level in blood; What is the likely diagnosis - *(AI01)*
a) Pituitary adenoma b) Testicular failure
c) Craniopharyngioma d) Cushing's syndrome

3580. A baby girl presents with bilateral inguinal masses, thought to. be hernias hut are found to be testes in the inguinal canals.Which karyotype would you expect to find in the child - *(AIIMS Nov 04)*
a) 46, XX b) 46,XY
c) 47,XXY d)47,XYY

3501, Prophylactic gonadectomy is done in -
a) Testicular feminising syndrome *(AIIMSDec 97)*
b) Klinefelter's syndrome
c) Kalman's syndrome
d) Down's syndrome

3582. True of testicular feminization syndrome is -
a) Testes are present *(PGIJune 02)*
b) Female Habitus
c) XY genotype
d) Secondary amenorrhea
e) Uterus present

3583. A 21 year old woman presents with complaints of primary amenorrhoea. Her height is 153 cms, weight is 51 kg. She has well developed breasts. She has no pubic or axillary hair and no hirsuitism. Which of the following is the most probable diagnosis-^ *04)*
a) Turner's syndrome
b) Stein-Leventhal syndrome
c) Premature ovarian failure
d) Complete androgen insensitivity syndrome

3584. Testicular feminising syndrome is characterised by-
a) 47 XX b) 47XY *(PGIJune 03)*
c) Ambiguous genitalia d) Female genitalia
e) Mullerian derivatives present

3585. True statement about Testicular feminization syndrome- *(PGI June 04)*
a) Absent uterus b) Absent vagina
c) Chromosome pattern 47 X Y d) Absent ovary

3586. 16 year old girl with primary amenorrhoea attends OPD, She has normal sexual development and normal breast but with absent public and axillary hair. Examination shows B/Linguinal hernias. USG shows absent uterus and blind vagina. Diagnosis will be - *(AIIMS May 0 7)*
a) Turner syndrome
b) Mullerian agenesis
c) Star syndrome
d) Androgen insensitivity syndrome

3587. All of the following statements about androgen insensitivity syndrome are true except -
a) It is an X linked disorder *(AIPGMEE 08)*
b) XY genotype is present
c) Affected individual has female phenotype
d) Abundant pubic hair are present

3588. All are true about XO chromosomal pattern, except-
a) All are hermaphrodites *(AIIMS May 94)*
b) Gonadal dysgenesis
c) Webbed neck
d) Congenital heart disease

3589. In Turner's syndrome which of the following is NOT seen - *(AIIMS June 2000)*
a) Short stature b) Widely spaced nipple
c) Webbed neck d) Mental retardation

3590. All are seen in Turner's syndrome, except -
a) XO pattern *(AIIMS May 93)*
b) Webbed neck
c) Short stature
d) Mental retardation

3591. A patient with XO chromosomes and short stature is likely to have - *(AIIMS June 2000)*
a) Klinefelter's syndrome b) Turner's syndrome
c) Condy syndrome d) Condy phenomenon

3592. True about Turner's syndrome - *(PGIDec 02)*
a) Primary amenorrhea b)45XO
c) Short stature patient d) Puberty usually late
e) Streak ovaries

3593. The following statements regarding Turner syndrome are true except - *(AIIMSMay2003)*
a) Occurence of Turner syndrome is influenced by maternal age.
b) Most patients have primary amenorrhoea.
c) Most patients have short stature.
d) Edema of hands and feet is an important feature during infancy.

3594. Kamlesh, a 2 year old girl has Down's syndrome. Her karyotype is 21/21 translocation. What is the risk of recurrence in subsequent pregnancies if the father is a balanced translocation carrier -
a) 100% b) 50% *(AI 02)*
c) 25% d)0%

3595. All the following are features of Down's syn drome except -
a) Brushfield spots in iris b) Simian crease
c) Mental retardation d) Hypertonicity

3596. Down's syndrome is associated with -*(PGI.DEC 02)*
a) Congenital heart disease
b) ***ALL.***
c) Early onset Alzheimer's disease
d) CNS tumour
e) Infection

3597. True about trisomies is - *(PGI June 08)*
a) Increased maternal age > 35 years
b) Downs causes MR
c) Most common trisomy is trisomy 21
d) Trisomy 21 is ameiosis-I error

3578) b 3579) a 3580)b 3581) a 3582)a,b,c 3583) d 3584) d 3585) a,d 3586) d 3587) d 3588) a 3589) d 3590) d 359l)b 3592)All 3593)a 3594)a 3595)d 3596)a,b,c,e 3597)a,c,d

3598. True about Down's syndrome are A/E -
a) Predisposed to acute leukemias *(PGIJune04)*
b) Associated with congenital heart disease
c) Increased risk of CNS tumours
d) Early onset Alzheimer's disease
e) Increased risk of infection

3599. 100% recurrence of disease in Down's syndrome -
a) Translocation of 15 + 21 chromsome
b) Mosaic pattern *(PGIJune 2000)*
c) Trisomy -(21,21 translocation)
d) Non Dysjunction

3600. In Down's syndrome - *(PGIDec 06)*
a) Gap (sandle gap) b)Antimongoloid slant
c) Cliodactyly d) Hypotonia

3601. Cardiac abnormality seen with Noonan's syndrome is- *(AIIMS May 95)*
a) VSD b)ASD
c) Pulmonary stenosis d) Coarctation of aorta

3602. All are components of Laurence Moon Biedl syndrome, except - *(AIIMS May 93)*
a) Digital anomaly b) Asthenic built
c) Mental retardation d) Hypogonadism

3603. True is Klinefelter's syndrome - *(AI98)*
a) Short stature b) Pituitary adenoma
c) Subnormal intelligence d) Breast adenoma

3604. Males who are sexually underdeveloped with rudimentary testes and prostate glands, sparse pubic and facial hair, long arms and legs and large hands and feets are likely to have the chromosome complement of- *(AI 04)*
a) 45XYY b)46XY
c) 46XXY d)46X

3605. Klinefelter's syndrome is associated with-*(PGI June*
a) XXY genotype b) Male habitus *02)*
c) Infertility d) Azoospermia
e) Barr body absent

3606. Fragile X-syndrome is characterized by all of the following except - *(AI 99)*
a) Long face b) Large ear
c) Large nose d) Large testis

3607. Genetic abnormality in fragile x *syndrome-fPGIJune*
a) Trinucleotide repeats b) Point mutation *07)*
c) Not inheritable d) Deletion

3608. All are present in Fragile X syndrome - *(PGI June*
a) .MR b) Microorchidism *08)*
c) Large facies d) Small ear

3609. A young, tall, thin male with arachnodactyly has ectopia lentis in both eyes. The most likely diagnosis is- *(AIIMSNov 05)*
a) Marfan's Syndrome
b) Marchesani's Syndrome
c) Homocystinuria
d) Ehler's Danlos syndrome

3610. The diagnosis of a patient presenting with familial Polyostosis, Precocious puberty and Pigmentation is- *(AI 95)*
a) Tuberous sclerosis
b) McCune Albright syndrome
c) Klinefelter syndrome
d) SLE

3611. Rokitansky kuster hauser syndrome is associated with- *(AI 01)*
a) Ovarian agenesis b) Absent fallopian tube
c) Vaginal atresia d) Bicomuate uterus

3612. Absent radius is seen in all except - *(PGI June 08)*
a) Haltoram b) Fanconi anaemia
c) Trisomy 13 d) Ectodermal dyplasia

3613. Late onset of puberty inmale is defined as -
a) Puberty onset after 16 years *(AIIMS May 94)*
b) Puberty onset after 17 years
c) Puberty onset after 18 years
d) Puberty onset after 21 years

3614. All of the following statements about HRT (hormone replacement therapy) are true except -
a) It increases the risk of coronary artery disease
b) It increases bone mineral density *(AIIMS May 05)*
c) It increases the risk of breast cancer
d) It increases the risk of endometrial cancer

3615. Salt losing Hydroxylase deficiency is characterized by- *(PGI June 01)*
a) Hyponatremia b) Hyperkalemia
c) Hypoglycemia d) Hypocalcemia

3616. Virilisation of female is present in all, except -
a) 17-â hydroxylase deficiency *(AIIMS May 93)*
b) 21 -a hydroxylase deficiency
c) 11 -a hydroxylase deficiency
d) 11-â hydroxysteroid deficiency

3617. Which of the following statement about congenital adrenal hyperplasia is not true - *(AIPGMEE 08)*
a) 21-alpha hydroxylase deficiency is the most common cause
b) Males present with precocious puberty
c) Females present with ambiguous genitilia
d) Hypokalemic alkalosis is seen

3618. A female child with virilization, hypertension with low plasma renin diagnosis is - *(AIIMSMay 07)*
a) 21 a hydroxylase deficiency
b) lip hydroxylase deficiency
c) 3'P hydroxylase deficiency
d) Conn's syndrome

3619. The most common cause of ambiguous genitalia in a new born - *(AI 02)*
a) 21 a hydroxylase deficiency
b) lip hydroxylase deficiency
c) 17 a hydroxylase deficiency
d) 3 p - hydroxysteroid deficiency

3598)None 3599)c 3600)a,c,d 3601)c 3602)b 3603)c 3604)bore 3605)a,c,d 3606)c 3607)a 3608)a,e 3609)a 3610)b 3611)c 3612)d 3613)a 3614)d 3615)a,b,c 3616)a 3617)d 3618>b 3619)a

3620. Pseudohermaphroditism in a female child is most commonly due to - *(AI94)*
a) 21 a hydroxylase deficiency
b) 17 a hydroxylase deficiency
c) 11 (3 hydroxylase deficiency
d) 3 p Hydroxysteroid dehydrogenase deficiency

3621. A baby girl with ambiguous genitalia is found to have 21a hydroxylase deficiency of the salt-wasting type. Which of the following karyotypes would you expect to find - *(AIIMS May 04)*
a) 46, XX b) 46, XY
c) 47,XXY d)47,XYY

3622. Which one of the following is an autosomal dominant disorder - *(AIIMS 96)*
a) Duchenne's muscular dystrophy
b) Fragile X syndrome
c) Fanconi's anemia
d) Huntington's chorea

3623. Which one of the following is Autosomal recessive - *(AI 98)*
a) Homocysteinuria b) G - 6 PD deficiency
c) Mytonic dystrophy d) Otospongiosis

3624. All of the following are X - linked except - *(AI 98)*
a) G - 6 PD deficiency b) Hemophilia A
c) Von - willebrand's disease d) Fragile X syndrome

3625. Most common trisomy among following is - *(AI98)*
a) 18 b)21
c) 13 d) 5

3626. Most common group of diseases following mendelian inheritance are - *(AI 99)*
a) Autosomal dominant b) Autosomal recessive
c) X-linked dominant d) X-linked recessive

3627. Which of the following is Autosomal Dominant-
a) Retinoblastoma *(AI2K)*
b) Ataxia telangiectasia
c) Bloom's syndrome
d) Xeroderma pigmentosa

3628. Which one of the following is an Autosomal Dominant disorder - *(AI 02)*
a) Cystic fibrosis
b) Hereditary spherocytosis
c) Sickle cell anemia
d) G-6PD deficiency

3629. RNA fragments are sequenced by - *(AI 99)*
a) Eastern-blot b) Western blot
c) Northern blot d) Southern-blot

3630. Which one of the following diseases is an autosomal dominant disorder - *(AIIMSMay 2005)*
a) Hemochromatosis
b) Phenylketonuria
c) Maturity onset diabetes of the young
d) Glucose-6 phosphate dehydrogenase deficiency

3631. Single gene autosomal recessive disease is -
a) Wilson's disease *(PGIDEC99)*
b) Tuberous sclerosis
c) Huntington's disease
d) Schizophrenia

3632. Mutation leading to sickle cell anemia - *(PGI June*
a) Crossover mutation b)Frameshift *01)*
c) Deletion d) Nondysjunction
e) Point mutation

3633. Most common chromosomal syndromė \&-*(AIIMS* ***Dec***
a) Fragile X syndrome b) Trisomy 17 *94)*
c) Trisomy 21 d) Trisomy 13

3634. Which condition is Autosomal dominant -
a) HemophiliaA *(AIIMSNOV93)*
b) Duchenne muscular dystrophy
c) Wilson's disease
d) Adult polycystic kidney disease

3635. Alpha-fetoprotein in maternal serum and/or amniotic fluid is increased in all except - *(AIIMS May 2005)*
a) Fetal neural tube defects b) Down's syndrome
c) Anencephaly d) Encephalocele

3636. True about Transgenic process is - *(PGI June 01)*
a) Removing DNA from a cell
b) Inserting DNA into a cell
c) Tumor carcinogenesis can be studied
d) In "Knock out" animals a specific gene is targeted for inducing mutation or inactivation

3637. Glucose-6-phosphate dehydrogenase deficiency is- *(UPSC95)*
a) Autosomal recessive b) Autosomal dominant
c) Sex-linked recessive d) Sex-linked dominant

3638. Short stature with widely spread nipples and webbing of neck is seen in- *(TN 95)*
a) Down's syndrome b) Turner's syndrome
c) Klinefelter's syndrome d) Edward's infarction

3639. Disease where gene therapy has been attempted or considered include- *(Kerala 2K)*
a) Adenosine deaminase deficiency
b) hemophilia A
c) Cystic fibrosis
d) Hypercholesterolemia
e) All of the above

3640. Regarding Genome therapy all are true except -
a) Gene also considered as drug *(Manipal 04)*
b) Has been tried in cystic fibrosis
c) It is used for cloning
d) None

3641. Which is X - linked dominant condition? -*(Manipal*
a) Phosphate diabetes b) Hemophilia *04)*
c) Gaucher disease d) Cystic fibrosis

3642. All of the following are chromosomal breakage syndromes except - *(Karnataka 04)*
a) Fanconi's anaemia b) Ehler-Danlos syndrome
c) Bloom syndrome d) Ataxia telengiectasia

3643. Which one of the following neurological conditions is not inherited in autosomal dominant pattern -
a) Neurofibromatosis *(UPSC 05)*
b) Friedreich's ataxia
c) Marfan's syndrome

3620)a 3621)a 3622)d 3623)a 3624)c 3625)b 3626)a 3627)a 3628)b 3629)c 3630)c 3631)a 3632)e 3633)c 3634)d 3635)b 3636)b,c,d 3637)c 3638)b 3639)e 3640)a 3641)a 3642)b 3643)b

3644. DNA analysis can be done from all except -
a) Monocyte b) Lymphocyte *(MAHE 05)*
c) Fibroblast d) Amnion cell

3645. Gene mutations in Cystic fibrosis occurs at -
a) Short arm of chromosome 7 *(J & K 05)*
b) Long arm os chromosome 5
c) Long arm of chromosome 7
d) Short arm of chromosome 3

3646. Which one of the following is an autosomal dominant type of genetic disorder - *(UPSC 0 7)*
a) Colour - blindess b) Haemophilia
c) Phenylketonuria d) Tuberous sclerosis

3647. The following are autosomal dominant disorders except - **(***Corned 0 7)*
a) Mytonic dystrophy b) Von Willebrand disease
c) Haemochromatosis d) Marfan's syndrome

3648. Which is X-linked dominant conditions ?
a) Phosphate diabetes *(Delhi PG Feb. 09)*
b) Hemophilia
c) Gaucher's disease
d) Cystic fibrosis

3649. Which of the following is/are an example/examples of non-Mendelian inheritanc*el (Delhi PG Mar. 09)*
a) Genomic imprinting
b) Uniparental disomy
c) Mitochondrial inheritance
d) All of the above

3650. Which one of the following is NOT an autosomal recessive disorder - *(UPSC-109)*
a) Leber's hereditary optic atrophy
b) Finnish nephropathy
c) Renal tubular acidosis
d) Haemochromatosis

3651. Which of the following correctly describes gene therapy? *(UPSC-II09)*
a) Synthesis of DNA probes with specific sequence
b) Mapping and isolation of gene sequence
c) Introduction of gene sequence into a cell
d) Use of polymerase chain reaction technique

3652. Northern blotting is used for analysis of-
a) DNA b) RNA *(COMED 09)*
c) Proteins d) Polysaccharides

INFECTION

VIROLOGY

3653. Reverse transcriptase sequence in HIV is best described as - *(AI2000)*
a) RNA-DNA-RNA b) DNA - RNA
c) RNA-DNA-RNA d) RNA-DNA

3654. HIV infects most commonly- *(AIIMS June 2000)*
a) CD4+helper cells b) CD8+cells
c) Macrophage d) Neutrophil

3655. HIV affects characteristically - *(AIIMSDec 98)*
a) CD_4 cells +macrophages
b) CD_4 Lymphocytes only
c) Natural killer cells
d) Helper cells

3656. Which one of the following is true regarding HIV infection - *(AI 04)*
a) Following needle stick injury infectivity is reduced by adminsitration of nucleoside analogues
b) CD4 counts are the best predictors of disease progression
c) Infected T cells survive for a month in infected patients
d) In latent phase HIV has minimal replication

3657. True about HIV in pregnancy - *(PGI June 01)*
a) Perinatal transmission common
b) LSCS increases chances of transmission significantly
c) Zidovudine does not decrease risk if given to baby bom to HIV positive mother
d) Less than 5% chance of transmission
e) Pregnancy predisposes to HIV infection

3658. All are true about perinatal transmission of HIV Except- *(AIIMS June 98)*
a) Cannot be diagnosed by routine confirmatory test.
b) Post natal transmission is not possible.
c) Infant transmission rate is <50%
d) Vims can be isolated from mother's milk

3659. The chance that a health worker gets HIV from an accidental needle prick is - *(PGI June 99)*
a) 1 % b) 10%
c) 95% d) 100%

3660. A patient develops hepatosplenomegaly, lymphadenopathy following sexual contact, 3 weeks back. The best test to rule out HIV infection is -
a) ELISA b) Western blot *(AIIMS June 99)*
c) p24 Ag d) Lymph node biopsy

3661. A patient comes to hospital with a history of sore throat, diarrhoea and sexual contact 2 weeks before. The best investigation to rule out HIV is - *(AI2000)*
a) P24 antigen assay b) ELISA
c) Western blot d) Lymph node biopsy

3662. "Window period" in HIV is defined as -
a) Period between onset of infection^T/MS*Nov 07)* and clinically detectable level of antibodies
b) Period between infection and appearance of symptoms
c) Time between HFV positivity to AIDS
d) CD4 count < 200

3663. Major signs included by WHO for AIDS diagnosis -
a) Chronic diarrhea > 1 month *(PGI June 06)*
b) Chronic cough > 1 month
c) Chronic fever > 1 month
d) Weight loss of at least 10% of body weight
e) Generalized Lymphadenopathy

3644) b 3645) c 3646) d 3647) c 3648) a 3649) d 3650) a 365 l)c 3652) b 3653) a 3654) a 3655) a 3656) a 3657) a 3658) b 3659) a 3660) c 3661) a 3662) a 3663)a,c,d

3664. False positive ELISA for HTV - *(PGIDec 02)*
a) Multiple myeloma
b) Lepromatous leprosy
c) SLE

3665. In the HIV positive patient with tuberculosis, all are true except - *(AIIMS May 01)*
a) Decreased cavitation in lungs
b) Increased sputum positively forAFB
c) Highly variable tuberculin tests
d) Decreased fibrosis

3666. Presentation of TB in AIDS patients is/are -
a) t sputum positivity *(PGI June 04)*
b) Atypical CXR
c) Less tolerance to ATT
d) t ed cavitary lesion
e) Ted extra pulmonary manifestation

3667. True about TB in HIV infection- *(PGI June 07)*
a) Less susceptibility to ATT
b) Same susceptibility to ATT
c) Faster progression of ATT
d) TB more common in AIDS

3668. Commonest presentation of tuberculosis is AIDS -
a) Infection with high organism (+) *(PGI June 06)*
b) Sputum smear positive
c) Negative tuberculin
d) Reactive Caseous necrosis seen
e) Extra pulmonary TB is common

3669. True about Tuberculosis HIV patients - *(PGI09)*
a) T Sputum positivity
b) INH prophyaxis prevent development of T.B
c) Lack characteristics feature of T.B
d) Highly positive PPD reaction
e) Atypical radiological features

3670. A 30-year old HIV positive patient presents with fever, dyspnoea and non-productive cough. Patient is cyanosed. His chest X-ray reveals bilateral, symmetrical interstitial infiltrates. The most likely diagnosis is - *(AI03)*
a) Tuberculosis
b) Cryptococcosis
c) Pneumocystis carinii pneumonia
d) Toxoplasmosis

3671. Multifocal tumour of vascular origin in a patient of AIDS is- *(AI2000)*
a) Kaposi's sarcoma
b) Astrocytoma
c) Gastric carcinoma
d) Primary CNS lymphoma

3672. A patient with HIV has diarrhoea with AFB +ve organism in stool. The most likely organism is -
a) Mycobacterium avium intracellulare *(AI2000)*
b) Mycobacterium tuberculosis
c) Mycobacterium leprae
d) Mycoplasmas

3673. A HIV patient complains of visual disturbances. Fundal examination shows bilateral retinal exudates and perivascular haemorrhages. Which of the following viruses are most likely to be responsible for this retinitis - *(AI 04)*
a) Herpes simplex virus
b) Human herpes virus 8
c) Cytomegalovirus
d) Epstein-Barr (EB) virus

3674. Which of the following is not seen in HTV Patient with CD_4 count less than 100 Per micro litre, who has non productive cough - *(AIIMS June 99)*
a) Mycobacterium tuberculosis
b) Pneumocystis carinii
c) Mycoplasma pneumonae
d) Cryptococcal infection

3675. All are true regarding HIV infection with osteomyelitis, except - *(ARMSDec 97)*
a) Commonly caused by Staphylococcus aureus
b) New periosteal bone formation
c) Usually bilateral
d) Necrosis is not seen

3676. A HIV positive female presents with an indurated ulcer over the tongue. Laboratory findings show growth in cornmeal agar at 20 degree celcius, microscopy showing hyphae and growth in human serum at 37 degree celcius show budding yeasts. The probable cause is - *(AIIMSMay 2001)*
a) Candida albicans b) Histoplasmosis
c) Blastomycosis d) Coccidiodomycosis

3677. DOC in esophageal candidiasis in HIV- *(PGI June 2K)*
a) Fluconazole b) Miconazole
c) Amphotericin-B d) Griseofulvin

3678. A known sputum positive pulmonary tuberculosis patient currently on INH, rifampicin, pyrizinamide and ethambutol is found to be HIV positive. His CD4 count was 100/ L and viral load was more than 50,000 copies/ml. Which of the following antiretroviral drug should be avoided - *(AI04)*
a) Indinavir b)Lamivudin
c) Ritonavir d)Efavirenz

3679. Which tumor is not seen in AIDS - *(ARMSDec 97)*
a) Kaposi sarcoma
b) GI adeno carcinoma
c) Non Hodgkin's lymphoma
d) Astrocytoma

3680. All are HIV associated malignancies except-*(PGIDec 99)*
a) Kaposi's sarcoma b) Lung carcinoma
c) NHL d) Anogenital CA

3681. Cutaneous marker of HTV is - *(PGIDec 98)*
a) Seborrhoea b) Vesicular rash
c) Oral candidiasis d) Photosensitivity

3682. The most common late CNS complication of HIV is -
a) Dementia b) Ataxia *(ARMS May 01)*
c) Seizures d) Deliruim

3664)c 3665)b 3666)b,e 3667)b,d 3668)e 3669)c,e 3670)c 3671)a 3672)a 3673)c 3674)c 3675)d 3676)a 3677)a 3678)c 3679) d 3680)b 3681)a 3682)a

3683. AIDS asso malignancy/neoplasms - *(PGIDec 06)*
a) NHL b) Kaposis sarcoma
c) Primary CNS lymphoma d)Ca cervix

3684. Pathologic features of brain in ADDS are ail, except-
a) Perivascular giant cell invasion *(AIIMSNov 01)*
b) Microglial nodules
c) Vasculitis
d) Temporal lobe infarction

3685. All of the following statments regarding primary effusion lymphoma are true except - *(AI06)*
a) It generally presents in elderly patients
b) There is often an association with HHV-8
c) The proliferating cells are NK cells
d) Patients are commonly HIV positive

3686. Primary cerebral lymphoma - *(PGIDec 05)*
a) It is most common formed of T cells
b) It is Usually solitary
c) Multifocal-lesion are seen
d) It is seeen in immunosuppressed patient
e) Chemosensitive

3687. Which of the following antiretroviral drugs is a non-nucleoside reverse transcriptase inhibitor *
a) Zidovudine b) Efavirenz*(A I IMS May 05)*
c) Saquinavir d) Stavudine

3688. Which of the following is not a nucleoside reverse transcriptase inhibitor - *(AI 04)*
A)Zalcitabine b) Lamivudine
c) Nevirapine d) Didanosine

3689. A doctor was accidentally exposed to HIV by a needle stick injury while sampling HIV positive patient. Drug prescribed to him would be - *(AIIMSMay 02)*
a) Zidovudine + Lamivudine + Indinavir for 4 weeks
b) Zidovudine + Lamivudine + Navirapine for 4 weeks
c) Zidovudine + Stavudine for 4 weeks
d) Zidovudine + Lamivudine for 4 weeks

3690. The following are the complications of the HIV infection except - *(AI 09)*
a) Cardiac tamponade c) Pericardial effusion
c) Thromboembolism d) Cardiomyopathy

3691. The most common cause of seizures in a patient of AIDS is- *(UPSC2K)*
a) Toxoplasmosis
b) Cryptococcal meningitis
c) Progessive multifocal leucoencephalopathy
d) CNS lymphoma

3692. Commonest oppurtunistic infection in AIDS is- *(AIMS 92)*
a) Tuberculosis b) Cryptococcosis
c) Aspergillosis d) Candidasis

3693. Opportunistic lung infection in AIDS is due to- *(NIMHANS88)*
a) Pneumocystis carini b) Klebsiella
c) Mucormycosis d) Mycoplasma

3694. Which vaccine is not useful in a patient with AIDS-
a) OPV b) DPT *(AIMS 92)*
c) BCG d) Measles

3695. Most common CNS manifestation of HIV infection is - *(JIPMER 93)*
a) Vacuolar myelopathy b) Encephalopathy
c) Acute meningitis d) Dementia

3696. The most common ophtalmic lesion in AIDS is- *(AIMS80, PGI81)*
a) Hard exudates b) Cotton wool spots
c) Angioid streaks d) Microaneurysms

3697. Homosexual men with AIDS are most likely to exhibit- *(AIMS 78)*
a) Antibodies to HLV- II
b) Pneumocystitis carini penumoniae
c) Elevation of inducer/helper T cells
d) All of the above

3698. In tuberculosis in an AIDS patient the chest X-ray looks like- *(Delhi 92)*
a) Miliary shadow b) Cavity
c) Consolidation d) Collapse

3699. Most common opportunistic infection in AIDS is- *(AIMS 92)*
a) Cryptococcosis b) Tuberculosis
c) Candidiasis d) Aspergillosis

3700. ADDS infect - *(Kerala 94)*
a) B cells b) Helper T cells
c) Killer T cells d) Regular T cells

3701. ADDS was first diagnosed in patients suffering from-
a) CrytococcUs neoformans meningitis *(TN95)*
b) Pneumocystis carini
c) Kaposi sarcoma
d) Tuberculosis

3702. The most specific test for AIDS is- *(CUPGEE 95)*
a) Western blot b) Southern blot
c) ELISA d) None

3703. In patients of acquired immunodeficiency syndrome, the commonest cause of space occupying lesion in brain is - *(UPSC97)*
a) Non Hodgkin's lymphoma
b) Cytomnegalovirus infection
c) Cryptoccosis
d) Toxoplasmosis

3704. Which of the following is AIDS defining illness - *(UPSC 97)*
a) Mycobacterium tuberculosis meningitis
b) Cryptococcus neoformans meningitis
c) Cytomegalovirus meningitis
d) Histoplasma capsulatum meningitis

3705. True statement ragarding neurological manifestation of AIDS is - *(MAHE 98)*
a) Dementia and delerium are the most common CNS manifestations
b) Neurological lesions do not develop until 2-3 years after HIV infection
c) 25% of AIDS patients show sub-normal infelligence on clinical examination
d) Convulsions may be the presenting symptoms

3683) All 3684) c 3685)c 3686)c,d 3687)b 3688)c 3689)a 3690)c 3691)a 3692)None 3693)a 3694)a
3695)b,d 3696)b 3697)b 3698)a 3699)None 3700)b 3701)b 3702)a 3703)d 3704)A11 3705)d

3706. In an AIDS patient presenting with fever cough a diagnosis of pnemocystis carinii pneumonia is best established by- *(MAHE 98)*
a) Transtracheal biopsy
b) Broncho alveolar lavage
c) Staining of intranuclear inclusion and silver staining
d) Aspiration and culture

3707. In early AIDS infection of ELISA is negative what should be done - *(Kerala 98)*
a) p24 antibody b) gp 120 antibody
c) gp 120 antigen d) p 24 antigen

3708. All are used for AIDS except- *(JIPMER 99)*
a) Fanciclovir b) Ritonavir
c) Stavudine d) Indinavir

3709. The minimum period required for post exposure chemo prophylaxis for HIV is- *(UPSC 2K)*
a) 4 weeks b) 6 weeks
c) 8 weeks d) 12 weeks

3710. ELISA test for AIDS is- *(ICS 2K)*
a) More sensitive but less specific
b) More specific but less sensitive
c) Highly sensitive and specific
d) Neither specific nor sensitive

3711. Diffuse lymphadenopathy in AIDS patient indicates - *(J&K2001)*
a) Lymphoma b)TB
c) No specific infection d) Fungal infection

3712. All are used in AIDS except- *(Kerala 2001)*
a) Zidovudine b) Stavudine
c) Ribavarin d)Lamivudine

3713. A patient with HIV infection complains of rapidly progressive painless visual loss.Fundus shows exudates and haemorrhage especially along blood vessels. In this case, the treatment of choice would be- *(UPSC 2002)*
a) Amphotericin B b) Pentamidine
c) Acyclovir d) Ganciclovir

3714. Side effects of zidovudine- **(***TN 99)*
a) Headache b) Myalgia
c) Granulocytopenia d) Rashes

3715. Tuberculous Infection most common in AIDS- *(JIPMER91)*
a) M.Avium Intracellulare b) M.Scrofulaceum
c) M. Ulcerans d) M.Tuberculosis

3716. Commonest mode of AIDS transmission in india is by - *(Kamat96)*
a) Vertical transmission
b) I.V drug abuse.
c) Heterosexual promiscuity
d) Homosexual promiscuity.

3717. Risk of HIV transmission is not seen with -
a) Whole blood *(NIMS96)*
b) Platelets
c) Plasma derived Hepatitis
d) Leucocytes Vaccines

3718. AIDS is not transmitted by - *(Kerala. 97)*
a) Blood transfusion b) Cryoprecipitate
c) Breast milk d) Plasma

3719. In AIDS, kaposi sarcoma may respond to -
a) Interleukin-2 infusion b) Azathioprine
c) Alpha interferon d) Any of the above

3720. HIV selectivly infects and destroys - *(PGI81)*
a) T_4 cells b)T_3cells
c) K cells d) T_{10} cells

3721. HTLV-II has been implicated in the etilogy of- *(JIPMER 80,AIIMS 81)*
a) AIDS b) Adult T cell lymphoma
c) Zinc deficiency d) Hairy cell leukemia

3722. If a parenteral needle stick injury occurs in a health care worker dealing with AIDS patient which of the following are necessary - *(KARN 94)*
a) Serial serological testing of the source person
b) Serial serological testing of the health worker
c) Zidovudine (AZT) prophylaxis to health care worker
d) Wash the part with soap and water
e) Wash the part with gloutaraldehyde

3723. The most common cause of death in Kaposi's Sarcoma is - *(Karnatak 96)*
a) Dissemination
b) AIDS
c) Massive pulmonary haemorrhage
d) Diabetes mellitus

3724. The following are true about CDC classification of AIDS except - *(Jipmer 03)*
a) Hairy cell leukoplakia included
b) Recurrent salmonellosis
c) Secondary cancer like Kaposi sarcoma
d) CD_4 cell count taken into consideration

3725. A resident doctor sustained a needlestick injury while sampling blood of a patient who is HIV positive. A decision is taken to offer him post-exposure prophylaxis. Which one of the following would be the best recommendation? -
a) Zidovudine + Lamivudine for 4 weeks
b) Zidovudine + Lamivudine + Nevirapine for 4 weeks
c) Zidovudine + Lamivudine + Indinavir for 4 weeks
d) Zidovudine + Stavudine + Nevirapine for 4 weeks

3726. Which of the following allows binding of HIV to CD4 cells - *(Kerala 04)*
a) gp 120
b) gp41
c) Proteins formed by expression of gag gene
d) ccR5

3727. TB in HIV infection causes pulmonary disease resembling post primary disease in normal individuals when it occurs during_____stage of HIV infection - *(Kerala 04)*
a) Stage of viraemia
b) Middle third of window period
c) Last third of window period
d) Full blown AIDS

3706)b 3707)d 3708)a 3709)a 3710)a 3711)c 3712)c 3713)d 3714)c 3715)a 3716)c 3717)c 3718)None 3719) c 3720) a 3721) d 3722) c,d 3723) c 3724) None 3725) c 3726) a 3727) a

3728. HIV induced nephropathy is more common in which of the following subsets of HIV patients -
a) Homosexuals b) Hetrosexuals
c) Intravenous drug abusers d) Congenital HIV

3729. Full blown immunodeficiency syndrome is characterized by - *(SGPGI05)*
a) High viral titres with low CD_4 count
b) Low viral titres with low CD_4 count
c) High viral titres with high CD_4 count
d) High CD_4 and high CD_g

3730. Which vaccine is not given in AIDS patients -
a) DPT b)BCG *(HPU05)*
c) Rabies d) Measles

3731. All are major feature of AIDS except - *(HPU 05)*
a) Fever > 1 month
b) Diarrhea > 1 month
c) Loss of> 10% of Body Wt.
d) Cough > 1 month

3732. Which one of the following is not a AIDS defining condition - *(UPSC 05)*
a) CMV retinitis
b) Cryptococcal minigitis
c) Pneumocystis carinii pneumonia
d) Hodgkin's lymphoma

3733. A patient comes to hospital with a history of sore throat, diarrhoea and sexual contact 2 weeks before. The best investigation to rule out HIV is -
a) P24 antigen assay b) ELISA *(MAHE 05)*
c) Western blot d) Lymph node biopsy

3734. The most common ophtalmic lesion in AIDS is - *(Jipmer 05)*
a) Hard exudates b) Cotton wool spots
c) Angioid streaks d) Microaneurysms

3735. Zidovudine toxicity is increased by all except -
a) Azithromycin b) Probencid *(APPGE 05)*
c) Cisplatin d) Cyclophosphamide

3736. Reserve transcriptase sequence in HIV is best described as - *(MAHE 05)*
a) RNA-DNA-RNA b) DNA-RNA
c) DNA-RNA-DNA d) RNA-DNA

3737. Which drug is recommended for prevention of mother to child transmission of HIV infection ?
a) Didanosine b) Nevirapine *(UPSC 06)*
c) Indinavir d) Nelfmavir

3738. A patient with HIV disease is on Highly Active Anti-Retroviral Therapy (HAART). He develops tuberculosis. Which one of the following anti-tubercular drugs interferes with HAART ?
a) Isoniazid b) Ethambutol *(UPSC 06)*
c) Pyrazinamide d) Rifampicin

3739. Which one of the following statements is correct ? Opportunistic infections in HIV infected individual occur when CD_4 cell count fall below - *(UPSC 06)*
a) 200/cumm. b)400/cumm.
c) 600/cumm d)800/cumm

3740. Most common cause of pleural effusion in HIV patients - *(NIMHANS 06)*
a) Kaposi sarcoma b) Lymphoma
c) P.carinii d) Mycobacterium tuberculosis

3741. Life time risk of TB in HIV Patients -*(COMED 06)*
a) 20% b)50%
c) 10% d) 5%

3742. Characteristic fat distribution seen in HTV patient is? *(APPG06)*
a) Cheek b) Abdomen
c) Temple d) Buffalo hump

3743. Most common GI manifestation in HIV infection is -
a) Amebiasis *(Manipal06)*
b) Cryptosoporidiosis
c) Giaridiasis
d) Hook Worm infestation

3744. Oral lesions in Immunocompromised state -
a) Lichen planus *(Manipal06)*
b) Lichenoid eruption
c) Oral hairy leukoplakia
d) Erythroplakia

3745. Epstein-Barr virus is considered responsible for all the following conditions except- *(UPSC 96)*
a) Burkitt's lymphoma
b) Infectious mononucleiosis
c) Nasopharyngeal carcinoma
d) T-Cell lymphoma

3746. All are true about rabies virus except - *(MP 2K)*
a) It is a DNA virus
b) Vaccine virus has fixed incubation period
c) Negri bodies are found in hippocampus
d) All bites on fingers with laceration are class three injuries

3747. Herpes simplex encephalitis affects.....lobe-
a) Temporal b) Parietal *(NIMHANS 01)*
c) Occipital d) Frontal

3748. Japanese encephalitis is caused by- *(UPSC 95)*
a) Human retrovirus b) Enteroviruses
c) Arboviruses d)Cytomegaloviru

3749. Epstein-Barr virus infection is usually associated with the following disease states except- *(UP 9 7)*
a) T-cell lymphoma
b) Incectious mononucleosis
c) Nasopharyngeal carcinoma
d) Meningoencephalitis

3750. Drug of choice for cytomegalovirus - *(JIPMER 98)*
a) Acyclovir b) Amantadine
c) Ganciclovir d) Idoxuridien

3751. In varicella infection which is not tru^-*(Kerala 97)*
a) Scabs are highly infective
b) Caused by herpes virus
c) Transmitted by oro-pharyngeal secretions
d) Vesicles are centripetal in distribution

3728) c 3729) a 3730) b 373 l)d 3732) d 3733) a 3734) b 3735) a 3736) a 3737) b 3738) d 3739) a 3740) a 3741)b 3742) b 3743) b 3744) c 3745) None 3746) a 3747) a 3748) c 3749)None 3750) c 3751) a

3752. Dengue haemorrhage fever (DHF) is suspected if ail of the following are present EXCEPT-
a) Fever of over 10 dyas duration *(UPSC 2K)*
b) Evidence of bleeding
c) Thrombocytes count less than l ,00,000/cmm
d) Evidence of lymph adenopathy

3753. Most common complication of rubella- *(IN2002)*
a) Polyarthritis b) Encephalitis
c) Orchitis d) Thromobocytopenia

3754. Child with agammaglobinemia with respiratory tract infection and diarrhoea is most likely having infection- *(TN 97)*
a) Cocksackie virus b) Rota Virus
c) Shigella d) None of the above

3755. Sternal edema is seen in - *(TN 98)*
a) Measles b) Mumps
c) Diphtheria d) Varicella

3756. Respiratory syncytial virus causes all except-(7W*89)*
a) Cold in children b) Coryza in adults
c) Pneumonia in elderly d)ARDS

3757. Oesophagitis in immuno compromised person is caused by all except is - *(CALCUTTA 2K)*
a) HSV b)HTV
c) Varicella d)CMV

3758. Dengue fever is transmitted by - *(Karnataka 04)*
a) Tiger mosquito b) Jackal mosquito
c) Wolf mosquito d) Lion mosquito

3759. All of the following are true regarding influenza except- *(Kerala 04)*
a) Point mutations in hemagglutinin gene cause antigenic drift
b) Acquisition of completely new hemagglutin in gene cause antigenic shift
c) Amantidine is active against influenza B only
d) Amantidine Shortnes the illness

3760. Acute viral hepatitis - A is diagnosed by -
a) Hepatic injury related with transaminase level
b) Variable increase in transaminase level*(SGPGI05)*
c) IgG anti HAV used for diagnosis
d) No rise of transaminase at all

3761. Hand foot mouth disease is characterized by -
a) Cause miniepidemic in school
b) **I.P. -3-10 Days**
c) Transmitted by virus
d) C/F similar test seen in cows

3762. All of the following is complications of mumps expect ? *(APPG 06)*
a) Meningoencephalitis b)Myocarditis
c) Pancreatitis d)Myositis

3763. What is the most common opportunistic infection in AIDS? *(UPSC07)*
a) Tuberculosis b) Cryptococcosis
c) Pneumocystitis carinii d)Histoplasmosis

3764. All of the following are true of Reye's syndrome, except - *(Delhi PG Feb. 09)*
a) It frequently complicates viral infections
b) Prothrombin time is prolonged
c) Disease may be precipitated by salicylates
d) Deep jaundice is present

3765. The following are true about measles-(Mzm/?a/ *09)*
a) It is an RNA virus
b) Causes Koplik's spots on the conjunctiva
c) Acute catarrhal conjunctivitis is a known features
d) All the above

3766. Consider the following statements with regard to sexual transmission of HTV - *(UPSC-109)*
1. Male-to-female transmission is many timed more efficient than female-to-male transmission
2. Non-ulcerative inflammatory STDs such as those caused by Chlamydia trachomatis and Trichomonas vaginalis do not increase the risk of transmission of HIV infection.
3. Infections with Treponema pallidum, Haemophilus ducreyi and HSV increase the risk of transmission of HIV infection.
4. Oral sex is a much less efficient mode of transmission of HIV than is receptive anal intercourse.

Which of the statements given above are correct ?
a) 1 and 3 only b) 1,3 and 4 only
c) 2 and 4 only d) 1,2,3 and 4

3767. What is the drug of choice for CMV (cytomegalovirus) retinitis in patients with AIDS -
a) Acyclovirb) Ganciclovir *(UPSC-I09)*
c) Pentamidined) Cotrimoxazole

3768. A patient with HIV disease presents with fever, malaise and headache of acute onset. CSF examination reveals 20 cells with 80% lymphocytes, protein 100 mg/dl, sugar 35 mg/dl, and a positive India ink preparation. CT head is normal What is the most appropriate therapy in this patient -*(UPSC-109)*
a) Amphotericin-B b) Amoxycillin
c) Acyclovir d)Antitubercular drugs

3769. A patient with fever from 3 days, severe joint pain & retroorbital pain is admitted in hospital. His initial Hb and Hct are normal and platelet count is 96000, which drops to 48000 on 3rd day. Fever has responded incompetely to paracetamol. Futher management includes - *(PGINov. 10)*
a) Liberal fluids
b) NS AID
c) Acyclovir
d) Prophylactic platelet transfusion
e) D-dimer assay

3770. Resided Zidovudine and Lamivudine, which of the following drugs is a reverse transcriptase inhibitor used in the treatment of HTV infection?
a) Saquinavir b) Indinavir *(UPSC 111)*
c) Abacavir d) Ritonavir

3752)d 3753)a 3754)b 3755)b 3756)d 3757)b 3758)a 3759)c 3760)b 3761)a,c 3762)d 3763)a 3764)d 3765)d 3766) b 3767) b 3768) a 3769) a 3770) c,d

3771. With which of the following group of anti-retroviral drugs are dyslipidemia, insulin resistance, diabetes mellitus with abdominal obesity and skeletal wasting linked? *(UPSCI11)*
a) Reverse transcriptase inhibitors
b) Integrase inhibitors
c) Protease inhibitors
d) Entry inhibitors

3772. Nituzoxomide in AIDS - *(NEET/DNB Pattern)*
a) Cryptococcosis b) Cryptosporidiosis > K
' A'f &fc^piSfoplasmosis. jd) Candidiasis # ; *:&i*

3773. Not a site for primary lymphoma in *AIDS-(NEET/*
a) CNS b) Stomach* *DNB Pattern)*
c) Kidney d) Bone marrow

3774. Lymp ***kojmmHP/Uf*** *yi^::b^MEEf^PN3^atterri)*
a) Immunoblastic? / *
b) Marginal B cell lymphoma
c) Hodgkins lymphoma
d) Mantle cell lymphoma

3775. Most common fungal infection in II.I.V. - *(NEET/*
a) Histoplasmosis b) Candida *ONE Pattern)*
s w * -■«) Cryptosporidium^ .. d) ,Cryptococcus' ■ .iw *M*ftt/;

3776 Prophyla xis for HI V is optimally effective if started unto.. .. hrs of exposure - *(NEET/DNBPattern)*
a) 1 b) 2
c) 4 d) 12

3777. Which of the following provide protection against malaria all except - *(NEET/DNB P ttern)*
a) Duffy blood group b) Sickle cell anem a
0 e) Thalas semia d) PNH1 **gj**

3778. Not to be given in malignant malaria is - *(NEET/*
a) Quinolone b) Quinine *DNB Pattern)*
c) Chloroquine d) Artesunate

3779. Fever blisters can occur due to - *(AIMS,May 12)*
a) HHV6
b) Varicella
c) Primary HSV-1 infection
d) Reactivation of HSV-1

3780. Drug of choice for listeria -*(NEET/DNB Pattern)*
a) Cephalosporin b) Ampicillin: ,
c) Ciplox d) Amikacin

3781. Drug of choice for cholera - *(NEET/DNB Pattern)*
It% *W* a) Tetracycline \ %1Sp *i*
b) Penicillin
c) Clindamycin
d) Trimethoprim sulfomethonazole

3782. First symptom of leprosy - *(NEET/DNB Pattern)*
a) Decreased vibration & position sense .
, b) Decreased .pain
c) Decreased temperature
d) Decreased light touch

3783. Best diagnostic modality for rotavirus diarrhea -
a) Isolation virus from, stool culture *(NEET/DNB*
b) Detection of antigen in serum *Pattern)*
c) Detection of antigen in stool
d) Detection of antibody in serum

3784.30,^riOldn^jyhi<'hismorth^ ely organism causing K- v$_{i.1}$ 4n&ction of epididypgg$ *(NEET/DNB Pattern)*
a) E.coli b) Gonococci
c) Chlamydia d) Ureaplasma ureolyticum

3785. Chyluria is due to- *, (NEEI/DNB Pattern)*
a) Carcinoma b) Tuberculosis
c) Filaria d) Malaria

3786. Reactive bradycardia with fever- *(NEET/DNB Pattern)*
a> Typhoid b)Malaria 7;;
c) Tuberculosis d) Brucellosis

3787. Treatment of tetanus A/E- *(NEET/DNB Pattern)*
a) Clindamycin b) Doxycycline'
- wA c)' Metronidazole d)Penicillin *l*/^1

3788. What can represent as a medical emergency in an aspleenic patient - *(NEETYDNB Pattern)*
a) Cat bite b) Dog bite
c) Fish bite d) Human bite

3789. Which of the following cause tropical spastic paraplegia - *(NEET/DNB Pattern)*
a) EBV b) CMV
c) HTLV-I d) HSV

BACTERIOLOGY

3790. A farmer from central asia persents with an acute onsetr of swinging pyrexia, rigor sweating and monoartucular arthritis of the hip. He also complained of headache and insommia -
On examination he is found to have a small firm splenomegaly and hepatomegaly. His counts showed leucopenia with relative lymphocytosis The most likely diagnosis is - *(ICS 98)*
a) Brucellosis b) Bagassosis
c) Byssionosis d) Chikungunya fever

3791. Poisoning of food by which of the organisms has the shortest incubation period - *(CUPGEE 96)*
a) S. aureus b) Salmonella
c) Botulism d) CL perfringesn

3792. Reactive arthritis is usually caused by- *(Kerala 95)*
a) Shigella flexineri b) Shigella boydli
c) Shigella shiga d) Shigella dysentriae

3793. Which of the following statements regarding plague are correct - *(UPSC95)*
a) There is no man to man transmission of disease
b) Bubonic plague may evolve into septicaemic form of disease
c) Fleas survive in the wall of dwellings for 2 to 4 weeks
d) Domestic rat is infected from wild rodents

3794. Which of the following is not associated with streptococcus- *(UP96)*
a) Rheumatic fever b) Scarlet fever
c) Acute GN. d) Scalded skin syndrome

3795. Streptolysin 'O' acts through- *(UP96)*
a) N- muraminidase b) Teichoic acid
c) Muramicacid d) Cytochrome oxidase

3771)c 3772)b 3773)c 3774)a 3775)b 3776)a 3777)d 3778)a 3779)d 3780)b 3781)a 3782)b 3783)b 3784)c
3785)c 3786)a 3787)d 3788)b 3789)c 3790)a 3791)a 3792)a 3793)b 3794)d 3795)b

3796. All are seen in diphtheric outcome except-
a) Pseudomembrane formation *(JIPMER 98)*
b) Cardiomyopathy
c) Endotoxemia
d) Polyneuropathy

3797. In primary syphillis the lesion seen is- *(MP 98)*
a) Indurated ulcer b) Multiplicity of lesion
c) Painful ulcer d) Bleeding ulcer

3798. Young famale presents with myalgia fever, headache, diarrhoea and an erythematous rash which first appeared in the groin. Most likely diagnosis is- *(MAHE 98)*
a) Toxic epidermal necrolysis
b) Staph, scalded skin syndrome
c) Toxic shock syndrome
d) Epidermolysis bullosa

3799. Consider the following statements- *(ICS 98)*
Helicobacter pylori is
1) The causative organism in 80% of the cases of peptic ulcer-
2) Present in 80% of normal Indian population
3) Responsible for relapse of peptic ulcer
4) Incidentally present in 80% of the cases of peptic ulcer
Of these statement -
a) 1 and Three are correct b) 3 and 4 are correct
c) 1,2 and 3 are correct d) 1 and 4 are correct

3800. A farmer from central Asia presents with an acute onset of swinging pyrexia, rigor, sweating and monoarticular arthritis of the hip. He also complained of headache and insomnia. On examination he is found to have a small, firm splenom egaly and hepatomegaly. His counts showed leucopenia with relative lypmhocytosis. The most likely diagnosis is- *(ICS 98)*
a) Brucellosis b) Bagassosis
c) Byssinosis d) Chikungunyafever

3801. Pneumococcal vaccine advocated for all except-
a) Diabetes mellitus b) Sickle cell anaemia
c) Renal failure d) Cystic fibrosis

3802. Hutchinson's teeth involves- *(Karanat 99)*
a) Incisors b) Premolars
c) Molars d) Canine teeth

3803. A patient in the post opreative ICU with intravenous catheter developed spikes of fever. The causativeorvanism is - *(Karant 99)*
a) E.Coli
b) Coagulase negative staphylococci
c) Pseudomonas
d) Streptococcus agalactiae

3804. True about pneumococcal vaccine is - *(MP2K)*
a) Not given if age is less than 2 years
b) Not given in splenectomy patients
c) Polyvalent
d) Derived from capsular protein

3805. Bronchopneumonia complication in measles is due to- *(ICS2K)*
a) Aspiration b) Sinusitis
c) Bronchiolar obstruction d) Immuno-modualtion

3806. Among the toxins produced by Clostridium botulinum the non-neurotoxic one is - *(Kerala 2K)*
a) A b)B
c) Cl d)C2
e) D

3807. Botulinum toxin is used in treatment of-
a) Facial dystonia and tics *(NIMHANS 2K)*
b) Tetanus
c) GB. syndrome
d) Botulinism

3808. Method of choice to confirm H. Pylori eradication is
a) Urea breath test b) Culture *(J& K O1)*
c) Serology d) Microscopy

3809. All of the following are spirochetal infection except-
a) Bejel b)Yaws *(CIP01)*
c) Pinta d) Relapsing fever
e) *l£N*

3810. A 48 year old male presents with non-itchy generalised papulo-nodular lesion of three months duration. Physical examination does not show any other abnormaly.Slit smear from a nodule does not show AFB. Blood VDRL is reactive 1:2 dilution.The most likely diagnosis is- *(UPSC 95)*
a) Drug eruption
b) Lepromatous leprosy
c) Post kalaazar dermal leishmaniasis
d) Secondary syphilis

3811. H. pylori causes - *(JPMER 99)*
a) Chronic atrophic gastritis
b) Eosinophlic gastritis
c) Lymphomatoid gastritis
d) Chronic non atrophic gastritis

3812. H. Pylori does not cause - *(J & K 2001)*
a) Gastric ulcer b) Duodenal ulcer
c) Lymphoma d) Leiomyoma

3813. Crepitus in a wound is produced by - *(Kerala 97)*
a) Staph aureus b) Clostridium tetani
c) Clostridium welchii d) Pseudomonas

3814. In cystic fibrosis, pseudomonas aeroginosa is most common arganism. The next most common is -
a) Steptococci *(JIPMER 95)*
b) Klebsiella
c) Pnuemococci
d) Staphylococcus aureus

3815. Actinomycosis is commonly seen in - *(ICS 98)*
a) Tibia b) Mandible
c) Scapula d) Femur

3816. False positive veneral desease research laboratories (VDRL) test have been associated with all thefollowing except - *(KARNA T 96)*
a) Narcotic addiction b) Atypical pneumonias
c) Old age d) Diabetes mellitus

3796) c 3797) a 3798) c 3799) c 3800) a 3801)d 3802) a 3803)b 3804)a,c 3805)d 3806) d 3807) a 3808) a 3809) e 3810)d 381 l)a 3812)d 3813)c 3814)d 3815)b 3816)d

3817. Urinary tract infection by a gram +ve organism in a young sexually active female is due to - *(MAHE 98)*
a) B. Subtilis b) E. coli
c) Staph. Saprophyticus d) Strept. pyogenos

3818. Bilateral epitrochlear adenopathy is seen in all except- *(JIPMER 95)*
a) Syphilis b) Tularemia
c) Toxo Plasmosis d) Sarcoidosis

3819. In a contaminated, puctured wound of the leg of a non-immune child of 10, which one of the following measures would give the best protection against the development of tetanus - *(UPSC 9 7)*
a) Active immunization and antibiotics
b) Active immunization, antibotics and immobilisation
c) Active immunization, wound excision and primary closure
d) Active and passive immunization along with antibiotics

3820. Best way to treat street wounds- *(KERALA 97)*
a) Immediate suturing
b) Cleaning with saline and debridement
c) Oral antibiotics
d) Leave it alone

3821. Bartenellosis is caused by - *(CMC 98)*
a) Staphylococcus b) Streoticiccus
c) Anaerobes d) Gonococci
e) Coccobacillus

3822. Best treatment to prevent gas gangrene - *(TN99)*
a) Thorough debridement b) Anti serum
c) Vaccnation d) Antibiotics

3823. All of the follwing drugs are used for eradication of Helcobacter pylori except - *(UPSC 95)*
a) Bismuth subcitrate b) Sucralfate
c) Metronidazole d) Amoxycillin

3824. Which one of the following statements about H. pylori is NOT true - *(UPSC)*
a) Its prevalence increases with age
b) Its prevalence is inversely related to socio-economic status
c) Commonly fundus is the site of colonization
d) It is implicated in duodenal ulcer, gastric ulcer and gastric carcinoma

3825. lyphoral vaccine is recommended after-*(Jipmer 03)*
a) 4 years b) 6 years
c) At birth d) After puberty

3826. Carrier stage is not seen in - *(Jipmer 03)*
a) Diphtheria b) Typhoid
c) Hepatitis - B d) Whooping cough

3827. In a patient with enteric fever bone and joint infection is seen specially in children having - *(UPSC 04)*
a) Aplastic anemia b) HIV disease
c) Sickle cell disease d) HbsAg + ve hepatitis

3828. All are complication of diphtheria, excep *t-(Jipmer 04)*
a) Myocarditis b) Occular muscle palsy
c) Cerebellar ataxia d) Hepatic failure

3829. Characteristic feature of early congenital syphilis is - *(U.PP.GM.E.E. 04)*
a) Microcephaly
b) Saddle nose
c) Interstitial keratitis with sabre skin
d) Vesicular rash with bulla over palms and soles

3830. All of the following are true regarding whooping cough except - *(Kerala 04)*
a) Spread by droplet infection
b) 90% of cases occur in children under 5 years of age
c) The whoop stage is more infection than catarrhal stage
d) Blood count shows lymphocytosis

3831. All of the following are true regarding diphtheria except- *(Kerala04)*
a) Tonsillar membrane cab be easily wiped off
b) There may be swelling of neck causing bull neck appearance
c) With high degree of immunity a membrane may never appear
d) In laryngeal diphtheria, tracheostomy may be needed to relieve respiratory obstruction

3832. Which one of the following is not a feature of leptospirosis - *(UPSC05)*
a) More than 10 fold rise of transaminases
b) Elevated creatinine phosphokinase
c) Hepatorenal syndrome
d) Thrombocytopenia

3833. A four-fold increase in the titre obtained in Weil-Felix reaction is diagnostic of - *(UPSC05)*
a) Rickettsial infection b) Fungal infection
c) Spirochetal infection d) Viral infection

3834. Rx of latent syphilis - *(PGI June 05)*
a) Penicillin b) Erythromycin
c) Tetracycline d) Ciprofloxacin

3835. Metronidazole is indicated in the treatment of which one of the following ? *(UPSC 06)*
a) Traveller's diarrhea
b) Escherichia coli-induced diarrhoea
c) Cryptosporidium-induced diarrhea
d) Helicobacter pylori infection

3836. H.Pylori causes which of the following anemia -
a) Iron deficiency anemia *(APPG06)*
b) Sideroblastic anemia
c) Hemolytic anemia
d) Aplastic anemia

3837. Generalized paresis of Insane is seen in- *(Manipal 06)*
a) Primary stage ,b) Secondary stage
c) Teritiary stage d) Congenital syphilis

3838. Loss of lateral l/3rd of eyebrow is seen in - *(Manipal 06)*
a) Lepromatous leprosy b) Taenia capitis
c) Tuberculosis d) Tetanus

3839. Diagnostic method in TB is all excep*t-(Manipal 06)*
a) Biopsy b) Chest X-ray
c) Montaux, test d) FNAC

3817)c 3818)None 3819)d 3820)b 3821)None 3822)a 3823)b 3824)c 3825)b 3826)d 3827)c 3828)d 3829)d 3830) c 3831) a 3832) c>a 3833) a 3834) a,c 3835) d 3836) a 3837) c 3838) a 3839) a

3840. Ghon's complex is not characterised by- *(UPSC 07)*
a) Hilar lymph nodes
b) Pleural effusion
c) Prominent draining lymphatics
d) Subpleural focus

3841. The drug of choice for the treatment of chlamydial infection is - *(UPSC 07)*
a) Ampicillin
b) Third generation cephalosporins
c) Metronidazole
d) Doxycycline

3842. With reference to leprosy, consider the following statements- *(UPSC 07)*
1. In lepromatous leprosy, lepromin test is always positive
2. Polyclonal hypergammaglobinemia is a common feature of lepromatous leprosy.
3. Secondary amyloidosis may occur in long-standing lepromatous leprosy

Which of the statements given above are correct ?
a) 1,2 and 3 b) 1 and 2 only
c) 1 and 3 only d) 2 and 3 only

3843. Which is the commonest site for extrapulmonary TB? *(Corned 07)*
a) Pleura b) Lymph node
c) Intestine d) Meninges

3844. Drug of choice in methicillin-resistant Staphylococcus aureus - *(Corned 07)*
a) Ceftriaxone b) Ceftazidime
c) Ampicillin d) Vancomycin

3845. In acquired syphilis- *(Manipal 09)*
a) Interstitial keratitis is a recognised feature
b) The infection is most infectious in the secondary stage
c) Causes secondary uveitis
d) May present with a rash which is highly infectious

3846. Secondary syphilis is characterized by the following except - *(UPSC-109)*
a) Occurs 6-8 weeks after development of chancre
b) Painful and itchy maculopapular lesions
c) Constitutional features are present
d) Meningitis, hepatitis, glomerulonephritis and uveitis may occur

3847. Clinical signs and symptoms in tetanus are a result of- *(UPSC-II09)*
a) Endotoxins
b) Exotoxins fixed to motor nerve endplates
c) Circulating exotoxins
d) Both endotoxins and exotoxins

3848. The drug of choice for the treatment of gonorrhoea in a pregnant patient allergic to beta-lactum antibiotics is - *(COMED 09)*
a) Piperacillin b) Ceftriaxone
c) Spectinomycin d) Ciprofloxacin

3849. Which among the following is the drug of choice for Clostridium difficile-induced colitis - *(COMED 09)*
a) Gentamicin b) Ciprofloxacin
c) Metronidazole d)Linezolid

3850. Which of the following antitubercular drugs is safe in hepatitis ? *(Delhi PG Mar. 09)*
a) Isoniazid b) Rifampicin
c) Pyrazinamide d)Ethambutol

3851. Steroids are indicated in all of the following forms of tuberculosis except - *(Delhi PG Mar 09)*
a) Meningitis b) Pericarditis
c) Ileo-Caecal tuberculosis d) Adrenal involvement

3852. Investigstions in a clinically suspected case of tuberculosis is done by - *(PGIMay 10)*
a) Mantoux test (in children) b) Sputum AFB
c) QuantiFERON-TBGold d) Bactec
e) T-SPOT-TB

3853. A patient from Himachal Pradesh presents with fever from 5 days, altered sensorium, increased JVP, maculo-papular rash & erythema on back with black necrotic tissue. Treatment includes -
a) Aminoglycosides b) Ceftriaxone *(PGINov 10)*
c) Chloramphenicol d) Doxycycline
e) Tetracycline

3854. In leptospirosis, the following clinical features are seen except - *(UPSC 111)*
a) Jaundice which may be intense
b) Haemorrhage
c) Hepatomegaly
d) Massive splenomegaly

3855. Which of the following is not associated with Acute Food Poisoning - *(UPSC II11)*
a) Onset with vomiting
b) Tenesmus
c) Leucocytosis
d) High skin surface temperature

ENDOCARDITIS

3856. Which of the following statements are NOT true of right sided infective endocarditis- *(Kamat 96)*
a) Unlikely in the absence of murmur
b) It is commonly seen in drug addicts
c) Emboli to organs other than the lung is rare
d) Can occur following septic abortion

3857. Commonest complication of infective endocarditis is- *(TN95)*
a) CCF b) Embolisation
c) Regurgitation d) Sudden death

DRUGS

3858. Ketocanozole is useful in all except - *(Kerala 95)*
a) T. cruris b) T.versicolor
c) T.capitis d) T.corpoiris

3840)b 3841)d 3842)d 3843)b 3844)d 3845)c 3846)b 3847)b 3848)c 3849)c 3850)d 3851)c 3852)A11
3853)a,c,d,e 3854) d 3855) c 3856) a 3857) b 3858) c

3859. Which one of the following therapies would be safe in a patient with pulmonary tuberculosis having markedly abnormal liver function - *(UPSC 95)*
a) Streptomycin + isoniazid
b) Ethambutol + isoniazid
c) Rifampicin + isoniazid
d) Streptomycin + ethambutol

3860. Which one of the following is effective in the treatment of brucellosis - *(UPSC 95)*
a) Rifampicin b) Amphotericin
c) Ketoconazole d)Pencillin

3861. All of the following are true of pyrazinamide EXCEPT- *(Karn95)*
a) It kills intracellular organisms
b) It is contraindicated in pregnancy
c) It crosses blood brain barrier
d) Is is must in short course chemotherapy

3862. Drug of choice in pseudomonas septicemia is -
a) Methicillin b) Ceftazidime *(PGI95)*
c) Moxalatum d) Piperacillin

3863. Drug of choice for pseudomembranous colitis - *(JIPMER98)*
a) Penicillin b) Metronidazole
c) Ciprofloxacin d) Vancomycin

3864. Worldwide accepted minimum dose of penicillin in latent syphilis- *(AP97)*
a) 4.8 mega units b) 6.0 mega units
c) 7.0 mega units d) 10 units

3865. All of the following are Hepatotoxic except- *(AP 97)*
a) Erythromycin b) Tetracycline
c) Choloroquine d) Rifampicin

3866. In ethambutol toxicity defect is seen in - *(MP 2K)*
a) Red vision b) Green vision
c) Yellow vision d) Blue vision

3867. Safest anti TB drug in renal diseas - *(Orissa R)*
a) Steptomycin b) Capreomycin
c) Rifampicin d) Ethambutol

3868. Drug of choice for Leptospirosis- *(JIPMER 98)*
a) Penicillin b) Tetracycline
c) Suplhonamide d) Erythromycin

3869. Post - translation modification is seen with -
a) Streptomycin b) Penicillin *(TN03)*
c) Sulphonamides d) Cephalosporins

3870. Quinine given to a patient of falciparum malaria caused sweating and plapitation, the likely cause is- *(VPP.GM.E.E. 04)*
a) Cinchonism b) Hyperglycemia
c) Hypoglycemia d) Hypoklemia

3871. Chimeric human / murine monoclonal antibody are- *(PGINov.10)*
a) Adalimumab b) Rituximab
c) Muromonab d) Trastuzumab
e) Infliximab

3872. IVue about Dextrain - *(PGINov. 10)*
a) Cause Rouleaux formation
b) Impair factor VIIIO function
c) *i* Sugar level
d) Improve microcirculation
e) Can cause anaphylaxis

FUNGUS

3873. Which one of the following is the drug of choice for treating systemic fungal infection ? *(UPSC 06)*
a) Griseofulvin b) Amphotericin B
c) Ketoconazole d) Co-trimoxazole

3874. The definitive diagnosis of Pneumocystis carinii pneumonia is - *(Corned07)*
a) Serological test
b) Chest X-ray
c) Finding cysts in tissue specimens
d) CT scan of thorax

PARASITOLOGY

3875. Drug of choice for treating schistosoma haematobium is- *(JIPMER 95)*
a) Metronidazole b) Praziquantel
c) Pyrantel pamoate d) None of the above

3876. Resistant kala-azar is defined by the persistance of the following feature despite adequate therapy-
a) Fever *(UPSC95)*
b) Non-regression of splenomegaly
c) L.D. bodies in more than 5% cells in bone marrow
d) Hyperglobulinaemia

3877. P. falciparum does not present with - *(CUPGEE 95)*
a) Hyperglycaemia b)Hypoglycaemia
c) Hypotension d) Fever

3878. Asiatic cholangitis is caused by - *(AP96)*
a) Schistosoma hematobium
b) Paragonimus Westermani
c) Clonorchis sinensis
d) Amoebiasis

3879. All of the following drugs have been used in the treatment of Kala-azar, except - *(UP 9 7)*
a) Sodium stibogluconate b) Clindamycin
c) Amphotericin B d) Pentamidine

3880. The diagnositc test for cerebral cysticercosis -
a) MRI *(TN 98)*
b) Non contrast CT scan
c) Contrast CT scan
d) Plain x-ray

3881. Which is not true - *(Kerala 97)*
a) Plasmodium vivax affects immature RBC
b) Plasmodium falciparum affect all stages of RBC
c) Plasmodium malaria affects senescent RBC
d) All of the above

3859)d 3860)a 3861)b 3862)d 3863)b 3864)c 3865)c 3866)b 3867)c 3868)a 3869)a 3870)c 3871)b,e 3872)a,b,d,e 3873)b 3874)c 3875)b 3876)c 3877)a 3878)c 3879)b 3880)b 3881)None

3882. The treatment of choice in Taenia saginata and taenia solium infections is - *(UPSC 97)*
a) Metronidazole b) Niclosamide
c) Praziquantel d) Albendazole

3883. All of the following are effective in giardiasis except-
a) Co-trimoxazole b) Furazolidine *(AP 97)*
c) Metronidazole d)Tinidazole

3884. True statement regarding amoebic dysentry -
a) Incubation period 7-10 days *(MAHE 98)*
b) Profuse, watery diarrhoea
c) Diagnostic mucosal lesion most common in rectum
d) Diagnostic mucosal findings on sigmoidoscopy

3885. True statements regarding falciparum malaria are all the following durgs except - *(MAHE 98)*
a) Haemoglobinuria and renal failure
b) Hypoglycemia
c) Cerebral malaria
d) Adequately prevented with chroloquine therapy

3886. Which one of the following immunoglobulins is characteristically elevated in filariasis -*(UPSC 2K)*
a) IgA b) IgE
c) IgG d) IgM

3887. A patient presents with subcutaneou nodules over Rt. iliac crest. Lymph node as well as skin smear shows microfilariae. Patient also has eye manifestatons .Most common filarial species involved - *(AIIMS 01)*
a) Brugis timori b) Onchocerca volvulus
c) LoaLoa d) Mansonelle ozaradi

3888. Which is true about post ftansfusion malaria -
a) Caused by plasmodium malaria *(JIPMER95)*
b) Radical chemotherapy is required
c) Transmitted by needles
d) Caused by P ovale

3889. All of the following are seen in cerebral malaria except - *(UPSC 9 7)*
a) Hyperglycaemia
b) Thrombocytopaenia
c) Acute respiratory distress syndrome
d) Heavy parasitemia

3890. Drug of choice in cerebral cysticercosis is -
a) Piperazine b)Pyrvinium *(JIPMER01)*
c) Thiabendazole d) Mebendazole

3891. Tachyzoites are seen in - *(U.P 97)*
a) Toxocara canis b) Toxoplasma gondii
c) Leishmania d) Trypanasoma

3892. A tick borne fever, where organism attacks RBC's -
a) Typhus b) Babesiosis *(JIPMER 98)*
c) Dengue d) Malaria

3893. The parasite which is transmitted sexually-
a) Strongyloides stercoralis *(TN 98)*
b) Necator americanus
c) Ankylostoma duodonale
d) Trichura

3894. Treatment of uncomplicated hydatid cyst in lung is -
a) Marsupialisation *(PGI89)*
b) Lobectomy
c) Enucleation
d) Extended tube drainage

3895. Chaga's disease does not involve - *(JIPMER 90)*
a) Pancreas b) Duodenum
c) Esophagus d) Colon

3896. Winter bottom's sign is typically seen in -
a) Muconium peritonitis *(JIPMER 81, AIIMS 80)*
b) KalaAzar
c) American trypanosomiasis
d) African trypanosomiasis

3897. In plasmodium vivax malaria, relapse is caused by -
a) Sporozoite b) Schizent *(Jipmer 03)*
c) Hypnozoite d) Gametocytes

3898. Which one of the following statment is false -
a) The presence of ingested erythrocytes is seen only in Entamoeba histolytica
b) Young adult males of low socio - economic status are most commonly affected by invasive amoebiasis
c) A low iron content in the diet predisposes to invasive
d) The pathogenic and non pathogenic strains of E. histolytica can be differentiated by electrophoretic study of desmosomes

3899. Duffy antigen on erythrocytes are receptors for -
a) P. falciparum b) P. vivax *(UPSC 04)*
c) P. ovale d) P. malariae

3900. "String test" in which jejunal mucus is examined, is done for diagonos is of - *(Kerala 04)*
a) Amoebiasis b) Stronglyoidiasis
c) Giardiasis d) Cyclosporiasis

3901. Visceral leishmaniasis is predisposed by -
a) Sickle cell anemia *(Kerala 04)*
b) Renal transplantation
c) G6PD deficiency
d) AIDS

3902. Peripheral blood smear in Plasmodium falciparum infection may show all of the following except - *(SGPGI05)*
a) Male gametocyte b) Trophozoite
c) Female gamatocyte d)Schizont

3903. Malarial relapse is seen in - *(ICS 05)*
a) P. falciparum and P. vivax
b) P. falciparum and P. malariae
c) P. ovale and P. malariae
d) P. vivax and P. ovale

3904. Toxoplasmosis in the foetus can be best confirmed by- *(MAHA 05)*
a) IgM antibodies against Toxoplasma in the mother
b) IgM antibodies against Toxoplasma in the foetus
c) IgG antibodies against Toxoplasma in the moter
d) IgG antibodies against Toxoplasma in the foetus

3882)c 3883)a 3884)d 3885)d 3886)b 3887)b 3888)a,c,d 3889)a 3890)None 3891)b 3892)b 3893)None 3894)c 3895)a,b 3896)d 3897)c 3898)c 3899)b 3900)c 3901)c 3902)d 3903)c 3904)b

3905. A patient present with lower gastrointestinal bleed. Sigmoidoscopy shows ulcers in the sigmoid. Biopsy from this area shows flask-shaped ulcers. Which of te following is the most appropriate treatment- *(AIMS NOV 05)*
a) Intravenous ceftriaxone
b) Intravenous metronidazole
c) Intravenous steroids and sulphasalazine
d) Hydrocortisone enemas

3906. Regarding falciparam malaria, consider the following statements - *(UPSC 07)*
1. The mortality rises steeply when the proportion of infected erythrocytes increases increases above 3 pet cent.
2. The patient may develop hypoglycemia even when not treated with quinine.

Which of the statements given above is/are correct?
a) 1 only b) 2 only
c) Both 1 and 2 d) Neither 1 nor 2

3907. Duffy blood group antigen negativity confers protection against infection by - *(Corned 08)*
a) Plasmodium falciparum b) Plasmodium ovale
c) Plasmodium vivax d) Plasmodium malariae

3908. Which maturation stage of RBCs is infected by Plasmodium falciparum - *(UPSC-109)*
a) Reticulocyte stage only b) Normoblast stage
c) OldRBC d) RBC of all ages

3909. A Bone marrow transplant recipient patient developed chest infection. On HRCT 'Tree in bud appearance' is seen. Most likely causative agent is- *(AIMS Nov 10)*
a) Klebsiella b) Pneumocystis
c)TB d)RSV

3910. Giardiasis may result in the following except -
a) Ill health *(UPSC 111)*
b) Diarrhea
c) Steatorrhoea
d) Gastrointestinal bleeding

3911. A pregnant woman has contracted malaria. Which of the following drugs should not be used by her?
1. Chloroquine *(UPSC 111)*
2. Primaquine
3. Quinine
4. Mefloquine

Select the correct answer using the code given below-
a) 1 only b) 1 and 3 only
c) 2 and 4 only d) 1,2 and 3

MISCELLANEOUS

3912. TRUE statements concerning malaria include-
a) Malaria caused by each of the four plasmodial species can relapse after initial illness *(AIMS Nov 99)*
b) Red cells negative for the Duffy blood group antigen are resistant to Plasmodium vivax
c) Renal impairment is a grave prognostic sign in falciparum malaria
d) Plasmodium malariae can cause immune-mediated nephropathy

3913. In severe malaria following are seen - *(PGIDec 03)*
a) Coma b)Thrombocyto
c) Lactic acidosis d) pH <7.5
e) Hyperglycemia

3914. Which is not a feature of cerebral malaria -
a) Perivascular demyelination *(PGIJune 99)*
b) Durck granuloma
c) Prolifereated glial cells arranged radially
d) Lesion is not related to parasite

3915. In complication of falciparium malaria, which drug is not given - *(PGI June 97)*
a) Phenobarbitone b) Dexmethosone
c) Quinine d) Blood transfusion

3916. True about fluorescent antibody detection test in diagnosis of plasmodium falcifarum are all except ? *(AIMS Nov 08)*
a) It is an immunochromatographic test
b) Detection of histidine rich protein 1
c) Detection of lactate dehydrogenase antigen
d) Detection of glutamate dehydrogenase antigen

3917. True about cerebral malaria is children -
a) Quinine is drug of choice *(PGIDEC2000)*
b) Hypoglycemia
c) Good prognosis
d) Caused by P. vivax

3918. All of the following clinical syndroms are produced by leishmaniasis, except - *(AIMS Nov 99)*
a) Splenomegaly
b) Pancytopenia
c) Dysphagia, chest pain and pyrexia with cough
d) Diffuse skin lesions

3919. True about toxoplasmosis is all except -
a) In adults toxoplasmosis is usually asymptomatic
b) IgG antibodies are diagnostic in Congenital toxoplasmosis *(AIMS Nov 01)*
c) Is a antroponotic disease
d) Encephalitis is uncommon (rare) in immunocompetent individuals

3920. Toxoplasmosis in the foetus can be best confirmed by- *(AIMS May 2002)*
a) IgM antibodies against Toxoplasma in the mother
b) IgM antibodies against Toxoplasma in the Foetus
c) IgG antibodies against Toxoplasma in the mother
d) IgG antibodies against Toxoplasma in the foetus

3921. Kala-azar is not responding to primary treatment. The treatment should now consist of - *(AI97)*
a) Double dose of antimony b) Amphotericin - B
c) Ketoconazole d) Splenectomy

3905)b 3906)c 3907)c 3908)d 3909)b 3910)d 3911)c 3912)b,d 3913)a,b,c,d 3914)d 3915)b 3916)b 3917)a,b 3918)c 3919)b 3920)b 3921)b

3922. Most common lesion in fetal toxoplasmosis is - *(Dec 95)*
a) GI involvement b) Chorioretinitis
c) Pulmonary involvement d) Encephalitis

3923. Which is not a manifestation of congenital toxoplasmosis - *(AIIMS May 95)*
a) Chorioretinitis b) Hydrocephalus
c) Intracranial calcification d) Cerebellar atrophy

3924. A 56 years old man has painful rashes over his right upper eyelid and forehead for the last 48 hours. He underwent chemotherapy for Non Hodgkin's lymphoma one year ago. His tepmperature is 98° F, blood pressure 138/76 mm Hg and pulse is 80/ minute. Examination shows no other abnormalities. Which of the following is the most likely diagnosis - *(AIIMS Nov 2002)*
a) Impetigo b) Herpes zoster
c) Pyoderma gangrenosum d) Erysipelas

3925. An 18-year-old male presented with acute onset descending paralysis of 3 days duration. There is also a history of blurring of vision for the same duration. On examination, the patient has quadriparesis with areflexia. Both the pupils are non-reactive. The most probable diagnosis is -
a) Poliomyelitis *b)Botu\ism(AIIMS06)*
c) Diptheria d) Porphyria

3926. Botulism characterised by - *(PGI DEC 02)*
a) Seizure
b) Fever
c) Ascending paralysis
d) Descending symmetrical paralysis
e) Blurring of vision

3927. Botulinum toxin is used in - *(PGIDEC98)*
a) Focal dystonia b) Myasthenia gravis
c) Cerebellare ataxia d) Hypotonia

3928. In Botulinism all are seen except - *(PGIDEC 99)*
a) Diplopia b) Diarrhoea
c) Dysphagia d) Abd. pain

3929. Which of the following cause dysentery- *(PGI DEC 2K)*
a) Giardiasis b) Entaemoeba histolytica
c) Balantidium coli d) Cyclosporiasis

3930. A 42-year-old engineer developed redness of the glans and radial fissuring of the prepuce 2 weeks ago. A Potassium hydroxide preparation of scrapings from the glans showed pseudohyphae and buds. Which one of the following systemic illness should he be screened for - *(AIIMSMay 04)*
a) Pulmonary tuberculosis b) Diabetes mellitus
c) Systemic Candidiasis d) Chronic renal failure

3931. Regarding Candida true are - *(PGI June 06)*
a) Commensal in skin
b) Oral candidiasis common in pregnancy
c) In AIDS at early stage
d) Gram's Staining done
e) Bladder candidiasis treated by Amphotericin by catheter

3932. The single most common cause of pyrexia of unknown origin is - *(AIIMS 06)*
a) Mycobacterium tuberculosis
b) Salmonella typhi
c) Brucella spp
d) Salmonella paratyphi A

3933. The endotoxin of the following gram-negative bacteria does not play any part in the pathogenesis of the natural disease - *(AIIMS 06)*
a) Escherichia coli b) Klebseilla spp.
c) Vibrio cholerae d) Pseudomonas aeruginosa

3934. Salmonella typhi is the causative agent of typhoid fever. The infective dose of S. typhi is - *(AIIMS 06)*
a) One bacillus b) 10^8-10^{10} bacilli
c) 10M0^5 bacilli d) 1-10 bacilli

3935. SARS true are - *(PGI June 06)*
a) Severe acute respiratory syndrome
b) Documented respiratory route spread
c) Effective vaccine available
d) Cause atypical pneumonitis
e) Group coronavirus

3936. Features of Giardiasis - *(PGI June 06)*
a) Mai absorption
b) Cyst with 4 nuclei
c) Trophozoite with four nuclei
d) Common in hypogammaglobulinemia

3937. Antibiotic associated diarrhea is caused by -
a) CI. difficile b) Cholera *(PGI June 05)*
c) Salmonella d) Klebsiella
e) E.Coli

3938. Clindamycin is the drug of choice in - *(PGI June 05)*
a) Methicillin resistance Staph. Aureus
b) Mycoplasma pneumoniae
c) Bacteroidis fragilis
d) Pseudomonus infection
e) Enterobacterium

3939. A 15 year old boy presents to you with history of fever, altered sensorium and purpuric rash for two days. On examination, the patient is found stuporous. He has a BP of90/60 mmHg and extensive palpable purpura over the legs. Which of he following would be the most appropriate initial choice of antibiotic -
a) Vancomycin b) Pencilline G *(AIIMS Nov 03)*
c) Ciprofloxacin d) Gentamicin

3940. Hand foot mouth disease is characterized by -
a) Cause miniepidemic in school *(PGI June 05)*
b) J.P - 3 -10 days
c) Transmitted by virus
d) CIF similar to teSt seen in cows

3941. Acute intravascular hemolysis can be caused by infection due to all of the following organisms except- *(AIIMS Nov 03)*
a) Clostridium tetani
b) Bartonella bacilliformis
c) Plasmodium falciparum
d) Babesia microti

3922) b 3923) d 3924) b 3925) b 3926) d,e 3927) a 3928) b 3929) b,c 3930) b 3931) a,d,e 3932) a 3933) c 3934) c 3935) a,b,d,e 3936) a,b,d 3937) a 3938) c 3939)b 3940) a,c 3941) a

3942. Pneumococcal vaccine is given in - *(PGI June 06)*
a) HIV
b) Spienectomised patients
c) Sickle cell anemia
d) Corticosteroids therapy
e) Chemotherapy

3943. Complications of shigella infections -*(PGI June 06)*
a) HUS b) Reactive arthritis
c) Sepsis

3944. Diseases caused by Chlamydia - *(PGIJune 06)*
a) LGV
b) Trachoma
c) Granuloma inguinale
d) Nonspecific cervicitis

3945. Most common cause of amoebic lung abscess is -
a) Aspiration *(AI97)*
b) Direct spread form liver
c) Hematogenous spread from liver
d) Hematogenous spread form gut

3946. Diagnostic test of extra intestinal invasive amoebiasis is - *(AIIMS June 2000)*
a) Counter immuno-electrophoresis
b) Complement fixation test
c) ELISA
d) Indirect haemagglutination test

3947. The characteristic "sulfur grains" of actinomycosis are composed chiefly of -
a) Organisms *(AIIMSNov 99)*
b) Neutrophils and monocytes
c) Monocytes and lymphocytes
d) Eosinophils

3948. All are true regarding Helicobacter pylori except -
a) Less prevalent in developing countries
b) Toxicogenic strains usually causes ulcers
c) Urea breath test is positive *(AIIMSFeb 97)*
d) Gram negative organism

3949. Helicobacter pylori is not associated with -
a) Gastrointestinal lymphoma *(AIIMS Nov 03)*
b) Gastric cancer
c) Gastric leiomyoma
d) Peptic ulcer

3950. A 10-year-old school girl has recurrent episodes of boils on the scalp. The boils subside with antibiotic therapy but recur after some time. The most likely cause of the recurrences is - *(AIIMS May 05)*
a) Primary immunodeficiency syndrome
b) Juvenile diabetes mellitus
c) Pediculosis capitis
d) HTV infection

3951. All the features of peripheral neuritis in a patient with Hansen's disease except - *(AIIMSMay 01)*
a) Predominant sensory involvement
b) Decreased tendon reflexes
c) Mutilations
d) Peripheral nerve thickening

3952. Which of the following is true of lepromatous leprosy-
a) Bacterial index + to + + *(PGI Dec 01)*
b) Involvement of earlobes
c) Symmetrical involvement
d) Only a few bacilli are seen in the lesion
e) Loss of eyebrows

3953. In leprous neuritis, there is - *(PGIDec 01)*
a) Intracutaneous thickening of the nerve
b) Facial palsy
c) Occurs in warm and moist areas
d) Palpable peripheral nerves are present
e) > 10 lesions may be found

3954. A patient of borderline tuberculoid leprosy on treatment develops reaction. What will be the best next line of management - *(AIIMS Nov 99)*
a) Stop dapsone immediately'
b) Stop dapsone now and restart after some time
c) Continue dapsone and give steroids
d) Stop dapsone forever

3955. Clinical features of Erythema nodosum Leprosum -
a) Fever b) Hepatitis *(PGI June 04)*
c) Joint pain d) Pancreatitis
e) Skin eruptions

3956. A 30 year old male, Kallu, with a history of sexual exposure comes with a painless indurated ulcer over the penis with everted margins. The diagnosis is -
a) Syphilis *(AIIMS May 2001)*
b) Chancroid
c) Lymphogranuloma venerum
d) Granuloma inguinale

3957. A patient has multiple necrotic ulcers over glans penis with tender inguinal lymphadenopathy. The likely diagnosis is - *(AIIMS Dec 94)*
a) Haemophilous ducreyi
b) Chlamydia trachomatis
c) Herpes simplex
d) Candida albicans

3958. Features of secondary syphilis are/is-*(PGI DEC 2K)*
a) Condyloma accuminata
b) Condyloma lata
c) Mulberry/moon molar
d) Lesions over palms/sales

3959. Young male with painless induration of penis, enlarged non tender genital lymph nodes. Cause is - *(AIIMS May 94)*
a) Chancroid b) Herpes genitalis
c) Primary syphilis d) Donovanosis

3960. All are true about FTA-ABS in Syphilis, except -
a) FTA - ABS becomes negative after treatment
b) Present in secondary syphilis *(AI 2000)*
c) It is a specific test
d) May be positive in Lyme's disease

3942)All 3943) a,b,c 3944)a,b,d 3945) b 3946) c 3947) a 3948) a 3949) c 3950) c 395 l)b 3952)b,c,e 3953)a,b,d,e 3954) c 3955) a,b,c 3956) a 3957) a 3958) b,d 3959) c 3960) a

3961. False + ve VDRL, is seen in - *(AI2000)*
a) Lepromatous Leprosy
b) Infectious mononucleosis
c) HIV
d) Pregnancy

3962. 30-year old Basanti presents with light brown lesions involving both her cheeks. The lesions had never been erythematous. Which of the following is the most probable diagnosis - *(AlIMSNov 2000)*
a) SLR
b) Chloasma
c) Air borne contact dermatitis
d) Photo sensitive reaction

3963. A female developed brown macule on the cheek, forehead and nose after exposure to light following delivery of a baby, the diagnosis is-*(AIIMS June 2K)*
a) SLR b) Chloasma
c) Photodermatitis d) Acne rosacea

3964. Mycobacterium causing lung infection are -
a) Mycobacterium Tuberculosis *(PGIJUNE03)*
b) Mycobacterium Kansasii
c) Mycobacterium Fortuitum
d) Mycobacterium avium intracellularae
e) Mycobacterium Scrofuloceuml

3965. Chance of developing T.B. is high when mantoux test positive in patients with - *(PGIDEC 02)*
a) Taking adrenal steroid b) HIV
c) DM d) Alcoholism

3966. All the following may be used in the prophylaxis of Meningococcal infection except - *(AI 96)*
a) Penicillin b) Sulphonamides
c) Erythromycin d)Rifampicin

3967. All of the following are sexually transmited, except-
a) Candida albicans *(AI 02)*
b) Echionococcus
c) Molluscum contagiosum
d) Group B streptococcus

3968. Infectivity of chicken pox is seen- *(AIIMS June 2000)*
a) Till last scab falls off
b) 3 days after the appearance of rash
c) 6 days after the appearance of rash
d) As long as the fever lasts

3969. Which of the following is true regarding chicken pox- *(PGIDec 01)*
a) CNS complications are seen
b) Reye's syndrome can occur
c) Prevented by giving immunoglobulins
d) It is infectious for first 2 weeks
e) Childhood infection is more severe than adult

3970. True about measles is/are - *(PGI June 01)*
a) Incubation period (I.P.) is 10-12 days
b) Confunctivitis common
c) Rash starts on abdomen
d) Fever disappears —> rash appears
e) Koplik spots are seen on fundus examination

3971. A 9 years old Raju develops sudden loss of vision in both eyes, following an attack of measles. The probale cause is - *(AIIMS June 99)*
a) B/L optic neuritis b) Encephalitis
c) Keratonealacia d) Raised intraocdura pressure

3972. Most common complication of Mumps is -
a) Polyarthritis *(AIIMS May 94)*
b) Orchitis
c) Meningoencephalitis
d) Nerve deafness

3973. All are true regarding Mumps, except -
a) Incubation period 18-21 days *(AIIMSNO V93)*
b) Extensive tissue damage
c) Multiplies in respiratory epithelium
d) Spreads through Stenson's duct to Parotid gland

3974. Which of the following is NOT seen in furious Rabies - *(AIIMS Dec 94)*
a) Hyperexcitability b) Aerophobia
c) Hypertension d) Constriction of pupil

3975. True about Rabies - *(PGI June 03)*
a) Bats Transmit disease in some parts of the world
b) Brainstem encephalitis is characteristic
c) Negri bodies commonly found in thalamus and anterior pituitary
d) Paraesthesia is not seen
e) Recovery is the usual course

3976. All are true about Neisseria gonorrhea except -
a) Gram positive cocci *(AIIMS May 2001)*
b) Causes stricture urethra
c) Involves seminal vesicals and spreads to epididymis
d) Drug of choice is Ceftriaxone

3977. The commonest cause of non-gonococcal urethritis is- *(AI96)*
a) Chlamydia b) Ureaplasmaurealyticum
c) E. coli d) Proteus

3978. Treatment of choice of penicilline resistant gonococcol infection is - *(AIIMS Sep 96)*
a) Spectinomycin b) Ceftriaxone
c) Penicillin d) Ceftazidime

3979. A 32 year old male, Kallu, who recently visited a sea coast presented with ulcer over the left leg. The probable cause is - *(AIIMSMay 2001)*
a) Pasturella multocida
b) Micrococcus halophillus
c) Vibrio vulnificus
d) Neisseria gonorrhea

3980. There has been an outbreak of infections caused by methicillin resistant Staphylococcus aureus in the surgical intensive care unit. The most effective means of limiting the spread is - *(AIIMSNov 99)*
a) Treatment with cephalosporins to which most strains are sensitive
b) Treatment with naficillin and gentamicin, which have a synergistic effect
c) Use of high-dose naficillin alone and isolation
d) Treatment with glycopeptide

3961)b 3962)b 3963)b 3964)a,b,d 3965)a,b,c 3966)c 3967)b 3968)c 3969)a,b,c 3970)a,b 3971)a 3972)b
3973) d 3974) d 3975) a,b 3976) a 3977) a 3978) a 3979) c 3980) d

3981. Treatment of choice of thoracic actinomycosis is- *(AIMS Dec 97)*
a) Amphotericin B b) Cotrimoxazole
c) Penicillin d) Itraconazole

3982. All are complication of diphtheria, except - *(AIMS June 9 7)*
a) Myocarditis b) Ocular muscle palsy
c) Cerebellar ataxia d) Hepatic failure

3983. Drug of choice for diphtheria carrier is -*(AIMSDec*
a) Penicillin b) Erythromycin*95)*
c) Procaine penicillin d) Tetracycline

3984. In an ICU patient is on invasive monitoring, All are causes of bacterial sepsis except - *(AIMS May 01)*
a) Orotracheal intubation
b) Intra arterial line
c) Humidified air
d) Central venous catheter

3985. True regarding presentation of primary T.B. is -
a) B/L pleural effusion with negative Tuberculin test. *(AIMSDec 98)*
b) U/L hilar lymphadenopathy
c) Sustained chronic pyrexia
d) B/L pelural effusion with positive tuberculin test.

3986. Period of isolation in salmonella infection is till -
a) 72 hours after chemotherapy *(AIMS June 98)*
b) Widal negative
c) 3 consecutive stool cultures are negative
d) Urine culture is negative twice

3987. Acute intravascular hemolysis can be caused by infection due to all of the following organisms except-
a) Clostridium tetani *(AIMS Nov 2003)*
b) Bartonella bacilliformis
c) Plasmodium falciparum
d) Babesia microti

3988. Neurotropism is shown by - *(PGIDEC2000)*
a) C. neoformans b) Polio virus
c) Coxsackievirus d)C.albicans

3989. Treatment of choice for tropical splenomegaly is -
a) Chloroquine 6 months *(AIMSJune 97)*
b) Mefloquine 3 months
c) Proguanil
d) Pyrimethamine + sulphadoxine X 1 month

3990. Which of the following statement concerning infections with intestinal nematodes is correct - *(AIMS Nov 99)*
a) A relatively small number of organisms typically produce severe clinical symptoms
b) Ascaris larvae enter the body via migration through dermal capillaries
c) Hookworm infections result from swallowing of hook worm eggs
d) Strongyloides infection is associated with recurrent urticaria

3991. Cysticercosis present as - *(PGIDEC 03)*
a) Seizure b) Neuropathy
c) Encephalitis d) Muscular hypertrophy
e) Encephalitis

3992. Kallu a 30 year old man, presented with subcutaneous itchy nodules over the left iliac crest. On examination they are firm, non tender and mobile. Skin scrapping contains microfilaria and adults worms of - *(AIMS May 2001)*
a) Loa Loa b) Onchocerca volvulus
c) Brugia malayi d) Mansonella persutans

3993. A 38-year old gay man who is known to be infected with the HIV virus presents with a week of fever and tachypnea. Chest X-ray reveals bilateral alveolar infiltrates. Arterial blood gas determination reveals a $Pa0_2$ of 55 mmHg on room air. A bronchoalveolar lavage is positive for methenamine silver staining material. Which of the following statement is correct concerning the current clinical situation - *(AIMS Nov 99)*
a) Transbronchial biopsy should be carried out to confirm the diagnosis
b) Pentamidine therapy by the aerosolized route would be appropriate if the patient has a known allergy to sulfa drugs.
c) Trimethoprim-sulfamethoxazole and pentamidine should be administered in combination
d) Trimethoprim-sulfamethoxazole alone should be administered

3994. Giant cell (Hecht's) pneumonia is due to -
a) CMV b) Measles*(PGI DEC 98)*
c) Malaria d) P. carinii

3995. Most common fùngal infection in febrile neutropenia is- *(AI01)*
a) Aspergillus niger b) Candida
c) Mucormycosis d) Aspergillusfumigatu

3996. Infection causing CAD - *(PGIJUNE 03)*
a) Chlamydia pneumonae
b) Streptococcus
c) Proteus
d) Uroplasma ureolyticum

3997. True about H. Pylori is all except - *(PGI June 2000)*
a) It splits urea & produces ammonia to survive
b) Produces Gastric Ca
c) Gram-ve curved rods
d) Cag-A gene is not associated with-risk of duodenal ulcer

3998. Pneumococcal vaccination is indicated in -
a) Postsplenectomy *(PGIDec 02)*
b) Sickle cell anemia
c) mv
d) After radiotherapy

3999. While handling a febrile neutropenic patient all are essential except - *(AI98)*
a) Repeated hand washing of hospital person
b) White cell infusion
c) Prophylactic antibiotic
d) Colony stimulating factor for macrophages

3981)c 3982)d 3983)b 3984)c 3985)b 3986)c 3987)a 3988)a,b,c 3989)c 3990)d 3991)a,b,e 3992)b 3993)d 3994) b 3995) b 3996) a 3997) d 3998) a,b,c 3999) b

4000. Chemotherapy induced agranulocytopenia is treated with- *(PGIDec 06)*
a) GM-CSF b) G-CSF
c) Packed cells d) Platelets

4001. Dengue hemorrhagic fever - *(PGI June 2000)*
a) Most common in previously affected patients
b) DHF-2 most common cause
c) Immunosuppressed
d) Incubation period 7-14 days

4002. Features of bronchiolitis are - *(PGI June 01)*
a) Caused by R.S.V.
b) Wheeze present
c) Pulmonary edema common
d) Seen in immunocompromised hosts
e) Common age groups is from 5 to 15 years age

4003. TVue about Roseola infantum - *(PGI June 03)*
a) Also called 5 th disease
b) Caused by HHV 6 & 7
c) Rash appears in trunk
d) Defeverse, rash begins

4004. *True* statements is/are - *(PGI June 04)*
a) Kaposi's sarcoma is caused by HHV-6
b) EBV causes lymphomatous lymphoma
c) Bronchiolitis is caused by RS V
d) Erythema infectiosum have 'slapped cheek' appearance
e) Roseola infantum is caused by parvovirus

4005. Most common catheter induced blood infection is due to- *(ARMS May 07)*
a) Staphylococcus aureus
b) Coagulase negative staphylococci
c) Gram negative bacilli
d) Candida

NUTRITION

4006. Deficiency of which trace element causes perioral rash, gonadal atrophy, neuritis and pigmentation in skin creases - *(ARMS Nov 93)*
a) Cobalt b) Zinc
c) Magnesium d) Selenium

4007. Zinc deficeincy result in - *(PGI Dec 02)*
a) Loss of libido b) Poor weight gain
c) Poor wound healing d) Sexual infantilism

4008. Zinc deficiency is characterized by - *(PGI June 04)*
a) Sexual infantilism b) Poor growth
c) Cardiomyopathy d) Poor wound healing
e) Loss of libido

4009. Zinc deficiency causes - *(PGI June 06)*
a) Cardiomyopathy b) Reduced growth
c) Mental Retardation d) Gonadal atrophy

4010. Copper deficiency is characterized by - *(PGIDec 04)*
a) Cardiomyopathy b) Anaemia
c) Osteopenia d) Growth retardation

4011. Cu deficiency manfest as - *(PGI June 05)*
a) Anaemia b) Cardiomyopathy
c) Hepatomegaly d) Growth retardation

4012. Manganese deficiency features - *(PGI Dec 05)*
a) Anemia b) Alopecia
c) Ataxia d) Gonadal atrophy
e) Taste alteration

4013. Mg is useinRxof- *(PGI June 05)*
a) Diarrhea b) Tetani
c) Intractable seizure d) Cardiac arrest
e) Premature labour

4014. Decreased level of serum Vit B6 is seen in -
a) CRF b) CHF *(PGI Dec 04)*
c) INH therapy d) Alcohol

4015. Vitamin B6 deficiency is associated with all of the following except - *(AI95)*
a) Penicillamine b) INH
c) Cyclosporin d) Cycloserine

4016. Thiamine deficiency is known to occur in all of the following except - *(AI 03)*
a) Food Faddist
b) Homocystenemia
c) Chronic alcoholic
d) Chronic heart failure patient of diuretics

4017. Obesity is associated with all of the following except-
a) Osteoarthritis b) Hypertension *(AI97)*
c) Gall stones d) Pancreatitis

4018. Obesity is associated with - *(PGIDec 03)*
a) Cushing's syndrome b) Pheochromocytoma
c) Insulinoma d) Hypothalamic lesion
e) Hyperthyroidism

4019. True statement about obesity - *(PGIDec 04)*
a) Dexenfluramine is drug of choice
b) Sibutramine is only or epinephrine uptake inhibitor
c) Common risk factor for all cancers
d) According to WHO body mass index greater then 25 is overweight
e) Long term effect of orlistat is known

4020. Drug used for obesity - *(PGI June 08)*
a) Orlistat b)Rivatat
c) Nitousoxide d) Phenylephrine

4021. Which of the following is not a common feature of Anorexia Nervosa - *(AI 06)*
a) Binge eating
b) Amennorhea
c) Self perception of being 'fat'
d) Under weight

4022. All the following are features of Anorexia Nervosa except- *(AI 94)*
a) Predominantly seen in females
b) There is loss of weight at the time of presentation
c) Amenorrhea is rare
d) Avoidance of high caloric foods

4023. The most appropriate drug for the treatment of bulimia nervosa is - *(ARMSMay 2005)*
a) Amitriptyline b) Lithium
c) Fluoxetine d) Sertraline

4000)a,b 4001)a 4002)a,b 4003)b,c 4004)b,c,d 4005)b 4006)b 4007)A11 4O08)a,d,e 4009)b,d 4010)b,c,d

4024. Following diseases or disorders are associated with iodine deficeiency - *(PGI DEC 03)*
a) Abortions b) Major depression
c) Goitre d) Squint

4025. In a patient of total parenteral nutrition daily monitoring is done with - *(PGIDec 04)*
a) Body weight b) Plasma protein
c) CBC d) Plasma osmolality
e) Coagulation profile

4026. True about the nutrition in a patient of sepsis - *(PGIDec 03)*
a) Protein requirement is 0.5-1 gm/kg/day
b) Energy should be derived from fat only
c) Caloric intake is 22 K cal/kg/day

4027. A. patient on enteral nutrition develops diarrhea. Which of the following statements is/are true -
a) Diarrhea seen in > 30% cases *(PGIDec 04)*
b) More in duodenal nutrition than jejunal nutrition
c) MC cause is contamination of food
d) In persistent diarrhea Clostridium difficile should be excluded
e) It is self-limiting

4028. The amino acid which is associated with atherosclerosis is - *(AIIMSMay 06)*
a) Lysine b) Homocystein
c) Cysteine d) Alanine

4029. A 36 yrs old female who is chronic alcoholic feels that she can hear voices commanding her to do thing and has difficulty in falling sleep. Diagnosis is -
a) Delirium tremens *(AIIMS June 2000)*
b) Depression
c) Alcoholic hallucinosis
d) Wernicke's encephalopathy

4030. Which of the following drug is given for detoxification of alcohol in chronic alcoholics -
a) Haloperidol *(AIIMS June 2K)*
b) Naltrexone
c) Chlordiazepoxide
d) Buprenorphine

4031. Drugs used in alcohol abstinence - *(PGI June 07)*
a) Disulfiram b)Nalterxone
c) Chordiazepoxide d) Morphine

4032. All are associated with Wernicke's encephalopathy, except - *(AIIMS Dec 95)*
a) Cog-wheel rigidity
b) Alteration in mental function
c) Vlth nerve palsy
d) Ataxia

4033. Characteristic feature of korsakoff psychosis is -
a) Disorientation b) Delirium *(PGIDec 98)*
c) Coarse tremor d) Amnesia

4034. A female taking alcohol is more prone to develop toxicity and cirrhosis compare with male when same amount of alcohol taken due to - *(PGIDec 02)*
a) *i* ed alcohol dehydrogenase in stomach
b) t ed absorption
c) Congenital
d) Genetic factor
e) Large body size

4035. A chronic alcoholic presented to the casualty with altered sensorium. His blood sugar level was normal. Which of the following is the treatment to be given - *(AIIMS May 02)*
a) Inj. Vitamin B1 b) IV dextrose 5%
c) IV dextrose 50% d) IV Normal saline

4036. True Statement about nutrition in adult is are -
a) Daily calorie intake in a sedentary adults is 40-45 kcal/kg/day *{PGI June 04)*
b) Daily calorie intake in a sedentary adult is 120-150 kcal/kg/day
c) Nitrogen requirement is lgm/kg
d) one gram nitrogen yields 6 gm of protein

4037. Smoking predisposes to carcinoma *of-(PGIDEC 01)*
a) Bladder b) Ovary
c) Buccal mucosa d) Breast
e) Stomach

4038. Which of the following statement is incorrect - *(AIIMSNov 08)*
a) Selenium deficiency causes cardiomyopathy
b) Zinc deficiency causes pulmonary fibrosis
c) Increased calcium intake cause iron deficiency
d) Vit a deficiency occurs after 6 months to 1 year of low Vit A diet

4039. Which of the following is not correct - *(A109)*
a) Zinc deficiency can cause severe pulmonary problems
b) Milk alkali syndrome can cause hypercalcemia
c) Selenium deficiency can cause cardiac problem
d) Iodine deficiency can cause thyroid problems

4040. Which is false about acrodermatitis enteropathica?
a) Triad of diarrhoea, dementia and dermatitis
b) Low serum zinc levels *(AIIMSNov 08)*
c) Symptoms improve with zinc supplementation
d) Autosomal recessive

4041. Atkin's diet is - *(AIIMSMay 07)*
a) Protein restricted low calorie diet
b) Carbohydrate restricted low calorie diet
c) Fat restricted low calorie diet
d) Mineral restricted low calorie diet

4042. Pellagra like dermatitis occures in - (,*JIPMER95)*
a) Dermato myositis b) Carcinoid syndrome
c) SLE d) Lymphoma

4043. A negative nitrogen balance is observed -
a) During normal pregnancy *(UPSC95)*
b) during convalescence
c) In malnutrition
d) During normal child growth

4044. Oro-oculo-genital syndrome occurs due to -
a) Vit. A deficiency *(UPSC96)*
b) Vit. Bj deficiency
c) Vit. B_2 dificiency
d) Nicotininc acid dificiency

4024) a,c,d 4025) a 4026) None 4027) a,d 4028) b 4029) c 4030) c 4031)a,b,c 4032) a 4033) d 4034) a 4035) a 4036) a,d 4037)a,c,e 4038) b 4039) a 4040) a 4041) b 4042) b 4043) c 4044) c

4045. Zinc deficiency causes - *(Kerala 96)*
a) Hypo gonadism b) Diarrhoea
c) Pegmentation d) Psychosis
e) Defective carbohydrate metabolism

4046. Which is not seen in anorexia nervosa - *(CUPGEE*
a) Bradycardia b) Lanugo hair *96)*
c) Ammenorrhoea d) Weight Loss

4047. Which of the following is least characteristic of anorexia nervosa - *(Kerala 96)*
a) Lowered vital signs when the weight is low
b) Decreased physical activity
c) history of obestity
d) Denial of illness

4048. Obesity Predisposes to all except - *(AP 96)*
a) Hypoventilation b) Hypertension
c) Hyperventilation d) Diabetes Melitus

4049. Pellegra can cause all of the following except -
a) Depression *(UP97)*
b) Skin lesions
c) Spastic paretic syndrome
d) Acute heamorrhagic disseminated encephalomyelitis

4050. Which one of the following is not true of folic acid-
a) It prevents megaloblastic anaemia *(ICS 98)*
b) Its deficiency is detected by Schilling test
c) Its administration should be started in early pregnancy
d) Its deficiency causes neural tube defect in foetus

4051. Generalised edema can be produced by deficiency of- *(Karnatak98)*
a) VitA b) Thiamine
c) Vit D d) Folic acid

4052. Trace element not needed is - *(JIPMER 99)*
a) Chromium b) Molybdenum
c) Magnesium d) Cesium

4053. Thiamine deficiency causes - *(AMC99)*
a) Peripheral neuropathy b) Cardiomyopathy
c) Ophthalmoplegia d)All

4054. Keshan disease is a cardiomyopathy endemically seen in which of the following - *(Kerala 2K)*
a) Low calcium areas b) Low magnesium areas
c) Low fluoride areas d) Low zinc areas
e) Low selenium areas

4055. Condition associatedwith obesity are all except- *(UP2K)*
a) Pheochromocytoma b) Hypothyroidism
c) Insulinoma d) Cushing's syndrome

4056. The likely metabolic complications of total parenteral nutrition within the first two weeks of therapy would include all of the following -
a) Cardiopulmonary failure *(UPSC 97)*
b) Hyperosmolar non-ketotic hyperglycaemia
c) Zinc deficiency
d) Hypophosphataemia

4057. Parenteral nutrition is best given through - *(JIPMER2K)*
a) Femoral vein b) Saphenous vein
c) Subclavian vein d) Cephalic vein

4058. Which of the following is a goitrogeus -(*Kerala 97)*
a) Brinjal b) Turnip
c) Cabbage d) Sweet potato

4059. Angular oral fissures is treated with- *(SGPGI05)*
a) Riboflavin b)Pyridoxine
c) Cynocobalamine d) Vitamin C

4060. Keshan disease is due to deficiency of - *(UPSC 05)*
a) Selenium b) Chromium
c) Copper d) Manganese

4061. Cu deficiency manifest as - *(PGI June 05)*
a) Anemia b) Cardiomyopathy
c) Hepatomegaly d) Growth retardation

4062. An individual is said to be 'overweight' if his BMI is in the range of - *(J &k 05)*
a) 24.0-26.9 b) 24.0-27.9
c) 25.0-28.9 d) 25.0-29.9

4063. A 35 year old alcoholic presents with diarrhoea and scaly rash on his neck, hands and feet. He will improve if he is treated with which one of the following ? *(UPSC 06)*
a) Vitamin A b) Thiamine
c) Folic acid d) Nicotinic acid

4064. Cancer can be prevented by ingestion of -*(Kam 06)*
a) Beta carotene b) Vitamin C & E
c) Selenium d) All the above

4065. The principal polypeptide that increase food intake are the following except - *(Corned 08)*
a) Neuropeptides-Y b) Leptin
c) Orexin-A d) B-endophrin

4066. A 23-year-old individual who believes in megavitamins therapy develops severe headche, fundoscopy reveals papilloedema. The likely cause for this problem is - *(UPSC-109)*
a) Vitamin B_{12} intoxication
b) Vitamin A intoxication
c) Vitamin E intoxication
d) Vitamin K intoxication

4067. Pyridoxine hypervitaminosis causes - *(UPSC-I09)*
a) Polyneuropathy b) Hypercalcemia
c) Liver damage d) Renal failure

4068. Disease not due to Vit. B deficiency -*(PGINov. 10)*
a) Scurvy b) Acrodermatitis
c) Beri-Beri d)Nightblindness
e) Pellagra

4069. Cu deficiency manifests as - *(PGINov. 10)*
a) Hepatic fibrosis b) Hemolytic anaemia
c) Mental retardation d) Growth retardation
e) T ed Pigmentation

4070. Rx of choice in chronic alcoholic with normal RBS. s? normal BHN^bu#4lteL _ ed sensorium - g®
a) Vit. B_1 injection IM *(I JEET/BNB pattern)*
b) Dextrose 50%
c) Dextrose 10%
d) -Normal saline

Calorie restrictionincreases longevity through -
a) Sirtruins b). Albumin *(NEETwmmgatt n)*
c) Amyloid d) Carotene

TOXICOLOGY

4072. A housewife ingests a rodenticide white powder accidentally. She is brought to hospital where the examination shows generalized, flaccid paralysis and an irregular pulse. ECG shows multiple ventricular ectopics, generalized changes with ST. Serum potassium is 2.5 mE/1. The most likely ingested poison is - *(AIIMSMay 06)*
a) Barium carbonate b) Superwarfarins
c) Zinc phosphide d) Aluminium phosphide

4073. A young girl has consumed barium carbonate with suicidal intent She complains of generalized muscle weakness. The most likely electrolyte is - *(A106)*
a) Hyponatremia b) Hypocalcemia
c) Hypokalemia d) Hypomagnesemia

4074. A 2 year old boy presents with fever for 3 days which responded to administration of paracetamol. Three days later he developed acute renal failure, marked acidosis and encephalopathy. His urine showed plenty of oxalate crystals. The blood anion gap and osmolal gap were increased. Which of the following is the most likely diagnosis - *(A1IMS Nov 05)*
a) Paracetamol poisoning
b) Diethyl glycol poisoning
c) Severe malaria
d) Hanta virus infection

4075. A 7 years girl, parent gave history of fever for which she was treated with Paracetamol following which the fever subsided. Later she developed seizures and altered sensorium. The urine examination revealed oxalate crystals on microscopy, Blood anion gap and osmolality were increased. The diagnosis is -
a) Lactic acidosis *(AIIMSMay 02)*
b) Ethylene glycol
c) Renal tubular acidosis
d) Paracetamol poisoning

4076. A person who has drunk the anti-freeze of his car is likely to have - *(PGI June 99)*
a) Metabolic alkalosis with normal anion gap
b) Metabolic acidosis with increased anion gap
c) Metabolic alkalosis
d) Respiratory alkalosis

4077. Oxalate crytals in urine is seen in - *(PGI Dec 06)*
a) Ethylene glycol poison b) Di glycol poison
c) Alcohol d)Indivavir

4078. A 25 year old woman presents with recurrent abdominal pain and anemia. Peripheral blood smear shows basophilic stippling of the red blood cells. What is the most likely diagnosis - *(AIIMSNov 05)*
a) Coeliac disease b) Hookworm infestation
c) Sickle cell disease d) Lead poisoning

4079. The pathogenesis of hypochromic anemia in lead poisoning is due to - *(AIIMS Nov 02)*
a) Inhibition of enzymes involved in heme biosynthesis
b) Binding of lead to transferrin, inhibiting the transport of iron
c) Binding of lead to cell membrane of erythroid precursors
d) Binding of lead to ferritin inhibiting their breakdown into hemosiderin

4080. Lead poisoning is characterised by - *(PGIDec 02)*
a) Eosinophilic stippling of WBC
b) Normochromic normocytic anaemia
c) Hypochromic normocytic anaemia
d) lFe^{2+}
e) Microcytic anaemia

4081. Non-irritant gas producing systemic toxicity is - *(PGI June 02)*
a) Ammonia b) Hydrogen chloride
c) Carbon monoxide d) Chlorine

4082. CO poisoning is characterized by - *(PGI June 03)*
a) Lt. shift of 0_2 dissociation curve
b) $IPaC0_2$
°) $|^{P}_{5}o$
d) $i\ 0_2$ Content
e) Smoking is a predisposing factor

4083. $P0_2$ level is 4. in - *(PGI Dec 02)*
a) Anaemia b) CO poisoning
c) Methaemoglobinemia d) KCN poisoning
e) Hypoventilation

4084. Arsenic causes - *(AI2000)*
a) Basal cell carcinoma
b) Malignant melanoma
c) Mesothelioma
d) Sezary Syndrome

4085. Arsenic causes - *(AI2000)*
a) Portal hypertension
b) Cirrhosis
c) Extra hepatic portal vein obstruction
d) Hepatic carcinoma

4086. All are true about aspirin poisoning except -
a) Acidosis b) Hypothermia *(PGI Dec 99)*
c) Dehydration d) Oliguria

4087. Which is seen in opioid poisoning - *(PGI Dec 99)*
a) Hyperventilation b) Raised BP
c) Slow shallow respiration d) Dyspnea

4088. Penicillamine is commonly used in the management of following heavy metal poisoning except -
a) Arsenic b) Copper *(PGI June 2000)*
c) Lead d) Mercury

4089. An 8 year old boy, Raju, is brought to the casuality with a history of consuming something while playing outside in the playground. On examination, there was altered sensorium, hyperpyrexia, dilated pupils. Most probable cause is - *(AIIMS May 01)*
a) Dhatura poisoning
b) Organophosphorus poisoning
c) Partheniun poisoning
d) Barbiturate poisonig

4072) a 4073) c 4074) b 4075) b 4076) b 4077) a 4078) d 4079) a 4080) a,e 4081) c 4082)a,d,e 4083) e 4084) a 4085) a 4086) b 4087) c 4088) a 4089) a

4090. Tricyclic antidepressants cause all except -
a) Coma *(AIIMS Dec 98)*
b) Prolongation of QRS complexes
c) Myoclonic jerks
d) Metabolic alkalosis

4091. A-65, year old farmer presents with sweating, hypothermia and pulse rate of <50/min treatment is- *(AIIMS Dec 98)*
a) Physostigmine b) Neostigmine
c) Atropine d) Pilocarpine

4092. Haemoglobinuria does not occur in - *(ARMSFeb 97)*
a) $CuS0_4$ poisoning
b) Snake bite
c) Mismatched blood transfusion
d) Thalassemia

4093. All of the following can cause cyanosis, except -
a) Decompensated hepatic cirrhosis *(ARMSDec 94)*
b) Sulfhemoglobin
c) Carboxyhemoglobin
d) Methemoglobin

4094. 10 year old girl bought with acute paracetamol overdose management is - *(PGIJune 08)*
a) N-acetylecysteine
b) PT monitoring
c) Measurement of hepatic enzymes
d) Char col i.v., given
e) S. Bilirubin measurement

4095. On exposure to air urine colour changes to olive green in poison in - *(PGI June 08)*
a) Carbolic acid b) Cyclophosphamide
c) Phenopthalein d) Ethelene glycol

4096. When a 11 year old child was siphoning kerosene onto a tin, he had a bout of cough. In a few hours he developed severe respiratory distress and was hospitalised. He was treated with oxygen, Antibiotics, steroids and IV fluids. Over the next two days, his condition deteriorated. Both lung apices were resonant and both bases were dull to precussion. There was shifting dullness in the chest. Air entry was poor. The temperature varied between 102 F and 102 F and there was profuse sweating and circulatory callapse. Deterioration on the third day was likely due to - *(UPSC 97)*
a) Belateral haemo-pneumothorax
b) Bilateral pyo-pneumothorax
c) Bilateral hydrothorax
d) Cardiac tamponade

4097. Treatement of organophosphorus compound poisoning is - *(CMC 98)*
a) Atropine b)PAM
c) Neostigmine d) Adrenaline
e) None

4098. The following are used in the treatment of dapsone poisoning, except - *(JIPMER 02)*
a) Methylene blue b) Ascorbic acid
c) Hemodialysis d) Echange transfusion

4099. Which organ failure is seen in iron poisoning-
a) Kidney b) Liver *(TNPSC2K)*
c) Spleen d) Heart

4100. Most specific test for organophosphorous poiso ning is- *(JIPMER 2002)*
a) RBC cholinesterase level
b) Plasma cholinesterase level
c) RBC uroporphyrin level
d) Measurement of serum levels of organopho sphorous

4101. Amotivation syndrome seen with - *(APPG03)*
a) Cannabis b) LSD
c) Cocaine d) Amphetamine

4102. The following statements are true for lead poisoning except- *(SGPGI05)*
a) Only inorganic compounds are absorbed through the skin
b) 90% of ingested lead is excreted in faeces
c) Lead has mainly CNS toxicity
d) Urine lead levels of more than 0.8 mg/I indicate lead absorption

4103. Which of the following is the most approprate therapy for an individual who has ingested an overdose of aspirin - *(UPSC 05)*
a) Acetazolamide b) Sodium Bicarbonate
c) Flumazani d)Allopurinol

4104. Choline toxicity results in - *(NIMHANS 06)*
a) Fishy colour b) Constipation
c) Dry mouth d) Hypertension

4105. Consider the following - *(UPSC-109)*
1. Kerosene poisoning
2. Organo-phosphorus poisoning
3. Corrosive poisoning
4. Iron poisoning

In which of the above is gastric lavage contraindicated?
a) 1 only b) 1 and 3 only
c) 2 and 4 only d) 1,2,3 and 4

4106. Pulseless electrical activity of heart can be seen in poisoning with drug- *(COMED 09)*
a) Flumaznil b) Naloxone
c) Propoxyphene d) Glucagon

4107. A 24 year old male presents with altered sensorium and rapid shallow breathing. ABG showsrpH 7.2, sodium 140, bicarbonate 10 and chloride 98. Probable diagnosis is - *(PGINov 10)*
a) Renal tubular acidosis
b) DKA
c) Ethylene glycol poisoning
d) Amphetamine toxicity

4108. Haemodialysis is useful in the management of overdosage/poisoning of the following drugs except-
a) Lithium *(UPSC 111)*
b) Theophylline
c) Chloramphenicol
d) Salicylates

4090)d 4091)c 4092)d 4093)c 4094)A11 4095)a 4096)b 4097)a,b 4098)c 4099)b,d 4100)a 4101)a 4102)a 4103)b 4104)a 4105)b 4106)c 4107)b,c 4108)c

ONCOLOGY

GENERAL

4109. Increase in alpha-fetoprotein is seen in - *(AHMSJune 2K)*
a) Hepatoblastoma b) Neuroblastoma
c) Thymoma d) Angiosarcoma

4110. Which of the following statements is not true regarding (Xrfetoprotein - *(A199)*
a) High levels are seen in fibrolamellar hepatic carcinoma
b) Pre-operative high level indicates worse prognosis
c) High level are seen in stomach carcinoma
d) Levels may be increased in Hapatitis

4111. Maximum increase in a-fetoprotein increased is seen with - *(A199)*
a) Hepato-cellular-carcinoma
b) Benign-mature teratoma
c) Chorio-carcinoma
d) Teratoma

4112. All are correctly matched, except-
a) CA ovary - CA 125 *(AHMSJune 2K)*
b) Choriocarcinoma - CEA
c) Prostatic carcinoma - PSA
d) Meig's syndrome - HCG

4113. Specific Ihmor marker is seen in - *(PGIDec05)*
a) Ca breast b) Ca lung
c) Ca liver d) Ca ovary
e) Ca colon

4114. Natural elements having anticancer properties -
a) Nitrosoamines b) Vit. C *(PGI June 06)*
c) Vit. D d) Carotene
e) Selenium

4115. Natural prevention of cancers are/is-(PG7 *JUNE 04)*
a) Nitrosaminesb) Ascorbic acid
c) Beta carotene d) a-Tocopherol

4116. Chemo prevention trials shown effective in reducing of- *(PGI Dec 04)*
a) Lymphoma b) Breast Ca
c) Pancreatic Ca d) Ca urinary bladder
e) Aero digestive tract

4117. Smoking predisposes to all of the following cancers except- *(AI99)*
a) Carcinoma larynx b) Carcinoma bladder
c) Carcinoma stomach d) Lymphoma

4118. Autopsy of lung of an old man shows that the bronchi are lined by stratified squamous epithelium. What is this change - *(AIIMS Nov 2001)*
a) Metaplasiab) Dysplasia
c) Hyperplasia d) Hypertrophy

4119. Which is the most common site of metastatic disease-
a) Lung b)Bone *(AIIMS May 2005)*
c) Liver d) Brain

4120. Which of the following is involved in tumor metastasis cascade - *(AIIMS May 2002)*
a) Fibronectin b)E~Cadherin
c) Type IV collagenase d) Tyrosine kinase

4121. Which one of the following is not a non-metastatic complication of malignancies - *(AIIMSMay 2005)*
a) Cushing's syndrome
b) Cerebral cortical degeneration
c) Cerebellar digeneration
d) Polymyositis

4122. All are associated with paraneoplastic syndromes except - *(AIIMS May 01)*
a) Cerebeller degeneration
b) Progressive multifocal leucoencephalopathy
c) Amyotropic lateral sclerosis
d) Opsoclonus myoclonus

4123. Ramesh 40 yrs male patient presenting with polyuria, pain abdomen, nausea, vomitting, altered sensorium was found to have bronchogenic carcinoma. The electrolyte abnormality seen in him would be - *(AIIMS May 2002)*
a) Hypokalemia b) Hyperkalemia
c) Hypocalcaemia d) Hypercalcemia

4124. Non-metastatic manifestation of Ca lung - *(PGI June 03)*
a) Cushing Synd b) Diabetes Mellitus
c) Carcinoid Synd d) Jaundice
e) Hypercalcemia

4125. Lung to lung metastasis is seen in - *(AIIMSMay 05)*
a) Adenocarcinoma of lung
b) Squamous cell carcinoma
c) Small cell carcinoma
d) Neuroendocrine tumor of lung

4126. All following secreted by Bronchogenic Ca except -
a) Nor adrenaline b) PTH *(PGI June 2K)*
c) ACTH d)ADH

4127. TCa^{+} 2 in Ca lung is seen in Ca - *(PGIDEC97)*
a) Adeno b) Squamous
c) Small cell d) Large cell

4128. Mycosis fungoides syndrome, treatment is -
a) 5-FU *(PGI DEC 98)*
b) Adriamycin
c) Electron beam therapy
d) Interferon

4129. Cancer caused by chronic parasitic infection -
a) Cholangiocarcinoma *(PGIJUNE 98)*
b) Hepatic cell Ca
c) CaGB
d) Ca pancreas

4130. TVue about Gardner's syndrome is except-
a) CNS tumor b) Osteoma *(PGIJune 2K)*
c) Dermoid tumour d) Colonic polups

4131. Followings are the symptoms of carcinoid symptoms-
a) Wheezing b) Flushing *(PGI Dec 02)*
c) Cyanosis d) Clubbing
e) Diarrhoea

4132. Radio resistant tumours are - *(PGI June 04)*
a) Melanoma b)HD
c) Seminoma d) Ewing's sarcoma
e) Chondrosarcoma

4109)a 4110)a,c 4111)a 4112)d 4113)None 4114)b,d,e 4115)c,d,e 4116)b,e 4117)d 4118)a 4119)c 4120)b 4121)b 4122)b 4123)d 4124)a,c,e 4125)a 4126)a 4127)b 4128)c,d 4129)a 4130)a 4131)a,b,e 4132)a,e

4133. A patient presents with secondaries to the adrenals. The most common site of primary is - *(AI 2K)*
a) Lung b) Kidney
c) Breast d) Stomach

4134. Lung cancer predisposing factors - *(PGI June 03)*
a) Cigerette smoking
b) Bidi smoking
c) Passive smoking
d) Active smoking
e) Rurals have higher invidence than urbans

4135. All of the following conditions are premalignant except- *(AI99)*
a) Ulcerative colitis b) Crohn's disease
c) Bronchiectasis d) Paget disease of bone

4136. Multiple submucosal neuromas is most likely associated with - *(ARMS May 2005)*
a) Medullary carcinomos of the thyroid
b) Ovarian carcinoma
c) Testicular teratoma
d) Pancreatic beta cell carcinoma

4137. Most common site of rhabdomyosarcoma in children is- *(ARMS June 2000)*
a) Genito urinary area b) Head and neck region
c) Trunk d) Extremities

4138. Hypoglycemia is associated with all, except -
a) Fibroma *(ARMSDec 97)*
b) Soft tissue sarcoma
c) Small cell carcinoma of lung
d) Hepatocellular carcinoma

4139. Hyperkeratosis of palm and sole is seen in -
a) Carcinoma colon *(ARMSDec 97)*
b) Hepatoma
c) Adenocarcinoma lung
d) CA oesophagus

4140. Lymph node metastasis is common in -
a) Osteosarcoma *(ARMSDec 95)*
b) Fibrous histiocytoma
c) Angiosarcoma
d) Rhabdomyosarcoma

4141. Most common tumor of the anterior mediastinum tumour is - *(AI99)*
a) Thymoma b) Lymphoma
c) Neurogenic tumour d) Vascular cyst

4142. Commonest lesion in middle mediastinum is -
a) Lipoma b) Aneurysm *(AI 98)*
c) Congenital cyst d) Germ cell tumour

4143. All the following can cause GIT cancers except -
a) Hepatitis B virus b)EBV *(A12K)*
c) HIV d) H. pylori

4144. A 25-year old male had pigmented macules over the plam, sole and oral mucosa. He also had anemia and pain in abdomen. The most probable diagnosis is -
a) Albright's syndrome *(ARMSMay 2005)*
b) Cushing's syndrome
c) Peutz-Jegher's syndrome
d) Incontinentia pigmenti

4145. Migratory necrolytic erythema is seen in -
a) Glucagonoma syndrome *(ARMS May 2005)*
b) Peutz-Jeghers syndrome
c) Sarcoidosis
d) Amyloidosis

4146. The most common side-effect of chemotherapy administration is - *(ARMS May 2005)*
a) Nausea b) Alopecia
c) Myelosuppression d) Renal dysfunction

4147. The commonest side effect of cisplatinum in a patient using it for esophageal carcinoma is -
a) Acute tubular necrosis *(ARMS May 2001)*
b) Thrombocytopenia
c) Hepatic failure
d) Cardiomyopathy

4148. Tkmors most amenable (cured with) to chemotherapy-
a) Chorjo Ca *(PGI Dec 06)*
b) Embryonal rhabdomyosarcoma
c) Hepatocellular Ca
d) Thyroid Ca

4149. Chemotherapy is useful in all, except- *(ARMS Dec*
a) Ewing's sarcoma b) Germ cell tumor *97)*
c) Secondaries d) Carcinoma cervix

4150. Patient presents with Hb-5 g%, TLC-9000/cc, DLC-Neutrophils-3%,Lymphoblasts-75% and fever for 1 mth. Drug used is - *(PGI June 07)*
a) iv Ciprofloxacin
b) Colony stimulating factor
c) Packed cell transfusion
d) Oral Ciprofloxacin

4151. Drug of choice for cisplatin induced emesis is- *(ARMS May 95)*
a) Metoclopramide b) Domperidone
c) Ondansetron d) Octreotide

4152. Whole body radiation is indicated in - *(PGI June 04)*
a) Advanced head & neck tumours
b) BM transplantation
c) Medulloblastoma
d) Mycosis fungoides
e) Histiocytosis-x

4153. Commonest site of metastases is - *(Assam 95)*
a) Lung b) Brain
c) Liver d) Kidney

4154. Kaposi's sarcoma is caused by- *(J&K2001)*
a) HHV-5 b)HHHV-5
c) HHV-7 d)HHV-8

4155. On post mortem, metastasis are usually found in which organ - **(***CUPGEE 96)*
a) Liver b) Kidney
c) Brain d) Bones

4156. AD of the foUowing are carcinogenic except-
a) H. pylori b) Hepatitis B virus *(Orissa **R**)*
c) E.B. virus d) Campylobacter

4157. Chemotherapy may be used in - *(KERALA 96)*
a) Osteosarcoma b) Ewings sarco
c) Wilms tumour d) Neuroblastoma
e) Chriocarcinoma

4133)a 4134)a,b,c,d 4135)c 4136)a 4137)b 4138)c 4139)d 4140)c,d 4141)a 4142)c 4143)a 4144)c 4145)a 4146)a 4147)a 4148)a,b 4149)d 4150)a,b,c 4151)c 4152)b,d 4153) c 4154)d 4155)a 4156)d 4157)All

4158. All are premalignant except - *(MP 98)*
a) Arsenic poisoning
b) Zn deficiency
c) Utraviolent radiation exposure
d) Bowens disease

4159. Radiotherapy is not used in - *(KERALA 98)*
a) Ca oesophagus b) Ca cervix
c) Ca stomach d) Brain tumour

4160. Lalloo 50 yrs, a chronic smoker presents with history of hemoptysis. He was having truncal obesity and hypertension. He had an elevated ACTH level which was not suppressible with high does dexamethasone. What would be the most probable diagnosis - *(AIIMS 2K)*
a) Bilateral aderal hyperplasia
b) Ademal adenoma
c) Pictuitary tumor
d) EctopicACTH producing lung cancer

4161. The most common hormone other than gastrin, contained in the gastrin-secreting islet cell tumor is - *(Kerala 2K)*
a) ACTH
b) Glucagon
c) Melanocyte stimulating hormone
d) Growth hormone releasing factor
e) Insulin

4162. Long arm chromosome 5 deletion is seen in- *(MAHE 2001)*
a) Crohn's disease b) Ulcerative colotis
c) Polyposis coli d)Pheochromocytoma

4163. Arsenic is assocaited with increased risk of -
a) Mesothelioma *(UP 2K)*
b) Melanoma
c) Basal cell carcinoma
d) Squamous cell carcinoma

4164. Carcinomas of all of following sites metastasize to vertebral column except - *(DELHIPG 96)*
a) Breast b) Bronchus
c) Prostate d) Esophagus

4165. Galactorrhoea due to ectopic prolactin is seen in
a) Malignant thymoma *(MP 2K)*
b) Bronchogenic carcinoma
c) Medullary carcinoma thyroid
d) Hypernephroma

4166. All of the following is used in pleurodesis except -
a) C. parvum *(TN 95)*
b) Clotrimazole
c) Mustine Hcl
d) Tetracycline

4167. Tylosis is associated with - *(CUPGEE 96)*
a) Oesophageal Ca b) Uterine Ca
c) Gastric Ca d) Prostatic Ca

4168. Currently all of the following malignancies are curable except - *(Karnatak 96)*
a) Chriocarcinoma b) Wilm's tumour
c) Acute Myeloid leukemia d) Hairy cell leukemia

4169. All of the following are potentially cured by chemotherapy except - *(AP 96)*
a) Hodgkins b)ALL
c) Wilm's tumour d) Chondrosarcoma

4170. All of the following are recognised tumor-markers except- *(UP 97)*
a) BetaHCG b) Beta 2 microglobin
c) Acid phosphatase d) Alpha foeto protein

4171. Intra op radiation is given to - *(AIIMS 98)*
a) Pancreas b) Breast
c) Cervix d) Thyroid

4172. Which of the following maliganat diseases of children has the best prognosis ? -
a) Wilm's tumour
b) Neuroblastoma
c) Rhabdomyosarcoma
d) Primitive neuroectodermal tumour

4173. Prophylactic radiotherapy to neck given in which malignancy with palpable swelling - *(APPG 03)*
a) Nasopharyngeal carcinoma
b) Laryngeal carcinoma
c) Sinuses malignancy
d) Tongue carcinoma

4174. Commonest cancer in which metastasis is seen in the brain is - *(NIMHANS 05)*
a) Breast b)Lung
c) Kidney d) Intestines

4175. Radiation can causes - *(JIPMER05)*
a) Non Hodgkin lymphoma
b) Hodgkins lymphoma
c) Acute leukemia
d) Papillary carcinoma thyroid

4176. Commonest type of bronchogenic carcinoma is -
a) Adenocarcinoma *(MAHE 05)*
b) Oat cell carcinoma
c) Squamous cell carcinoma
d) Large cell carcinoma

4177. Lymphnode metastasis is seen with - *(NIMHANS 05)*
a) Liposarcoma b) Neurofibrosarcoma
c) Histiocytoma d) Angiosarcoma

4178. All of the following are carcinogenic except-
a) H. pylori b) Hepatitis B virus
c) E.B. virus d) Campylobacter *(Jipmer05)*

4179. Which of the following in involved in tumor metastasis cascade - *(MAHA 05)*
a) Fibronectin b)E-Cadherin
c) Type IV collagenase d) Tyrosine kinase

4180. Imatinib mesylate is most useful in the treatment of- *(COMED 09)*
a) Chronic lymphoid leukaemia
b) Chronic myeloid leukaemia
c) Acute myeloid leukaemia
d) Acute lymphoid leukaemia

4158)b 4159)c 4160)d 4161)a 4162)c 4163)c,d 4164)d 4165)b,d 4166)b 4167)a 4168)None4169)d 4170)b 4171)a 4172)a 4173)a 4174)b 4175)c 4176)a 4177)d 4178)d 4179)b 4180)b

4181. All are true about Glomus body tumor except -
a) Also k/a chemodectoma *(PGIMay 10)*
b) Also k/a paraganglinoma
c) Common in older age
d) Brain Metastasis is common
e) Usually benign tumor

4182. True about PEComa (perivascular epithelioid cell tumour) - *(PGI May 10)*
a) Melanin & HMB45 are markers
b) Malignant melanoma variant
c) Contain perivascular epithelioid cells
d) Angiomyolypoma (AML) is a subtype

4183. True about malignant melanoma - *(PGIMay 10)*
a) Lymphatic spread
b) Lymph node biopsy is always done
c) Biopsy to be done when sentinel node is involved
d) Microsatellitism seen

4184. The most common site of skeletal metastases in carcinoma of the breast is - *(UPSC II11)*
a) Pelvis b) Skull
c) Lumbar vertebrae d) Thoracic vertebrae

4185; Pyogenic granulom truq A/E:·n, *0f^M^/P^P[attem]*
a) Bacterial infection
; f^Bieedh^
c) Benign tumour
d) Capillary hemangioma

4186. TTiorium indued tumor- *(NEE f/DNB(Pattern)*
a) Angiosarcoma of liver b) Renal ceflbarcinbma
c) Lymphoma d) Astrocytoma

iisfi **Most common caiisepf ectopic ACTH production -**
a) Renal cell carcinoma *(NEEf/i>NB\ Pattern)*
b) IHepatoqellular carchfohife?
c) Small cell carcinoma lung
d) Pheochromacytopiar^^

4187. jSiftiiliiiiSI II IBill

BRAIN

4188. Most common tumour of the posterior cranial fossa is - *(MAHE 05)*
a) Glioma b) Medulloblastoma
c) Meningioma d) Oligodendroglioma

CARCINOID

4189. Which of the following about carcinoids is not true-
a) 80 % occur in appendix and ileum *(TN95)*
b) Most of them metastatise to liver
c) 90 % of them cause carcinoma symptoms
d) They can occur in the lungs

TESTIS

4190. Radical retroperitoneal lymphnode dissection is indicated for all the following testicular tumours exscept - *(TN 99)*
a) Choriocarcinoma b) Teratoma
c) Teratocarcinoma d) Seninoma

4191. Stage I seminoma tl2estis. t/t of choice is - *(TN 01)*
a) High inguinal orchidectomy
b) High inguinal orchidectomy and radiotherapy
c) Radiotherapy and Chemotherapy
d) Trans-scrotal orchidectomy

LUNG

4192. Superior vena cava syndome is due to which type of lung carcinoma - *(MP 2K)*
a) Small cell b) Squamous cell
c) Adeno carcinoma d) Undifferentiated

4193. Which one of the following cell type of lung cancers is most frequently associated with hypercalcaemia -
a) Small cell b) Large cell *(UPSC 95)*
c) Squamous cell d) anaplastic

4194. The feature of benign nature of solitary pulnonary nodule- *(AP 96)*
a) 6cm size
b) Acute onset
c) Small speckts of calcification
d) Popcorn calcification

4195. All are true of pancoast's tumor except- *(AP97)*
a) Deltoid muscle atrophy
b) Treated with radiotherapy & chemotherapy
c) Homer's syndrome
d) Pain along the ulnar border of the forearm

4196. Paraneoplastic manifestation of Bronchogenic carcinoma includes all, except - *(Delhi PG Feb. 09)*
a) Dermatomyositis
b) Acanthosis nigricans
c) Cerebellar degeneration
d) Hyperkeratosis of palm and soles

4197. Treatment of SVC syndrome due to Small Cell Carcinoma Lung is - *(Delhi PG Mar. 09)*
a) Radiotherapy b) Chemotherapy
c) Surgery d) No treatment

PANCREAS

4198. Which of the following is the most common functioning pancreatic islet cell tumour ?
a) Gastrinoma b) Glucagonoma *(Manipal 06)*
c) Insulinoma d) Vipoma

4199. The triad of diabetes, gallstones and steatorrhoea is associated with which one of the following tumours ? *(COMED 09)*
a) Gastrinomas b) Somatostationomas
c) VIPomas d) Glucagonomas

4200. All are true about Zollinger Ellison syndrome except - *(PGI May 10)*
a) Surgery is done b) Exocrine tumour
c) Endocrine disorder d) Secretory diarrhoea
e) Metastasis occurs

4181)d 4182)a,c,d 4183)A11 4184)d 4185)a 4186)a 4187)c 4188)a 4189) a,c 4190) d 4191)b 4192)a,b 4193)c 4194) c,d 4195) a,b 4196)d 4197)b 4198)c 4199)b 4200)b

4201. Which of the following tests is not used in the diagnosis of insulinoma - *(AI11)*
a) Fasting blood glucose b) Xylose test
c) C- peptide levels d) Insulin/Glucose Ratio

4202. All of the following statements about Nesidioblastosis are true, Except - *(AI 11)*
a) Hypoglycemic episodes may be seen
b) Occurs in adults more than children
c) Histopathology shows hyperplasia of islet cells
d) Diazoxide may be used for treatment

COLON

4203. Which of the following is not precancerous condition to colon - *(J1PMER 95)*
a) Irritable bowel syndrome b) Ulcerative colitis
c) Familial polyposis d)All

4204. Risk factor for Ca colon is/are - *(PG1 Nov. 10)*
a) Male sex b) Crohn's disease
c) Lynch syndrome d) Animal fat
e) NSAIDS

KIDNEY

4205. Worst prognosis in renal cell carcinoma is assocaited with - *(MAHE 98)*
a) Haematuria
b) Size>5cm
c) Invasion of renal vein
d) Pulmonary secondaries

LIVER

4206. The following are risk factors for developing cholangiocarcinoma except - *(UPSC-109)*
a) Choledochal cyst
b) Cholelithiasis
c) Liver flukes
d) Working in the rubber industry

MISCELLANEOUS

4207. B cell prolymphocytic leukemia patients differ from those with B cell chronic lymphocytic leukemia in -
a) Presenting at a younger age *(AI 06)*
b) Having a lower total leucocyte count
c) Having prominent lymphadenopathy
d) Having a shorter survival

4208. AML transformation common in - *(PGIJune06)*
a) Aplastic anemia
b) MDS
c) Megakaryocytic thrombocytopenia

4209. Haemopoietic malignancy is been in - *{PGI June 05)*
a) HTLV-1 b)EBV
c) ParvoB19 d)HHV-8
e) CMV

4210. Charcot's joint seen in A/E- *(PGIJune06)*
a) Syringomyelia b) Diabetes
c) Hydrocephalus d) Amold-chiari malformation
e) Leprosy

4211. Alpha chain disease is detected by - *(PGIJune 98)*
a) M component in serum
b) Jejunal biopsy
c) Light chain in lumen of jejunum
d) All of the above

4212. Which of the following collagen disorder is NOT commonly associated with pulmonary fibrosis -
a) SLE *(AlIMSDec 94)*
b) Progressive systemic sclerosis
c) Dermatomyositis
d) Rheumatoid arthritis

4213. Plasmapheresis is treatment of choice for-
a) Henoch scholien purpura *(ARMSNov 2001)*
b) Wegener's granulomatosis
c) Good Pasture's syndrome
d) Acute renal transplant rejection

4214. Congenital syndrome associated with lymphoproliferative malignancy - *(PGI June 05)*
a) Bloom syndrome
b) Fanconi's anemia
c) Turner syndrome
d) Chediak Higashi syndrome
e) Ataxia telangiectasia

4215. Find the correct matches - *(PGI June 02)*
a) ANCA-Takayasu's arteritis
b) Antihistone antibodies-SLE in newborn
c) Naproxen-Pseudoporphyria
d) Antimitochondrial antibodies-primary biliary cirrhosis

4216. A female presents with H/O rash and polyarthritis. It may be associated with - *(PGI June 02)*
a) ANA b)RA factor
c) Bad obsteric history d) Increased APTT
e) HLA-B27

4217. Complication of long-term hemophilia -
a) Joint deformity *(PGI June 05)*
b) Transfusion transmitted disease
c) Renal calculi
d) Severe iron deficiency anemia

4218. All are features of accidental hypothermia, EXCEPT-
a) Lactic acidosis *(ARMS Nov 93)*
b) Bradycardia
c) Hypoglycemia
d) Increased number of FFA

4219. True about phacomelia is/are - *(PGI June 01)*
a) Tragedy in 1961
b) By Teratogenic drugs
c) Rigid drug restriction during pregnancy
d) Thalidomide
e) Overdose of the drug during pregnancy is main cause

4201)b 4202)b 4203)a 4204)b,c,d 4205)d 4206)d 4207)d 4208)a,b 4209)a,b,d 4210)None 421 l)b 4212)c 4213)c 4214)d,e 4215)c,d 4216)a,b,c,d 4217)a,b 4218)d 4219)a,b,c,d

4220. Which of the following statements is true of Rabies-
a) Fluorescent antibody is the test of choice *(AI96)*
b) HDCV is a live attenuated vaccine
c) Vaccine is given deep IM in the buttock
d) Local wound care is of no use

4221. WHO Ladder is for the rationale titration of- *(AIIMSMay 05)*
a) Oral analgesia b) Chemotherapy
c) Radiotherapy d) Antidepressants

4222. For comparison grading of pain the scale used is- *(AIIMS May 02)*
a) Face's scale b)CHEOPES
c) Numerical charts d) Visual scale

4223. Infliximab is directed against - *(AIIMSMay 05)*
a) Tumor necrosis factor-a (TNF - cc)
b) Interleukin -1 (IL - 1)
c) Interleukin -12 (IL -12)
d) Intercellular adhesion molecule (ICAM)

4224. Which of the following drugs can be safely prescribed in pregnancy - *(AIIMSMay 05)*
a) Warfarin b) ACE inhibitors
c) Heparin d) Beta-blockers

4225. Low doses of aspirin therapy is essentially advised for all of the following conditions except - *(AI 9 7)*
a) SEE
b) KJGR
c) Post myocardinal infarction
d) Pre ecclampsia

4226. Interferon is used in - *(PGIJune03)*
a) CML
b) Multiple myeloma
c) Small cell Ca of lung
d) Non small cell Ca of lung
e) Renal cell Ca

4227. In non immune hydrops which of the following is NOT seen - *(AIIMS June 2000)*
a) skin oedema b) ascites
c) large placenta d) cardiomegaly

4228. Iron overload occurs in all, except - *(AIIMS Sep 96)*
a) Thallassemia
b) Myelodysplastic syndrome
c) Polycythemia vera
d) Sideroblastic anaemia

4229. Hyperbaric oxygen is used in - *(PGIJune02)*
a) Co poisoning b)ARDS
c) Anerobic infection d) Septicemia
e) Pneumonia

4230. Raynaud's phenomenon is seen in - *(PGIDec 01)*
a) Scleroderma b) Reiter's disease
c) Rheumatoid arthritis d) Behcet's syndrome
e) Mixed connective tissue disease

4231. Macroglossia is seen in following except - *(PGI June*
a) Amyloidosis b) Acromegaly *97)*
c) Hyperthyroidism d) Down's syndrome

4232. Tache noires is seen in - *(PGIDec 97)*
a) Emphysema b) Diphtheria
c) Boutoneuse fever d) Bronchial asthma

4233. Oxygen content of the arterial blood is reduced in all except - *(PGI June 9 7)*
a) Methemoglobinemia
b) Fallot's tetralogy
c) Carbon monoxide poisoning
d) Fibrosing alveolitis

4234. Imipenem, a newer antibiotic with a broad antibacterial spectrum, is coadministered with cilastin because - *(AIIMS Nov 99)*
a) The combination of these antibiotics is Synergistic against Pseudomonas species
b) Cilastin aids the gastrointestinal absorption of the active moiety, imipenem
c) Cilastin inhibits a Beta-lactamase that destroys imipenem
d) Cilastin inhibits an enzyme in the kidney that destroys imipenem

4235. Rheumatoid arthritis pericarditis is - *(PGIDec 98)*
a) Serous b) Fibrinous
c) Serofibrinous d) Adhesives

4236. Cyclosporine inducced HTN is treated by -
a) Clonidine b)Enalapril *(PGI June 03)*
c) Nifedipine d) Methyl dopa

4237. Acanthosis nigricans is caused by which drug- *(PGI June 2K)*
a) Amphotericin-B b) Ketoconazole
c) Nicotinic acid d) Nalidixil acid

4238. Radiotherapy is treatment of choice in -
a) Sarcoidosis *(AIIMSJune 97)*
b) Tuberculosis
c) Monoclonal hypogammaglobulinemia
d) Sarcomas

4239. Blood culture is indicated in all, except -
a) Enteric fever *(AIIMS June 97)*
b) Sub acute bacterial endocarditis
c) Septicemia
d) Malaria

4240. Which of the following drugs can be safely prescribed in pregnancy - *(AIIMSMay 05)*
a) Warfarin b) ACE inhibitors
c) Heparin d) Beta-blockers

4241. Enzyme replacement therapy is available for the treatment of the following disorder -*(AIIMSNov 03)*
a) Gaucher's disease
b) Niemann-Pick disease
c) Hunter syndrome
d) Phenylketonuria

4242. After contrast media injection in the Radiology department, a patient develops severe Hypotension, bronchospasm and cyanosis. Which one of the following drugs should be used for treatment -
a) Atropine b) Aminophylline
c) Dopamine d) Adrenaline *(AIIMSMay 04)*

4243. Serum total lactate dehydrogenase level will NOT be raised in - *(AI 03)*
a) Muscle crush injury b) Stroke
c) Myocardial infarction d) Hemolysis

4220) a 4221) a 4222) d 4223) a 4224) c 4225) a 4226)a,b,e 4227) d 4228) c 4229) a,c 4230)a,c,e 423 l)c 4232) c 4233) a,c 4234) d 4235) b 4236) b,c 4237) c 4238) c 4239) d 4240) c 4241) a 4242) d 4243) b

4244. Palpable purpura could occur in the following conditions, except - *(ai 05)*
a) Thrombocytopenia
b) Small-vessel vasculitis
c) Disseminated gonococcal infection
d) Acute meningococcemia

4245. Purpura is a feature of- *(PGIJune 2000)*
a) Disseminated Intravascular Coagulation
b) Henoch Schonlein Purpura
c) Meningococcemia
d) Schamberg's disease

4246. Enzyme defect in acute intermittent porphyria - *(PGI June 05)*
a) HMB synthase b) ALA dehydratase
c) URO I synthase d) URO **II** synthase
e) Ferrochelatase

4247. Goldenhar's syndrome - *(PGI Dec 04)*
a) Micrognathia b) Malformed ear
c) Preauricular tags d) Malar hypoplasia

4248. Mycotic abscesses are due to - *(AI 06)*
a) Bacterial infection b) Fungal infection
c) Viral infection d) Mixed infection

4249. TVeatment of tobacco addiction - *(PGI June 05)*
a) Nicotine b) Bupropion
c) Mecanylate d) Dopamine
e) Adenine

4250. All reduce lactation except - *(PGI June 06)*
a) Maternal anxiety b) Retracted nipple
c) Dehydration d) Diabetes
e) Antibiotics

4251. Vertical transmission of antibody can occur in all of the following, Except - *(AIMS Sep 96)*
a) Rh incompatibility
b) Isoimmune thrombocytopenia
c) Neonatal toxic erythema
d) Neonatal myasthenia gravis

4252. Antibodies for the following conditions may be transmitted from mother to fetus except - *(AI 98)*
a) Rh-incompatibility
b) Isoimmune thrombocytopenia
c) Toxic erythema
d) Myaesthenia gravis

4253. Humoral immunodeficiency is suspected in a patient and he is under investigation. Which of the following infections would not be consistent with the diagnosis-
a) Giardiasis *(AIMS Nov 2004)*
b) Pneumocystis carinii pneumonia
c) Recurrent sinusitis
d) Recurrent subcutaneous abscesses

4254. The type of Allergic reaction seen in Allergic fungal sinusitis is - *(AIMS Nov 2004)*
a) Type 1 and Type 2 b) Type 2 and Type 3
c) Type 1 and Type 3 d) Type 4 and Type 1

4255. All are features of Wiskott Aldrich syndrome, except- *(AIMS Dec 97)*
a) Descreased IgM level
b) Elevated IgE level
c) Decreased IgA level
d) Decreased ratio of CD_4 and CD_g cells

4256. Immune tolerance can be induced *by-(AIMSMay 95)*
a) Excess antigen
b) Excess antibody
c) Excess complement level
d) Neonatal thymectomy

4257. The commonest cause of death in a patient with primary amyloidosis is - *(AIMS May 2003)*
a) Renal failure b) Cardiac involvement
c) Bleeding diathesis d) Respiratory failure

4258. Severe Laxity of joints - *(PGI June 05)*
a) Marfan's syndrome
b) Ehler Danlos
c) RA
d) Osteogenesis imperfecta
e) OA

4259. A 25 year old male presented with pigmentation of nose and pinna. After voiding, his urine becomes dark. His spine is most likely to show- *(AIMS Nov 05)*
a) Atlantoaxial subluxation b) Spondyloptosis
c) Basilar invagination d) Calcification of disc

4260. History of dislike for sweet food items is typically present in - *(AIMSNov 03)*
a) Diabetes mellitus
b) Glycogen storage disease
c) Hereditary fructose intolerance

4261. A 40 year old male patient is suffering from type H diabetes mellitus and hypertension. Which of the following antihypertensive drugs should not be used in such patients - *(AIMS Nov 03)*
a) Lisinopril b) Hydrochlorthiazide
c) Losartan d) Trandolopril

4262. A one year old boy presented with hepatosplenomegaly and delayed milestones. The liver biopsy and bone marrow biopsy revealed presence of histiocytes with PAS-positive Diastase-resistant material in the cytoplasm. Electron-microscopic examination of these histiocytes is most likely to reveal the presence of- *(AIMS Nov 03)*
a) Birbeck granules in the cytoplasm
b) Myelin figures in the cytoplasm
c) Parallel rays of tubular structures in lysosomes
d) Electron dense deposit in the mitochondria

4263. Which deleterious effect is least likely to occur in hypothermia - *(AIMS Nov 06)*
a) Cardiac arryhthmia
b) Decreased peripheral resistance
c) Reversible coagulation
d) Renal failure

4244) a 4245) a,b,c 4246) a 4247)All 4248)b 4249)a,b 4250)c,d,e 425l)c 4252) c 4253)b 4254)c 4255)c
4256) a 4257) b 4258) a,b 4259) d 4260) c 4261) b 4262) c 4263) b

4264. A young male patient presents with LDL 600 mg/dl, triglycerides 160 mg/dl. What would be the most likely finding on physical examination -
a) Tendon xanthoma *(AIIMSNov 06)*
b) Lipemia retinalis
c) Eruptive tuberous xanthomas
d) Xanthelesma

4265. A man takes peanut and develop stridor, neck swelling, tongue swelling and hoarseness of voice. Most probable diagnosis is - *(AIIMS May 07)*
a) Foreign body bronchus
b) Parapharyngeal abscess
c) Foreign body larynx
d) Angioneurotic edema

4266. Not true about angioneurotic edema - *(AI09)*
a) Pitting edema of face, lips and mucous membrane
b) Cl esterase inhibitor deficiency can cause it
c) Extreme temperature exposure can provoke it
d) Known with ACE inhibitors

4267. Necrotising lymphadenitis is seen with -
a) Kimura disease *(AIIMS Nov 09)*
b) Kikuchi disease
c) Castle Man disease
d) Hodgkin's lymphoma

4268. Respiratory centre depression is caused by all except- *(AIIMS Nov 10)*
a) Opium b) Strychnine
c) Barbiturates d) Gelsemium

4269. Acronym 'POEMS' stand for - *(PGIMay 11)*
a) Oesophageal dysmotility
b) Polyneuropathy
c) Endocrinopathy
d) M-protein
e) Scleroderma

4270. Carney triad consists of - *(PGIMay 11)*
a) Gastric Ca b) Paraganglioma
c) Pulmonary chordoma d) Carcinoma bronchus
e) Chondromatosis

4271. Paroxysmal hypotension is seen in - *(J1PMER 95)*
a) Carcinoid syndrome
b) Lymphoma
c) Leukemia
d) Infectious mononucleosis

4272. All of the following statements regarding mast cells are true except - *(UPSC 95)*
a) They contain heparin proteoglycan
b) Their number is increased in patients with bronchial asthma
c) Disodium cromoglycate brings about their degranulation
d) They receptors for F_c portion of I E

4273. Plasmapheresis is recommended in all of the following except - *(UPSC 97)*
a) Hyperviscosity syndrome
b) Macroglobulinaemia
c) Immune complex glomerulonephritis
d) Chronic active hepatitis

4274. 20 year old female on OCPs resented with behaviour changes & abdominal pain most probable diagnosis is - *(PGI 96)*
a) SUE b) Acute intermittent porphyria
c) Pancreatitis d) Aortic aneurysm

4275. Sree chitra Tirunal institute (SCT) is under the ministry of - *(SCTIMS 98)*
a) Family welfare
b) Human resources and development
c) Science and technology
d) Government of India

4276. Which of the following has the worst prognosis -
a) Cholecystectomy *(J & K 01)*
b) Splencetomy
c) Nephrectomy
d) Appendicetomy

4277. Wing beating tremor is seen in - *(NIMHANS 2K)*
a) Huntington disease b) Wilson disease
c) Parkinsonism d) Thyrotoxicosis

4278. Imipenem, a newer antibiotic with a broad antibacterial spectrum is coadministered with cilastin because - *(UPSC 99)*
a) The combination of these antibiotics is Synergistic against Pseudomonas species
b) Cilastin aids the gastrointestinal absorption of the active moiety, imipenem
c) Cilastin inhibits a Beta-lactamase that destroys imipenem
d) Cilastin inhibits an enzyme in the kidney that destroys imipenem

4279. Cause of death which is common in case of coma -
a) Tongue falling back and obstructing airway
b) Secretions obstructing airway *(TN 03)*
c) Cardiac arrest
d) Epilepsy

4280. Erynimyer's flask deformity is seen in - (*Bihar 03)*
a) Gaucher's disease b)Hemophilia
c) Rickets d) Scurvy

4281. Specific role of endoplasmic reticulum -*(Kerala 04)*
a) Lipid biosynthesis
b) Lipid catabolism
c) Maintenance of calcium store
d) Pentose phosphate pathway

4282. Postural hypotension is not seen in - *(MAHE 05)*
a) Diabetes b) Hypoglycemia
c) Tabes dorsalis d) Anti hypertensive drugs

4283. Thromboangitis obliterans involves which vessels - *(HPU05)*
a) Ant and Post tibial b) Femoral
c) Aortoiliac d) Popliteal

4284. Injury caused by biopsy taken for scalene lymph node - *(HPU05)*
a) Injury to phrenic nerve
b) Injury to vagus nerve
c) Injury to apex to lung
d) Injury to trachea

4264)a 4265)d 4266)a 4267)b 4268)b 4269)b,c,d 4270)a,b,c 4271)a 4272)c 4273)d 4274)b 4275)c 4276)b 4277)b 4278)d 4279)b 4280)None 4281)a 4282)b 4283)a 4284)c

4285. Abbey's flap is used for reconstruction of- *(HPU05)*
a) Breast repair b) Upper lip repair
c) Cheek repair d) Nose repair

4286. Carotid massage causes - *(HPU 05)*
a) It increases vagal tone
b) Decreases sympathetic discharge
c) It decrease vagal tone
d) Causes tachycardia

4287. TViage means - *(MAHE05)*
a) Sorting out of cases on availability of medical resources and severity of patients condition
b) Patients are divided into 3 groups
c) Severely injured patients are attended first in military camps
d) None of the above

4288. All the following metabolic may cause chronic or recurrent abdominal pain, except - *(J&k 05)*
a) Acute intermittent prophyria
b) Addison's disease
c) Hypercalcemia
d) Hyperkalemia

4289. Which is not a pyrogen - *(NIMHANS 06)*
a) IFN-a b) TNF - a
c) IL-4 d)IL-18

4290. Consider the following - *(UPSC 07)*
1. Malnutrition
2. Lithostatin (pancreatic stone protein) deficiency
3. Cassava tuber
4. Oxidant stress (heightened cytochrome P-450 activity)

Which of the above produce tropical calcific pancreatitis (fibrocalculous pancreatic diabetes) ?
a) 1,2 and 3 only b) 2,3 and 4 only
c) 1 and 4 only d) 1,2,3 and 4

4291. Match List I with List II and select the correct answer using the code given below the lists - *(UPSC07)*

List I (Laboratory investigation)	**Listn** (Disease condition)
A. Alkaline urine pH	1. Lactose intolerance
B. Elevated sweat chloride	2. Renal tubular acidosis
C. Reducing substance in urine	3. Cystic fibrosis
D. Reducing substance in stool	4. Galactosemia

Code:

	A	B	C	D
a)	2	4	3	1
b)	2	3	4	1
c)	1	4	3	2
d)	1	3	4	2

4292. Neutrophilic leucocytosis is seen in all except -
a) Sepsis *(Corned 07)*
b) Myocardial infarction
c) Pyogenic osteomyelitis
d) Hay fever

4293. Refeeding edema is due to increased release of- *(Corned 08)*
a) Growth hormone b) Glucocorticoids
c) Insulin d) Thyroxine

4294. Mucin clot test is done to detect - *(Corned 08)*
a) Mucin in stool
b) Protein in CSF
c) Hyaluronate in Synovial fluid
d) Protein in pleural fluid

4295. Emporiatrics deals with the health of the-
a) Farmers b) Travellers *(Corned 08)*
c) Industrial workers d) Mine workers

4296. Ghrelin is responsible for - *(Corned 08)*
a) Stimulation of appetite
b) Suppression of appetite
c) Stimulation of of sleep
d) Suppression of sleep

4297. All are true of cerebral salt wasting except -
a) Increased urine output *(Corned 08)*
b) Low intravascular volume
c) Low uric acid in serum
d) Decreased vasopressin levels

4298. The estimation of 3 methyl histidine in urine is used to study - *(Corned 08)*
a) Status of folate in the body
b) Renal disease
c) Skeletal muscle mass
d) Protein absorption in the gut

4299. Sympathomimetic drugs are useful in the therapy of all of the following conditions except-
a) Acute decompensated heart failure *(Manipal 09)*
b) Hypotension
c) Hypertension
d) Erective dysfunction

4300. Consider the following statements - *(UPSC-109)*
1. Thalidomide is the drug of choice for erythema nodosum leprosum
2. It is an immunomodulatory and anti-inflammatory drug

Which of the statements given above is/are correct?
a) 1 only b) 2 only
c) Both 1 and 2 d) Neither 1 nor 2

4301. High serum uric acid, high serum phosphates and high serum creatinine in a patient will be observed in : *(Delhi PG Mar. 09)*
a) Chronic lymphocytic leukemia
b) Obstructive jaundice
c) Status epilepticus
d) Typhoid

4302. Albinism- *(Manipal 09)*
a) Hair bulb for tyrosine positivity test is useful only when the child is 5 years old
b) Is associated with platelets abnormality especially with aspirin
c) Complete decussation is invariable in all albinism
d) Is associated with thrombosis under general anaesthesia

4285)b 4286)c 4287)a 4288)d 4289)d 4290)a 4291)b 4292)d 4293)c 4294)c 4295)b 4296)a 4297)c 4298)c 4299)c 4300)c 4301)a 4302)b

4303. Sulphas alazine is NOT used for the treatment of -
a) Crohn's disease *(UPSC-109)*
b) Rheumatoid arthritis
c) Sarcoidosis
d) Ulcerative colitis

4304. Paradoxical undressing occurs with - *(COMED 09)*
a) Heatstroke b) Hypothermia
c) Hyperthermia d)Hyperpyrexia

4305. Purple toe syndrome is associated with which of the following drugs ? *(COMED 09)*
a) Warfarin b) Phenytoin
c) Theophylline d) Thalidomide

4306. All are true about congenital erythropoetic porphyria except - *(PGIMay 10)*
a) Can occur from infancy to adult
b) Erythrodontia
c) Ferrochelase deficiency
d) Corporophyrins III in urine
e) Uroporphyrin in urine

4307. Benefits of Enteric feeding Vs parenteral feeding are- *(PGI Nov. 10)*
a) T Cost
b) *l* Morbidity
c) Preferred in acute pancreatitis
d) Preserve GIT function
e) Maintain immunological function

4308. Lithium is the drug of choice for the treatment of- *(UPSCI11)*
a) Bipolar disorder b)Dysthymia
c) Anxiety neurosis d) Schizophrenia

4309. Restless legs syndrome in chronic renal failure may respond to- *(UPSCI11)*
a) Quinine b) Clpnazepam
c) Vitamin E d) Vitamin D

4310. Consider the following medical conditions -
1. Recent myocardial infarction *(UPSC 111)*
2. Cerebrovascular accident
3. Artificial heart valve
4. Retinal detachment

Electroconvulsive therapy is contraindicated in -
a) 1 and 3 only b) 2 and 4 only
c)i 2,3 and 4 d) 1,2 and 4

4311. Drug used for smoking cessation *AJE-(NEET/DNB*
a) Naltrexone b) Bupropion *Pattern)*
c) Buprenorphine d) Methadone

4312. Poland syndrome all of the following are seen except - *(NEET/DNB Pattern)*
a) Absence of pectoralis major
b) Absence of pectoralis major
c) Syndactyly of digits
d) Short index fingers

4313. Angioid streak is seen in- *(NEET/DNB Pattern)*
a) Tuberous sclerosis
b) Pseudoxanthoma elasticum
c) Sturge weber syndrome
d) Septo optic dysplasia

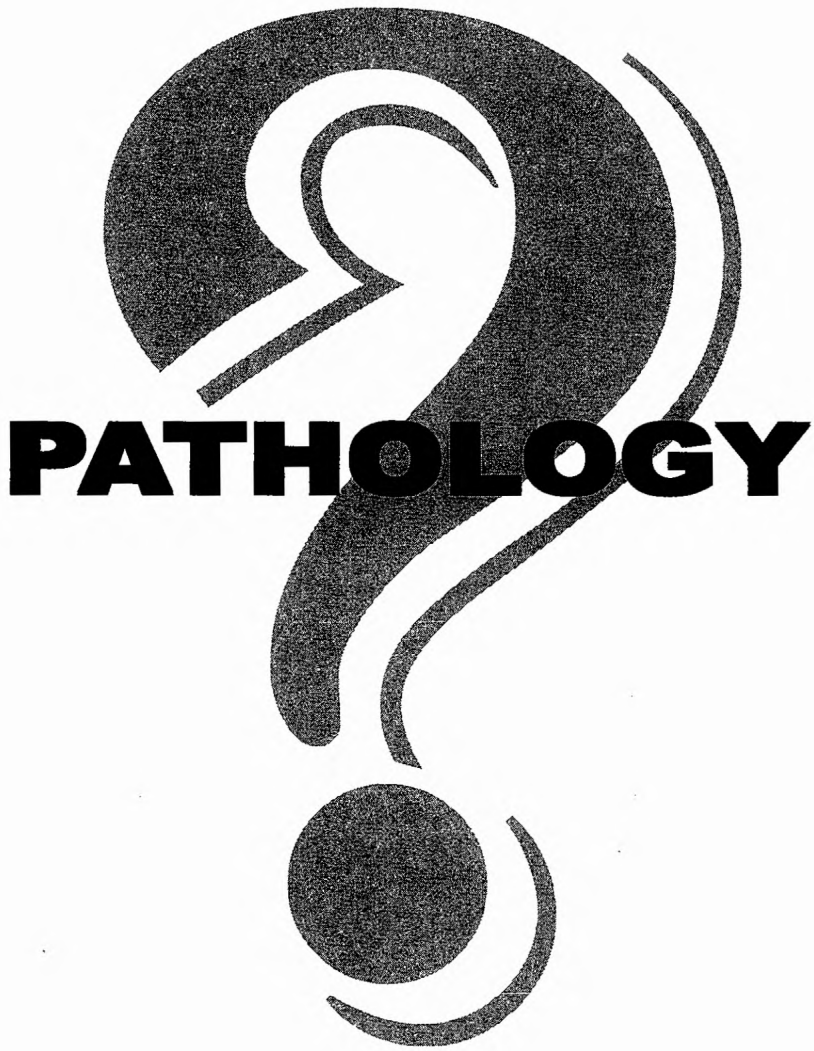
4314. All are true about Erythema multiforme except - *(NEET/DNB Pattern)*
a) Target lesion
b) Does not involve mucosa
c) Associated with HSV
d) Extensor involvement

4315. Richner-Hanhart syndrome is- *(NEET/DNB Pattern)*
a) Autosomal dominant
b) Occular and cutaneous ulcers
c) Associated with abnormality in lipid metabolism
d) Normal mental function

4316. Odd pair - *(NEET/DNB Pattern)*
a) Erythema marginatum-rheumatic fever
b) Erythema gyrens ripens-malignancy
c) Necrotic acral eiythema-HCV

43f7t Muir toyre syndrome shows- *(NEET/DNB Pattern)*
a): Sebaceous keratomas
b) Lisch nodules
c) Intestinal polyp
d) Hyperelastic joints

4318. Daily temperature variation in remmitent fever is-
a) < 0.5 C b) >1.0 C *(NEET/DNB Pattern)*
c) < 1.0 C d) >2 C



4319. Hyperthermia - *(NEET/DNB Pattern)*
a) Temperature > 41.5
b) > 40 with autonomic dysfunctuion
c) No change in hypothalamic thermostat
d) One which normalises with anti pyretic

4320. Fabry's disease affects - *(NEET/DNB Pattern)*
a) ER b) Lysosome
c) Mitochondria d) Cell membrane

4321. Calcium homeostasis disturbance is seen in -
a) Malignant hyperthermia *(NEET/DNB Pattern)*
b) DMD
c) Tibial muscular dystrophy
d) Limb girdle muscle dystrophy

* * *

PATHOLOGY

CELLULAR PATHOLOGY

1. **Hypertrophy is a type of-** *(A192)*
   a) Cell injury b) Cellular adaptation
   c) Carcinoma d) Cell aging
2. **What is hyperplasia -** *(PGI99)*
   a) Decrease in cell size
   b) Increase in cell size
   c) Increase in cell number
   d) Decrease in cell number
3. **Hypertrophy is-** *(NEET/DNB Pattern)*
   a) Increase in cell number b) Increase in cell size
   c) Decrease in cell number d) Decrease in cell size
4. **In comparison to hyperplasia, hypertrophy involves-**
   a) Increase in cell size and number *(AIIMS 91)*
   b) Increase in cell size without increase in number
   c) Increase in cell number without increasing in size
   d) Increase in cell size and decrease in number
5. **Physiological hyperplasia and hypertrophy are seen simultaneously in -** *(PGI May 10)*
   a) Uterus in pregnancy
   b) Skeletal muscle in atheletes
   c) Breast at puberty
   d) Thyroid gland during pregnancy
6. **Both hyperplasia and hypertrophy is found in-**
   a) Pregnancy uterus *(AIIMS May 09)*
   b) Cardiac muscle in cardiomegaly
   c) Skeletal muscle in athelete
   d) Breast development in puberty

||§ **Decrease in cell size refers to-** *(NEETMNB Pattern)*
   a) Atrophy b) Metaplasia
   c) Hyperplasia d) Hypertrophy

8. **Replacement of columinar epithelium of respiratory tract to squamous epithelium is -** *(PGI 99)*
   a) Hyperplasia b) Metaplasia
   c) Hypoplasia d) None of the above
9. **Cell injury occurs due to -** *(PGI June 08)*
   a) 1 ATP
   b) T Cytosolic Cal ^{4*}
   c) Membrane damage
   d) Mitochondrial dysfunction
   e) T intracellular K^+
10. **All of the following statements are true regarding reversible cell injury except -(AI05, ARMS Nov 06)**
    a) Formation of amorphous densities in the mitochondrial matrix.
    b) Diminished generation of adenosine triphosphate (ATP)
    c) Formation of blebs in the plasma membrane
    d) Detachment of ribosomes from the granular endoplasmic reticulum
11. **Which finding on electron microscopy indicates irreversible cell inj ury -** *(ARMSMay 12, Nov. 02)*
    a) Dilatation of endoplasmic reticulum
    b) Dissociation of ribosomes from rough endoplasmic reticulum
    c) Flocculent amorphous densities in the mitochondria
    d) Myelin figures
12. **Irreversible cell inj ury is in dicated by -** *(AI 00)*
    a) Accumulation of calcium in mitochondria
    b) Myelin figures
    c) ATP depletion
    d) Shifting of ribosomes
13. **Irreversible cell injury -** *(NEET/DNB Pattern)*
    a) Mitochondrial densities b) Cellular swelling
    c) Blebs d) None
14. **All are reversible injury of cell, except -**
    a) Vacuole *(ARMS Dec 98)*
    b) Karyorrhexis
    c) Fat accumulation
    d) Cell wall swelling
15. **Enzyme level in tissue inj ury is due to-** *(PGI 98)*
    a) Lysis of cells b) Enzyme secretion
    c) No inhibitor in serum d) All of the above
16. **: In cell death, myelin figures are derived from -** *(NEET/DNBPattern)*
    a) Nucleus b) Cell membrane
    c) Cytoplasm d) Mitochondria
17. **The Fenton reaction leads to free radical generation when -** *(ARMS Nov 02)*
    a) Radiant energy is absorbed by water
    b) Hydrogen peroxide is formed by Myeloperoxidase
    c) Ferrous ions are converted to ferric ions
    d) Nitric oxide is converted to peroxynitrite anion
18. **Enzyme that protects the brain from free radical injury is -** *(AI 01)*
    a) Myeloperoxidase b) Superoxide dismutase
    c) MAO d) Hydroxylase
19. **Organelle where H_20_2 is produced and destroyed is-** *(ARMS May 94)*
    a) Peroxisome b) Lysosome
    c) Golgi body d) Ribosome
20. **Necrosis of cells is due to -** *(ARMS Nov 99)*
    a) Ca^{2+}efflux in cell
    b) Fat deposition in cells
    c) Water imbibition in cells
    d) Enzymatic digestion
21. **Coagulative necrosis is due to '•** *(NEET/DNB Pattern)*
    a) Denaturation of protein
    b) Enzymatic digestion
    c) Infection
    d) None
22. **Mlisatype of-** *(UP 10)*
    a) Coagulative necrosis b) Liquefactive necrosis
    c) Caseous necrosis d) Fat necrosis
23. **Coagulative necrosis is seen in A/E -** *(ARMSMay 95*
    a) M.I. b)T.B. *AI97)*
    c) Thermal d) Zenker's degeneration
24. **Coagulative necrosis is seen in -** *(ARMSMay 10)*
    a) T.B. b) Sarcoidosis
    c) Cryptococcal infection d) Gangrene

l)b 2)c 3)c 4)b 5)a>c 6)a 7)a 8)b 9)a,b,c,d 10)a ll)c 12)a 13)a 14)b
15)a 16)b 17)c 18)b 19)a 20)d 21)a . 22)a 23)b 24)d>a

25. Coagulative necrosis is seen in - *(AI09)*
a) Tuberculosis b) Fungal infection
c) Sarcoidosis d) Wet gangrene

26. Caseous necrosis in granuloma not found in -
a) Tuberculosis b) Leprosy *(PGI June 06)*
c) Histoplasmosis d)CMV
e) Wegener's granulomatosis

27. Fat necrosis is common in - *(NEET/DNB Pattern)*
a) Omentum b) Breast
c) Retroperitoneal fat d) All of the above

28. Fibrinoid necrosis may be observed in all of the following except - *(AI 05)*
a) Malignant hypertension
b) Polyarteritis nodosa
c) Diabetic glomerulosclerosis
d) Aschoff's nodule

29i **Programmed cell death is known as-**
a) Cytolysis *(AIIMS Nov 05,NEET/DNB Pattern)*
b) Apoptosis
c) Necrosis
d) Proptosis

30. Chemotherapeutic drugs can cause-
a) Only necrosis *(AIMS May 05)*
b) Only apoptosis
c) Both necrosis and apoptosis
d) Anoikis

31. True about apoptosis is all, except-*(AIIMS Nov 01)*
a) Considerable apoptosis may occur in tissues before it becomes apparent in histology
b) Apoptotic cells appear round mass of the intensely eosinophillic cytoplasm with dense nuclear chromatin fragments
c) Apoptosis of cells induce inflammatory reaction
d) Macrophages phagocytose the apoptotic cells and degrade them.

32. Characteristic feature of apoptosis - *(AI 10)*
a) Cell membrane intact
b) Cytoplasmic eosinophilia
c) Nuclear moulding
d) Cell swelling

33. The characteristic feature of apoptosis on light microscopy is - *(AI 10)*
a) Cellular swelling
b) Nuclear compaction
c) Intact cell membrane
d) Cytoplasmic eosinophlia

34. True about Apoptosis are all except-*(AIIMSMay 0 7)*
a) Inflammation is present
b) Chromosomal brekage
c) Clumping of chromatin
d) Cell shrinkage

35. All of the following are features of apoptosis, except-
a) Cellular swelling *(AI 10)*
b) Nuclear compaction
c) Intact cell membrane
d) Cytoplasmic eosiophilia

36. Example of Apoptosis is? *(DNB Dec 09)*
a) Councilman Bodies b) Gamma Gandy Body
c) Russell bodies d) None

37. Apoptotic bodies are - *(NEET/DNB Pattern)*
a) Clumped chromatin bodies
b) Pyknotic nucleus without organelles
c) Cell membrane bound with organelles
d) No nucleus with organelles

38. Which of the following organelles plays a pivotal role in apoptosis? *(AIIMS May 10, AI 11, 09)*
a) Mitochondria b) Endoplasmic reticulum
c) Nucleus d) Golgi apparatus

39. Cytosolic cytochrome C plays an important function in - *(AIIMS Nov 06)*
a) Apoptosis b) Cell necrosis
c) Electron transport chain d) Cell division

40. In apoptosis, Apaf-1 is activated by release of which of the following substances from the mitochondria ?
a) Bel-2 b)Bax *(AI05)*
c) Bel - XL d) Cytochrome C

41. In apoptotic permeabilization of membrane occurs in- *(PGI Nov 10)*
a) Nuclear membrane b) Cytoplasmic membrane
c) Lysosome d) Ribosome
e) Mitochondrial membrane

42. In apoptosis, cytochrome C acts through - *(NEET/DNB Pattern)*
a) Apaf 1 b) Bcl-2
c) FADD d) TNF

43. Which is activated for nuclear fragmentation in apoptosis - *(PGI June 07)*
a) Caspases b)Apaf-1
c) Oxygen free radicals

44. In apoptosis which is/are involved - *(PGI June 08)*
a) Apaf-1 b)Bcl2
c) Caspases d) Programeed cell death

45. Caspases are involved in - *(AIIMSNov 07, AI 10)*
a) Apoptosis b) Cell signaling
c) Pinocytosis d) Cell injury

46. Caspases are associated with - *(AIIMSMay 10)*
a) Organogenesis
b) Hydropic degeneration
c) Collagen hyalinization

47. The following is an antiapoptotic gene -
a) Bax b) Bad *(AIIMS Nov 06)*
c) Bcl-X d) Bim

48. Which of the following is an antiapoptotic gene -
a) C-myc b) P53 *(AI 04,2000)*
c) bcl-2 d) bax

49. Ladder pattern of DNA electrophoresis in apoptosis is caused by the action of the following enzyme -
a) Endonuclease b) Transglutaminase
c) DNAse d) Caspase *(AIIMS Nov 04)*

50. Internucleosomal cleavage of DNA is characteristic of- *(AIIMS Nov 05)*
a) Reversible cell injury b) Irreversible cell injury
c) Necrosis d) Apoptosis

25) a 26)b,d,e 27) d 28) c 29) b 30) c 31) c 32) a 33) b 34) a 35) a 36) a 37) c 38) a
39) a 40) d 41) e 42) a 43) a 44)a,b,c,d 45) a 46) a 47) c 48) c 49) a 50) d

51. **True about apoptosis -** *(PGI May 10)*
a) Increase in lysosomal enzyme
b) Increase in caspases
c) Phosphatidyl serine has important role
d) Intemucleosomal cleavage of nucleus

52. **True about apoptosis-** *(PGI June 03)*
a) Migration of Leukocytes
b) End products are phagocytosed by macrophage
c) Intranuclear fragmentation of DNA
d) Activation of caspasses
e) Annexin V is marker of apoptopic cell

53. **Starting point of apoptosis for programme cell death is-** *(PGI Dec 97)*
a) Activation of endonuclease
b) Release of *enzyme*
c) Accumulation of calcium
d) Destruction by macrophages

54. **Annexin Y is a marker of-** *(NEET/DNB Pattern, AIIMS May 09)*
a) Apoptosis b) Necrosis
e) Artherosclerosis d) Inflammation

55. **Which of the following diseases have an underlying mitochondrial abnormality-** *(PGI 01)*
a) Krabbe's disease b)Fabry's disease
c) Mitochondrial myopathy d)Oncocytoma
e) Fanconi syndrome

56. **Cellular and flagellar movement is carried out by all of the following except -** *(AI05)*
a) Intermediate filaments b)Actin
c) Tubulin d) Myosin

5® **Steatosis means -** *(NEET/DNB Pattern)*
a) Fatty change
b) Accumulation of triglyceride
c) Accumulation of glycogen
d) Accumulation of pigment

58. **Which of the following pigments are involved in free radical injury -** *(AIIMS Nov 06)*
a) Lipofuscin b) Melanin
c) Bilirubin d) Hematin

59. **The light brown perinuclear pigment seen on H & E staining of the cardiac muscle fibres in the grossly normal appearing heart of an 83 year old man at autopsy is due to deposition of -** *(AIIMS May 03)*
a) Hemosiderin b) Lipochrome
c) Cholesterol metabolite d)Anthracotic pigment

60. **Dystrophic calcification means-** *(PGIDec 9 7)*
a) Calcification in destroyed tissue with normal calcium level in blood
b) T level of Ca^ deposits
c) Calcification in normal tissue seen in hyperparathyroidism
d) Calcification in destroyed tissues with hyper calcemia

61. **Dystrophic calcification is seen in -** *(AI 95)*
a) Milk alkali syndrome b) Atheromatous plaque
c) Hyperparathyroidism d) Vitamin A intoxication

62. **Which of the following is not a common site for metastatic calcification -** *(AIIMS Nov 05)*
a) Gastric mucosa b) Kidney
c) Parathyroid d)Lung

53. **True about metastatic calcification -** *(AIIMSMay 09)*
a) Serum ca level is normal
b) Occurs in dead/dying tissue
c) Occurs in damaged heart valves
d) Calcification starts in mitochondria

64. **Dystrophic calcification is seen in all except-** *(NEET/DNBPattem)*
a) Lymphnode b) Lungs
c) Kidneys d) Rheumatic valves

65. **Calcification of soft tissues without any distrubance of calcium metabolism is called -** *(AIIMSNov 04)*
a) Ionotrophic calcification
b) Monotrophic calcification
c) Dystrophic calcification
d) Calcium induced calcification

66. **Heterotopic calcification occurs in -**
a) Ankylosing spondylitis *(PGIDec 01, June 07)*
b) Reiter's syndrome
c) Forrestier's disease
d) Rheumatoid arthritis
e) Gouty arthritis

m **True about Psammoma bodies are all except -**
a) Seen in meningioma *(NEET/DNB Pattern)*
b) Concentric whorled appearance
■Sf¡ c)^ontains^Calciiyn"deposits
d) Seen in teratoma

68. **True about cell ageing -** *(AIIMSNov 01)*
a) Free radicals injury
b) Mitochondria are increased
c) Lipofuscin accumulation in the cell
d) Size of cell increased

69. **All of the following are associated with increased aging, except -** *(AI 09)*
a) Increased cross linkages in collegen
b) Increased superoxide dismutase
c) Increased accumulation of free radicals
d) Accumulated mutation in somatic cells

70. **Which of the following is associated with aging -**
a) Reduced cross linkages in collagen
b) Increased free radical injury *(AIIMSMay 10)*
c) Decreased Somatic mutations in DNA
d) Increased superoxide dismutase levels

71, **All of the following statements are true for cell aging except:** *(AI 9 7)*
a) Enlargement of telomere
b) Decrease number of mitochondria
c) GlycolysationofDNA
d) Glycolysation of RNA

72. **Which of the following has a direct role in apoptosis?**
a) Nitric oxide b)Adenylcyclase *(DNBDec 11)*
c) cAMP d) Cytochrome C

51)b,c,d 52)b,c,d,e 53) None 54) a 55)c,d 56) a 57) a,b 58) a 59)b 60) a 61) b 62) c 63) d
64) b,c 65) c 66) a,c 67) d 68) a,c 69) b 70) b 71) a 72) d

73. **Annexin V is associated with?** *(DNB Dec 11)*
a) Necrosis b) Apoptosis
c) Atherosclerosis d) Inflammation

74. **True about Caspases is?** *(DNB June 11)*
a) Involved in apoptosis
b) Cause necrosis
c) Involved in pain pathway
d) Are cytokines inhibitor

75. **Oncocytes are found in all except -** *(DNB June 11)*
a) Thyroid b) Panereus
c) Pituitary d) Pineal

76. **True about Apoptosis all EXCEPT -** *(DNB June 10)*
a) Annexin 5 is marker
b) Inflammation is present
c) Cell shrinkage
d) Clumping of chromatin

77. **Which of the following is a pathological calcification ?**
a) Suprasellar calcification *(DNB June 10)*
b) Basal ganglia calcification
c) Pineal body calcification
d) Choroid calcification

78. **Brown atrophy is due to accumulation of -**
a) Melanin b) Hemosiderin *(DNB Dec 09)*
c) Hematin d)Lipofuscin

79. **Annexin V is a marker of -** *(DNB Dec 09)*
a) Apoptosis b) Necrosis
c) Artherosclerosis d) Inflammation

80. **Example of Apoptosis is?** *(DNB June 09)*
a) Councilman Bodies b) Gamma Gandy Body
c) Russell bodies d) None

81. **True about Apoptosis is?** *(DNB June 09)*
a) Requires energy
b) Cell self-initiated
c) Swelling of cytoplasm
d) Loss of membrane integrity

82. **Organelle that plays a pivotal role in apoptosis -**
a) Endoplasmic reticulum *(DNB Dec 08)*
b) Golgi complex
c) Mitochondria
d) Nucleus

83. **Apoptosis is inhibited by -** *(DNB Dec 08)*
a) p53 b)N-myC
c) RAS d) BC1-2

84. **Psammoma bodies show which type of calcification-**
a) Metastatic b) Dystrophic *(DNB June 08)*
c) Secondary d) Any of the above

85. **Liquefactive necrosis is seen in -** *(DNB June 08)*
a) Heart b) Brain
c) Lungs d) Spleen

86. **Apoptosis is inhibited by -** *(DNB Dec 07)*
a) bcl-2 b)p53
c) ras d)c-myc

87. **Metastatic calcification is most often seen in -**
a) Lymphnodes b) Lungs *(DNB Dec 07)*
c) Spleen d) Liver

88. **Which of the following is the hallmark of programmed cell death ?** *(DNB Dec 07)*
a) Apoptosis b) Coagulation necrosis
c) Fibrinoid necrosis d) Liquefaction necrosis

89. **Psammoma bodies shows which type of calcification -** *(DNB June 07)*
a) Metastatic b) Dystrophic
c) Secondary d) Any of the above

90. **Oncocytes are seen in all of the following except-**
a) Pitutary b) Thyroid *(A1IMS83)*
c) Pancreas d) Thymus

91. **Most common type of cell death due to sudden occlusion of blood suply-** *(Kerala 96)*
a) Coagulation necrosis b) Caseation necrosis
c) Liquefactive necrosis d) Gangrene

92. **Which of the following is not a coagulative necrosis-**
a) Myocardial infarct *(DPGEE 08)*
b) Kidney infarct
c) Brain infarct
d) Adrenal infarct

93. **Pyogenic infection and brain infarction associated with-** *(UP 08)*
a) Coagulative necrosis
b) Liquefaction necrosis
c) Caseous necrosis
d) Fat necrosis

94. **Intracellular calcification begin in** *the-(JIPMER 91)*
a) Mitochondria b) Endoplasmic reticulum
c) Golgi bodies d) Intracellular vocuoles

95. **Dystrophic calcification occur in all except-***(Al 90)*
a) Rheumatic heart disease
b) Lymph node
c) Normal kidney
d) Aneurysm

96. **Dystrophic calification is seen in -** *(DPGEE 08)*
a) Paget disease b) Renal osteodystrophy
c) Atheroma d) Milk Alkali syndrome

97. **Metastatic calcification is most commonly seen in-** *(JIPMER 91)*
a) Cornea b) Extensor tendon
c) Lungs d) Renal tubules

98. **Calcification in necrotic tissue is called -**
a) Metastatic calcification *(JIPMER 95)*
b) Dystrophic calcification
c) Calcinosis
d) Tumoral calcinosis

99. **Metastatic calcification is not seen in -**
a) Kidney tubules *(JIPMER 86, Delhi 86)*
b) Fundal glands of stomach
c) Alveoli of lungs
d) Media of Monkeberg degeneration

100. **The following are example of apoptosis except-**
a) Graft versus host disease *(JIPMER 2002)*
b) Menstrual cycle
c) Pathological atrophy following duct obstruction
d) Tumour necrosis

---

73) b 74) a 75) d 76) b 77) a 78) d 79) a 80) a 81) a,b 82) c 83) d 84) b 85) c 86) a

101. CD - 95 in apoptosis; the death receptors initiated through - *(UP 08)*
a) Induces apoptosis when it engaged by fas ligand system
b) Cytochrom C binds to a protein Apoptosis activating (Apaf-1) factor -1
c) Apoptosis may be initiated by caspase activation
d) Apoptosis mediated through DNA damage

102. Apoptosis is inhibited by - *(MH11)*
a)p53 b)NMYC
c)RAS d) Bcl-2

103. The gene for apoptosis is - *(MAHA 05)*
a) BC1-2 b) BRAC
c) RET d)All

104. The process of programmed gene directed cell death characterized by cell-shrinkage, nuclear condensation and fragmentation is known as -
a) Necrosis b) Chromatolysis *(ICS 05)*
c) Pyknosis d) Apoptosis

105. One of the following is an apoptosis inhibitor gene-
a) p53 b) Bcl-2 *(SGPGI04)*
c) Rb d) c-Myc

106. Lipid peroxidation as a cause of ageing and injury of cells is - *(KERALA 2001)*
a) Free redical theory
b) Apoptosis theory
c) Enzyme cascade theory
d) Cell destruction theory

107. Lipofuscin, the golden yellow pigment is seen in heart muscle - *(TN 95)*
a) Hypertrophy b) Atrophy
c) Hyperplasia d) Infarction

108. Wear and tear pigment in the body refers to-
a) Lipochrome b) Melanin *(Karn 06)*
c) Anthracotic pigment d) Haemosiderin

109. The patient with the following show the maximum deposits of lipofuscin in - *(PGI82)*
a) Gaucher's disease b) Tay sach's disease
c) Acute Enteric fever d) Severe malnutrition

110. The following pigment is not derived from hemoglobin - *(Karnataka 02)*
a) Hematin b) Hemosiderin
c) Lipofuscin d) Bilirubin

111. Cloudy swelling is due to - *(TN 91)*
a) Accumulation of water intracellularly
b) Fat accumulation intracellularly
c) Lysozyme degeneration
d) Glycogen accumulation intracellularly

112. Which one of the following acts to increase the release of Ca^{2+} from endoplasmic reticulum-
a) Inositol triphosphate *(Jipmer 05)*
b) Parathyroid hormone
c) 1,25-dihydroxy cholecalciferol
d) Diacylglycerol

INFLAMMATION AND TISSUE REPAIR

113. All are 'celsus' signs of inflammation except -
a) Pain b) Swelling *(PGI 92)*
c) Cyanosis d) Redness

114. The following host tissue responses can be seen in acute inflammation, except - *(A102)*
a) Exudation b) Vasodilation
c) Margination d) Granuloma formation

115. In acute inflammation due to the contraction of endothelial cell cytoskeleton, which of the following results - *(AIIMS Nov 11, 06)*
a) Delayed transient increase in permeability
b) Early transient increase in permeability
c) Delayed permanent increase in permeability
d) Early permanent increase in permeability

116. In acute inflammation due to the retraction of endothelial cell cytoskeleton, which of the following results - *(AIIMS Nov 11)*
a) Delayed transient increase in permeability
b) Early transient increase in permeability
c) Delayed prolonged increase in permeability
d) Early permanent increase in permeability

117. All of the following vascular changes are observed in acute inflammation, except - *(AI05)*
a) Vasodilation
b) Stasis of blood
c) Increased vascular permeability
d) Decreased hydrostatic pressure

118. Most characteristic feature of acute inflammation:
a) Vasoconstriction *(AI 11, AIIMS May 10)*
b) Vascular stasis
c) Vasodilatation and increased vascular permeability
d) Margination of leucocytes

119. Delayed prolonged bleeding is caused by - *(AI 08)*
a) Histamine b) Leukocyte dependent injury
c) IL-1 d) Direct injury to endothelial cells

120. All of Which is family of selectin, except - *(NEETZ DNE Pattern)*
a) P selectin b) L selectin
c) A selectin d) E selectin

121. True about integrin is - *(PGIDec 97)*
a) Used in binding
b) Oncogene
c) Anti oncogene
d) Component of basement membrane

122. Role of P-selectin in inflammation - *(MH 11)*
a) Rolling b) Adhesion
c) Homing d) Transmigration

123. Endothelium, leukocyte integration during inflammation is mediated by/due to - *(PGI June 03)*
a) Selectin b) Integrin
c) Defesins d)Endothelin

124. Cell-matrix adhesions are mediated by? *(NEET/DNB Pattern)*
a) Cadherins b) Integrins
c) Selectins d) Calmodulin

101)a 102) d 103) a 104)d 105)b 106)a 107)b 108)a 109)d 110)c lll)a 112)a 113)c 114)d
115) b 116) c 117) d 118) c 119)d 120)c 121)a 122)c 123)a,b 124)b

125. Diapedesis is - *(AIIMS Nov 01)*
a) Immigration of leucocytes through the basement membrane
b) Immigration of the leucocytes through the vessel wall to the site of inflammation
c) Aggregation of platelets at the site of bleeding
d) Auto digestion of the cells.

126. Most important for *diapedesis?(NEET/DNB Pattern)*
a) RECAM b) Selectin
c) Lategrin d) Mucin like glycoprotein

127. Earliest transient change following tissue injury will be- *(AI07)*
a) Neutropenia b) Neutrophilia
c) Monocytosis d) Lymphocytosis

128. Chemotaxis in response to activation of cells results in - *(PGI2002, AIIMS May 10)*
a) Random multidirectional movement
b) Unidirectional motion
c) Adhesion to endothelium
d) Augmeted oxygen dependent bactericidal effect
e) Phagocytosis

129. Commonest variety of acute inflammation is -
a) Purulent inflammation
b) Serous inflammation
c) Catarrhal inflammation
d) Necrotic inflammation
e) Fibrinous inflammation

130. All occurs in chronic inflammation except - *(AI91)*
a) Infiltration of macrophages
b) Fibrosis
c) Infiltration of neutrophils
d) Angiogenesis

131. Granulomatous inflammatory reaction is caused by all, except - *(AIIMS Nov 01)*
a) M. Tuberculosis b) M. Leprae
c) Yersinia pestis d) Mycoplasma

132. Necrotizing epitheloid cell granulomas are seen in all, except - *(DELHIPG Mar. 09)*
a) Tuberculosis
b) Wegener's granulomatosis
c) Cat's Scratch disease
d) Leprosy

133. Epithelial granuloma is caused by - *(PGI Dec 02)*
a) Neutrophil b) Cytotoxic T-cells
c) Helper T-cells d)NK cells

134. The epitheloid cell and multinucleated gaint cells of Granulomatous inflammation are derived from -
a) Basophils *(AI 02)*
b) Eosinophils
c) CD 4 - T lymphocytes
d) Monocytes - Macrophages

135. Not characteristic feature of granuloma -
a) Chronic inflammatory infiltrate *(AIIMSMay 95)*
b) Epitheloid cell
c) Giant cell
d) PMN's with fibrinoid necrosis with cellular infiltrates

136. Epitheloid granuloma may by seen in all of the following conditions except - *(AI 98)*
a) Sarcoidosis b) Tuberculosis
c) Pneumocystic carinii d) Hodgkin's lymphoma

137. Non caseating granulomas are seen in all of the following except - *(AIIMS May 01)*
a) Byssinosis b) Hodgkin's Lymphoma
c) Metastatic Ca lung d) Tuberculosis

138. Macrophages are found in - *(AIIMSDec 97)*
a) Phase of scar formation
b) Phase of repair
c) Late phase of inflammation
d) Early phase of inflammation

139. Secondary granules in neutrophil is- *(AIIMS June 98)*
a) Lactoferrin b) Proteolytic enzymes
c) Nucleotidase d) Catalase

140. In an inflammatory response, Macrophages are usually derived from - *(AI 94)*
a) Monocytes b) Reticuloendothelial cells
c) Neutrophils d) Lymphocytes

141. All are macrophages except - *(AIIMSFeb 97)*
a) Histocytes b) Kupffer cells
c) Osteoclasts d) Lymphocytes

142. Maj or Basic Protein is formed by - *(AIIMSMay 94)*
a) Lymphocyte b) Basophil
c) Neutrophil d) Eosinophil

143. The most important source of histamine- *(NEET/DNB Pattern)*
a) Mast cells b) Eosinophil
c) Neutrophil d) Macrophages

144. Life-span of Neutrophil - *(PGI June 2000)*
a) 15 days b) 6 hours
c) 6 days d) 10 days

145. All of the following are mediators of acute inflammation except - *(AIIMS Nov 05)*
a) Angiotensin b) Prostaglandin E2
c) Kallikrein d) C 3a

146. All of the following are mediators of inflammation except - *(AIIMS May 05, Nov 10)*
a) Tumour necrosis factor-a (TNF-oc)
b) Interleukin-1
c) Myeloperoxidase
d) Prostaglandins

147. Vasoactive amines, involved in inflammation are -
a) Histamine b) Renin *(PGI June08)*
c) Angiotensin d) Serotonin
e) Endothelin

148. Prostacyclin is mainly produced *by-(AIIMSMay 93)*
a) Platelet b) Vascular endothelium
c) Prostate d) Testis

149. Which of the following is/are the products (s) of lipoxygenase pathway - *(PGIMay 10)*
a) PG b) TXA_2
c) Leukotrienes d)Lipoxin
e) Hepoxilins

125) b 126) a 127)b 128)b 129)c 130)c 131)d 132)d 133)c 134)d 135)d 136)c 137)c 138)c
139) a 140) a 141)d 142)d 143)a 144)b 145)a 146)c 147)a,d 148)b 149)c,d,e

150. To which of the following family of chemical mediators of inflammation, the lipoxins belong -
a) Kinin system *(AI04)*
b) Cytokines
c) Chemokines
d) Arachidonic acid metabolites

151. Isoprostanes are formed from archidonic acid by -
a) Cycloxygenase *(Rohtak 09)*
b) Lipoxygenase
c) Epoxide hydrolase
d) Non-enzymatic free radical peroxidation

152. C-C beta chemokine includes - *(AIIMSNov 06)*
a) IL-8 b) Eotaxin
c) Lymphotactin d) Fractalkine

153. Pro inflammatory Cytokines include all of the following except -
a) Interleukin 1 b) Interleukin 2
c) Interleukin 6 d)TNF-Alpha

154. Pro-inflammatory cytokines are - *(PGINov 10)*
a) IL-1 b) IL-2
c) *TLA* d)IL-6
e) IL-8 ....

155. Which is not a pro-inflamatory cytokine -
a) 1L~8 b) IL-11 *(NEET/DNB Pattern)*
c) IL-1 d) PAF

156. Which of the following chemical mediators of inflammation is an example of a C-X-C or alpha chemokine- *(AIIMS Nov 03)*
a) LipoxinLXA4
b) Interleukin IL-8
c) Interleukin IL-6
d) Monocyte Chemoattractant Protein MCP-1

157. Which of the following best denotes classical complement pathway activation in immunoinflammatory condition - *(ARMS 04)*
a) C_2, C_4 and C_3 decreased
b) C_2 and C_4 normal, C_3 is decreased
c) C_3 normal and C_2 C_4 decreased
d) C_2, C_4, C_3 all are elevated

158. C3 convertase acts on - *(Manipal 06)*
a) C4b2b b)C4b2B3a
c)C_{4b} d)C_3

159. Factor present in the final common terminal complement pathway is - *(AI 0 7)*
a)C_4 b)C_3
c) C_5 d) Protein B

160. Both antibody dependent and independent complement pathway converge on which complement component - *(ARMS Nov 08)*
a)C_3 b)C_5
c)C_{lv} d)C_8

161. The complement is fixed best by which of the following immunoglobulins - *(ARMSMay 02)*
a) IgG b)IgM
c) IgA d) IgD

162. Complement responsible for activation of bacterial lysis is - *(NEET/DNB Pattern)*
a) c_{3a} b) c_{3b}
C) c_{5-9} d) c_{1-3}

163. All of following are correct about Thromboxane A_2 except- *(AI01)*
a) Low dose aspirin inhibits its synthesis.
b) Causes vasoconstriction in blood vessels.
c) Causes broncoconstriction
d) Secreted by WBC

164. Increased capillary permeability is caused by all of the following except - *(AI97)*
a) Anaphylatoxin b) 5 hydroxytryptamine
c) Renin d) Histamines

165. Actions of bradykinin include all of the following, except- *(AI10)*
a) Vasodilatation
b) Bronchodilatation
c) Increased vascular permeability
d) Pain

166. What is the most important role of bradykinin in acute inflammation - *(ARMS May 12, AI 10)*
a) Increase in vascular permeability
b) Vasodilatation
c) Mediation of pain
d) Bronchoconstriction

167. Bradykinin Causes - *(AI 08)*
a) Vasoconstriction
b) Pain at the site of inflammation
c) Bronchodilatation
d) Decreased Vascular bermeability

168. What is hot caused by platelet activating factor?
a) Vasoconstriction *(NEET/DNB Pattern)*
b) Bronchodilation
c) Causes platelet aggregation
d) transmits signals between cells

169. Phagocytic cells in brain - *(ARMSSep 96)*
a) Oligodendrocytes b) Macrophages
c) Microglia d) Astrocytes

170. Phagocytosis is the function of - *(AI 98)*
a) Astrocytes b) Oligodendrocytes
c) Microglia d) Schawan cells

171. Oxygen dependent killing is done through- *(AI07)*
a) NADPH oxidase b) Superoxide dismutase
c) Catalase d) Glutathione peroxidase

172. Most effective bacterial system within phagocytes is- *(AI 09)*
a) Lysozyme mediated
b) Lactoferrin mediated
c) Reactive oxygen metabolite mediated
d) Cationic basic protein mediated

173. Which of the following helps in generating reactive 02 intermediates in neutrophils-
a) NADPH Oxidase *(AI 08, ARMS Nov 08)*
b) Superoxide dismutase (SOD)
c) Catalase
d) Glutathione peroxidase

150) d 151) d 152)b 153)None>b 154)A11 155)d 156)b 157)a 158)d 159)c 160)b 161)b 162)c
163) d 164)c 165) b 166)a 167)b 168)a 169)c 170)c 171)a 172)c 173)a

174. All of the following enzymes may contribute in generating free oxygen radicals within neutrophils for killing intracellular bacteria, except - *(AI11)*
a) Superoxide dismutase b) Fenton's reaction
c) NADPH oxidase d) Glutathione peroxidase

175. Which of the following enzymes are responsible for generating 'oxygen burst' within neutrophils for killing intracellular bacteria? *(AI 11)*
a) Superoxide dismutase b) Glutathione peroxidase
c) Oxidase d) Catalase

176. The process increasing the ability for phagocytosis of foreign bodies by body is called - *(PGI 95)*
a) Cross reactivity b) Opsonisation
c) Immune Tolerance d) Immune Surveillance

177. Basement membrane degeneration is mediated by -
a) Metalloproteinases b) Oxidases*(AI 08)*
c) Elastases d) Hydrocylases

178. All are components of basement membrane except -
a) Nodogen b) Laminin *(AIIMSNov 07)*
c) Entactin d) Rhodopsin

179. The most abundant glycoprotein present in basement membrane is - *(AI 04, 95)*
a) Laminin b) Fibronectin
c) Collagen type 4 d) Heparan sulphate

180. Triple helix is found in - *(AI 98)*
a) Cystine b) Collagen
c) Pectin d)DNA

181. Articular cartilage is made up of- *(PGI79JIPMER 81)*
a) Type I collagen b) Type II collagen
c) Type III collagen d) Type IV collagen

182. Collagen most abundant in Hyaline cartilage -
a) Type I b) Type II *(AIIMSNov 07)*
c) Type III d) Type IV

183. Which are not labile cells- *(AI 93)*
a) Bone marrow b) Intestitial mucosa
c) Epithelium of skin d) Hepatocytes

184. True about stem cells - *(PGI June 03)*
a) Found in yolk sac
b) Used in gene therapy
c) Terminally matured cells
d) Found in peripheral circulation

185. Which of the following statements is not correct regarding stem cell? *(DPG11)*
a) Developmental elasticity
b) Transdifferentiation
c) Can be harvested from embryo
d) Knock out mice made possible because of it

186. OVAL cells seen in stem cells of -*(NEET/DNB Pattern)*
a) Skin b) Cornea
c) Liver d) Bone

187. Stem cells are taken from all except - *(NEET/DNB Pattern)*
a) Liver b) Bone marrow
c) Blood d) Adiposetissue

188. Hematopoetic stem cell differ from progenitor stem cell in that they can - *(AIIMSMay 12)*
a) Form terminally differentiated cells
b) Long term reconstitution of bone marrow
c) Produce growth factors
d) Have receptors for anchoring proteins

189. Characteristic of protective epithelium is -
a) Regeneration of membrane *(AIIMS May 94)*
b) Microvilli
c) Thinness
d) Pinocytic vesicle

190. Formation of granulation tissue is due to -
a) Thrombosed vessels *(AIIMSDec 97)*
b) Budding of new capillaries
c) Mucosal proliferation
d) Infiltration of cells.

191. Wound contraction is mediated by - *(AI 00)*
a) Myofibroblasts b) Epithelial cells
c) Collagen d)Elastin

192. The normal tensile strength of tissue at the site of wound is gained after - *(AIIMS 81)*
a) One week of wound healing
b) Two weeks of wound healing
c) Two months of wound healing
d) Two years of wound healing

193. Fibroblast is derived from - *(PGIDec 98)*
a) Local mesenchyme b) Macrophage
c) Endothelium d) Vessels

194. Maximum collagen in wound healing is seen at -
a) End of first week *(NEET/DNB Pattern)*
b) End of second week
c) End of third week
d) End of 2 months

195. Acid phosphatase is specific to which of the following cells - *(AIIMS Nov 06)*
a) Monocyte b) Tlymphocyte
c) B lymphocyte d) Myelocytes

196. Febrile response in CNS is mediated by-
a) Bacterial toxin b)IL-l *(PGIDec 03)*
c) *TLr6* d) Interferon
e) TNF

197. **Fever occurs due to -** *(NEET/DNB Pattern)*
a) EL 1 b) Endoephin
c) Enkephalin d) Histamine

198. All of the following are pyrogenic cytokines, Except- *(AI 12)*
a) Interleuken 18 (IL-18)
b) Interleuken 6 (IL-6)
c) Tumor Necrosis Factor (TNF)
d) Interferon a (IFN-a)

199. Acute phase reactants of inflammation are-fPG/ *08)*
a) Haptoglobin
b) C-reactive protein (CRP)
c) Transferrin
d) Prostaglandins
e) Fibrinogen

174)d>a 175) c 176)b 177) a 178) d 179) a 180)b 181)b 182)b 183)d 184)a,d 185) a 186)c 187) a
188)b 189)a 190)b 191)a 192)None 193)a 194)c 195)a 196)All 197)a 198)a 199) a,b,c,e

200. The foreign body giants cells - *(AIMS87, AI88)*
a) Has 60-100 nuclei
b) Arranged at the periphery of the cell
c) Associated with TB, syphilis, leprosy
d) In TB they are called Langhans Giant cells

201. Touton Giant cells are seen in - *(PGI96)*
a) Cat scatch disease b) Sarcoidosis
c) Xanthomas d) Neurofibroma

202. Complete wound strength is gained by?
a) Never regained b) 1 month *(DNBDec 11)*
c) 6 months d) 1 year

203. Interleukin responsible for pyrexia is?
a) IL1 b) IL6 *(DNB June 11)*
c) INF gamma d)IFN alpha

204. Which among the following is not an adhesion molecule? *(DNB Dec 10)*
a) Integrin b) Selectin
c) Interferon d) Transferrin

205. Resolution of inflammation caused by -
a) TNF Alfa, EL-1 and CRP *(DNB Dec 10)*
b) TNF beta, IL-6 and CRP
c) TNF Alfa, IL 10 and IL 1 receptor antagonist
d) TNF gamma

206. Histamine causes all except - *(DNB June 10)*
a) Arteriolar dilatation
b) Increased permeability of venules
c) Constriction of large arteries
d) Platelet aggregation

207. C in CRP stands for - *(DNB June 10)*
a) ConcanavalinA
b) Chondrotin sulfate in series with ARP, BRP
c) Capsular polysaccharide of pneumococcus
d) Cellular

208. Most characteric features of acture inflammation is- *(DNB Dec 09)*
a) Vasoconstriction
b) Vascular stasis
c) Vasodilation and increased vascular permeability
d) Margination of leukocytes

209. Which of the folloiwng is not a labile cell -
a) Bone marrow *(DNB Dec 08)*
b) Epidermal cells
c) Small intesting mucosa
d) Hepatocytes

210. Which of the following is not an acute phase reactant - *(DNB Dec 08)*
a) CRP b) Fibrinogen
c) Tissue factor d) Serum amyloid A

211. Rubor in inflammation is due to - *(DNB Dec 08)*
a) Dilation of arterioles
b) Increased vascular permeability
c) Increased viscocity of blood
d) Edema

212. Principal cell in granuloma is - *(DNB June 07)*
a) Lymphocyte b) Histiocyte
c) Langhyans d) Giant cell

213. Rubor in inflammation is due to - *(Jipmer 11)*
a) Dilation of arterioles
b) Increased vascular permeability
c) Increased viscocity of blood
d) Edema

214. Exudation of plasma and Leucocytes in acute inflamation is from the - *(PGI 89)*
a) Venules b) Capillaries
c) Arterioles d) Arterioles and capillaries

215. Immediate transient type of increase vascular permeability in acute inflammation - *(Orissa 98)*
a) Venules b) Capillaries
c) Arterioles d) None

216. Epitheloid cell is a modified - *(NIMS 96)*
a) Lymphocyte b) Macrophage
c) Mast cell d) Eosinophil

217. The nuclei of langerhan's giants cells - *(AIMS 86)*
a) Are present at the centre
b) Form a network
c) Are arranged radially
d) Are arranged around the periphery
e) Are fused to form single mass

218. Epitheloid like giant cells are seen in all the following except- *(JIPMER93)*
a) Leprosy b) Ulcerative Colitis
c) Crohns disease d) Brucellosis

219. Immune granulomas are not seen in - *(Kerala 97)*
a) Tuberculosis b) Syphilis
c) Silicosis d) Berryliosis

220. When leukocytes are arranged along the endothelium of blood vessels it is called - *(AMU 05)*
a) Diapedesis b) Adhesion
c) Margination d) Chemotaxis

221. The complex process of leukocyte movements through the blood vessels are all EXCEPT - *(UP 08)*
a) Rolling b) Adhesion
c) Migration d) Phagocytosis

222. The 4 classical features of inflammation are described by - *(TN 95)*
a) Celsus b) Hippocrates
c) Aristotle d) Galen

223. Macrophages are seen in - *(CUPGE97)*
a) Early inflammation b) Late inflammation
c) Wound repair d) Healing

224. Bradykinin is a clevage product of - *(TNPSC2K)*
a) Kininogen b) Prekallikrein
c) Kallikrien d) Histamine

225. Vascular dilation in the inflammatory response is mediated by all the following EXCEPT -
a) Prostaglandins b) C3a *(Karnat99)*
c) Leukotrienes d)C5a

226. Which leukotriene is the adhesion factor for the neutrophil on the cell surface to attach to endothelium- *(JIPMER 2001)*
a) B4 b)C4
c) m d)E4

200)a,c 201)c 202)a 203)a>b 204)d 205)None>c 206)d 207)c 208) c 209)d 210)c 211)a 212)b
213)a 214)a 215)a 216) b 217)d 218)c 219)c 220)c 221)d 222)a 223)b 224)a 225)c 226)a

227. Chemotaxis is promoted by the all except - *(AI89)*
a) Lymphokine b) Kallikerine
c) Serotonin d) Complement factor c_5

228. Chemotaxis is mediated by- *(ICS98)*
a) Histamine
b) Leukotriene B4 and C5a
c) Leukotriene C4 and C3a
d) Bradykinin

229. The most important meditor of chemotaxis among following is - *(Delhi 96)*
a) C3b b) C5a
c) C567 d)C2

230. Endogenous chemoattractants are all except -
a) C5a b)Integrins *(MH10)*
c) LIB4 d)IL8

231. In Lipooxygenase pathway, the formation of the arachidonic acids products which of the following helps in the promote platelet aggregation and vasoconstriction - *(UP 08)*
a) C5a b) Thromboxane A_2
c) Leukotriene B_4 d) C_f activators

232. Phagocytosis is not done by - *(MP 2K)*
a) NK cells b) Histiocytes
c) WBC d) Macrophages

233. Opsninsis- *(APPG2006)*
a) C3a
b) lgM
c) Carbothydrate binding proteins
d) Selections

234. Most important inflammatory mediator- *(IN 99)*
a) TNF b) IL2
c) Interferon d)PAF

235. In acute inflammation pain is mediated by -
a) Serotonin b) Histamine *(TN03)*
c) Bradykinin d) Cytokines

236. Phagocytic cells elaborate - *(JIPMER 01)*
a) Prostaglandins b) Thromboxane A
c) Leukotrienes d) All of the above

237. The Eosinophils secrets all EXCEPT - *(UP 07, 05)*
a) Major basic protein
b) Hydrolytic enzyme
c) Reactive form of 0_2
d) Eosinophilic chemotactic factor

238. In genetic deficiency of MPO the increased susceptibility to infection is due to - *(DELHIPG Feb. 09)*
a) Defective production of Prostaglandins
b) Defective rolling of neutrophils
c) Inability to produce hydroxyl-halide radicals
d) Inability to produce hydrogen peroxide

239. Integrins include all the following Receptor except -
a) Fibronectin *(Karnat 99)*
b) Glycoprotein on platelet surface
c) Leukocyte adhesion molecule
d) Platelet derived growth factor

240. Regeneration is replacement of lost tissue by -
a) Surface epithelium *(SGPGI05)*
b) Granulation tissue
c) Living tissue of any kind
d) Living tissue of similar kind

241. Myofibroblast is seen in - *(JIPMER 90)*
a) Normal connective tissue
b) Muscle septa
c) Wound margin
d) Bronchus

242. Angiogenesis is - *(UP 07)*
a) Formation of the new blood vessels
b) Repair by connective tissues
c) Formation of the blood clot
d) All of the above

243. Which occurs first in wound healing - *(HP2006)*
a) Thin continuous epithelial cover appears
b) Fibroblasts lay down collagen fiber
c) Granulation tissue fills the wound
d) Neutrophils line the wound edge

244. The tensile strength of the wound starts and increase after - *(DELHIPG Feb. 09)*
a) Immediate suture of the wound
b) 3 to 4 days
c) 7 to 10 days
d) 6 months

245. Laminin is present in - *(KERALA98)*
a) Lens b) Basement membrane
c) Liver d) Lungs

246. Laminin and fibronectin are involved in all the following cell function except - *(Karnat 99)*
a) Adhesion b) Migration
c) Apoptosis d) Differentiation

247. Keloid scars is made up of - *(JIPMER 98)*
a) Dense collagen b) Loose fibrous tissue
c) Granulamatous tissue d) Loose areolar tissue

248. Highest concentration of hydroxy proline is seen in- *(JIPMER98)*
a) Elastin b) Collagen
c) Fibrous tissue d) Gelatin

249. Wound healing is the summation of following processes except - *(UPSC02)*
a) Coagulation b) Matrix synthesis
c) Angiogenesis d) Fibrolysis

250. Complete restoration of tensile strength of the wound comparable to normal tissue takes as long as-
a) Two weeks b) Six weeks *(UPSC 02)*
c) Six months d) Two years

HEMODYNAMICS

251. Oedema is caused by fall in plasma protein below
a) 0.5% b) 5% *(DNB88)*
c) 15% d)50%
e) 85%

227)c 228)b 229)b 230)b 231)b 232)a 233)a 234)a 235)c 236)a,c 237)b,d 238)c 239)d 240)d
241) c 242) a 243) d 244) c 245) b 246) c 247) a 248) b 249) d 250) None 251) d

252. Increased blood volume in a tissue is known as -
a) Hypermia b) Edema *(PGI Dec 07)*
c) Congestion d) Purpura
e) Petechiae

253. Following injury to a blood vessel; Immediate haemostasis is achieved by - *(NEET/DNB Pattern)*
a) Fibrin deposition b) Vasoconstriction
c) Platelet adhesion d) Thrombosis

254. All the following occur in hemostasis except -
a) Vasospams of blood vessel *(PGI June 08)*
b) Platelet plug formation
c) Dissolution of clot by plasmin
d) Formation of fibrin clot

255. The blood in the vessels normally does not clot because - *(AI 04)*
a) Vitamin K antagonists are present in plasma
b) Thrombin has a positive feedback on plasminogen
c) Sodium citrate in plasma chelates calcium ions
d) Vascular endothelium is smooth and coated with glycocalyx

256. All endothelial cells produce thrombomodulin except those found in- *(NEET/DNBPattern, AI 05)*
a) Hepatic circulation
b) Cutaneous circulation
c) Cerebral microcirculation
d) Renal circulation

257. Platelet aggregation in vivo is mediated by -
a) Swelling *(PGI Dec 03)*
b) Ig mediators
c) Interaction among the leukocyte
d) Interaction among the platelets
e) Macromolecules

258. Thromboxane *(PGIDec 07)*
a) Formed by platelets b) Formed from PGG^PGFL,
c) Prothrombotic d) Vasoconstrictor
e) Vasodilator

259. Which of the following is a procoagulation protein -
a) Thrombomodulin b) Protein C *(AI04)*
c) Protein S d) Thrombin

260. All of the following are true about blood coagulation, except- *(AI 11)*
a) Factor X is part of both intrinsic and extrinsic pathways
b) Extrinsic pathway is activated by contact with negatively charged surfaces
c) Intrinsic pathway can be activated in vitro
d) Calcium is required in several steps of coagulation

261. Fibrin is degraded by- *(NEET/DNB Pattern)*
a) Plasminogen b) Thromboplastin
c) Plasmin d) FD

262. Virchow's triad for thrombosis include all except -
a) Stasis *(AI 97, AIIMS Nov 08)*
b) Endothelial injury
c) Hypercoagulability
d) platelet thrombis

263. Arterial thrombosis is seen in - *(PGI June 03)*
a) Homocystinemia
b) Anti phospholipid synd
c) Protein S deficiency
d) Protein C deficiency
e) Antithrombin III deficiency

264. Inherited coagulation disorder - *(PGIDec 05)*
a) Protein C deficiency b) Protein S deficiency
c) Leiden factor d) Lupus anticoagulant
e) Anti cardiolipin

265. Predisposing factor for venous thrombosis -
a) AT III deficiency *(PGIDec 04)*
b) Protein S deficiency
c) Protein C deficiency
d) Dysfibrinogenemia

266. Inherited coagulation defect with T coagulation is found in - *(PGIDec 07)*
a) Protein C deficiency
b) Protein S deficiency
c) Antithrombin III deficiency
d) Protein C resistance
e) Dysfibrinogenemia

267. All of the following conditions may predispose to pulmonary embolism except - *(AI 03)*
a) Protein S deficiency b) Malignancy
c) Obesity d) Progesterone therapy

268. Hypercoagulability due to defective factor V gene is called - *(AIIMS Nov 03)*
a) Lisbon mutation
b) Leiden mutation
c) Antiphospholipid syndrome
d) Inducible thrombocytopenia syndrome

269. Which of the following present with recurrent episodes of upper limb thrombosis - *(AIIMS June 98)*
a) Prostatic Ca.
b) Pancreatic Ca.
c) Osteo Sa.
d) Acute promyelocytic leukemia

270. All are predisposing factors of Deep Vein thrombosis,except- *(NEET/DNB Pattern)*
■ a) Cushing's syndrome b) Hip surgery
.VI* c) Lower limbfrauiha d) Subungualmelanoma

271. All of the following are risk factors for deep vein thrombosis (DVT) except - *(AI 03)*
a) Duration of surgery more than thirty minutes
b) Obesity
c) Age less than 40 years
d) Use of oestrogen - progesterone contraceptive pills

272. All are hypercoagulable states, except -
a) Protein C resistance *(AIIMS June 98)*
b) Protein S deficiency
c) Antiphospholipid antibody
d) Polycythemia

252)a,c 253)b 254)None 255)d 256)c 257)b,d,e 258)a,b,c,d 259)d -260)b 261)c 262)d 263)a,b
264) a,b,c 265) All 266) All 267) d 268) b 269)a,b,c 270) d 271) c 272) None

273. All increase the chances of Deep Vein Thrombosis except- *(A100)*
a) Oral contraceptive pills
b) Hypertension
c) Superficial thrombophlebitis
d) Myocardial Infaction

274. A patient with cirrhosis of liver has the following coagulation parameters, Platelet count 2,00,000, Prothrombin time 25s/12s, Activated partial thromboplastin time 60s/35s, thrombin time 15s/ 15s. In this patient - *(AIIMS May 04)*
a) D-dimer will be normal
b) Fibrinogen will be < 100 mg
c) ATIII will be high
d) Protein C will be elevated

275. The most common source of embolism - *(NEET/DNB Pattern)*
a) DVT b) Trauma
c) Infection d) Surgery

276. Which of the following is true of fat embolism -
a) Thrombocytopenia *(PGIJune05)*
b) Macroglobulinemia
c) Prothrombin time increased
d) Fat globules in urine

277. Leiden factori&tg *(tiMT/DM 'PuttemJj*
a) Factor VIb) Factor VHI
c) Factor IV d) Factor V

278. Pale infarcts are seen at all of the following sites except- *(AIIMSNov 10, AI97)*
a) Heart b) Spleen
c) Kidney d) Lung

279. Pale infarct is seen in following except -
a) Lung b) Liver *(AIIMS Nov 10)*
c) Kidney d) Brain

280. On sectioning of an organ at the time of autopsy, a focal, wedge-shaped firm area is seen accompanied by extensive hemorrhage, with a red appearance. The lesion has a base on the surface of the organ. This findings is typically of - *(AIIMSMay 03)*
a) Lung with pulmonary thromboembolism
b) Heart with coronary thrombosis
c) Liver with hypovolemic shock
d) Kidney with septic embolus

281. White infact is seen in - *(NEET/DNB Pattern)*
a) Lung b) Intestine
c) Liver d) Ovary

282. Haemorrhagic infarct may be seen in - *(AI99)*
a) Brain b)Lung
c) Spleen d) Heart

283. In shock, characteristic feature is - *(PGI97)*
a) Cardiac failure b) Poor perfusion of tissues
c) Cyanosis d) Oedema

284. True about shock - *(PGI99)*
a) In early stage cardiac output and BP are maintained
b) There is decreased sympathetic activity
c) Renin secretion may be increased
d) Aldosterone secretion is decreased

285. Severe hypovalemic shock occurs when blood volume less is - *(AI94)*
a) >10% b)>20%
c) >30% d) > 40 %

286. Endotoxin shock is initiated by - *(AIIMSNov 10)*
a) Endothelial injury
b) Peripheral vasodilation
c) Increased vascular permeability
d) Cytokines action

287. In gram negative septicemia, early findings setting before shock of florid is - *(AI 99)*
a) T Cardiac output, T Total peripheral resistance
b) T Cardiac output, -*l* Total peripheral resistance
c) -*l* Cardiac output, T Total peripheral resistance
d) *i* Cardiac output, -*l* Total peripheral resistance

288. Early sepsis is characterized by a/e - *(PGI June 01)*
a) Confusion & restlessness
b) Bradycardia
c) Hypotension
d) Sweating
e) Cold extremities

289. Cytokines are secreted in sepsis and Systemic inflammatory Response syndrome (SIRS) by -
a) Neutrophils b) Adrenal *(PGIDEC 01)*
c) Platelets d) Collecting duct
e) Renal cortex

290. In cardiac shock - *(PGIDec 02)*
a) SBP<90mmofHg
b) DBP < 80 mm of Hg
c) Urine output < 20 ml/hr
d) Cardiac index <3.5
e) Stroke volume 70 ml

291. Peripheral resistance is decreased in which type of shock- *(PGI2000)*
a) Hypovolemic shock b) Neurogenic shock
c) Septic shock d) Cardiogenic shock

292. The histological features of shock includes-
a) ATN *(PGI June 02)*
b) Pulmonary congestion
c) Depletion of lipids in adrenal cortex
d) Hepatic necrosis
e) Depletion of lymphocytes

293. Platelet Dens granules contain all except -
a) ADP b) 5-HT *(DNB June 11)*
c) Calcium d)VwF

294. White infarcts are seen in the following, except -
a) Liver b) Kidney *(DNB June 09)*
c) Spleen d) Heart

295. Oedema is caused by fall in plasma proteins below -
a) 0.5% b) 5% *(DNB June 08)*
c) 15% d) 50%

296. The commonest site of thrombosis is-
a) Vein b) Artery *(DNB June 07)*
c) Heart d) Capillary

273) c 274) a 275) a 276) a,d 277) d 278) d 279) a 280) a 281) c 282) b 283) b 284) a,c 285) d 286) d 287)b 288)b,d,e 289)a 290)a 291)b,c 292)a,b,c,d 293)d 294)None 295)d 296)a

297. Organ most vulnerable to ischaemic due to shock-
a) Lungs b) Adrenals *(DNB June07)*
c) Kidney d) Heart

298. Cells most sensitive to hypoxia are - *(Kara. 94)*
a) Myocardial cells b) Neurons
c) Hepatocytes d) Renal tubular epithelial cells

299. Which is the least resistant to 0_2 depletion -
a) Liver b) Heart *(Kerala03)*
c) Kidney d) Spleen

300. Primary causes of non- inflammatory oedema include all of the following except - *(KARN. 94)*
a) Increase in intra - vascular hydrostatic pressure
b) Increased vascular permeability
c) Diminished plasma colloid oncotic pressure
d) Lymphatic obstruction

301. Lines ofZahn occur in- *(AI90)*
a) Postmortem clot b) Infarct
c) Embolus d) Coralline thrombus

302. Migratory thrombophelibitis is seen in - *(UP 07)*
a) Dissaminated cancer
b) Rheumatic heart disease
c) Libman - sacks endocarditis
d) All of the above

303. All of the following are true of red infarction, except-
a) Occurs with venous occlusion *(J &K 05)*
b) Seen in loose tissues
c) Occurs in end arterial occlusion
d) Occurs in previously congested tissue

304. Red infarction is seen in - *(KERALA 94)*
a) Kidney b) Brain
c) Small instestine d) Heart

305. Following pathogenetic mechanisms operate in septic shock except - *(KARN. 84)*
a) Increased peripheral vascular resistance
b) Veno constriction
c) Direct toxic endothelial injury
d) Activation of complement

306. The first effect of endotoxin is - *(TN99)*
a) Endothelial damage b) Perivascular necrosis
c) DIC d) All the above

307. Which one of the following factors is labelled as cytokine in the pathogenesis of systemic inflammatory response syndrome (SIRS) ?
a) Nitric oxide b) Complements *(UPSC-II08)*
c) Leukotrienes d) Tumor Necrosis factor

308. All predispose to thrombosis except - *(ICS 98)*
a) Homocystinuria b)PNH
c) Polycythemia d) Hypomagnesemia

309. Thrombomodulin thrombin complex prevents clotting because - *(DPG11)*
a) Thrombomodulin inhibits prothrombin activator
b) The complex activates antithrombin III
c) Thrombomodulin-thrombin complex activates heparin
d) The complex removes thrombin and also activates protein kinase **'C'** which inactivates factors V & VIII

IMMUNITY

310. Features of innate immunity A/E - *(PG1 June 06)*
a) Recognizes foreign antigen in blood
b) C reactive protein
c) Complement protein is a part of innate immune system
d) Includes phagocytes and natural killer cells

311. Which is conerned with cell mediated immunity -
a) B-Lymphocytes b) T-Lymphocytes *(AI98)*
c) Eosinophils d) Monocytes

312. CD8 cell - *(NEET/DNB Pattern)*
a) T-cells b)B-cells
c) Null cells d) Macrophages

313. All of the following are functions of CD 4 helper cells, except - *(AIIMS May 11,10, AI 09)*
a) Immunogenic memory
b) Produce immnoglobulins
c) Activate macrophages
d) Activate cytotoxic cells

314. Primary role of T-Lymphocytes is - *(PGI Dec 98)*
a) Antibody formation
b) Delayed hypersensitivity
c) Complement production
d) All of the above

315. The following interleukin is characteristically produced in a T_H1 response - *(NEET/DNB Pattern, AIIMS Nov 04)*
a) JLr2 b)RA
c) IL-5 d) IL-10

316. Interleukin produced characteristically by THj -
a) Interleukin 2 b) IL 5 *(PGI June 06)*
c) IL y d) INF y
e) IL10

317. Plasma cells are derived from - *(AI 99)*
a) T cells b) B cells
c) Macrophages d) Neutrophils

318. IgE is secreted by - *(PGI 02)*
a) Mast cell b) Basophils
c) Eosinophils d) Plasma cells
e) Neutrophils

319. Following injection of lymphokines, the same class of immunoglobulin are produced. This is to be referred as - *(AIIMS May01)*
a) Group switching b) Clonal selection
c) Hybridisation d) Class switching

320. Natural killer cells attacks which of the following cells- *(AIIMS Nov06)*
a) Cells which express MHC 1
b) Cells which are not able to express MHC 1
c) MHC cells which express MHC 2
d) Cells which are not able to express MHC

321. Apart from T & B lymphocytes, the other class of lymphocytes is - *(PGI 2002)*
a) Macrophages b) Astrocytes
c) NK cells d) Langerhanscells

297) d 298) b 299) b 300) b 301) d 302) a 303) c 304) c 305) a 306) a 307) d 308) d 309) d 310) a
31 l)b 312)a 313)b 314)b 315)a 316)a,d 317)b 318)d 319)b 320)b 321)c

322. All of the following statements about NK cells are true except - *(AI03)*
a) They are derived from large granular cells.
b) They comprise about 5% of human peripheral lymphoid cells.
c) They are MHC restricted cytotoxic cells
d) They express IgG Fc receptors

323. The following feature is common to both cytotoxic T - cells and NK cells - *(AI 02)*
a) Synthesize antibody
b) Require antibodies to be present for action
c) Effective against virus infected cells
d) Recognize antigen in association with HLA class n markers

324. NK cells express - *(NEET/DNB Pattern)*
a) CD 15,064111 b)CD16,C6561 p 8|f
c) CD 16,CD 57 d) CD21 CD 66

325. Immunity against cancer cells - *(NEET/DNB Pattern)*
a) Basophills b) EosinopliiLs
c) NK cells d) Neutrophils

326. NK cell CD marker is - *(NEET/DNB Pattern)*
a)16 b) 60
c) 32 d) 25

327. Antigen presenting cells are - *(PGI June 06)*
a) Langerhans cell b) Macrophage
c) Cytotoxic T cells d) Helper T cells
e) B lymphocyte

328. Most potent stimulator of Naive T-cells - *(NEET/DNB Pattern, AIIMS Nov 08, 05)*
a) Mature dentritic cells
b) Follicular dentritic cells
c) Macrophages
d) B-cell

329. Antigen presenting cells are all of the following except - *(ARMS May 02)*
a) Astrocytes b) Endothelial cells
c) Epithelial cells d) Langerhans cells

330. All are antigen presenting cells except - *(AI 08)*
a) Langerhan's cell b) Dendritic cells
c) T-cells d)B-cells

331. Before sensitizing T-cells slight modification in antigen is induced by - *(PGI June 06)*
a) Langerhans cell
b) NKcell
c) Dendritic cells

332. Langerhan's cells are - *(AI 98, 97, 96)*
a) Phagocytic cells
b) Antigen presenting cells
c) Seen in auto immune conditions
d) Seen in chronic infection

333. Toll like receptors, recognize bacterial products and stimulates immune response by - *(AIIMSNov 06)*
a) Perforin and granzyme mediated apoptosis
b) FADD ligand apoptosis
c) Transcriptions of nuclear factor mediated by NFKb which recruits cytokines
d) Cyclin

334. Which toll like receptors are involved in action of bacterial endotoxins - *(PGI June 07)*
a) I b) II
c) m d)IV
d) V

335. Which of the following is not true regarding super-antigens- *(AI08)*
a) Bind T cells irrespective of antigen specificity of TCR
b) Bind directly to both MHC II and T cell receptor causing T cell activation
c) Bind to cleft (or antigen binding groove) in the MHC II molecule
d) Binds directly to lateral aspect of T cell receptor

336. MHC class HI genes encode - *(AI 03)*
a) Complement component C3
b) Tumor necrosis factor
c) Interleukin 2
d) Beta 2 microglobulin

337. Cell type which lacks HLA antigen is - *(ARMSMay 05)*
a) Monocyte b) Thrombocytes
c) Neutrophil d) Red blood cell

338. HLA is located on - *(AIIMSNov 09, 08)*
a) Short arm of chr-6 b) Long arm of chr-6
c) Short arm of chr-3 d) Long arm of chr-3

339. The HLA class III region genes are important elements in - *(AI 03)*
a) Transplant rejection phenomenon
b) Governing susceptibility to autoimmune disease
c) Immune surveillance
d) Antigen presentation and elimination

340. MHC restriction is a part of all except -
a) Antiviral cytotoxic T cell *(ARMS May 09)*
b) Antibacterial helper T cell/cytotoxic cells
c) Allograft rejection
d) Autoimmune disorder

341. Mixed lymphocyte culture is used to indentify -
a) MHC class I antigen *(ARMS Nov 02)*
b) MHC class II antigen.
c) B lymphocytes
d) T helper cells

342. HLA typing is useful in - *(PGI June 06)*
a) Disputed paternity b) Thanatology
c) Organ transplant d) Dactylography

343. True about MHC-class H - *(PGI June 06)*
a) Not involved in innate immunity
b) Cytotoxic T-cell involved
c) Present in nucleated cells
d) Present in B-Cells

344. MHC class I represented on - *(NEET/DNB Pattern)*
a) All cells b) All nucleated cells
c) RBCs d) None

345. True statements are all except - *(AI 00)*
a) Chromosome 6 harbours the gene for MHC.
b) Genes encoding compliments are located adjacent to class-1 molecules
c) Monocytes have MHC class II antigens on their surfaces
d) Class III MHC does not encode complement

322) c 323) b 324) b 325) c 326) a 327)a,b,e 328) a 329)a,b,c 330) c 331)a,c 332) b 333) c 334) b,d
335) c 336) b 337) d 338) a 339) b 340) d 341) b 342) a,c 343) a,d 344) b 345) d

346. HLA - B27 is associated with - *(AI01)*
a) Ankylosing spondylitis
b) Rheumatoid arthritis
c) Chronic active hepatitis
d) Diabetes

347. HLA B27 is not seen in - *(NEET/DNB Pattern)*
a) SLE b) Ankylosing spondylitis
c) Reiter^ syndrome d) Psoriotic arthritis.

348. HLA associated with rheumatoid arthritis -
a) DR1 b) DR2 *(PGI May 10)*
c) DR3 d)DR4
e) DR5

349. Which of the following surface glycoproteins is most often expressed in human hematopoietic stem cell -
a) CD 22 b) CD 40 *(AIIMSNov 05)*
c) CD 15 d) CD 34

350. Not a B-cell marker - *(AIIMSNov 09)*
a) CD 19 b) CD 20
c) CD 134 d)CD 10

351. All are B cell marker except - *(AIIMSMay 07)*
a) CD-15 b)CD-19
c) CD-21 d) CD-23

352. The marker for B lymphocyte is - *(AI 00)*
a) CD 19 b) CD 68
c) CD 34 d)CD4

353. Memory T cells can be identified by using the following marker - *(AI 03)*
a) CD45RA b)CD45RB
c) CD45RC d) CD45RO

354. Which of the following is a pan-T lymphocyte marker - *(AI 03)*
a) CD2 b)CD3
c) CD19 d) CD25

355. CD-95 has a major role in - *(AIIMS Nov 03)*
a) Apoptosis b) Cell necrosis
c) Interferon activation d) Proteolysis

356. CD - 95 is a marker of - *(NEET/DNB Pattern)*
a) Death receptor ;b) MHC coritplex^:';; y ;
c) T helper cells d) NK cells;

357. Which of these is false regarding cytokines -
a) Mediators of inflammation *(AIIMS Dec 97)*
b) Produced by macrophages
c) Are soluble proteins
d) Does not mediate specific reactions

358. Cytokines - *(PGI Dec 05)*
a) Includes interleukins
b) Produce only in sepsis
c) Are polypeptide (complex protein)
d) Highly specific action

359. Interleukin secreted by macrophages, stimulating lymphocytes is - *(AIIMS May 01)*
a) INF alpha b) TNF alpha
c) EL-1 d)IL-6

360. IL-2 is secreted by- *(AIIMS Feb 97)*
a) CD4 lymphocytes b) CD8 cells
c) Macrophages d) Neutrophils

361. Eosinophils are activated by • *(NEET/DNB Pattern)*
a) IL1, b)IL5
c) IL4

362." Type I hypersensitivity is mediated by which of the following immunoglobulins ? *(AI 07, 05)*
a) IgA b) IgG
c) IgM d)IgE

363. The most important cells in type I hypersensitivity -
a) Macrophages b) Mast cells *(AI92)*
c) Neutrophils d) Lymphocytes

364. Mast cell synthesize and/or secrete - *(PGI June 03)*
a) Adrenaline b)Ach
c) Histamine d) Heparin

365. Ram Devi presented with generalized edema sweating and flushing tachycardia and fever after bee sting. This is - *(AIIMS Nov 01)*
a) T cell mediated cytotoxicity
b) IgE mediated reaction
c) IgG mediated reaction
d) IgA mediated hypersensitivity reaction

366. A15 year old healthy boy with no major medical problem complaints that he breaks out with blocky areas of erythema that are pruritic over skin of his arm, leg and trunk every time within an hour of eating sea foods. The clinical features are suggestive of- *(AI 03)*
a) Localised immune - complex deposion
b) Cell modulatedhypersensitivity
c) Localized anaphylaxis
d) Release of complement C3b

367. Type H hypersensitivity is mediated by -
a) Immune complex b) Ig G *(PGI June 08)*
c) IgM d)Complement
e) IgE

368. Immune complex mediated reaction - *(AI99)*
a) Type I b) Type II
c) Type III d) Type IV

369. Type IV hypersensitivity is - *(AI 9 7)*
a) IgE mediated b) Immune complex mediated
c) Cell mediated d) Antibody mediated

370. Epithelial granuloma is caused by- *(PGI 02)*
a) Neutrophil b) Cylotoxic T-cells
c) Helper T-cells d)NK cells

371. All combinations are true, except - *(AIIMSNov 93)*
a) Erythema nodosum leprosum-Type III hypersensitivity
b) Post streptococcal glomerulonephritis -Type III hypersensitivity
c) Schick test - delayed hypersensitivity
d) Mismatched blood transfusion - Type II hypersensitivity

372. Which of the following immune hypersensitivity reaction is resonsible for Myasthenia Gravis -
a) Type I Hypersensitivity *(AI 12)*
b) Type II Hypersensitivity
c) Type III Hypersensitivity
d) Type IV Hypersensitivity

346)a 347)a 348)b>a,c 349)d 350)c 351)a 352)a 353)d 354)b 355) a 356)a 357)d 358)a,c,d 359)c 360)a 361)b 362)d 363)b 364)c,d,e 365)b 366)c 367)a,c,d 368)c 369)c 370)c 371)c 372)b

373. Example of Type IV hypersensitivity is -
a) Serum sickness *(AIIMSDec94)*
b) Granulomatous reaction
c) Schwartzmann reaction
d) Arthus reaction

374. A 40 year old man has chronic cough with fever for several months. The chest radiograph reveals a diffuse reticulondular pattern. Microscopically on transbronchial biopsy there are focal areas of inflammation containing epitheloid cell granuloma, Langhans giant cells, and lymphocytes. These findings are typical for which of the following type of hypersensitivity immunologic responses -
a) Type I b) Type II *(AIIMSMay 03)*
c) Type III d) Type IV

375. Type IV Hypersensitivity- *(PGIJune06)*
a) Farmer's lung
b) Contact hypersensitivity
c) Immediate hypersensitivity
d) Myasthenia gravis

376. Type H hypersensitivity - *(PGI June 06)*
a) Blood transfusion reaction
b) Arthus reaction
c) Hay Fever
d) Glomerulonephritis

377. Delayed type of hypersensitivity is seen in following except - *(PGIDec 9 7)*
a) Arthus phenomenon b) Contact dermatitis
c) Tuberculin test d) Graft vs host reaction

378. Arthus reaction is what type of hypersensitivity reaction - *(AI07)*
a) Localized immune complex
b) Ag - Ab reaction
c) Compliment mediated
d) Ab mediated

379. Cell mediated immune response is which type of hypersensitivity - *(NEET/DNB Pattern)*
,a)F b) II
c) m d) IV

380. Which is not a type III hypersensitivity reaction -
a) TB b) Rheumatoid arthritis *(AI 95)*
c) SLE d) Arthus reaction

381. Alio graft is between - *(PGIDec 99)*
a) Individuals of same genetic constitution
b) Individuals of same species with different genetic identity
c) Twins
d) Members of different species

382. Most important antigen initiating graft rejection -
a) HLA- Antigen b) MHC - molecule
c) Polysaccharide d) DHA *(PGI Dec 08)*

383. T cell recognize which antigen in graft rejection -
a) MHC H b) MHC I *(AI 98)*
c) Both MHC I & II d) None

884. Preforme&alitibc^^^ause - *(NEET/DNB Pattern, PGI June 06)*
a) Hyperacute rejection
b) Acute rejection
c) Chronic rejection
d) Acute humoral rejection

385. Histology of acute rejection of renal transplant are-
a) Arteriolar hyalinosis *(PGI June 05)*
b) Eosinophilic infiltration
c) Glomerular vasodilation
d) Neutrophilic infiltration
e) Nectrotising vasculitis

386. GVHD- *(PGIDec 05)*
a) Associated with solid organ transplantation
b) Graft must contains immunocompitant T-cell
c) It is seen in immunosupressed persons

387. All are affected in Graft-Versus host reaction -
a) Skin b)GI.T *(AIIMSMay 07)*
c) Liver d)Lung

388. Which of the following statements about graft versus host disease is least correct - *(AI 08)*
a) Occurs when host is immunocompromized
b) Occurs when donor cells are immunocompromized
c) Is also called runt disease
d) A common cause is stem cell transplantation

389. Not true about graft versus host reaction -
a) Lymphocytic infiltration of portal tract
b) Bile duct damage *(PGI Nov 09)*
c) Intrahepatic cholestasis
d) Require liver biopsy for confirmation
e) Endothelitis - lymphocyte in portal vein

390. Autoimmunity can be caused due to all of the following except - *(AIIMS May 05)*
a) The pressure of forbidden clones
b) Expression of cryptic antigens
c) Negative selection of T-cells in the thymus
d) Inappropriate expression of the MHC proteins

391. Which of the following is organ specific - *(AI 9 7)*
a) SLE b)RA
c) Good pasture's syndrome d) PAN

392. All of the following are autoimmune disease except?
a) SLE b) Grave's disease *(AI11)*
c) Myasthenia gravis d) Sickle cell disease

393. Characteristic feature of SLE is - *(PGIDec 99)*
a) Uveitis b) Joint deformity
c) Polyserositis d) Cavitating lesion islung

394. Shrinking lung is a feature of - *(PGI June 99)*
a) SLE b) Rheumatoid arthritis
c) Scleroderma d) Sarcoidosis

395. In which of following arthritis erosions are not seen -
a) Rheumatoid arthritis *(AIIMS May 05)*
b) Systemic lupus erthematosus (SLE)
c) Psoriasis
d) Gout

373)b 374) d 375)b 376) a 377) a 378) a 379) d 380) a 381)b 382) a,b 383) a 384) a 385) d,e 386) a,b,c 387)d 388)b 389)None 390)c 391)c 392)d 393)c 394)a 395)b

396. What is TRUE about antinuclear antibody (ANA) - *(AIIMS May 1993)*
a) Anti-RNA antibody is specific for SLE
b) Double stranded Anti-DNA is specific for SLE
c) ANA normally present in 80%
d) None of the above

397. Speckled pattern is seen in - *(PGI97)*
a) Anti Sm antibody
b) Anti ds DNA antibody
c) Anti histone antibody
d) Anti chromatin antibody

398. Wire loop thickening of glomerular basement membrane is seen in - *(AIIMS May 1993, AI00)*
a) Systemic lupus erythematosus (SLE)
b) Non Insulin Dependent Diabetes Mellitus
c) Rapidly progressive glomerulonephritis
d) Malignant hypertension

399. Characteristic of SLE of Kidney - *(PGI 98)*
a) Wire loop lesion b) Focal sclerosis
c) Focal necrosis d) Generalized sclerosis

400. Which of the following is associated with double stranded DNA antibody - *(AIIMS Dec 94)*
a) Juvenile rheumatoid arthritis
b) SLE
c) Systemic sclerosis
d) Dermatomyositis

401. A 30 year old lady presents to the outpatient department with an Erythematous butterfly rash on her checks. Which of the following antibodies should be assayed initially for her suspected condition - *(AI 12)*
a) Anti-Ds-DNA
b) Anti-Ro-Antibody
c) Anti-Centromere-Antibody
d) Anti-mitochondrial-Antibody

402. Antinuclear antibody specific for SLE is -
a) Anti ds DNA *(PGIDec 97)*
b) Anti nuclear antibodies
c) Anti centromere antibody
d) Anti histone Ab

403. Drug induced lupus antibodies are found in -
a) Anti-Rho b)Ds-DNA *(AIIMSDec 98)*
c) Anti-Sm d) Anti-histone antibody

404. L.E. cell is a - *(JIPMER 85)*
a) Lymphocyte b) Neutrophil
c) Basinophil d) Eosinophil
e) Monocyte

405. Hemotoxylin bodies are seen in ? *(AIIMSMay 08)*
a) SLE b) PAN
c) RA d) Wegners granulomatosis

406. Features of systemic sclerosis are -*(PGI June 03)*
a) Calcinosis
b) Sclerodactyly
c) Raynaud's phenomena
d) Melanin deposition
e) Occurs in old ages

407. All of the following are features of scleroderma except- *(AI95)*
a) Dysphagia
b) Raynaud's phenomenon
c) Skin contracture
d) Calcification in long bones

408. A 35 year old lady complains dysphagia, Raynaud's phenomenon, sclerodactyly. Investigations show antinuclear antibody. The likely diagnosis is -
a) Systemic lupus erythematosis *(AIIMS June 99)*
b) Systemic sclerosis
c) Mixed connective tissue disorder
d) Rheumatoid arthritis

409. Anticentromere antibodies are most commonly associated with- *(AI 06)*
a) Diffuse cutaneous systemic sclerosis
b) Mixed connective tissue disease
c) CREST syndrome
d) Polymyositis

410. Sicca syndrome is associated with all except -
a) Midline granuloma *(AIIMS Feb 97)*
b) Chronic active hepatitis
c) Rheumatoid arthritis
d) Scleroderma

411. All are seen in primary extraglandular Sjogren syndrome except - *(PGI Dec 99)*
a) Rheumatoid arthritis
b) Raynaud's phenomena
c) Lymphoma
d) Splenomegaly

412. Uveoparotitis is seen in - *(PGI June 98)*
a) SLE b) Sjogren's syndrome
c) Rheumatoid arthritis d) Sarcoidosis

413. Auto antibody in Sjogrens syndrome is?
o a) Anti centromere antibody *(NEET/DNB Pattern)*
b) Anti Ro & anti La
c) Anti dsJ3$A.' 'J'f * * * * * ' ' 1
d) Anti RNP 4 - % ^ v * ' *

414. In an immunocompromised patient, what is correct - *(AIIMS May 94)*
a) Complement deficit causes parasitic infection
b) T-cell deficit causes pyogenic bacterial infection
c) B-cell deficit causes capsulated bacterial infection
d) All of the above

415. Lack of leucocyte adhesion molecules (LAM) is associated with - *(AI 98)*
a) Delayed closure of umblical cord
b) Normal chemotaxis
c) Compliment opsinization
d) Neutropenia

416. Which one of the following statements is correct regarding chronic granulomatous disease -
a) It is an autosomal dominant disease
b) It is characterized *(AIIMS Nov 04)* by abnormal bacterial phagocytosis
c) Recurrent streptococcal infections are usual in this disease
d) Nitroblue tetrazolium test is useful for screening

396) b 397) a 398) a 399) a 400) b 401) a 402) a 403) d 404) b,e 405) a 406)a,b,c 407) d 408) b 409) c 410)a 411)a 412)d 413)b 414)b,c 415)a 416)d

417. Nitroblue tetrazolium test is used *for-(AIIMS Nov 08)*
a) Phagocytes b) Complement
c) T cell d) B cell

418. All are true regarding agammaglobulinemia except-
a) Loss of germinal centre in lymph node
b) Normal cortical lymphocytes *(PGI01)*
c) Normal cortical lymphocytes in paracortex and medulla
d) Decreased red pulp in spleen
e) Immunodeficiency (cell mediated)

419. The commonest Primary immunodeficiency is -
a) Common variable immunodeficiency *(AI94, PGI*
b) Isolated IgA immunodeficiency *June 05)*
c) Wiskott-Aldrich syndrome
d) AIDS

420. Which is found in DiGeorge's syndrome - *(PGI 01)*
a) Tetany
b) Eczema
c) Mucocutaneous candidiasis
d) Absent B and T cells
e) Total absence of T cells

421. Thymic hypoplasia is seen in -*(NEET/DNB Pattern)*
a) Wiskott-Aldrich syndrome
b) Digeorge syndrome
c) IgA deficiency
d) Agammaglobulinemia

422. Wiskott Aldrich not true is - *(AIIMS 97)*
a) Raised IgE b) Raised IgM
c) Reduced IgA d) CD4 and CD8 defect

423. IgG is normal or slightly reduced in A/E -*(PGI 97)*
a) Wiskott aldrich syndrome
b) Selective IgA deficiency
c) Di George syndrome
d) Common variable deficiency

424. Adenosine deaminase deficiency is seen in the following- *(AI01, 05)*
a) Common variable immunodeficiency.
b) Severe combined immunodeficiency
c) Chronic granulomatous disease
d) Nezelof syndrome

425. All of the following is true except- *(A1IMS Nov 10, May 09)*
a) NADPH oxidase acts via superoxide ions
b) Chediak-Higashi syndrome is due to defective phagolysosome formation
c) In Brutons agammaglobulinemia opsonisation is not affected
d) Myeloperodixase action is mainly due to OCI-

426. Common variable hypogammaglobulinemia shows-
a) Decreased B cell count *(NEET/DNB Pattern)*
b) Increased B cell count
c) Normal B cell count
d) Absent B cells

427. Which of these is characteristic of amyloidosis- *(AIIMS Dec 98)*
a) Beta pleated, metachromasis, PAS +ve
b) Congophilic, beta pleated, PAS +ve
c) Beta pleated, fibrillary, congophillic
d) Alpha pleated, small fibrils

428. Major fibril protein in Primary Amyloidosis is -
a) AL b)AA *(AI95)*
c) Transthyretin d) Procalcitonin

429. In multiple myeloma-amyloid is - *(PGI June 2000)*
a) AL b) AA
c) ATTR d)Ap_2m

430. Amyloidosis is found in the following except -
a) Multiple myeloma *(PGI June 97)*
b) Hypernephroma
c) Thymoma
d) Lymphoma

431. AA amyloid chain is found in - *(PGIDec 07)*
a) Multiple myeloma
b) Rheumatoid arthritis
c) Gout
d) Familial mediterranean fever
e) Alzheimer disease

432. Which of the following is (are) Heredofamilial amyloidosis - *(PGIMay 10)*
a) Alzheimer's disease
b) Multiple myeloma
c) Familial mediterranean fever
d) RA
e) Systemic senile amyloidosis

433. True regarding amyloidosis are, A/E -
a) Massive proteinuria *(AIIMS June 98)*
b) Mild hypertension
c) Normal kidney size
d) Urinary cast present

434. All of the following statements regarding amyloidosis are true except - *(AI 97)*
a) Multiple myeloma - shows AL type deposits
b) Secondary amyloidosis - shows AA type deposits
c) Renal amyloidosis - shows AA type deposits
d) Renal amyloidosis commonly presents with mild proteinuria

435. Lardaceous spleen is due to deposition of amyloid in- *(AIIMS Nov 02)*
a) Sinusoids of red pulp. b) White pulp,
c) Pencilary artery. d) Splenic trabeculae

436. What is most common cause of death in amyloidosis?
a) Cardiac failure b) Renal failure *(NEET/DNB*
c) Sepsis d) None *Pattern)*

437. Best investigation for diagnosing amyloidosis -
a) Rectal biopsy *(AIIMS May 10, AI 07)*
b) Colonoscopy
c) CT scan
d) Upper GI endoscopy

438. On electron microscopy amyloid characteristically exhibits - *(AIIMS Nov 05)*
a) (J-pleated sheat b) Hyaline globules
c) 7.5-lOnm fibrils d) 20-25 nm fibrils

417) a 418)b,c,d 419) b 420) a,c 421)b 422) b,c 423) a 424) b 425) c 426) c 427) c 428) a 429) a 430) c 431)b,d 432) c,e 433) None 434) c 435) a 436) a 437) a 438) c

439. Amyloid deposits stain positively with all of the following except - *(AIIMS May 06)*
a) Congo-red b) Crystal violet
c) Methenamine silver d) Thioflavin T

440. Stains used in amyloidosis - *(PGIMay 10)*
a) Congo red b) Thioflavin
c) Reticulin d) Grains Iodine
e) PAS

441. Which one of the following stains is specific for Amyloid? *(AI97, 05)*
a) Periodic Acid schif (PAS) b)Alzerianred
c) Congo red d) Von - Kossa

442. A diabetic patient is undergoing dialysis. Aspiration done around the knee joint would show - *(AI07)*
a) A beta 2 microglobulin b)AA
c) AL d)Lactoferrin

443. A 60 year old female is suffereing from renal failure and is on hemodialysis since last 8 years. She developed carpal tunnel syndrome. Which of the following will be associated? *(AIIMSNov 11)*
a) AL b) AA
c) ATTR d) Beta 2 microglobulin

444. Hemodialysis associated with amyloid pattern - *(NEET/DNB Pattern)*
a) AA b) AL
c) Beta - 2- microglobulin d)ATTR

445. Correctly matched pairs in Amyloids-(PG/ *June 06)*
a) Multiple myeloma - light chain
b) Chronic inflammation - AA
c) Cardiac-ATTR
d) Neural - p_2 microglobuliln

446. Familial amyloidotic polyneuropathy is due to amyloidosis of nerves caused by deposition of -
a) Amyloid associated protein *(AIIMS Nov 02)*
b) Mutant Calcitonin
c) Mutant Transthyretin
d) Normal transthyretin

447. True about senile systemic amyloidosis -
a) Systemic involvement present *(PGINov 09)*
b) P amyloid
c) AA amyloid
d) Heart failure is predominant presentation
e) Transthyretin

448. Which type of Amyloidosis is caused by mutation of the transthyretin protein ? *(NEET/DNB Pattern)*
a) Familial Mediterranean fever
b) Familial amyloidotic polyneuropathy
c) Dialysis associated amyloidosis
d) Prion protein associated amyloidosis

449. Amyloidosis is most common seen in - *(NEET/DNB Pattern)*
a) Maturity onset DM
b) Type I DM
c) Type II DM
d) HTN

450. In amyloidosis Beta pleated sheet will be seen in -
a) X-ray crystallography *(AIIMS Nov 06)*
b) Electron microscope
c) Spiral electron microscope
d) Congo red stain

451. Amyloid is found in - *(PGI June 99)*
a) Medullary carcinoma thyroid
b) ALL
c) Cirrhosis
d) Budd chiari syndrome

452. Bone marrow in AL amyloidosis shows - *(AI 07)*
a) Bone marrow plasmacytosis
b) Granulomatous reaction
c) Fibrosis
d) Giant cell formation

453. In hemodialysis associated amyloidosis, which of the following is seen *(AI 08)*
a) Transthyretin b) B_2 microglobulin
c) SAA d) a_2 microglobulin

454. Senile cardiac amyloidosis associated protein is -
a) Transthyretin *(AIIMS Nov 07)*
b) ANP
c) Beta2microglobin
d) Gelsolin

455. Which of the following amyloid forms is seen in secondary amyloidosis associated with chronic diseases - *(AI 12)*
a) Amyloid Associated Protein
b) Amyloid light chain
c) Beta 2 Amyloid
d) ATTR

456. Most common cause of death in primary amyloidosis is? *(DNB June 11)*
a) Respiratoryfailure b) Cardiac failure
c) Renal failure d) Septicemia

457. Rh incomatibility is - *(DNB June 11)*
a) Type I hypersensitivity
b) Type II hypersensitivity
c) Type III hypersensitivity
d) Type IV hyperseninsitivity

458. Confirmatory test for the diagnosis of Amyloidosis is- *(DNB Dec 10)*
a) Diagnostic peritoneal lavage
b) Tongue biopsy
c) Rectal biopsy
d) Whole body CT scan

459. The primary function of Toll like Receptors is?
a) Vasodilation *(DNB Dec 10)*
b) Activation of Immune System
c) Regulation of Calcium channel
d) Second Messenger

460. Best marker of SLE? *(DNB June 10)*
a) Anti Sm antibodies
b) Anti-ds DNA antibodies
c) Anti-Histone antibodies
d) Anti Ro (SS-A) antibodies

439)c 440)a,b,e 441)c 442)a 443)d 444)c 445)a,b,c 446)c 447)e 448)b 449)c 450)a 451)a 452)a 453) b 454) a 455) a 456) b 457) b 458) c 459) b 460) b

461. HLA is present on - *(DNB June 10)*
a) Short term of chromosomes 3
b) Short arm of chromosomes 6
c) Long arm of chromosomes 3
d) Long arm of chromosomes 6

462. Anti Ul-RNP antibody is seen in? *(DNB Dec 09)*
a) SLE b) Scleroderma
c) MCTD d) Dermatomyositis

463. Granulomatous inflammation is which type of hypersensitivity? *(DNB Dec 09)*
a) Type I b) Type II
c) Type III d) Type IV

464. Staining characteristic used for demonstration of Amyloid is? *(DNB June 09)*
a) Apple green with Congo red under ordinary light
b) Apple green with Congo red under polarized light
c) Pink with Congo red under ordinary light
d) None

465. Immune complex deposition is - *(DNB Dec 08)*
a) Type I HS b) Type II HS
c) Type III HS d) Type IV HS

466. Diffuse proliferative glomerulonephritis, in Lupus nephritis falls under - *(DNB Dec 08)*
a) Class II b) Class III
c) Class IV d) Class V

467. Congo-red with amyloid produces -*(DNB June 08)*
a) Dark brown colour b) Blue colour
c) Brilliant pink colour d) Khaki colour

468. Onion peel appearance of splenic capsle is seen in- *(DNB Dec 07)*
a) SUE b) Scleroderma
c) RA d) Sjogrens

469. Lardaceous spleen is due to deposition of amyloid in- *(DNBDec 07)*
a) Sinusoids of red pulp b) White pulp
c) Penicillary artery d) Splenic trabeculae

470. Amyloid (AA) originates from - *(DNBDec 07)*
a) RBC b) Plasma cell \
c) Reticulo-endothelial cell d) Lymphocytes

471. Secondary (AA) amyloid is seen in all except -
a) RA b) TB *(DNB Dec 07)*
c) Multiple myeloma d)RCC

472. Most commonly amyloidoisis is secondary to -
a) Chronic suppuration *(DNB June 07)*
b) Acute inflammation
c) Cellular necrosis
d) Hyaline degeneration

473. Congo-red with amyloid produces - *(DNB June 07)*
a) Dark brown colour b) B lue colour
c) Brilliant pink colour d) Khaki colour

474. 'Lardaceous' spleen is seen in - *(DNB June 07)*
a) CML b)Hodgkin's lymphoma
c) Amyloidosis d) Malaria

475. Biopsy of the parotid gland in a patient with Sjogren's syndrome shows - *(DNB June 07)*
a) Neutrophils b) Lymphocytes
c) Eosinophils d) Basophils

476. Which of the following cells do not act as antigen presenting cells. ? *(Karnataka 2006)*
a) T-cells b)B-cells
c) Macrophages d) Osteoclasts

477. Antitumor activity is shown by all except -
a) Cytotoxic T lymphocytes *(DELHIPG Feb. 09)*
b) Natural killer cells
c) Basophils
d) Macrophages

478. Large antigen - antibody reaction is required to cause - *(TN 89)*
a) Serum sickness b) Arthus reaction
c) Urticaria d) Anaphylactic-reaction

479. Hemolytic disease of newborn is an example of -
a) Type III hypersensitivity *(DPG11)*
b) Type II hypersensitivity
c) Arthus reaction
d) Type IV hypersensitivity

480. Immune complex depostion is - *(Jipmer 11)*
a) Type I HS b)TypeIIHS
c) Type III HS d) Type IV HS

481. Mast cells release interleukin - *(A.P.98)*
a) 1 b) 2
c) 3 d)4

482. Which of the following do not play role in production, maintainance & activation of lymphocytes? *(MH11)*
a) *JL-l* b)IL-2
c) IL4 d)IL-12

483. Which of following antigen cell does not express MHC Class II - molecules - *(KERALA 2K)*
a) Follicular cells thyroid
b) Microglia of brain
c) Langerhan's cells of skin
d) Dendritic cell of Lymphoid cells
e) Fibroblasts of connective tissue

484. All of the following are immune complex diseases except- *(GUPGEE99)*
a) Serum sickness b) Farmer's lungs
c) SIB d) Graft rejection

485. Commonest fungal infection in neutropenia -*(UP 2K)*
a) Aspergillus Fumigatus b) Candida
c) Aspergillus calvus d) Mucormycosis

486. A patient with recurrent bacterial infections is diagnosed to have a genetic deficiency in myeloperoxidase. The cause of increased susceptibility to infections is - *(MAHA 05)*
a) Defective neutrophil degranulation
b) Defective production of prostaglandins
c) An inability to produce hydroxyhalide radicals
d) Decreased oxygen consumption after phagocytosis

487. Pre-B cells and B cells are produced in -
a) Bone marrow *(JIPMER 79, PGI80)*
b) Thymus
c) Tonsils
d) Gut associated lymphoid tissue

461) b 462) c 463) d 464)b 465)c 466)c 467)c 468)a 469)a 470)c 471)c 472)a 473)c 474)c
475)b 476) a 477)c 478)b 479)b 480)c 481)a,c,d 482)d 483)a 484)d 485)b 486)c 487)a

488. Th 1 type of cells are most dependent on -
a) IFN-y b) EL-4 *(SGPGI05)*
c) ID5 d)IL-6

489. Humoral graft rejection is characterised by-
a) Intense mononuclear infiltration *(Kerala 94)*
b) Neovascularisation of grafted tissue
c) Thrombosis of the blood vessels and ischemic necrosis
d) Monocytic infiltration

490. The type of immunological reaction seen in endothelial corneal graft rejection is - *(SGPGI05)*
a) Type II b) Type IV
c) Type III d) Type I

491. In the rejection phenomenon after kidney transplant, the primary target for early immunological attack is- *(PGI81,82 UPSC88)*
a) Vascular endothelium b) Renal papillae
c) Glomeruli d) Proximal tubules

492. Acute humoral renal transplant rejection is characterized by the following except -
a) Presence of anti-donor antibodies
b) Interstitial and tubular mononuclear cell infiltrate
c) Necrotizing vasculitis *(DELHIPG Mar. 09)*
d) Acute cortical necrosis

493. Acute graft versus host disease reaction occurs in all except - *(UP 0 7)*
a) Liver b) Adrenal
c) Gut d)Skin

494. The LE cell in Romanowsky stained preparation is a/an- *(COMED09)*
a) Monocyte b) Neutrophil
c) Eosinophil d) Lymphocyte

495. Anti nuclear antibodies in SLE causz-*(Kerala 96)*
a) Arthritis b)LE cells
c) Endocarditis d)CNS lesions
e) Skin rashes

496. The most diagnostic test for SLE is -
a) Complement fixation test *(AIIMS 78, DELHI 93)*
b) Antibodies against ANA cell
c) Antibodies against DNA
d) Antibodies against nucleus

497. The most sensitive test for SLE - *(Kama, 96)*
a) Anti ds DNA b)ANA
c) Anti histone d) Complement C levels

498. Urine findings in SLE - *(TN 86)*
a) Proteinuria b)RBC cells
c) LE cells d)None

499. Renal pathology in SLE includes all EXCEPT -
a) Focal glomerulonephritis *(UP 08)*
b) Diffuse glomerulonephritis
c) Membranous glomerulonephritis
d) Lipoid nephrosis

500. What is the most common histological type of nephritis seen in systemic lupus erythematosus (SLE)- *(UPSC-109)*
a) Mesangial b) Focal proliferative
c) Diffuse proliferative d) Membranous

501. Diffuse proliferative glomerulonephritis, in Lupus nephritis falls under - *(Karri 11)*
a) Class II b) Class III
c) Class IV d) Class V

502. A20 year old female has an erythematous rash over her face on both cheeks and across the bridge of her nose.This rash is made worse by sunlight exposure when she is outdoors. Along with the rash, she has had muscle and joint pain for several month. However, radiographs of the joints does not show any abnormalities, and she has normal joint mobility without deformity. Which of the following laboratory test findings is most characteristic of the disease-
a) Elevated anti-streptolysin O (ASO) titer
b) HLA-B27 genotype *(MAHA 05)*
c) Markedly decreased serum level ofimmuno-globulin G (IgG)
d) Antibodies to double-standed DNA

503. Erosive arthritis occurs in all except - *(UP 2K)*
a) SLE b) Osteoarthritis
c) Gout d) Psoriatic arthritis

504. Antitopoismerase I is mark of - *(JIPMER 99)*
a) Systemic sclerosis
b) Classic Polyarteritis nodosa
c) Nephrotic syndrome
d) Rheumatoid arthritis

505. A 55 years male presented with dry mouth, & rheumatoid arthritis with high titre of anti SS-A and SS-B antibodies, diagnosed a case of minor salivary gland tumour. The earliest histologic finding in - *(UP 08)*
a) Endothelial cells b) Basophils
c) Lymphocyte d) Eosinophils

506. Anti fibrillarin antibodies are met with -
a) Rheumatoid Arthritis *(KarnatOl)*
b) Systemic Lupus Erythematosis
c) Mixed Connective Tissue disease
d) Systemic scerosis
e) None

507. Antinuclear antibodies are seen in - *(PGI 8 7)*
a) SLE b) Systemic sclerosis
c) Morphea d) Pemphigus vulgaris

508. NANAantibody is seen in- *(HPU05)*
a) Sarcoidosis b) Tuberculosis
c) Leprosy d) Carcinoid

509. Chediak Higashi syndrome is characterised by the following except - *(MH11)*
a) Neutrophilia
b) Defective degranulation
c) Delayed microbial killing
d) Giant granules

510. Biopsy of the parotid gland in a patient with Sjogren's syndrome shows - *(Jipmer 11)*
a) Neutrophils b) Lymphocytes
c) Eosinophils d) Basophils

488) a 489) c 490) b 491) a 492) b 493) b 494) a,b 495) b 496) c 497) b 498) a,b 499) d 500) c 501) c
502) d 503) a 504) a 505) c 506) d 507)a,b,c 508) a 509) a 510) b

511. Amyloidosis most commonly affects - *(AI88)*
a) Liver b) Tongue
c) Colon d) Heart

512. The etiology of amyloidosis is - *(TN 86)*
a) Automimmune b) T-cell mediated
c) B cell mediated d) Unknown

513. Amyloidosis of kidney may be seen in the following except - *(UPSC 05)*
a) Enteric fever b) Ulcerative colitis
c) Suppurative lung disease d) Hansen's disease

514. Amyloid is best identified by - *(KERALA 87, AI88)*
a) Staining with methyl violet
b) Secondary fluorescence in UV light with riboflavin
c) Congo red
d) Green birefringence of stained amyloid when viewed by polarizing microscope

515. AL type of amyloid is seen in - *(PGI89)*
a) Medullary caracinoma thyroid
b) Primary amyloidosis
c) Multiple myeloma
d) Familial amyloidosis

516. Congo-red with amyloid produces - *(ALIMS 78,83)*
a) Dark brown colour b) Blue colour
c) Brilliant pink colour d) Red colour
e) Khaki colour

517. Which is not true regarding amyloid-*(CUPGEE 95)*
a) Intra cellular accumulation of fibrillar protein
b) Red-green birefringence seen when amyloid materal is under polarized light
c) A good method of diagnosis is abdominal fat pad biopsy
d) All of the above

518. Amyloid stroma is seen in - *(PGI88)*
a) Papillary ca. thyroid
b) Follicular ca. thyroid
c) Anaplastic ca. thyroid
d) Medullary ca. thyroid

519. AE type of amyloid is seen in - *(PGI 89)*
a) Medullary carcinoma thyroid
b) Primary amyloidosis
c) Multiple myeloma
d) Familial amyloidosis

520. Deposition of protein ^{6} A beta 2m' is seen in which clinicopathologic category of amyloidosis -
a) Familial Mediterranean fever *(Karnll)*
b) Hemodialysis associated
c) Senile cerebral
d) Systemic senile

521. The most reliable investigation in amyloid disease is- *(PGI 88)*
a) Rectal biopsy b) Immunoglobulin assay
c) Ultrasound d) Urine examination

522. Which of these is characteristic of amyloidosis -
a) Beta pleated, metachromosis, PAS + ve
b) Congophilic, beta pleated, PAS +ve *(MAHE 05)*
c) Beta pleated, fibrillary, congophilic
d) Alpha pleated, small fibrils

523. Sago spleen is seen in - *(Karnataka 02)*
a) Gaucher's disease b) Malaria
c) Amyloidosis d) Felty's disease

524. Lordaceous spleen is seen in - *(PGI 79, AMU 84)*
a) Alcoholic hepatitis
b) Chronic active hepatits
c) Focal amyloidosis
d) Diffuse amyloidosis

525. Gingival biopsy is useful in the diagnosis of -*(UPSC*
a) Sarcoidosis b) Amyloidosis *97,DPG10)*
c) Histoplasmosis d) Scurvy

526. Serum amyloid associated protein, found in -
a) Alzheimer's disease *(UP 07)*
b) Chronic inflammatory states
c) Chronic renal failure
d) Malignant hypertension

527. Hemodialysis associated amyloid is deposited in -
a) Knee joint b) Large intestine *(Kerala 94)*
c) Liver d) Tongue

528. Macroglosia is seen in - *(AP 96)*
a) Amyloidosis
b) Folic acid deficiency
c) Motor neurone disease
d) None

529. Raji cell assay are used to quantitate - *(DPG11)*
a) Complement levels b) Immune complexes
c) T-cells d)IFN levels

GENETICS

530. The approximate number of genes contained in the human genome is - *(ALIMS Nov 02)*
a) 40,000 b) 30,000.
c) 80,000 d) 1,00,000.

531. Mutation leading to sickle cell anemia- *(PGI June 01)*
a) Crossover mutation b)Frameshift
c) Deletion d) Nondysjunction
e) Point mutation

532. Genetic polymorphism include - *(PGI Nov 10)*
a) SNP b) Microsatellites
c) Mutations d) Translocation
e) Mini satellites

533. Single gene disorder is- *(NEET/DNB Pattern)*
a) Glycogen storage disease b) Retinoblastoma
c) DM djHT ;

534. Which of the following is an automsomal dominant metabolic disorder - *(AI 04)*
a) Cysticfibrosis
b) Phenylketonuria
c) a-1 antitrypsin deficiency
d) Familial hypercholestrolemia

535. The chances of having an unaffected baby, when both parents have achondroplasia, are- *(AIIMS,May 04*
a) 0% b) 25% *AI05)*
c) 50% d) 100%

511)d 512)d 513)a 514)d 515)b,c 516) c 517)a 518)d 519)a 520)b 521)a 522)c 523)c 524)d
525) b 526) b 527) a 528) a 529) b 530) b 531)e 532)a,b,e 533) a,b 534) d 535) b

536. Female is affected, male is not Disease is autosomal dominant, what is the chance in children? *(NEET/DNB Pattern)*
a) 50%, affected b) 25% affected
c) 75% affected d) All affected

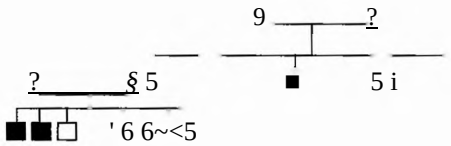
537. Disease having autosomal recessive inheritance - *(PGIMay 10)*
a) Cystic fibrosis
b) Hydrocephalus
c) Duchene muscular dystrophy
d) Albinism
e) Vitamin D resistant ricket

538. A parent is homozygous and a parent heterozygous for an autosomal recessive gene. What will be the outcome - *(AIIMSMay 94)*
a) 75% children affected
b) No child affected, but all are carriers
c) 50% children affected, rest are carriers
d) 25% children affected, rest are carriers

539. Cystic fibrosis is inherited as an autosomal recessive condition. A normal couple has one daughter affected with the disease. They are now planning to have another child. What is the chance of her sibling being affected by the disease - *(AI10)*
a) 0 b) %
c) % d)%

540. An albino girl gets married to a normal boy, What are the chances of their having an affected child and what are the chances of their children being carriers?
a) None affected, all carriers *(AI03)*
b) All normal
c) 50% carriers
d) 50% affected, 50% carriers

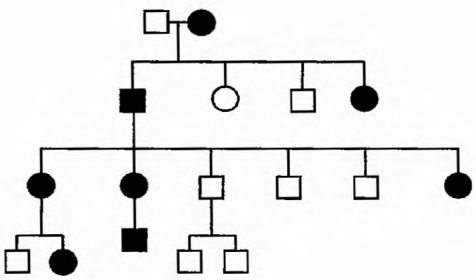
541. If both parents are sickle cell anemia patients then the likelyhood of offsprings having the disease is-
a) 10% b)25% *(NEET/DNB Pattern)*
c) 50% d) 100%



542. A couple, with a fimily history of beta thalassemia major in a distant relative, has come for counseling. The husband has HbA2 of 4.8% and the wife has HbA2 of 2.3%. The risk of having a child with beta thalassemia major is - *(AI03)*
a) 50% b) 25%
c) 5% d) 0%

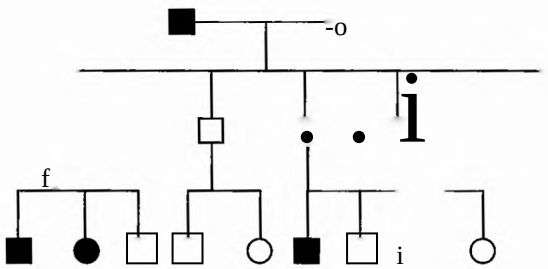
543. Kinky hair desease is disorder where an affected child has peculiar white stubby hair, does not grow, brain degeneration is seen and dies by age of two years. Mrs A is hesitant about having children because her two sisters had sons who had died form kinky hair disease. Her mother's brother also died of the same condition. Which of the following is the possible mode of inheritence in her family - *(AI 04)*
a) X-linked recessive b) X-linked dominant
c) Autosomal recessive d) Autosomal dominant

544. True statement about inheritence of an X linked recessive trait is - *(NEET/DNB Pattern)*
a) 50% ofboysofcarriermother are affected
b) 50% of girls of diseased father are carrier
c) Father transmits disease to the son
d) Mother transmits the disease to the daughter



545. Males are more commonly affected than females in-
a) Autosomal dominant *(AI 10)*
b) Autosomal recessive
c) X - linked dominant
d) X - linked recessive

546. Study the following carefully - *(AI 05)*



Read the pedigree. Inheritance pattern of the disease in the family is -
a) Autosomal recessive type
b) Autosomal dominant type
c) X-Linked dominant type
d) X-linked recessive type

547. The most likely inheritance pattern depicted in the following pedigree is - *(AIIMS Nov 03)*

a) Autosomal dominant b) X-linked recessive
c) X-linked dominant d) Autosomal recessive

548. Which of the following is the most likely inheritance pattern in the pedigree given below - *(AIIMS May 04)*

a) Autosomal dominant b) Mitochondrial
c) Autosomal recessive d) X-linked dominant

549. Autosomal dominant inheritance-
a) Albinism *(NEET/DNB Pattern)*
b) Sickle cell anaemia
c) Thallesemia
d) Hereditary spherocytosis

550. Neurofibromomatosis 1 is - *(NEET/DNB Pattern)*
a) AD b) AR
c) X linked recessive d) X linked dominant

536) a 537) a,d 538) c 539) c 540) a 541) d 542) d 543) a 544) a 545) d 546) d 547) c 548) d 549) d 550) a

551. Hemophilia is associated with- *(NEET/DNB pattern)*
a) X chromosome b) Y chromosome
c) Chromosome 3 d) Chromosome 16 ;

552. Inheritance of Huntington's chorea-.
a) a d b) AR *(NEET/DNB Pattern)*
c) x r y,•;. ?; d) XD

553. An Autosomal Dominant condition is - *(AI95)*
a) Albinism b) Huntigton's chorea
c) Hurler's syndrome d) Hunter's syndrome

554. The inheritance pattern of familial Retinoblastomas is- *(AIIMS Nov 05)*
a) Autosomal recessive b) Autosomal dominant
c) X-linked dominant d) X-linked recessive

555. Which of the following is not X linked condition-
a) Duchenne muscular dystrophy *(NEET/DNB*
b) Emery-Dreifuss muscular dystrophy* *p/ Pattern)*
c) Facioscapulohumeral muscular dystrophy
d) Becker muscular dystrophy

556. Duchenne muscular dystrophy is inherited as - *(NEET/DNB Pattern)*
a) X linked - b) Autosomal dominant
c) Autosomal recessive d) Codominant

557. Male to male transmission is seen in -*(NEET/DNB*
a) Autosomal dominant diseases *Pattern)*
b) Autosomal recessive
c) X-linked dominant ? / ■
d) Mitochondrial disease

558. All of the following are autosomal dominant disorders, except- *(AI 12)*
a) Gardner's syndrome b) Ataxia Telengisctasia
c) Neurofibromatosis d) Peutz-Jeghers syndrome

559. Multifactorial inheritance is most likely to play a signifant role in the appearance of - *(PGI98)*
a) Achondroplasia b) Lysosomal storage disease
c) Cleftlipd) Huntington disease

560. Abnormal chromosomal number which is exact multiple of the 23 - *(PGI 99)*
a) Euploidy b)Aneuploidy
c) Mosaicism d) Trisomy

561. Pataus syndrome due to - *(AIIMS 86)*
a) Trisomy 21 b) Trisomy 18
c) 18P d) Trisomy 13
e) 18Q

562. Edwards syndrome is- *(NEET/DNB Pattern)*
a) Trisomy 21 b) Trisomy 18 *flpf-* '? v'^ 1 *f:*
c) Trisomy 13 d) 5 P

563. The following diseases have defect in DNA repair mechanism except for - *(AIIMS Nov 05)*
a) Xeroderma Pigmentosa
b) Fanconi syndrome
c) Huntington's disease
d) Hereditary non polyposis colon cancer

564. DNA repair defect is associated with - *(AIIMSNov*
a) Xeroderma pigmentosum *09, NEET/DNB*
b) Icthyosis *Pattern)*
■ ' c); 'Angelman syn^timefe^l^
d) DiGeorge's syndrome

565. Gene instability associated with malignancy is seen in- *(AIIMSNov 09)*
a) Klippel fiel syndrome b) Ataxia telangiectasia
c) Marfan's syndrome d)EDS

566. Single gene disorder which does not follow mendelian inheritance - *(PGI 93)*
a) Sickle cell anemia b) Down syndrome
c) Fragile X-syndrome d) Retinoblastoma

567. Premutation is seen in: *(UP 08)*
a) Genomic imprinting
b) Trinucleotide repeat mutation
c) Mitochondrial mutation
d) Gonadal mosaicism

568. i^tic^aj^niss^-^ **en in -** *(^ET/Dmmttern)*
a) Translocation
b) Chromosome breaking
c) Trinucleotide-repeat expansion Pi
*M&IM^* **Mitpchoiiddal mutation** *M*

569. True about fragile-X syndrome - *(PGI June 09)*
a) Triple nucleotide repeat sequence
b) Chromosome breaking
c) Mitochondrial mutation
d) Centrachrome absent

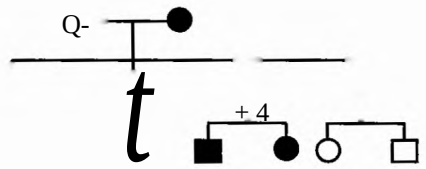
570. All are true about Fragile X syndrome except -
a) Large head b) Large nose *(AI 99)*
c) Large ear d) Large testis

571. Differential expression of same gene depending on parent of origin is referred to as - *(AI05, 08)*
a) Genomic imprinting b) Mosaicism
c) Anticipation d) Nonpenetrance

572. Genomic imprinting is associated with- *(PGI 01)*
a) Silencing of paternal chromosome
b) Silencing of maternal chgromosome
c) Angelman syndroma
d) Prader Willi syndrome
e) Gonadal mosaicism

573| **One of the following disorders is due to maternal disomy of chromosome 15-** *(NEET/DNB Patlern,*
a) Prader Willi syndrome *AIIMSj/fpv ip)*
b) Angelman syndrome ■■*'VH* -(vis
c) Hydatidiform mole
!&>>£d) Klinefelter's syndrome 1 | S

574. When a functional gene is inherited from one parent only, the condition is known as - *(AI 09)*
a) Genomic imprinting b) Mosaicism
c) Alleles d)Chimerism



575. True about genomic imprinting - *(PGI Nov 10)*
a) Different expression of gene depending on parent of origin
b) Prader-Willi syndrome is maternal deletion of chromosome 15
c) Angelman syndrome is due to paternal deletion of chromosome 15
d) Uniparental disomy is other name of genomic imprinting

551) a 552) a 553) d 554) b 555) c 556) a 557) a 558) b 559) c 560) a 561) d 562) b 563) c 564) a
565) b 566) c 567) b 568) c 569) a 570) b 571) a 572)a,b,c,d 573) b 574) a 575) a

576. Two siblings with osteogenesis imperfect, but their parents are normal. Mechanism of inheritance is- *(AIIMS May 10)*
a) Anticipation b) Genomic imprinting
c) Germ line mosaicism d) New mutation

577. Genomic imprinting is seen *in-(NEET/DNB Pattern)*
a) Prader willi syndrome
b) Marfan syndrome
c) EDS
d) Osteogenesis imperfecta

578. Pedigree analysis - Analyze the following pedigree and give the mode of inheritance - *(PGI May 10)*
a) Autosomal recessive
b) Autosomal dominant
c) Mitochondrial inheritance
d) X linked dominant

579. NARPisa- *(AIIMS Nov 09)*
a) Lipid storage disorder
b) Glycogen storage disorder
c) Mitochondrial disorder
d) Lysosomal storage disorder

580. TVue about mitochondrial diseases - *(PGINov 10)*
a) Paternal inheritance
b) LHON & CPEO are typical examples
c) Most common abnormality shown is neurological
d) Li-Fraumeni syndrome is a mitochondrial disease
e) Common mode of inheritance

581. Mitochondrial abnormalities are seen *m-(PGIMay 10)*
a) Oncocytoma b) Keam-Sayre syndrome
c) Faber disease d) Mitochondrial myopathy
e) Leigh's disease

582. Mitochondrial chromosomal abnormaity leads to -
a) Lebers hereditary optic neuropathy
b) Angelman syndrome *(NEET/DNB Pattern)*
c) Prader villi syndrome
d) Myotonic dystrophy

583. Karyotyping is done with all, *except-(AHMS June 98)*
a) Blood lymphocyte b) Blood monocyte
c) Amnion d) Fibroblast

584. Which of the following procedures as routine technique for karyotyping using light microscopy -
a) C-banding b) G-banding *(AI03)*
c) Q-banding d) Brd V-staining

585. Karyotyping is useful in diagnosis of - *(AI09)*
a) Autosomal recessive disorders
b) X-linked recessive disorders
c) Chromosomal abnormalities
d) Biochemical abnormalities

58<fc Karyotyping is done in which phase of cell cycle-
siii a) Anaphase b) Metaphase *(NEET/DNB*
c) Telophase d) S phase *Pattern)*

587. In-situ DNA nick end labeling can quantitate -
a) Fraction of cells in apoptotic pathways *(AI 05)*
b) Fraction of cells in S phase
c) p53 gene produce
d) bcr/abl gene

588. Which of the following techniques is used in gene therapy- *(PGI 01)*
a) Electroporation
b) Electrofocusing
c) Selectively targeted recombination
d) Intranuclear injection

589. Palindromic DNA implies - *(PGI 01)*
a) Short stretches of DNA
b) Recognised by specific restriction endonuclease
c) Codes for bacterial resistance
d) Complementary strands
e) Rifampicin acts

5910; Microarray is - *(NEET/DNB Pattern)*
a) Study of multiple genes
b) Study of diseas e
c) Study of organisms
d) Study of blood group Mills

591. Which is not true about Down's syndrome -
a) Decreased humerus length. *(AIIMS Nov 99)*
b) Decreased nuchal fold thickness.
c) Decreased femur length.
d) Duodenal atresia.

592. Down's syndrome is associated with *-(PGI DEC 02)*
a) Congenital heart disease
b) A.L.L.
c) Early onset Alzheimer's disease
d) CNS tumour
e) Infection

593. Down syndrome is due to -
a) Trisomy 21 b) Translocation 13-15/21
c) Translocation 22/21 d) All of the above

594. Which of the following is not associated with Down's syndrome? *(AIIMS Nov 11)*
a) Trisomy 21
b) Mosaic 21
c) Translocation t (15,21), t (21,21)
d) Deletion of 21

595. Down's syndrome is most commonly caused by -
a) Maternal nondisjunction *(AI 10)*
b) Paternal nondisjunction
c) Translocation
d) Mosaicism

596. A married middle aged female gives history of repeated abortions for the past 5 years. The given below is conceptions pre-natal karyogram. This karyogram suggests the following - *(AI 03)*
a) Klinefelter's syndrome b) Turner's syndrome
c) Down's syndrome d) Patau's syndrome

576) c 577) a 578) c 579) c 580) b,c 581)a,b,d,e 582) a 583) b 584) b 585) c 586)b 587) a 588)a,c,d 589)a,b,d 590)a 591)b 592)a,b,c,e 593)d 594)d 595)a 596)c

597. A nineteen year old female with short stature, wide spread nipples and primary amenorrhoea most likely has a karyotype of - *(AI03)*
a) 47,XX+18 b) 46, XXY
c) 47,XXY d)45 X

m- **Thrner no of chromosomes -** *(NEET/DNB\Pattem)*
a) 45 b) 47
c) 46 d)42 •;£!£&

599. Which of the following is true of Kleinefelter's syndrome - *(PGIDec 01)*
a) Chromosome pattern is 47 XXY
b) Mental retardation is present
c) Hypogonadism occurs
d) Increased FSH level
e) Eunuchoid proportions

600. Males who are sexually under developed with rudimentary testes and prostate galnds, sparse pubic and facial hair, long arms and legs and large hands & feet are likely to have the chromosome - *(AI 04)*
a) 45,XYYb) 46,XY
c) 46, XXY d) 46, X

601. Klinefelter no of chromosomes-(7VEEr/DJV8 *Pattern)*
a) 47 b) 46
c) 45 d)44

602. Barr body is absent in- *(PGIDec 98)*
a) Kleinefelter's syndrome b) Turner's syndrome
c) Super female d)None

603. TVansport of lipids from the intestine to other tissues is by- *(AI94)*
a) Chylomicrons b) LDL
c) HDL d)VLDL

604. Reverse cholesterol transport is mediated by -
a) HDL b)VLDL *(PGI97)*
c) LDL d)IDL

605. Increased risk of coronary heart disease is seen in-
a) Type I hyperlipidemia *(AI 99)*
b) Type II hyperlipidemia
c) Type IV hyperlipidemia
d) Type V hyperlipidemia

606. Receptors of LDL is/are - *(PGI June 05)*
a) B100 b)B48
c) APOA1 d) APOA11
e) APOC-11

607. Hypertriglyceridemia is seen in - *(AI 9 7)*
a) LDL receptor defect
b) Dysbetalipoprotenemia
c) Abetalipoproteinemia
d) all of the above

608. Tendon xanthomas are seen in - *(AIIMSJune 98)*
a) Familial hyper cholesterolemia
b) Familial hyperlipidemica
c) Familial dysbetalipoproteinemia
d) Familial lipoprotein lipase deficiency

609. In marfan syndrome, the defect is in - *(NEET/DNB*
a) Fibrillin I b) Fibrillin II *Pattern)*
c) Collegen d) Elastin

610. In Marfan's syndrome, Aortic aneurysm occurs most commonly in- *(AI 95)*
a) Ascending aorta b) Descending aorta
c) Abdominal aorta d) Arch of aorta

611. Hypermability of joint and hyperelasticity is seen in-
a) Marfan syndrome *(PGI 99)*
b) Ehlers danlos syndrome
c) Fragile X-syndrome
d) Angelman syndrome

612. Osteogenesis imperfect defect in - *(NEET/DNB*
a) Collagen type I b) Elastin *Pattern)*
c) Collagen type IV d) basement membrane

613. Gauchers disease is due to - *(PGI 88)*
a) Glucocerebrosidse deficiency
b) Accumulation of glucocerebroside
c) Sphingomyelin deposition
d) Glycogen deposition

614. A one year old boy presented with hepatosplenomegaly and delayed milestones. The liver biopsy and bone marrow biopsy revealed presence of histiocytes with PAS-positive Diastase-resistant material in the cytoplasm. Electron-microscopic examination of these histiocytes is most likely to reveal the presence of -
a) Birbeck granules in the cytoplasm
b) Myelin figures in the cytoplasm
c) Parallel rays of tubular structures in lysosomes
d) Electron dense deposit in the mitochondria

615. Father has a blood groupB: Mother hasAB: Children are not likely to have the following blood group -
a) O b)A *(AI01)*
c) B d)AB

616. A baby's blood group was determined as O Rh negative. Select the blood group the baby's mother or father will not have - *(AIIMS Nov 02)*
a) A, Rh Positive b) B, Rh Positive
c) AB, Rh Negative d) O, Rh positive

617. The gene that regulates normal morphogenesis during development is - *(AIIMSNov 02)*
a) FMR-1 gene b) Homeobox gene.
c) P-16 d)PTEN.

618. A couple has two children affected with tuberous selerosis. On detailed clinical and laboratory evaluation (including molecular studies) both parents are normal. Which one of the following explains the two affected children in this family ?
a) Non penetrance *(AIIMS May 06)*
b) Uniparental diasomy
c) Genomic imprinting
d) Germline mosaicism

619. Gene for retinoblastoma is located on - *(UP 09)*
a) Chromosome 13 b) Chromosome 1
c) Chromosome 10 d) Chromosome 5

620. Karyotype in Klinefelter's syndrome is?
a) 47XXY b) 45X0 *(DNB Dec 11)*
c) 46XXY d) 45XXX

597) d 598) a 599)A11 600)c 601)a 602)b 603)a 604)a 605)b 606)a 607)b 608)a 609)a 610)a
611)b 612)a 613)a,b 614)c 615)a 616)c 617)b 618)d 619)a 620)a

621. Mutation in Marfan's syndrome *is?(DNB June 11)*
a) Collagen I b) Collagen IV
c) Fibrillin I d) Fibrillin II

622. Which of the following is a DNA repair defect?
a) Bloom syndrome *(DNB Dec 10)*
b) Incontinentia pigmenti
c) Aplastic Anemia
d) Tuberous sclerosis

623. In Xeroderma Pigmentosum, defect is in?
a) Methylation
b) Nucleotide Excision Repair
c) DNA replication
d) Protein folding

624. All the following are characteristic of Turner Syndrome EXCEPT- *(DNB Dec 10)*
a) Webbing of Neck b) Cubitus valgus
c) Umbilical Hernia d) Coarctation of Aorta

625. Which of the following procedures as routine technique for karyotyping using light microscopy-
a) C-banding b)G-banding *(DNB Dec 10)*
c) Q-banding d) Brd V-staining

626. Which of the following is inherited as autosomal recessive form? *(DNB June 10)*
a) Sickle cell anemia
b) Hemophilia
c) Hereditary spherocytosis
d) Glucose 6-P04 dehydrogenase deficiency

627. Gaucher's disease is inherited as? *(DNB June 10)*
a) Autosomal recessive
b) Autosomal dominant
c) X-linked recessive
d) X-linked dominant

628. Which of the following procedures as routine technique for karyotyping using light microscopy -
a) C-banding b) G-banding *(DNB Dec 09)*
c) Q-banding d) Brd V-staining

629. Inheritance pathern of ABO blood group system is- *(DNB Dec 08)*
a) Pseudodominanceb) Autosomal dominant
c) Autosomal recessive d) Codominance

630. The chromosomal karyotype in Patau syndrome is - *(DNB Dec 08)*
a) 47XX,+21 b) 46XX/47XX,+18
c) 45XX,der(14;21) d) 47XX,+13

631. Deficiency of enzyme hexosaminidase, n subunit causes - *(DNB Dec 08)*
a) Tay-Sachs disease b) Hurler syndrome
c) Fabry disease d) Pompe disease

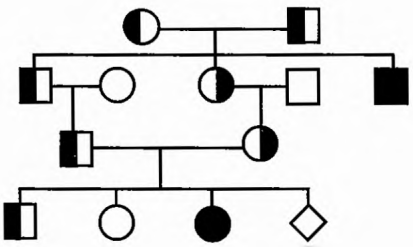
632. The following are single gene disorders except - *(COMED 09)*
a) Haemochromatosisb) Cystic fibrosis
c) William's syndrome d) Huntington's disease

633. Multifactorial inheritance is known in -
a) Neurofibroma *(COMED 09)*
b) Haemophilia
c) Cardiac septal defects
d) Hypophosphataemic rickets

634. One of the following is due to point mutation-
a) Colour blindness *(JIPMER 92)*
b) Sickle cell anemia
c) Diabetes
d) Pophyria

635. Autosomal dominant gene is one which is expressed in- *(MAHE98)*
a) Homozygous state b) Heterozygous state
c) Both d) All of the above

636. Chances of an offspring being affected when one parent is autosomal dominant heterozygote -
a) 25% b) 50% *(Manipal 08)*
c) 100% d) None



637. The following are sex linked inherited disease -
a) G6 PD deficiency
b) Hypogamma globuinemia
c) Downs syndrome
d) Diamond blackfan disease
e) hemophilia

638. Which one of the following disorders is autosomal recessive ? *(UPSC-108)*
a) Homocystinuriab) G6PD deficiency
c) Myotonic dystrophy d) Otospongiosis

639. All of the following are autosomal dominant disorders except - *(UPSC 95)*
a) Tuberous sclerosisb) Polyposis coli
c) Cystic fibrosis d) Myotonic dystrophy

640. Which of the following is an autosomal dominant metabolic disorder - *(Manipal 09)*
a) Cystic fibrosis
b) Phenylketonuria
c) Alpha-I anti-trypsin deficiency
d) Familial hypercholesterolemia

641.

Examine the above pedigree chart Which one of the following diseases is the most likely for this situation ? *(UPSC-108)*
a) Neurofibromatosis b) Beta-thalassemia
c) Colourblindness d) Vitamin D resistant rickets

642. Mitochondrial DNA (mt- DNA) is known for all except - *(DPG 11)*
a) Maternal inheritance
b) Heteroplasmy
c) Leber hereditary optic neuropathy is the prototype
d) Nemaline myopathy results due to mutations in mt- DNA

621) c 622) a 623) b 624) c 625) b 626) a 627) a 628) b 629) d 630) d 631) a 632) c 633) c 634) b
635)b 636)b 637)a,e 638)a 639)c 640)d 641)b 642)d

643. A10 year old male, although mentally retarded, is able to carry out activities of daily living, including feeding and dressing himself. On physical examination, he has branchycephaly and oblique palpebral fissures with prominent epicanthal folds. On the palm of each hand is seen a transverse crease. On auscultation of the chest, there is a grade ni/IV systolic murmur. Which of the following diseases will be most likely have by the age of 20 -
a) Acute leukemia *(MAHA 05)*
b) Hepatic cirrhosis
c) Chronic renal failure
d) Acute myocardial infarction

644. Which is not a feature of Downs syndrome -
a) Clinodactyly *(AIIMS 91)*
b) Pigmented birth marks
c) Hypotonia
d) Respiratory tract Infections

645. Nuchal fold thickness is used to dignose - *(UP 2K)*
a) Down's syndrome b) Cri-du-chat sundrome
c) Durpan's syndrome d) Paul-Bunnel sundrome

646. The chromosomal karyotype in Patau syndrome is -
a) 47XX,+21 *(Karn 11)*
b) 46XX/47XX,+18
c) 45XX,der(14;21)
d) 47XX,+13

647. True about fragile X syndrome are all except -
a) Large testes b) Large nose *(UP 2K)*
c) Large head d) Large ear

648. False statements about fragile- X syndrome is -
a) Breakage in long arm of X chromosome
b) Common genetic disorder *(CUPGEE 99)*
c) Micro-orchidism
d) Long face

649. Increasing severity of mental retardation of male members over generations is a result of -
a) Mitochondrial DNA mutation
b) Frameshift mutation *(DELHIPG Feb. 09)*
c) Y linked disorder
d) Trinucleotide repeat mutation

650. The following are the features of Marfan's syndrome except- *(UPSC-108)*
a) Arachnodactyly
b) Reduced joint mobility
c) Dislocation of the lens
d) Mitral regurgitation

651. Watson and C rick are associated with -
a) Discovery of helical structure of DNA
b) Association of Helicobacter pylori with chronic gastritis *(Manipal 08)*
c) Discovery of HIV virus
d) None of the above

652. Fuelgen reaction is a cytochemical test for- *(AIIMS*
a) M.RNA b) T. RNA *84, JIPMER 79)*
c) DNA d) All of the above

653. Supratemporal lental subluxation is seen in -
a) Weil's marchasani syndrome *(AI89)*
b) Marfans
c) Hunters
d) Homocystinuria

654. Splenic macrophages in Gaucher's disease differ from those in ceroid histiocytosis by staining positive for - *(Manipal 09)*
a) Lipids b) Phospholipids
c) Acid fast stain d) Iron

655. Chances of an offspring being affected when one parent is autosomal dominant heterozygote -
a) 25% b) 50% *(MAHE07)*
c) 100% d) None

656. Inheritance pattern of ABO blood group system is- *(MH11)*
a) Pseudodominance b) Autosomal dominant
c) Autosomal recessive d) Codominance

NEOPLASIA

657. Tdmor containing cells of all three germ layers is called- *(AI98)*
a) Leiomyoma b) Squamous cell carcinoma
c) Adenocarcinoma d) Teratoma

658. What are hamartomas - *(AI 89)*
a) Hemangiomas
b) Development malformations
c) Hematomas
d) Antibioma

659. Overgrowth of a skin structure at a localised region - *((^EEPj DNB- Pattern)*
a) Hamartoma b) Malignant tumor
c) Choriostoma d) Polyp

660. All are benign mesenchymal tumours of stomach except- *(PGI98)*
a) Leiomyoma b) Adenoma
c) Fibroma d) Lipoma

661. Lack of differentiation is called - *(PGI95)*
a) Anaplasia b) Dysplasia
c) Metaplasia d) Hyperplasia

662. Reversible loss of polarity with abnormality in size and shape of cells is known as - *(AIIMS Nov 01)*
a) Metaplasia b) Dysplasia
c) Hyperplasia d) Anaplasia

663. How do you differentiate C_A in situ from invasive C_A- *(PGI June 98, 97)*
a) Penetration of Basement membrane
b) Number of mitotic cells
c) Metastasis
d) Nuclear plemorphism

664. When stem cells transforms to form cells characteristic of other tissues, the process is called as- *(AIIMSNov 07)*
a) De-differentiation b) Re-differentiation
c) Trans-differentiation d) Sub-differentiation

643) a 644) b 645) a 646) a 647) b 648) c 649) d 650) b 651) a 652) c 653) b 654) a 655) b 656) d
657) d 658) b 659) a 660) b 661) a 662) b 663) a 664) c

665. The term "tumour progression" means -
a) Spread of cancer to distant site *(PGIJune 08)*
b) Rate of growth of tumour
c) Ability of cancer cells to resemble their normal counterpart
d) Sequential appearance of features of increasing malignancy

666. The most reliable feature of malignant tumor-^47*99)*
a) Local invasion b) Metastasis
c) Rapid growth d) Poor differentiation

667. Morphologically diagnostic feature of cancer cells - *(PGIJune 98)*
a) T Size b) t Mitotic activity
c) T Cytoplasm d) T Lysosomes

668. It is true that sarcoma - *(AI89)*
a) Are malignant tumours of mesenchyme origin
b) Usualy spread by vascular invasion
c) Metastasise frequently to regional lymph node
d) Are only loosely invasive

669. Cancer cells derive energy from - *(AIIMS 2001)*
a) Glycolysis b) Oxidative metabolism
c) Increased mitochondria d)None

670. The correct sequence of cell cycle is - *(AI 03)*
a) G0-G1-S-G2-M b)G0-Gl-G2-S-M
c) G0-M-G2-S-G1 d) G0-G1-S-M-G2

671. During which phase of the cell cycle the cellular content of DNA is doubled - *(AIIMS Nov 05)*
a) Mitotic phase b) G_l phase
c) G_2 phase d) S phase

672. Centrosome duplication takes place in-(*7VEET/DNB Pattern)*
a) M phase b) GO phase
c) S phase d) G2 phase

673. Transition from G2 to M phase of the cell cycle is controlled by - *(AIIMS Nov 03)*
a) Retinoblastoma gene product
b) p53 protein
c) CyclinE
d) CyclinB

674. Which of the following is not a cyclin dependent kinase (CDK) inhibitor - *(AIIMS Nov 03)*
a) p21 b)p27
c) p53 d)p57

675. All of the following are inhibitors of cell cycle except-
a) P21 b) P 27 *(PGIDec 07)*
c) pl61NK4a d)CDK2

676. The tumor suppressor gene p 53 induces cell cycle arrest at - *(NEET/DNB Pattern, AIIMS Nov 05)*
a) G_2- M phase b)S-G_2 phase
c) G_r S phase d)G_0phase

677. Regarding oncogonesis - *(PGI02)*
a) Topoisomerase causes breaks in strands
b) P53 is the most common oncogene mutation causing malignancy in humans
c) At G2-M-phase there is loss of inhibitors controlling cell cycle
d) Decrease of telomerase activity cause antitumor effects

678. True regarding Oncogenes are all except -
a) Derived from protooncogenes *(AIIMS June 98)*
b) Oncogenes code for specific protein
c) Causes in vitro cell variation in animals
d) Multiple growth factors govern the gene

679. True about protooncogene - *(PGIJune 06)*
a) Important for normal cell growth
b) Oncogenesis
c) C - myc overexpression causes lympnoma
d) Mutation causes Retinoblastoma
e) Deletion cause Sickle cell disease

680. MYC gene is - *(NEET/DNB Pattern)*
a) Protein kinase inhibitor
b) Growth factor inhibitor % t $
c) GTPase
d) Transcription activator

681. In the mitogen activated protein kinase pathway, the activation of RAS is counteracted *by-(AIIMSMay 04)*
a) Protein kinase C
b) GTPase activating protein
c) Phosphatidyl inositol
d) Inositol triphosphate

682? Amplification of N myc is associated with which tumour? *(NEET/DNB Pattern)*
a) Neuroblastoma b) Retinoblastoma
c) Osteosarcoma d) Neuroma

683. The expression of the following oncogene is associated with a high incidence of Medullary carcinoma of thyroid - *(AIIMS Nov 05)*
a) P53 b) Her 2 neu
c) RET protooncogene d) Rb gene

684. RET gene mutation d is associated with which malignancy- *(NEET/DNB Pattern)*
a) Pheochfomocytoma
b) Medullary carcinoma thyroid
c) Lymphoma
d) Renal cell carcinoma

685. The normal cellular counterparts of oncogenes are important for the following functions, except -
a) Promotion of cell cycle progression *(AI06)*
b) Inhibition of apoptosis
c) Promotion of DNA repair
d) Promotion of nuclear transcription

686. An example of a tumour suppressor gene *is-(NEET/DNB Pattern, AI 05)*
a) myc b) fos
c) ras d)RB

687. Which is not a tumor Suppressor gene -
a) WT-1 b)RB *(AIIMS May 08)*
c) P53 d)RAS

1882 **Endometrial carcinoma: which of the following tumor suppressor gene occur -** *(NEET/DNB Pattern)*
a) P53 b) Rb
c) PTEN d)APC

689. Growth factor oncogen is - *(AI 08)*
a) myc b) fos
c) sis d)jun

665) d 666) b 667)b 668)a 669)a 670)a 671)d 672)c 673)d 674)c 675)d 676)c 677)A11 678)d
679) a,b 680) d 681)b 682) a 683) c 684) b 685) c 686) d 687) d 688) c 689) c

690. Increased susceptibility to breast cancer is likely to be associated with a mutation in the following gene- *(AIIMS May 08)*
a) p53 b) BRCA-1
c) Retinoblastoma (Rb) d)H-Ras

691. Which of the following mutations in a tumour suppressor agent causes breast carcinoma -
a) p43 b) p53 *(AIIMSMay 02)*
c) p73 d)p83

692. Which of the following is known as the "guardian of the genome" - *(ARMS May 05)*
a) p53 b)Mdm2
c) pl4 d) ATM

693. The following statements are true about Tumour Suppressor Gene p53 except - *(ARMSNov 04)*
a) It regulates cetain genes involved in cell cycle regulation
b) Its increased levels can induce apoptosis
c) Its activity in the cells decreases following UV irradiation and stimulates cell cycle
d) Mutations of the p53 gene are the most common genetic alteration seen in human cancer

694. True statements about P53. gene are all except -
a) Arrest cell cycle at G1 Phase
b) Product is 53 KD protein *(AI08, ARMS Nov 09)*
c) Located on chromose 17
d) Wild/non-mutated form is associated with increased risk of child-hood tumors.

695. Why fetal cells continue to divide but terminally differentiated adult cells do not divide -*(ARMSNov 06)*
a) There are many cyclin inhibitors which prevent cell to enter into S phase in adult
b) Phosphatase absent in fetal cells
c) Proteinase is absent in fetus
d) Absence of CD kinase

696. True about p53 - *(PGI May 10, Nov 09)*
a) Tumor suppressor gene b) Protooncogene
c) Proapoptotic d) Encodes 53 kD
e) Arrest cell cycle in G

697. Tumorogenesis in agin^ is due to -*(ARMSMay 09)*
a) Telomerase reactivation
b) Telomerase inactivation
c) Increased apoptosis
d) Suppression of proto-oncogenes

698. Telomerase - *(NEET/DNB Pattern)*
a) RNA polymerase
b) Causes :carcinogenesis
c) Presentin somatic cells
d) Absent in germ cells

699. E cadherin gene deficiency is seen in - *(NEET/DNB Pattern)*
a) Gastric ca b) Intestinal ca
c) Pancreatic ca

700. All of the following is involved in tumor metastasis cascade except - *(ARMS May 02)*
a) Fibronectin b)E-cadherin
c) Type IV collegenase d) Tyrosine kinase

701. Essential for tumor metastasis is - *(ARMS Nov 08)*
a) Angiogenesis
b) Tumorogenesis
c) Apoptosis
d) Inhibition of tyrosine kinase

702. Which is the most common site of metastasis -
a) Lung b)Bone *(ARMS May 05)*
c) Liver d) Brain

703. Li frumani syndrome is due to mutation of which gene - *(NEET/DNB Pattern)*
a) P 21 b) P 53
c) P 41 d) P 43

704. All of the following constitute familial cancer syndrome except - *(AI 99)*
a) Xeroderma-pigmentosum b) Retinoblastoma
c) Neurofibromatosis d)MEN-I

705. Which of the following is not associated with malignancy - *(ARMS June 97)*
a) Fragile X syndrome b) Fanconi's syndrome
c) Down's syndrome d) Bloom syndrome

706. BRA Cl Gene is located on - *(ARMS Nov 08)*
a) Chromosome 13 b) Chromosome 11
c) Chromosome 17 d) Chromosome 22

707. Genifor Wilms tumor is located on- *(NEET/DNB Pattern)*
a) Chromosome 1 b) Chromospine 10
c) Chromosome 11 d) Chromosome 12

708. Hereditary retinoblastomas develop the following chromosomal deletion - *(AI 03)*
a) 13ql4 b)13pl4
c) 14pl3 d) 14pl3

709. Which of the following condition has increased risk of malignancy - *(PGI June 08)*
a) Metaplasia b) Dysplasia
c) Hyperplasia d) Inflammation
e) Hypertrophy

CARCINOGENTIC FACTORS

710. Which of the following statements about carcinogenesis is false ? *(ARMS May 06)*
a) Asbestos exposure increases the incidence of lung cancer
b) Papilloma viruses produce tumours in animals but not in humans
c) Exposure to aniline dyes predisposes to cancer of the urinary bladder
d) Hepatitis B virus has been implicated in hepatocellular carcinoma

711. Benzopyrene change to carcinogen in animal occurs due to all except - *(ARMS Nov 09)*
a) Epoxide formation
b) p53 activation
c) Cytochrome C activation
d) By inducing metabolism of cyt p450

690) a >b 691)b 692) a 693) c 694) d 695) a 696)a,c,d,e 697) a 698) b 699) a 700) d 701) a 702) c 703) b
704) a 705) a 706) c 707) c 708) a 709)a,b,c,d 710) b 711)c

712. Which of the tumours are of viral origin -
a) Laryngeal papilloma *(PGIDec03)*
b) Naspharyngeal carcinoma
c) Lymphoma
d) Kaposi's sarcoma

713. Virus causing hemopoietic carcinoma are -
a) EBV b) HTLV -1 *(PGIJune 05)*
c) HHV-8 d)CMV
e) Kaposi sarcoma

714. Uses of tumor marker are - *(PGI Dec 2000)*
a) Screening of a cancer
b) Follow up of a cancer patient, esp. for knowing about recurrance
c) Confirmation of a diagnosed cancer
d) For monitoring the treatment of a cancer

715. HMB 45 is a tumor marker for - *(AJ08)*
a) Neuroblastoma b) Neurofibroma
c) Malignant melanoma d) Angiosarcoma

716. Which one of the following is not used as a tumor marker in testicular tumours ? *(AI05)*
a) AFP b)LDH
c) HOG d)CEA

7jfj* Carcinoma of lung, breast m^rker is - I[p|fSlj
a) CEA b) AFP *(NEET/DNB Pattern)*
c) h o g d) CA-15-3 J

718. A testicular tumor marker is - *(AI 96)*
a) a-Fetoprotein b) Ectopic hormones
c) CEA d) Testosterone

719. Which is not a tumour marker - *(AIIMSNov94)*
a) Carcinoembryonic antigen (CEA)
b) Human Chorionic Gonadotropin (hCG)
c) p_2 Microglobulin
d) a Fetoprotein (AFP)

720. True about carcinoembryonic antigen (CEA) -
a) Useful for screening of Ca. colon *(PGI June 01)*
b) Gives confirmative evidence of Ca. colon
c) Helpful for follow-up after resection
d) Levels decrease immediately after resection of tumor
e) Tumour size correlates with CEA level

721. True regarding carcino embroyonic antigen are A/E- *(AIIMS Dec 97)*
a) Is a glycoprotein
b) Helps in knowing recurrence after resection
c) Increases in Ca colon associated with only liver metastasis
d) Usually associated with malignancies of GI tract

722. True about tumour marker is - *(PGI June 08)*
a) P.S.A. is used for CA prostrate
b) Tumour marker is used to diagnose residual recurrence of disease
c) Can be used for diagnosis of cancer
d) CA-19-9 is used for colon cancer

723. alpharfetoprpteinisdetectedincmof-^ *:ET/DNB*
a) Hepatocellular Ca *Pattern, AIIMS Dec 95,*
b) Colonic cancer *May 93)*
c) Tuberculoma
d) Renal cell Ca.

724. Serum alpha feto protein level is raised in -
a) Teratoma *(AIIMS Feb 97)*
b) Seminoma
c) Endodermal sinus tumor
d) HOG

725. AFP is raised in- *(PGI Nov 10)*
a) Yolk sac tumor b) Seminoma
c) Teratoma d) Endodermal sinus tumor
e) Cirrhosis

726. All of the following are examples of tumor markers, except - *(AIIMS Nov 04)*
a) Alpha-HCG(a-HCG) b)Alpha-Fetoprotein
c) Thyroglobulin d) p_2 - microglobulin

727. For which one of the following tumours Gastrin is a biochemical marker - *(AIIMS May 05)*
a) Medullary carcinoma of thyroid
b) Pancreatic neuroendocrine tumour
c) Pheochromocytoma
d) Gastrointestinal stromal tumor

728. CD-99 is for- *(AIIMS May 08)*
a) Ewing's sarcoma
b) SLL
c) Dermatofibroma protruberans
d) Malignant histiocytic fibroma

729. Elevated CA-125 are seen in - *(PGI Nov 10)*
a) Abdominal TB b) Ca cervix
c) Endometriosis d) Ovarian ca
e) Endometrial ca

730. An undifferentiated malignant tumour on immunohistochemical stain shows cytoplasmic positivity of most of the tumor cells for cytokeratin. The most probable diagnosis of the tumor is - *(AIIMS May 06,AI97, 95)*
a) Sarcoma b) Lymphoma
c) Carcinoma d) Malignant Melanoma

731. Squamous cell carcinciBo^^ipa^ker-isf^ *(N0ET/£)NB*
a) Vimentin b) Cytokerafjh *fPaitew)*
c) Desmin d) Myogenin

732. Which amongst the following a marker of carinoma- *(AI 12)*
a) Cytokeratin b) Vimentin
c) Calretinin d)CD45

733. Poorly differentiated carcinoma express- *(NEET/DNB*
a) Cytokeratin b) Vimentin *Pattern)*
c) LCA . d) desniin f

734. A 56 year old Chronic smoker, mass in bronchus resected. Most useful immunohistochemical marker to make a proper diagnosis would be -
a) Cytokeratin *(AIIMS Nov 09)*
b) Vimentin
c) Epithelial membrane cadherin
d) Leucocyte common antigen

712)a,b,c,d 713)a,b 714)a,b,d 715)c 716)d 717)a 718)a 719)c 720)a,c,e 721)c 722)a,b,d 723)a 724)a,c 725)a,c,d,e 726)a 727)b 728)a 729)A11 730)c 731)b 732)a 733)a 734)a

735. CD 34 is a tumor marker used for -
a) Ewings sarcoma *(NEET/DNB Pattern)*
b) Myofibrosarcoma
c) Alveolar soft part sarcoma
d) Inflammatory myofibroblastic tumor

736. SYT-SSX1 gene is associated with-*(NEET/DNB Pattern)*
a) Liposarcoma b) Rhabdomyosarcoma
c) Synovial sarcoma d) Ewiings sarcoma

737. Paraneoplastic syndrome is associated with- *(PGI*
a) Renal ca b) Oesophageal ca *Dec 03)*
c) Breast ca d) Testicular ca
e) Small cell carcinoma of lung

738. Migratory thrombophlebitis is associated with all of the following except - *(AI08)*
a) Prostate b)Lung
c) GIT d) Pancrease

739. Ectopic ACTH production is seen in - *(AI 96)*
a) Small cell carcinoma is lung
b) Anaplastic carcinoma of lung
c) Squamous cell carcinoma of lung
d) Adenocarcinoma of cerebellum

740. In tumour lysis syndrome all of the following are seen except - *(AIIMS May 02)*
a) Hypernatremia b) Hypercalcemia
c) Hyperkalemia d) Hyperphosphatemia

741. Retinoblastoma is associated *with-(NEET/DNB Pattern)*
a) Osteosarcoma b) Hepatoceliular ca
c) SCC d) Osteoclastoma

742. A simple bacterial test for mutagenic carcinogens is - *(AI 05)*
a) Ames test b) Redox test
c) Bacteriophage d) Gene splicing

743. The following is not a feature of malignant transformation by cultured cells - *(AI 05)*
a) Increased cell density
b) Increased requirement for growth factors
c) Alterations of cytoskeletal structures
d) Loss of anchorage

744. The following parasitic infections predispose to malignancies- *(NEET/DNB Pattern)*
a) Pargibunuasus b) Guinea worm infection
c) Clonorchiasis d) Schistosomiasis

745. Antibody against tumor cells - *(PGI June 08)*
a) MHC-I b) MHC-II
c) Anti viral d) Differentiatedantigen

746. Loss of hetrozygosity associated with -
a) Acute myeloid leukemia *(AIIMS May 08)*
b) ALL
c) Retinoblastoma
d) Promyelocitic leukemia

747. All are malignant tumors except - *(AI 08)*
a) Chloroma b) Fibromatosis
c) Askins tumor d) Liposarcoma

748. Conventional cytogenetics are difficult in solid tumors especially in case of carcinoma cervix -
a) High mitotic rate *(ARMS Nov 10)*
b) Bacterial contamination of the specimen
c) Good metaphase activity
d) Inadequate biopsy specimen

749. Which of the following tumors show increased c-kit - *(NEET/DNB Pattern)*
a) Yolk sac tumor b) Embryonal carcinoma
c) Choriocarcinoma d) Seminoma

750. High risk of malignancy is seen in? *(DNB June 11)*
a) Simple hyperplasia with atypia
b) Simple hyperplasia without atypia
c) Complex hyperplasia with atypia
d) Complex hyperplasia without atypia

751. All the following are angiogenic factors EXCEPT -
a) VEGF b) PDGF *(DNB Dec 10)*
c) IFN d)TGF/3

752. Which of the following is not a tumor marker -
a) CEA *(DNB Dec 10)*
b) Tyrosinase
c) Human leucocyte antigen A2
d) AFP

753. Which among the following pairs of Oncogenes is activated by Translocation? *(DNB Dec 10)*
a) SIS & HST-1 b) HGF & L-MYC
c) TGF & CDK4 d) ABL & C-MYC

754. False about p53 is - *(DNB June 10)*
a) It is present on chromosomes 17
b) It evauses cell cylce arrest in G1
c) 53 KDa
d) Non mutated wild p53 is associated with neoplasm in childhood

755. A 67 year male smoker presents with haemoptysis and cough. Bronchoscopic biopsy revealed undifferentiated tumour. The immunohistochemical marker that can be most helpful is- *(DNB June 10)*
a) Calretinin b) Vimentin
c) Cytokeratin d)GGt

756. Elevated AFP levels are seen in all of the following except - *(DNB June 10)*
a) Hepatoblastoma b) Seminoma
c) Teratoma d) None of the above

757. HMB 45 is a marker for - *(DNB June 10)*
a) Sarcoma b) Melanoma
c) Carcinoma d) None of the above

758. Marker of malignant melanoma is? *(DNB June 09)*
a) HMB45 b)S-100
c) Synaptophysin d) Both A and B

759. S 100 is a marker of ? *(DNB June 09)*
a) Melanoma b) Schwannoma
c) Histiocytoma d) All of the above

760. Essential for tumor metastasis is -*(DNB Dec 08)*
a) Angiogenesis
b) Tumorogenesis
c) Apoptosis
d) Inhibition of Tyrosine kinase activity

735)c 736)c 737)a,c,e 738)a 739)a 740)b 741)a 742)a 743)b 744)c,d 745)a 746)c 747)b 748)b,d

761. BRCA-1 gene lies on Chromosome-(Z>iVB *Dec 08)*
a) 17 b) 18
c) 20 d) 21

762. Ectopic rest of normal tissue is known as -
a) Choristoma b) Hamartoma*(DNB Dec 08)*
c) Pheudotumor d) Lymphoma

763. Raised AFP's is typically seen in - *(DNB Dec 08)*
a) Hepatitis b) Semnoma
c) HCC d) All of the above

764. All of the following are tumour markers, except -
a) p-microglobulin b)HCG *(DNB June08)*
c) a-feto protein d)CEA

765. Squamous cell carcinoma spreads commonly via -
a) Implantation *(DNB June08)*
b) Hematogenous spread
c) Lymphatic spread
d) Trancoelomic spread

766. An example of a tumour suppressor gene is -
a) myc b) fos *(DNB Dec 07)*
c) ras d)Rb

767. Hereditary factor are important in -f*DNB Dec 07)*
a) Retinoblastoma b) Breast carcinoma
c) Bronchogenic carcinoma d) Pancreatic tumor

768. N-MYC amplification is associated with which tumor? *(DNB June 07)*
a) Burkitt lymphoma
b) Squamous cell carcinoma lung
c) Astrocytoma
d) Neuroblastoma

769. Migratory superficial thrombophlebitis is seen in - *(DNB June 07)*
a) Carcinoma pancreas b) Astrocytoma
c) Renal carcinoma d)All

770. Ectopic rest of normal tissue is known as- *(MH11)*
a) Choristoma b) Hamartoma
c) Pseudotumor d) Lymphoma

771. Basal cell carcinoma commonly spreads by- *(MAHE*
a) Lymphatics b) Haematogenous *07, 08)*
c) Direct spread d) All the above

772. Pseudomyxoma peritonei is seen with - *(AI89)*
a) Mucinous cystadenocarcinoma ovary
b) Carcinoid appedix
c) Endometrial carcinoma
d) Ileal carcinoid

773. The most important prognostic indicator of mesenchymal tumour is - *(AIIMS 91)*
a) Type of primary b) Grade
c) Size d) Site

774. Commonest carcinoma in elderly male is -
a) Stomach b) Lung *(JIPMER 88)*
c) Esophagus d) Prostate

775. The incidence of which of the following cancers has increased in the past 4 decades - *(PGI83)*
a) Carcinoma of pancreas
b) Carcinoma of stomach
c) Carcinoma of lung
d) Carcinoma of colon

776. Which of the following has propensity to metastasize through lymph nodes ? *(APPG 08)*
a) Alveolar rhabdomyosarcoma
b) Osteosarcoma
c) Both
d) None

*111***. Choristoma is -** *(TN04)*
a) Normal tissue in abnormal site
b) Normal tissue in excess at noimal site
c) Abnormal tissue at any site
d) None of the above

778. All are precancerous except - *(Manipal 08)*
a) Lichen planus b)Verrucous carcinoma
c) Submucous fibrosis d) Leukoplakia

779. Inherited cancer syndrome include all except-
a) Retinoblastom *(Kerala 2001)*
b) Neurofibroma
c) Xeroderma pigmentosa
d) Familial polyposis coli

780. The following hereditary disorders show an abnormally high predispostition to malignancy except - *(JIPMER 78, ROHTAK 86)*
a) Xerderma pigmentosum b) Bloom's syndrome
c) Fanconi's anaemia d) Ataxia telangiectasia
e) Cystinuria

781. Chromosome associated with familial polyposis colon? *(APPG 08)*
a) Chromosome 5 b) Chromosome 6
c) Chromosome 11 d) Chromosome 13

782. The best example of a proto-oncogene activated by point mutation is - *(ICS 98)*
a) Ras b)N-myc
c) L-myc d) Abl

783. N-MYC amplification is associated with which tumor? *(Kam11)*
a) Burkitt lymphoma
b) Squamous cell carcinoma lung
c) Astrocytoma
d) Neuroblastoma

784. Philadelphia chromosome is an example of - *(ICS 98)*
a) Balanced translocation b) Deletion
c) Non-dysjunction d) Duplication

785. Cancer suppressor gene is important in which malignancy - *(TN99)*
a) Retinoblastoma b) Malignant melanoma
c) Liver carcinoma d) Lung cancer

786. Which of the following functions is associated with the oncogenic L 'MYC' in lung cancer -*(Kama! 99)*
a) Proteine kinase
b) GTP binding protein
c) Nuclear binding portein
d) Growth factor

787. Malignancy with familial inheritence - *(AI99)*
a) Ca breast b) Ca ovary
c) Ca testis d) Ca panreas

761)a 762)a 763)c 764)None 765)c 766) d 767)a>b 768)d 769)a 770)a 771)c 772)a 773)b 774)d
775) c 776) a 777) a 778) b 779) b 780) e 781) a 782) a 783) d 784) a 785) a 786) c 787) a,b

788. The tumor suppressor gene P53 induces cell arrest at- *(UP 08)*
a) G_2 - M phase b) S - G_2 phase
c) Gj - S phase d) G_0 - phase

789. DNA probe is of great value in the identification of gene in all of the following neoplasms except -
a) Neuroblastoma b) Breast cancer *(ICS 98)*
c) Lymphomas d) Gliomas

790. A child is born with a single functional copy of a tumor suppressor gene. At the age of 5 years, the remaining normal allele is lost through mutation. As a result, the ability to control the transition from G1 to the S phase of the cell cycle is lost. Which of the following neoplasms is most likely to arise by means of this mechanism - *(MAHA 05)*
a) Retinoblastoma
b) Breast carcinoma
c) Adenocarcinoma of colon
d) Cerebral astrocytoma

791. Alpha fetoprotein is genetically and structurally related to - *(Corned 08)*
a) Albumin b) Transferrin
c) Fibrinogen d) Growth hormone

792. Keratin is a tumour market for - *(AI92)*
a) Carcinoma cervix b) Neurofibroma
c) Rhabdoyosarcoma d) Chorio carcinoma

793. C.E.A. (Carcinoma embryonic antigen) is elevated in all except - *(TN 97)*
a) Alcoholic Cirrhosis b)Ca-colon
c) Ulcerative Colitis d) Emphysema

794. Tumour marker for a highly vascular tumour -
a) Desmin b) Keratin *(Kerala 97)*
c) Sa200 d) Alpha-feto protein

795. Disticntion between a poorly differentiated carcinoma and a lymphoma can be made by immunoperoxidase staining of the tumour tissue with antibodies directed against - *(ICS2K)*
a) Desmin b) Myoglobin
c) Vimentin d) Cytokeratin

796. A chronic alcoholic has an elevated serum alpha fetoprotein levels. Which of the following neoplasms is most likely - *(DELHIPG Feb. 09)*
a) Prostatic adenocarcinoma
b) Multiple myeloma
c) Hepatocellular carcinoma
d) Glioblastoma multiforme

797. Raised AFP is typically seen in - *(MHII)*
a) Hepatitis b) Seminoma
c) HOC d) All of the above

798. All of the following are examples of tumor markers, except - *(Jipmer 05)*
a) Alpha-HCG (ocHCG) b) Alpha-Feto protein
c) Thro globulin d) P2-microglobulin

799. Ca 125 is used in diagnosis of - *(C. U.P.GE.E. 02)*
a) Ovarian cancer b) Gall bladder cancer
c) Carcinoids d) Bronchogenic cancer

800. In exocrine pancreatic cancer, the commonest tumour marker to be elevated as - *(COMED 09)*
a) CA-125 b) CEA
c) CA-15-3 d) CA-19-9

801. Increased susceptibility to breast cancer is likely to be associated with a mutation in the following gene -
a) P^{53} b) BRCA-1 *(Jipmer 05)*
c) Retinoblastoma (Rb) d)H-Ras

802. Major contribution to cachexia with advanced cancer-
a) Clathrin b) Histamine *(HP 2006)*
c) Interferon d) Tumor-necrosis-factor (TNT)

803. A 65 years old male diagnosed by biopsy a case of lung carcinoma, with paraneoplastic syndrome and increased PTH. Probable cause is- *(UP 08)*
a) Parathyroid b) Parathyroid related peptide
c) Calcitonin d) Calcitonin related peptide

804. Exfoliative cytology is useful in - *(Kerala 90)*
a) Carcinoma stomach b) Carcinoma bronchus
c) Carcinoma cervix d) All of the above

805. Following are spontaneous resolution tumours except - *(UP 08)*
a) Malignant melanoma b) Osteogenic sarcoma
c) Cholangio carcinoma d) Retinoblastoma

CARDIOVASCULAR SYSTEM

BLOODVESSELS

806. What one structural feature do all blood capillaries have in common - *(PGI95)*
a) Absence of intracellular fenestrations in the endothelial cells
b) Presence of intracellular fenestrations
c) A discontinuous basement membrane
d) A continuous basement membrane
e) Remain patent in the healthy subject

807. The following factors are derived from the endothelial cell except - *(AI 94)*
a) Thrombomodulin b) ProteinS
c) Prostacyclin d) Thromboxane A2

808. Neointimal hyperplasia causes vascular graft failure as a result of hypertrophy of - *(AI 06)*
a) Endothelial cells b) Collagen fibers
c) Smooth muscle cells d) Elastic fibers

809. Medial calcification is seen in *~(NEET/DNB Pattern)*
a) Atherosclerosis b) Arteriolosclerosis
c) Monckebergs sclerosis d) Dissecting aneurysm

810. Atheroma resulting in angina has following characteristic except - *(AIIMS June 2000)*
a) Thin fibrous cap
b) Thick fibrous cap
c) Lack of macrophage
d) Lack of smooth muscle cell

811. Atherosclerosis initiation by fibroblast plaque is mediated by injury to - *(PGI Dec 98)*
a) Smooth muscle b) Media
c) Adventitia d) Endothelium

788) c 789) d 790) a 791) a 792) a 793) d 794) b 795) d 796) c 797) a,c 798) a 799) a 800) d 801) a,b 802) d 803) b 804)d 805)b,c 806)None 807)d 808)c 809)c 810)d 811)d

812. In atherosclerosis, increased LDL in monocyte macrophage due to - *(PGI June 99)*
a) LDL receptors on macrophage
b) LDL receptors on endothelium
c) Lipids in LDL get oxidized
d) All of the above

813. Atheromatous changes of blood vessels affects early in - *(NEET/DNB Pattern)*
a) Kidney b) Heart
c) Liver d) Spleen

814.Which of the following increases the susceptibility to coronary artery disease - *(AI 03)*
a) Type V hyperlipoproteinaemia
b) Von willebrand's disease
c) Nephrotic syndrome
d) Systemic lupus erythematosus

815. Raised serum level of lipoprotein-a is a predictor of- *(AI03)*
a) Cirrhosis of liver b) Rheumatic arthritis
c) Atherosclerosis b) Cervical cancer

816. CAD predisposing factors- *(PGIDec 02)*
a) Homocysteinemia b) 1 Lipoprotein B
c) T Fibrinogen d) THDL
e) T plasminogen activator inhibitors 1

817. Infective agent causing *ztherosc\erosis~(NEET/DNB*
a) M. pneumoniae b) C. Pneumoniae *Pattern)*
v *s3)* H.influenza ^ d$r6. Bipfheriae p ^ f

818. Major change occurring in blood vessels in hypertensio n - *(AIIMS Dec 94)*
a) Atherosclerosis
b) Hyaline arteriosclerosis
c) Multiple small aneurysms
d) Fibrinoid necrosis

819. Commonest histological finding in benign hypertension is - *(NEET/DNB Pattern, ARMS May 11)*
a) Proliferating endarteritis
b) Necrotising arteriolitis
c) Hyaline arteriosclerosis
d) Cystic medial necrosis

820. In malignant HTN, seen is - *(PGIDec 97)*
a) Hyalinised arterioles
b) Replacement by necrotizing arteriolitis
c) Calcification
d) Atherosclerosis

821. In malignant hypertension hyperplastic arteriosclerosis is seen n all except - *(AHMSMay 01)*
a) Heart b) Kidney
c) Pericardial Fat d) Peripancreatic fat

822. In malignant hypertension, hallmark is - *(PGIDec 98)*
a) Fibrinoid necrosis b) Hyperplastic arterioles
c) Hyalinization d) All of the above

823. All are seen in malignant hypertension except -
a) Fibrinoid necrosis *(AI 08)*
b) Hyaline arteriolosclerosis
c) Necrotizing glomerulonephritis
d) Hyperplastic arteriolosclerosis

824. Most common cause of aortic aneurysm is - *(AI 98)*
a) Syphilis b) Marfan's syndrome
c) Atherosclerosis d) Congenital

825. Most common cause of Abdominal aneurysm is -
a) Atherosclerosis b) Trauma *(AI94)*
c) Marfan's syndrome d) Congenital

826. 70 year old man has abdominal pain with mass in abdomen. Angiography reveals aneurysm of aorta. Most likely cause is - *(AIIMS Nov 01)*
a) Trauma b) Atherosclerosis
c) Syphilis d) Congenital

827. Syphilitic aneurysm mostly involve - *(AI 88)*
a) Arch of aorta
b) Descending aorta
c) Abdominal aorta above the renal arteries
d) Abdominal aorta below the renal arteries

828. Visceral aneurysm is most commonly seen in -
a) Splenic b) Renal *(NEET/DNB Pattern)*
c) Hepatic d) Coronary

829. In aortic dissection blood enters in - *(PGI 92)*
a) Intima b) Media
c) Adventitia d) Any of the above layer

830. Most common cause of Aortic dissection -
a) Hypertension b)DM *(AIIMS 98)*
c) Trauma d) Mafan syndrome

831. Most common cause of dissecting hematoma is because of - *(NEET/DNB Pattern)*
a) Hypertension b) Marfan's
c) Iatrogenic d) Kawasaki

832. Cystic medial necrosis responsible for aortic dilatation and rupture is seen in - *(PGI June 09)*
a) Syphilitic aneurysm b) Takayasu arteritis
c) Atherosclerosis d) Marfan syndrome
e) Ehler Danlos syndrome

833. Cystic medical necrosis is seen in- *(NEET/DNB*
a) Marfans b) Friedrichs ataxia *Pattern)*
c) Downs d) Kawasaki

VASCULITIS

834. Small vessel vasculitis are - *(PGIDec 2000)*
a) Classical PAN b) Wegner's granulomatosis
c) Giant cell arteritis d)HSP
e) Churg-strauss syndrome

835. Large vessel vasculitis is/are: *(PGIDec 07)*
a) Takayasu disease b) Temporal arteritis
c) PAN d) Giant cell arteritis
e) Wegner granulomatosis

836. Which is associated with vasculitis of medium . size vessels - *(NEET/DNB Pattern)*
a) Temporal areritis b) Wegners granulomatosis
c) Classic PAN d) Tuberous sclerosis

837. Granuloma is seen in all except - *(AIIMSNov 01)*
a) Giant cell arteritis
b) Microscopic polyangitis
c) Wegner's granulomatosis
d) Churg-strauss disease

812)c 813) b 814) c 815)c 816)a,c,e 817)b 818)b,d 819)c 820)b,d 821)a 822)a,b 823)b 824)c
825)a 826)b 827)None 828)a 829)b 830)a 831)a 832)d,e 833)a 834)b,d,e 835)a,b,d 836)c 837)b

838. All of the following condition are associated with granulomatous pathology, except - *(AI10)*
a) Wegner's granulomatosis (WG)
b) Takayasu arteritis (TA)
c) Polyarteritis nodosa (Classic PAN)
d) Giant cell arteritis (GCA)

839. pANCA is sensitive and specified *ior-(AIIMSDec 98)*
a) Post streptococcal glomerulonephritis
b) Idiopathic cresentic glomerulonephritis
c) Diffuse glomerulosclerosis
d) Diffuse glomerulosclerosis

840. ANC A positive vasculitis are - *(PGI June 09)*
a) Churg-strauss syndrome
b) Polyarteritis nodosa
c) Wegener granulomatosis
d) Takayasu arteritis
e) Henoch-schonlein purpura

841. ANCA positive is - *(A1IMS Nov 09)*
a) Good pasture syndrome
b) Wegner's granulomatosis
c) Sjogren syndrome
d) Relapsing polychondritis

842. Vasculitis is seen in- *(PGIDec 02)*
a) Burger's disease b) HSP
c) Gout d) Reiteres disease
e) Behcets syndrome

843. All of the following are true about temporal arteritis except - *(AI 96, AIIMS May 95)*
a) Polymyalgia rheumatica b) Anemia
c) LowESR d) Sudden blindness

844. All is true about Giant cell arteritis except -
.-7>^tInvoLves large to small sized areteries 4 „ ,
b) Granulomatous inflammation *(NEET/DNB Pattern)*
c) Most commonly involved artery is abdominal aorta
*l*fd) ^%pientM natute of the^mstolyemefeL J?§ g *i*

845. Pulseless disease is - *(AI 98)*
a) Giant cell arteritis b) Takayasu arteritis
c) Kawasaki disease d) Polyarteritis nodosa

846. In PAN, **cysts are seen in all excepts** *f(NEEJ7DNB*
: a) Lung ^ b) Pancreas *Pattern, AI00, 95)*
c) Liver d) Heart

847. Muscle biopsy in PAN shows - *(PGI June 98)*
a) Necrotising arteritis b) Atrophy
c) Granulomatous lesions d) Ring lesions

848. Kawasaki disease is associated with all except -
a) Erythema *(AI 96, AIIMS Feb 97)*
b) Posterior cervical lymphadenopathy
c) Thrombocytopenia
d) Conjuctivitis

849. Kawasaki disease is associated with all except -
a) Thrombocytopenia *(AIIMS Dec 98)*
b) Cervical lymphadenopathy
c) Redeye
d) Rash

850. Feature of microscopic poly angitis is -*(PGIDec 99)*
a) IgG deposits in kidney b) Bronchospasm
c) Renal involvement d) All of the above

851. Wegener[f]s granulomatosis involve- *(PGIDec 03)*
a) Lung b) Liver
c) Kidney d) Upper respiratory tract
e) Heart

852. A patient presents with respiratory symptoms i.e. cough, hemoptysis and glomerulonephritis. His C-ANC A levies in serum were found to be raised. The most likely diagnosis is - *(AIIMS Nov 02)*
a) Goodpasteur's syndrome
b) Classic polyarteritis nodosa
c) Wegener's granulomatosis
d) Kawasaki syndrome

853. In Wegeners glomerulonephritis characteristic feature seen in - *(AIIMS Nov 10, Nov 09)*
a) Granuloma in the vessel wall
b) Focal necrotizing glomerulonephritis
c) Nodular glomerulosclerosis
d) Interstitial granuloma

854. Wegner's granulomatosis - *(PGIDec 06)*
a) Involve lung
b) Involve nose
c) Involve kidney
d) Treated with cytotoxic and steroids

855. Which is not a characteristic of wegeners granulomatosis - *(NEET/DNB Pattern)*
a) Granuloma in vessel; wall
b) Focal; necrotising glomerulonephritis
c) Positive for cANCA
d) Involves large vessels

856. Lung is characteristically involved *in-(PGI June 2K)*
a) Churg-Strauss syndrome b) HSP
c) PAN d)ITP

857. Henoch-Schonlein purpura is characterized by the deposition of the following immunoglobulin around the vessels - *(AIIMS Nov 05)*
a) IgM b)IgG
c) IgA d)IgE

858. All are seen in Henoch schonlein purpura except -
a) Thrombocytopenia *(AI 94)*
b) Glomerulonephritis
c) Arthralgia
d) Abdominal pain

859. Frequency of renal involvement in HSP -
a) 20-40% * - ! b) >80% *(NEEWDNB Pattern)*
c) 40-60% d) 10%

860. TVue about Henoch-schonlein pupura *-(PGI June 09)*
a) Palpable pupura
b) Thrombocytopenia
c) C-ANCA positive
d) Kidney commonly affected
e) Thrombocytosis

861. Hypersensitivity angitis is seen in - *(TN 86)*
a) SLE
b) Polyarteritis nodosa
c) Henoch schonlein purpura
d) Buergers disease

838) c 839) b 840) a,c 841) a,b 842)a,b,d,e 843) c 844) c 845)b 846) a 847) a 848) c 849) a 850) c
851)a,c,d,e 852)c 853)b>a 854)a,b,c,d 855)d 856)a 857)c 858)a 859)c 860)a,d,e 861)c

862. Hypersensitivity vasculitis is seen most commonly in - *(AIIMS Nov 08, May 09)*
a) Post capillary venules b) Arterioles
c) Veins d) Capillaries

863. Burger disease is associated with - *(AI98)*
a) Alcoholism b) Smoking
c) Trauma d) Cold environment

864. Raynaud's phenomenon is seen in - *(PGIMay 10)*
a) SLE b) Systemic sclerosis
c) DM d) Hypertension

865. Raynaud's phenomenon what change is seen in vessels initial stage - *(NEET/DNB Pattern)*
a) No change (Fibrinoid, Thrombosis)
b) Thrombosis
c) Fibrinoid necrosis
d) Hyaline sclerosis

TUMORS

866. Spontaneous regression can occur *vt\t)i-(MH 10, 07)*
a) Cavernous hemangioma b) Strawberry angioma
c) Nevus flemes d) None of the above

867. Most common site of lymphangioma is-*(PGI Dec 08)*
a) Axilla b) Head and Neck
c) Groin d) Heart

868. True about pyogenic granuloma are-(PG7 *June 09)*
a) Vascular pathology
b) Bleeds rarely
c) In pregnancy incidence increases
d) Local excision is done
e) Recurrent and malignant

869. Pathological feature of pyogenic granuloma -
a) Epitheloid cells *(NEET/DNB Pattern)*
b) Cavernous hemangioma
c) Granulation tissue
d) Giant cells

870. The tissue of origin of the Kaposi's sarcoma is -
a) Lymphoid b) Vascular *(AIIMS May 05)*
c) Neural d) Muscular

871. Kaposi sarcoma associated with gut may be seen in- *(AI99)*
a) Nonhodgkin's lymphoma b) HIV - infection
c) Fungal infection d) Keratoacanthosis

872. Kaposis sarcoma is seen with -*(NEET/DNB Pattern)*
a) HCV b)HPV
c) HSV d)HHV

873. Features of essential hypertension- *(PGI Dec 02)*
a) Concentric hypertrophy of LV
b) Ted heart size
c) t ed size of the heart muscles
d) Myohypertrophy
e) Myohyperplasia

874. Concentric hypertrophy of left ventricle is seen in- *(PGIDec 98)*
a) Cong, bicuspid aortic valve b) MS
c) AR d) HOCM

875. Concentric hypertrophy of heart is associated -
a) Systemic Hypertension *(AIIMS97)*
b) Mitral regurgitaion
c) Hypertrophic cardiomyopathy
d) Mitral stensis

876. Left ventricular stress is maximum in- *(AIIMS 89)*
a) MS with MR b)MSwithAR
c) MR with AR d)ASwithAR

877. Heart failure cells are - *(PGI 87)*
a) Lipofuscin granules in cardiac cells
b) Pigmented alveolar macrophages
c) Pigmented pancreatic acinar cells
d) Pigment cells seen in liver

878. Commonest cause of right ventricular failure is -
a) Corpulmonale *(AIIMS 89)*
b) Pulmonary involvement
c) Endomyocardial fibrosis
d) Left ventricular failure

879. Heart failure cells are seen in *(NEET/DNBpattern)*
a) Kideny b) Heart
c) Lungs d) Braih

880. Best indicator for coronary artery disease -
a) HDL b)LDL *(AIIMS Nov 10)*
c) VLDL dj Chlomicron

881. Which one of the following sets of components of Cigarette smoke is a casual agent of coronary artery disease - *(NEET/DNB Pattern)*
a) Tar.and nicotine
b) Nicotine and carbon monoxide and tar
c) Gbrbonmonooxide and Tar
d) Carbon dioxide

882. Coronary heart disease may manifest as all, except-
a) Angina on effort b) Cardiomyopathies
c) Myocardial infarction d) Sudden death

883. The critical narrowing of coronary vessels to cause angina is - *(AIIMS 80, PGI 78)*
a) More than 50% b) More than 60%
c) More than 70% d) More than 80%

884. Vasospasm is the cause of - *(AI 97)*
a) Stable angina b) Unstable angina
c) Variant angina d) Classical angina

885. The most common site for myocardial infarction is -
a) Left atrium b) Left ventricle *(AI 96)*
c) Right atrium d) Right ventricle

886. Most common site of artery of atherosclerosis -
a) LAD b) RCA *(NEET/DNB Pattern)*
c) LCX d) Diagonal branch of LAD

887. Most common site of myocardial infaction is -
a) Anterior wall of left ventricle *(AI 98)*
b) Posterior wall of left ventrilce
c) Posterior wall of right ventrilce
d) Inferior wall of left ventricle

888. Inferior wall MI - *(NEET/DNB Pattern)*
a) Post interventricular artery
b) Ant interventricular artey
c) Atrial branch
d) Nodal branch

862) a 863) b 864) a,b 865) a 866) b 867) b 868)a,c,d 869) c 870) b 871)b 872) d 873)a,b,c,d 874) a
875)a 876) d 877)b 878)d 879)c 880)b 881)b 882)b 883)c 884)c 885)b 886)a 887)c 888)a

889. The most common site of Myocardial infarction is -
a) Anterolateral b) Interventricular septum
c) Posterior wall d) Inferior wall *(AI94)*

890. All of the following statements regarding subendocardinal infarction are true, except - *(AI06)*
a) These are multifocal in nature
b) These often result from hypotension or shock
c) Epicarditis is not seen
d) These may result in aneurysm

891. Reversible inj ury in myocardium occurs at -
a) 2 minutes b) 30 minutes *(PGI99)*
c) 2 hours d) 5 hours

892. A 60 year old male presented with acute chest pain of 4 hours duration. Electrocardiographic examination revealed new Q wave with ST segment depression. He succummed to his illness within 24 hours of admission. The heart revealed presence of a transmural haemorrhagic area over the septum and anterior wall of the left ventricle. Light microscopic examination is most likely to reveal -
a) Edema in between normal myofibres *(AI04)*
b) Necrotic myofibres with presence of neutrophils
c) Coagulative necrosis of the myocytes with presence of granulation tissue
d) Infiltration by histocytes with haemosiderin laden macrophages

893. A 45 year old male had severe chest pain and was admitted to the hospital with a diagnosis of acute myocardial infarction. Four days later he died and autopsy showed transmural coagulative necrosis. Which of the following microscopic features will be seen on further examination? *(AUMSMay 11,AI09)*
a) Fibroblast and collegen
b) Granulation tissue
c) Neutrophilic infiltration surrounding coagulative necrosis
d) Granulomatous inflammation

894. Autopsy finding after 12hrs in a case of death due to ML- *(AIIMSNov 99)*
a) Caseous necrosis b) Coagulative necrosis
c) Fat necrosis d) Liquefactive necrosis

895. Average time taken for myocardial infarction to heal completely is - *(AIIMS May 04)*
a) 3 weeks b) 6 weeks
c) 12 weeks d) 15 weeks

896. A mylocardial infarct showing early granulation tissue has most likely occured - *(AI 02)*
a) Less than 1 hours b) Within 24 hrs
c) Within 1 week d) Within 1 month

897. The cells seen after 72 hours in the infarcted area in MI are- *(NEET/DNB Pattern)*
a) Neutrophils b) Lymphocytes
c) Macrophages d) Monocytes

898. Troponin-T is a marker of - *(AIIMS May 04)*
a) Renal diseases b) Muscular dystrophy
c) Cirrhosis of liver d) Myocardial infarction

899. In MI, which enzyme is raised in 4 to 6 hrs and decreases in 3 to 6 days - *(AIIMS June 98)*
a) SGOT b)LDH
c) CPK d) SGOT

900; 7 day old MI the most sensitive biochemical marker-
a) Troponin I T b) CPK MB *(NEET/DNB*
c) LDH d) Myoglobin *Pattern)*

901. Post MI daiy 10 which enzyme is raised r-
a) LDH b) CPK *(NEET/DNB Pattern)*
c) Troponin d) Myoglobin

902. In stable angina - *(AIIMS Nov 03)*
a) CK-MB is elevated
b) Troponin T is elevated
c) Myoglobin is elevated
d) The level of cardiac markers remain unchanged

903. Troponin-T is preferable to CPK-MB in the diagnosis of acute MI in all of the following situations except- *(AI 03)*
a) Bedside diagnosis of MI b) After CABG
c) Reinfarction after 4 days d) Small infarct

904. Recurrent ischemic events following thrombolysis has been patho-physiologically linked to which of the following factors - *(AI 03)*
a) Antibodies to thrombolytic agents
b) FibrinopeptideA
c) Lipoprotein A
d) Triglycerides

905. Fatal arrythmias are seen if myocardial infarction is - *(NEET/DNB Pattern)*
a) Posterior b) Inferior
c) Anterolateral d) Subendodardial

906. TVue about Dressler'syndrome is all, except -
a) Occurs within hours after myocardial infarction
b) May be due to early use of anticoagulant
c) Chest pain is common *(AIIMS June 98)*
d) Responds well to salicylates

RHEUMATIC FEVER

907. TVue about Rheumatic heart disease and Rheumatic fever is/are - *(PGI June 04)*
a) Caused by group 'A' streptococci
b) Caused by group 'B' streptococci
c) Carrier have high risk of developing RF
d) Carrier have low risk of developing RF
e) M-5 protein cross reacts

908. What is the mechanism of acute rheumatic fever -
a) Cross reactivity with endogenous antigen
b) Innocent by slender effect *(AIIMS May 10)*
c) Due to toxin secretion by streptococci
d) Release of pyrogenic cytokines

909. A10 year old boy, Pappu, died of acute rheumatic fever. All the following can be expected at autopsy except - *(AI02)*
a) Ashoff nodules b) Rupture of chordae tendinae
c) Me Callum patch d) Fibrinous pericarditis

889) a 890) d 891)b 892)b 893)c 894)b 895)b 896)d 897)c 898)d 899)c 900)a 901)a 902) d
903) c 904) b 905) b 906) a 907)a,d,e 908) a 909) b

910. Aschoff's nodules are seen in - *(AI05)*
a) Subacute bacterial endocarditis.
b) Libman - Sacks endocarditis
c) Rheumatic carditis
d) Non - bacterial Thrombotic endocarditis

911. Valve usually not involved in rheumatic fever -
a) Mitral b) Aortic *(DNB Dec 08)*
c) Pumonary d) Tricuspid

912. True about acute rheumatic fever - *(PGIDec 02)*
a) Chorea
b) Erythema nodosum
c) Arthritis
d) Caused by antecedent a-hemolytic streptococcus infection
e) Carditis

913. Which is not major criteria for diagnosis of rheumatic fever ? *(NEET/DNB Pattern)*
a) Carditis b) Subcutaneous nodules
c) Increased ASLO d) Arthritis

914. Content of Aschoff's nodules are *AJE-(AIIMSJme 97)*
a) Histiocytes b) Langhan's giant cell
c) Fibrinoid deposition d) Aschoff's cells

915. Aschoff bodies in Rheumatic heart disease show all of the following features, except - *(AIIMS Nov 02)*
a) Anitschkow cells b) Epitheloid cells
c) Giant cells d) Fibrinoid necrosis

91i5. Me Calluih's patch is diagnostic of,-
a) Infective endocarditis *(NEET/DNB Pattern)*
'/ b) Rheumahcendcfca|d^J
• v c) Myocardial infarctiphl^|
d) Tetralogy of FaUot(ToF)

917. Characteristic feature of Rheumatic carriiiis is -
a) Pericarditis b) Endocarditis *(AI 99)*
c) Myocarditis d) Pancarditis

918. Diagnostic feature in rheumatic heart disease is -
a) Aschoff's nodule *(AI 97)*
b) Me Callumn patch
c) Bread & butter pericarditis
d) Shaggy vegetation

ENDOCARDITIS

919. Bacterial endocarditis is most commonly caused by-
a) a-Hemolytic streptococci *(PGIDec 03)*
b) (3 -Hemolytic streptococci
c) Staphylococcus aureus
d) Cardiobacterium
e) Staph epidermidis

920. The risk of developing infective endocarditis is the least in patient with - *(AIIMSMay 03)*
a) Small VSD
b) Severe aortic regurgitation
c) Severe mitral regurgitation
d) Large ASD

921. Non-sterile vegetations are seen in - *(PGI 99)*
a) Rheumatic fever
b) Infective endocarditis
c) Non bacterial thrombotic endocarditis
d) Libman sack's endocarditis

922. Which of these statements is FALSE about infective endocarditis in I.V. drug abusers- *(AIIMS June 2000)*
a) Candida is a common cause.
b) Pulmonary valve is commonly involved
c) Staphylococeus aureus is commonest organism
d) Tricuspid valve is most commonly involved

923. Which of the following is not a complication of infective endocarditis - *(AIIMS Nov 03)*
a) Myocardial ring abscess
b) Suppurative pericarditis
c) Myocardial infarction
d) Focal and diffuse glomerulonephritis

924. Flat vegetations in pockets of valves are due to -
a) Rheumatic heart disease *(AI 00)*
b) Libman sacks Endocarditis
c) NBTE
d) Infective endocarditis

925. Which type of endocarditis has vegetation on both Sides of the valves - *(NEET/DNB Pattern)*
a) Infective endocarditis
b) Libmah Sack's endocarditis *i'Mh*
c> Kf
lAsi d) None

926. Which of these is TRUE regarding Libman sach's lesion - *(AIIMS June 2000)*
a) Causes perforation of valves
b) Involves mulitple valves
c) Consists of large vegetation
d) Vegetations on the surface of valve spreads to mural endocardium

927; **Vegetations in libman sacendqcarditis are -** *(NEET/DNB Pattern)*
a) Large and fragile
b) Small warty along the line of closure of valve
c) Small or medium sized on either or both sides of valve
d) Small bland vegetations ^ ^

928. Vegetations below the AV valves are present in -
a) Libman sach's endocarditis *(AIIMSDec 97)*
b) Chronic rheumatic carditis
c) Acute rheumatic carditis
d) Non thrombotic endocarditis

929. In which of the following vegetation are friable and easily detachable from the cardiac valves - *(AI 10)*
a) Rheumatic fever b) Rheumatoid heart
c) SLE d) Infective endocarditis

930. Firm warty vegetations along the line of apposition of heart valves is present in - *(AIIMS Dec 98, AI 00)*
a) NBTE
b) Bacterial endocarditis
c) Rheumatic heart disease
d) Libman Sach's endocarditis

910)c 911)c 912)a,c,e 913)c 914)b 915)b 916)b 917)d 918)a 919)c 920)d 921)b 922)b
923) None orb 924) b 925) b 926) d 927) c 928) a 929) d 930) c

931. Site of lesion in endocarditis of rheumatic heart disease - *(PGI97)*
a) Along lines of closure of valves
b) Free margin of valves
c) Both sides of valves
d) Valve cusps

932. Which of the following is associated with.destruction of valves ? *(NEET/DNB Pattern)*
a) infective endocarditis
b) Libman sach's endocarditis
c) Rheumatic Heartdisease
d) All

933. Cardiomyopathy may be seen in all except -
a) Duchenne muscular dystrophy *(A1IMS May 06)*
b) Friedrich's ataxia
c) Type II glycogen storage disease
d) Alkaptonuria

934. Alcohol causes - *(PGI 99)*
a) Dilated cardiomyopathy b) HOCM
c) Restrictive cardiomyopathy d) None

935. IVue regarding cardiomyopathy - *(PGI Dec 08)*
a) RV dilatation is present
b) May result from thyroxicosis
c) Secondary to alcohol
d) Good prognosis
e) Aortic valve calcification is seen

936. All are true about hypertropic obstructive cardiomyopathy except - *(AI95)*
a) Assymmetric septal hypertrophy
b) Dilatation of atria
c) Dilatation of ventricles
d) Outflow obstruction

937. Which one of the following is not a cause for restrictive cardiomyopathy - *(ARMS May 04)*
a) Alcohol b) Hemochromatosis
c) Amyloidosis d) Sarcoidosis

938. Causes of restrictive cardiomyopathy are -
a) Amyloid b) Sarcoidosis *(PGI Nov 09)*
c) Viral myopathy d) Alcohol
e) Storage disease

939. Which worm causes *myocarditis-(NEET/DNBPattern)*
a) Trichuris b) Trichinella
c) Enterobius d) Strohgyioides

940. Myocarditis can be cuased by - *(PGI 88)*
a) Pertussis b) Measles
c) Diphtheria d) Scorpionsting

941. The causes of pericarditis are -
a) Infection b) Trauma
c) Neoplasia d) Acute mycardial infarction
e) Any of the above

942. Hemorrhagic pericarditis is seen in - *(PGI 96)*
a) Uremia b) TB
c) Neoplasm d)All

943. Causes of constrictive pericarditis is/are -
a) T.B. b) SLE *(PGI Nov09)*
c) Brucellosis d) Histoplasmosis
e) Hydralazine

944. Type of pericarditis in tuberculosis - *(ARMS 91)*
a) Hemorrhagic b) Constrictive
c) Fibrinous d) Serofibrinous

945. Hemopericardium is seen in -
a) Chest injury b)MI
c) Ruptured Aortic aneurysm d) All

946. Most common tumour of heart *is-(NEET/DNB Pattern, AI 99, 94)*
a) Myxoma b) Rhabdomyosarcoma
c) Fibroma c) Leiomyosarcoma

947. TVue about myxoma is - *(AI 99)*
a) Mostly seen in left atrium
b) Can metastasize to other sites
c) Rarely recurs after removal
d) Most often seen in right atrium

948. Characteristic pathological finding in carcinoid of heart- *(AI 10)*
a) Fibrous endocordial thickening of right ventricle andtricuspid valve
b) Collagen deposition in wall of right ventricle and tricuspid valve
c) Interstitial fibrous thickening of right ventricle and pulmonic valve
d) Mononuclear inflammatory infiltrate in the wall of right atrium

949. Which carcinoma metastases to heart?
a) Ca breast b) Ca stomach *(PGI May 10)*
c) Ca lung d) Ca urinary bladder
e) Osteosarcoma

MISCELLANEOUS (CVS1

950. Tigered effect in myocardium is due to -
a) Malignant change *(NEET/DNB Pattern)*
b) Fat deposition
c) Seen in rheumatic fever
d) Associated with myocarditis

951. What does "cardiac polyp" mean? *(ARMSMay 11)*
a) Acute infarct b) Cardiac aneurysm
c) Benign tumor d) Fibrinous clot

952. True about subendocardial hemorrhage is all except-
a) May be seen after head injury *(ARMS Nov 10)*
b) Involves RV wall
c) Continous pattern of sheet like
d) Flame shaped hemorrhages

953. Calcification of the aortic valve is seen in - *(AI 95)*
a) Aortic stenosis b) Aortic regurgitation
c) Marfan's syndrome d) Hurler's syndrome

954. Nicoladoni sign is also known as - *(ARMSNov 08)*
a) Branham sign b) Murray sign
c) Frei's sign d) Darrier's sign

955. In MVPS mitral valve HPE shows - *(ARMSNov 07)*
a) Hyaline degeneration
b) Elastic degeneration
c) Myxomatous degeneration
d) Fibrinoid necrosis

931) a 932) a 933) d 934) a 935)a,b,c 936) c 937) a 938)a,b,e 939) b 940) b,c 941) e 942) d 943)a,b,d,e
944)a,b 945)d 946)a 947)a 948)a 949)a,c 950)b 951)d 952)b 953)a 954)a 955)c

956. A young female patient came for routine examination. On examination a mid systolic click was found. There is no history of RHD. The histopathological examination is most likely to *show-(AIIMSMay 12)*
a) Myxomatous degeneration and prolapsed of the mitral valve
b) Fibrinous deposition on the tip of papillary muscle
c) Rupture of chordae tendinae
d) Aschoff nodule on the mitral valve

957. The most common cause of SVC syndrome is -
a) Thrombosis *(AJ 95, 94)*
b) Extrinsic compression
c) Mediastinal lymphoma
d) Teratoma

958. Which one of the following is not a cause for restrictive cardiomyopathy - *(DNB Dec 11)*
a) Alcohol b) Hemochromatosis
c) Amyloidosis d) Sarcoidosis

959. Flat vegetations in pockets of valves are due to -
a) Rheumatic heart disease *(DNB Dec 11)*
b) Libman sacks Endocarditis
c) NBTE
d) Infective endocarditis

960. Factor responsible for Cardiac Hypertrophy is?
a) ANF b) TNF alpha *(DNB Dec 10)*
c) c-myc d)TGFbeta

961. Libmann sacks endocarditis is associated with?
a) SLE b) NBTE *(DNB June10)*
c) Rheumatic d) Fungal

962. Which of the following is not a common cause of vasculitis in adults - *(DNB June 10)*
a) Giant cell artheritis
b) Kawasaki disease
c) Henoch schonlein purpura
d) Polyarteritis nodosa

963. Onion skin thickening of arteriolar wall is seen in - *(DNB June 10)*
a) Atherosclerosis
b) Median calcific sclerosis
c) Hyaline arteriosclerosis
d) Hyperplastic arteriosclerosis

964. Takayasu disease most commonly affects?
a) Coeliac axis b) Coronaries *(DNB Dec 09)*
c) Radial artery d) Renal artery

965. Hypersensitivity vasculities seen in - *(DNB Dec 09)*
a) Capillaries
b) Arterioles
c) Post capillary venules
d) Medium sized vessels

966. Which of the following condition(s) are associated with raised ANCA except - *(DNB June 09)*
a) Wegener's granulomatosis
b) Polyarteritis Nodosa
c) Microscopic Polyangitis
d) Churg-Strauss syndrome

967. Ascending aorta involvement is the commonest site of which aneuryam - *(DNB June 09)*
a) Syphilitic b) Atherosclerotic
c) Mycotic d) None of the above

968. Onion skin thickening of arteriolar wall is seen in- *(DNB Dec 08)*
a) Atherosclerosis
b) Median calcific sclerosis
c) Hyaline arteriosclerosis
d) Hyperplastic arteriosclerosis

969. MC valve involved in Rheumatic fever -
a) Mitral b) Aortic *(DNB Dec 08)*
c) Pulmonary d) Tricuspid

970. In myocardial infarction, microscopic picture of coagulationnecrosis with neutrophillic infiltration is seen in - *(DNB Dec 08)*
a) 4-12 hrs b) 12-24 hr
c) 1-3 days d) 3-7 days

971. Approximate time, at the end of which the quantity, of ATP within ischemic cardiac myocytes is reduced to 10% of original is - *(DNB Dec 08)*
a) <2 minutes b) 10 minutes
c) 20 minutes d) 40 minutes

972. Hypersensitivity vasculitis is seen *in-(DNBJune 08)*
a) Postcapillary venules b) Arterioles
c) Veins d)Capillaries

973. Heart failure cells are found in - *(DNB June 08)*
a) Myocardium b) Lungs
c) Liver d) Spleen

974. In Wegener's granulomatosis cytoplasmic anti neutrophilic antibodies are directed against - *(DNB*
a) Proteinase 1 b) Proteinase 2 *June 08)*
c) Proteinase 3 d) Proteinase 4

975. The common primary tumor of heart is- *(DNB June 08)*
a) Rhabdomyoma b) Fibroma
c) Myxoma d) Lipoma

976. Atrial myxoma commonly arises from-
a) Left ventricle b) Left atrium*(DNB June 08)*
c) Right ventricle d) Right atrium

977. ASLO Titres are used in the diagnosis of -
a) Acute rheumatoid arthritis *(DNB June 08)*
b) Acute rheumatic fever
c) Ankylosing spondylitis
d) Osteoarthritis

978. Most common cause of aortic aneurysm is -
a) Atherosclerosis b) Syphilis *(DNB June 08)*
c) Trauma d) Congenital

979. Mitral valve vegetations do not embolise usually to -
a) Brain b) Liver *(DNB Dec 07)*
c) Spleen d) Lungs

980. Most common site of myocardial infarction is -
a) Ant. wall of left ventricle *(DNB Dec 0 7)*
b) Post, wall of right ventricle
c) Post, wall of left ventricle
d) Inf. wall of left ventricle

956) a 957) b 958) a 959) b 960) c 961) a 962) b>c 963) d 964) d 965) c 966) b 967) a 968) d 969) a
970) c 971)d 972) a 973)b 974)c 975)c 976)b 977)b 978)a 979)d 980)a

981. Following are major criteria of rheumatic fever, except - *(DNB Dec 0 7)*
a) Chorea b) Arthritis
c) Carditis d) Prolonged P-R interval

982. Fibrinoid necrosis is seen in following except -
a) PAN *(DNB Dec 07)*
b) Diabetes mellitus
c) Malignant hypertension
d) SLE

983. Commonest histological finding in benign hypertension is - *(DNB June 0 7)*
a) Proliferating endarteritis
b) Necrotising arteriolitis
c) Hyaline arteriosclerosis
d) Cystic medial necrosis

984. The probable interval between throat infection and onset of rheumatic fever is - *(DNB June 07)*
a) 2-4 hours b) 2-4 days
c) 2-4 weeks d) 2-4 months

985. Ascoff's bodies are seen in - *(DNB June 07)*
a) Rheumatic myocarditis
b) Rheumatic arthritis
c) Bacterial endocarditis
d) Marantic endocarditis

986. Large warty vegetation are characteristic of-
a) SLE b) SABE *(DNB June 07)*
c) Both d)None

987. Cells seen in MI at 48 hours are - *(DNB June 07)*
a) Polymorphs b) Fibroblasts
c) Lymphocytes d) Macrophages

988. Endothelial cells have - *(Bihar 03)*
a) Weibel-Palad bodies b) Gamma-gandy bodies
c) Both d) None

989. In which of the following locations would you least except to find significant atherosclerotic lesions in a patient with risky* factors of smoking, hypertension, diabetes mellitus, and serum cholesterol level of 280 mg/dl - *(MAHA 05)*
a) Left main coronary artery
b) Aortic bifurcation
c) Circle of Willis
d) Pulmonary artery trunk

990. Most accepted theory of atheroscerosis is -
a) Lipid infiltration of intima *(KERALA 95)*
b) Reaction to endothelial injury
c) Due to smoking
d) Hyperlipidemia

991. Medial calcification is seen in - *(TN 90)*
a) Atherosclerosis b) Arteriolosclerosis
c) Monckebergs sclerosis d) Dissecting aneurysm

992. Which of the following is the least common site of atherosclerotic lesions - *(DELHIPGMar 09)*
a) Aortic bifurcation
b) Pulmonary arterial trunk
c) Common carotid artery
d) Middle cerebral artery

993. Monckenbergs sclerosis invloves - *(Jipmer 95)*
a) Intima b) Media
c) Externa d) All the layers

994. Leu tic aneurysms are common in all except -
a) Ascending aorta *(AIIMS81)*
b) Arch of aorta
c) Descending thoracic aorta
d) Abdominal aorta

995. Tree bark like calcification in chest X-ray is seen in- *(JIPMER93)*
a) Syphilitic aneurysm b)Aorto-Arteritis
c) Neurofibromatosis d) Atherosclerosis

996. Dissecting haematoma is a clinical complication occurring in - *(COMED09)*
a) Turner's syndrome b) Klinefelter's syndrome
c) Down syndrome d) Marfan syndrome

997. Onion skin thickening of arteriolar wall is seen in-
a) Atherosclerosis *(Corned08)*
b) Median calcific sclerosis
c) Hyaline arteriolosclerosis
d) Hyperplastic arteriolosclerosis

998. Kaposi sarcoma occurs with infection due to -
a) HHV8 b)HHV4 *(IN04)*
c) HHV2 d)HHVl

999. Characterstic CVS leison in syphils is - *(CMC 98)*
a) Aneurysm of arch of aorta b) AR
c) Aortic ring dilatation d)AS
e) Medial necrosis

1000. PAN is associated with - *(DPGEE 08)*
a) Hepatitis A b) Hepatitis B
c) Hepatitis C d) Hepatitis E

1001. The follow is true of Endothelins- *(BIHAR 03)*
a) Secreted by endothelium
b) Most potent vasoconstrictor
c) Both
d) None

1002. Atherosclerosis in the coronary circulation most commonly affects - *(MAHE 98)*
a) Left anterior descending artery
b) Left circumflex
c) Right coronary
d) All of the above

1003. In atherosclerosis, increased LDL in monocyte macrophage due to - *(DPG10)*
a) LDL receptors on macrophage
b) LDL receptors on endothelium
c) Lipids in LDL get oxidized
d) All of the above

1004. Coronary occlusion is caused by the following except - *(JIPMER 80, AMU 85)*
a) Atheromatous narrowing of vessel
b) Haemorrhage in to an atheromatous plaque
c) Rupture of atheromatous plaque in to the lumen
d) Organization of thrombus
e) Calcification of atheroma

981)d 982)b 983)c 984)c 985)a 986) b 987)a 988)a 989)d 990) b 991)c 992)b 993)b 994)d
995) a 996) d 997) d 998) a 999) c 1000) b 1001) a 1002) a 1003) c 1004) d,e

1005. Approximate time, at the end of which the quantity, of ATP within ischemic cardiac myocytes is reduced to 10% of original is - *(Karn 11)*
a) <2 minutes b) 10 minutes
c) 20 minutes d) 40 minutes

1006. In myocardial infarction the infarct accquires hyperemic rim with an yellow centre at -
a) 3-7 days b) 10-20 days *(JIPMER95)*
c) 7-14 days d) 1-2 hours

1007. In myocardial infarction, light microscopic changes are evident by - *(Kerala 03)*
a) 1 hour b) 1/2 hour
c) 6 hours d) 24 hours

1008. In myocardial infarction, early light microscopic change is - *(BIHAR 03)*
a) Waviness of fibres b) Necrosis of fibres
c) Round cell infiltration d) None

1009. Autopsy finding after 12 hrs in a case of death due to MX - *(MAHE 05, DPG10)*
a) Caseous necrosis b) Coagulative necrosis
c) Fat necrosis d) Liquefactive necrosis

1010. In myocardial infarction, microscopic picture of coagulation necrosis with neutrophilic infiltration is seen in - *(Corned 08)*
a) 4-12 hrs b) 12-24 hrs
c) 1-3 days d) 3-7 days

1011. The infarcted myocardium is replaced by scar tissue is in - *(JIPMER 78, PGI80)*
a) 2 weeks b) 4 weeks
c) 6 weeks d) 10 weeks

1012. Enzyme appearing last in MI is - *(ASSAM 95)*
a) CPK b)LDH
c) SGOT d) SGPT

1013. Me callums patch is seen in the - *(PGI86)*
a) Right atrium b) Left atrium
c) Left ventricle d) Right ventricle

1014. The most characteristic histological finding of acute rheumatic carditis is- *(Kerala 89)*
a) Fibrinous pericarditis
b) Vegetations on mitral valve leaflets
c) Aschoff bodies in myocardium
d) Increased vascularity of the valves

1015. All are true of actue rheumatic fever except -
a) Aschoff nodule in mycoacardium *(AI90)*
b) Focal myocardial fiber necrosis
c) Microthrombi in arteriole
d) Lymphocytic myocarditis

1016. Features of rheumatic carditis are all except -
a) Aschoff nodule *(PGI 89)*
b) Lymphatic infiltration
c) Myocardial fibrosis
d) Intramyocardial microemboli

1017. The commonest type of pericarditis in acute rheumatic fever is - *(AI 91)*
a) Serous b) Fibrinous
c) Serofibrinous d)Purulant

1018. Exudate in rheumatic fever is - *(JIPMER 95)*
a) Serous b) Purulent
c) Fibrinous d) Myxomatous

1019. In Rheumatic fever, fibrinoid necrosis occurs in
a) Mycardium b) Collagen *(TN91)*
c) Perciardium d) Endocardium

1020. The % of coincidence between sore throat and acute rheumatic fever is - *(JIPMER 95)*
a) 3% b) 5%
c) 7% d)9%

1021. Aschoff cells are - *(JIPMER 95)*
a) Fibroblastsb) Monocytes
c) Neutrophils d) Lymphocytes

1022. Pathognomic features of acute rheumatic fever is - *(DELHIPG Feb. 09)*
a) Pericarditisb) Myocarditis
c) Mitral stenosis d) Aschoffs nodules

1023. Characterstic of acute rheumatic fever- *(JIPMER 98)*
a) Endocarditisb) Mycocarditis
c) Pericarditis d) Pancarditis

1024. Ascoff's bodies are seen in - *(Jipmer 11)*
a) Rheumatic myocarditis
b) Rheumatic arthritis
c) Bacterial endocarditis
d) Marantic endocarditis

1025. True about vegetation in rheumatic fever is -
a) Soft & friable b) Large & firm *(UP 96)*
c) Soft & firm d) Large & friable

1026. Causative organism in acute bacterial endocarditis is - *(UPSC 85, 87, Kerala 88)*
a) Staphylococcus aureus
b) Streptococcus viridans
c) Pneumococcus
d) Streptococcus pyogenes

1027. Myocardial abscess is most common in acute endocarditis caused by- *(Kerala 2K)*
a) Streptococcus viridans b) Enterococci
c) Streptococcus pneumoniae d) Listeria
e) Staphylococcus aureus

1028. Bactrial endocarditis can cause all except - *(AI90)*
a) Cerebral infarct
b) Focal glomerulamephritis
c) Meninigitis
d) Subcutaneous nodules

1029. Large warty vegetation are characteristic of-
a) SLE b) SABE *(CUPGEE96)*
c) Both d) None

1030. Commonest complication of infective endocardities is- ***(AI 89)***
a) Thromboembolism b) Mycotic aneurysm
c) Fibrinous pericarditis d) Mycardial abscesses

1031. Which of the folloeing true about libman sac's endocarditis- *(Manipal 2006)*
a) It is along the line of closure
b) On either side of valve
c) It is friable
d) Organism are seen

1005) d 1006) a 1007)b 1008)a 1009)b 1010)c 1011)c 1012) b 1013)b 1014)c 1015)c 1016)d 1017)b 1018)c
1019)b 1020) a 1021)b 1022)d 1023)d 1024)a 1025)c 1026)a 1027)e 1028)d 1029)b 1030)d 1031)b

1032. Libman Sach's **endocarditis is associated with -**
a) Rheumatic heart disease b) SLE *(MH11)*
c) Carcinoma d)None

1033. All are true about hypertropic obstructive cardiomyopathy except - *(KERALA 95)*
a) Assymmetric septal hypertrophy
b) Dilatation of atria
c) Dilatation of ventricles
d) Outflow obstruction

1034. Which of the following findings expected on microscopic examination of biopsy from heart showing ventricular hypertrophy with asymmetric septal thickening - *(HP 2006)*
a) Aschoff bodies
b) Disorganisation of myofibrils
c) Infiltration by inflammatory cells
d) Localised fibrous scarring

1035. All are the causes of myocarditis except -
a) Trichinosis *(Karnat 05)*
b) Mycobacterium tuberculosis
c) Corenybacterium diphtheria
d) Systemic lupus erythromatosis

1036. Myocarditis can be caused by - *(Maharashtra 10)*
a) Schistosomia
b) Ankylostoma duodenale
c) Trichuris trichura
d) Trichinella spiralis

1037. Bloody pericardial effusion can be due to -
a) Uremic pericarditis *(CMC 87)*
b) Tuberculosis pericarditis
c) Tumour infiltration
d) All of the above

1038. The substance that accumulates in cardiac myxoma is - *(JIPMER 95)*
a) Mucopolysaccharides
b) Sialo mucin
c) Gelatin
d) Glycoprotein

1039. Metastasis to heart are mostly from - *(SGPGI04)*
a) Breast b) Prostate
c) Ovary d)All

1040. Commonest complication of prosthetic valve is -
a) Embolism *(Kerala 91)*
b) Subacute bacterial endocarditis
c) Rejection
d) Infarction

HEMATOLOGY RBC

1041. Progenitor hematopoetic stem cells originate in-
a). Bone Marrow *(NEET/DNB Pattern)*
b) Thymus
c) Lymph node
d) Spleen

1042. Which of the following statement(s) is/are about reticulocyte? *(PGI Dec 08)*
a) Smaller than RBC
b) t in hemolytic anemia
c) Staining is done by Romanowsky stain
d) Contain nucleus
e) Chromatin is densly condensed

1043. Ineffective erythropoiesis occurs in- *(PGI01)*
a) Myelodysplastic syndrome
b) Megaloblastic anemia
c) Leukemia
d) Aplastic anemia
e) Iron deficiency anaemia

1044. The size of the red blood cells is measured by -
a) MCV b) MCHC *(PGI 07)*
c) ESR d)MCH

1045. Reticulocytosis is seen in - *(NEET/DNB Pattern)*
a) Hemolytic anemia b) Megaloblastic anetnia
c) Aplastic anemia d) Iron deficiency

1046. Macrocytosis in CBC can be diagnosed by -
a) I MCV b)lMCHC *(PGI Dec 06)*
c) 1 Hematocrit d) Red cell width

ANEMIA

1047. All are features of Intravasular hemolysis except-
a) Thrombocytopenia *(AIIMS Dec 95)*
b) Hemosiderinuria
c) Decreased haptoglobin
d) Raised indirect bilirubin

1048. Extravascular hemolysis causes - *(AI94)*
a) Hemoglobinemia b) Hemosiderinuria
c) Jaundice d) Hemoglobinemia

1049. Intravascular hemolysis occurs in - *(PGIDec 2K, June 05)*
a) Hereditary spherocytosis
b) Acute G6PD
c) Sickle cell ds
d) Thalassemia
e) PNH

1050. Low serum haptoglobin in hemolysis is masked by -
a) Pregnancy *(AIIMS Nov 09)*
b) Liver disease
c) Bile duct obstruction
d) Malnutrition

1051. Which of the following causes hemolytic anemia -
a) Hereditary spherocytosis *(PGIDec 07)*
b) Infection
c) Iron deficiency
d) Sickle cell anemia
e) Copper deficiency

1052. Osmotic fragility is increased in -
a) Sickle cell anaemia > *(NEET/DNB Pattern)*
b) Thalassemia
c) Hereditary; spherocytosis
a) Chronic lead poisoning

1032) b 1033) c 1034)b 1035)b 1036)d 1037)d 1038)a 1039)a 1040)a 1041)a 1042)b 1043)a,b,e 1044)a 1045) a 1046) c,d 1047)a 1048)c 1049)b,c,e 1050)c 1051)a,b,d 1052)c

1053. Unconjligated hyperbilirubinemia with increased urobilinogen is seen in - *(AI10)*
a) Hemolytic anemia b) Liver cirrhosis
c) Bile duct obstruction d) Sclerosing chalangitis

1054. Shape ofRBC is biconcave due to? *(DNBDec09)*
a) Ankyrin b) Spectrin
c) Band protein d) Glycophorin-C

1055. Hereditary spherocytosis is due to.....deficiency -
a) Spectrin b)Invertin *(PGIJune2K)*
c) Cytokeratin d) All of the above

1056. The following protein defects can cause hereditiary spherocytosis except - *(AI 07)*
a) Ankyrin b)Palladin
c) Glycophorin C d) Anion transport protein

1057. Involved in Hereditary spherocytosis- *(PGI June 09)*
a) Spectrin b) Ankyrin
c) Pyrin d) Band 4.2
e) Actin

1058. Hereditary spherocytosis is due to - *(PGIDec 97)*
a) Spectrin deficiency b) Integrin defect
c) Collagen defect d) Defect with glycoprotein

1059. The peripheral smear of Hereditary spherocytosis will show spherocytes - *(PGIDec 06)*
a) Usually of same size b) Reticulocytosis seen
c) Smaller size d) Anemis is negligible
e) Always a/w T MCHC

1060. Bite cells are seen in - *J0[EET/mB Pattern)*
a) G6PD deficiency: b) SCA
c) Hereditary spherocytosis d) Trauma

1061. Spherocytosis in blood smear seen in- *(PGI June 04)*
a) Haemoglobin-C
b) Mechanical trauma
c) Hereditary spherocytosis
d) Hereditary elliptosis

1062. Maximum spherocytes is seen *in-(NEET/DNB Pattern)*
a) Autoimmune haemolytic anemia
b) VitB 12 deficiency
c) Aplastic anemia
d) None

1063. Spherocytosis of RBC's is a common feature in - *(PGI June 99)*
a) G-6P-D deficiency b) Sickle cell anemia
c) CML d)All

1064. A 23-year-old female presented with jaundice and pallor for 2 months. Her peripheral blood smear shows the presence of spherocytes. The most relevant investigation to arrive at a diagnosis is - *(AIIMS May 12)*
a) Reties count b) Osmotic fragility test
c) Coombs test d) Tests fro PNH

1065. Defect leading to thalassemia lies in -*(PGIDec 97)*
a) Haemoglobin b) Osmotic fragility
c) RBC membrane d) Platelets

1066. HbA2 is - *(NEET/DNB Pattern)*
a) Alpha2 Beta 2 b)Alpha 2 Gamma2
c) Beta 2 Gamma 2 d) Alpha 2 Delta 2

1067. The primat^ defect which leads to sickle cell anemia is - *(NEET/DNB Pattern, AI 03)*
a) An abnormality in porphyrin part of hemoglobin
b) Replacement of glutamate by valine in |}-chain'of HbA
c) A nonsence mutation in the P-chain of HbA
d) Substitution of valine by glutamate in the a-chain of HbA

1068. Sickle cell mutation is - *(NEET/DNB Pattern)*
a) Point mutation b) Select mutation
, c) Frame shift mutation d) Nonsense mutation

1069. True about Sickle cell anaemia except -
a) Commonly seen in black *(PGI June 04)*
b) R.B.C. size is altered
c) V for G in p-chain globin
d) Deletion of gene

1070. Factors affecting sickling in sickle cell anemia are - *(PGI June 08)*
a) HbS concentration b) HbA
c) pH d) Oxygenation

1071. Sickle cell trait patient do not have manifestations as that of Sickle cell disease, because-
a) 50% HbS is required for occurrence of sickling
b) HbA prevents sickling *(AIIMS Nov 01)*
c) 50% sickles
d) HbA prevents polymerazitation of Hbs

1072. Which one of the following statements about Hemoglobin S (HbS) is not true - *(AIIMSNov 04)*
a) Hemoglobin HbS differs from hemoglobin HbA by the substitution of Val for Glu in position 6 of the beta chain
b) One altered peptide of HbS migrates faster towards the cathode (-) than the corresponding peptide of HbA
c) Binding of HbS to the deoxygenated HbA can extend the polymer and cause sickling of the red blood cells
d) Lowering the concentration of deoxygenated HbS can prevent sickling

1073. In sickle cell trait, number of bands found in Hb-
a) 2 b) 1 *(PGI June 98)*
c) 4 d) 5

1074. In sickle cell anaemia true is - *(PGI June 2000)*
a) Autosplenectomy due to thrombosis &infarction
b) Microcytosis
c) Microcardia
d) Splenomegaly

1075. Following are the findings in sickle cell Anemia, except - *(PGI June 98)*
a) Fish vertebra
b) Enlarged heart
c) Splenomegaly usually seen
d) Leukocytosis

1053) a 1054) b 1055)a 1056)c 1057)a,b,d 1058)a 1059)b,c,d 1060)a 1061)b,c,d 1062)a 1063)a 1064)c
1065) a 1066) d 1067)b 1068)a 1069)d 1070)A11 1071) a 1072) c 1073)a 1074)a 1075)c

1076. Crew haircut appearance in X-ray skull and Gandy gamma bodies are seen in - *(AIIMSNov 93)*
a) G-6-PD deficiency
b) Hodgkin's lymphoma
c) Hereditary spherocytosis
d) Sickle cell anaemia

1077. Heterozygous sickle cell anemia gives protection against- *(AI10)*
a) G6PD b) Malaria
c) Thalassemia d) Dengue fever

1078. Thalassemia occurs due to which mutations -
a) Mis sense b) Splicing*(PGI Dec 2K)*
c) Transition d) Frame-shift
e) Truncation

1079. In Beta thalassemia, there is - *(AIIMSMay 01)*
a) Increase in beta chain, decrease in alpha chain
b) Decrease in beta chain, increase in alpha chain
c) Decrease in beta chain, decrease in alpha chain
d) Increase in beta chain, increase in alpha chain

1080. |3-thalasemia trait; true about - *(PGI June 04)*
a) THbF b)THbA2
c) Microcytosis d) Severe anaemia

1081. Hb A 2 concentration in thalassemia trait is -
a) 1 b) 1-2.5 *(PGI June 99)*
c) 2.5-3.5 d)>3.5

1082. HbA2 is raised in - *(NEET/DNB Pattern)*
a) Beta thal trait
b) Sickle cell anemia
c) Hereditory spherocytosis
d) None

1083. The peripheral blood smear of a patient shows features of thalasemia, also presented with anaemia. Family history is also +ve. The investigation done to establish the diagnosis is - *(AIIMS June 99)*
a) ESR estimation
b) Blood spherocyte estimation
c) Bone marrow aspiration
d) Hb-electrophoresis

1084. NESTROFT test is used in screening of -
a) Thalassemia *(AIIMS Nov 11)*
b) Autoimmune hemolytic anemia
c) Spherocytosis
d) G6PD deficiency

1085. In a-thalassemia - *(NEET/DNB Pattern)*
a) Excess a-chain b) No a-chain
c) Excess β-chain d) No β-chain

1086. HbH is associated with - *(AI 11)*
a) Deletion of 3 alpha genes
b) Deletion of 4 alpha genes
c) Deletion of 3 beta genes
d) Deletion of 4 beta genes

1087. Paroxymal noctural hemoglobinuria is due to -
a) Acquired red cell defect *(NEET/DNB Pattern)*
b) Cpngential red cell defect
^SSl&c) Auto immune defect
slits d) Lead poisoning

1088. Which is not a feature of paroxysmal nocturnal hemoglobinuria - *(AIIMS 93)*
a) Increased LAP score b) Thrombosis
c) Thrombocytopenia d) Hemolysis

1089; Ham test is done for - *(NEET/DNB Pattern; PGI98)*
a) PNH b) Megaloblastic anemia
'iikM': **q)^Sicfcle ce^ ^aqinia ^^ d) Th^lassejnia i ,**

1090. An abnormal Ham test is most likely associated with which of the following ? *(AIIMSNov 11)*
a) Defect in spectrin
b) Defective GPI anchor
c) Defect in complement
d) Mannose-binding residue defect

1091. PNH is associated with a deficiency of - *(AI 10)*
a) DAF b)MIRL
c) GPI anchored protein d) All of the above

1092. Mutation of which of the following gene is most important in paroxysmal nocturnal hemaglobinuria-
a) Decay accelerating factor (DAF) *(AI 10)*
b) Membrane inhibitor of reactive lysis (MIRL)
c) Glycosyl phosphatidyl inositol (GPI)
d) CD8 binding protein

1093. Coomb's positive hemolysis is seen in - *(PGIDec 97)*
a) TTP b)SLE
c) ITP d) PNH

1094. Cold agglutinin is - *(NEET/DNB Pattern)*
a) IgCi b)JgM
c) IgA clHgD

1095. Donath landsteiner antibody is seen in-
a) PNH *(PGI June 99)*
b) Waldenstrom's macroglobulinemia
c) Paroxysmal cold hemoglobinuria
d) Malaria

1096. Cold haemagglutinin is associated with - *(AI 08)*
a) Anti Ig M b) Anti Ig G
c) Anti Ig A d) Donath Landsteiner antibody

1097. All of the following are associated with coombs positive hemolytic anemia except - *(AI 09)*
a) Thrombotic thrombocytopenia purpura (TTP)
b) Scleroderma
c) SLE
d) PAN

1098. Coombs positive hemolytic anemia is associated with
a) TTP b)PAN *(AI09)*
c) SLE d)HUS

1099. Non immune hemolytic anemia occurs in - *(PGI June 98)*
a) SEE b) P. vivax infection
c) CLL d)CML

1100. Autoimmune haemolytic anemia is seen in - *(AI 01)*
a) ALL b)AML
c) (XL d)CML

1101. Microangiopathic hemolytic anemia is seen in -
a) HUS *(PGI June 02, 01)*
b) ITP
c) Malignant hypertension
d) Prosthetic valves
e) TTP

1076)d 1077) b 1078)b,d 1079)b 1080)a,b,c 1081)d 1082)a 1083)d 1084)a 1085)b 1086)a 1087)a 1088)a 1089) a 1090)b 1091)d 1092)c>a 1093)b 1094)b 1095)c 1096)d 1097)a 1098)c 1099)b 1100)c 1101)a,c,d,e

1102. In microangiopathic hemolytic anemia, cells seen are - *(PGI June 98)*
a) Fragmented RBC's b) Schistocytes
c) Splierocytes d) Anisocytes

1103. Cause of fragmented RBC in peripheral blood -
a) Microangiopathic hemolytic anemia
b) D.I.C. *(PGI June 05)*
c) Hemophilia-A
d) Malignant hypertension
e) HELLP syndrome

1104. Microangiopathic hemolytic anemia -
a) F T P b) I T P *(NEET/DNB Pattern)*
a - S ^ c) 1 e purpura d) CML

1105. Iron is absorbed from - *(A193)*
a) Small intestine b) Stomach
c) Large intestine d) None

Iron is stored in- *(NEET/WDN^ Patterti)*
;a) Bone marrow ; *y)* Livers*% x hi*!' *"0 1* ,
c) Spleen d) AUofth&above *0

1107. Iron absorption is decreased by A/E- *(AUMSJune 97)*
a) Calcium b) Tetracycline
c) Phytate d) Ascorbic acid

1108. Iron deficiency anemia seen in - *(PGI Dec 06)*
a) CRF b) Billroth II operation
c) Hookworm d) Celiac sprue
e) Carcinoma colon

1109. True about iron deficiency anemia - *(PGI June 05)*
a) Microcytic hypochromic anemia
b) Decreased TIBC
c) Increased ferritin
d) Bone marrow iron decreased earlier than serum iron

The earliest sign of iron deficiency anaemia -
(NEET/DNB Pattern, AJIMS Feb 97 ,AI 97)
a) Increase in iron binding capacity
b) Decrease in serum ferritin level
c) Decrease in serum iron level
d) All the above

1111. Which is not seen in iron deficiency anaemia -
a) Hyper-segmented neutrophils *(AI 00)*
b) Microcytosis preceeds hypochromia
c) MCHC<50%
d) Commonest cause of anaemia in India

1112. Best test for assessment of iron status is - *(AI01)*
a) Transferrin b) Ferritin
c) Serum iron d) Hemoglobin

1113. True about iron deficiency anemia *is/are-(PGIJune 09)*
a) Howel jolly bodies b) Anisocytosis
c) Polychromasia d) Volume of cell 88 fl
e) Volume of cell 120 fl

1114. A 40 year male has Hb-10 gm%, MCV-65 fL, RDW-16%, platelet count 4.5 lac/pL. Additional finding are- *(PGIJune 09)*
a) Low S. transferrin b) t Iron binding capacity
c) t Hb A_2 d) t Serum copper
e) t S. ferritin

1115. Response to iron in iron deficiency anemia is denoted by - *(DNB Jun e 09)*
a) Restoration of enzymes
b) Reticulocytosis
V* c) Increase in iron binding capacity
d) Increase in hemoglobin

1116. Microcytosis is seen in - *(PGI June 04)*
a) Thalassemia b)HbLepore
c) Hb barfs

1117. A 30 years old female, RBC Counts 4.5 million, MCV 55 fl, Tc 8000, no history of blood transfusion?
a) Iron deficiency anemia *(AIIMS May 08)*
b) Thalassemia major
c) Thalassemia minor
d) Megaloblastic anemia

1118. A patient with microcytic hypochromic anemia. Hb-9%, serum iron-20 micro/dl, ferritin level-800mg/ml, transferrin percentage saturation-64. What is possible diagnosis? *(AIIMS Nov 10)*
a) Atransferrinemia b) Iron deficiency anemia
c) DMT 1 mutation d) Hemochromatosis

1119. Anemia of chronic disease is due to -
a) $VitB_{12}$ deficiency *(NEET/DNB Pattern)*
b) Folate deficiery
c) Decreased utilization of stored iron
d) Chronic blood loss

1120. Anemia of chronic disorder is characterized by -
a) T Sideroblast b) t TIBC *(PGIJune 98)*
c) t Bone marrow iron d) t Protoporphyrin

1121. In contrast to iron deficiency anemia in anemia of chronic disease, TIBC - *(AI 99)*
a) Decreases b) Increases
c) Normal

1122. A 25 year old lady on treatment for rheumatoid arthritis has following lab findings: Hb-9gm/dl, MCV- 55fl, serum iron-30microgm/dl, feritin-200ng/ml, TIBC- 298 microgm/dl. What is the most probable diagnosis? *(AIIMSNov 11)*
a) Thalassemia minor
b) Thalassemia major
c) Anemia of chronic disease
d) Iron deficiency anemia

1123. Anaemia in CRF is due to - *(PGIDec 06)*
a) *lEPO* b) *i* RBC survival
c) *i* Folate d) B.M. hypoplasia
e) Iron deficiency

1124. True regarding anaemia of chronic ds. are -A/E -
a) Decreased TIBC *(AUMSJune 99)*
b) Increased macrophage iron in marrow
c) Decrease serum ferritin level
d) Decreased serum iron levels

1125. Decrease in serum iron, decrease TIBC is seen in-
a) Iron deficiency anemia *(NEET/DNB Pattern)*
bj **Th^lasefni^^ -**
c) Anemia of chronic disease
d) Sideroblastic anemia

1102) a,b 1103)a,b,d,e 1104)a 1105)a 1106) d 1107)d 1108)A11 1109)a,d 1110)b llll)a 1112) b 1113) b,d
1114) b 1115) b 1116)a,b,c 1117)c 1118)a 1119)c 1120)c 1121)a 1122)c 1123)A11 1124)c 1125)c

1126. Not present in Sideroblastic anaemia is -
a) Microcytic anaemia *(AI1MSFeb 97)*
b) Decreased transferrin saturation
c) Sideroblast cells in blood smear film
d) Ineffective erythropoesis

1127. Sideroblastic anemia is caused by all except - *(NEET/DNB Pattern)*
a) Collegen vascular disease
b) Iron deficit
c) Lead poisoning
d) Cutaneous, porphyria

1128. 33 years old alcoholic on ATT presents with increased serum iron & increased transferrin saturation. Diagnosis ? *(Jipmer11)*
a) Iron deficiency anemia
b) Sideroblastic anemia
c) Megaloblastic anemia
d) Anemia of chronic disease

1129. Sideroblast seen in - *(PG1 Dec 05)*
a) Thalassemia b) Myelofibrosis
c) Alcoholism d) Iron overload

1130. Ringed Sideroblasts are seen in - *(AI08)*
a) Iron deficiency anemia
b) Myelodysplastic syndrone
c) Thalassemia
d) Anemia of chronic disease

1131. Which does not cause sideroblastic anaemia-
a) INH *(ARMS 94)*
b) Chloramphenicol
c) Myelodysplastic anaemia
d) Mercury

1132. Megaloblastic anemia is due to - *(PGI99)*
a) Defect in DNA synthesis
b) Defect in RNA synthesis
c) Defect in protein synthesis

1133. Hypersegmented neutrophils are seen in - *(NEET/DNB Pattern, AI98)*
a) Microcytic hypochronic anemia
b) Sideroblastic anemia
c) Megaloblastic anemia
d) Hemolytic anemia

1134. Which is the true statement regarding megaloblasitc anemia - *(PGI Dec 01)*
a) Megaloblastic precursors are present in bone marrow
b) Mean corpuscular volume is increased
c) Serum LDH is increased
d) Thrombocytosis occurs
e) Target cells are found

1135. Deficiency of the 'intrinsic factor of Castle' causes - *(NEET/DNB Pattern)*
a) Megaloblastic anemia b) Pernicious anemia
c) Cooley's anemia d) Aplastic anemia

1136. Schilling's test is false +ve in - *(PGI June 08)*
a) Celiac sprue
b) Renal insufficiency
c) Short bowel syndrome
d) Diverticulosis
e) Chronic pancreatitis

1137. Correct statement(s) regarding schilling test is/are-
a) Detect cause of cobalamin malnutrition
b) Normal in terminal ileal resection *(PGI Nov 09)*
c) Abnormal in pernicious anemia
d) Normal in bacterial overgrowth syndrome

1138. Causes of Vit. B_{12} deficiency megaloblastic anemia-
a) Fish tap worm infestation *(PGI June 05)*
b) Dilantin therapy
c) Gastrectomy
d) Ileal resection
e) Methotrexate

1139. Macrocytic anemia may be seen in all of these except - *(PGI June 02)*
a) Liver disease b) Copper deficiency
c) Thiamine deficiency d) Vitamin B_{12} deficiency
e) Ortic aciduria

1140. Megaloblastic anemia is seen in - *(PGI June 08)*
a) ileal resection
b) Crohn's disease
c) Intestinal lymphatic ectasia
d) Mentrier's disease
e) Pancreatic disease

1141. Megaloblastic anemia is/are not caused by -
a) Vitamin B_{12} deficiency *(PGI June 09)*
b) Folic acid deficiency
c) Sodium valproate
d) Aplastic anaemia
e) Alcohol

1142. All of the following cause macrocytic anaemia, except- *(ARMSFeb 97)*
a) Primaquine b) Methotrexate
c) Trimethoprin d) Azathioprine

1143. Differential diagnosis for pancytopenia with cellular bone marrow include the following except -
a) Megaloblastic anemia *(ARMSNov 07)*
b) Myelodysplasia
c) Paroxysmal Nocturnal Hemoglobinuria
d) Congenital dyserythropoietic anemia

1144. Pancytopemia is caused by - *(PGIDec 02)*
a) Aplastic anemia
b) MDS
c) Megaloblastic anaemia
d) Hairy cell leukaemia
e) Diamond Blackfan syndrome

1145. True about aplastic anemia - *(PGI June 05)*
a) Splenomegaly
b) Nucleated RBC in peripheral blood
c) Reticulocytopenia
d) Thrombocytopenia
e) Neutropenia

1146. Aplastic anemia can progress to - *(PGIDec 01)*
a) AML
b) Myelodysplastic anemia
c) Pure red cell aplasia
d) Paroxysmal nocturnal hemoglobinuria
e) Myelofibrosis

1126) b 1127) b 1128) b 1129)b,c,ci 1130)b 1131)d 1132)a 1133)c 1134)a,b,c 1135)b 1136)b 1137)a,c 1138)a,c,d 1139) b 1140)a,b,e 1141)c,d 1142) a 1143) a 1144)a,b,c,d 1145)c,d,e 1146)a,b,d

MISCELLANEOUS (RBC)

1147. The anaemia associated with leukaemia is -
a) Iron deficiency *(NEET/DNB Pattern)*
b) Megaloblastic type
c) Myelophthisic type
d) All of above

1148. A 40 year old male had undergone splenectomy 20 years ago. Peripheral blood smear examination would show the presence of - *(A103)*
a) Dohle bodies
b) Hypersegmented neutrophils
c) Spherocytes
d) Howell-Jolly bodies

1149. Howel-Jolly bodies may be seen after - *(Al 99)*
a) Hepatectomy b) Splenectomy
c) Pancreatectomy d) Cholecystectomy

1150. Which of the following is seen in the peripheral smear of a patient who has underwent splenectomy - *(PG1 Dec 01)*
a) Howell-Jolly bodies b) Eosinophilia
c) Macrocytosis d) Thrombocytopenia
e) Neutrophilia

1151. Cabot's ring in RBC is seen in? *(DNB Dec 09)*
a) Acquired hemolytic anemia
b) Hemochromatosis
c) Thalassemia
d) After splenectomy

1152. A 60 yr old female with history 8 blood transfusions in 2yrs. Her Hb-60g/L, TLC-5800, platelet- 3.4 lakhs, MCV-60, RBC-2.1 lakhs/mm3. She is having hypochromic microcytic anemia. Which investigation is not needed? *(AlIMSNov 10)*
a) Evaluation for pulmonary hemosisderosis
b) Urinary hemosiderin
c) Bone marrow examination
d) GI endoscopy

1153. The pathogenesis hypochromic anemia in lead poisoning is due to - *(AIIMS Nov 02)*
a) Inhibition of enzymes involved in heme biosynthesis
b) Binding of lead to transferrin, inhibiting the transport of iron.
c) Binding of lead to cell membrane of erythroid precursors.
d) Binding of lead to ferritin inhibiting their breakdown into hemosiderin.

1154. Lead causes following except - *(NEET/DNBPattern)*
a) Uroporphyrinuria b) Sideroblastic anemia
c) Basophilic stippling d) Macrocytic anemia

1155. Which of these are seen on Romanowsky stain - *(PG1 June 02)*
a) Reticulocytes b) Basophilic stippling
c) Heinz bodies d) Ho well-Jolly bodies
e) Cabot ring

1156. Bone marrow iron is increased in- *(PGIDec 03)*
a) Thalassemia
b) Iron deficiency anaemia
c) Anaemia in chronic disease
d) PNH
e) Megaloblastic anaemia

1157. Schistocyte is/are found in - *(PGIMay 10)*
a) TTP
b) DIC
c) Severe iron deficiency
d) March hemoglobinuria

1158. Helmet cells are characteristic of anemia of-
a) Hemolytic uremic syndrome
b) Polysplenia *(NEET/DNB Pattern)*
c) Spherocytosis
d) Acanthocytosis

1159. Which of the following regarding Bombay blood group is false? *(AIIMSMay 12)*
a) Lack of H, A and B antigen on RBCs
b) Lack of H, A and B substance in saliva
c) Lack of antigens of several blood group systems
d) H, A and B antibody will always be present in serum

1160. Most common cause of hereditary spherocytosis?
a) Spectrin b) Glycophorin *(DNB Dec 11)*
c) Ankyrin d) Band 4

1161. Adding glucose to stored blood causes?
a) Prevent hemolysis *(DNB Dec 11)*
b) Gives nutrition to cells
c) Increase acidosis of blood
d) Prevent Hyperkalemia

1162. All are seen in sickle cell anemia EXCEPT -
a) Target cells b) Jaundice *(DNB June 11)*
c) Reticulocytosis d) High hematocrit

1163. Common site of haematopoiesis in fetus is -
a) Liver b) Spleen *(DNB June 11)*
c) Bone marrow d)Gut

1164. In hereditary spherocytosis mutation not seen is?
a) Ankyrin b) Spectrin *(DNB Dec 10)*
c) Band-3 d) Na^+ Cl^- channel protein

1165. Warm antibody hemolytic anemia is seen in?
a) Methyldopa b) Penicillin *(DNB June 10)*
c) Quinine d) Stibophen

1166. Macrocytic anemia is seen in all EXCEPT -
a) Vitamin B12 deficiency *(DNB June 10)*
b) Hemolytic anemia
c) Post hemorrhagic anemia
d) Anemia of chronic disease

1167. Macrocytic anemia not seen in? *(DNB June 10)*
a) Folate deficiency
b) Anemia of chronic disease
c) Previous ileum resection
d) Regional enteritis

1147)c 1148) d 1149) b 1150)a 1151)a 1152)a 1153)a 1154)d 1155)a,b,d,e 1156)a,c,e 1157)A11 1158)a
1159) c 1160)c 1161) b 1162) d 1163)a 1164)d 1165)a 1166)d 1167)b

1168. Autosplenectomy is seen in? *(DNB June 10)*
a) Hereditary spherocytosis
b) G6 PD deficiency
c) Sickle cell anemia
d) Thalassemia major

1169. Pappenheimer bodies are composed of?
a) Copper b)Zinc *(DNB June10)*
c) Iron d)Lead

1170. Low serum haptoglobin in hemolysis is masked by - *(DNB June 10)*
a) Bile duct obstruction b) Liver disease
c) Malnutrition d) Pregnacy

1171. Gamma Gandy bodies contains hemosiderin and -
a) Na+ b) Ca++ *(DNB June10)*
c)Mg++ d)Cl-

1172. ABO antigens are not found in - *(DNB June 10)*
a) CSF b) Plasma
c) Saliva d) Semen

1173. Color of hemosiderin is? *(DNB Dec 09)*
a) Black b) Brown
c) Blue d) Yellow

1174. Sideroblastic anemia is seen in chronic poisoning of - *(DNB June 09)*
a) Lead b) Arsenic
c) Copper d) Mercury

1175. Echinocytes are types of- *(DNB June 09)*
a) RBC's b) Lymphocytes
c) Monocytes d) Platelets

1176. In sickle cell anaemia defect is in which chain -
a) a-chain b) p-chain *(DNB June 09)*
c) Both the chains d) None of these

1177. AH are true regarding Thrombotic Thrombocytopenia Purpurs (TTP), except -
a) Normal complement levels *(DNB Dec 08)*
b) Microangiopathic hemolytic anemia
c) Thrombocytopenia
d) Thrombosis

1178. How long can blood be stored with CPD-A -
a) 21 days b) 28 days *(DNB June 08)*
c) 35 days d) 42 days

1179. Blood when stored at 4°C can be kept for -
a) **7** days b) 14 days *(DNB June 08)*
c) 21 days d) 28 days

1180. Gamma Gandy bodies contains hemosiderin and -
a) Na^+ b) Ca^ *(DNB June08)*
c) **Mg^{++}** **d)cr**

1181. All are features of hemolytic anemia, except -
a) Hemoglobinuria *(DNB June 08)*
b) Jaundice
c) Increased haptoglobulin
d) Hemosiderinuria

1182. Sideroblastic anemia is seen in chronic poisoning of- *(DNB Dec 07)*
a) Lead b) Arsenic
c) Copper d) Mercury

1183. Burr cell is seen in - *(DNB Dec 07)*
a) Uremia
b) Hepatocellular carcinoma
c) Gastric carcinoma
d) Ovarian carcinoma

1184. What type of RBC seen in chronic renal failure?
a) Microcytic b) Macrocytic *(DNB Dec 07)*
c) Normocytic d)None

1185. Microspherocytosis in peripheral blood smear are seen in - *(DNB Dec 07)*
a) Sickle cell anemia
b) Autoimmune acquired haemolytic anaemia
c) Thalassemia
d) All of the above

1186. Thalassaemia major manifests in- *(DNB June 07)*
a) Childhood b) Puberty
c) Adolescence d) Middleage

1187. Which of the following indicates hemolysis? *(DNB*
a) Target cells b) Schistocytes*June 07)*
c) Acantocytes d) Basophilic stippling

1188. Blood when stored at 4°C can be kept for -
a) 7 days b) 14 days *(DNB June 07)*
c) 21 days d) 28 days

1189. Normal myeloid erthyroid ratio is - *(AIIMS87)*
a) 2:1 b) 1:1
c) 3:1 d)4:l

1190. Largest number of bone marrow cells are -*(J1PMER*
a) Promyelocytes b) Meta myelocytes *95)*
c) Erythroid cells d) Myelocytes

1191. Best method for hemoglobin estimation is -
a) Sahli's hemoglobinometer *(PGI89)*
b) Cyanmethaemoglobin method
c) Calorimetric method
d) None of the above

1192. The stain used for the demonstration of reticulocyte is - *(COMED 09)*
a) Wright stain b) Brilliant cresyl blue
c) Alcianblue d) Glemsa stain

1193. Malaria protection comes from all except -
a) G6PD deficiency b) Thalassemia *(JIPMER 99)*
c) Sickle cell anemia d) Acanthocytosis

1194. The normal total iron binding capacity *is-(UPSC88)*
a) 0.5-1 Omg/litre b) 1.5-2.5 mg/litre
c) 1.0-1.5mg/litre d) 2.54 mg/litre

1195. The size of the red blood cells is measured by -
a) MCV b) MCHC *(UP07)*
c) ESR d)MCH

1196. The blood indices which reflects iron deficiency more accurately is - *(IN 03)*
a) MCV b)MCH
c) MCHC d)PCV

1197. Erythropoiesis in adults occur in - *(IN91)*
a) Flat bones b) Spleen
c) Long bones d) Kidneys

1168) c 1169) c 1170) a 1171)b 1172) a 1173)b 1174) a 1175)a 1176) b 1177)None>a 1178)c 1179)c 1180)b
1181) c 1182) a 1183) a 1184)c 1185)b 1186)a 1187)b 1188) c 1189)c 1190) b 1191)b 1192)b 1193)d
1194) None 1195)a 1196)c 1197)a

1198. Which of the following is a cause of extravascular hemolysis - *(DPGEE 08)*
a) Falciparum malaria
b) Sickle cell disease
c) Mismatched blood transfusion
d) Microthrombi in circulation

1199. Direct coombs test is positive in hemolytic anaemia due to - *(AIIMS 8 7)*
a) Paroxysmal cold hemoglobinuria
b) Paroxysmal nocturnal hemoglobinuria
c) Hereditary spherocytosis
d) Idiopathic thrombocytopenic prpura

1200. Direct coomb's test detects - *(UP 08)*
a) Antigen in serum
b) Antibodies in RBC surface
c) Antigen in RBC surface
d) Antibodies in serum

1201. Intrinsic cell wall defect of RBCs is feature of-
a) Paroxysmal nocturnal hemoglobinuria *(MH11)*
b) Sickle cell anemia
c) Herediatary sperocytosis
d) All of the above

1202. Heinz bodies are seen in - *(MH 11)*
a) Thalassemia
b) G6PD deficiency
c) Herediatary spherocytosis
d) Paroxysmal nocturnal hemoglobinuria

1203. Decrease in osmotic fragility cause hemolysis in -
a) Thalassemia b) P-Thalassemia *(TN 99)*
c) Sickle cell anemia d) Methhemoglobinemia

1204. In P- thalassemia - *(TN 99)*
a) Excess chain b) No p chain
c) No chain d) Normal chains

1205. Test for P-thalassemia trait - *(AI89)*
a) HbA_2 b) HbF
c) Fragility test d) Coomb's test

1206. Hereditary spherocytosis is characterised by -
a) Membrane skeleton abnormalities *(KARN 84)*
b) Microtubule defect
c) Accumulation of intermediate filament
d) None of the above

1207. The most common structural red cell defect without Hb abnormality is - *(TN95)*
a) Elliptocytosis b) Spherocytosis
c) Poikilocytosis d) Sickle cell disease

1208. Hereditory spherocytosis is dueto deficiency of- *(SGPGI05)*
a) Ankyrin b) Spectrin
c) Selectin d) Integrin

1209. In Hereditary spherocytosis an inherited abnormality is seen in which of the following red blood cell component - *(DELHIPG Mar. 09)*
a) A-globin chain
b) a-globin chain
c) Phosphatidylinositol glycan A
d) Spectrin

1210. Which of the following statements is true of hereditary spherocytosis - *(SGPGI 05)*
a) About 50% of affected infants have moderately severe neonatal jaundice
b) Diagnosis can be made in neonatal period easily by examination of a blood film
c) Intra vascular hemolysis is a common feature
d) The disorder is usually due to autosomal recessive inheritance

1211. In sickle cell anaemia, the mutational event responsible for the mutation for beta chain is -
a) Crossing over b) Point mutation *(Corned 07)*
c) Insertion d) Deletion

1212. Dithionite test is done for assessing - *(JIPMER 80,*
a) HbF b)HbE *AMC84)*
c) HbA d)HbC
e) HbS

1213. All are true in megaloblastic anaemia except -
a) Microcytes *(KERALA95)*
b) Megakaryocytes
c) Decrease in Platelets
d) Neurological symptoms

1214. Macropolycyte in peripheral smear is a feature of- *(Karnataka04)*
a) Hereditary sherocytosis
b) Iron deficiency anaemia
c) Sickle cell anaemia
d) Megaloblastic anaemia

1215. Which of the following is not the cause of macrocytic anaemia ? *(APPG08)*
a) Orotic aciduria
b) Abetalipoproteinemia
c) Lesh nyhan disease
d) Transcobalamine deficiency

1216. Microspherocytosis in peripheral blood smear are seen in - *(Kamat05)*
a) Congenital spherocytosis
b) Autoimmune acquired haemolytic anaemia
c) Thalassemia
d) All of the above

1217. Aplastic anemia can progress to all except -
a) AML *(DPG10)*
b) Myelodysplastic anemia
c) Pure red cell aplasia
d) Paroxysmal nocturnal hemoglobinuria

1218. Schistocytes are - *(Orissa05)*
a) Material parasite b)WBC
c) Broken RBC d)Schizont

1219. Which of the following indicates hemolysis?
a) Target cells b) Schistocytes *(Jipmer 11)*
c) Acantocytes d) Basophilic stippling

1220. Spur cell is seen in - *(Jharkand 03)*
a) Uremia
b) Hepatocellular carcinoma
c) Gastric carcinoma
d) Ovarian carcinoma

1198)b 1199) a 1200)b 1201)a 1202)b 1203)b 1204)b 1205)a 1206)a 1207)b 1208)a>b 1209)d 1210)a
121 l)b 1212) e 1213)a 1214)d 1215)c 1216)d 1217)c 1218)c 1219)b 1220)None

1221. Bite cells are characteristic of - *(Jipmer 05)*
a) G6PD deficiency
b) Thallasemia
c) Hereditary spherocytosis
d) Sideroblastic anaemia

1222. What type of RBC seen in chronic renal failure ?
a) Microcytic b) Macrocytic *(APPG 08)*
c) Normocytic d)None

1223. A 22-year old female has a congenital anemia that required multiple transfusions of red blood cells for many years. She now has no significant findings on physical examination. However, her liver function test results are abnormal. Which of the following findings would most likely appear in a liver biopsy - *(MAHA 05)*
a) Steatosis in hepatocytes
b) Bilirubin in canaliculi
c) Glycogen in hepatocytes
d) Hemosiderin in hepatocytes

1224. A 29 year old female who has hereditary spherocytosis and mild anemia has developed a low-grade fever with malaise. After a week she feels very tired and appears pale. Her hematocrit drops from the usual value of 36% to 28%. There is no change in the appearance of red cells morphology. Reticulocytes are absent from the following events has most likely occurred - *(MAHA 05)*
a) Development of anti-red cell antibodies
b) Disseminated intravascular coagulopathy
c) Accelerated extravascular hemolysis in the spleen
d) Reduced erythropoiesis from parvovirus infection

1225. Raised serum ferritin is seen in - *(JIPMER 93)*
a) Leukemia b) CRF
c) Rheumatoid arthtitis d) All of above

1226. Which of the following proteins binds with free hemoglobin in the plasma - *(Karn. 95)*
a) Albumin b) Haptoglobin
c) Pre-albumin d) Ceruloplasmin

1227. When osmotic fragility is normal, RBC's begin to hemolyse when suspended in saline -
a) 0.33 % b) 0.48 *% (PGI81, DNB 89)*
c) 0.9% d) 1.2%

1228. The best suited anticogulant for osmotic fragility testis- *(AIIMS 86)*
a) Heparin b)EDTA
c) Trisodium citrate d) Potassium oxalate

1229. Gandy gamma bodies are seen in - *(AI88)*
a) Sickle cell anemia
b) Thalassaemia
c) Hereditary spherocytosis
d) Vit.B_{12} deficiency

1230. Gamma gandy bodies are seen in all except -
a) Cirrhosis with portal hypertension *(JIPMER 92)*
b) Chronic myeloid leukemia
c) Sickle cell anemia
d) Thalassemia

HEMATOLOGY COAGULATION DISORDERS

1231. Vitamin K-dependent factor is - *(NEET/DNB Pattern)*
a) n b)ffl
c) IV d)VI

1232. Hemophilia manifest clinically as rise in -
a) APTT b) PT *(PGI June 97)*
c) CT d) FDP

1233. A 9 year old boy with elevation in both PT and A PTT. What is the diagnosis? *(AIIMS Nov 10)*
a) Defect in extrinsic pathway
b) Defect in intrinsic pathway
c) Platelet function defect
d) Defect in common pathway

1234. Bleeding disorders with t APTT and t PT:
a) Factor 13 deficiency *(PGI June 09)*
b) Severe liver disease
c) Immune thrombocytopenic purpura
d) Leiden (Factor V) deficiency

1235. True regarding prothrombin time measurement?
a) Platelet rich plasma is required *(AIIMSNov 11)*
b) Activate with kaolin
c) Should be measured within 2 hours
d) Immediate refrigenation to preserve coagulation factor viability

1236. Major source of Von willebrand factor (vWF) -
a) Erythrocytes b) Neutrophils *(AI98)*
c) Endothelial cells d) Monocytes

1237. Von wiUebrands disease all are true except -
a) Factor VIIIC deficiency *(AIIMS 97)*
b) B.T. Prolonged
c) Normal Ristocetin test
d) Defective aggregation

1238. The commonest mode of inheritance of Von Willebrand's diasease - *(AIIMS Nov 2000)*
a) Codominant b) Autosomal recessive
c) Autosomal dominant d) X linked recessive

1239. Hemophilia A has following except - *(AI97)*
a) 1VIII factor b)tPTT
c) tPT d) Normal BT

1240. Hemophilia manifest clinically as rise in- *(PGI97)*
a) APTT b) PT
c) CT d)FDP

1241. Bleeding disorder with Ta PTT is/are -
a) Hemophilia A
b) Hemophilia B
c) Henoch-schonlein purpura
d) Bemard-soulier syndrome
e) Von-Willebrand disease

1242. Hemophilia B is due to deficiency of - *(NEET/DNB Pattern)*
■ ^ a) Factor VIII b) Factor VH
c) Factor DC d) factor X

1221) a 1222) c 1223)d 1224)d 1225)d 1226)b 1227)b 1228)a 1229)a 1230)d 1231)a 1232)a 1233)d 1234)b,d 1235) c 1236) c 1237) a,c 1238) c 1239)c 1240)a 1241)a,b,e 1242)c

1243. In thromboasthenia there is a defect in - *(AI91)*
a) Platelet aggregation
b) Platelet adhesion
c) Decreased ADP release
d) Desordered platelet secretion

1244. Which is not true regarding Bernard Soulier syndrome - *(AI11)*
a) Ristocetin aggregation is normal
b) Aggregation with collagen and ADP is normal
c) Large platelets
d) Thrombocytopenia

1245. Glanzmans disease is - *(NEET/DNB Pattern)*
a) Congenital defect of platelets
b) Congential defect of RBd,s;,-
c) Defect of neutrophils
d) Clotting factor deficiency

1246. A newborn baby presented with profuse bleeding from the umbilical stump after birth. Rest of the examination and PT, APTT are within normal limits. Most of probable diagnosis is -
a) Factor X deficiency *(AIIMS May 12)*
b) Glanzmann thrombasthenia
c) Von willebrand disease
d) Bemad soulier disease

1247. Which of the following statements about platelet function defects is true? *(AI 11)*
a) Normal platelet count with prolonged bleeding time
b) Thrombocytopenia with prolonged bleeding time
c) Thromobocytosis with prolonged bleeding time
d) Normal platelet count with normal bleeding time

1248. All of the following can cause megakaryocytic thrombocytopenia, except - *(AIIMS Nov 04)*
a) Idiopathic thrombocytopenic purpura
b) Systemic lupus erythematosus
c) Aplastic anemia
d) Disseminated intravascular coagulation (DIC)

1249. All the following conditions cause thrombocytopenia except- *(NEET/DNB Pattern)*
a) Giant hemangioma
b) Infectious mononucleosis
c) HIV infection
d) Iron deficiency anemia

1250. Normal platelet count is/are seen in - *(PGI Nov 10)*
a) DIC
b) Shaken baby syndrome
c) Microangiopathic hemolytic anemia
d) Spleenomegaly
e) Kasabach-Merritt syndrome

1251. Thrombocytopenia is caused by: *(PGIDec 08)*
a) Heparin
b) Acyclovir
c) DIC
d) Henoch-schonlein purpura (HSP)
e) Hemolytic uremic syndrome (HUS)

1252. The presence of small sized platelets on the peripheral smear is characteristic of - *(AIIMS Nov 03)*
a) Idiopathic thrombocytopenic purpura.
b) Bernard soulier syndrome
c) Disseminated intravascular coagulation
d) Wiskott Aldrich syndrome

1253. Cause of ITP is - *(AIIMSFeb 97)*
a) Vasculitis
b) Antibody to vascular epithelium
c) Antibody to platelets
d) Antibody to clotting factors

1254. IVue about Thrombocytopenic pupura is-
a) Haemolysis is extravasular *(PGI June 98)*
b) Normal renal function test
c) Thrombosis in cerebral blood vessels
d) Immediate cure following plasmapheresis

1255. Hemolytic Uremic Syndrome is characterized by -
a) Microangiopathic haemolytic anaemia
b) iedLDH *(PGI Dec 03)*
c) Thrombocytopenia
d) Renal failure
e) Positive Coomb's test

1256. All are features of haemolytic uremic syndrome, except - *(AIIMSDec 95)*
a) Hyperkalemia
b) Anaemia
c) Renal microthrombi
d) Neuro psychiatric disturbances

1257. True about HUS - *(PGIDec 07)*
a) Thrombocytopenia
b) Schistocytes seen in peripheral blood
c) Caused by E coli
d) Renal failure is seen

1258. The following condition is not associated with an Anti- phopholipid syndrome - *(AI 02)*
a) Venous thrombosis
b) Recurrent foetal loss
c) Thrombocytosis
d) Neurological manifestations

1259. All are true regarding lupus anticoagulant except - *(AIIMS Sep 96)*
a) Increased PT b) Increased abortion
c) Rashes d) Arterial thrombosis

1260. Lupus anticoagulants may cause all of the following except- ***(AI98)***
a) Recurrent abortion
b) False +ve VDRL results
c) Increase prothrombin time
d) Arterial thrombosis

1261. Which of the following antibodies is most frequently seen in Antiphospholipid Syndrome ? ***(AI 11)***
a) Beta 2 microglobulin antibody
b) Anti-nuclear antibody
c) Anti-centromere antibody
d) Anti- beta 2 glycoprotein antibody

1243) a 1244) a 1245)a 1246)b 1247)a 1248)c 1249)d 1250)b 1251)a,c,e 1252)d 1253)c 1254)c 1255)a,c,d 1256) d 1257) a,b,c,d 1258)c 1259)None 1260)None 1261)d

1262. Conditions associated with incoagulable state -
a) Abruption placentae *(PGI Dec 04)*
b) Acute promyelocytic leukaemia
c) Severe falciparum malaria
d) Snake envenomation
e) Heparin overdose

1263. Bleeding in DIC is most closely related to -
a) Raised fibrin degradation products level in blood
b) Prolong prothrombin time *(AIIMS June 98)*
c) Low serum fibrinogen level
d) Raised thrombin time

1264. In DIC, which is/are seen - *(PGI June 05)*
a) Normal APTT b) Increased PT
c) Increased factor VIII d)Decreased fibrinogen
e) Decreased platelets

1265. Disseminated intravascular coagulation (DIC) differs from thrombotic thrombocytopenic purpura. In this reference the DIC is most likely characterized by - *(AI04)*
a) Significant numbers of schistocytes
b) A brisk reticulocytosis
c) Decreased coagulation factor levels
d) Significant thrombocytopenia

1266. In DIC, following are seen except -
a) Fibrinogen decreased *(NEET/DNB Pattern)*
b) Thrombocytopenia
c) Normal APTT
d) PT elevation

1267. The following carcinomas are associated with DIC except - *(AI95)*
a) Stomach b) Pancreas
c) Prostate d) Breast

1268. Causes for DIC are- *(PGI Dec 05)*
a) Anaerobic sepsis b) Malignancy
c) Lymphoma d) Leukemia
e) Massive blood transfusion

1269. Incoagulable states are - *(PGI Dec 08)*
a) Snake envenomation
b) Acute-promyelocytic leukemia
c) Abruptio placenta
d) Heparin overdose
e) Severe falcipanm malaria

1270. What is hot associated with DIC -
a) Thrombocytopenia *(NEET/DNB Pattern)*
b) Increased PT
c) Hyperfibrinogenemia
d) Increased FDP|feS^:M

1271. True about fresh frozen plasma - *(PGIDec 2000)*
a) Used for treatment of antithrombin-3 deficiency
b) Used for treatment of Vit-K deficiency
c) Used for replacing factor VIII & IX, if deficiency
d) Best alternative for platelet

1272. Platelet are stored in - *(PGI Dec 02)*
a) 22 ± 2°C b) - 4°C
c)-2°C d) - 20°C
e) 37°C

1273. Although more than 400 blood groups have been identified, the ABO blood group system remians the most important in clinical medicne because -
a) It was the first blood group system to be discovered *(AIIMS Nov 02)*
b) It has four different blood groups A,B, AB, O (H).
c) ABO(H) antigens are present in most body tissues and fluids
d) ABO(H) antibodies are invariably present in plasma when persons RBC lacks the corresponding antigen

1274. Not true regarding fresh frozen plasma -
jjggPP Supplier mmj or* coa'giilatiotr factors
b) ABO match not required *(NEET/DNB Pattern)*
pgp|p -c) Bbould *I* be^hsed in vfeplacement- ^f ^factors in *, DIC/trauma
d) To be used within 30 minutes of having trauma

1275. Increased PT and Normal PTT are found in?
a) Von Willibrand's disease *(DNBDec 11)*
b) Factor 7 deficiency
c) Factor 8 deficiency
d) Thrombin deficiency

1276. The best screening test for hemophilia -
a) PT b) CT *(DNBDec 11)*
c) PTT d)BT

1277. In Von willebrand disease, there is - *(DNB June 11)*
a) Factor VII deficiency
b) Factor VIIIC deficiency
c) Factor X deficiency
d) vWF

1278. Prologed PT and Normal PTT may be seen in -
a) Thrombocytopenia *(DNB June 11)*
b) DIC
c) Vit. K deficiency
d) Aspirin toxicity

1279. All are to access platelet functions except -
a) Prothrombin time *(DNB June 10)*
b) Bleeding time
c) Clot retraction time
d) Prothrombin deactivation

1280. A patient is having deficiency of Von Willebrand factor. What abnormalities he will present with?
a) Increased PTT, increased PT *(DNB Dec 09)*
b) Decreased PT, Increased PTT
c) Normal PT, Normal PTT
d) Normal PT & Increased PTT

1281. Thrombocytopenia due to increased platelet destruction is seen in - *(DNB Dec 09)*
a) Aplastic anemia
b) Cancer chemotherapy
c) Acute leukemia
d) Systemic lupus erythematosus

1282. Bleeding time is prolonged in - *(DNB Dec 07)*
a) Von Willebrand's disease b) Christmas disease
c) Haemophilia d) Polycythemia

1262) All 1263) c 1264)b,d,e 1265) c 1266) c 1267) d 1268)a,b,d 1269) All 1270) c 1271) a,b 1272) a 1273) d 1274) d 1275) b 1276)c 1277)d 1278)None 1279)a,d 1280)d 1281)d 1282)a

1283. The following are essential components of the intrinsic coagulation system - *(PGI84)*
a) Pre-kailikrein b) High molecular weight kininogen
c) Factor VII d) Tissue factor
e) Factor XI

1284. Platelet function can be assessed by - *(JIMPER 88)*
a) Prothrombin time
b) Fibrinogen degradation products
c) Clotting time
d) Bleeding time

1285. Coagulation time is prolonged in all except -*(TN90)*
a) Hemophilia b) Von Willebrand's disease
c) Christmas disease d) ITP

1286. Hess test is done to assess - *(Delhi 83)*
a) Bleeding time b) Capillary fragility
c) Clotting time d) Prothrombin time

1287. Bleeding time is prolonged in - *(Kerala 94)*
a) Von Willebrand's disease
b) Christmas disease
c) Haemophilia
d) Polycythemia

1288. Patients with hemophilia a have bleeding disorder because of - *(DELHI PG Mar. 09)*
a) Lack of platelet aggregation
b) Lack of reaction accelerator during activation of factor X in coagulation cascade
c) Neutralization of antithrombin III
d) Release of Thromboxane A_2

1289. Von Willebrand's factor is synthesized in which one of the following - *(UPSC-109)*
a) Vascular endothelium b) Macrophages
c) Liver d) Eosinophils

1290. Anti-thrombin III levels in disseminated intravascular coagulation - *(UPSC 02)*
a) Are decreased b) Are increased
c) Remain Same d) Are variable

1291. Not a causes for DIC - *(TN 99)*
a) Septicemia b) Visceral carcinoma
c) Cholera d) Antepartum hemorrhage

1292. DIC is seen with all except - *(AIIMS 91)*
a) Accidental hemorrhage
b) Black water fever
c) Amniotic fluid embolism
d) Overdosage with Vitamin K

1293. Feature common to carcinoma pancreas, lungs, stomach is - *(TN 99)*
a) Retinoblastoma b) Migratory thrombophlebitis
c) Ascites d)DIC

HEMATOLOGY WBC

LYMPHOMA

1294. The type of Hodgkin's lymphoma *inc\ude-(PGIDec 01)*
a) Nodular sclerosing b) Lymphocyte depletion
c) Mixed cellularity d) Mantle cell lymphoma
e) Lymphoplasmacytic

1295. The subtype of Hodgkin's disease, which is histogentically distinct from all the other subtypes, is- *(AI05)*
a) Lymphocyte predominant
b) Nodular sclerosis
c) Mixed cellularity
d) Lymphocyte depleted

1296. Reed sternberg cells are found in-*(NEET/DNB Pattern)*
a) Hodkin's-disease b) Sickle cell anaemia
c) Thalassemia d) CML

1297. The lymphocytic and histiocytic variant of Reed-Sternberg cell is seen in - *(AIIMS Nov 05)*
a) Follicular center lymphoma
b) Lymphocyte depleted Hodgkin's disease
c) Nodular sclerosis Hodgkin's disease
d) Lymphocyte predominant Hodgkin's disease

1298. All of the following are the good prognostic features for Hodgkin's disease except - *(AI04)*
a) Haemoglobin > 10 gm/dl
b) WBC count < 15000/mm^3
c) Absolute lymphocyte count < 600/ 1
d) Age < 45 yrs

1299. Best prognostic type of Hodgkin's lymphoma is -
a) Lymphocytic predominant *(AIIMS June 98)*
b) Lymphocytic depletion
c) Mixed cellularity
d) Nodular sclerosis

1300. Which of the following malignancy is associated with underlying progression and spreads characteristically in a stepwise fashion and hence staging the disease is an important prognostic factor? *(MH11)*
a) Hodgkin's lymphoma b) Multiple myeloma
c) Mature T cell NHL d) Mature B cell NHL

1301. Which Hodgkin's disease is associated with best prognosis - *(NEET/DNB Pattern)*
a) Lymphocytic predominance
b) Lymphocyte depletion
c) Mixed cellularity
d) Nodular sclerosis

1302. Most common type of hodgkin's lymphoma in India is - *(AI98)*
a) Nodular sclerosing
b) Lymphocyte predominance
c) Mixed cellularity
d) Lymphocyte depletion

1303. Histological features of classical hodgkin's disease - *(PGIJune 05)*
a) Mixed cellularity seen in the background
b) Neoplastic cells more than non-neoplastic cells.
c) Both neoplastic & non-neoplastic cells are seen
d) CD 15 & CD 34 seen
e) Reed stemberg cells are seen

1304. Classical markers for Hodgkin's disease - *(AI08)*
a) CD 15 and CD 30 b)CD 15 andCD22
c) CD 15 and CD 20 d) CD 20 and CD 30

1283)a,b,e 1284)d 1285)d 1286)b 1287)a 1288)b 1289)a 1290)a 1291)c 1292)d 1293)a,b,d 1294)a,b,c 1295) a 1296) a 1297) d 1298) c 1299) a 1300) a 1301) a 1302) c 1303)a,c,e 1304) a

1305. True about nodular lymphocytic predominant Hodgkin's lymphoma - *(PGINov 10)*
a) Consists predominantly of classical RS cells
b) CD 15 & CD 30 positive
c) Made up of T lymphocytes
d) EBV positive
e) Have good prognosis

1306. AD of the following are true about nodular sclerosis of Hodgkin's disease except - *(PGI Dec 07)*
a) Well formed fibrous stands
b) CD 15 +
c) CD 20 +
d) Infiltration by plasma cells

1307. Which ceD is not seen in Hodgkin lymphoma -
a) Reed Sternberg cell b) Lacunar cell
c) L&Hcell d)Langerhancell
e) Hodgkin cell *(PGI June 03)*

1308. 'Popcorn-cells' are seen in which variety of hodgkin's disease - *(PGI Dec 2000)*
a) Nodular sclerosis
b) Mixed cellularity
c) Lymphocyte predominance
d) Lymphocyte depletion

1309. Lacunar cells are seen in which type of Hodgkin's lymphoma - *(NEET/DNB Pattern)*
^ a) Lymphocyte predominance
b) Lyphocyte depletion
c) Nodular sclerosing
d) Mixed cellularity

1310. Which of the foHowing statements on lymphoma is not True - *(AIIMSMay 06)*
a) A single classification system for Hodgkin's disease (HD) is almost universally accepted
b) HD more often tends to remain localized to a single group of lymph nodes and spreads by contiguity
c) Several types of non Hodgkin's lymphoma (NHL) may have a leukemic phase
d) In general follicular (nodular)NHL has worse prognosis compared to diffuse NHL

1311. The classification proposed by the International Lymphoma Study Group for non - Hodgkin's lymphoma is known as - *(AI05)*
a) Kiel classification
b) REAL classification
c) WHO classification
d) Rappaport classification

1312. 'Intermediate form' of Non hodgkin's lymphoma is -
a) Small noncleaved cell *(AI 99)*
b) Diffuse, small cleaved cell
c) Lymphoblastic
d) Large cell immunoblastic

1313. Most malignant form of NHL is- *(AI 98)*
a) Diffuse large cell
b) Small cell lymphocytic lymphoma
c) Follicular cleavage
d) Large cell follicular

1314. International prognostic index for lymphomas includes the foDowing prognostic factors, except -
a) Stage of disease *(AIIMS May 11)*
b) Number of extralymphatic sites involved
c) LDH
d) Hemoglobin and albumin

1315. A 48 year old woman was admitted with a history of weakness for two months. On examination, cervical lymph nodes were found enlarged and spleen was palpable 2 cm below the costal margin. Her hemoglobin was 10.5 g/dl, platelet count 2.7 X10^9/ L and total leukocyte count 40 X 10^9/ L, which included 80% mature lymphoid cells with coarse clumped chromatin. Bone marrow revealed a nodular lymphoid infiltrate. The peripheral blood lymphoid ceHs were positive for CD 19, CD5, CD20 and CD23 and were negative for CD 79 B and FMC-7.
The histopathological examination of the lymph node in this patient wifi most likely exhibit effacement of lymph node architecture by - *(AI 05)*
a) A pseudofollicular pattern with proliferation centers
b) A monomorphic lymphoid proliferation with a nodular pattern.
c) A predominantly follicular pattern
d) A diffuse proliferation of medium to large lymphoid cells with high mitotic rate.

1316. Autoimmune hemolytic anemia is seen in - *(PGI99)*
a) CML b)CLL
c) ALL d)AML

1317. Mantle cell lymphomas are positive for all of the foDowing, except - *(AI 06)*
a) CD 23 b) CD 20
c) CD 5 d) CD 43

1318. A 63-year old man presented with massive splenomegaly, lymphadenopathy and a total leucocyte count of17000 per mm^3. The flow cytometery showed CD 23 negative and CD 5 positive monoclonal B-cells with bright kappa positively comprising 80% of the peripheral blood lymphoid cells. The most likely diagnosis is - *(AI 03)*
a) Mantle cell lymphoma
b) Splenic lymphoma with villous lymphocytes
c) Follicular lymphoma
d) Hairy cell leukemia

1319. Mantle cell ca shows - *(NEET/DNB Pattern)*
a) CD5 +, CD25 - b) CD 5 +, CD 10 +
c) CD 5+, CD23+ d) CD 5+, CD 23 -

1320. CD 5 lymphocyte is found in- *(AIIMS2001)*
a) Hairy cell leukemia b) Burkitt lymphoma
c) Follicular cell lymphoma d) Mantle cell lymphoma

1321. In Burkitts lymphoma, translocation seen is chromosome - *(AI 10, AIIMS May 01)*
a) 12-14 translocation b) 8 -14 translocation
c) 4 - 8 translocation d) 12-18 translocation

1305) e 1306)c 1307)d 1308)c 1309)c 1310)d 1311)b 1312)b 1313)a 1314)d 1315)d 1316)b 1317)a 1318)a 1319) d 1320) d 1321) b

1322. All are true about follicular lymphoma except:
a) CD 20+ *(PGIJune 09)*
b) CD 5+
c) Bel-1 positive in follicular lumphoma where as Bcl-2 positive in mantle cell lymphoma
d) Translocation of (14:18)

1323. Starry sky appearance is seen in -
a) Burkitts lymphoma *(NEET/DNB Pattern)*
b) CLL
xj[Dffuise large B celllyinphotna
d)ALCL'

1324. Burkitt's lymphoma is - *(PGIJune 02)*
a) B cell lymphoma
b) 6,14 translocation
c) Can present as abdominal mass
d) Radiotherapy is used in treatment

1325. t (2;8) is characteristically seen with - *(AI10)*
a) Pre B cell lymphoma
b) Pre T cell lymphoma
c) Burkitt's lymphoma
d) Montel cell lymphoma

1326. About Burkitt's lymphoma, true is- *(AIIMSNov 09)*
a) CD34 + ve & Surface Ig+ve
b) CD34 + ve & Surface Ig -ve
c) CD34 - ve & Surface Ig -ve
d) CD34 - ve & Surface Ig +ve

1327. Post transplant lymphoma occurs due to proliferation of which of the following cells - *(AIIMSNov 06)*
a) T cell b) B cell
c) NKcell d) Monocyte

1328. Which of the following is true - *(AIIMS Nov 09)*
a) BCL-6: Burkitts lymphoma
b) BCL-2: Follicular & mantle cell lymphoma
c) CD-10 : Mantle cell lymphoma
d) CD 34: Diffuse large B cell lymphoma

LEUKEMIA

1329. CD marker specific for myeloid series -
a) CD34 b)CD45 *(AIIMS May 10)*
c) CD99 d) CD 117

1330. Most of the ALLs have - *(PGI98)*
a) B - cell origin b) T-cell origin
c) NKcell origin d)None

1331. A 17-year-old boy presented with TLC of 138 x 10^9 / L with 80% blasts on the peripheral smear. Chest X-ray demosnstrated a large mediastinal mass. Immunophenotyping of this patient's blasts would most likely demonstrate - *(AIMMS May 06)*
a) No surface antigens (null phenotype)
b) An immature T cell phenotype (Tdt/D34/CD7 positive)
c) Myeloid markers, such as CD 13, CD33 and CD15
d) B cell markers, such as CD 19, CD20 and CD22

1332. B ALL is due to - *(NEET/DNB Pattern)*
a) T cells b) Immature B cells
c) Immature T cells d) Both T & B cells

1333. Poor prognostic indicator of ALL is-*(AIIMS May 02)*
a) Female sex b) Leukocyte count < 50,000
c) Age greater than 1 year d) Hypodiploidy

1334. All of the following are good prognostic factors for ALL except - *(AIIMS Nov 08)*
a) Age of onset between 2-8 years
b) Initial WBC count less than 50000
c) Hyperdiploidy
d) t (9:22), t (8 :14), t (4:11)

1335. Good prognosis of ALL - *(NEET/DNB Pattern)*
a) Hyperdiploidy b) Hypodiploidy
c) T cell line d) Philadelphia chromosome

1336. ALL L_3 morphology is a malignancy arising from which cell lineage - *(AI 07)*
a) Mature B cell b) Precursor B cell
c) Immature T cell d) Mixed B cell & T cell

1337. A four year old boy was admitted with a history of abdominal pain and fever for two months maculopapular rash for ten days, and dry cough, dyspnea and wheezing for three days. One examination liver and spleen were enlarged 4 cm and 3 cm respectively below the costal margins. Jjps hemoglobin was 10.0 g/dl, platelet count 37 * 10*/L and total leukocyte count 70 x 10 /L, which included 80% eosinophils Bone marrow examination revealed a cellular marrow comprising of 45% blasts and 34% Eosinophils and eosinophilic precursors. The blasts stained negative for myeloperoxidase and non-specific esterase and were positive for CD19, CD10, CD22 and CD20. Which one of the following is the most likely diagnosis - *(AIIMS NO V2004)*
a) Biphenotypic acute leukemia (lymphoid and eosinophil lineage)
b) Acute eosinophilic leukemia
c) Acute lymphoblastic leukemia with hyper-eosinophilic syndrome
d) Acute myeloid leukemia with eosinophilia

1338. A four year old boy was admitted with a history of abdominal pain and fever for two months maculopapular rash for ten days, and dry cough, dyspnea and wheezing for three days. On examination liver and spleen were enlarged 4 cm and 3 cm respectivley below the costal margin. His hemoglobin was 10.0 g/dl, platelet count 3.7 x 10^9/L and total leukocyte count 70 x 10^9/L, which included 80% eosinophils Bone marrow examination revealed a cellular marrow comprising of 45% blasts and 34% Eosinophils and eosinophil precursors. The blasts stained negative for my eloperoxidase and non-specific esterase and were positive for CD19, CD10, CD22 and CD20. Which one of the following statements is not true about disease? *(AI 05)*
a) Eosinophils are not part of the Neoplastic clone
b) t (5:14) rearrangement may be detected in blasts
c) Peripheral blood eosinophilia may normalize with chemotherapy
d) Inv (16) is often detected in the blasts and the eosinophils

1322)b,d 1323) a 1324)a,c 1325)c 1326)d 1327)b 1328)a 1329)c 1330)a 1331)b 1332)b 1333)d 1334)d 1335) a 1336) a 1337)c 1338)d

1339. The biochemical marker of lymphocytic leukemia is- *(AIIMSDec 90)*
a) Enolase b) Peroxidase
c) Choline exterase d) Periodic acid schiff

1340. Non specific esterase in present in - *(PGIDec 97)*
a) Megakaryocytic leukaemia
b) Lymphocytic leukaemia
c) Erythroleukaemia
d) AML

1341. Non specific esterase is positive in all the categories of AML except- *(Al 07)*
a) M3 b)M4
c)M5 d)M6

1342. What is the chromosomal translocation in AML M3 - *(NEET/DNB Pattern)*
a) T(18,21) b) T (15,17)
c) T (8, 21) d) T (9,11)

1343. Chloroma is due to - *(PGI99)*
a) AML b)CLL
c) ALL d) Non Hodgkin's lymphoma

1344. AML with gum infiltration, hepatosplenomegaly -
a) ALL b) M3
c) M2 d)M4

1345. A 15-year-old boy presented with one day history of bleedig gums, subconjunctival bleed and purpuric rash. Investigations revealed the following results :Hb-6.4 gm/dL; TLC-26,500/mm3 Platelet 35,000 mm3; prothrombin time-20 sec with a control of 13 sec; partial thromboplastin time-50sec; and Fibrinogen lOmg/dL. Peripheral smear was suggestive of acute myeloblastic leukemia. Which of the following is the most likely - *(AIIMS May 06)*
a) Myeloblastic leukemia without maturation
b) Myeloblastic leukemia with maturation
c) Promyelocytic leukemia
d) Myelomonocytic leukemia

1346. All of the following immunohistochemical markers are positive in the neoplatic cells of granulocytic sarcoma, except - *(AI06)*
a) CD45RO b) CD 43
c) Myeloperoxidase d) Lysozyme

1347. Marker for granulocytic Sarcoma- *(AIIMSMay 08)*
a) CD33 b)CD38
c) CD117 d) CD 137

1348. A 42 -year old man was referred with a 2 week history of fever weakness and bleeding gum. Peripherial smear showed pancytopenia. The bone marrow examination revelaed 26% blasts frequently exhibiting Auer rods and mature myeloid cells. An occasional neutrophil with pseudo Pelger-Huet anomaly was also noted : Which of the following cytochemical stains is most likely to be positive - *(AIIMS Nov 02)*
a) Acid phosphatase b) Non specific esterase
c) Myeloperoxidase d) Toluidine blue

1349. AML is characterized by - *(NEET/DNB Pattern)*
a) Philadelphia chromosome b) Auer rods
c) Hemolytic anemia d) Dohle bodies

1350. D.I.C. is seen in - *(AIIMS May 07, PGI Dec 2K, NEET/DNB Pattern)*
a) Acute promyelocytic leukemia
b) Acute myelomonocytic leukemia
c) CMC
d) Autoimmune hemolytic anemia

1351. AML with worst prognosis - *(AIIMS may 07)*
a) 8/12 translocation b) Inversion 16
c) Normal cytogenetics d) Monosomy 7

1352. A10 year old child presents with pallor & history of blood transfusion 2 months back. On investigation, Hb -4.5gm, total count 60000, platelet count- 21akhs and CD 10(+) ve, CD 19 (+)ve, CD 117 (+) ve, MPO (+) ve & CD 33(-)ve. What is the most likely diagnosis? *(AIIMS Nov 11)*
a) ALL
b) AML
c) Undifferentiated leukemia
d) Mixed phenotypic acute leukemia

1353. In a patient with acute leukemia, immunophenotype pattern is CD 19+ve, CD 10+ve, CD33+ve, CD 13+ve. He may probably have - *(AIIMS May 04)*
a) Biphenotypic leukemia b)ALL
c) AML- M_2 d)AML-M_0

1354. Plasmacytoid lymphomas may be associated with -
a) IgG b) IgM *(AI10)*
c) IgA d)IgE

1355. Leukemoid reaction is seen in - *(PGI87)*
a) Acute infection b) Myelomatosis
c) Hemorrhage d) Erythroleukemia
e) Bronchogenic carcinoma

1356. 'Hairy cell leukemia' is a neoplastic proliferation of- *(AI 99)*
a) T.cells b)B.cells
c) Myeloid cells d) Macrophages

1357. All of the following statements about Hairy cell leukaemia are true except - *(AI 04)*
a) Splenomegaly is conspicuous
b) Results from an expansion of neoplastic T lymphocytes
c) Cells are positive for Tartarate Resistant Acid phosphatase
d) The cells express CD25 consistently

1358. Compared to the other leukemias, hairy cell leukemia is associated with which of the following infections- *(Maharashtra 10)*
a) Parvovirus D19
b) Mycoplasma
c) Atypical mycobacteria
d) Salmonella

1339) d 1340)d 1341)d 1342)b 1343)a 1344)d 1345)c 1346)a 1347)c 1348)c 1349)b 1350)a 1351)d 1352)d 1353) a 1354)b 1355) a,c 1356) b 1357)b 1358)c

1359. Which of the following statement pertaining to leukemia is correct - *(AI05)*
a) Blasts of acute myeloid leukemia are typically Sudan black negative
b) Blasts of acute lymphoblastic leukemia ae typically myeloperoxidase positive.
c) Low leucocyte alkaline phosphatase score is characteristically seen in blastic phase of chronic myeloid leukemia.
d) Tartarate resistant acid phosphatase positivity is typically seen in hairy cell leukemia.

1360. Specific stain for myeloblasts is- *(NEET/DNB Pattern)*
a) Sudan black b) PAS
c) Myeloperoxidase d) LAP

1361. Sezary syndrome is included in category of-
a) T cell leukaemia *(PGIDec97)*
b) Lymphoma
c) B cell leukaemia
d) Pigmented disorder of skin

1362. Which is the most common cytogenetic abnormaltiy in adult myelodysplastic syndrome (MDS) - *(AI 04)*
a) Trisomy 8b)20q-
c) 5q- d) Monosmy 7

1363. Least likely to be Pre-leukemic condition is -
a) Paroxysmal nocturnal hemoglobinuria
b) Paroxysmal cold hemoglobinuria
c) Aplastic anemia *(AIIMSNov 11)*
d) Myelodysplastc syndrome

1364. Which of the following statements is true -
a) Chronic myeloid leukemia occurs beyond 50 years of age *(AIIMS May 12)*
b) Hairy cell leukemia in less than 50 years has a good prognosis
c) Acute lymphoid leukemia in less than 1 year has a poor prognosis
d) Chronic lymphocytic leukemia occurs in less than 50 years of age

MYELOPROLIFERATIVE DISORDERS

1365. Which of the following is not a myeloproliferative disease - *(AIIMS Nov 2000)*
a) Polycythemia vers
b) Acute myeloid leukemia
c) Chronic myeloid leukemia
d) Essential thrombocytosis

1366. A peripheral smear with increased neutrophils, basophils, eosinophils, and platelets is highly suggestive of - *(AIIMS May 06)*
a) Actute myeloid leukemia
b) Acute lymphoblastic leukemia
c) Chronic myelogenous leukemia
d) Myelodysplastic syndrome

1367. A 60 year old man presented with fatigue, weight loss and heaviness in left hypochondrium for 6 months. The hemogram showed Hb. lOgm/dL, TLC 5 lakhs/mm^3, platelet count 4 lakhs/mm^3, DLC; neutrophil 55%, lymphocutes 4%, monocytes 2%, basophils 6%, metamyelocytes 10%, myelocytes 18%, promyelocytes 2% and blasts 3%. The most likely cytogenetic abnormality in this case is -
a) t (1; 21) b) t (9; 22) *(AIIMSMay 03)*
c) t(15; 17) d)Trisomy21

1368. Which one of the following is not a criterion for making a diagnosis of chronic myeloid leukemia in accelerated phase - *(AIIMS Nov 04)*
a) Blasts 10-19% of WBC's in peripheral blood
b) Basophils 10-19% of WBC'S in peripheral blood
c) Increasing spleen size unresponsive to therapy
d) Persistent thrombocytosis (>1000 x 10^9/L) unresponsive to therapy

1369. Diagnostic criteria ofCML are- *(PGIJune04)*
a) Auer rods
b) Basophilia
c) *i* LAP score
d) Bone marrow fibrosis
e) Chromosomal abnormality seen (t 9:22)

1370. Which of these is true regarding *CML-(AIIMSJune 99)*
a) Size of splenomegaly indicates prognosis
b) Phagocytic activity of WBC is reduced
c) Sudan black stain is specific for myeloblast
d) Myeloblast, granuloblast and lympohblast are PH chromosome +ve.

1371. Which of the following is not compatible with a diagnosis of chronic myelomonocytic leukemia -
a) Peripheral blood monocytosis more than 1T0^9/L. *(AIIMS Nov 03)*
b) Absence of Philadelphia chromosome
c) More than 20% blasts in blood or bone marrow
d) Absent or minimal dysplasia in myeloid lineages

1372. Which of the following is not compatible with a diagnosis of juvenile myelomonocytic leukemia - *(AIIMS Nov 05)*
a) Peripheral blood monocytosis, more than 1 x 10^9/L
b) Increased hemoglobin F levels for age
c) Presence of bcr/abl fusion gene
d) GM-CSF hypersensitivity of myeloid progenitors in vitro

1373. Which is not seen in polycythemia vera -
a) Increased Vit B_{12} binding capacity
b) Increased erythropoietin level
c) Increase RBC count *(NEET/DNB Pattern)*
d) Ocular congestion

1374. All are true about Polycythemia vera except -
a) Increased vit B_{12} *(AIIMS Nov 2000)*
b) Decrease LAP score
c) Leucocytosis
d) Increased platelets

1359) d 1360)c 1361)a 1362)d 1363)b 1364)c 1365)b 1366)c 1367)b 1368)b 1369)e 1370)a,d 1371)c,d 1372)c 1373)b 1374)b

1375. A patient has the following findings -splenomegaly, low RBC count, normal WBC, and platelet count and peripheral blood smear shows target cells. Repeated BM aspiration is unsuccessful. The probable diagnosis is - *(AIIMS JUNE 99)*
a) Thalassemia
b) Chronic myeloid leukemia
c) Iron deficiency anaemia
d) Myelofibrosis

1376. A patient presents with a platelet count of 700 x 10^9/L with abnormalitites in size, shape and granularity of platelets. WBC count of 12 x 10^9 L, hemoglobin of llg/dl and the absence of the Philadelphia chromosome. The most likely diagnosis would be- *(AIIMSMay 06)*
a) Polycythemia vera
b) Essential thrombocythemia
c) Chronic myeloid leukemia
d) Leukemoid reaction

MULTIPLE MYELOMA

1377. The cell mass in multiple myeloma is formed by- *(PGI Dec 01)*
a) Clonal expansion of terminally matured B cells
b) Preformed B cells are seen in the marrow
c) Circulating B cells settle in BM
d) B-cells turn malignant and secrete light chains
e) Specialised T-cells

1378. Multiple myeloma is characterized by all except
a) Presence of light chains *(PGI 2000)*
b) Monoclonal gammopathy
c) Polyclonal gammopathy
d) Hypergammaglobulinemia

1379. Not a feature of multiple myeloma - *(AIIMSMay 05)*
a) Hypercalcemia
b) Anemia
c) Hyperviscosity
d) Elevated alkaline phosphatase

1380. True about Multipal Myeloma - *(PGI2000)*
a) Bence Jones protein in urine
b) Hypogammaglobulinemia
c) Amyloidosis
d) Plasmacytosis <10 %
e) Renal failure

1381. Commonest site of lytic lesion in multiple myeloma is - *(NEET/L>NB Pattern)*
a) Vertebral column b) Femur
c) Clavicle d) Pelvis

1382. Which of the following is not a major criteria for diagnosis of multiple myeloma ? *(AI06)*
a) Lytic bone lesions
b) Plasmacytoma on tissue biopsy
c) Bone marrow plasmacytosis > 30%
d) 'M' spike > 3g% for Ig G, > 2g% for IgA

1383. Which of the following is not a minor diagnositic criteria for multiple myeloma? *(ARMSNov 10, 08)*
a) Lytic bone lesions
b) Plasmacytosis greater than 20%
c) Plasmacytoma on biopsy
d) Monoclonal globuline spike on serum electrophoresis of > 2.5 g/dl for IgG, > 1.5 g/dl for IgA

1384. All of the following are true about multiple myeloma except - *(A 194)*
a) Osteolytic bone disease
b) t (18-14) translocation
c) Light chain proliferation
d) Bence-Jones proteins in urine

1385. What is the best prognostic indicator of multiple myeloma at the time of diagnosis -
a) Number of myeloma cells in the marrow
b) Beta 2 microglobulin *(ARMS Nov 2000)*
c) Alkaline phosphatase level
d) Hypercalcemia

1386. A70-year-old male has a pathologic fracture of femur. The lesion appears a lytic on X-rays film with a circumscribed punched out appearance. The curetting from fracture site is most likely to show which of the following - *(ARMSMay 06)*
a) Diminished and thinned trabecular bone fragments secondary to osteopenia
b) Sheets of atypical plasma cells
c) Metastatic prostatic adenocarcinoma
d) Malignant cells forming osteoid bone

1387. Russell bodies are found *in-(NEET/DNB Pattern)*
a) Multiple Myeloma b) Gonadal tumor >•,
c) Parkinsonism d) Intracranial neoplasms

1388. Russell's body is found in - *(AI 95, ARMS June 97)*
a) WBC b)RBC
c) Mast cell d) Plasma cell

1389. Which of the following statement is not tru *e-(AI 05)*
a) Patients with IgD myeloma may present with no evident M-spike on serum electrophoresis
b) A diagnosis of plasma cell leukemia can be made if circulating peripheral blood plasma blasts comprise 14% of peripheral blood white cell count of $1X10^9$ / L and platelet count of 88 X 10^9/ L
c) In smoldering myeloma plasma cells constitute 10 - 30% of total bone marrow cellularity.
d) In a patient with multiple myeloma, a monoclonal light chain may be detected in both serum and urine

1390. True about multiple myeloma except - *(PGI Dec 98)*
a) t Uric acid b) T Urea
c) t Ca++ d) t Aik. phoshatase

1391. Not true regarding waldenstorms macro-globulinemia is - *(PGI June 99)*
a) Lymphadenopathy is usually present
b) Blood viscosity increased
c) IgM immunoglobulin increased
d) Hypercalcemia

1375)d 1376)b 1377)d 1378)c 1379)d 1380)a,b,c,e 1381)a 1382)a 1383)c 1384)b 1385)b 1386)b 1387)a 1388) d 1389)b 1390)d 1391)d

1392. Paraproteinemias associated with - *(PGIDec 04)*
a) Pathological fractureb) Visual disturbances
c) Peripheral neuropathyd) T Ca^{+2}
e) Platelet hypofunction

1393. Hyperviscosity is seen in - *(PGIDec 03, 04)*
a) Cryoglobulinemia b) Multiple myeloma
c) MGUS d) Lymphoma
e) Macroglobulinaemia

1394. TVue about Bence-Jones protein: *(PGIDec 07)*
a) Made of light chain
b) Reappears at 100°C
c) Dissolve at 100°C
d) Amyloid light chain in urine
e) AA type amyloid protein

1395. Histiocytosis X is seen in except- *(PGIDec 97)*
a) Hand schuller Christian disease
b) Eosinophilic granuloma
c) Letter-siwe syndrome
d) Torres syndrome

1396. A 2 year old child presents with scattered lesions in the skull. Biopsy revealed Langerhans giant cells. The most commonly associated is marker with this condition will be - *(AI12, 10, AIIMS Nov 0 7)*
a) CD la b) CD 57
c) CD 3 d) CD 68

1397. Shape of berbicks granules is - *(NEET/DNB Pattern)*
a) Hockey stick b) Bat
c) Ball d) Tennis racket

1398. A child presented in the OPD with multiple permeating lesions involving all the bones of the body which of the following is the most probable diagnosis - *(AIIMS Nov 2000)*
a) Neuroblastoma
b) Metastasis from osteosarcoma
c) Histiocytosis X
d) Metastasis from Wilm's tumour

1399. Langerhans cell histiocytosis true is all except -
a) Peak incidence less than 3 years of age
b) Radiosensitive *(AIIMS May 09)*
c) Diffuse form is known as litter-sewe-disease
d) Gonadal involvement occurs

1400. Features of histocytosis are all except -
a) Antigen processing *cells (NEET/DNB Pattern)*
b) CDla marker present
c) GDI 27 marker
d) Osteolytic lesions

1401. CD marker of histiocytosis is - *(NEET/DNB Pattern)*
a) CD1A b)CD IB
c) CD 1C d)CDlD

MISCELLANEOUS (WBC)

1402. In an ablated animal, myeloid series cells are injected. Which of following is sen after incubation period - *(AIIMS May 12)*
a) RBC b) Fibroblast
c) T lymphocytes d) Hematopoetic stem cell

1403. Generalized necrotising lymphadenopathy *(AI 11)*
a) Kimura disease
b) Kukuchi disease
c) Non-Hodgkin's lymphoma
d) Castleman's disease

1404. Eosinophilic abscess in lymph node is characteristically seen in - *(DPG11)*
a) Kimura's disease b) Hodgkin's lymphoma
c) Tuberculosis d) Sarcoidosis

1405. Massive splenomegaly with pancytopenia-fPG/*Dec 05)*
a) CLL b) Pure red cell aplasia
c) CML d) Myelofibrosis
e) Hairy cell leukemia

1406. Absolute lymphocytosis is seen in - *(PGI June 03)*
a) SLE b)T.B.
c) CLL d) Brucellosis

1407. Maximum magnitude of lymphocytosis is seen with-
a) Pulmonary Koch's *(AIIMSMay 1993)*
b) Typhoid
c) Bacterial pneumonia
d) Infectious mononucleosis

1408. Causes of eosinophilia - *(PGI June 04)*
a) Hodgkin's disease b) Filariasis
c) MI d) HTV infection

1409. Highest LAP score is seen in - *(PGI June 03)*
a) CML b) Polycythemiavera
c) PNH d) Pregnancy
e) Lymphoma

1410. Leucocyte alkaline phosphatase (LAP) is raised in A/E- *(AIIMSDec 95)*
a) Myelofibrosis b) Essential thrombocythemia
c) Polycythemia d) Chronic myeloid leukemia

1411. Splenic infarction is associated with - *(AIIMS 92)*
a) Typhoid
b) Infectious mononucleosis
c) CML
d) Paroxysmal nocturnal hemoglobinuria

1412. A patient presents with mediastinal mass with sheets of epithelial cells giving arborizing pattern of reactivity alongwith interspersed lympoid cells. The apt diagnosis would be - *(AIIMS May 08)*
a) Thymoma
b) Thymic carcinoid
c) Primary mediastinal lymphoma
d) Non-Hodgkin lymphoma

1413. Dohle bodies are seen in - *(NEET/DNB Pattern)*
a) Multiple myeloma
b) May-Hegglinanomaly
c) Waldenstorm Macroglobulinemia
d) Lymphoma

1414. Dohle bodies - *(NEET/DNB Pattern)*
a) Dilated Endoplasmic Reticulum in Neutrophils
b) Mitochondria
c) Golgi apparatus
d) Lysosomes

1392)A11 1393) a,b,d,e 1394)a,c,d 1395)d 1396)a 1397)d 1398)c 1399)d 1400)c 1401)a 1402)a 1403)b 1404) a 1405) d,e 1406)b,c,d 1407)d 1408)a,b,d 1409)b 1410)d 1411)b,c 1412)a 1413)b 1414)a

1415. All of the following stem cell populations are found within the bone marrow, except> *(AI12)*
a) Endothelial Progenitor cells
b) Myoblast Progenitor cells
c) Mesenchymal stem cells
d) Hematopoetic stem cells

1416. Chromosomal translocation seen in CML is?
a) 2:8 b)8:14 *(DNB Dec11)*
c) 9:22 d) 15:17

1417. All are markers of Mantle cell lymphoma except -
a) CD5 b) CD 19 *(DNB Dec11)*
c) CD 20 d) CD 23

1418. Burkitt's lymphoma arises from - *(DNBDec 10)*
a) Tcell b)Bcell
c) PreBcell d)NKcell

1419. DIC is seen most commonly seen in which AML type? *(DNB Dec 10)*
a) M2 b) M3
c)M4 d)M5

1420. Most Common extranodal site of Lymphoma in HIV is? *(DNB Dec 10)*
a) CNS b)GH
c) Retroperitoneum d) Mediastinum

1421. Necrotizing lymphadenitis is seen in -*(DNB June 10)*
a) Hodgkin's disease b) Kikuchi disease
c) Kimura disease d) Sarcodiosis

1422. Poor prognostic indicator in ALL- *(DNB June 10)*
a) Age < 2 year
b) TLC 4000-10,000
c) Presence of testicular involvement at presentation
d) Presence of blasts in peripheral smear

1423. All of the following are B cell markers except -
a) CD 10 b) CD 19 *(DNB June 10)*
c) CD 20 d) CD 34

1424. Periodic acid schiff stain shows block positiveity in- *(DNBDec 09)*
a) Myeloblasts b) Lymphoblasts
c) Monoblasts d) Megakaryoblasts

1425. Marker for hairy cell leukaemia is?
a) CD 30 b) CD 103 *(DNB June 09)*
c) CD1 d)CD4

1426. Burkitt's lymphoma shows which translocation?
a) 8:14 b) 9:22 *(DNB June09)*
c) 11:14 d) 14:18

1427. BCR ABL gene mutation is seen in? *(DNB June 09)*
a) CML b)AML
c) CLL d)ALL

1428. Chromosomal translocation seen in CML is?
a) 2:8 b)8:14 *(DNB June09)*
c) 9:22 d) 15:17

1429. Mycosis fungoides is? *(DNB June 09)*
a) T cell lymphoma b) B cell lymphoma
c) Mixed d) Plasma cell tumour

1430. Which of the following metabolic abnormality is seen in multiple myelona - *(DNB Dec 08)*
a) Hyponatremia b) Hypokalemia
c) Hypercalcemia d) Hyperphosphatemia

1431. Which of the following malignancy is associated with underlying progression and spreads characteristically in a stepwise fashion and hence staging the disease is an important prognostic factor? *(DNB Dec 08)*
a) Hodgkin's lymphoma b) Multiple myeloma
c) Mature T cell NHL d) Mature B cell NHL

1432. Russel bodies are seen in - *(DNB June 08)*
a) Lymphocytes b) Neutrophils
c) Macrophages d) None of the above

1433. The low grade non-Hodgbkins lymphoma is -
a) Follicular b) Large cell *(DNB June 08)*
c) Diffuse large cell d) Lymphoblastic

1434. CD-10 is seen in - *(DNB Dec 07)*
a) ALL b)CLL
c) HCL d)CML

1435. Abnormally high LAP score is seen in -*(DNB Dec 07)*
a) Polycythemia vera b)CML
c) PNH d)All

1436. CLL is characterised by following except -
a) Small lymphocytes in peripheral smear
b) Hepatosplenomegaly *(DNB Dec 07)*
c) Age > 50 years and usually females
d) ZAP-70 is a marker

1437. Birbeck granules in the cytoplasm are seen in -
a) Mast cells *(DNB Dec 07)*
b) Langerhan's cells
c) Thrombocytes
d) Myelocytes

1438. Multiple myeloma is diagnosed by - *(DNB June 07)*
a) 24 hours urine protein
b) Kidney biopsy
c) > 10%plasmacytosis
d) Rouleaux formation in blood

1439. Chloromaisatumorof- *(AP 92)*
a) Soft tissue b) Bone
c) Hemopoeitic cell d) Ovary

1440. Most common extranodal site for non-hodkin's lymphoma is - *(DNB June 07)*
a) Stomach b) Brain
c) Intestines d) Tonsils

1441. Progressive transformation of germinal centers (PTGC) is a precursor lesion of - *(DPG11)*
a) Hodgkins lymphoma, nodular sclerosis
b) Hodgkins lymphoma, mixed cellularity
c) Hodgkins lymphoma, lymphocytic predominant
d) Peripheral T cell lymphoma

1442. Hilar lymphadenopathy is seen in which type of Hodgkin's desease - *(JIPMER 80, PGI81)*
a) Lymphocyte predominent b) Mixed type
c) Lymphocyte depleted d)Nodular sclerosis

1443. Commonest type of Hodgkins lymphoma is- *(AP 84)*
a) Nodular sclerosis
b) Lymphocytic depletion
c) Lymphocytic predominant
d) Mixed cellularity

1415)b 1416) c 1417) d 1418)b 1419)b 1420)a 1421)b 1422)a 1423)d 1424)b 1425)b 1426)a 1427)a 1428)c 1429)a 1430)c 1431)a 1432)d 1433) a 1434)a 1435)a 1436)c 1437)b 1438)c 1439)c 1440)a 1441)c 1442)d 1443) a

1444. All are true about Hodgkins lymphoma except -
a) Less aggressive than NHL *(KERALA 95)*
b) Single node involvement common
c) Spread in continuity
d) Systemic involement more common than NHL

1445. All are true of Hodgkins lymphoma except -
a) Bimodal age pattern *(JIPMER93)*
b) Females less common
c) Contiguous spread
d) Osteolytic metastasis

1446. Which of the following features is shared in common between lymphocyte - rich and lymphocyte predominant types of Hodgkin's lymphoma -
a) Paucity of diagnostic RS cells *(MH10)*
b) EBV is associated
c) RS cells are CD 20 positive
d) Good prognosis

1447. "Working Formulation" in staging of NHL is based on- *(TN97)*
a) Survival characteristics of cells
b) Morphology of cells
c) Cells of origin
d) None of the above

1448. Non Hodgkin's lymphoma----------diffuse,large cell type----------belongs to- *(ORISSA 99)*
a) Low gradeb) Intermediate grade
c) High grade d) None of the above

1449. Most common extranodal site for non - hodkin's lymphoma is - *(TN 03)*
a) Stomach b) Brain
c) Intestines d) Tonsils

1450. In Non-Hodgkin's lymphoma early involvement of bone marrow is typical of which variety -
a) Diffuse *(AIIMS 78,81,83)*
b) Nodular
c) Lymphocytic well differentiated
d) Lymphocytic poorly differentiated

1451. Most common translocation in follicular lymphomas - *(TN 99)*
a) 14«18b) 17«19
c) 11« 14 d) 22 «9

1452. "Stary sky" appearance is seen in - *(UP 07)*
a) Burkitt's lymphoma
b) Mantle cell lymphoma
c) Extra nodal marginal Zone B-cell lymphoma of MALT type
d) Chronic myeloid leukemia

1453. Mantle cell lymphomas are positive for all of the following except - *(DPG10)*
a) CD23 b) CD20
c) CD5 d) CyclinDl

1454. Dilantoin sodium may cause - *(PGI82, AP 91)*
a) Follicular hyperplasia
b) Paracortial hyperplasia
c) Sinus histiocytosis
d) Atrophy of lymph nodes

1455. NHL presenting as a localised disease is usually -
a) Nodular poorly differentiated *(PGI 95)*
b) Diffuse
c) Nodular well differentiated
d) None

1456. Conditions predisposing to leukemia include all except- *(JIPMER88)*
a) Ionising radiation
b) Myelofibrosis
c) Inflections mononucleosis
d) Polycythemia vera

1457. Auer bodies are seen in - *(PGI 89)*
a) Mj-AML b)M_3-AML
c) M_6-AML d)ALL

1458. Chromosomal abnormality seen in promyelocytic leukemia - *(PGI 80,92)*
a) 17-15t b)21-9t
c) 22-9t d) None of the above

1459. Acute promyelocytic leukaemia (AML-M3) includes which of the following subtypes-(Kera/a *2K)*
a) Hyper granular and hypo granular type
b) Hyper granular and hyper segmented
c) Hyper granular and micro granular type
d) Hypo granular and micro granular type
e) Hypo granular and inclusion type

1460. Non specific esterase in present in - *(PGI 97)*
a) Megakaryocytic leukaemia
b) Lymphocytic leukaemia
c) Erythroleukaemia
d) AML

1461. The stain used for demonstrating Auer rods in blasts is- *(J&K05)*
a) Periodic Acid Schiff (PAS)
b) Myeloperoxidase
c) Leucocyte alkaline phosphatase
d) Non-specific esterase

1462. The difference between leukemia and leukemoid reaction is done by - *(DPGEE 08)*
a) Leukocyte alkaline phosphatase
b) Immature cells
c) Total leukocyte count
d) E.S.R

1463. Which of the following combinations of cytogenetic abnormality and associated leukemia/lymphoma is incorrect - *(Jipmer 05)*
a) t (8:14) Burkitt's lymphoma
b) t(15:170)AML-M3
c) t (9:22) CML
d) t (0:20) ALL

1464. bcl_2 in B-cell lymphoma the translocation involving-
a) t (8 :14) b)t(8:12) *(UP 08)*
c) t (14:18) d) t (14:22)

1444) d 1445) d 1446)d 1447)b 1448)b 1449)a 1450)b 1451) a 1452)a 1453)a 1454)b 1455)c 1456)c 1457)a,b
1458) a 1459)c 1460)d 1461)b 1462)a 1463)d 1464)c

1465. CD 19 positive, CD22 positive, CD 103 positive monoclonal B-cells with bright kappa positivity were found to comprise 60% of the peripheral blood lymphoid cells on flow cytometric analysis in a 55 year old man with massive splenomegaly and a total leucocyte count 3.3 x 10^9/L. Which one of the following is the most likely diagnosis - *(Jipmer 05)*
a) Splenic lymphoma with villous lymphocytes
b) Mantle cell lymphoma
c) B-cell prolymphocytic leukemia
d) Hairy cell leukemia

1466. Basophillic leucocytosis occurs in - *(UP 07)*
a) AML b)ALL
c) CML d)CLL

1467. CML is characterised by all except - *(JIPMER 91)*
a) Leukocytosis
b) Thrombocytosis
c) Increased Leukocyte alkaline Phosphatase
d) Increased serum Vitamin B_{J2}

1468. Philadelphia chromosome is - *(AIIMS 85, UPSC 86)*
a) Translocation from chromosome 22 to chromosome 9
b) Seen in CML
c) SeeninCLL
d) A good prognostic indication
e) All the correct

1469. Translocation of bcr-abl gene is characteristically seen in - *(UPSC-108)*
a) Chronic myeloid leukemia
b) Acute myeloid leukemia
c) Chronic lymphatic leukemia
d) Acute lymphatic leukemia

1470. BCL-2 is the marker for - *(DPGEE 08)*
a) Follicular lymphoma b) Mycosis fungoides
c) B-Cell lymphoma d) Mantle cell lymphoma

1471. In Philadelphia chromosome the defect is in -
a) Short arm of chromosome 22 *(Kerala 90)*
b) Long arm of chromosome 22
c) Short arm of chromosome 9
d) Chromosome 21

1472. The type of lymphocyte which is predominent in chronic lymphatic leukemia - *(Delhi 86)*
a) T lymphocyte b) B lymphocyte
c) K cells d) Helper T lymphocyte

1473. In which of the following conditions that cause polycythemia is the serum erythropoietin extremely low - *(MAHA 05)*
a) Dehydration b) Renal cell carcinoma
c) Renal cell carcinoma d) Polycythemia vera

1474. In CLL basically which cell predominates -
a) T cell b)Bcell *(HPU01)*
c) Lymphocyte d) Monocyte

1475. Following are of B Cell origin *e\cept-(JIPMER 92)*
a) OL b)ALL
c) Sezary syndrome d) Burkitt's Lymphoma

1476. All are B cell lymphomas except - *(APPGE 05)*
a) Burkitt's lymphoma
b) Mycosis fungoides
c) Mantle cell lymphoma
d) Follicular cell lymphoma

1477. Which is incorrect about Burkitts lymphoma ?
a) High mitotic activity *(APPG08)*
b) High Apoptotic cell death
c) Small nuclei proliferation
d) None

1478. Which of the following conditions is most likely to lead to a dry tap during bone marrow aspiration -
a) Acute lymphoblastic leukemia *(J &K 05)*
b) Multiple myeloma
c) Megaloblastic anaemia
d) Idiopathic myelofibrosis

1479. Confirmation of myelofibrosis is by -
a) Bone marrow aspiration *(JIPMER 80,86)*
b) Peripheral smear
c) Leuocytes alkaline
d) Splenic puncture phosphatase in neutrophils
e) Bone marrow biopsy

1480. The Myleoproliferative Syndrome of demeashak include all of the following except - *(AIIMS 81,86)*
a) Angiogenic myeloid metaplasia
b) Thrombocythemia
c) Erythroleukemia
d) Megaloblastic hyperplasia

1481. Most common postoperative complication in polycythemia vera - *(Jipmer 11)*
a) Infection
b) Cardiopulmonary complication
c) Hemolysis
d) Uremia

1482. Inpelgerhuetanomaly- *(AIIMS82)*
a) Most of the neutrophils are bilobed
b) Lymphocytic nucleus becomes indented
c) Monocytic nuclei lose their notch
d) Neutrophils become hypersegmented

1483. Thrombocytosis is a recognised feature of-
a) Myelofibrosis *(UPSC 97)*
b) Systemic lupus erythematosis
c) Azidothymidine therapy
d) Myelodysplastic syndrome

1484. Russel bodies are - *(NIMHANS 86, AP 85)*
a) Intracellular accumulation of protein
b) Homogenous eosinophilic deposits
c) Seen in multiple myeloma
d) All of the above

1485. Bence Jones Protein are - *(AIIMS 91)*
a) Heavy chains b) Heary & light chain
c) Light chain d) Immunoglobulin

1486. Flame cells are seen in - *(JIPMER 95)*
a) Multiple myleoma b) Ewings sarcoma
c) Luekemia d) Osteosarcoma

1465) d 1466) c 1467)c 1468)a,b 1469)a 1470)a 1471)b 1472)b 1473)d 1474)b 1475)c 1476)b 1477)b 1478)d 1479) e 1480) c 1481)None>? 1482) a 1483) a,d 1484) d 1485) c 1486) a

1487. Which of the metabolic abnormality is seen in multiple myeloma? *(DPG11)*
a) Hyponatremia b) Hypokalemia
c) Hypercalcemia d) Hyperphosphatemia

1488. Which one of the following is the most common immunologic type of multiple myeloma?
a) IgG, Kappa light chain *(UPSC-108)*
b) IgA, Kappa light chain
c) IgD, Lambda light chain
d) IgM, type

1489. Multiple myeloma is diagnosed by - *(Jipmer 11)*
a) 24 hours urine protein
b) Kidney biopsy
c) > 10%plasmocytosis
d) Rouleaux formation in blood

1490. X-bodies called Birbeck granules are characteristically seen in - *(Kerala 2K)*
a) Granulomatous vasculitis
b) Pulmonary alveolar proteinosis
c) Langerhan's cells granulomatosis
d) Idiopathic pulmonary alveolar proteinosis
e) Amyloidosis

1491. The histologic hallmark of langerhan cells is-
a) Dendritic cell processes *(JIPMER 79, PGI80)*
b) Giant mitochondria
c) Birbeck granules
d) Eosinophilic granules

1492. Most common site of eosinophilic granuloma -
a) Radius b) Femur *(MP98)*
c) Skull d) Lumbar vertebrae

1493. Solitary eosinophilic granuloma, commonest in the-
a) Femur b) Skull *(ARMS 86, 89)*
c) Radius d) Lumbar vertebra

1494. All are histicytosis except - *(AP96)*
a) Letter seiwe syndrome
b) Chloroma
c) Handschuller-christian triad
d) Eosinophilic granuloma

1495. Bone marrow biopsy is useful in the diagnosis of -
a) CML b) ALL *(PGI 89)*
c) Aleukemic leukemia d) Hodgkins disease
e) ITP

1496. Bone marrow aspiration is not indicated in:
a) Thalassemia major *(DELHIPGFeb. 09)*
b) Megaloblastic anaemia
c) Idiopathic thrombocytopenic purpura
d) Pure red cell aplasia

1497. Following splenectomy which cell increased earliest - *(MP 2K)*
a) Lymphocytes b) Monocytes
c) Neutrophils d) Plateles

1498. Alkaline phosphatase is specific to which type of following cells - *(UP 08)*
a) Eosinophils b) Neutrophils
c) Polymorphs d) Basophils

1499. Leucocytosis is not seen in - *(AI89)*
a) Typhoid b)MI
c) Appendicitis d) Measles

1500. Leukocytosis is seen in all except - *(DPG 10, JIMPER91)*
a) Brucellosis b) Acute MI
c) Typhoid d)Diptheria

1501. Downey cell is seen in - *(COMEDK 05)*
a) Myeloma b) Chronic myeloid leukemia
c) Hairy cell leukemia d) Infectious mononucleosis

1502. Which of the following surface glycoproteins is most often expressed in human hematopoietic stem cell?
a) CD22 b)CD4D *(DPG10)*
c) CD15 d) CD34

1503. A 50 years old male presents with massive spleenomegaly. His differential diagnosis will include, except - *(DPG 11)*
a) CML b) Polycythemia vera
c) Hairy cell leukemia d) Aplastic anemia

RESPIRATORY SYSTEM

1504. Which of the following is not component of acinus-
a) Pulmonary lobule *(PGI 83)*
b) Respiratory bronchioles
c) Alveolar ducts
d) Alveolar sac

1505. Clara cells are seen in - *(ARMS June 98)*
a) Alveoli b) Bronchus
c) Trachea d) Bronchiole

1506. Collapse of lung is called - *(NEET/DNB Pattern)*
a) Emphysema b) Bronchiactasis
c) Atelectasis d) Bronchitis

1507. Characteristic histopathological finding in SHOCK LUNG- *(AI 12, ARMS Nov 07,May 08)*
a) Diffuse alveolar necrosis
b) Interstitial pulmonary edema
c) Diffuse interstitial inflammation
d) Intra-cellular debris

1508. Acute lung injury is caused by all of the following except- *(ARMSMay 02)*
a) Aspiration
b) Toxic gas inhalation
c) Cardiopulmonary bypass with heart lung machine.
d) Lung contusion

1509. In hyaline membrane disease the pathology in the lung consists of - *(NEET/DNB Pattern)*
a) Albumin and complement b) Fibrin
c) Precipitated surfactant d) Mucus *t*

1510. Which of the following is an obstructive lung disease- *(AI97)*
a) Interstitial fibrosis b) Obesity
c) Emphysema d) Kyphosis

1511. The following are seen in chronic obstructive pulmonary disease (COPD) Except - *(AI 95)*
a) Hemoptysis b) Cor Pulmonale
c) Pneumothorax d) Aplastic anemia

1487) c 1488) a 1489)c 1490)c 1491)c 1492)c 1493)b 1494)b 1495)c 1496)a 1497)d 1498)b 1499)a 1500)c
1501) d 1502)d 1503) d 1504)a 1505)d 1506)c 1507)a 1508)None 1509)b 1510)c 1511)d

1512. Emphysema pathologically involves beyond the-
a) Bronchi
b) Terminal bronchiole
c) Respiratory bronchiole
d) Alveolar Sac

1513. Commonest type of emphysema is-
a) Centriacinar b) Obstructed
c) Irregular d)Panacinar

1514. Antitrypsin deficiency is associated with-
a) Restrictive lung pathology *(PGIDec 99)*
b) Cystric fibrosis
c) Emphysema
d) Carcinoma

1515. (Xj-antitrypsin deficiency is associated with -*(AI99)*
a) Centriacinar emphysema
b) Panacinar-emphysema
c) Paraseptal-emphysema
d) Irregular-emphysema

1516. Reid index is useful in - *(AI 12)*
a) Glomerulonephritis b) Chronic bronchitis
c) Cirrhosis d)MI

1517. Bronchial asthma is characterized - *(PGI June 05)*
a) Inflammatory disease of airway
b) Allergic disease of air way
c) Hyporesponsiveness of airway
d) Hyperresponsiveness of airway
e) Treatment is mostly inhaled steroid

1518. Curshmann's crystals are seen in - ***(PGI****Dec 98)*
a) Bronchial asthma
b) Bronchiectasis
c) Chronic bronchitis
d) Wegners granulomatosis

1519. Creola bodies are seen in - *(NEET/DNB Pattern)*
a) Bronchial asthma b) Chronic bronchitis
c) Emphysema d) Bronchiectatsis

1520. Bronchiectasis means…….of bronchi - *(NEET/DNB Pattern)*
a) Inflammation b) Dilatation
c) Cavitation d)All

1521. Bronchiectasis is most common in which lobe -
a) Right upper lobe *(AIIMS May 95)*
b) Right middle lobe
c) Left upper lobe
d) Left lower lobe

1522. Which of the following is NOT a complication of bronchiectasis - *(AIIMS Sep 96)*
a) Lung abscess b) Lung cancer
c) Amyloidosis d) Empyema

1523. Kartagener's syndrome includes - *(PGI June 01)*
a) Situs inversus b)Bronchiectasis
c) Sinusitis d) Male infertility
e) Cystic fibrosis

1524. True about kartagener's syndrome - *(PGIDec 04)*
a) Dextrocardia b) Infertility
c) Mental retardation d) Bronchiectasis

1525. False about cystic fibrosis - *(PGI June 09)*
a) Associated with CFTR gene
b) Autosomal recessive inheritance
c) Associated with 7p chromosome
d) Recurrent respiratory tract infection
e) Sweat Cl^- and Na^+ concentration increased

1526. Cystic fibrosis is associated with all except -
a) Infertility *(NEET/DNB Pattern)*
b) Azoospermia
c) Nasal polyps

1527. Which of the following is characteristically not associated with the development of interstitial lung disease? *(AIIMS May 06)*
a) Organic dusts
b) Inorganic dusts
c) Toxic gases e.g. chlorine, sulphur dioxide
d) Inhalation of tobacco smoke

1528. A female presents with history of progressive breathlessness. Histology shows heterogenous patchy fibrosis with several fibroblastic foci. The most likely diagnosis is - *(AI 10)*
a) Cryptogenic organizing pneumonia
b) Non specific interstitial pneumonia
c) Usual interstitial pneumonia
d) Desquamative interstitial pneumonia

1529. The dangerous particle size causing pneumoconiosis varies from -
a) 100-150 m b) 50-100 m
c) 10-50 m d)l-5 m

1530. Anthfacosis is due to inhalation of- *(NEET/DNB Pattern)*
a) Coal dust b) Asbestos dust
c) Silica dust d) Berylium dust

1531. True Statement about silicosis - *(PGIDec 04)*
a) Produces pleural plaque
b) Associated with tuberculosis
c) Lower lobe infiltration
d) Hilar adenopathy

1532. All of the following features are seen in asbestosis except- *(AIIMSNov 02)*
a) Diffuse pulmonary interstitial fibrosis.
b) Fibrous pleural thickening.
c) Emphysema.
d) Calcific pleural plaques

1533. Ferruginous bodies are seen in - *(AI08)*
a) Silicosis b) Bysinosis
c) Asbestosis d) Baggassosis

1534. Asbestosis of the lung is associated with all of the following except - *(AIIMSMay 02)*
a) Mesothelioma
b) Progression of lesion even after stopping exposure to asbestos
c) Nodular lesions involving upper lobe
d) Asbestos bodies in sputum

1512)b 1513) c 1514)c 1515)b 1516)b 1517)a,b,d,e 1518)a 1519)a 1520)b 1521)d 1522)b 1523)a,b,c,d 1524)a,b,d 1525)c 1526)d 1527)d 1528)c 1529)d 1530)a 1531)b,d 1532)c 1533)c 1534)c

1535. All of the following are seen in asbestosis except -
a) Diffuse alveolar damage *(Al 02)*
b) Calcify pleural plaques
c) Diffuse pulmonary interstitial fibrosis
d) Mesotheliomas

1536. Asbestosis is associated with - *(PGIDec 07)*
a) CaLung b) Ascites
c) Adenocarcinoma d) Mesothelioma
e) Carcinoma colon

1537. Which of the following is associated with hypersensitive pneumonitis - *(AIIMSMay 02)*
a) Silicosis b) Asbestosis
c) Byssnosis d) Berylliosis

1538. Hypersensitivity pneumonitis is classically described as a - *(Al 09)*
a) Type I hypersensitivity reaction
b) Type II hypersensitivity reaction
c) Type III (Immune complex) hypersensitivity
d) Type IV (cell mediated) hypersensitivity

1539. Bilateral hilar lymphadenopathy with non caseating granuloma is seen in - *(AIIMSMay 94, Al 97)*
a) TB b) Lymphoma
c) Sarcoidosis d) All of the above

1540. A young lady presented with bilateral nodular lesions on shins. She was also found to have bilateral hilar lymphadenopathy on chest X-ray. Mantoux test reveals indurations of 5 mms. Skin biopsy would reveal - *(AIIMS May 02)*
a) Non caeseating Granuloma
b) Vasculitis
c) Caseating Granuloma
d) Malignant cells

1541. The most common source of pulmonary embolism is- *(AIIMS May 95)*
a) Amniotic fluid embolism
b) Renal artery embolism
c) Large veins of lower limb
d) Cardiothoracic surgery

1542. Pulmonary infarction occurs with all except -
a) Saddle embolus at bifurcation
b) Blockage of 2hd and 3rd gen end arteries
c) Arterioles are blocked *(NEET7DNB Pattern)*
d) None

1543. The percentage of pulmonary emboli, that proceed to infraction, is approximately - *(Al 06)*
a) 0-5% b)5-15%
c) 20-30% d) 30-40%

1544. All are the histological features of Pulmonary hypertension - *(PGI June 04)*
a) Capillaritis of alveolar septa
b) Saddle thrombi in pulmonary trunk
c) Thrombi in pulmonary vasculature
d) Veno-occlusive disease
e) Arterial wall thicken

1545. Pulmonary infarction and pulmonary edema is differentiated by- *(PGI June 97)*
a) Heart failure cells
b) Necrotising alveolar sac
c) Capillary congestion
d) Pulmonary wedge pressure

1546. Heart failure cells contain - *(NEET/DNB Pattern)*
a) Hemosiderin b) Lipofuschin
c) Myoglobin d) Albumin

1547. Good pasture's syndrome is characterised by -
a) Necrotisting hemorrhagic interstitial pneumonitis
b) Alveolitis *(JIPMER 88)*
c) Patchy consolidation
d) Pulmonary edema

1548. Good-pasture syndrome is not characterized by -
a) Anti GBM *(PGI June 99)*
b) Crescents
c) Pulmonary hemorrhage
d) Diffuse alveolar damage

1549. The most common causative organism for lobar pneumonia is - *(AIIMS Nov 04)*
a) Staphylococcus aureus
b) Streptococcus pyogenes
c) Streptococcus pneumoniae
d) Haemophilus influenzae

1550. In the stage of Grey hepatization -
a) WBC's fill the alveoli *(NEET/DNB Pattern)*
b) RBC's fill the alveoli
c) Organisms fill the alveoli
d) Accumulation of fibrin

1551. The most common termination of lobar pneumonia is-
a) Consolidation b) Resolution
c) Abscess formation d) Empyema

1552. All of the following features are seen in the viral pneumonia except - *(Al 05)*
a) Presence of interstitial inflammation
b) Predominance of alveolar exudates
c) Bronchiolitis
d) Multinucleate gaint cells in the bronchiolar wall

1553. Atypical pneumonia can be caused by the following microbial agents except ? *(Al 05)*
a) Mycoplasma pneumoniae
b) Legionella peumophila
c) Human corona virus
d) Klebsiella pneumoniae

1554. The commonest cause of lung abscess -
a) Tuberculosis *(AIIMSMay 95)*
b) Congenital
c) Hematogenous
d) Aspirated oropharyngeal secretion

1555. Predisposing factors of Lung abscess-
a) Altered sensorium *(PGI Dec 03)*
b) Dental sepsis
c) Aggressive treatment of pneumonia
d) Subpulmonic effusion
e) Endobronchial obstruction

1535) a 1536)a,b,d,e 1537)c 1538)c>d 1539)c 1540)a 1541)c 1542)d 1543)b 1544)c,d,e 1545)a 1546)a
1547) a 1548)d 1549)c 1550)d 1551)b 1552)b 1553)d 1554)d 1555)a,b,d,e

1556. Most common type of carcino^lungi^ 5
a) Small cell carcinoma *(NEET/DNB Pattern)*
b) Adenocarcinoma
U § lg|| Squamoms cell oarcmQmaie - 1
d) Large cell carcinoma

1557. Commonest type of lung carcinoma in nonsmokers is- *(AI97)*
a) Squamous cell C_A b) Small cell C_A
c) Adeno C_A d) Alveolar cell C_A

155$. Most common histoligical types of lung carcinoma in India is - *(AI99)*
a) Squamous cell C_A b) Adeno carcinoma
c) Small cell C_A d) Large cell C_A

1559. A 56 year old chronic smoker, mass in bronchus resected. What is the possible marker-
a) Cytokeratin *(AIIMS Nov 09)*
b) Vimentin
c) Epithelial membrane Cadherin
d) Leukocyte

1560. True about adenocarcinoma of lung - *(PGIJune 05)*
a) More common in female
b) Smoking is not associated with
c) Central cavitations
d) Upper lobe involvement is most common
e) Peripheral involvement

1561. Histopatholoty of a lung cancer shows[6]clara cells' probable diagnosis is -
a) Squamous cell cancer
b) Bronchio alveolar cancer
c) Large cell cancer
d) Papillary carcinoma

1562. Bronchoalveolar carcinoma variants are -
a) Clara cell *(PGI June 09)*
b) Adenosarcoma
c) Mucinous type
d) Type II pneumocyte
e) Neuroendocrine

1563. Lung to lung metastasis is seen in -
a) Adenocarcinoma of lung *(AIIMS May 05)*
b) Squamous cell carcinoma
c) Small cell carcinoma
d) Neuroendocrine tumor of lung

1564. Hyperscretory granules seen in with lungCa -
a) Adeno Ca *(PGI Dec 06)*
b) Small cell Ca
c) Large cell Ca
d) Bronchoalveolar Ca
e) Squamous cell carcinoma

1565. Marker of small cell cancer of lung is -
a) Chromogranin *(NEET/DNB Pattern)*
b) Cytokeratin **n§**
c) Desmin
d) Vimentin

1566. Which of the following histological type lung carcinoma has worst prognosis - *(AI 99)*
a) Squamous cell CA b) Adenocarcinoma
c) Alveolar-carcinoma d) Small cell carcinoma

1567. Chronic smoker develops cough, hemoptysis. Doctor tells him that he is having most malignant type of bronchogenic carcinoma. The type is - *(AIIMS 01)*
a) Squamous b) Small cell
c) Large cell d) Adenomatous

1568. True about lung carcinoma - *(AI 10)*
a) More than 75% of lung cancers are squamous cell type
b) Oat cell carcinoma frquently show cavitation
c) Lung calcification is characteristically seen in oat cell carcinoma
d) Oat cell carcinoma is commonly associated with bilateral hilar lymphadenopathy

1569. True about lung carcinoma - *(PGI Dec 05)*
a) Squamous cell ca is most common carcinoma
b) Squamous cell ca cause myopathy
c) Small cell ca has best prognosis
d) Bronchoalveolar ca involves proximal airways

1570. Lung carcinomas most frequently metastasize to -
Hill a) Brain b) Liver *(NEET/DNB Pattern)*
c) Adrenal d) Bone

1571. Which paraneoplastic syndrome is nojt^efn^wi^ small cell ca lung - *i (NEET/DNB Pafterh)*
a) PTH b) ACTH
c) ADH d) Carcinoid syndrome

1572. Neuroendocrine lesions of lung are - *(PGIJune 04)*
a) Carcinoid tumor b) Alveolar carcinoma
c) Hamartoma d) Asthma

1573. Neuroendocrine lesions of lung are: *(PGI Dec 08)*
a) Carcinoid
b) Benign tumourlets
c) Bronchoalveolar carcinoma
d) Chondroid hemartoma
e) Atypical carcinoid

1574. Bronchial adenoma commonly present as - *(AI 98)*
a) Recurrent hemoptysis b) Cough
c) Dysponea d) Chest pain

1575. Following is true about bronchial carcinoids -
a) Highly radiosensitive *(Jipmer 11)*
b) Metastasis common
c) Carcinoid syndrome does not manifest
d) Commonly arise from terminal bronchioles

1576. Carcinoid tumor develops from -
a) Enterochromaffin cells *(NEET/DNB Pattern)*
b) Neuroectoderm •*m* gsgsHs?
*?) *y* cells"
d) Goblet cells

1577, Normal amount of pleural fluid is approximately
a) 5 ml b) 15 ml *(PGI 81, AIIMS 84)*
c) 50mL d) 100 ml

1578, Pleural effusion in cirrhosis all are true except -
a) *i* Pleural LDH serum LDH *(PGI Dec 98)*
b) Protein lOg/L
c) Glue 80 mg
d) S.G below 1.012

1556) b 1557) c 1558)a 1559)a 1560)a,b,e 1561)b 1562)a,c,e 1563)a 1564)b 1565)a 1566)d 1567)b 1568)d 1569) None 1570)a 1571)a 1572)a 1573)a,b,e 1574)a 1575)c 1576)a 1577)b 1578)b

1579. B/L Exudative pleural effusion seen in - *(PGIDec 06)*
a) SLE b) Lymphoma
c) CCF d) Nephrotic syndrome
e) Ascites

1580. Primary pleural tumor is- *(AI94)*
a) Mesothelioma b) Myxoma
c) Lipoma d) Fibroma

1581. Pleural fibroma is differentiated from mesothelioma by the presence which of the following in the former-
a) CD14 b) CD24 *(PGI June 05)*
c) Cytokeratin absence d) Erb positive
e) CD34

1582. Which of the following is a finding in biopsy of mesothelioma of pleura- *(PGI Dec 01)*
a) Myelin figurers b) Desmosomes
c) Wiebel-Palade bodies d) Microvillin invasion
e) Intense fibrosis

1583. **Pleural mesothelioma is associated with-(PGI** Dec 05)
a) Asbestosis b) Berylliosis
c) Silicosis d)Beryliosis
e) Baggosis

1584. On biopsy, characteristic finding of malignant mesothelioma is - *(PGIMay 10)*
a) Myelin b) Desmosin
c) Weibel-palade bodies d) Branching microvilli
e) Fibrosis

1585. Popcorn calcification on chest X-ray is seen in:
a) Hamartoma b) Granuloma *(PGIDec 07)*
c) Metastasis d) sarcoidosis
e) Pneumonia

1586. Lung granuloma found in A/E- *(PGI June 04)*
a) Berylliosis b) Asbestosis
c) SLE d) Sarcoidosis

1587. End stage Lung disease seen in - *(PGIJune 04)*
a) Sarcoidosis
b) Interstitial lung disease
c) Langerhans cell histiocytosis
d) Aspergillosis
e) Asbestosis

1588. Bronchogenic sequestration is seen in which lobe- *(NEET/DNB Pattern)*
a) Left lower lobe b) Right upper lobe
c) Left puddle lobe d) Xeiuppgr lpBe

1589. Sequestrated lobe of lung is commonly supplied by-: *(NEET/DNB Pypp*
a) Pulmonary artery b) Intercostal artery
c) Descending aorta d) Bronchial artery

1590. Bronchogenic cysts occurs commonly in *(AJ^4S94)*
a) Post mediastinum b) Sup mediastinum
c) Carina d) Periphery of lung.

1591. Which tumour is not seen in the anterior mediastinum-? *(NEET/DNB Pattern)*
a) Teratoma b) Thymic tumours
c) Lymphomas d) Neurofibroma

1592. Commonest mass in the middle mediastinum is -
a) Lipoma b) Aneurysm *(AIIMS Sep 96)*
c) Lymph node mass d) Congenital cysts

1593. Most common mediastinal tumor is- *(NEET/DNB Pattern)*
a) Neurogenic tumor b) Pericardial cyst
c) Hernia d). Teratoma N

1594. Asteroid bodies are seen in? *(DNB Dec 11)*
a) Sarcoidosis b) Syphilis
c) Chromoblastomycosis d) Sporotrichosis

1595. Reid's Index is? *(DNB Dec 10)*
a) Increased in Chronic Bronchitis
b) Decreased in Chronic Bronchitis
c) Increased in Bronchial Asthma
d) Decreased in Bronchial Asthma

1596. Asteroid bodies are seen in? *(DNB June 10)*
a) Sarcoidosis
b) Syphilis
c) Chromoblastomycosis
d) Sporotrichosis

1597. Cut surface of lungs in Silicosis shows?
a) Pleural thickening *(DNB June 09)*
b) Hard collagenous scars
c) Nodules
d) All of the above

1598. The following does not occur with asbestosis -
a) Methaemoglobinemia *(DNB Dec 08)*
b) Pneumoconiosis
c) Pleural mesothelioma
d) Pleural calcification

1599. Schaumann bodies are seen in - *(DNB Dec 08)*
a) Sarcoidosisb) Chronic bronchitis
c) Asthma d) Syphilis

1600. The most common type of emphysema associated with a-1 antitrypsin deficiency - *(DNB Dec 08)*
a) Centriacinarb) Panlobular
c) Paraseptal d) Distal acinar

1601. Gray hepatization of lungs is seen on day -
a) 1 b)2-3 *(DNB June 08)*
c) 3-5 d)5-7

1602. Which is associated with Ca lung - *(DNB June 08)*
a) Chromiumb) Berrylium
c) Asbestos d) Nickel

1603. The lung carcinoma most common in non-smokers is - *(DNB Dec 07)*
a) Sq. cell b) Large cell
c) Adenocarcinoma d) Small cell

1604. All of the following malignancies are seen in anterior mediastinum except - *(Delhi PGI 86)*
a) Teratoma b) Thymoma
c) Lymphoma d) Neuroentericcyst

1605. Hyaline membrane in the lung is seen in -
a) Respirtory distress syndrome *(PGI 87)*
b) Pulmonary edema
c) Pneumococcal Pneumonia
d) Acute viral hepatitis

1579) a 1580) a,d 1581)c,e 1582)e 1583)a 1584)d 1585)a 1586)b,c 1587)a,b,c,e 1588)a 1589)c 1590)c 1591) d 1592)c 1593) a 1594)a 1595)a 1596)a 1597)d 1598)a 1599)a 1600)b 1601)d 1602)c>a,d 1603)c 1604)d 1605) a

1606. The following is not characterstic of ARDS -
a) Dyspnoea *(PGI89)*
b) Ability to maintain $Pa0_2$ on 100% oxygen
c) Bilateral crepts
d) Bilateral opacities on X-ray

1607. Which of the following statements about pulmonary emboli is not correct ? *(DELHIPGMar 09)*
a) 60-80% pulmonary embolism are clinically silent
b) In more than 95% cases venous emboli originate form deep leg veins
c) Embolic obstruction of pulmonary vessels almost always cause pulmonary infarction
d) Embolic obstruction of medium sized arteries may result in pulmonary haemorrhage

1608. Alpha I antitrypsin deficiency occurs in - *(TN91)*
a) Emphysema b) Bronchiectasis
c) Empyema d) Bronchogenic carcinoma

1609. Potato nodes are a characterstic feature of -
a) Sarcoidosis b) Lymphoma*(JIPMER 92)*
c) Carcinoid d) Tuberculosis

1610. Laminated concretions of calcium and proteins are-
a) Schaumann's bodies *(Maharashtra 10)*
b) Ferrugenious bodies
c) Asteroid bodies
d) Gamma Gandy bodies

1611. In sarcoidosis the following is true - *(Jipmer 98)*
a) Epitheloid cells showing caseation
b) Epitheloid cell- with no caseation
c) Histocytic cells-with caseation
d) Well differenciated histiocytic cells

1612. Sputum from an asthma patient may show -
a) Numerous eosinophils *(AIIMS 85)*
b) Curschmann's spirals
c) Charcot-Leyden crystals
d) All of the above

1613. Schaumann bodies are seen in - *(MH11)*
a) Sarcoidosis b) Chronic bronchitis
c) Asthma d) Syphilis

1614. Difference between bronchial asthma and COPD is?
a) Reversible bronchoconstriction *(Jipmer 11)*
b) Hyperventilation on chest X ray
c) Acute exacerbation by URTI
d) Decreased FVC1/FVC

1615. Pathological study of status asthmaticus reveals -
a) Suppurative endobronchial exudates *(Kerala 03)*
b) Mucous plugs of small bronchioles
c) Necrosis of bronchi
d) None

1616. The alveoli are Riled with exudate the air is displaced converting the lung into a solid organ. This description suggests- *(AMU 85)*
a) Chronic bronchitis b) Bronchial asthma
c) Bronchiectasis d) Lobar pneumonia

1617. Classical demonsrtable fibrinous inflammation is seen in which one of the following stages of lobar pneumonia - *(ICS 2K)*
a) Hyperemia b) Red hepaization
c) Grey hepatization d) Resolution

1618. In lobar pneumonia, the presence of flbrinosuppurative exudates with disintegration of red cells is seen in the stage of - *(COMED 09)*
a) Congestion b) Red hepatization
c) Grey hepatization d) Resolution

1619. Which is not an inflammatory stage in pneumonia -
a) Organisation b) Congestion*(Jipmer 03)*
c) Resolution d) Hepatisation

1620. Lung abscess is common following... pneumonia -
a) Streptococcal b) Staphyloccocal
c) Viral d) Klebsiella *(UPSC88)*

1621. Characteristic feature of viral pneumonias is -
a) Interstitial mononuclear infiltration *(Delhi 96)*
b) Intra-alveolar proteinaceous exudate
c) Hyaline membrane lining alveoli
d) Fibrotic septa

1622. In primary atypical pneumonia inflammatory cells accumulate in - *(Orissa R)*
a) Alveolar lumen b) Bronchioles
c) Alveolar wall d) Pleural space

1623. Mycoplasma infection simulates-
a) Pneumococcal pneumonia *(PGI81, DNB 91)*
b) Viral pneumonia
c) Hypersensitivity pneumonia
d) Aspiration pneumonia

1624. Which of the following type hypersensitivity reactions occurs In Farmer's lungs - *(UP 08)*
a) Type I b) Type II
c) Type III d) Type IV

1625. Which of these types of asbestos is LEAST associated with mesothelioma - *(COMED 09)*
a) Chrysolite b) Crocidolite
c) Amosite d)Tremolite

1626. The following does not occur with asbestosis -
a) Methaemoglobinemia *(DPG11)*
b) Pneumoconiosis
c) Pleural mesothelioma
d) Pleural calcification

1627. Beryllium exposure is associated with-
a) Pulmonary fibrosis *(COMED 09)*
b) Granulomatous lung disease
c) Lung cancer
d) Chronic bronchitis

1628. Which of the following inhaled occupational pollutant produces extensive nodular pulmonary fibrosis ? *(DELHIPG Mar. 09)*
a) Silica b) Asbestos
c) Wood dust d) Carbon

1606)b 1607)c 1608) a 1609)a 1610)a 1611)b 1612)d 1613)a 1614)a 1615)b 1616)d 1617)c 1618)c 1619)a 1620)d 1621) a 1622)c 1623)b 1624)c,d 1625)a,c 1626)a 1627)b 1628)a

1629. Sudden death, right sided heart failure (cor pulmonale or cardiovascular collapse occur when -
a) Small pulmonary embolism *(AMU 05)*
b) Massive pulmonary embolism
c) 60% or more of pulmonary artery is obstructed with emboli
d) End artery obliteration

1630. Sarcoidosis is mimicked by chronic poisoning with- *(COMEDK05)*
a) Mercury b) Beryllium
c) Aluminium d)Lead

1631. Which one of the following is NOT a feature of Kartagener' s syndrome - *(UPSC-109)*
a) Bronchiectasis b) Ciliary dyskinesia
c) Pancreatic insufficiency d) Situs inversus

1632. D-dimer is the most sensitive test for- *(DPG11)*
a) Pulmonary embolism
b) Acute pulmonary edema
c) Cardiac tamponade
d) Acute MI

1633. Pulmonary neoplasm associated with smoking is -
a) Oat cell carcinoma
b) Squamous cell carcinoma
c) Adenocarcinoma
d) None of the above

1634. Bronchogenic carcinoma commonly metastasise to which endocrine organ - *(PDI87)*
a) Ovaries b) Testes
c) Thyroid d) Adrenals

1635. Small cell cancer commonly metastasizes to -
a) Brain b) Liver *(Orissa04)*
c) Bone d) Kidney

1636. Histopatholoty of a lung cancer shows 'clara cells' probable diagnosis is - *(JIPMER 2002)*
a) Squamous cell cancer
b) Bronchio alveolar cancer
c) Large cell cancer
d) Papillary carcinoma

1637. Scar carcinoma of lung is seen most commonly following - *(Delhi 96)*
a) Tuberculosis b) Irradiation
c) Infarct d) Lung abscess

1638. PTH like substance is produced by which type of lung malignacy - *(Jipmer 90)*
a) Squamous cell carcinoma
b) Oat cell carcinoma
c) Adeno carcinoma
d) Large cell carcinoma

1639. Which of the following is not true about Bronchoalveolar carcinoma - *(Maharashtra 10)*
a) Adenocarcinoma
b) Stromal invasion with desmoplasia
c) Preservation of alveolar structure
d) Grows along pre-existing anatomical structures

1640. Bronchoalveolar carcinoma presents as - *(TN 91)*
a) Hemoptysis b) Collapse
c) Effusion d)All

1641. Most common lung malfomation - *(Jipmer 95)*
a) Hypoplasia of lung b) Congenital cyst
c) Vascular anamolies d) Lobar sequestration

1642. Mesothelioma is- *(DELHI 83)*
a) Benign b) Rarely malignant
c) Mostly malignant d) Always malignant

1643. Long term complication of bronchopulmonary dysplasia is - *(MAHE 98)*
a) Decreased factional residual capacity
b) Small airway disease
c) Large airway disease
d) Interstitial lung disease

URINARY TRACT

1644. PodoCytes are, seen in - *(NEET/DNB Pattern)*
a) Bowman's capsule
b) §tg Proximal cony^JptedtuJjule! H U§
c) Distal convoluted tubule
d) Collecting tubule of the kidney

1645. The protein in glomerular basement membrane responsible for charge dependent filtration is -
a) Albumin b) Collagen type IV
c) Proteoglycan d) Fibronectin

1646. In renal disease, Albumin is first to appear in urine because - *(AIIMS May 04)*
a) Of its high concentration in plasma
b) Has molecular weight slightly greater than the molecules normally getting filtered
c) High Albumin: Globulin ratio
d) Tubular epithelial cells are sensitive to albumin

1647. In glomerular disease which of the following is mainly excreted in Urine - *(PGIDec 03)*
a) Albumin b) Globulin
c) Light chain d) Heavy chain
e) Tamm-Horsfall protein

1648. Uremia occurs when total GFR is reduced by -
a) 25% b) 50% *(NEET/DNB Pattern)*
c) 60% d) 80%

1649. Urine analysis of a patient with hematuria & hypercalciuria is most likely to reveal?
a) Isomorphic RBCs *(AIIMSNov 11)*
b) RBC casts
c) Nephrotic range proteinuria
d) Eosinophiluria

1650. TanmiHbrefanproteifis^du<^by-(ilZ]&^Vov93
a) Ureter b) Collecting duct *NEET/DNB*
c) Loop of Henle d) Distal tubule *Pattern)*

1651. Cast is produced due to damage to- *(PGI Dec 98)*
a) Nephron b) Tubule
c) PCT d)DCT

1652. Broad cast is characteristic of - *(PGI June 97)*
a) CRF b)AcGN
c) ARF d) Renal TB

1629)c 1630)b 1631)c 1632)a 1633)a,b 1634)d 1635)a 1636)b 1637)a,b,c 1638)a 1639)b 1640)a,b 1641)b 1642)c 1643)a,b,d 1644)a 1645)c 1646)b 1647)a 1648)a 1649)a 1650)c 1651)d 1652)a

1653. The cause of oedema in Nephritic syndrome is - *(NEET/DNB Pattern)*
a) Decreased in plasma protein concentration
b) Increased in plasma protein concentration
c) Reduced plasma osmotic pressure
d) Sodium and water retention

1654. Most common cause of nephritic syndrome in adults -
a) Membranoproliferative glomerulonephritis
b) FSGN
c) Membranous glomerulonephritis
d) Minimal change disease

1655. Maximum endocapillary proliferation is a feature of-
a) Membranous GN *(AI98)*
b) Measangio proliferation GN
c) Focal sclerosis
d) Post streptococcai GN

1656. Sub-epithelial humps are characteristic of-
a) Minimal change glomerulonephritis
b) Membranous glomerulonephritis
c) Membranoproliferative glomerulonephritis
d) Post-steptococcal glomerulonephritis

1657. All of the following statements is/are true about post streptococcal glomerulonephritis except -
a) Early treatment of streptococcal pharyngitis prevents glomerulonephritis *(PGI June 09)*
b) All cases of streptococcal infection lead to glomerulonephritis
c) Hump sign may be present
d) Immune complex deposits are seen
e) Commonly presents with cresent formation

1658. PSGN (post strept. GN) asso. with - *(PGIDec 06)*
a) Subepithelial deposits
b) Nephritis along with acute Renal failure
c) Low complement levels
d) HTN and protenuria
e) Normal complements

1659. Acute diffuse proliferative glomerulonephritis will have all of the following features, except -
a) Microscopic haematuria *(AIIMS Nov 05)*
b) Raised blood urea level
c) Raised serum creatinine level
d) Hypoalbuminaemia

1660. RPGN occurs in A/E- *(AIIMS Sep 96)*
a) SLE
b) Post streptococcal glomerulonephritis
c) Diabetic nephropathy
d) Good pastures syndrome

1661. Focal glomerulonephritis can be seen in all, except-
a) Hypertension *(AIIMS Nov 93)*
b) Wegener's granulomatosis
c) Infective endocarditis
d) IgA nephropathy

1662. Which of the following conditions are associated with pauci-immune crescenteric glomerulonephritis-
a) Henoch-schonlein nephritis
b) Lupus nephritis *(AI 09, AIIMS May 09)*
c) Microscopic poly angitis
d) Alport's syndrome

1663. Crescent formation is characteristic of the following glomerular disease - *(AI 02)*
a) Minimal change disease
b) Rapidly progressive glomerulonephritis
c) Focal and segmental glomerulosclerosis
d) Rapidly non prgressive glomerulonephritis

1664. Crescents are derived from - *(NEET/DNB Pattern)*
a) Epithelial cells + fibrin + macrophage
b) Mesangium + fibrin + macrophage
c) Tubule + mesangiaum + fibrin
d) Mesangiaum + fibrin

1665. All are features of RPGN except - *(AI94)*
a) Rapid recovery b) Crescent formation
c) Hypertension d) Non-selective proteinuria

1666. The prognosis of rapidly proliferating glomerulonephritis (Crescentric GN) depends upon-
a) Number of crescents *(AIIMS Nov 01)*
b) Size of crescents
c) Shape of crescents
d) Cellularity of crescents

1667. Post-infective glomerulonephritis present *?l $-(AI96)*
a) ARF
b) Nephrotic syndrome
c) Nephritic syndrome
d) Asymptomatic hematuria

1668. RPGN caused by - *(PGI June 05)*
a) FSGS
b) Wegener's granulomatosis
c) Good pasteur's syndrome
d) PAN
e) Microscopic poly angitis

1669. Which of these does not cause crescentic glomerulo nephritis *(NEET/DNB Pattern, AI 08)*
r %^l„f\)^Rapidly progressive glgmer|lp|fe^M|C^'it H §
b) Alport syndrome
c) Goodpasture syndrome
4?^rdj Henoch schdnMn>pgipura | ||g§§

1670. Crescentic glomerulonephritis seen in -
a) PSGN b) MPGN *(PGIDec 07)*
c) Membranous GN d)RPGN
e) Malignant HTN

1671. All are non proliferative GN except - *(AI 08)*
a) Membranous GN
b) Mesangiocapillary GN
c) Diabetic glomerulosclerosis
d) Amyloidosis

1672. Which of the following is included in definition of Nephrotic syndrome - *(PGI June 04)*
a) Microalbuminuria b) Massive Proteinuria
c) Microscopic haematuria d) Oedema
e) Hyperlipidemia

1653) d 1654) None 1655)d 1656)d 1657)a,b,e 1658)a,b,c,d 1659)d 1660)c 1661)a 1662)c 1663)b 1664)a
1665) a 1666) a 1667)c 1668)b,c,d,e 1669)b 1670)a,b,d 1671)b 1672)b,d,e

1673. Nephrotic syndrome is characterised by - *(PGIDec 02)*
a) Proteinuria b) Hyperlipidemia
c) Oedema d) Haematuria
e) Lipiduria

1674. Hypercoagulation in nephrotic syndrome is caused by- *(AI10)*
a) Loss of antithrombin III
b) Decreased fibrinogen
c) Decreased metabolism of Vitamin K
d) Increase in protein C

1675. All of the following are decreased in nephrotic syndrome, except - *(AIIMSJune 98, Dec 95, AI97)*
a) Serum transferrin b) Serum fibrinogen
c) Serum ceruloplasmin d) Serum albumin

1676. All of the following decrease in Nephrotic syndrome except - *(NEET/DNB Pattern)*
a) Fibrinogen b) Thyroxin
c) Transferrin d) Albumin

1677. Edema in nephrotic syndrome is due to -
a) Sodium & water retention *(AlIMSNov 10)*
b) Increased venous pressure
c) Hypoalbuminemia
d) Hyperlipidemia

1678. Most common cause of nephrotic syndrome in adults-
a) Membranous glomerulonephritis *(AI98)*
b) Minimal change disease
c) Acute GN
d) Focal GN

1679. Idiopathic nephrotic syndrome is associated with the following except- *(MH11)*
a) Focal segmental glomerulosclerosis
b) Minimal change disease
c) Membranoproliferative glomerulonephritis
d) Mesangioproliferative glomerulonephritis

1680. True about membranous GN are following except -
a) Thickening of B.M *(PGI June 2000)*
b) Deposition between endothelium and B.M.
c) Most common cause of nephrotic syndrome in adults
d) Seen in SLE, tumors, drugs

1681. *True* about Heyman rat glomerulonephritis -
a) Heymann antigen is called megalin *(PGI Dec 04)*
b) Electron dense deposits in subendothelial space
c) Electron dense deposits in mesangium
d) Subepithelial aspect of basement membrane have deposits
e) Antigen against bacterial and viral products

1682. Epimembranous deposition is seen in - *(PGIDec 99)*
a) Good pasteur syndrome b) Membranous GN
c) MPGN d)MCD

1683. Clinical feature of minimal change glomerulonephritis are all except - *(AI 96)*
a) Hypertension b) Edema
c) Selective proteinuria d) Fever

1684. A 7 year old boy presented with generalized edema. Urine examination revealed marked albuminuria. Serum biochemical examinations showed hypoalbuminaemia with hyperlipidaemia. Kidney biopsy was undertaken. On light microscopic examination, the kidney appeared normal. Electron microscopic examination is most likely to reveal -
a) Fusion of foot processes of the glomerular epithelial cells *(AIIMS Nov 03)*
b) Rarefaction of glomerular basement membrane
c) Deposition of electron dense material in the basement membrane
d) Thin basement membrane

1685. A 7 year old girl is brought with complaints of generalized swelling of the body. Urinary examination reveals grade 3 proteinuria and the presence of hyaline and fatty casts. She has no history of hematuria. Which of the following statements about her condition is true?
a) No IgG deposits or C3 deposition on renal biopsy
b) Her C3 level will be low *(AIIMS May 11)*
c) IgA nephropathy is the likely diagnosis
d) Alport's syndrome is the likely diagnosis

1686. Feature(s) of Lipoid nephrosis is/are- *(PGI Nov 09)*
a) Normal on light microscopy
b) Epithelial deposit
c) Glomerular tuft sclerosis
d) Diffuse, uniform effacement of foot processes
e) Tubular sclerosis

1687. A child had hematuria and nephrotic syndrome (minimal change disease) was diagnosed. True about it is- *(AIIMS Nov 01)*
a) A type of focal segmental GN
b) IgA deposition on basement membrane
c) Foot process of glomerular membrane normal
d) Glomerular fùnction is lost due to loss of poly charge on both sites of glomerular foot process

1688. True about light microscopy in minimal change disease is - *(AIIMS Nov 01, AI 95)*
a) Loss of foot process seen
b) Anti GBM Abs seen
c) IgA deposits seen
d) No change seen

1689. All are true about minimal change GN except-
a) Selective proteinuria *(PGI Dec 99)*
b) IgG deposition in mesangium
c) Common in age group 2-9 years
d) Responds to steroids

1690. True about Minimal change disease is - *(AI 00)*
a) Appears normal under light microscopy but electron microscope shows loss of foot processes
b) Mesangial deposits
c) Tram Track appearance
d) Gross haematuria

1673)a,b,c,e 1674)a 1675)b 1676)a 1677)c 1678)a 1679)None>c 1680)b 1681)a,d 1682)b 1683)a 1684)a 1685) a 1686) a,d 1687) d 1688) d 1689)b 1690) a

1691. All are steroid resistant except - *(AI96)*
a) Post-streptococcal glomerulonephritis
b) Minimal change glomerulonephritis
c) RPGN
d) Recurrent hematuria

1692. Which of these is the characteristic feature of membranoproliferative glomerulonephritis -
a) Sub epithelial deposits *(AUMSDec95)*
b) Foamy cells
c) Splitting of glomerular basement membrane
d) Sub endothelial deposits.

1693. Thickening of basement membrane of glomeruli is seen in - *(PGI97)*
a) IgA nephropathy
b) Membranoproliferative glomerulonephritis
c) Lipoid nephrosis
d) Post streptococcal glomerulonephrities

1694. IgA nephropathy can occur in - *(AIIMSNov93)*
a) Membranoproliferative GN
b) Minimal change GN
c) Mesangioproliferative GN
d) RPGN type I

1695. Which of the following is not true about Berger's disease - *(AI 03)*
a) The pathological changes are proliferative and usually confined to mesangial cells; usually focal and segmental
b) Hematuria may be gross or microscopic
c) On immunofluorescence deposits contain both IgA and IgG
d) Absence of associated proteinuria is pathognomonic

1696. A female patient Nandini presents with upper respiratory tract infection. Two days after. She develops hematuria. Probable diagnosis is -
a) IgA nephropathy *(AIIMS June 99)*
b) Wegener's granulomatosis
c) Henoch sholein purpura
d) Post streptococcal glomerulonephritis

1697. Where are the deposits found in IgA Nephropathy-
a) Subepithelial b) Subendocardial*(PGI 97)*
c) Mesangium d) No deposists

1698. Increased IgA deposits are seen in - *(AI 00)*
a) Henoch Schonlein Purpura
b) Minimal Change Glomerulonephritis
c) Chronic Pyelonephritis
d) Haemolytic Uremic Syndrome

1699. Frequency of renal involvement in HSP -
a) 2040% b) >80% *(NEET/.DNBPatter n)*
c) 40-60% d) 10%

1700. In IgA nephropathy (Berger's disease), there are -
a) Subepithelial deposits *(PGIDec 97)*
b) Subendothelial deposits
c) Mesangial deposits
d) Basement membrane deposits

1701. Proliferative glomerular deposits in kidney are found in - *(AI 00)*
a) Amyloidosis
b) Diabetes millitus
c) IgA nephropathy
d) Membranous glomerulonephritis

1702. In reflux nephropathy, glomerular lesion is-
a) Focal GN. *(PGI June 2000)*
b) Membranous GN.
c) Membrano proliferative G.N.
d) Minimal change disease

1703. A person with radiologically confirmed reflux nephropathy develops nephrotic range proteinuria. Which of the following would be the most likely histological finding in the patient? *(AIIMSNov 11)*
a) Focal segmental glomerulosclerosis
b) Nodular glomerulosclerosis
c) Membranous glomerulopathy
d) Proliferative glomerulonephritis with crescents

1704. Glomerulonephritis associated with AIDS is-
a) Focal segmental GN b) PSGM *(PGIDec 2K)*
c) MPGN d) Membranous GN

1705. Which type of FSGS has worst prognosis?
a) Tip variant b) Collapsing *(AIIMS May 08)*
c) NOS d) Perihilar

1706. In collapsing glomerulopathy which of the following is seen - *(AIIMSNov 07)*
a) Hypertrophy and necrosis of the visceral epithelium
b) Proliferation of the parietal epithelium
c) Tuft necrosis
d) Mesangiolysis

1707. HIV associated nephropathy is a type of -
a) Membranous glomerulonephritis *(AIIMS Nov 04)*
b) Immunotaetoid glomerulopathy
c) Collapsing glomerulopathy
d) Fibrillary glomerulopathy

1708. Collapsing glomerulopathy, features are -
a) Tuft necrosis *(AIIMS Nov 07)*
b) Mesangiolysis
c) Parietal epithelial proliferation
d) Hypertrophy and necrosis of visceral epithelium

1709. Kidney changes in AIDS patient - *(PGIDec 04)*
a) Membranous GN
b) Wire loop lesion
c) Focal segmental glomerulosclerosis
d) Mesangioproliferative glomerulonephritis
e) Kimmelsteil Wilson lesion

1710. Foot process effacement is seen on EM in -
a) Minimal change disease *(PGI Nov 10)*
b) Focal segmental GN
c) IgA nephropathy
d) Mesangial proliferative GN

1711. A patient presenting with haemoptysis and renal ijfjM failure,with antibasementmembrane antibodies has- *(NEET/DNB Pattern)*
a) Good pasture's b) Wegener's
Sgtf c)Ctorg Strauss d^^^ocl^scholeinpurpura 1*]*

1691)b 1692) c>d 1693)b 1694)c 1695)d 1696)a 1697)c 1698)a 1699)c 1700)c 1701)c 1702)a 1703)a 1704) a 1705)b 1706)a 1707)c 1708)d 1709)a,c,d 1710)A11 1711)a

1712. Lupus glomerulonephritis includes - *(PGIDec 07)*
a) MPGN
b) Mesangeal proliferative GN
c) Focal segmental GN
d) Membranosclerosis

1713. Wire loop lesions are often characteristic for the following class of lupus nephritis -*(AIIMS May 04)*
a) Mesangial proliferative glomerulonephritis (WHO class II)
b) Focal proliferative glomerulonephritis (WHO class IE)
c) Diffuse proliferative glomerulonephritis (WHO class IV)
d) Membranous glomerulonephritis (WHO class V)

1714. The cause of oedema in Nephritic syndrome is- *(UP 07)*
a) Decreased in plasma protein concentration
b) Increased in plasma protein concentration
c) Reduced plasma osmotic pressure
d) Sodium and water retension

1715. Which of the following types of glomerulonephritis is most likely to cause CRF all except - *(A1 99)*
a) Post streptococcal glomerulonephritis
b) Membranous GN
c) Membrano proliferative GN
d) Focal segmental glomerulosclerosis

1716. In Leprosy most common renal lesion seen is -
a) MGN *(AI99)*
b) MPGN
c) Focal glomerulosclerosis
d) Diffuse glomerulosclerosis

1717. Which component of HBV causes glomerulonephritis - *(AIIMS June 2K)*
a) HbeAg. b) HBcAg.
c) HBs Ag. d) Anti HBs Ag antibody

1718. Organised glomemler deposits in kidney is present in- *(AI00)*
a) Amyloidosis b) Diabetes millitus
c) IgA nephropathy d) Cryoglobulinemia

1719. Subepithelial deposits in kidney are seen in- *(PGI June 01)*
a) MPGN-1 b) GPS (good-pasture synd)
c) PSGN d) Membranous GN
e) RPGN

1720. Subepithelial deposits are seen in- *(PGIMay 10)*
a) Minimal change disease b) MPGN
c) Membranous GN d)PSGN
e) IgA nephropathy

1721. Subepithelial deposits are seen in - *(PGIDec 97)*
a) Membranoproliferative nephropathy
b) Membranous GN
c) Minimal change GN
d) Diabetic sclerosis

1722. The most common gene defect in idiopathic steroid resistant nephrotic syndrome - *(AIIMSNov 11, May 07, Nov 06)*
a) ACE b) NPHS 2
c) HOX11 d)PAX

1723. The finish type of congenital nephrotic syndrome occurs due to gene mutations affecting the following protein - *(A106, 09, AIIMS May 09)*
a) Podocin b) Alpha-actinin
c) Nephrin d) CD2 activated protein

1724. Steroid resistant nephrotic Syndrome-
a) Nephrin *(AIIMS May 08)*
b) Alpha-actinin-4
c) Podocin
d) Transient receptor Potential - 6

1725. All of the following are associated with Low C_3 level except- *(AI03)*
a) Post streptococcal glomerulonephritis
b) Membrano-proliferative Glomerulonephritis
c) Good pasture's disease
d) Systemic lupus erythromatosus

1726. All of the following are associated with low complement levels except - *(AI 04)*
a) Lupus nephritis
b) Mesanogio capillary glomerulonephritis
c) Diarrhea associated hemolytic uremic syndrome
d) Glomerulonephritis related to bacterial endocarditis

1727. Low complement levels seen in - *(PGIDec 06, 07)*
a) PSGN
b) MPGN
c) Good pasture's syndrome
d) Wegner's granulomatosis
e) Infective endocarditis

1728. Serum C3 is persistently low in the following except-
a) Post streptococcal glomerulonephritis *(AI 04)*
b) Membranoproliferative glomerulonephritis
c) Lupus nephritis
d) Glomerulonephritis related to bacterial endocarditis

1729. Hereditary nephritis is seen in - *(PGIDec 03)*
a) Analgesic nephropathy
b) Balkan nephropathy
c) Alport syndrome
d) Eosinophilic nephritis

1730. Glomerulonephritis associated with sensory neural deafness are features of - *(AIIMSDec 95)*
a) Alport's syndrome b) Nail patella syndrome
c) Down's syndrome d) Fabry's syndrome

1731. The Electron Microscopy is virtually diagnostic in renal biopsy study of - *(AIIMSMay 08, AI 10)*
a) Goodpasture's syndrome
b) Churg-Strauss syndrome
c) Alport syndrome
d) Wegner's granulomatosis

1712)a,b,c,d 1713)c 1714)d 1715)a 1716)a 1717)a 1718)c 1719)c,d,e 1720)c,d 1721)b 1722)b 1723)c 1724)c 1725)c 1726)c 1727)a,b,e 1728)a 1729)c 1730)a 1731)c

1732. Histology of Alport syndrome- *(PGIJune05)*
a) Foamy cells in interstitium
b) Foamy cells in tubular epithelial cells
c) Thickening of GBM > 100 nm
d) Thinning of GBM < 100 nm
e) Intimal proliferation

Alports syndrome is - *(NEET/DNB Pattern)*
a) Xlinked b) Co-dominant
c) AD

1734. Salt losing nephritis is a feature of - *(AI97)*
a) Interstitial nephritis
b) Amyloidosis of kidney
c) Post streptococcal GN
d) PEM

1735. Salt losing nephritis is a feature of- *(AIIMS Dec 95)*
a) Interstitial nephritis b) Polycystic kidney
c) Lupus nephritis d) Renal amyloidosis

1736. Pathological changes of diabetic nephropathy are all except- *(AI 95)*
a) Fibrin caps and capsular drops
b) Intercapillary glomerulosclerosis
c) Focal sclerosis
d) Capillary basement membrane thickening

1737. Most common pathological features in diabetes melitus is - *(AI 98)*
a) Papillary necrosis
b) Diffuse glomerulosclerosis
c) Renal atherosclerosis
d) Chronic pyelonephritis

1738. Most common factor in development of Diabetic nephropathy is - *(A194)*
a) Previous kidney disease
b) Associated hypertension
c) Duration of diabetes
d) Control with treatment

Common pathologic?' changes seen in kidney in benign hypertension are - *(NEET/DNB Pattern)*
a) Fibronoid necrosis b) Microaneurysm
d) Thining of walls

1740. Which characteristic feature is seen in the kidney in Malignant hypertension - *(AI 94)*
a) Hyaline necrosis b) Fibrinoid necrosis
c) Medial wall hyperplasia d) Micro-aneurysm

1741. Commonest histological finding in benign hypertension is - *(AI 09)*
a) Proliferative endarteritis
b) Necrotizing arteriolitis
c) Hyaline arteriosclerosis
d) Cystic medial necrosis

1742. Malignant hypertension is associated with -
a) RPGN *(PGIDec04)*
b) Malignant nephrosclerosis
c) Membranous GN
d) IgA nephropathy
e) Acute pyelonephritis

1743. The pathological change in malignant hypertension is - *(AI 95)*
a) Hyperplastic arteriosclerosis
b) Cystic medial necrosis
c) Benign nephrosclerosis
d) Hyaline arteriosclerosis

1744. NOT a cause of granular contracted kidney -
a) Diabetes mellitus *(AIIMS Dec 94, AI 9 7)*
b) Chronic pyelonephritis
c) Benign nephrosclerosis
d) Chronic glomerulonephritis

1745. Flea-bitten kidney is seen in all except - *(AI96, 98)*
a) SABE
b) Malignant hypertension
b) Hemolytic Uremic syndrome
d) Diabetic nephropathy

1746. Large kidney is seen in A/E - *(PGIDec 99)*
a) Benign nephrosclerosis b) Lymphoma
c) Amyloidosis d) DM

1747. Bilaterally enlarged kidneys are seen in -
a) Chronic glomerulonephritis *(PGI June 02)*
b) Chronic pyelonephritis
c) Benign nephrosclerosis
d) Polycystic Kidney disease
e) Amyloidosis

1748. Malignant hypertension cause& *(NEET/DNB Pattern)*
a) Flea bitten kidney
b) . Irregular granular contracted kidney
cj Large white kidney
d) No change in kidney

1749. Flea bitten appearance of the kidney is seen in -
a) Malignant hypertension *(NEET/DNB Pattern)*
b) Benign hypertension
c) Chronic pyelonephritis
d) Diabetes mellitus

1750. In an adult Unilateral smooth contracted kidney with hypertension is seen in - *(PGI June 98)*
a) Stenosis of renal arter b)Chr. GN
c) Renal cell CA d) Pyelonephritis

1751. A 40-year-old hypertensive male was admitted to the hospital with sudden onset of headache and altered sensorium. On Examination his Blood Pressure was observed to be 220/110 mm Hg and the patient died four later. What is likely pathological finding in his kidneys - *(AI 12)*
a) Small kidney with granular surface
b) Small kidney with peticheal haemorrhages
c) Large kideny with waxy appearance
d) Large kidney with granular surface

1752. Kidney biopsy from a child with hemolytic uremic syndrome characteristically most likely presents features of- *(AI 05)*
a) Thrombotic microangiopathy
b) Proliferative glomerulonephritis
c) Focal segmental glomerulosclerosis
d) Minimal change disease

1732) a,d 1733)a 1734) a 1735)a 1736)c 1737)b 1738)c 1739)a 1740)c 1741)c 1742)b 1743)a 1744)a 1745) d 1746) a 1747) d,e 1748) a 1749) a 1750) a 1751)b 1752) a

1753. TVue about Thrombocytopenic pupura is-
a) Haemolysis is extravasular *(PGI June 98)*
b) Normal renal function test
c) Thrombosis in cerebral blood vessels
d) Immediate cure following plasmapheresis

1754. About HUS all are true except - *(AIIMS May 08)*
a) Most commonly caused by verocytogenic E.Coli
b) Causes mild to severe coombs positive hemolytic anemia
c) Recurrences rare
d) Transient thrombocytopenia

1755. Adult polycystic kidney disease is-
a) Autosomal dominant *(NEET/DNB Pattern)*
b) Autosomal i;ecessiye
c) X-linked
d) Mitochondrial

1756. True about autosomal dominant type of APKD -
a) Small kidney *(PGI June 04)*
b) B/L medullary cyst
c) Mutation of polycystine 1 & 2 gene
d) Renal transplantation is contraindicated
e) Pathogenesis starts early and renal failure seen in middle life

1757. Which of the following is associated with adult polycystic kidney disease - *(AIIMS Nov 01)*
a) Berry aneurysms in Circle of Willis
b) Saccular aneurysms of aorta
c) Fusiform aneurysms of aorta
d) Leutic aneurysms

1758. True about adult polycystic kidney disease is all, except- *(AIIMS Nov 01)*
a) Autosomal dominant inheritance
b) Hypertension is rare
c) Can be associated with cysts in liver, lungs and pancreas
d) Pyelonephritis is common

1759. Which one of the following statements is wrong regarding adult polycystic kidney disease -
a) Kidneys are enlarged in size *(AIIMS May 04)*
b) The presentation is unilateral
c) Intracranial aneurysms may be associated
d) Typically manifests in the 3rd decade

1760. Regarding medullary sponge kidney -*(PGI June 02)*
a) Autosomal dominant b) Nephrocalcinosis
c) ARF d) Minimal proteinuria
e) More common in females

1761. Renal papillary necrosis is seen in -*(PGI June 01)*
a) Thalassemia b)DM
c) Phenacetin abuse d) Alcoholism
e) Cortical necrosis

1762. Renal papillary necrosis is almost always associated with one of the following conditions -
a) Diabetes-mcllitus *(NEET/DNB Pattern)*
b) Analgesic-nephropathy - ||pi §|§ §> §§ '?
c) Chronic pyelonephritis
d) Post streptococcal GN

1763. Necrotizing pappillitis may be seen in all of the following conditions except - *(AI02)*
a) Sickle cell disease
b) Tuberculous pyelonephritis
c) Diabetes mellitus
d) Analgesic nephropathy

1764. All are true about renal cell carcinoma, except -
a) Invades Renal Vein *(AIIMS May 94)*
b) Hematuria may occur
c) Arises from proximal convoluted tubule
d) More common in females

1765. The most common histological variant of renal cell carcinoma is - *(AIIMS Nov 05)*
a) Clear cell type b) Chromophobe type
c) Papillary type d) Tubular type

1766. A 40 year old man presented with painless haematuria. Bimunual examination revealed a ballotable mass over the right flank. Subsequently right nephrectomy was done and the mass was seen to be composed of cells with clear cytoplasm. Areas of haemorrhage and necrosis were frequent. Cytogenetic analysis of this mass is likely to reveal the abnormality of - *(AI 04)*
a) Chromosome 1 b) Chromosome 3
c) Chromosome l i d) Chromosome 17

1767. Chromophobe variant of renal cell carcinoma is associated with - *(AI 10)*
a) VHL gene mutations
b) Trisomy of 7 and 17 (+7, +17)
c) 3 p deletions (3p-)
d) Monosomy of 1 and Y (-1, -Y)

1768. Oncocytic carcinoma arises from - *(NEET/DNB*
'u- § if'PenVasrctflaf^' I tiyGfomerqp^41 |p| fj Pattern)
c) Loop of henle dj Collecting 4^1^

1769. Histopathology showing large cells with plant like apperance with perinuclear halo is seen in which type of renal cell carcinoma - *(PGI2K)*
a) Onchocytoma b) Granular cell carcinoma
c) Angiosarcoma d) Chromophobic
e) Clear cell carcinoma

1770. Paraneoplastic syndrome associated with renal cell carcinoma are all of the following except - *(AI 09)*
a) Polycythemia b) Hypercalcemia
c) Hypertension d) Cushing syndrome

1771. Microalbuminuria is defined as protein levels of- *(DNB Dec 08)*
a) 100-150 mg/L b) 151 -200 mg/L
c) 201-300 mg/L d) 301-600 mg/L

1772. TVue about fibronectin nephropathy are all except-
a) Autosomal recessive inheritance
b) Gomerular enlargement and PAS+ trichrome mesangial deposit *(AIIMS Nov 10)*
c) Glomerulus do not consistently stain for Ig and complement
d) Ultrastructural feature is presence of large electron mesangial or subendothelial deposit

1753) c 1754)b 1755)a 1756)b,c,e 1757)a 1758)b 1759)b 1760)a,b,d 1761)b,c,d 1762)a>b 1763)b 1764)d
1765) a 1766)b 1767)d 1768)d 1769)d 1770)None>d 1771)a,b,c 1772)a

1773. The most common infectious agent associated with chronic pyelonephritis is - *(A1IMS May 03)*
a) Proteus vulgaris
b) Klebsiella pneumonia
c) Staphylococcus aureus
d) Escherichia coli

1774. An important factor for chronic pyelonerphritis is -
a) Obstruction *(AI96)*
b) Vesico-ureteral reflux
c) Pelvi-ureteric junction obstruction
d) Catheter induced

1775. Which of the following statements about Xanthogranulomatous pyelonephritis is not true -
a) Foam cells are seen *(AI 11, 09)*
b) Associated with tuberculosis
c) Yellow nodules are seen
d) Giant cells may be seen

1776. Cells involved in interstitial cystitis? *(NEET/DNB Pattern)*
a) Lymphocytes b) Nouimphils
c) Macrophages d) Mast cells

1777. Kidney changes in multiple myeloma are -
a) Hyaline casts *(PGI Dec 01)*
b) Focal segmental glomerulosclerosis
c) MPGN
d) Fatty casts

1778. Renal lesions in Multiple myeloma - *(PGI June 04)*
a) Cast nephropathy b) Amyloid deposition
c) Plasma cell infiltration d) Eosinophilic infiltration
e) Fibrinoid lesions

1779. A renal biopsy from a 56 year old woman with progressive renal failure for the past 3 years shows glomerular and vascular deposition of pink amorphous material.lt shows apple-green birefringence under polarized light after Congo red staining. These deposits are positive for lambda light chains, the person is most likely to suffer from -
a) Rheumatoid arthritis *(AIIMSMay03)*
b) Tuberculosis
c) Systemic lupus erythematosus
d) Multiple myeloma

1780. Mesangial deposits of monoclonal Kappa/ Lambda light chains is indicative *of-(AIIMSMay 04)*
a) Mesangioproliferative glomerulonephritis
b) Focal and segmental glomerulosclerosis
c) Kimmelstein - wilson disease
d) Amyloidosis

1781. Nephrocalcinosis is seen in - *(PGI June 04)*
a) Hypoparathyroidism
b) Medullary sponge kidney
c) DM
d) RTA

1782. Causes of nephrocalcinosis are - *(PGI June 01)*
a) Hyperparathyroidism b)T.B. Kidney
c) Hypercalcemia d) Glomerulonephritis
e) MCD

1783. Disease that recurs after transplantation of kidney is - *(PGI Dec 98)*
a) DM b)MPGN
c) SLE d) Mesangial

1784. Excessive intake of which of these causes necrosis of PCT - *(AIIMS Dec 97)*
a) Mercury b) Alcohol
c) Arsenic d) Phenol

1785. Mercury affects which part of the kidney -
a) PCT b) DCT *(AIIMSMay 07)*
c) Collecting duct d) LoopofHenle

1786. Part of the kidney unit involved in As. Poisoning -
a) Collecting duct b) Loop of henle *(AIIMSSep96)*
c) PCT d)DCT

1787. On kidney biopsy, PAS positive structures are:
a) Glomerular basement membrane *(PGINov 10)*
b) Tubule
c) Neutrophils
d) Interstitium
e) Mesangial matrix

1788. Pulmonary, renal syndrome is seen *in-(PGIDec 03)*
a) Good pasture syndrome
b) Leptospirosis
c) Legionella
d) Wegeners granulomatosis
e) Hantan virus infection

1789. Eosinophiluria is seen in - *(PGIDec 2000)*
a) PAN
b) Microscopic polyangitis
c) Interstitial nephritis
d) Atherothrombotic emboli

1790. All of the following form radiolucent stones except -
a) Xanthine b) Cysteine *(AIIMS03)*
c) Allopurinol d) Orotic acid

1791. Michaelis Gutmann bodies are seen in -
a) Xanthogranulomatous pyelonephritis
b) Malakoplakia *(AIIMS May07)*
c) Nail patella syndrome

1792. Most common tumor of urinary bladder is -
a) Sq. cell carcinoma *(PGI June97)*
b) Adenocarcinoma
c) Transitional carcinoma
d) Str. squamous carcinoma

1793. Transitional cell carcinoma of bladder is associated with - *(PGI June 01)*
a) Schistosomiasis b) Naphthylamine
c) Smoking d)TB bladder

1794. Squamaus cell Carcinoma of bladder is predisposed by- *(PGI June02)*
a) Urolithiasis b) Persistent urachus
c) Schistosomiasis d) Polyp
e) Smoking

1795. Most constant and persistent feature of Ca bladder is - *(PGIDec 95, AIIMS June 97)*
a) Haematuria b) Frequency
c) Dysuria d) Abdominal lump

1773) d 1774)b 1775)b 1776)d 1777)a 1778)a,b,c 1779)d 1780)d 1781) b,d 1782)a,b,c 1783)a,b 1784)a,c,d
1785) a 1786) c 1787)a,b,d,e 1788)a,b,d,e 1789) c,d 1790) b 1791) b 1792) c 1793)a,b,c 1794) a,c 1795) a

1796. Transitio maIi^^E:^areii|6maUbladfleF^a^ied **by-** *(NEET/DNB Pattern)*
a) Schistomiasis b):Ascariasis,
c) Malaria **IStMl'i. d)» None**

1797. Paraneoplastic syndrome not seen in renal cell cancer is? *(DNBDecll)*
a) Acanthosisnigricans b) Amyloidosis
c) Polycythemia d)SLE

1798. Type of nephropathy in DM - *(DNB June 11)*
a) Focal b) Diffuse
c) Nodular d) Crescent

1799. An emerging organism responsible for causing Pyelonephritis in Renal Allografts is *1 (DNB Dec 10)*
a) Polyoma virus b) Herpes virus
c) Hepatitis B virus d) Rota virus

1800. Increased levels of C_3NeF are associated with? *(DNB Dec 10)*
a) Type IMPGN b) Type IIMPGN
c) FSGS d) Berger Disease

1801. On one side kidney is normal, while other side kidney is contracted with scar, what is the most probable diagnosis? *(DNB June 10)*
a) Chronic pyelonephritis
b) Polycystic kidney
c) Renal artery stenosis
d) Tuberculosis of kidney

1802. In wegner's glomerulonephritis, the characteristic features seen in - *(DNB June 10)*
a) Focal necrotizing glomerulonephritis
b) Granulomas in the vessels wall
c) Interstital granulomas
d) Nodular glomerulosclerosis

1803. Michaelis gutmann bodies are found in -
a) Malakoplakia *(DNB Dec 09)*
b) Xanthogranulomatous pyelonephritis
c) Nail patella syndrome
d) Xanthelesma

1804. Berger nephropathy is due to mesangial deposition of- *(DNB Dec 09)*
a) Fibrin and C3 b)IgDandC3
c) IgE and C3 d)IgAandC3

1805. Mercury affects which part of the kidney -
a) PCT b) DCT *(DNB Dec09)*
c) Collecting duct d) Loop of Henle

1806. Pauci immune glomerulonephritis is seen in -
a) After transplant in Alports *(DNB Dec 09)*
b) Microscopic polyangitis
c) Henoch-schonlein nephritis
d) Lupus

1807. The most common gene defect in idiopathic steroid resistance nephrotic syndrome - *(DNB Dec 09)*
a) ACE b) NPHS 2
c) Hoxll d)Pax

1808. All are causes of granular contracted kidneys, except - *(DNB June 09)*
a) Benign nephrosclerosis b) Diabetes mellitus
c) Chronic PN d) Chronic GN

1809. The cresecent forming glomerulonephritis is -
a) RPGN b) Acute GN *(DNB June 08)*
c) Membranous GN d) Membrano proliferative GN

1810. Serum C_3 is persistently low in the following except - *(DNB Dec 07)*
a) Post-streptococcal glomerulonephritis
b) Membranoproliferative glomerulonephritis
c) Lupus nephritis
d) Glomerulonephritis related to bacterial endocarditis

1811. The cresent forming glomerulonephritis is -
a) RPGN b) Acute GN *(DNB Dec 07)*
c) Membranous GN d) Membrano proliferative GN

1812. Rapidly progressive glomerulonephritis is histologically characterised by the presence of numerous - *(DNB June 07)*
a) Intramembranous dense deposits
b) Atrophic proximal convoluted tubules
c) Hyalinized small arterioles
d) Epithelial cell crescents

1813. Subendothelial electron dense deposits within the glomerulus is seen in - *(DNB June 07)*
a) MPGN type I
b) Crescentic glomerulonephritis
c) Dense deposit disease
d) IgA nephropathy

1814. Linear deposits along glomerular basement membrane are seen in - *(DNB June 07)*
a) Good pasture syndrome b) SLE
c) Drug reaction d) HS purpura

1815. Kimmelsteil -Wilson lesions in kidney consists of-
a) Splitting of glomerular basement membrane
b) Nodular sclerosis of the glomeruli
c) Hyaline sclerosis *(DNB June 07)*
d) Hyperplastic arteriosclerosis

1816. The protein in glomerular basement membrane responsible for charge dependent filtration is -
a) Albumin b) Collagen type IV
c) Proteoglycan d) Fibronectin *(DELHI 96)*

1817. Clinical feature of CRF appear when renal function is reduce to - *(JIPMER 80)*
a) 70% b) 50%
c) 30% d) 20% of normal

1818. Glomerulonephritis is due to - *(JIPMER 90)*
a) Type I hypersensitivity reaction
b) Type IV hypersensitivity reation
c) Immune complex deposition
d) Type V hypersensitivity reaction

1819. Linear deposition of lgG on glomerular basement membrane is seen in - *(AIIMS 91)*
a) CRF
b) Good pasteur's syndrome
c) Nephrotic syndrome
d) Shunt nephritis

1796) a 1797) a,d 1798)c>b 1799)a 1800)b 1801)a 1802)a>b 1803)a 1804)d 1805)a 1806)b 1807)b
1808)b 1809) a 1810)a 1811)a 1812)d 1813)a 1814)a 1815)b 1816)c 1817)d 1818)c 1819)b

1820. Which of the following is associated with anti-glomerular basement membrane antibody ?
a) IgA nephropathy *(UPSC-108)*
b) Membranous glomerulonephritis
c) Goodpasture's syndrome
d) Membrano-proliferative glomerulonephritis

1821. Cresentic glomerular deposits are seen in -
a) Wegener's granulomatosis *(MH11)*
b) Polyarteritis nodosa
c) Thrombangitis obliterans
d) All of the above

1822. All are true about ANCA associated crescentic glomerulonephritis, except - *(DELHIPG Feb. 09)*
a) Seen in Wegner's granulomatosis
b) Seen in microscopic polyangitis
c) Seen in Henoch Schonlein purpura
d) Is pauci-immue in nature

1823. Rapidly progressive glomerulonephritis is characterised by - *(Jipmer 11)*
a) Cresents
b) Splitting of basement membrane
c) Neutrophil infilteration of the mesangium
d) Glomerulosclerosis

1824. Hall mark of the IgA nephropathy is - *(UP 07)*
a) Oedema b) Hematuria
c) Hypertension d) Proteinuria

1825. In which of the following are linear IgA deposits in mesangium noted - *(MH 11)*
a) Henoch Schonlein purpura
b) Malaria
c) Good Pasture's syndrome
d) Wegener's granulomatosis

1826. There are electron dense deposits in the region of hyalinosis and sclerosis with diffuse loss of foot process seen in electron microscopy are features of- *(UP 07)*
a) Minimal change disease
b) Membranous glamerulonephritis
c) Membranoproliferative GN
d) Focal segmental glomerulosclerosis

1827. Minimal-change nephropathy - *(JIPMER 78, AMU87)*
a) Is the commonest cause of the nephrotic syndrome in childhood
b) Does not relapse after remission
c) Produces highly selective proteinuria
d) Does not cause depression of the serum complement level
e) Must always be confirmed by renal biopsy

1828. Spliting of the glomerular basement membrane is seen in - *(JIPMER 78,AMU87)*
a) Acute glomerulonephritis
b) Membranous glomerulonephritis
c) Membranoproliferative glomerulonephritis
d) Good pasture's syndrome

1829. Which of the following is the cause of break of glomerular basement membrane sometimes and sub epithelial deposits in electron microscopy?
a) Membranous glomerulonephritis (MGN)
b) Focal glomerular sclerosis *(APPG 08)*
c) Rapidly progressive glomerulonephritis (RPGN)
d) Minimal change (MCD)

1830. Subendothelial electron dense deposits within the glomerulus is seen in - *(Karn 11)*
a) MPGNtypel
b) Crescentic glomerulonephritis
c) Dense deposit disease
d) IgA nephropathy

1831. All cause nephrotic syndrome except - *(AI89)*
a) Minimal lesion glomerulonephritis
b) Membranous glomerulonephritis
c) Post streptococcal glomerulonephritis
d) Focal glomerulosclerosis

1832. Visceral leishmaniasis causes - *(Karnat 05)*
a) Membranous glomerulonephritis
b) Mesangio-poliferative glomerulonephritis
c) Focal segmental glomerulonephritis
d) Rapidly progressive glomerulonephritis

1833. Lipid cast are seen in - *(AP 96)*
a) Acute tubular necrosis
b) Nephrotic syndrome
c) Cytomegalic inclusion disease
d) None

1834. Nephrotic syndrome is caused by all except -
a) Malaria b) Penicillamine *(AI89)*
c) Syphilis d) Shock

1835. Nephrotic syndrome is characterized by all except -
a) Hypoalbuminemia *(UPSC-108)*
b) Hypolipidemia
c) Lipiduria
d) Proteinuria >3.5 gm per 1.73 m^2 per 24 hours

1836. All of the following may be associated with massive proteinuria except - *(UP 9 7)*
a) Amyloidsis b) Renal vein thrombosis
c) Polycystic kidneys d) Polyarteritis nodosa

1837. Most common cause of nephrotic syndrome in adults- *(Manipal 2006)*
a) Membrano proliferative glomerulonephritis
b) FSGN
c) Membranous glomerulonephritis
d) Minimal change disease

1838. Commonest type of nephrotic syndrome seen in children- *(PGI88)*
a) Focal b) Diffúse
c) Minimal change d) Proliferative

1839. In nephritic syndrome the following features indicate poor prognosis except - *(COMEDK 05)*
a) Selective proteinuria
b) Haematuria
c) Hypertension
d) Membrano proliferative histopathology

1820)c 1821) a 1822)c 1823)a 1824)b 1825)a 1826)d 1827)a,c,d 1828)c 1829)a 1830)a 1831) c 1832)b 1833) b 1834)d 1835)b 1836)c,d 1837)c 1838)c 1839)a

1840. Glomerulosclerosis is a feature of - *(JIPMER 85)*
a) Diabetes mellitus
b) Hypertension
c) Acute glomerulo nephritis
d) Nephrotic syndrome

1841. The intracytoplasmic vacuoles seen in the Armmani Epstein cell are rich in - *(AIIMS 83)*
a) Na and K' b) Glycogen
c) Lipids d) None of the above

1842. Kimmelstiel-wilson disease is diagnostic of-
a) Diabetic glomerulosclerosis *(AI88)*
b) Hypertension benign
c) Malignant hypertension
d) Amyloidosis

1843. Kimmelsteil -Wilson lesions in kidney consists of-
a) Splitting of glomerular basement membrane
b) Nodular sclerosis of the glomeruli *(Jipmer 11)*
c) Hyaline sclerosis
d) Hyperplastic arteriosclerosis

1844. Charactersitic feature of kidneys in diabetes mellitus is - *(AI89)*
a) Nodular sclerosis b) Fibrin cap
c) Papillary necrosis d)Difuse glomerulosclerosis

1845. Most specific histological lesion in diabetic nephropathy is - *(COMED 09)*
a) Glomerular crescents
b) Immune complex deposition
c) Occlusion of glomeruli with fibrin caps
d) Nodular glomerulosclerosis

1846. Which is not a feature of benign hypertension in Kidney- *(JIPMER 91)*
a) Hyaline arteriosclerosis
b) Interstitial lobular fibrosis
c) Medial hypertrophy of small vessels
d) Fibrinoid necrosis

1847. Onion skin lesions, in the muscular layer of arteriole, are seen in - *(TN 2002)*
a) SLE
b) Benign nephrosclerosis
c) Malignant nephrosclerosis
d) RPGN

1848. Bilateral contracted kidney occurs in all except
a) Diabetes mellitus *(AIIMS 90)*
b) Benign nephrosclerosis
c) Chronic pyelonephritis
d) Chronic glomerular nephritis

1849. Bilaterally symmmetrical contracted scarred kidney is seen in- *(Kerala 94)*
a) Nephrosclerosis
b) Chronic glomerulonephriris
c) End stage renal disease
d) Chronic pyelonephritis

1850. Findings of multiple myeloma in kidney are all except- *(DPG10)*
a) Tubular casts b) Amyloidosis
c) Wire loop lesions d) Renal tubular necrosis

1851. Which of the following is not associated with Adult Polycystic Kidney Disease - *(DPG 11)*
a) Autosomal dominant inheritance
b) Mutations involving gene affecting cell-cell-matrix interaction
c) Intracranial berry aneurysm may be present
d) Tricuspid valve prolapse

1852. Cylindrical dilatation of renal tubules is seen in -
a) Polycystic disease of kidney *(Jipmer 95)*
b) Medullary cystic disease
c) Wilms tumour
d) Lipoid nephrosis

1853. Route of infection in Tubercular Pyelonephritis -
a) Ascending *(APPGE 05)*
b) Descending
c) Haemotogenous
d) Airborne

1854. Xanthogranulomatous pyelonephritis is often associated with infection by - *(COMED 09)*
a) Proteus b) E. coli
c) H. influenzae d) Klebsiella

1855. A15 year old male presents with hematuria, he has previous diagnoses of deafness and corneal dystrophy. Urinalysis shows 1 + proteins, no ketones, no glucose, 1+blood, and no leukocytes. A renal biopsy reveals tubular epithelial foam cells by light microscopy. By electron microscopy the glomerular basement membrane shows areas of attenuation, with splitting and lamination of lamina dense in other thickened areas. The most probable diagnosis is -
a) Acute tubular necrosis *(MAHA 05)*
b) Berger disease
c) Membranous glomerulonephritis
d) Alport syndrome

1856. Which is not seen in Hemolytic uremic syndrome -
a) Coombs test positive *(AIIMS 92)*
b) Thrombocytopenia
c) Hypoflbrinogenemia
d) Uremia

1857. Which one of the following variants of renal cell carcinoma has the worst prognosis - *(UPSC 95)*
a) Papillary b) Tubuloalveolar
c) Chromophobe d) Sacromatoid

1858. The worst prognosis for renal cell carcinoma is
a) Vascular invasion *(JIPMER 92)*
b) Associated with hypercalcemia
c) Presence of Hematuria
d) Size more than 5 cm.

1859. Bilateral Renal cell carcimoma is seen in -
a) Eagle Barett's syndrome *(Corned 08)*
b) Beckwith Weideman syndrome
c) Von Hippel Lindau disease
d) Bilateral Angiomyolipoma

1840)a 1841)b 1842)a 1843)b 1844)a 1845)d 1846)d 1847)c 1848)a 1849)b 1850)c 1851) d 1852)a 1853)c
1854) a 1855)d 1856) a 1857)d 1858) a 1859)c

1860. A 40-year-old man presented with painless haematuria. Bimanual examination revealed a ballottable mass over the right flank. Subsequently right nephrectomy was done and the mass was seen to be composed of cells with clear cytoplasm. Areas of hemorrhage and necrosis were frequent cytogenetic analysis of this mass is likely to reveal the abnormality of - *(Manipal 09)*
a) Chromosome 1 b) Chromosome 3
c) Chromosome 11 d) Chromosome 17

1861. In Wilm's tumor the following leads to emergence of resistance to chemotherapy - *(DELHIPG Feb. 09)*
a) Nephrogenic rests
b) Monophasic morphology
c) Anaplasia
d) Capsular infiltration

1862. Transitional cell carcinomas can be caused by -
a) Napthylamine b) Smoking *(PGI88)*
c) Bilharziasis d) Betel nut

GASTROINTESTINAL TRACT

1863. Mallory weiss Syndrome is caused due to tear in -
a) Lower esophageal end. *(AIIMS Nov 99)*
b) Upper esophageal end.
c) Crico pharyngeal junction.
d) Gastro esophageal junction.

1864. In which of the following conditions uniform dilation of esophagus is seen - *(PGI June 05)*
a) Scleroderma b) Achalasia cardia
c) Dermatomysitis d) Trypanosoma cruzi infection

1865. Achalasia cardia - *(NEET/DNB Pattern)*
a) Absence of nerves
b) Absence of muscles
c) Hypertrophy, of nerves
d) None

1866. Best site for taking biopsy for viral oesophagitis is-
a) Edge of ulcer *(AIIMS Nov 01)*
b) Base of ulcer
c) Adjacent indurated area around ulcer
d) Surrounding normal mucosa

1867. Barrett's oesophagus is - *(AI02, Aiims June 93)*
a) Lower oesophagus lined by columnar epithelium
b) Upper oesophagus lined by columnar epithelium
c) Lower oesophagus lined by ciliated epithelium
d) Lower oesophagus lined by pseudostratified epithelium

1868. All except one are true regarding Barret's esophagus-
a) More incidence of sq. cell ca *(AIIMSFeb 97)*
b) Metaplasia
c) Columnar epithelium
d) Involves lower oesophagus

1869. Common type of Ca in middle V_3rd of oesophagus-
a) Adeno Ca *(PGI Dec 02)*
b) Squamous Ca
c) Adeno squamous Ca
d) Leiomyosarcoma

mm. **M.C. site of Ca esophagus is -** *(NEET/DNB Pattern)*
a) Middle ^rd b) Upper $^1/_3$rd
c) Lower V_3rd d) Lower end of esophagus

1871. The following are predisposing factors for esophageal Ca Except - *(AI 96)*
a) Plummer-Vinson syndrome
b) Tylosis palmaris
c) Chronic Achalasia
d) Benzene therapy

1872. Predisposing factors for Esophagus Ca- *(PGI June 05)*
a) Tylosis b) Achalasia
c) Barrett's esophaeus d) Scleroderma

1873. Chronic gastiritis is caused by all except -
a) H. Pylori *(NEET/DNB Pattern)*
b) Pernicious anaemia
c) Alcohol
d) Overuse of salicylates

1874. Type B gastritis- *(PGI May 10)*
a) Body predominant b) Fundus predominant
c) Antral predominant d) H. pylori
e) Autoimmune

1875. True about autonomic atrophic gastritis -
a) Loss of parietal cell *(PGI Nov 09)*
b) Hypertrophy of G cells
c) Apoptosis of gland epithelial cell
d) Hypertrophy of enterochromaffin cell
e) Active inflammation to neuroendocrine gland

1876. Endoscopic biopsy from a case of H.pylori related duodenal ulcer is most likely to reveal -
a) Antral predominant gastritis
b) Multifocal atrophic gastritis
c) Acute erosive gastritis
d) Gastric atrophy

1877. Thick mucous coat is- *(AI 97)*
a) Protective in ulcer patients
b) Not protective in ulcer patients
c) Easily destroyed by antacids
d) Commonly associated with carcinomatous change

1878. Peptic ulceration occurs at all the following sites except- *(KERALA 89)*
a) Lesser cuvature
b) First part of duodenum
c) Lower end of esophagus
d) Stoma of gastric portion of gastrojejunostomy

1879. The most common site of a benign (peptic) gastric ulcer is - *(AIIMS June 04)*
a) Upper third of lesser curvature
b) Greater curvature
c) Pyloric antrum
d) Lesser curvature near incisura angularis

1880. Most common complication of gastric ulcer -
a) Tea pot stomach *(AIIMS June 93)*
b) Scirrhous corcinoma
c) Preforation
d) Massive haematemesis

1860)b 1861) c 1862)a,b,c 1863) d 1864)b,d 1865)a 1866)a 1867)a 1868)b 1869)b 1870)c 1871)d
1872) a,b,c 1873)d 1874)c,d 1875)a,b,d 1876)a 1877)a 1878)d 1879)d 1880)d

1881. Common sites for cushing ulcers include all of the following except - *(AI99)*
a) Esophagus b) Stomach
c) 1st part of duodenum d) Distal duodenum

1882. Hypertrophic gastropathy is seen in - *(PGIDec 05)*
a) Seen in menetriers disease and ZES
b) It is associated with malignancy
c) It shows cerebriform rugacity on stomach
d) More in fundus and body

1883. Giant hypertrophy of gastric mucosa similar to brain surface is seen in - *(PGIDec 02)*
a) Peptic ulceration b) Carcinoma stomach
c) Menetrier's disease d) Leomyosarcoma

1884. Most common type of gastric polypis t
a) Hyperplastic polyp *(NEET/DNB Pattern)*
b) H^^oihatotis^i^ |
c) Malignant polyp
d) Familial polyosis

1885. Which one of the following is the most significant risk factor for development of gastric carcinoma ?
a) Paneth cell metaplasia *(AI 06)*
b) Pyloric metaplasia
c) Intestinal metaplasia
d) Ciliated metaplasia

1886. Gastric carcinoma is associated with all EXCEPT -
a) Inactivation of p5 3 *(DNBDecll)*
b) Over expression of C-erb
c) Over expression of C-met
d) Activation of RAS

1887. Most Common site for carcinoma stomch -
a) Antrum b) Fundus *(AIIMS June 93)*
c) Lesser curvature d) Greater curvature

1888. Commonest variety of carcinoma stomach is -
a) Squamous carcinoma b) Adenocarcinoma
c) Colloid carcinoma d)None

1889. The best prognosis in carcinoma stomach is with -
a) Superficial spreading type *(AI 95)*
b) Ulcerative type
c) Linitis plastica type
d) Polypoidal type

1890. When carcinoma of stomach develops secondarily to pernicious anemia, it is usually situated in the -
a) Prepyloric region b) Pylorus
c) Body d) Fundus

1891. False about the malignant ulcer of stomach is-
a) The mucosal folds do not reach the edge of the ulcer *(DPG10)*
b) Mucosal folds are thickened and fused
c) Ulcer crator is eccentric
d) Margins of the ulcer are overhanging

1892. Malignant gastric ulcers are characterized by A/E -
a) ulcer extends beyond the gastric wall.
b) Mucosal rugae stop far of ulcers
c) Eccentric crater *(AIIMS Dec 98)*
d) Margins are raised

1893. Linitis plastica is a feature of - *(AIIMS June 98)*
a) Hiatus hernia
b) Chronic gastric ulcer
c) Lymphoma of stomach
d) Diffuse carcinoma stomach

1894. Linitis plastica is found in A/E- *(AIIMS Dec 98)*
a) Syphillis b) Carcinoma
c) Sarcoid d)Leiomyosarcoma

1895. Amongst the following, the most common site for Leiomyoma is- *(AI 96, 98)*
a) Stomach b) Small Intestine
c) Duodenum d) Colon

1896. Histologic examination of the lesion in stomach reveal fat-laden cells, likely cause is -
a) Lymphoma *(AIIMS Nov 01)*
b) Postgastrectomy
c) Signet-cell carcinoma stomach
d) Atrophic gastritis

1897. True about gastric lymphoma - *(PGI June 09)*
a) Non Hodgkins lymphoma commonest variety
b) Diagnosis is made by biopsy
c) Chemoresistant
d) Essentially B-cell type
e) H-Pylori has direct relationship

1898. Most common site for non-Hodgkins lymphoma outside the lymph nodes is - *(UP 08)*
a) Liver b) Spleen
c) Stomach d) Brain

1899. Lymphoepithelial change in stomach is seen in -
a) Maltoma b) Coeliac ds *(PGI Dec99)*
c) Ipsidoma d) IBS

ggPMHL, **mon site of GIST is -** *(NEET/DNB Pattern)*
a) Ileum b) Esophagus
c) Colon d) Stomach

1901. Which of the following markers is specific for gastro-intestinal stomal tumor (GIST) - *(AI 10, 09)*
a) CD 117 b) CD 34
c) CD 23 d)S-100

1902. Gastrointestinal stromal malignancy arises from which of the following - *(AIIMS May 02)*
a) Smooth muscle
b) Nerve cells
c) Interstitial cells of Cajal
d) Vascular Endothelium

1903. The gene involved in GIST - *(MP 09)*
a) C-KTT b)BRAC-l
c) p53 d)BRAC-2

1904. Not true about GIST- ■ *(NEET/DNB Pattern)*
a) Stomach is the most common site
b) High propensity of malignant change
c) Associated with c-KIT mutation
life d) Histology slices spiridfc. shaped cells

1905. Mucin is not secreted by - *(AI 94)*
a) Goblet cell b) Paneth cell
c) Brunner's gland d) Crypts of Liberkuhn

1881) d 1882)a,b,c,d 1883)c 1884)a 1885)c 1886)None 1887)a 1888)b 1889)a 1890)d 1891)d 1892)a
1893)c,d 1894)d 1895)a 1896)b 1897)a,b,d,e 1898)c 1899)a 1900)d 1901)a 1902)c 1903)a 1904)b 1905)b

1906. In the intra-epithelial region of the mucosa of intestine the predominant cell population is that of-
a) Bcell b) T-cells *(AI02)*
c) Plasma cells d) Basophils

1907. Aganglionic seqment is encountered in which part of colon in case of Hirschsprung disease -
a) Distal to dilated segment *(AIIMSNov 99)*
b) In Whole colon
c) Proximal to dilated segment
d) In the dilated segment

1908. True statement regarding Hirschsprung's disease-
a) Giant ganglia are present *(AIIMS June 99)*
b) Mucosa is involved and show foldings
c) Manometry excludes the disease
d) Rectal biopsy is contraindicated in infants.

1909. Common site of regional enteritis is - *(AI98)*
a) Colon b) Rectum
c) Distal ileum and colon d) Caecum

1910. Skip granulomatous lesions are seen in - *(AI96)*
a) Ulcerative colitis b) Crohn's disease
c) Whipple's disease d) Reiter's disease

1911. Pseudopolyps are features of - *(NEET/DNB Pattern)*
a) Crohn's disease * b) Ulcerative colitis
c) Celiac sprue d) Whipple's disease

1912. Toxic megacolon is seen in - *(AI98)*
a) Chronic nonspecific ulcerative colititis
b) Crohn's disease
c) Colonic diverticulosis
d) Hamartomatous polyp

1913. Toxic megacolon is most commonly associated with- *(AI96)*
a) Ulcerative colitis b) Crohn's disease
c) Whipple's disease d) Reiter's disease

1914. Pipe stem appearance in barium enema is seen in- *(AI89)*
a) Crohns disease b) Ulcerative colitis
c) Schistosomiasis d) Carcinoma colon

1915. True regarding crohn's disease are A/E -
a) Scleroderma *(AIIMSJune 97)*
b) Transmural involvement
c) Cobble stone appearance
d) Skin involvement

1916. Which of the following would be the best morphological feature to distinguish ulcerative colitis from Crohn's disease - *(AIIMSMay 04)*
a) Diffuse distributions of pseudopolyps
b) Mucosal edema
c) Crypt abscesses
d) Lymphoid aggregates in the mucosa

1917. Ulcerative colitis what is seen - *(AIIMSMay 08)*
a) Cryptitis b) Crypt loss
c) Crypt branching d) Proliferating mucosa

1918. TVpe about «lcerative^ohtiis,>,aH^ie^l|rv'^s Uf§j
^ Rectum involved *(NEET/DNB Pattern)*
b) Pseudopplyps
c) PancolitfS:
d) Noncaseating granuloma

1919. All the following statements are false, except - *(AIIMS*
a) Collagenous colitis is seen in children *June 99)*
b) Ulcerative colitis is an acute granulomatus disease
c) Ulcerative colitis involves mucosa and submucosa
d) Necrotizing enterocolitis is an acute granulomatous disease

1920. What is true about ulcerative coUtis-
a) Involves rectum and then whole colon backwards
b) Involves only colon *(NEET/DNB Pattern)*
&&&&# c) Skip lesions seen
iSfg® d) jtieum not involved
mm

1921. Small intestinal biopsy is specific for - *(PGIDec 98)*
a) Tropicalsprue b) Celiac sprue
c) Whipple'sdisease d) Amyloidosis

1922. The following cereals should be avoided in patients with celiac diseases, except - *(AIIMSNov 03)*
a) Wheat b) Barely
c) Maize d) Rye

1923. The histological features of coeliac disease include all of the following Except - *(AI 02)*
a) Crypt hyperplasia
b) Increase in thickness of the mucosa
c) Increase in intraepithelial lymphocytes
d) Increase in inflammatory cells in lamina propyria

1924. True about celiac disease - *(PGIDec 07)*
a) Villous atrophy
b) Crypt hyperplasia
c) Infiltration of lymphocytes
d) Cryptitis
e) Superficial layer thinning

1925. Gluten sensitive enteropathy is most strongly associated with - *(AI 03)*
a) HLA-DQ2 b) HLA-DR4
c) HLA-DQ3 d) Blood group'B'

1926. Which not true regarding coeliac disease -
a) Total and sub-total villous atrophy
b) Increased chance of lymphoma *(PGI June 99)*
c) Anti-gliadin antibody persists even after gluten free diet
d) Tdisacharidases

1927, Gluten free diet is use in - *(UP 07)*
a) Celiac disease b) Tropical sprue
c) Ulcerative colitis d) Irritable bowel syndrome

1928. Macrophages containing large quantities of undigested and partial digested bacteria in intestine are seen in - *(AI 02)*
a) Whipple's disease
b) Amyloidosis
c) Immunoapproliferative small instetinal disease
d) Vibro cholerae infection

1929. Which of the following is a histological feature of whipple's disease *(AI 08)*
a) Infiltration of histiocytes in the lamina propria.
b) Granuloma in the lamina
c) Macrophages with PAS (+)ve material inside the lamina propria.
d) Eosinophils in the lamina propria

1906)b 1907) a 1908)c 1909)c 1910) b 191 l)b 1912)a 1913)a 1914) b 1915)a 1916)a 1917)a 1918)d 1919) c 1920) b 1921) c,d 1922) c 1923) b 1924)a,b,c 1925) a 1926) d 1927) a 1928) a 1929) c

1930. Lymphocytic colitis - *(PGIDec 05)*
a) Bloody diarrhea
b) Intra epithelial lymphocytes
c) Lymphocytes is stools
d) Through Ileoscopy look for payer's patches

1931. The most pre-cancerous condition for carcinoma colon is - *(AI 95)*
a) Familial polyposis b) Hamartomatous polyps
c) Juvenile polyps d) Hyperplastic polyps

1932. Which polyp has got the maximum risk of turning into malignancy -
a) Pseudopolyp
b) Hyperplastic polyp
c) Tubular villous adenomas (multiple)
d) Adenomatous polyps

1933. Osteomas, aden om a to us polyps of intestine & periampullary carcinomas are seen in -
a) Cowden syndrome *(NEET/DNBPattern)*
b) Peutz Jegers syndrome;
c) FAP ■
d) Gardener syndrome

1934. Inheritance of Gardner syndrome is -
a) Autosomal recessive *(NEET/DNB Pattern)*
b) Autosomal dominant
e)»X linked -
d) None of the above

1935. Which statement is false regarding familial adenomatous polyposis - *(A1IMS June 99)*
a) Males are usually carriers
b) Autosomal dominant inheritance
c) If not treated progress to malignancy in 100% of cases
d) Males and females are affected equally.

1936. True about Peutz jegher syndrome - *(PGINov 09)*
a) Most common site is small intestine
b) Polypectomy on colonoscopy is treatment of choice
c) Hamartomatous polyp
d) Mucosal involvement present
e) Have no malignant potential

1937. Dietery factors associated with colon carcinoma -
a) High fiber b) Low fiber *(PGI Dec 02)*
c) Smoked fish d) High fat intake
e) Japanese are common to develop Ca colon

1938. Which of these are associated with increased risk of colorectal Ca - *(PGI June 02)*
a) More intake of animal fat b) Aspirin
c) Ulcerative colitis d) Amoebic colitis
e) Polyps

1939. What is most commonly involved in carcinoma colon - *(AIIMS Nov 94)*
a) Caecum b) Rectosigtmoid colon
c) Transverse colon d) Ascending colon

1940. Carcinoma of the Rt. colon commonly presents as- *(AIIMS 94)*
a) Ulceratinglesion b) Fungating
c) Stenosing d) Infiltrating

1941. What is meant by Ca colon stage Hie -
a) Hepatic metastasis. *(AIIMS June 99)*
b) Extension upto serosa & lymph node
c) Extension upto serosa
d) Extension upto mucosa

1942. Colon carcinogenesis is associated with all except-
a) APC b)kRAS *(DNB Dec 09)*
c) B-catenin d) Mismatch repair

1943. True about intestinal lymphoma - *(PGI Nov 10)*
a) Involved in non-Hodgkin's lymphoma
b) Made up of predominantly T cells
c) C-kit positive
d) Most common at ileo-caecal junction
e) Lymphadenopathy always seen

1944. Lymphoepithelial lesions in GIT are seen in-
a) IPSD (Immuno Proliferative Small Instestinal Disease) *(PGI Dec 2000)*
b) MALTOMA
c) Celiac disease
d) Adenocarcinoma intestine

1945. All are true regarding typhoid ulcer except- *(AIIMS June 97)*
a) Perforation is less common in children below 5yrs
b) Placed transversely along the ileum
c) Multiple ulcer found in terminal ileum
d) Perforation occurs in 3rd week

1946. Typhoid ulcer is - *(AIIMS 87, AI 90)*
a) Ulceration of the Peyer's patch
b) Longitudinal ulcer
c) May perforate
d) Stricture is rare
e) All of the above

1947. Macrophage, granuloma, erythrophagocytosis are found in *(PGI June 97)*
a) Ulcerative colitis b)Necrotising enterocolitis
c) Regional ileitis d) Typhoid

1948. The pathological appearance in pseudomembranous colitis consists of - *(AI 98)*
a) Necrosis and gangrene
b) Small ulceration with slough
c) Serositis with covered by membrane
d) Excessive ulceration in serosa

1949. Diverticulum most common *site fe-(NEET/DNBPattern)*
a) Sigmoid colon b) Ileum
c) Ascending colon d) Transverse colon

1950. Hour glass deformity is seen in - *(DNB Dec 11)*
a) Carcinoma stomachb) Peptic ulcer
c) Duodenal atresia d) CHPS

1951. Anti-Saccharomyces cerevisiae antibodies are seen in? *(DNB June 11)*
a) Crohn's diseaseb) Scleroderma
c) SLE d) Sjogren's syndrome

1952. Inflammatory bowel disease with transmural involvement and skip lesions is? *(DNB June 11)*
a) Crohn's disease b) Ulcerative colitis
c) Shigella infection d) Clostridium infection

1930) b 1931)a 1932)c 1933)d 1934)b 1935)a 1936)a,b,c,d 1937)b,d,e 1938)a,c,e 1939)None>b 1940)b
1941) b 1942) None 1943)a 1944)a,b,c 1945)b 1946)e 1947)c,d 1948)b 1949)a 1950)b 1951)a 1952)a

1953. True about Barrett's esophagus is? *(DNB June 11)*
a) Squamous metaplasia b) Columnar metaplasia
c) Irreversible d) Cancerous

1954. Paneth cells contain - *(DNB June 10)*
a) Zinc b) Copper
c) Molybdenum d) Selenium

1955. Anti transglutaminase antibody is seen in?
a) Celiac disease *(DNB Dec 09)*
b) SLE
c) Collagenous colitis
d) Tropical sprue

1956. Paneth cells characterized by - *(DNB Dec 09)*
a) More number of lysosomal enzyme
b) High concentration of zinc
c) More concentration of EFR
d) Foamy cells

1957. Antigliadin antibodies are detectable in -
a) Tropica sprue *(DNB Dec 08)*
b) Whipple's disease
c) Celiac disease
d) Intestinal lymphoma

1958. The highest malignant potential is seen in -
a) Crohn's disease *(DNB June 08)*
b) Ulcerative colitis
c) Familial polyposis
d) Infantile polyp

1959. Pseudopolyposis is seen in - *(DNB June 08)*
a) Crohn's disease b) Ulcerative colitis
c) Juvenile polyposis d) Enteric fever
e) Tuberculosis

1960. Skip lesions of colon with epitheloid granuloma are usually seen with - *(DNB June 07)*
a) Crohn's disease b) Ulcerative colitis
c) Intestinal TB d) Sarcoidosis

1961. Pseudopolyposis is seen in - *(DNB June 07)*
a) Crohn's disease b) Ulcerative colitis
c) Juvenile polyposis d) Enteric fever
e) Tuberculosis

1962. Toxic megacolon is most commonly associated with - *(DNB June 0 7)*
a) Ulcerative colitis b) Crohn's disease
c) Whipple's disease d) Reiter's disease

1963. Conditions associated with an increased risk of squamous cell carcinoma of the oesophagus include all of the following except - *(Karn 96)*
a) Barret's Oesophagus b) Achalasia cardia
c) Smoking d) Tytosis

1964. Endoscopic biopsy from a case of H.pylori related duodenal ulcer is most likely to reveal -
a) Antral predominant gastritis *(Jipmer 05)*
b) Multifocal atrophic gastritis
c) Acute erosive gastritis
d) Gastric atrophy

1965. One of the following polyps in the stomach does not become maligant - *(JIPMER 80, AIIMS 80)*
a) Tubular adenoma b) Villous adenoma
c) Multiple polyposis d) Hyperplastic polyps

1966. Which of the following is not related with carcinoma stomach - *(UP96)*
a) Blood Group O b) Blood group A
c) Smoked fish d) Nitrosoamines

1967. Greater risk of carcinoma of stomach is associated with- *(UP92)*
a) Old age b) Intestinal metaplasisa
c) Cardiac end ulcer d) Prepyloric ulcer

1968. The Instestinal villi are swollen and distended. There is accumlation of large granular Macrophages, containing material which stains. Strongly with periodic acid Schiff, in the Lamina propria. The most probable condition is - *(AMU85)*
a) Secondaty steatorrhoeb) Sprue
c) Coeliac disease d) Whipple's disease
e) Crohn's gap desease

1969. The following about ulcerative colitis is true except-
a) Chronic granulomatous disease *(PGI88)*
b) Pseudopolyps seen
c) Predisposes to granulolatous disease
d) Can cause clubbing of fingers
e) Associated with $HLAA_3$

1970. All are seen in Ulcerative colitis *except-(JIPMER 98)*
a) Pseudopolyps b) Skip lesions
c) Rectum involvement d) Malabsorption

1971. Transmural involvement & granuloma are seen in - *(JIPMER 98)*
a) Ulcerative coilitis b) Crohn's disease
c) Tropical sprue d) Amoebic colitis

1972. The features of crohns disease are all except -
a) Lymphoid hyperplasia *(JIPMER 91)*
b) Skip lesion
c) Transmural involvement
d) Crypt Abscess

1973. Fistula is most common in - *(UP 07)*
a) Crohn's disease b) Ulcerative colitis
c) Infective entero colitis d) Coeliac sprue

1974. Yellowish exudates at multiple sites seen in colonoscopy indicates - *(Kerala 03)*
a) Crohn's disease b)Hirshspruingdisease
c) Tuberculosis d) Lymphoma

1975. Villous atrophy is seen in - *(AI89, 90)*
a) Celiac disease b) Giardisasis
c) Tropical sprue d) All of above

1976. Pneumatosis intestinalis is diagnostic of -
a) Ileal perforation *(COMED09)*
b) Necrotizing enterocolitis
c) Meconium ileus
d) Colonic aganglionosis

1977. Morphologic features of celiac disease include all, except- *(DELHIPGMar. 09)*
a) Increase in intra-epithelial lymphocytes
b) Increase crypt: villous ratio
c) Distended macrophages with PAS positive granules in lamina propria
d) Elongated, hyperplastic and tortuous crypts

1953)b 1954) a 1955)a 1956)b 1957)c 1958)c 1959)b 1960)a 1961)b 1962)a 1963)a 1964)a 1965)d 1966)a 1967)b 1968)d 1969)a,c,e 1970)b 1971)b 1972)a 1973)a 1974)a 1975)d 1976)b 1977)c

1978. Mesentric tumours are - *(Karnat 05)*
a) Usually solid b) Usually cystic
c) Highly malignant d) Highly vascular

1979. Not true about familial polyposis colon cancer syndrome? *(Jipmer 11)*
a) Autosomal recessive
b) Associated with fibromas and osteomas
c) Associated with brain tumors
d) 100% incidence of colon ca

1980. Premalignant conditions of the GIT are - *(PGI88)*
a) IliocecalTB b) Familial polyposis
c) Villous adenomas d) Ulcerative colitis

1981. The polyp with least malignant *potmtM-(JIPMER 98)*
a) Hyperplastic polyp b) Psuedo adenoma
c) Vilious adenoma d) Tubular adenoma

1982. Colonic polyp that has maximum chance of malignant change - *(MH11)*
a) Hyperplastic polyp
b) Adenomatous polyp
c) Juvenile polyp
d) Polyp of Peutzeger syndrome

1983. The adenomatous polypi of large bowel are most often situated in - *(AIIMS 81, AMU 89)*
a) Ascending colon b) Transverse colon
c) Descending colon d) Sigmoid colon

1984. Single most important prognostic indicator of colorectal carcinoma is - *(Kerala 04)*
a) CEA titres b) Degree of atypia
c) Size of tumor d) Extent of tumour

1985. Duke's stage C2 refers to carcinoma - *(UPSC 95)*
a) Bladder penetrating the extravesical fat
b) Bladder with metastasis to internal iliac lymph nodes
c) With histological features of 75% anaplastic cells
d) Rectum with metastasis to inferior mesentric lymph nodes

1986. In Duke's classification of cancer rectum, B2 denotes-
a) Growth extends to perirectal fat *(AIIMS 90)*
b) Regional nodes involved
c) Limited to thickness of bowel wall
d) Hepatic metastasis

1987. Commonest site of amoebiasis in the gut - *(AI88)*
a) Ileum b) Caecum
c) Ascending colon d) Transverse colon
e) Sigmoid colon

1988. Erythrophagia and Mononuclear cell infiltration ulcers are seen in - *(ROHTAK 9 7)*
a) Necrotising colitis b) Ulcerative colitis
c) Crohn's disease d) Typhoid ulcers
e) Amoebic ulcers

1989. Ulceration of Peyer's patches occur in... infection
a) Amoebiasis b) Crohn's *(PGI88)*
c) Salmonella d) Clostridium difficle

1990. Small intestinal stricture is not seen - *(Kerala 94)*
a) Lymphoma b) Typhoid
c) Tumor d) TB

1991. All are complication of Typhoid ulcer EXCEPT -
a) Perforation b) Stricture *(UP 08)*
c) Haemorrhage d) Sepsis

HEPATOBILIARY SYSTEM & PANCREAS

1992. In anoxia of liver, necrosis is seen in -*(PGI Dec 02)*
a) Centrilobular
b) Around the periphery
c) Around the central vein
d) Around the bile duct

1993. Nutmeg liver is seen in! - *(NEET/DNB Pattern)*
a) Right sided heart failure
b) Left sided heart failure
c) Increased pulmonary pressure
d) Decreased pulmonary pressure

1994. Centrizonal necrosis of liver occurs with -
a) Carbon tetrachloride ($CC1_4$) toxicity
b) Heart failure (CHF) *(AIIMS May 93)*
c) Smoking (chronic)
d) Chronic alcoholism

1995. Hepatic infarcts are seen in - *(PGI June 02)*
a) Eclampsia
b) Chronic venous congestion
c) Budd-Chiari syndrome
d) Shock
e) Extrahepatic biliary atresia

1996. Centrilobular necrosis of liver may be seen with -
a) Phosphorus b) Arsenic *(NEET/DNBPattern)*
c) CCl_4 d) Ethanol

1997. Bilirubin is the degradation product of - *(PGI 97)*
a) Albumin b) Globulin
c) Heme d) Transferrin

1998. True regarding unconjugated bilirubuin is -
a) Not lipid soluble *(AIIMS Nov 93)*
b) More water soluble
c) Excreted by kidney easily
d) Bound with serum albumin

1999. In post-hepatic jaundice, the concentation of conjugated bilirubin in the blood is higher than that of unconjugated bilirubin because - *(AIIMSNov 02)*
a) There is an increased rate of destruction of red blood cells.
b) The unconjugated bilirubin is trapped by the bile stone produced in the bile duct.
c) The conjugation process of bilirubin in liver remains operative without any interference.
d) The UDP-glulcuronoyltransferase activity is in creased manifold in obstructive jaundice.

2000. An Rh-ve woman became pregnant with Rh+ve fetus. Within few days after birth, the infant developed jaundice, ascites, hepatomegaly and edema. The likely substance (s) deposited in skin and sclera in jaundice is/are given below. Which is the best possible answer- *(AIIMS Nov 03)*
a) Biliverdin
b) Conjugated and unconjugated bilirubin
c) Unconjugated bilirubin
d) Conjugated bilirubin

1978) b 1979) a 1980)b,c,d 1981)a 1982)b 1983)d 1984)d 1985)d 1986)c 1987)b,c 1988)d 1989)c 1990)b 1991) b 1992)a,c 1993)a 1994)a,b 1995)a,b,c,d 1996)c 1997)c 1998)d 1999)c 2000)b

2001. Conjugated hyperbilirubinemia in seen in -
a) Rotor's synd *(PGIJuneOl)*
b) Dubin Johnson synd
c) Gilbert's synd
d) Breast milk j aundice
e) Criggler Najjar synd

2002. Normal liver histology is seen in - *(PGIDec 02)*
a) Gilert's syndrome b) Rotor syndrome
c) Criglar Najjar syndrome d) D-J. syndrome
e) Haemochromatosis

2003. Gilbert's syndrome is characterized by -
a) Normal liver function test *(AIIMS May 1993)*
b) Increased risk of cirrhosis
c) Normal liver histology
d) Conjugated hyperbilirubinemia precipitated by fasting

2004. Liver biopsy is normal in - *(PGI June 01)*
a) Dubin johnson syndrome b) Gilbert syndrome
c) Hemochromatosis d) Wilson's disease
e) Rotor's syndrome

2005. Unconjugated hyperbilirubinemia is seen in -
a) Rotor syndrome *(NEET/DNB Pattern)*
b) Dubin-Johnson syndrome
c) Gilbert syndrome
d) Bile duct obstruction

2006. What is/are true about bilirubin? *(PGIDec 08)*
a) Conjugation is rate limiting step
b) Bilirubin has affinity for elastin
c) Conjugated bilirubin is maximum in blood
d) Total Hb content of body is 750 gm

2007. The liver biopsy in acute hepatitis due to hepatitis B virus is likely to show all of the following, except -
a) Ballooning change of hepatocytes
b) Ground glass hepatocytes *(AIIMS May 04)*
c) Focal or spotty necrosis
d) Acidophil bodies

2008. Piece meal necrosis on liver biopsy is a feature of -
a) Alcoholic hepatitis *(AIIMS May 95)*
b) Indian childhood cirrhosis
c) Chronic active hepatitis
d) Primary alcoholic cirrhosis

2009. Histological features of chronic hepatitis -
a) Fibrosis of porta hepatis *(PGI June 05)*
b) Architechtural changes
c) Bridging necrosis
d) Ballooning degenerations

2010. Histopathblogy of chronic *hepatitte-(NEET/DNB Pattern)*
a) Balloning b) Councilman bodies
, cj Bridgingnecrosis d)All

2011. Ground glass hepatocytes are seen in which of the viral hepatitis - *(Maharashtra 10)*
a) HAV b)HBV
c) HCV d)HDV

2012. In Chronic Viral Hepatitis - *(AIIMSMay 04)*
a) Hepatitis A virus infection is a common cause in children
b) Morphological classification into Chronic Active Hepatitis and Chronic Persistent Hepatitis are important
c) Fatty change is pathognomic of Hepatitis C virus infection
d) Grading refers to the extent of necrosis and inflammations

2013. Acute viral hepatitis - *(PGIDec 05)*
a) Ballooning degeneration
b) Acidophilic inclusion (necrosis)
c) Interphase hepatitis
d) Lobular disarray
e) Fibrosis

2014. Councilman bodies are seen in - *(AIIMSNov 07)*
a) Alcoholic cirrhosis b) Wilson's disease
c) Acute viral hepatitis d) Autoimmune hepatitis

2015. Acute viral hepatitis is characterised by -
a) Piece meal necrosis *(PGIDec 02)*
b) Zonal necrosis
c) Focal necrotic spot
d) Liver is enlarged and bile stained
e) Bridging necrosis

2016. Which of the following is true regarding viral hepatitis- *(AIIMS June 99)*
a) Raised transaminase level correlates well with hepatic injury
b) Variable elevation of transaminase in prodromal phase.
c) HAV infection is diagnosed by IgG estimation
d) Elevation of enzyme is specific for liver injury

2017. TVue about Autoimmune type n Liver disease-
a) Antinuclear antibody *(PGI Dec 02)*
b) LKM-1 antibody
c) Antismooth muscle antibody
d) DS DNA
e) LC-l,andLC-2

2018. In a chronic alcoholic all the following may be seen in the liver except - *(AI02)*
a) Fatty degeneration b) Chronic hepatitis
c) Granuloma formation d) Cholestatic hepatitis

2019. Features of alcoholic liver disease - *(PGIDec 03)*
a) Fatty changes
b) Pericellular fibrosis
c) Mallory bodies seen
d) Microvesicular fatty deposits

2020. Characteristic of alcoholic liver is - *(PGIDec 99)*
a) Perivenular fibrosis b) Mallory hyaline
c) Spotty necrosis d) Zonal necrosis

2021. Pathological manifestation of chronic alcoholism include aD of the following except -
a) Piecemeal necrosis *(NEET/DNB Pattern)*
b) Balloning degeneration
c) Microvesicular fatty changes
d) Central hyaline sclerosis

20^23a^^^t^i^'Cont^in - *(NEET/DNB Pattern)*
a) Vimentin b) Cytokeratins
c) Keratin d) J/tCollagen/**v S; Mjf i

2001) a,b 2002) a,b,c 2003)a,c 2004)b,e 2005)c 2006)b,d 2007)b 2008)c 2009)a,c 2010)c 2011)b 2012)d
2013)a,b,c,d 2014)c 2015)b,c,d,e 2016)b 2017)b,e 2018)c 2019)A11 2020)a,b,c 2021)a 2022)b

2023. All of the following conditions may show Mallory Hyaline changes except - *(AI9 7)*
a) Wilson disease
b) Indian childhood cirrhosis
c) Primary biliary cirrhosis
d) Hepatitis E

2024. Mallory hyaline is seen in - *(PGIDec 2000, Nov 09)*
a) Alcoholic liver disease
b) Hepatocellular carcinoma
c) Wilson's disease
d) I.C.C. (Indian childhood cirrhosis)
e) Bilary cirrhosis

2025. Microvesicular fatty liver is seen in - *(PGI Dec 04)*
a) Valproic acid b) Tetracycline
c) Rey's syndrome d) DM
e) Protein energy malnutrition

206^/S^MEh **does not cause micrbvesicularsteatosis -**
a) Alcoholic fatty liver *(NEET/DNB Pattern)*
b) -Tetracycline toxicity
c) Acute fatty liver of pregnancy
d) Reyes syndrome

2027. Macro-vesicular fatty liver is seen in - *(AI 96)*
a) Protein-Energy malnutrition
b) Viral hepatitis
c) Acute fatty liver of Pregnancy
d) Reye's syndrome

2028. Non - alcoholic steatohepatitis is caused by -
a) DM b) Obesity *(PGI June 03)*
c) Wilson disease d) Sarcoidosis
e) Triglyceridemia

2029. Which one of the following diseases characteristically causes fatty change in liver ?
a) Hepatitis B virus infection *(AI 05)*
b) Wilson's disease
c) Hepatitis C virus infection
d) Chronic alcoholism

2030. Periportal fatty infiltration of liver is seen with -
a) Alcoholism b) Viral hepatitis *(AI 96)*
c) Malnutrition d) Tetracycline

2031. All are correctly matched except - *(PGI June 06)*
a) Hepatitis B - Ground glass hepatocytes
b) Reye's Ground glass hepatocytes
c) Alcohol - Mallory bodies
d) Wilson disease - Mallory bodies
e) Acute hepatitis - councilman bodies

2032. A young boy presented with severe hematemesis. O/E there was no hepatomegaly, Mild splenomegaly is present Endoscopy shows esophageal varices. The most probable diagnosis - *(AIIMS Nov 2000)*
a) Veno occlusive disease
b) Budd chiari syndrome
c) Cirrhosis liver
d) Non cirrhotic portal fibrosis

2033. Which one of the following is not a feature of liver histology in Non cirrhotic portal fibrosis (NCPF) ?
a) Fibrosis in and around the portal tracts *(AI 05)*
b) Thrombosis of the medium and small portal vein branches
c) Non specific inflammatory cell infiltrates in the portal tracts
d) Bridging fibrosis

2034. Micronodular cirrhosis is found in - *(PGIDec 04)*
a) Jejunoileal by pass
b) Wilson's disease
c) Haemochromatosis
d) Chronic hepatitis B infection
e) Chronic hepatitis C infection

2035. Micronodular cirrhosis is seen in all except -
a) Chronic hepatitis B *(AIIMS Nov 07)*
b) Alcoholic cirrhosis
c) Haemochromatosis
d) Chronic cirrhosis secondary to biliary stasis

2036. Lipoprotein X is elevated in - *(PGI June 98)*
a) Primary biliary cirrhosis
b) Indian childhood cirrhosis
c) Hypercholesterolemia
d) Alcoholic cirrhosis

2037. Hepatocellular damage of Wilson's resembles -
a) Acute hepatitis *(PGIDec 05)*
b) Chronic hepatitis
c) Cholestasis

2038. Gene of Wilsons disease is -*(NEET/DNB Pattern)*
Plf a) ATP 7A b) ATP7B
c) ADP7A d) ADP7B

2039. Tests to diagnose Wilson's disease are -
a) KFring *(PGI Dec 2000)*
b) Liver copper by dry weight of liver = 200 micro gm/gm of dry weight
c) Sr. Ceruloplasmin
d) 24 hours urine copper after penicillamine
e) Sr. copper

2040. Copper is mainly transported *by-^NEET/DNB Pattern)*
a) Ceruloplasmin * b) Albumin
c) Haptoglobin d) Globulin

2041. Raised iron content is NOT found in which organ in Hemochromatosis - *(AIIMS Dec 94)*
a) Heart b) Skin
c) Testis d) Pituitary

2042. All are seen in hemochromatosis except - *(AI 08)*
a) Hypogonadism
b) Arthropathy
c) Bronze diabetes
d) Desferrioxamine is the treatment of choice

2043. Hemochromatosis is a defect in metabolism of -
a) Iron b) Copper *(NEET/DNB Pattern)*
c) Magnesium d) Calcium

2023) d 2024)All 2025)a,b,c 2026) a 2027) a 2028)a,b,e 2029) d 2030) c 203 l)b 2032) d 2033) d 2034) a,c 2035) a 2036) a 2037)a,b,c 2038)b 2039)a,b,c 2040) a 2041) c 2042) d 2043) a

2044. TVue about alpha-1 antitrypsin deficiency, is are -
a) Autosomal dominant *(PGI June 01)*
b) Pulmonary emphysema
c) Diastase resistant hepatic cells
d) Hepatic cells are orcein stain positive
e) Associated with berry aneurysm

2045. Which of the following features in liver biopsy is seen in alpha 1 antitrypsin deficiency-
a) PAS positive and diastase resistant globules are seen *(PGIDec 01)*
b) Cirrhosis of liver
c) Mallory hyaline
d) Bile duct proliferation
e) Amyloid deposition

2046. TYue statements about a_x - anti-trypsin deficiency-
a) Autosomal dominant disease *(PGI June 03)*
b) Emphysema
c) Fibrosis of Portal tract
d) Disetase resistant positive hepatocytes
e) Orcein positive granules

2047. Most common benign tumour of liver is-*(AIISM Nov*
a) Papilloma b) Hepatic adenoma *93,94)*
c) Amoeboma d) Hemangioma

2048. AFP is raised in - *(PGI 99)*
a) Hepatic adenoma
b) Hepatocellular carcinoma
c) Focal nodular hyperplasia
d) None

2049. Angiosarcoma of liver is associated with - *(A198)*
a) Nickel b) Chromium
c) Cadmium d) Arsenic

2050. Thorium dioxide caiisejs-'- *(NEET/DNR Pattern)*
a) Lymphoma b) Lymphangiosarcoma
c) Angiosarcoma d) Hemangioendothelioma

2051. All are features of hepatocellular carcinoma, except-
a) Not common in Asian *(AI1MS Sep 96)*
b) Liver biopsy is diagnostic
c) Raised titre ofHBV and HCV antibodies
d) Fibrolameller type is having good prognosis

2052. 38 year old man Babbu, a chronic alcoholic, presents with pain in abdomen. On examination his liver is enlarged and serum a fetoprotein is elevated. The most likely diagnosis is - *(A12000)*
a) Hepatocellular carcinoma
b) Liver cell hyperplasia
c) Hepatic adenoma
d) Hepatitis

2053. True about Fibrolamellar carcinoma of Liver is all, except- *(ARMS Nov 01)*
a) Females do not have increased incidence than males
b) Has good prognosis
c) Not associated with liver cirrhosis
d) Serum AFP levels are usually >1000 mg/ltr

2054. Best prognosis is seen in - *(AIIMS 98)*
a) Fibraolamellar hepatoma b) Hepatoblastoma
c) Angiosarcoma d) Cholangiosarcoma

2055. Definite markers for hepatoblastoma *\s-(PGINov 09)*
a) LDH b) Alpha-fetoprotein (AFP)
c) hCG d) Alkaline phosphatase
e) p microglobulin

2056. Canals ofhering are present in- *(PGI 98)*
a) Spleen b) Liver
c) Lymph node d) Bone marrow

2057. Histopathologic features of bile duct obstruction are-
a) Proliferation of bile duct *(PGI June 01)*
b) Bile lakes
c) Portal fibrosis
d) Cholestasis

ptgi **Primary biliary cirrhosis is positive for -**
jlgg a) PANCA *(NEET/DNB Pattern)*
b) Anti-mitochondrial antibody
c) Anti nuclear antibody
d) Anti-microsomal antibody

2059. Focal diffuse gall bladder wall thickening with comet tail reverberation artifacts on USG is in -
a) Adenomyomatosis of gall bladder
b) Ca gall bladder *(DNB Dec 08)*
c) Adenomatous polyps
d) Xantho granuloma

2060. Primary sclerosing cholangitis, true are -
a) T Females *(PGI June 06)*
b) Associated with IBD
c) Involves intra & extrahepatic ducts
d) ERCP not helpful

2061. Which is risk factor for cholangiocarcinoma -
a) Obesity *(NEET/DNB Pattern)*
b) Primary sclerosing cholangitis
c) Salmonella carrier state **fill**
d) HBV infection

2062. Klatskin tumo^is^,;; *ic(NEEP/JDNB Pattern)*
a) Nodular type of chQlangio0aripap|a#lljS
ill b) Fibrolamellar hepatocellular carcinoma
mm **.d)'GaU?bUdder:C^ttie|]®fg^i|j|^i^p^^|||pj**
||pSt d) Hepatocellular carcinoma

2063. Adeno carcinoma of gall bladder are always located in- *(ARMS 86)*
a) Fundus b) Neck
c) Harman's pouch d) Bile duct

2064. The following condition of GB is precancerous -
a) Cholesterosis *(NEET/DNB Pattern)*
b) Porcelain gall bladder
c) Biliary atresia
d) Choledochal cyst

2065. Budd chiari syndrome can be caused by - *(PGI 88)*
a) Thrombosis of hepatic veins
b) Polycythemia
c) Drinking Herbal tea
d) Membranous webs of IVC
e) All

2044) b,c 2045) a,b,c 2046)b,c,d 2047) d 2048) b 2049) d 2050) c 2051) a 2052) a 2053) d 2054) a 2055) b 2056) b 2057) a,b,c,d 2058) b 2059) a 2060) b,c 2061) b 2062) a 2063) a,b 2064) b 2065) e

2066. True about Budd-chiari syndrome - *(PGINov 10)*
a) Associated with coagulopathy
b) Cirrhosis may occur
c) Good prognosis
d) Ascites may be present
e) Hepatic vein thrombosis

2067. Budd- chiari syndrome is characterised by -
a) Hepatic veno-occlusive disease *(PGINov 10)*
b) Hepatomegaly
c) Portal vein obstruction
d) IVC obstruction
e) Hepatic vein obstruction

2068. Peliosis hepatis is caused by all except - *(MH11)*
a) Analgesics b) Anabolic steroids
c) OC pills d)Danazol

2069. All are produced exclusively by liver, except -
a) Factor VII b) Prothrombin *(AIIMS Nov 99)*
c) Globulin d) Albumin

2070. Increased lived attenuation with intracellular infiltration is seen in - *(PGI DEC 99)*
a) Fatty liver b) Amyloidosis
c) Hemochromatosis d) All

2071. Hypogonadism in cirrhosis is due to -
a) Direct effect of alcohol on testes *(PGI June 01)*
b) Increased estrogen due to decreased catabolism
c) Increased peripheral conversion of androgens into estrogen
d) Increased testosterone

2072. Intake of which of these cause vascular lesions in liver- *(AIIMS Dec 97)*
a) Halothanes b) INH
c) Steroids d) CPZ

2073. Pigmentation in the liver is caused by all except-
a) Lipofuscin b) Pseudomelanin *(PGIDec 01)*
c) Wilson's disease d) Malarial pigment
e) Bile pigment

2074. Which substance is/are not deposited in hepatocyte?
a) Lipofuschin *(PGI May 10)*
b) Melanin like pigment
c) Bile pigment
d) Iron
e) Melanin

2075. Which of the following tumours have an increased elevation of placental alkaline phosphatase in the serum as well as a positive immunohistochemical staining for placental alkaline phosphatase -
a) Seminoma *(AIIMS May 04)*
b) Hepatoblastoma
c) Hepatocellular carcinoma
d) Peripheral neuroectodermal tumour

2076. Intracanalicular hepatic apparatus is affected by-
a) Alagille syndrome *(PGI June 01)*
b) Cystic fibrosis
c) Congential hepatic fibrosis
d) Caroli's disease
e) Polycystic liver disease

2077. Von-Meyenburg's complexes is seen in -
a) Brain b) Liver *(PGINov10)*
c) Kidney d) Spleen
e) Pancreas

2078. Liver granulation may be associated with all of the following except - *(AI02)*
a) Candida b) Halothane
c) Sarcoidosis d) Hepatic metastasis

2079. All the following are causes of acute pancreatis except- *(AI94)*
a) Gallstone b)Alcohol
c) Hemachromatosis d) Hypercalcemia

2080. Most common site for pancreatic pseudocysts-
a) Head b)Body *(AI98)*
c) Neck d) Outside the pancrease

2081. Most common site for carcinoma of pancreas -
a) Head b) Ampulla *(PGI June 2K)*
c) Body d)Tail

2082. Which of the following is the most common endocrine tumour of pancreas-(^//MS *June 04, PGI June 06)*
a) Insulinoma b) Gastrinoma
c) VIPoma d) Glucagonoma

2083. Whipple's triad is seen in - *(AI 93)*
a) Pancreatic carcinoma b) Insulinoma
c) Gastrinoma d) Somatostatinoma

2084. About ZES true is ? *(PGIDec 05)*
a) MC site is duodenal loop
b) It is an exocrine disease
c) It is an endocrine disease
d) 50% are malignant
e) Surgical excision is done

2085. Commonest sites of intraabdominal abscess -
a) Subphrenic b) Paracolic*(PGIJune 06)*
c) Pelvis d) Retroperitoneal
e) Between loops

2086. Mallory hyaline is characteristic feature of?
a) Hepatocellular carcinoma *(DNB June 11)*
b) Primary biliary cirrhosis
c) Alcoholic liver disease
d) Wilson's disease

2087. Chronic persistent hepatitis and chronic active hepathitis are differentiated by - *(DNB June 11)*
a) Anti-SM b)CRP
c) Arthritis d) Liver biospy

2088. Nutmeg liver is seen in? *(DNB Dec 10)*
a) CVC b) Infarction of liver
c) Amyloidosis d) Budd chiari syndrome

2089. On stopping Alcohol, all the following changes are reversible EXCEPT - *(DNB Dec 10)*
a) Hepatitis
b) Cirrhosis
c) Microvesicular fatty change
d) Macrovesicular fatty change

2090. Nutmeg liver is seen in? *(DNB Dec 09)*
a) CVC b) Infacrction of liver
c) Amyloidosis d) Budd chiari syndrome

2066)a,b,d,e 2067)b,d,e 2068)a 2069)c 2070)a 2071)a,b,c 2072)c 2073)None 2074)e 2075)a 2076)b,c,d,e
2077) b 2078) d 2079) c 2080) b 2081) a 2082) a 2083) b 2084) a,c 2085) c 2086) c 2087) d 2088) a 2089) b 2090) a

2091. Councilman bodies are seen in? *(DNBDec09)*
a) Heart failure b) Acute viral hepatitis
c) Cirrhosis of liver d) Wilson's disease

2092. Mallory hyaline bodies are present in all of the following, except - *(DNB Dec 09)*
a) Primary biliary cirrhosis
b) Secondary biliary cirrhosis
c) Indian childhood cirrhosis
d) Alcoholic cirrhosis

2093. Peliosis hepatis is caused by all except-(Z>M? *Dec 08)*
a) Analgesics b) Anabolic steroids
c) OC pills d) Danazol

2094. Micronodular cirrhosis is seen in all, except -
a) Alcoholic cirrhosis *(DNB June 08)*
b) Wilson's disease
c) Budd Chiari syndrome
d) Indian childhood cirrhosis

2095. Periportal fatty infiltration of liver is seen with- *(DNB Dec 07)*
a) Alcoholism b) Viral hepatitis
c) Malnutrition d) Tetracycline

2096. Mallory's hyaline is seen in - *(DNB Dec 07)*
a) Hepatitis C infection
b) Amoebic liver abscess
c) Indian childhood cirrhosis
d) Autoimmune hepatitis

2097. Nut- meg liver is gross appearance of liver in one of the following- *(TNPSC 2K)*
a) Cirrhosis of liver
b) Hepatoma
c) Secondary carcinomatous deposit in liver
d) Chronic passive congestion in liver

2098. Chronic active hepatitis seen in - *(CUPGEE 97)*
a) Methyldopa b) Oestrogen
c) Erythromycin d) Tetracycline

2099. In chronic inflammation confined to portal tract with intact limiting membrane and normal lobular parenchyma, the histoapathological diagnosis would be- *(ICS 98)*
a) Active hepatitis
b) Chronic active hepatitis
c) Chronic persistent hepatitis
d) Acoholic heaptitis

2100. Chronic Active Hepatitis is most reliably distinguished from chronic Persistant hepatitis by the presence - *(UPSC 02)*
a) Extrahepatic manifestation
b) Significant titre of antismooth muscle antibody
c) Characteristic liver histology
d) Hepatitis B surface antigen

2101. Major source of collagen in cirrhosis -
a) Kupfer cells *(JIPMER 2002)*
b) Ito cell (Hepatic stellate cell)
c) Hepatocyte
d) Canalicular cell

2102. All of the following are true about chronic venous congestion of liver except - *(SGPGI05)*
a) Gamma Gandy bodies are seen
b) Nutmeg liver is seen
c) Dilated blood channels are seen

2103. Large giant cells are found in - *(JIPMER 79, AMU87)*
a) Alcoholic hepatitis b) Neonatal hepatitis
c) Serum hepatitis d) Amoebic hepatitis

2104. Pathological change of liver cells in acute viral hepatitis is - *(AUMS 87, AI90)*
a) Ballooning degeneration
b) Ground glass hepatocytes
c) Piece meal nerosis
d) Fatty change

2105. Which of the following is single most important indicator of likilihoodness of progresion of hepatitis to liver cirrhosis - *(Maharashtra 10)*
a) Etiology
b) Associated serological findings
c) Presence of bridging necrosis
d) Presence of mallary hyaline

2106. Centrilobular necrosis in the liver is due to -
a) Halothane *(JIPMER 93)*
b) Chronic venous congestion
c) Yellow fever
d) Hemorrhagic shock

2107. Midzonal necrosis in liver may occur in-
a) Enteric fever b) Yellow fever *(BIHAR 91)*
c) Scarlet fever d) Rheumatic fever

2108. Macronodular cirrhosis is considered once nodule diameter is greater than - *(Kerala 04)*
a) 1 nun b) 2 m.m
c) 3 ram d) 4 m.m

2109. In cirrhosis liver all are seen except - *(Kerala 96)*
a) Loss of normal architecture
b) Degeneration of hepatocytes
c) Fatty infiltration
d) Loss of inter cellular connective tissue matrix

2110. Fatty change in liver is seen with use of-
a) Tetracycline *(PGI79, Delhi 93)*
b) Erythromycin
c) Chlorpromazine
d) Acetoaminohen

2111. Microvesicular type of fatty liver is seen in the following except - *(UPSC-108)*
a) Acute fatty liver of pregnancy
b) Alcoholic liver disease
c) Reye's syndrome
d) Phosphorus intoxication

2112. Alcoholic hyaline, in alcoholic liver disease is composed of - *(UP 07)*
a) Lipofuscin
b) Eosinophilic intracytoplasmic inclusions
c) Basophilic intracytoplasmic inclusions
d) Hemozoin

2091)b 2092)b 2093)a 2094)b 2095)c 2096)c 2097)d 2098)a 2099) c 2100)c 2101)b 2102)a 2103)b 2104)a,b,d 2105)a 2106)a,b,d 2107)b 2108)c 2109)c 2110)a 2111)b 2112)b

2113. In alcoholic liver disease, which of the following pigments deposited in the hepatocytes - *(UP 08)*
a) Hemosiderin b) Hemoglobin
c) Lipofuscin d) Melanin

2114. Mallory's hyaline is seen in - *(DELHI PG Feb. 09)*
a) Hepatitis C infection
b) Amoebic liver abscess
c) Indian childhood cirrhosis
d) Autoimmune hepatitis

2115. Mallory bodies are seen in all of the following conditons except - *(SGPGI05)*
a) Alcoholism
b) Primary billiary cirrhosis
c) Secondary biliary cirrhosis
d) Wilson's disease

2116. Mallory Hyaline is characteristically seen with -
a) Yellow fever *(MH 11)*
b) Hepatitis B infection
c) Alcoholic hepatitis
d) Primary sclerosing cholangitis

2117. HBV is not associated with - *(Kamat 96)*
a) Chronic active hepatitis
b) Chronic persistent hepatitis
c) Post necrotic cirrhosis
d) Cholangio carcinoma

2118. Vinyl chloride has been implicated in - *(JIPMER 88)*
a) Angiosarcoma of liver
b) Angiofibroma of nose
c) Hepatomas
d) Bladder cancer

2119. Cholangio carcinoma of liver caused by - *(UP 08)*
a) Hepatitis B infection
b) Cirrhosis of liver
c) Alpha - feto protein
d) Clonorchis - sinensis infection

2120. Which of the following is not correct about fibrolamellar variant of Hepatocellular carcinoma?
a) Occurs in young males and females
b) Hepatitis B virus is an important risk factor
c) Often has a better prognosis *(DELHIPG Mar. 09)*
d) Is a hard scirrhous tumour

2121. "Onion skin" fibrosis of bile duct is seen in-
a) Primary biliary cirrhosis *(COMED09)*
b) Primary sclerosing cholangitis
c) Extrahepatic biliary fibrosis
d) Congenital hepatic fibrosis

2122. Grossly pigmented liver is seen in .... syndrome
a) Criggler-Najjar b) Gilberts *(AP96)*
c) Dubin johnson d) Rotor's

2123. The genetic defect in Dubin-Johnson syndrome is - *(Manipal 08)*
a) Mutation in gene for multiple drug resistance protein 2
b) Mutation in UDP-glucuronyl transferase
c) Mutation of chromosome 23
d) Flash mutations

2124. Gall stones in hemolytic anaemia are - *(AI89)*
a) Pigment b) Mixed
c) Cholesterol d) Any type

2125. Bile infarct is related to - *(NIMHANS 89)*
a) Hepatitis B
b) Dubin Johnson syndrome
c) Extrahepatic cholestasis
d) Intraphepatic cholestasis
e) Occlusion of hepatic artery

2126. Which one of the following is not a feature of liver histology in non-cirrhotic portal fibrosis (NCPF)?
a) Fibrosis in and around the portal tracts
b) Thrombosis of the medium and small portal vein branches *(DPG10)*
c) Non-specific inflammatory cell infiltrates in the portal tracts
d) Bridging fibrosis

2127. Single most indicator of likelihoodness of rapid progression of hepatitis to liver cirrhosis is -
a) Associated serological finding *(MH11)*
b) Underlying etiology
c) Presence of bridging necrosis
d) Presence of Mallory hyaline

2128. Primary sclerosing cholangitis is likely to be associated with - *(Jipmer 11)*
a) Adenocarcinoma of pancreas
b) Cholangiocarcinoma
c) Hepatocellular carcinoma
d) Adenocarcinoma of gall bladder

2129. Ground glass cells of Hadziyannis are seen in -
a) Bone b) Liver *(PGI83)*
c) Thyroid d) Prostate

2130. The skin pigmentation in bronze diabetes is due to-
a) Hemosiderin b) Lipofuscin *(JIPMER 90)*
c) Melanin d) Both melanine & hemosiderin

2131. Destruction of fat in acute pancreatitis is due to -
a) Lipase and elastase *(AI91)*
b) Lipase and trypsin
c) Secretin
d) Cholecystokinin and trypsin

2132. Term "Pseudo" used in "Pseudocyst" is due to its -
a) Cintents b) Lining *(AIIMS80)*
c) Site d) Course

2133. Factors that produce acute pancreatitis include all of the following except - *(Kamat 05)*
a) Alcohol
b) Hypercalcemia of parathyroid origin
c) Gall stones
d) Haemochromatosis

2134. Hyaline in islets of Langerhans resemble -
a) Mucin b) Amyloid *(AIIMS 79, 83)*
c) Glycolipid d) Phospholipid

2135. In diffuse calcification of pancreas calcium lies in-
a) Acinar tissues b) Interstitium *(PGI 81, 83)*
c) Pancreatic ducts d) Any where

2113)a 2114)c 2115)c 2116)c 2117)d 2118)a 2119)d 2120)b 2121)b 2122)c 2123)a 2124)a 2125)c 2126)d 2127)b 2128)b 2129)b 2130)d 2131)b 2132)b 2133)d 2134)b 2135)d

MALE GENITAL TRACT

2136. Carcinoma penis is rarest among - *(PGI84)*
a) Americans b) Indians
c) Swedes d)Jews

2137. Verrucous carcinoma is an - *(Kerala 2K)*
a) Extremely well differentiated squamous cell carcinoma
b) Poorly differentiated squamous cell anaemia
c) Example of condyloma
d) An example of adenocarcinoma

2138. All are true about atrophic testis except - *(AI91)*
a) Ley dig cell hypoplasia
b) Lymphocyte infiltration
c) Small size
d) Normal sertoli cell

2139. Testicular involvement wihtout epididymitis is a feature of - *(AI91)*
a) Gonorrhoea b) Syphilis
c) Tuberculosis d) Granuloma inguinale

2140. Which of the following testicular tumor is not a germ cell neoplasm - *(AI 98)*
a) Seminoma b) Yolk sac tumor
c) Sertoli cell tumor d) Teratoma

2141. Which of the following germ cell tumor is malignant-
a) Leydig cell tumor *(NpET/DNB Pattern)*
b) Sertoli cell Iuibot
c) Seminoma
d) Dermoid cyst

2142. Predisposing features for germ cell tumour-
a) Cryptochidism *(PGI Dec 02)*
b) Testicular feminising syndrome
c) Klinefelter's syndrome
d) Smoking
e) Rt side more common than Lt side

2143. Infertility is a common feature in "Sertoli cell only" syndrome because - *(AIIMS Nov 03)*
a) Too many Sertoli cells inhibit spermatogenesis via inhibin
b) Proper blood-testis barrier is not established
c) There is no germ cells in this condition
d) Sufficient numbers of spermatozoa are not produced

2^4i; G6|hm0iiest histological type of carcinoma testis is - *'^hEf^pNB Pattern)*
a) Teratoma b) Yolk sac tumour
fgg c) Serhihoma J|g| dyChoribck^^oM^^i" A*:;

2145. Microscopic feature of seminoma include all of the following except -
a) Gland formation
b) Lymphocytic infiltration
c) Monomorphic cells
d) Destruction of seminiferous tubules

2146. Microscopic picture of seminoma Testis - *(AI 88)*
a) Sheets of lymphocytes in homogenous background
b) Glandular with papilary outgrowth
c) Dermoid elements
d) Hyperchromatic nuclei in eosinophilic cytoplasm

2147. Most common testicular tumour of Childhood is
a) Teratoma b) Seminoma *(PGI 93)*
c) ChorioCarcinoma d) Embryonal Ca

2148. Commonest infantile testicular tumour is -
a) Seminoma b) Teratoma *(Kerala 03)*
c) Yolk sac tumor d) Dysgerminoma

2149. The most common malignant tesicular neophasm is - *(SGPGI05)*
a) Teratoma b) Seminoma
c) Choricocarcinoma d) Lymphoma

2150. HCG is secreted by all except- *(AIIMS2001)*
a) Embryonal cell cancer
b) Choriocarcinoma
c) Polyembryoma
d) Endodermal sinus tumour

2151. Marker for seminoma testis is - *(AI96)*
a) Alfa - fetoprotein
b) Carcinoembryonic antegens
c) HOG
d) Acid phosphatase

2152. HCG is raised in all except - *(AIIMS 92)*
a) Choriocarcinoma b) Seminoma
c) Yolk Sac Tumour d) Teratocarcinoma

2153. Tbmour marker for Endodermal Sinus lYimour
a) CEA b)HCG *(Jipmer91)*
c) Alfa feto protein d) Cytokeratin

2154. Schiller - Buyal bodies aresebn in-; *i(NEPT/DNB Pattern)*
a) Teratoma b) Seminoma ;
•/'e)?Yolksactumodr^d^Ghorip:-carcinom^ljf?¹ £;

2155. A glomerulus-like structure composed of central blood vessel enveloped by germ cells within a space lined by germ cells, is seen in - *(Karn 11)*
a) Sertoli-Leydig cell tumor
b) Granulosa cell tumor
c) Endodermal sinus tumor
d) Sex cord tumor with annular tubules

2156. Schiller- Duval bodies is seen in - *(Orissa R)*
a) Choriocarcinoma
b) Embryonal cell Ca
c) Endodermal sinus tumour
d) Immature teratoma

2157. Endodermal sinus tumour is characterized by -
a) Schiller-Duval body *(COMED09)*
b) Psammoma body
c) Call-Exner bodies
d) Homer-Wright rosettes

2158. Extragonadal germ cell tumors occur in all of following except - *(AIIMS 95)*
a) Sacrococcygeal region b) Mediastinum
c) Brain d) Testis

2136)d 2137)a 2138)a 2139)b 2140)c 2141)c 2142)a,b,c,e 2143)c 2144)c 2145)a 2146)a 2147)d 2148)c 2149)b 2150)d 2151)c 2152)b 2153)c 2154)c 2155)c 2156)c 2157)a 2158)d

2159. The commonest site for extragonadal germ cell tumour is - *(COMED 09)*
a) Retroperitoneum b) Sacrococcygeal region
c) Pineal gland d) Mediastinum

2160. The prostatic growth in benign prostatic hypertrophy is due to- *(JIPMER 2002)*
a) Testosterone b) 17 estradiol
c) Dihydrotestosterone d) Oestrogen

FEMALE GENITAL TRACT

2161. Sarcoma Botyroides is mostly seen *in-(UPSC 85,PGI*
a) Neonates b) Children under 2 years *86)*
c) Adults d) Post menopausal

2162. Tennis racket cells is seen in - *(Kerala 97)*
a) Sarcoma botyroides
b) Vaginal adenocarcinoma
c) Leiomyoma uterus
d) Seminoma

2163. Vaginal adenocarcinomas in children is caused by-
a) Virus *(TN 98)*
b) Adminstration of DES to pregnant mothers
c) Hormonal changes
d) All of the above

2164. Premalignant lesion of the vulva is - *(Kerala 87)*
a) Kraurosis
b) Leucoplakia
c) Condyloma accuminata
d) Localised scleroderma

2165. Squamocolumanr junction is usually located.. ..from cervical lip - *(DNB91)*
a) 2.5 mm b) 8-13 mm
c) 20-30 mm d) 40-50 mm

2166. Commonest site of endometriosis - *(AP 85, JIPMER*
a) Vagina b)Ovary *86,UPSC88)*
c) Urinary bladder d) Peritoneal cavity
e) Umbilicus

2167. Which is not a risk factor of endometrial carcinoma -
a) Obesity b) Smoking *(NEET/DNB*
c) Infertility d) Tamoxifen *Pattern)*

2168. Carcinosarcoma may arise in - *(PGI81,93)*
a) Uterus b)Cervix
c) Vagina d)Ovary

2169. Adenocarcinoma of the uterus along with rhabdomyosarcoma of the uterus is seen, the condition is called - *(KERALA 2001)*
a) Homologous sarcoma
b) Heterologous sarcoma
c) Mixed Mulleriam tumour
d) Carcinoma botryoids

2170. Most common ovarian tumor - *(NEET/DNB Pattern)*
a) Serous cystadenoma b) Choriocarcinoma
c) Teratomif^W^^^pSd)Fibrbtna •

2171. Mucinous cystadenoma of the ovary arises -
a) From cystic teratoma *(COMEDK05)*
b) From surface coelomic epithelium
c) From sex cord stomal cells
d) From ectopic mucin secreting glands

2172. Reinke's crystals are found in - *(AIIMSDec 95)*
a) Arrhenoblastoma b) Granulosa cell tumor
c) Dysgerminoma d) Hilus cell tumor

2173. Call exner bodies are seen *m-(NEET/DNBPattem)*
a) Dysgerminoma b) Granulosa cell tumor
c) Thecoma d) Arrhenoblastoma

2174. The largest ovarian tumour is seen with-
a) Pseudomucinous cystadenoma
b) Serous cystadenoma *(PGI 86, UPSC 85)*
c) Papillary cystadenoma
d) Dysgerminoma

2175. Which is true of Benign Ovarian tumour -
a) Torsion is uncommon *(AIIMS92)*
b) Capsule is Intact
c) Ascites can occur
d) Size less than 10 cm

2176. Usual size of a chocolate cyst of the ovary is about- *(DNB 89)*
a) 1 inch in diameter b) 2 inches in diameter
c) 4 inches in diameter d) 6 inches in diameter
e) 8 inches in diameter

2177. Which of the following is the ovarian counterpart of testicular seminoma - *(NEET/DNB Pattern)*
a) Brener's tumor b) Endodermal sinus tumor
c) Dermoid d) Dysgerminoma

2178. Most common radiosensitive ovarian tumour- *(MAHE 01)*
a) Dysgerminoma b) Granulosa cell tumour
c) Teratoma d) Theca cell tumour

2179. Which one of the following not is true regarding choriocarcinoma ? *(MH11)*
a) Aggressive malignancy
b) Raised HCG levels
c) Common below 20 years of age
d) Gonadal type is chemosensitive

2180. Rokitanski protruberences are seen in -
a) Mucinous carcinoma *(NEET/DNB Pattern*
b) Teratoma
j§ *$* Itf e)^pidermafcpy4^^|i0to^^h^ fg|g J | j
||!gii Papillaiyld^to[1]^ ;

2181. Sections from a solid-cyStic unilateral ovarian tumor in a 30-year old female show a tumor composed of diffuse sheets of small cells with doubtful nuclear grooving and scanty cytoplasm. No Call-Exner bodies are seen.The ideal immunohistochemistry panel would include - *(AIIMS May 06)*
a) Vimentin, epithelial membrane antigen, inhibin, CD99
b) Desmin, S-1.00 protein, smooth muscle antigen, cytokeratin
c) Chromogranin, CD45, CD99, CD20
d) CD3, chromagranin, CD 45, synaptophysin

2159)d 2160)c 2161)b 2162)a 2163)b 2164)b 2165)b 2166)b 2167)b 2168)a 2169)c 2170)a 2171)b 2172)d 2173)b 2174)a 2175)b 2176)b 2177)d 2178)a 2179)d 2180)b 2181)a

2182. A 20 year old female is diagnosed with granulosa cell tumor of the ovary. Which of the following biomarkers would be most useful for follow-up of patient? *(AlIMSNov 11)*
a) CA 19-9 b) CA 50
c) Inhibin d) Neuron-specific-enolase

2183. Marker for ovarian carcinoma in serum is -
a) CA-125 *(NEET/DNB Pattern)*
b) [illegible]
c) Acid Phosphatase
d) PSA

2184. Krukenberg adenocarcinoma of ovary can occur as result of metastases from all except- *(COMED06)*
a) Stomach b) Breast
c) Liver d) Pancreas

BREAST

2185. Lesions affecting the terminal duct lobular unit (TDLIJ) in breast are all except - *(DPG11)*
a) Nipple adenoma b) Blunt duct adenosis
c) Intraductal papilloma d) Fiboadenoma

2186. Cyclic changes in women breast occur on - *(AI97)*
a) Adipose tissue b) Fibrous tissue
c) Papillomatosis d) Cyst formation

2187. Proliferating breast ma^t^^(N^T/DN^iRa&ef4n}
a) Duct ectasia b) Fibroadenoma
c) Adenosis d) Papilloma

2188. Breast cancer more commonly seen in-
a) Increased risk in relatives *(AlIMSNov 98)*
b) Early marriage, 20 yrs.
c) Nullipara
d) High fat diet
e) Who avoided breast feeding

2189. All are risk factor Yhj *bxehstmp^^^(l&ET/DNB pattern)*
a) OCP g: §jS % | J b) Early mehsturation
c) Faihily history d) Late mehopause

2190. A female patient presented with a firm mass of 2 x 2 cms in the upper outer quadrant of the breast. She gives a family history of ovarian carcinoma. The investigation that needs to be done to assess for mutation is - *(AIIMS May 02)*
a) p53 b) BRCA-2
c) Her 2/Neu gene d) C-myc gene

2191. Malignancy of the Breast is likely to be associated with- *(AI94)*
a) Sclerosing adenosis
b) Atypical epithelial hyperplasia
c) Cystic change
d) Apocrine metaplasis

2192. Breast Ca is not a/w - *(PGIMay 10)*
a) BRCA 1 &BRCA2
b) Apocrine metaplasia
c) Atypical ductal hyperplasia
d) Fibroadenoma
e) Moderate hyperplasia

2193. The type of mammary ductal carcinoma in situ (DCIS) most likely to result in a palpable abnormality in the breast is - *(AI06)*
a) Apocrine DCIS
b) Neuroendocrine DCIS
c) Well differentiated DCIS
d) Comedo DCIS

2194. Most common carcinoma of breast is- *(AI97)*
a) Intra-ductal carcinoma b) Colloid carcinoma
c) Lobular carcinoma d) Sarcoma phylloides

2195. All of th^ foBdwlhg are invasive carcinoma breast except- *(NEET/DNB Pattern)*
a) Comedo carcitroma
b) Colloid carcinoma
c) Labular carcinoma in situ
d) Medullary carcinoma

2196. Which carcinoma breast is not *in\asi\e-(Delhi79,93)*
a) Comedo carcinoma b) Schirrhous carcinoma
c) Lobular carcinoma d) Paget's disease

2197. Bilateral breast ca is - *(PGI June 02)*
a) Scirrhous ca b) Medullary ca
c) Lobular ca d) Ductal ca
e) Paget's ca

2198. True about histology in infilterating lobular breast carcinoma - *(Jipmer 11)*
a) Single file pattern
b) Pleomorphic cells in sheets
c) Cribriform pattern
d) Pin wheel pattern

2199. In which one of the following types of carcinoma of the breast, is a biopsy of the opposite breast advised-
a) Inflammatory carcinoma *(UPSC 02)*
b) Medullary carcinoma
c) Lobular carcinoma
d) Scirrhous carcinoma

2200. ER positive status in Ca Breast indicates - *(NEET/DNB Pattern)*
a) Prognosis b) Etiology
c) Site d) None

2201. Women carrying BRCA 1 gene are more likely to develop which type of breast carcinoma - *(J&K05)*
a) Medullary b) Lobular
c) Colloid d) Secretory

2202. Modified Bloom Richardson criteria for Carcinoma Breast includes - *(PGIMay 10)*
a) Desmoplasia b) Lymphovenous embolism
c) Mitotic rate d) Tubule formation
e) Nuclear polymorphism

2203. Characteristic feature of pagets cells is - *(Kerala 94)*
a) Eosinophilic cytoplasm
b) Abundant clear cytoplasm
c) Glycogen mass
d) Multinucleated giant cell

2204. Toxemia of pregnancy, pathological change is-
a) Glomerular fibrin deposit *(PGI Dec 98)*
b) Fibrinoid necrosis
c) Epithelial damage
d) Mesangial hyperplasia

2182)c 2183)a 2184)c 2185)a 2186)None 2187)d 2188)a,c,d,e 2189)a 2190)b 2191)b 2192)b,d 2193)d

MUSCULOSKELETAL SYSTEM

2205. Which of the changes occur in bone growth -
a) Increased acid phosphatase *(ARMS Dec 97)*
b) Increased urinary calcium
c) Increased bone nucleotidase
d) Increased osteocalcin

2206. Bone resorption markers are all except -
a) Tartarate resistant acid phosphatase
b) Osteocalcin *(ARMS May 08)*
c) Cross linked-N-telopeptides
d) Urine total free deoxypyridinolone

2207. Marker of bone formation are all except -
a) Osteocalcin *(ARMS Nov 11)*
b) Alkaline phosphatase
c) Procollagen residue
d) Hydroxyproline

2208. Osteoblasts produce - *(JIPMER 79, Delhi 92)*
a) Collagen b) Calcium
c) Pyrophosphate d) Monosodium urate

2209. Rate of newly synthesized osteoid mineralization can be best estimated by - *(A109)*
a) Tetracycline labeling b) Alizarin red stain
c) Calcein stain d) Van kossa stain

2210. Which of the following joint is characteristically involved in RA. - *(ARMS Sep 96)*
a) Spine
b) Sacroiliac joint
c) Metacarpophalangeal joint and proximal interphangeal joint
d) Wrist joint

2211. Extra-articular manifestations of RA -
a) Scleritis *(PGI June 08)*
b) Pericarditis
c) Pulmonary fibrosis
d) Mononeuritis multiplex
e) Keratoconjuctivitis

2212. Which of the following statements about Rheumatoid Factor is true - *(AI12)*
a) It is an IgM antibody directed against IgG
b) It is an IgG antibody directed against IgM
c) It is more specific than Anti-CCP antibodies
d) It is positive in all cases of Juvenile Rheumatoid Arthritis

2213. Rheumatoid factor is- *(AI 08)*
a) Antibody b) Mucopolysaccharide
c) Fatty acid d) Glycoprotein

2214. Which one of the following is not a characteristic feature of rheumatoid arthritis ? *(UPSC-108)*
a) Sacroiliitis
b) Metacarpophalangeal joint involvement
c) Symmetrical arthritis
d) Positive rheumatoid factor

2215. Characteristic feature of still's disease -*(ARMS Dec*
a) Prominent kidney involvement *97, Sep 96)*
b) Rashes
c) Positive Rheumatoid factor
d) Neutropenia

2216. Seronegative arthritis include- *(AP 87, PGI 88*
a) Ankylosing spondylitis *AUPSC87)*
b) Reiters arthritis
c) Psoriatic arthritis
d) Enteropathic arthritis
e) All of the above

2217. "Tophus" is the pathognomic lesion of which of the following condition - *(ARMSMay 03)*
a) Multiple myeloma b) Cystinosis
c) Gout d) Eale's disease

2218. Tophi in gout found in all regions except- *(PGI2K)*
a) Joint capsule b) Skin
c) Muscle d) Articular cartilage
e) Synovial membrane

2219. All are causes of osteoporosis except -
a) Old age *(ARMS Sep 96)*
b) Chronic heparin therapy
c) Hypothyroidism
d) Thyrotoxicosis

2220. Osteoporosis is caused by all, *except*-*(AJIMS June 98)*
a) Corticosteroid b)Oestradiol
c) Methotrexate d) Chronic heparin therapy

2221. Involucrum means - *(TN 89)*
a) Dead bone b) New living bone
c) Previous living bone d) None of the above

2222. Garre's osteomyelitis commonly involve -
a) Jaw b) Femur *(JIPMER 2002)*
c) Ribs d) Small bones of hand

2223. Paget's disease involves which of the following bone-
a) Pelvis b) Vertebrae *(PGI2K)*
c) Skull d) Phalanges
e) Toes

2224. Serum marker of rickets is - *(AI 98)*
a) Acid phosphates
b) Alkaline phoshpatase
c) Decreased serum calcium
d) Urinary posphates

2225. Histology of Myositis ossificans mimics - *(TN 01)*
a) Osteosarcoma b) Osteochondroma
c) GCT d) Ewing's tumour

2226. Most common malignant bone tumor-
a) Osteogenic sarcoma *(NEET/DNB Pattern)*
b^Secoindaries
c) Osteoma
d) Enchondroma

2227. Which bone tumour arises from the epiphysis -
a) Osteogenic sarcoma *(AP 86, UPSC 86,*
b) Ewing sarcoma *Kerala 87, AJ. 88)*
c) Osteoclastoma
d) Osteoma
e) Osteoid osteoma

2205)d 2206)b 2207)d 2208)a 2209)a 2210)c 2211)AH 2212)a 2213)a>d 2214)a 2215)b 2216)e 2217)c 2218)a,e 2219)b 2220)b 2221)b 2222)a 2223)a,b,c 2224)b 2225)a 2226)b 2227)c

2228. Bone tumour arising from metaphysis -
a) Osteogenic sarcoma *(UPSC 86, Kerala 87)*
b) Ewing sarcoma
c) Osteoclastoma
d) Osteiod osteoma

2229. An epiphyseal bone lesion is - *(DELHIPG Feb. 09)*
a) Osteogenic sarcoma b) Chondroblastoma
c) Ewing's sarcoma d) Chondromyxoid fibroma

2230. Giant cells seen - *(PGIDec 06)*
a) Osteoclastoma b) Chondroblastoma
c) Chordoma d) Osteitis fibrosa cystisca

2231. A patient with Ewing's sarcoma. Histology shows small round cells. These cells are filled with which of the following - *(AIIMS Nov 2000)*
a) Glycogen b)Iron
c) Fat d) Mucin

2232. Ewings sarcoma arises from - *(NEET/DNB Pattern)*
a) G cells b) Totipotent cells
c) Neuroectodermal cells d) Neurons

2233. Which of the following is the most common mutation in Ewing's sarcoma - *(AI12)*
a) Translocation X: 18
b) Translocation 11; 22
c) Activative mutation of G5 alpha surface protein
d) Missense mutation in EXTI

2234. Large Intracytoplasmic glycogen storage is seen in which of malignaney - *(APPG 2006)*
a) Osterosarcoma
b) Mesenchymal chondrosarcoma
c) Ewing's sarcoma
d) Leiomyosarcoma

2235. MIC-2 is a marker of- *(AIIMSNov 09)*
a) Ewing's sarcoma
b) Osteosarcoma
c) Dermatofibrous protruberans
d) Alveolar cell sarcoma

2236. A patient with which of the follwing disease is predisposed to develop osteosarcoma - *(Kam 95)*
a) Osteomalacia b) Osteomyelitis
c) Paget's disease of bone d) Osteopetrosis

2237. Which of the following is not true in relation to osteosarcoma? *(DPG11)*
a) Paget's disease & prior irradiation are predisposing factors
b) Rb gene mutation is associated with hereditary variant
c) c-myc gene implicated in the genesis
d) Codman's triangle is the characteristic x-ray finding

2238. A 50-year-old lady presented with a 3-month history of pain in the lower third of the right thigh. There was no local swelling; tenderness was present on deep pressure. Plain X-rays showed an ill-defined intra medullary lesion with blotchy calcification at the lower end of the right femoral diaphysis, possibly enchondroma or chondrosarcoma. Sections showed a cartilaginous tumor. Which of the following histological features (if seen) would be most helpful to differentiate the two tumours? *(AIIMSMay 06)*
a) Focal necrosis and lobulation
b) Tumor permeation between bone trabecuae at periphery
c) Extensive myxoid change
d) High cellularity

2239. A 50 year old patient presents with a lesion in the midline involving the sacrum. It is found to be sclerotic. What is the most probable diagnosis -
a) Metastatic *(AIIMS Nov 2000)*
b) Chordoma
c) Osteosarcoma
d) Chondrosarcoma

2240. Secondaries are common in a/e - *(PGI June 01, 09)*
a) Skull b) Hand & feet bones
c) Proximal limb bones d) Pelvic
e) Vertebrae

2241. What percent of giant cell tumor of bone are malignant ? *(Manipal 08)*
a) 5-10% b) 15-20%
c) 25-30% d) 50-60%

2242. Giant cell tumor of tendon sheath is - *(NEET/DNB Pattern)*
a) Traumatic b) Infective
c) Malignant tumor d) benign tumor

2243. A patient presents with endocrinopathy, fibrous dysplasia of bone and hyperpigmentation. Diagnosis is? *(Jipmer 11)*
a) Me Cune Albright syndrome
b) Addison's disease
c) Alagille syndrome
d) Lynch syndrome

2244. Bone tumour which is hormone dependent- *(ZMS87)*
a) Osteogenic sarcoma b) Ewing sarcoma
c) Osteoclastoma d) Fibrous dysplasia
e) Osteiod osteoma

2245. Brown tumor of bone is seen in- *(AI 10)*
a) Hyperparathyroidism b) Hypoparathyroidism
c) Hypo-thyroidism d) Hyperthyroidism

2246. Dystrophin is lacking in- *(NEET/DNB Pattern, AIIMS May 93, 03)*
a) Polio
b) Duchenne's muscular dystrophy
c) Peroneal muscular atrophy
d) None of the above

2247. Characteristic finding in muscular dystrophy is -
a) Inflammatory cell infiltrate *(PGI 89)*
b) Heterogenicity of fiber size
c) Nuclear proliferation beneath sarcolemma
d) Muscle necrosis

2248. Target fibres are characteristicaly seen in a muscle biopsy of- *(Delhi 83)*
a) Dermatomyositis
b) Motor neuron disease
c) Myaesthenia gravis
d) Drug induced myopathy

2228)a 2229)b 2230)a,b 2231)a 2232)c 2233)b 2234)c 2235)a 2236)b,c 2237)c 2238)b 2239)b 2240)b
2241)a 2242)d 2243)a 2244)d 2245)a 2246)b 2247)b,d 2248)b

2249. Myotonic dystrophy is inherited in chromosomes -
a) 21 b) 20 *(A199)*
c) 19 d)24

2250. Myasthenia gravis is associated with -
a) Thymoma *(NEET/DNB Pattern)*
b) Thymic carcinoma
c) Thymic hyperplasia
d) Lymphoma

2251. In Myasthenia gravis, antibodies are present against - *(COMEDK 05)*
a) Muscarinic receptor proteins
b) Nicotinic receptor proteins
c) Protein actin
d) Protein myosin

2252. Perifascicular atropy of muscle fibres is seen in - *(NEET/DNB Pattern)*
a) Steroid myopathy
b) Dermatomyositis
c) Inclusion body myositis
d) Nemaline myopathy

2253. Prognosis in a soft tissue tumour is determined by -
a) Grade of tumour *(AIIMS 97)*
b) Bulk of the tumour
c) Depth of Invason
d) Lymph nodal involvement

2254. In which of the following malignancies histological grade is a good prognostic indicator? *(Jipmer 11)*
a) Melanoma b) Soft tissue sarcoma
c) Renal cell carcinoma d) Lung cancer

2255. Cytogenetics for synovial cell sarcoma is - *(AI08)*
a) t (X: 18) b) t(17,9)
c) t (9,22) d) t (11,14)

2256. "Biphasic pattern" on histology is seen in which tumor - *(DPG10, MH02)*
a) Rhabdomyosarcoma b) Synovial cell sarcoma
c) Osteosarcoma d) Neurofibroma

2257. Synovial sarcoma cellular markers are -
a) Cytokeratin b) S-100 *(PGI Nov 09)*
c) Vimentin d)Calretinin

2258. Ganglion of tendons is an example of - *(MH10)*
a) Neoplastic process
b) Malformation
c) Amyloid deposition
d) Myxomatous degeneration

2259. Fibrous histiocytoma is classified as - *(AI 98)*
a) Haemangio pericytoma
b) Sclerosing haemangioma
c) Angiomyolipoma's
d) Angiomyosarcoma

2260. With regard to the malignant behavior of leiomyosarcoma, the most important criterion is -
a) Blood vessel penetration by tumor cells *(AI 06)*
b) Tumor cells in lymphatic channels
c) Lymphocyte infiltration
d) The number of mitoses per high power field

2261. Commonest sarcoma in children is - *(PGIDec 99)*
a) Rhabdomyosarcoma b) Lipoma
c) Angiosarcoma d) Fibrosarcoma

2262>7l^a^lecy^ebmma shaped cellson histopathology are seen in - *(NEET/DNB Pattern)*
a);^choepMKelionya ; *T* b) Spideroma B */ E f)*
r c) Rhabdomyosarcoma fl)Histiocytoma

2263. *True* about childhood tumor are all except -
a) Wilm's tumor *(PGI June 08)*
b) Neuroblastoma
c) Retinoblastoma
d) Embryonal rhabdomyoma
e) Pleomorphic rhabdomyosarcoma

2264. Embryonal rhabdomyosarcoma is seen in -
a) Face b) Neck
c) Nasal cavity d) Vagina
e) Prostate

NERVOUS SYSTEM

2265. What are gitter cells - *(AIIMS Sep 96)*
a) Astrocytes
b) Macroglia
c) Modified macrophages in CNS
d) Oligodendrocytes

2266. Neuroglia responsible for phagocytosis is -
a) Fibrous Astrocytes *(AIIMSDec 94)*
b) Protoplasmic Astrocytes
c) Oligodendrocytes
d) Microglia

2267. The macrophage in the brain is - *(NEET/DNB Pattern)*
a) Schwann cells b) Oligodendrocytes
c) Astrocytes d) Microglia

2268. Disease or infarction of neurological tissue causes it to be repaired by - *(AI 02)*
a) Fluid
b) Neuroglia
c) Proliferation of adjacent nerve cells
d) Blood vessel

2269. The following cell types does hot participate iii repair after brain infarction - *(NEET/DNB Pattern)*
a) Microglia b) Astrocytes'
c) Fibroblasts d) Endothelium

2270. The function of oligodendrocyte is- *(AI 95)*
a) Myelinates the CNS
b) Nutrition of nervous tissue
c) Lining the cavities of the CVS
d) Behave like macrophages

2271. Complex granular corpuscels are produced by -
a) Oligodendrocytes b) Astrocytes *(AI 91)*
c) Microglia d) Vascular endothelium

2272. All are true about pyogenic meningitis except -
a) Increased CSF protein *(AI 91)*
b) Pleocytosis
c) Markedly decreased CSF glucose
d) Decreased CSF C- reactive protein

2249)c 2250)a 2251)b 2252)b 2253)a 2254)b 2255)a 2256)b 2257)a,b,c 2258)d 2259)b 2260)d 2261)a 2262) c 2263) e 2264) AH 2265) c 2266) d 2267) d 2268) b 2269) c 2270) a 2271) c 2272) d

2273. Following are CSF findings in aseptic meningitis except- *(AI93)*
a) Increased proteins b) Increased Sugar
c) Neutrophilia d) Decreased chloride

2274. C.S.F. cell count in tubercular meningitis varies between - *(Orissa 99)*
a) 0 to 99 b) 100 to 499
c) 500 to 999 d) 1000 to 5000

2275. Which is not a finding in viral encephalitis-
a) Astroglial proliferation *(PGl June 99)*
b) Perivascular mononuclear infiltrate
c) Inclusion bodies intranuclear and intracytoplasmic
d) None of the above

2276. Which of the following is not seen HIV involvement of CNS - *(AIlMSMay 09)*
a) Perivascular giant cell
b) Vacuolar degeneration of post column
c) Microglial nodule formation
d) Inclusion bodies

2277. Histopathological feature of HIV encephalitis is/are-
a) Negri body b) Lewy body *(PGINov 09)*
c) Fibrillary plaque d) Microglial nodules
e) Multinucleated giant cell

2278. Pathologic features of brain in AIDS are all, except - *(AIIMS Nov 01, Dec 97)*
a) Perivascular giant cell invasion
b) Microglial nodules
c) Vasculitis
d) Temporal lobe infarction

2279. Perivascular lymphocytes & microglial nodules are seen in - *(NEET/DNB Pattern)*
a) Multiple sclerosis b) IIIV encephalitis
c) CMV meningitis d) Bacterial meningitis

2280. In rabies pathological lesions in CNS are- *(PGI97)*
a) Brainstem encephalitis
b) Cranial nerve arteritis
c) Neuronal loss
d) Neurofibrillary tangles

228fv **Negri bodies are seen in-** ^ *{NEET/DNBPattern)*
a) Oligodendroglia b) Neuron
3|G)-Mybglia> ■ v*:*fh* ^ > **d) Astrocytes ., -**

2282. The nucleus involved in Alzheimer's disease is -
a) Basal nucleus of Mayemet *(AI 96)*
b) Raphe nucleus
c) Superior salivary nucleus
d) Basal lobe of cerebellum

2283. The following is not a feature of Alzeimer's disease-
a) Neurofibrillary tangles *(AI 04)*
b) Senile (neuritic) plaques
c) Amyloid angiopathy
d) Lewy bodies

2284. In Alzheimer disease, seen are: *(PGIDec 07)*
a) Neurofibrillary tangles b) Neuritic plaques
c) Pick's protein d) Amyloid angiopathy
e) Senile plaques

2285. All the following are feature of picks diseases except- *(Kerala 04)*
a) Knife blade atrophy b) Walnut brain
c) Ballooning degeneration d) Hirano bodies

2286. In Hydrocephalus exvacuo, the compensatory enlargement of ventricles and increase in CSF volume due to brain atrophy is seen in- *(Kerala 04)*
a) Alzheimers diseae b) Picks diseases
c) Both d) None of the above

2287. Characteristic pathological feature of Parkinson's disease is presence of - *(AI 99)*
a) Lewy bodies b) Babes nodule
c) Neuro fibrillary tangle d) Negri-bodies

2288. Rosenthal fibres are - *(NEET/DNB pattern)*
a) Intranclear inclusions
b) Intracytoplasmic inclusions
c) Present extracellularly
d) Part of cell membrane

2289. Rosenthal fibres are seen in - *(NEET/DNB Pattern)*
a) Pilocytic astrocytoma b) Glioblastoma
c) Medulloblastoma d) Ependymoma

2290. Rosenthal fibres in astrocytoma are composed of - *(NEET/DNB Pattern)*
a) Heat shock proteins b) Fibrillar proteins
c) GFAP d) Globulins

2291. Least common site for berry aneurysm is - *(AI97)*
a) Vertebral artery
b) Basilar artery
c) Junction of anterior cerebral artery and internal carotid artery
d) Posterior cerebral artery

2292. Berry aneurysm - Defect lies in - *(AIIMSMay 10)*
a) Degeneration of internal elastic lamina
b) Degeneration of media / muscle cell layer
c) Deposition of mucoid material in media
d) Low grade inflammation of vessel wall

2293. True about giant aneurysm - *(PGI June 09)*
a) Rarely rupture
b) Most common in middle cerebral artery
c) Pressure effect is often the presenting symptom
d) Thromboembolic phase is present

2294. Commonest cause of Intra cerebral bleed- *(NEET/DNB Pattern)*
a) Berry aneurysms b) Hypertension
c) Diabetes . d) Thrombocytopenia

2295 Chronic subdural hematoma is caused by -
a) Rupture of bridging veins *(Kerala 91)*
b) Fracture skull bones
c) Subarachnoid hemorrhage
d) Hypertension

2296. Regarding Dandy-Walker syndrome, all are seen except- *(AIIMS 98)*
a) Hydrocephalus
b) Archnoid cyst
c) Posterior fossa cyst
d) Cerebellar vermis deficiency

2273) b,c 2274) b,c 2275) a 2276) d 2277) d 2278) c 2279) b 2280) a 228 l)b 2282) a 2283) d 2284)a,b,d,e 2285)d 2286)c 2287)a 2288)b 2289)a 2290)c 2291)a 2292)b 2293)c,d 2294)b 2295)a 2296)b

2297. Which of the following would distinguish hydrocephalus due to aqueductal stenosis when compared to that due to Dandy walker malformation-
a) Third ventricle size *(AIIMSNov 02)*
b) Posterior fossa volume
c) Lateral ventricular size
d) Head circumference

2298. Obstruction to the flow of CSF at the aqueduct of sylvius will most likely lead to enlargement of -
a) All of the ventricles *(AIIMS Nov 03)*
b) Only lateral ventricle
c) Only fourth ventricle
d) Both lateral and third ventricles

2299. Which one of the following is the most common tumor associated with type I neurofibromatosis -
a) Optic nerve glioma *(AIIMS 03)*
b) Meningioma
c) Acoustic schwannoma
d) Low grade astrocytoma

2300. Neurofibromatosis true all, except- *(ARMSMay 09)*
a) Autosomal recessive
b) Associated with cataract
c) Scoliosis
d) Multiple fibroma

2301. Sturge Weber's syndrome is not associated with -
a) Seizures *(ARMS 94)*
b) Hemiatrophy of cerebral cortex
c) Gyriform calcification in brain
d) Empty sella

2302. Struge weber syndrome is associated with -
a) Port wine stain *(Delhi 96)*
b) Cavernous hemangioma
c) Lymphangioma
d) Hemangiosarcama

2303. The most likely diagnosis is a case of intractable convulsions mental defect and facial nevus is-
a) Sturge Weber syndrome *(Orissa 98)*
b) Tuberous sclerosis
c) Von-Hippen -Lindau disease
d) Von- Reckling-Hausens disease

2304. All of the following are the classical presentation of Craniovertrebral junction anomalies except -
a) Pyramidal signs *(ARMS Nov 03)*
b) Low hairline
c) Short neck
d) Pupillary asymmetry

2305. Tectal breaking is seen in - *(ARMSNov 03)*
a) Dandy-walker malformation
b) Amold-chiari malformation
c) Aqueductal stenosis
d) Third ventricular tumor

2306. Which of the following brain tumor arises from arachnoid villi - *(Manipal 2006)*
a) Medulloblastoma b) Ependymoma
c) Meningioma d) Glioma

2307. All of the following are neuronal tumors, except-
a) Gangliocytoma b) Ganglioglioma *(A111)*
c) Neurocytoma d) Ependymoma

2308. Which of the following tumors is not, derived from meninges - *(NEET/DNB Pattern)*
a) Hemangioblastoma b) Meningioma
c) Fibrous tumor d) Hemangiopericytoma

2309. Common spinal cord tumor with intradural but extramedullary situation - *(PGIDec 2000)*
a) Meningioma b) Neurofibroma
c) Ependymoma d) Astrocytoma

2310. Most common cerebellar tumor in children?
§|fg|f -a);<^sttQC'3rtpina; |Jj §f §|jS| *(NEET/DNB Pattern)*
b) Medulloblastoma
c) 'Ependymoma
d) DNET

2311. True about meningioms - *(Jipmer 11)*
a) More common in men
b) 50% are malignant
c) 95% cure rate following treatment
d) Arise from arachnoid layer

2312. Which of the following is true about medulloblastoma-
a) Radiosensitive tumor *(PGI Dec 05)*
b) Spreads through CSF
c) Surgical Rx not done
d) Occurs in young age group
e) It is a supra tentorial tumors

2313. Medulloblastoma most common metastasis is togi
a) Lung b) CNS *(NEET/DNB Pattern)*
c) Liver d) Spleen

2314. Following is true about meduUobastoma-("A/7MS[r] *95)*
a) It is seen mainly in over 50 age group
b) It is radiosensitive tumour
c) Only treatment is surgery
d) Seen in anterior cranial fossa

2315. Most common site for medulloblastoma *is-(NEET/*
a) Cerebellum b) Pituitary *I)NB Pattern)*
c) Cerebrum d) Pineal gland

2316. Which of the following carcinoma most frequently metastasizes to brain - *(ARMS Nov 05)*
a) Small cell carcinoma lung
b) Prostate cancer
c) Rectal carcinoma
d) Endometrial cancer

2317. Common primary sites of metastasis to the brain are-
a) Thyroid Ca b) Tongue Ca *(PGIDec 08)*
c) LungCa d) Breast Ca
e) Ovary Ca

2318. Most common nerve in the neck from which schwanoma arises - *(APPGE 05)*
a) Trigeminal b) Accessory
c) Hypoglossal d) Vagus nerve

2319. True about primary CNS lymphoma - *(PGI June 09)*
a) Reticulin staining is done
b) Essentially B cell type
c) Have an association with EBV
d) Indolent disease with good prognosis
e) Chemotherapy is highly effective

2297) b 2298) d 2299) a 2300) a 2301) d 2302) a,b 2303) a 2304) d 2305) b 2306) c 2307) d 2308) a 2309) a,b

2320. Most common GNS neoplasm In HIV patient - *(NEET/DNB Pattern)*
a) Meduloblastom a; Yt'J
b) Astrocytoma
c) Primary CNS lymphoma
d) Ependymoma

2321. True about pilocytic astrocytoma all except -
a) Long survival *(AIIMS May 09)*
b) Total surgical resection possible
c) Can involve posterior fossa
d) Median age at presentation is more than 80 years

2322, . Which of the following brain tumors does not spread via CSF ? *(DPG11)*
a) Germ cell tumors b) Medulloblastoma
c) CNS lymphoma d) Craniopharyngioma

PHI Mo^f cbmmpfr site of gb^Iastbm^fsmlfifbfnte is - *(NEET/DNB Pattern)*
a) CP angle b) Frontal lobe
c) Brain stem d) Occipital lobe

2324, Spongiform degerieration of cerebral cortex occurs in - *(NEET/DNB Pattern)*
a) Creutzfeldt-Jakob disease
b) Subacute sclerosing panencephalitis
byjFa&bfantiliaJ insoj&pa,a£ M⁴ J@ 4 **W/ J**
;d) Cerebral toxoplasmosis

2325, . Intranuclear inclusions of oligodendrocytes are seen in - *(AIIMS Nov 10)*
a) Creutzfelt jakob disease
b) Polio
c) Japanese encephalitis
d) Progressive multiple encephalopathy

2326 . Onion bulb appearance on nerve biopsy is seen in - *(AIIMS Nov 10)*
a) Amyloid neuropathy
b) Diabetic neuropathy
c) CIDP
d) Leprous neuritis

2327;?^lt#4$4hk Mstologlcal a] **ppearance of brain in Creutzfeldt-Jakob disease -** *(NEET/DNB Pattern)*
{ ?Y; a) Neuronophagia -f
b) Spongiform change in brain lUfl fygis !
c) Microabscesses ifpi
d) Demyelination 11 §8i

2328. Similar features between cerebral abscess and cerebral infarct- *(PGI June 09, 07)*
a) Coagulative necrosis
b) Liquefactive necrosis
c) Heal by collagen formation
d) Always develop from emboli from other site
e) MC associated with infectious disease

2329. Following will cause CNS-vasculitis except -
a) SLE *(PGI June-2000)*
b) Whipples disease
c) Granulomatous vasculitis
d) PAN

ENDOCRINOLOGY

2330. Anterior pituitary secretes all except - *(AI99)*
a) Growth hormone b) Prolactin
c) FSH d) Oxytocin

2331. Which of the following is true about pituitary tumor?
a) It present in 10% of brain tumors *(PGIDec 05)*
b) Erodes the sella and extends into surrounding area
c) Prolactinoma is least common
d) It is differentiated by reticulin stain

2332. Medullary carcinoma of the thyroid is associated with which of the following syndrome - *(AI03)*
a) MENI b)MENn
c) Fraumeni syndrome d) Hashimoto's thyroiditis

2333. Which is NOT a component of Werner's - *(AI 95, PGI 93)*
a) Pituitary b) Adrenal
c) Parathyroid d) Pancreas

2334. Werner syndrome is- *(NEET/DNB. Pattern)*
a) MEN 1 b) MEN IIA
c) MEN IIB d) AIP

2335. Which of the following is not included in Sipple's syndrome - *(AIIMS June 97)*
a) Pheochromocytoma
b) Medullary carcinoma thyroid
c) Hyperthyroidism
d) Hyperparathyroidism

2'334>MEN type I includes tumors of allexcept> *^(NEBT:/ DNB Pattern)*
a) Parathyroid b) Pituitary , ,
SHI c) Pancreas d) Medullary carcinoma of thyroid

2337. A/E are involved in MEN type HA- *(AIIMS Dec 95)*
a) Parathyroid b) Adrenal
c) Thyroid d) pituitary

2338. In which of the following is medullary thyroid cancer is the most aggressive form - *(Karnat 05)*
a) MEN type I b) MEN type II a
c) MEN type II b d) Sporadic cases

2339. Average weight of thyroid gland where diet is rich in Iodine is - *(UPSC83)*
a) 10-12gm b)14-16gm
c) 18-20 gm d) 28-30 gm

2340. In which of the following patients, thyrotoxicosis should not be suspected - *(Karnat05)*
a) Patients with unexplained weight loss
b) Patients with unexplained diarrhoea
c) Patients with distal muscle weakness
d) Patients with paroxysmal atrial tachycardia

2341. The endocrine disorder associated with generalized lymphadenopathyis- *(AIIMS78)*
a) Hyperthyriodism b) Addison'sdisease
c) Cushing'syndrome d) Carcinoid syndrome

2342. All are seen in hypothyroidism except -
a) Weight gain b) Cold intolerance
c) Diarrhoea d) Menorrhgia

2343. In hashimoto's disease serum antibodies are mainly against - *(JIPMER 79, AIIMS 84, 85)*
a) Thyroid follicles b) Thyroxine
c) Thyroglobulins d) Iodine

2320)c 2321)d 2322)d 2323)b 2324)a 2325)d 2326)c 2327)b 2328)b 2329)b 2330)d 2331)a,b,d 2332)b
2333)b 2334)a 2335)c 2336)d 2337)d 2338)c 2339)c 2340) c 2341) a 2342)c 2343)a,c

2344. All of the following are true about Hashimoto's thyroiditis, except - *(AI09)*
a) Follicular destruction
b) Increase in lymphocytes
c) Oncocytic metaplasia
d) Orphan Annie eye nuclei

2345. Patients with Hashimoto's thyroiditis are at increased risk of developing - *(Maharashtra 10)*
a) Papillary carcinoma b) Follicular carcinoma
c) T-cell lymphoma d) B-cell lymphoma

2346. The feature that differentiates a follicular carcinoma from a follicular adenoma of thyroid is - *(J&K 05)*
a) Nuclear pleomorphism b) Hurthle cell change
c) Capsular invasion d) Absence of colloid

234$* \|WTuN#tof the following gene defect is associated with development of medullary carciioto^^^fthyroid-
T Proto Oncogene a) vRAD^hAJB^SMpv^OS)
b) Fap gene *NEET/DNB Pattern)*
c) Rb gene
11§g 4) br c m gene H!I *m* **9&1**

2348. Psammoma bodies are seen in - *(PGI June 98)*
a) Thyroid carcinoma b) Carcinoma breast
c) Carcinoma stomach d) Carcinoma testis

HI Orphan annie eye nuclei appearance is characteristic of - *(NEET/DNB Pattern)*
a) Papillary carcinoma thyroid
b) Carcinoma pituitary
c) Paraganglioma
d) Meningioma

2350. FNAC is least diagnostic in which thyroid carcinoma-
a) Anaplastic b) Papillary *(AIIMS June 98)*
c) Follicular d) Thyroiditis

2351. Most common thyroid Cancer is - *(Al 08)*
a) Papillary carcinoma b) Follicular carcinoma
c) Medullary carcinoma d) Anaplastic carcinoma

2352. Medullary carcinoma of Thyroid is characterized by all, except - *(AIIMS Nov 94)*
a) Hereditary in nature
b) Hormone dependent
c) Secretes Calcitonin
d) Amyloid stroma is seen

2353. Medullary ca of thyroid is associated with increase in - *(AI97)*
a) Calcitonin b) Thyroglobulin
c)T3 d)T4

2354. Which type of thyroid carcinoma is classically associated with calcitonin induced amyloid deposition? *(MH11)*
a) Papillary b) Follicular
c) Anaplastic d) Medullary

2355. MEN syndrome is associated with increase in- *(Al 97)*
a) Papillary ca of thyroid b) Medullary
c) Follicular d) Anaplastic

2356. Which of the following is not true about medullary carcinoma of thyroid- *(Maharashtra 10)*
a) Origin is from 'C* cells of thyroid
b) Component of MEN-1
c) Multicentric in origin
d) Amyloid deposition

2357. All of the following are helpful for diagnosis of medullary Ca thyroid except - *(PGI June 2000)*
a) Spindle cell stroma with few follicles
b) Amyloid deposition
c) Calcitonin in stroma
d) Histological mitochondria is essential for diagnosis

2358. Psammoma bodies are seen in following except- *(PGI June 2K, AI09, NEET/DNB Pattern)*
a) Serous cystadenofria of ovary
pig b) Mucinous cystadenoma of ovary
§§gl d)M^ningioma
^Papillary carcinoma of thyroid

-■BflBiii
m **True about Psammoj ma bodies are all** e^geptk ^
if Seen in meningioma *(NEET/DNB Pattern)*
ib)'Cogcefrtde whorled appearanee
c) Contains Calcium^ deposits
fill Sd)?Seen in teratofrAk^^

2360. Psammoma bodies can be seen in the following except ? *(AI 11)*
a) Follicular carcinoma of thyroid
b) Papillary carcinoma of thyroid
c) Meningioma
d) Serous cytadenoma of ovary

2361. TVue about struma ovari - *(PGIDec 04)*
a) Ectopic thyroid tissue
b) Ectopic ovarian tissue
c) It is benign
d) It is included in teratoma

2362. Struma ovarii is composed entirely of-
a) Mature thyroid tissue *(Karnataka 2006)*
b) Immature thyroid tissue
c) Pimary ovarian carcinoid tissue
d) None of the above

2363. Most common Thyroid CA post radiation exposure - *(NEET/DNB Pattern)*
a) Papillary CA b) Medullary C A
» c) Follicular CA >:d)None >'.

2364. In thyroglossal cyst, carcinoma which arises is -
a) Follicular b) Medullary *(MP97)*
c) Papillary d) Anaplastic

2365. Which of the following production is noted in Cushing's Syndrome a tumour associated -
a) Decrease production of cortisol *(Karn 06)*
b) Increase production of cortisol
c) Excessive production of epinephrine
d) Excessive production of vasopressin

2366. Weight range of adrenal glands in most of cases of cushing's disease is - *(AP 92)*
a) 4~llgm b)ll-13gm
c) 14-24 gm d) 25-40 gm

2344)d 2345)d 2346)c 2347)a 2348)a 2349)a 2350)c 2351)a 2352)b 2353)a 2354)d 2355)b 2356)b 2357) d 2358)b 2359)d 2360)a 2361)a,c,e 2362)a 2363)a 2364)c 2365)b 2366)d

2367. Crook's hyaline change occurs in - *(AMU 87)*
a) Voluntary muscles
b) Diabetes mellitus liver
c) Basophils of pitutary gland in cushings disease
d) Viral hepatitis- B liver
e) Yellow fever-hepatitis

2368. The most common cause of Addison's disease is -
a) Autoimmune adrenalitis *(AlIMSMay 02)*
b) Meningococcal septicemia
c) Malignancy
d) Tuberculosis

2369. Which is false about adrenal adenoma - *(AI93)*
a) Usually less than 4 cm
b) Should be excised
c) Presents as abdominal mass
d) Causes cushing syndrome

2370. Pheochromocytoma does not arise from which of the following - *(JIPMER 88)*
a) Adrenal medulla b) Adrenal cortex
c) Extra adrenal sites d) Sympathetic chain

2371. Paragangliomas may show production of - *(DNB 91)*
a) ACTH b) Catecholamines
c) GH d)ADH

2372. Zellballen pattern are found in - *(PGINov 10)*
a) Pheochromocytoma
b) Paraganglioma
c) Acoustic neuroma
d) Transistional renal cell carcinoma
e) Schwannoma

2373. Tumor that follows rule of 10 is-*(NEET/DNB Pattern)*
a) Pheochromocytoma b) Oncocytoma
c) Lymphoma d) Renal cell carcinoma

2374. Malignancy in pheochromocytoma is indicated by-
a) Vascular invasion b) Mitotic figures *(AI 95)*
c) Capsular invasion d) metastasis

2375. WhichBof thefollowiug is moit reliabled eature of malignant transformation of pheochromoc ytoma -
; x **:5a)** Presenceofmitotic^g\xr^j*(NEET/DIfB Pattern)*
b) Capsular invasion
c) Vascular invasion
d) Pleomorphism |§I|f

2376. All the following familial syndromes are associated with development of pheochromocytomas except -
a) Sturge-Weber syndrome. *(AIIMSNov02)*
b) Von Recklinghausen disease.
c) MEN Type II.
d) Prader-Willi syndrome

2377. PTH does not cause - *(A1IMS May 95)*
a) Maintains serum Ca^{2+}
b) Ca^{2+} retention
c) Decreased $P0_4^{3'}$ excretion
d) May cause osteolysis

2378. Commonest cause of raised serum calcium is -
a) Ecotopic secretion *(Jipmer91)*
b) Parathyroid hyperplasia
c) Parathyroid adenoma
d) Parathyroid carcinoma

2379. Hypercalcemia is seen in all except - *(AI 97)*
a) Multiple myeloma
b) Primary hyperparathyroidism
c) Sarcoidosis
d) Tumour lysis

2380. Tertiary hyperparathyroidism is- *(AIIMSSep96, AI 98)*
a) High $P0_4$ level with metastasis
b) Secondary hyperparathyroidism with CRF
c) Primary hyperparathyroidism with low Ca^{2+} levels
d) Secondary hyperparathyroidism with chief cell adenoma

2381. What is deposited in Bronze diabetes -*(NEET/DNB Pattern)*
a) Bronze b) Copper
c) Iron d) Carbon

2382. Intraductal papillary mucin neoplasm is precursor of- *(PGI June 09)*
a) Mucinous cystic neoplasm
b) Mucinous non-cystic neoplasm
c) Ductal adenocarcinoma
d) Solid pseudopapillary neoplasm
e) Acinar cell carcinoma

2383. TheHLAimportant inIDDMis- *(AI94)*
a) HLA-A_3 tyHLA-B^
c) HLA-DR3/DR_4 d) HLA-Wj

2384. Nesidioblastoma is due to hyperplasia of-
a) Alpha cell b) Beta cell *(PGI Dec 99)*
c) Acinus d)D cells

DERMATOLOGY & INFECTIOUS DISEASES

2385. An adult old man gets burn injury to his hands. Over few weeks, the burned skin heals without the need for skin grafting. The most critical factor responsible for the rapid healing in this case is -
a) Remnant skin appendages *(AlIMSMay 03)*
b) Underlying connective tissues
c) Minimal edema and erythema
d) Granulation tissue

2386. Dyskeratosis - *(PGI June 07)*
a) Leukoplakia b) Hyperpigmentation
c) Nail dystrophy d) Premature keratinisation

2387. Acantholysis means - *(NEET/DNB Pattern)*
a) Diffuse epidermal hyperplasia
|| b) Lossdf mtercMhllar contfectioiis
c) Intercellular edema of the epidermis.
r d) Abno^m#ky*atihi^ation

2388. Predisposing factors for skin cancer are-
a) Smoking b)U-V-light *(PGIDec 2K)*
c) Chronic ulcer d) Infrared light

2389. Skin cancer which can occur due to exposure to light is - *(Kerala94)*
a) Melanoma b) Squamous cell carcinoma
c) Kaposis sarcoma d) None

2390. Maximum malignant potential is in- *(AI98)*
a) Superficial naevus b) Epidermal naevus
c) Junctional naevus d) Intradermis naevus

2367) c 2368) a 2369) c 2370) b 2371) b 2372) a,b 2373) a 2374) d 2375) None 2376) d 2377) c 2378) c 2379) d 2380)d 2381)c 2382)c 2383)c 2384)b 2385)a 2386)d 2387)b 2388)b,c 2389)b 2390)c

2391. Malignant change in nevus is characterised by-
a) Darkening b) Hemorrhage *(PGI93)*
c) Itching d) Increase in Size

2392. Marker for malignant melanoma is - *(J&K01)*
a) Cytokeratin b) MBN- 45
c) Alpha FP d)S 100

2393. Mutation in malignant melanoma- *(NEET/DNB Pattern)*
a) N-myc b) CDK2A
c) RET d) None

2394. Acantholytic cells in Pemphigus are derived from -
a) Stratum granulosum *(AIIMS May 1993)*
b) Stratum basale
c) Langerhans cell
d) Stratum spinosum

2395. 'Row of tombstones ' appearance is seen in -*(JIPMER*
a) Irritant dermatitis b) Pemphigus *78, PGI81)*
c) Pemphigoid d) Harpeszoster

2396. Mycosis fungoides affects - *(CMC 98)*
a) T Cells b)B Cells
c)NK Cells d)K Cells
e) None of the above

2397. Pautriers microabscess is seen in - *(TN 99)*
a) Psoriasis b) Mycosis fungoides
c) Lichen planus d) Leprosy

2398. Munro microabscesse are seen in -*(Maharashtra 10)*
a) Lichen planus b) Mycosis fungoides
c) Psoriasis d) Eczema

2399. Spongiosis is seen in -
a) Acute eczema b) Lichen Planus
c) Psoriasis d) Pemphigus

2400. Civatte bodies are found in - *(KERALA 98)*
a) Lichen Planus b) Psoriasis
c) Dermatophytosis d) Vitiligo

2401. Broke's tumor is a tumor of- *(AIIMS 81)*
a) Superficial dermal vesels
b) Sweat glands
c) Hair follicles
d) Sebaceous glands

2402. Acanthosis nigricans can occurs due to -
a) Increased multiplication of basal cells
b) Comification of basal cells *(Kerala 96)*
c) Keratinisation of epidermal cells
d) AH

2403. In congenital dystrophic variety of epidermolysis bullosa, mutation is seen in the gene coding for? *(AIIMS May 11)*
a) Laminin4 b) Collagen type 7
c) Alpha 6 integrin d) Keratin 14

2404. True about Dyskeratosis congenita - *(PGIMay 10)*
a) Pancytopenia b) Nail dystrophy
c) Hyperkeratosis d) X linked
e) Leukoplakia

2405. In primary tuberculosis, all of the following may be seen except - *(AI02)*
a) Cavitation b) Caseation
c) Calcification d) Giant cell

2406. Reactivation tuberculosis is almost excusively a disease of the - *(NEET/DNB Pattern)*
a) Lungs b) Bones
c) Joints d) Brain

2407. In primary T.B. seen - *(PGIDec 06)*
a) Ghon's focus b) Pleural effusion
c) Miliary motling d) Fibrosis
e) Cavity

2408. TVue about Ghon's focus- *(PGIDec04)*
a) Left apical parenchymal lesion
b) Right apical parenchymal lesion
c) Sub pleural caseous lesion in right upper lobe
d) Subpleural caseous lesion just above or below interlobar fissure
e) Caseous hilar lymphadenopathy

2409. Infraclavicular lesion of tuberculosis is known as -
a) Ghon's focus *(AIIMS May 11)*
b) Puhl's focus
c) Assman's focus d) Simmon's focus

2410. Commonest type of spinal T.B. is - *(AIIMSMay 95)*
a) Posterior b) Paradiscal
c) Pedicle d) Anterior

2411. Phagocytosis of TB bacilli does not occur because of- *(JIMPER 93)*
a) WaxD b) Muramyl dipeptide
c) Cord factor d) Peritrichate Cilia

2412. Soft granuloma is typically found in - *(AIIMS 86)*
a) Amoeboma b) Leprosy
c) Tuberculosis d) Gumma

2413. Ghon's focus with hilar Lymphadenopathy is equivalent to - *(Kerala 97)*
a) Boderline Tuberculoid Leprosy
b) Tuberculoid Leprosy (TL)
c) Lepromatous Leprosy (LL)
d) Indeterminate Leprosy

2414. Tuberculin test positivity indicates - *(APPGE 05)*
a) Good humoral immunity
b) Infection with mycobacterium
c) Good cell mediated immunity
d) None

2415. The most important function of epithelioid cells in tuberculosis is - *(DPG 10, UPSC 02)*
a) Phagocytosis b) Secretory
c) Antigenic d) Healing

2416. The pathogenesis of cerebral malaria included-
a) Cytoadhesion *(PGI June 03)*
b) Sequestration of cerebral vessels by RBCS
c) Reticulocytopenia
d) Also caused by P.vivax
e) Sporozoites are sequestrated in blood

2417. Pathological change in brain in cerebral malaria is - *(PGI June 97)*
a) Cerebral edema
b) Microvascular occlusion
c) ICT
d) Space occupying lesion

2391)c,d 2392) d 2393)b 2394)d 2395)b 2396)a 2397)b 2398)c 2399)a 2400)a 2401)c 2402)c 2403)b 2404)a,b,d,e 2405)a 2406)a 2407)a 2408)d 2409)c 2410)b 2411)c 2412)c 2413)b 2414)c 2415)b 2416)a,b 2417) b

2418. Durck granuloma is *sten\Ur(NEET/DNB; Pattern)*
a) Brain b) Spleen
c) Liver d)Lymphnode

2419. Finding on histopathological examination in liver in case of malaria is - *(AIIMSMay 07)*
a) Microabscess formation
b) Kupffer's cell hyperplasia with macrophage infiltration around periportal area laden with pigments
c) Non caseating granuloma
d) Non specific finding of neutrophilic infiltration

2420. Malaria affects all the following organs except -
a) Brain b) Heart *(PGI88)*
c) Liver d) Spleen

2421. Plasmodium falciparum affects all organs except
a) Lung b) Liver *(NEET/DNB Pattern)*
c) Kidney d) Heart

2422. Prolonged parasitism in malaria is due to -
a) Antigenic variation *(JIPMER 92)*
b) Intracellularity of parasite
c) Immunosuppression
d) Sequestration

2423. In occult filariasis microfilaria are present in -
a) Peripheral blood only *(Karnat 96)*
b) Peripheral lymph nodes only
c) Deep lymph nodes only
d) Deep organs only

2424. AIDS involves - *(AIIMSSep 96, AI98)*
a) B lymphocytes b) Helper T cells
c) Suppressor T cells d) Cytotoxic T cells

2425. Which of the following cell types is not a target for initiation and maintenance of HIV infection? *(DELHI*
a) CD4T cell b) Macrophage *PG Mar 09)*
c) Dendritic cell d)Neutrophil

2426. All the following malignancies are associated with HIV, except - *(AIIMS Nov 2000)*
a) Kaposi's Ca. b) Non Hodgkin's lymphoma
c) Astrocytoma d) Gastric adeno Ca.

2427. Least common mode of transmission of HTV-
a) Homosexual contact *(JIPMER 99)*
b) Heterosexual
c) IV drug abuse
d) Transfusion of blood products

2428. Rapid progression of disease with full blown manifestation in AIDS occurs when T4 cell count falls bellow- *(ORISSA R)*
a) 1000/microL b)500/microL
c) 200/microL d)50/microL

2429. Which of the following is not true about amoebiasis-
a) ALA in 10% causes in tropics *(AIIMSMay 95)*
b) Portal system efficient filter
c) Abscess due to suppuration
d) Abscess wall good for culture

2430. Characteristic feature of amoebic ulcer - *(AI89)*
a) Flask shaped b) Undermined edges
c) Rolled up edge d) Punched out

2431. Hepar lobatum is due to - *(JIMPER 90)*
a) Hepatitis A b) Syphilis
c) Hepatitis B d) Biliary atresia

2432. Hidradenitis suppurativa is found in- *(AIIMSNov 99)*
a) Sebaceous glands b) Hair follicle
c) Eccrine glands d) Apocrine glands

2433. Warthin-Finkeldey giant cells are seen in -
a) Measles b) Rubella *(AIIMS 83)*
c) Influenza d) Rickettsial pox

PEDIATRICS, ENVIRONMENT AND NUTRITION

2434. Primary structural defect of an organ is termed -
a) Malformation b) Disruption *(AI 09)*
c) Deformation d) Association

2435. All of the following are examples of a round cell tumor, except - *(AIIMS Nov 05)*
a) Neuroblastoma
b) Ewing's sarcoma
c) Non Hodgkin's Lymphoma
d) Osteosarcoma

2436. Retinoblsatoma is most similar to -
a) Fibroma *(PGI80, Rohtak 86)*
b) Phaochromocytoma
c) Neuroblastoma
d) Astrocytoma

2437. Rossettes are characteristically seen in - *(AI 08)*
a) Retinoblastoma b) Melanoma
c) Dysgerminoma d) Lymphoma

2438. Homer wright's rossette are seen in -*(PGI June 99)*
a) Neuroblastoma b) Astrocytoma
c) Meningioma d)Pinealoma

2439. Flexner-Wintersteiner rossette is seen in- *(Orissa R)*
a) Hepatoblastoma b) Nephroblastoma
c) Neuroblastoma d) Retinoblastoma

2440. Metastasis in neuroblastoma goes to -
a) Liver b)Lung *(PGI Nov 09)*
c) Bone d) Bone marrow
e) Kidney

2441. The most common malignant neoplasm of infancy is- *(AI05)*
a) Malignant teratoma b) Neuroblastoma
c) Wilms' tumor d) Hepatoblastoma

2442. Which of the following statements about neuroblastoma is not true - *(AI 09)*
a) Most common extracranial solid tumor in childhood
b) > 50 % present with metastasis at the time of diagnosis
c) Lung metastasis are common
d) Often encase aorta and its branches at the time of diagnosis

2418)a 2419)b 2420)b 2421)a,d 2422)b 2423)None 2424)b 2425)d 2426)c 2427)d 2428)c 2429)c 2430)a,b 243 l)b 2432) d 2433) a 2434) a 2435) d 2436) c 2437) a 2438) a,d 2439) d 2440)a,b,c,d 2441) b 2442) c

2443. To which of the following events is 'good' outcome in neuroblastoma associated - *(AI04)*
a) Diploidy
b) N-myc amplification
c) Chromosome 1 p depletion
d) Trk A expression

2444. The renal tumour which has multicentric origin -
a) Wilm's tumour *(TN98)*
b) Transitional cell carcinoma
c) Squamous cell carcinoma
d) Renal cell

2445. In which of the following conditions, Aniridia and Hemihypertrophy are most likely present -
a) Neuroblastoma *(A1IMS May 04)*
b) Wilms'tumour
c) Non-Hodgkin's lymphoma
d) Germ cell tumour

2446. Anaplasia inWilm's tumor is evident *by-(PGINov 10)*
a) Increased mitosis b) Pleomorphic nuclei
c) Large nucleus d) p53 mutation
e) Inceased response to chemotherapy

2447. 1 yr. old child with abdominal mass with calcification, possiblities are - *(PGIDec 2000)*
a) Neuroblastoma b) Wilm's tumor
c) Nephronopthsis **d)** Pheochromocytoma

important prognostic factor psfpan
tumour - *(NEET/DNB Pattern)*
a) Histopathology b) Ploidy of cel
c) Age < I yr d) Mutation of c1p gene

2449. True about nephrogenic rest - *(PGINov 10)*
a) Associated with Wilm's tumor
b) Increased risk of Wilm's tumor in contralateral kidney
c) No association with Wilm's tumor
d) Abnormal embryonal renal tissue

2450. Most common tumour of infancy is - *(UP 07, 05)*
a) Lymphangioma b) Rhabdomyoma
c) Haemangioma d) Lipoma

2451. UV radiation - *(NEET/DNB Pattern)*
a) Prevents formation of Pyrimidine dimmers
b) Stimulates formation of Pyrimidine dimmers
c) Purine dimmers
d) None

2452. The most radiosenstitive tissue is - ***(AP** 88)*
a) Brain b) Bone marrow
c) Thyroid d) Liver

2453. The least radio sensitive tissue is -
a) Nervous tissue b) Bone
c) Kidney d) Thyroid

2454. Least affected by radiation- *(M.P 98)*
a) GIT b) Gonads
c) Cartilage d)Lymphocytes

2455. Example for radiation induced cancer is -
a) Papillary carcinoma thyroid *(Kerala 96)*
b) Follicular carcinoma thyroid
c) Lymphoma
d) Hepatoma
e) Seminoma

2456. Most common tumour due to radiation arises from -
a) Lung b) Liver *(JIMPER 95)*
c) Bone marrow d) Breast

2457. During radiotherapy the Buccal Mucosa exhibits radiation reaction before skin due to - *(Kamat 99)*
a) Rapid cellular turn-over in bone
b) Slow cellular turn-over in blood vessel
c) Rapid cellular turn-over in skin
d) Rapid cellular turn-over in mucosa

2458. Which does of radiation given in fraction over sereral weeks will causes radiation nephritis beginning six months of more - *(Delhi 84)*
a) 1000 rads b) 1500 rads
c) 2300 rads d) 4200 rads

2459. A single whole body dose of how many rads could result in death - *(AMU 86)*
a) 100 rads b) 200 rads
c) 300 rads d) 500 rads

2460. Acute radiation hepatic damage is most marked between - *(Bihar 89)*
a) 1-7 days b) 7-21 days
c) 21-40 days d) 40-100 days

2461. High dose radiotherapy causes pancreatic -
a) Acinar dificiency *(JIMPER 79, 89)*
b) Islets of Langerhans deficiency
c) A + B
d) None

2462. What is present in the part of the bone which received radiotherapy- *(Kamat 99)*
a) Response to radiotherapy is good
b) Fast healing
c) More destruction of bone
d) Tumour regression is not affected

2463. Which of the following cause Teratogenecity -
a) Vit. C b) Vit. E *(AIIMD Feb 97)*
c) VitA d)Vit.D

2464. Lesion in Wernicke's encephalopathy occurs in- *(CUPGEE2001)*
a) Mamillary body b) Cerebellum
c) Motor cortex d) Substantia nigra

2465. Mild hemolytic anaemia is associated with vitamin dificiency- *(JIMPER 90)*
a) B6 b)E
c) A d)C

2466. Rickets is due to - *(AIIMS 91)*
a) Loss of calcium in urine
b) Increased mobilisation of calcium from bone
c) Decreased absorption of calcium
d) Loss of phosphate in Urine

2467. Bone affection in scurvy is due to which of the following - *(AI 10)*
a) Poor mineralization of the osteoid tissue
b) Defective osteoid matrix formation
c) Defective calcification in osteoid
d) Increased degradation of osteoid tissue

2443) d 2444) a 2445) b 2446)a,b,c,d 2447) a,b 2448) a 2449) a,b,d 2450) c 245 l)b 2452) b 2453) b 2454) c
2455)a 2456)c 2457)d 2458)c 2459)c 2460)d 2461)a 2462)c 2463)c 2464)a 2465)b 2466)c,d 2467)b

2468. The cause of scleritis is - *(PGI Dec 97)*
a) Collagen vascular disease b) TB
c) Trauma d) Glaucoma

PATHOLOGY MISCELLANEOUS

2469. The most common fixative used in pathology is?
a) Gluteraldehyde b) Alcohol *(AI11)*
c) Formaldehyde d) Picric acid

2470. The fixative used in histopathology - *(AIIMSMay 12)*
a) 10% buffered neutral formalin
b) Bouins fixative
c) Glutaraldehyde
d) Ethyl alcohol

2471. ESR depends on - *(PGI 87)*
a) Viscosity b) Fibrinogen
c) Rouleaux formation d) Verticality of tube
e) All of above

2472. ESR in increased in - *(AI98)*
a) Sickle cell anemia b) Multiple myeloma
c) Polycythemia vera d) Thalassemia

2473. ESR is raised in - *(AI90)*
a) Sickle cell anaemia
b) Multiple myeloma
c) Acute myocardial Infarction
d) Angina pectoris

2474. Anticoagulant of choice for ESR by Wintrobes method - *(A1IMS Feb 9 7)*
a) Citrate b) Heparin
c) Oxalate d) EDTA

2475. In Wintrobe's method for ESR, anticoagulant used is- *(PGI Dec 98)*
a) Double oxalate b)EDTA
c) Trisodium citrate d) Citrate

2476. Increased ESR is seen in one of following- *(AJ 96)*
a) Sickle cell anemia b) Multiple myeloma
c) Polycythemia d) Congestive heart failure

2477. Erythrocyte Sedimentation Rate is zero in -
a) Abetalipoproteinemia *(UPSC 02)*
b) Afibrinogenemia
c) Asplenia
d) Aplastic anemia

2478. Alkaline phosphatase level on serum is not increased in - *(AIIMS 94)*
a) Paget's disease b) Multiple myeloma
c) Hyperparathyroidism d) Osteomalacia

2479. Alkaline phosphatase levels are elevated in all of the following except - *(Manipal 0 7, 08)*
a) Brain tumors b) Obstructive jaundice
c) Bone tumors d) Placental tumors

2480. Nasal allergy is most often due to - *(PGI 93)*
a) Pollen grains b) Animal dust
c) House dust d) Automobile dust

2481. Nasopharyngeal angiofibromas are most frequently seen - *(AIIMS 8 7)*
a) In the second decade
b) In the third decade
c) In the fourth
d) In the fifth and sixth decades

2482. Otospongiosis is -
a) Autosomal dominant b) Autosomal recessive
c) X-linked dominant d) X-linked recessive

2483. Aphthous ulcers known as - *(UP 07)*
a) Canker sores b) Maijolin's ulcer
c) Curling's ulcer d) Cushing ulcers

2484. Most common type of salivary neoplasm -
a) Adenocystic cacinoma
b) Mixed cell parotid neoplasm
c) Epidermoid carcinoma
d) Adenocarcinoma
e) Adenolymphoma

2485. Most cdtntfton salivary gland tumor - *\(NEET/DNB*
a) Mucoepidermoid carcinoma
b) Pleomorphic ader oma
c) Warthims tumor
d) Qnc^y|o&
Hftfliil1§|M
H j

2486. The commonest site of Pleomorphic adenoma is -
a) Parotid salivary gland
b) Submandibular salivary gland
c) Sublingual gland
d) Submaxillary gland

2487. Pleomorphic adenoma is usually arise from-(T/P *07)*
a) Parotid gland b) Sub mandibular gland
c) Minor salivary gland d) Superficial lobe

2488. Acinic cell carcinomas of the salivary gland arise most often in the - *(A106)*
a) Parotid salivary gland.
b) Minor salivary glands
c) Submandibular salivary gland
d) Sublingual salivary gland

2489. Commonest salivary gland tumour in children -
a) Lymphoma *(AIIMS Nov 99)*
b) Adenoid cystic Ca
c) Pleomorphic adenoma
d) Mucoepidermoid Ca.

2490. Which of the following head and neck tumor has worst prognosis? *(MH11)*
a) Adenoid cystic carcinoma
b) Acinic cell carcinoma
c) Cystadenolymphoma
d) Mucoepidermoid carcinoma

2491. The most common pre-malignant condition of oral carcinoma is -
a) Leukoplakia b) Erythroplakia
c) Lichen planus d) Fibrosis

2492. Best prognosis is seen in - *(AIIMS97)*
a) Calip b) Ca tongue
c) Ca palate d) Ca floor of mouth

2468) a 2469) c 2470) a 2471) e 2472) b 2473) b,c 2474) c,d 2475) a,b 2476) b 2477) b 2478) b 2479) a 2480) a 2481)a 2482)a 2483)a 2484)b 2485)b 2486)a 2487)a 2488)a 2489)d 2490)a 2491)a 2492)a

2493. A 70 year old male who has been chewing tobacco for the past 50 years presents with a six months history of a large, fungating, soft papillary lesions in the oral cavity. The lesion has penetrated into the mandible. Lymph nodes are not palpable. Two biopsies taken from the lesion proper show benign appearing papillomatosis with hyperkeratosis and acanthosis infiltrating the subjacent tissues. The most likely diagnosis is - *(AI04)*
a) Squamous cell papilloma
b) Squamous cell carcinoma
c) Verrucous carcinoma
d) Malignant mixed tumour

2494. Which one of the following is NOT true of Ameloblastoma - *(Karnataka 02)*
a) Most common odontogenic tumour
b) Generally benign
c) Common in 3rd to 5th decade
d) Arises from mesenchymal tissue

2495. Most common jaw tumor is - *(SGPGI05)*
a) Ameloblastoma b) Ostogenie sarcoma
c) Fibrosarcoma d) Squamous cell carcinoma

2496. Cystic hygroma is seen in - *(A1IMS97)*
a) Turners syndrome b) Klinetelter
c) Marfans d) Down's

2497. Ultrastructural finding in case of paraganglioma ?
a) Deposition of glycogen *(A1IMS May 08, AI 10)*
b) Enlarged mitochondria
c) Shrunken mitochondria
d) Dense core granules

2498. Paraganglioma seen in - *(PGIDec 07)*
a) Carotid body tumor
b) Thorax
c) Para-vertebral location
d) Para-aortic lymph nodes

2499. Glomus Cells are found in - *(NEET/DNB Pattern)*
a) Carotid body Tumour b) Thyroid carcinoma
gfg§ c) Liver carcinoma d) None

2500 Which of the following porphyrias is not inherited as an Autosomal Dominant disorder - *(AI 12)*
a) Acute Intermittent Porphyria
b) Congenital Erythropoietic Porphyria
c) Porphyria Cutanea Tarda
d) Hereditary Coproporphyria

2501. The anticoagulant of choice for performing coagulation studies is - *(AIIMS Nov 11, DPG10,*
a) EDTA b) Heparin *J&K05)*
c) Tri sodium citrate d) Double oxalate

2502. If you are in PHC, which anticoagulant is used to sent the blood sample for blood glucose estimation?
a) EDTA *(AIIMS Nov 11)*
b) Heparin
c) Potassium oxalate
d) Potassium oxalate + sodium fluoride

2503. Gleasons scoring is used for - *(NEET/DNB Pattern)*
a) Carcinoma testis b) Carcinoma colon
c) Carcinoma thyroid: d) Carcinoma prostate

2504. Which of the following is not a channelopathy?
a) Cystic fibrosis *(AIIMS Nov 10)*
b) Liddle's syndrome
c) Tay-sach's disease
d) Hypokalemic periodic paralysis

2505. Biphasic histopathology is seen in - *(PGI Nov 09)*
a) Rhabdomyoma b) Mesothelioma
c) Neurofibromatosis d) Synovial sarcoma

2506. True about glomangioma - *(PGI June 09)*
a) Usually subungal
b) More common in hands and feet
c) Thrombosis can occur
d) Most common type of glomus tumor

2507. Glomus tumor is seen in - *(NEET/DNB Pattern)*
a) Retroperitoneum
; b) Soft tissue
c) Distal portion of digits
d) Proximal portion of digits

2508. Lung granuloma with necrosis are seen in -
a) PAN b) TB *(PGI June 01)*
c) Histoplasmosis d) Cryptococcosis
e) Wegener's granulomatosis

2509. Rh factor is an- *(AI 08)*
a) antibody b) Mucopolysaccharide
c) Protein d) fatty acid

2510. Reye's syndrome-histological finding-*(ARMSNov 07)*
a) Budding and branching of mitochondria
b) Swelling of endoplasmic reticulum
c) Paranuclear microdense deposits
d) Glycogen depletion

2511. Foam cells seen in - ***(PGI****Dec 05)*
a) Alport syndrome b) Niemann pick disease
c) Atherosclerosis d) Pneumonia

2512. Reye's syndrome is diagnosed by using with stain - *(AIIMS Dec 97, June 98)*
a) Reticulin stain b) Oil-red-O stain
c) PAS stain d) Mustein stain

2513. Which of the following is used as fungal stain tissue biopsy sections? *(AI 10)*
a) PAS b) Alizarin red
c) LPCB d) Masson Trichrome

2514. Stain not used for lipid - *(AIIMS Nov 07)*
a) Oil red O b) Congo red
c) Sudan III d) Sudan black

2515. Lipid in tissue is detected by - *(AIIMSNov 09)*
a) Oil RedO b) Muciramine
c) PAS d) Myeloperoxidase

2516. liver in hemochromatosis is stained by -
a) Masson Fontana *(NEET/DNB Pattern)*
b) Prussain blue
c) Masson trichrome
d) Congo red

2493) c 2494) d 2495) a 2496) a 2497) d 2498)a,b,c 2499) a 2500) b 2501) c 2502) d 2503) d 2504) c 2505) b,d 2506)a,b,c 2507)c 2508)b,c,e 2509)c 2510)d 2511)a,b,c 2512)b 2513)a 2514)b 2515)a 2516)b

2517. Acridine orange is a fluorescent dye used to bind -
a) DNAandRNA b) Protein *(AIIMS Nov 07)*
c) Lipid d) Carbohydrates

2518. PAS stains the following except - *(A1IMSNov 07)*
a) Glycogen
b) Lipids
c) Fungal cell wall
d) Basement membrane of bacteria

2519. Stain used for melanin - *(NEET/DNB Pattern)*
a) Masson Fontana b) Prussain blue
c) Masson trichrome d) Congo red

2520. Which of the following is a negative stain - *(NEET/DNB Pattern)*
a) Negrosin b) Fonatana
c) ZN stain d) Albert stain

2521. Methods of Hemoglobin estimation inlude the following except - *(ARMS Nov 07)*
a) Drabkin's method-ferricyanide-cyanide
b) Sahli's method
c) Spectrophotometric method
d) Wintrobe's method

2522. All the statement about lactoferrin are true, except- *(AJ03)*
a) It is present in secondary granules of neutrophil
b) It is present in exocrine secretions of body
c) It has great affinity for iron
d) It transports iron for erythropoiesis

2523. In familial mediterranean fever, the gene encoding the following protein undergoes mutation- *(AI05)*
a) Pyrin
b) Perforin
c) Atrial natriuretic factor
d) Immunoglobulin light chain

2524. Which is not pre-malignant at some site - *(AI2K)*
a) Bronchiactasis b) Cholilithiasis
c) Ulcerative colitis d) Leukoplakia

2525. The gene responsible for folic acid transport is situated on which chromosome- *(ARMS May 08, Nov08)*
a) 10 b) 5
c) X d) 21

2526. Splenic macrophages in Gaucher's disease differ from those in ceroid histocytosis by staining positive for - *(AI 04)*
a) Lipids b) Phospholipids
c) Acid Fast Stain d) Iron

2527. A 50-year-old male presented with signs and symptoms of restrictive heart disease. A right ventricular endo-myocardial biospy revealed deposition of extracellular eosinophilic hyaline material. On transmission electron microscopy, this material is most likely to reveal the presence of- *(ARMSMay 06)*
a) Non branching filaments of indefinitive length
b) Cross banded fibres with 67 m periodicity
c) Weber Palade bodies
d) Concentric whorls of lamellar structures

2528. Pericyte formation occur in - *(PGI Nov 09)*
a) Kaposi sarcoma b) Glomus tumor
c) Hemangiopericytoma d) Myopericytoma

2529. Fixative used for bone histopathology is? *(DNB*
a) 10% formalin b) Normal saline *Dec 11)*
c) Rectified spirit d) Nothing

2530. Zellballen pattern on histopathology is observed in? *(DNB Dec 10)*
a) GIST b) Astrocytoma
c) Carotid body tumor d) Retinoblastoma

2531. Serum alkaline phosphate is not rassed in -
a) Primary biliary cirrhosis *(DNB Dec 10)*
b) Hyperparathyoidism
c) Multiple myeloma
d) Hepatitis

2532. Which of the following is a stain for heart failure cells? *(DNB Dec 09)*
a) PAS b) Prussian blue
c) Sudan black d) Oil red

2533. Which of the following is a stain for fat cells?
a) PAS b) Prussian *b\ue(DNBDec 09)*
c) Sudan IV d)Alcianblue

2534. Carotid body tumor arises from? *(DNB Dec 09)*
a) Not a tumor but called a tumor
b) Carotid artery
c) Parasympathetic paraganglioma
d) Sympathetic paraganglioma

2535. Mechanism of oxygen toxicity is? *(DNB Dec 09)*
a) Direct DNA damage
b) Apoptosis
c) Nuclear fragmentation
d) Free radicals

2536. Substance commonly used for organ/tissue preservation for histopathological examination is? *(DNB June 09)*
a) Ethyl alcohol b) Formalin
c) Saturated salt solution d) Normal saline

2537. Which of the following head and neck tumor has worst prognosis? *(DNB June 08)*
a) Adenoid cystic carcinoma
b) Acinic cell carcinoma
c) Cystadenolymphoma
d) Mucoepidermoid carcinoma

2538. The commonest tumor of parotid is -*(DNB June 08)*
a) Mucoepidermoid b) Mixed parotid tumour
c) Adenolymphoma d) Squamous cell carcinoma

2539. Antigen absent in Bombay blood group- *(Orissa 04)*
a) H b)A
c) B d)D

2540. The antigen lacking in Rh negative person is -
a) C b) D *(UP 07,06)*
c) d d)E

2517)a 2518)d 2519)a 2520)a 2521)d 2522)d 2523)a 2524)a 2525)d 2526)a 2527)a 2528)b,c,d 2529)a
2530)c 2531)c 2532)b 2533)c 2534)c 2535)d 2536)b 2537) a 2538)b 2539)a,b,c 2540)b

2541. Blood groups A1 and A2 differ in- *(CUPGEE 02)*
a) Chemical structure of antigen
b) Spatial configuration of antigen
c) Molecular groups
d) Ionic charges on surface

2542. Onion skin spleen is seen in - *(AIIMS81, PGI84)*
a) UP b) Thalassemia
c) SLE d) Scleroderma

2543. Most common cause of splenic rupture is -
a) Malaria b) ITP *(Delhi PG 96)*
c) Thalassemia d) Cirrhosis

2544. Angioid streaks is seen in - *(HPU05)*
a) Pseudoxanthoma Elasticum b) Acromegaly
c) Paget's disease d) All of above

2545. Gleason's classification used for - *(UP 08)*
a) Carcinoma breast b) Carcinoma prostate
c) Carcinoma pancreas d) Carcinoma rectum

2546. Blood smear is best seen at pH of - *(Calcutta 2K)*
a) 7.2 b) 6.8
c) 6.6 d)7

2547. Commonly used FNAC needle gauge -
a) 26-29 b) 22-26
c) 18-22 d) 16-18

2548. Gomoris' aldehyde fuchsin specifically stains -
a) Alcian blue b) PAS *(AIIMS 78, 84)*
c) Methylene blue d) Geimsa stain

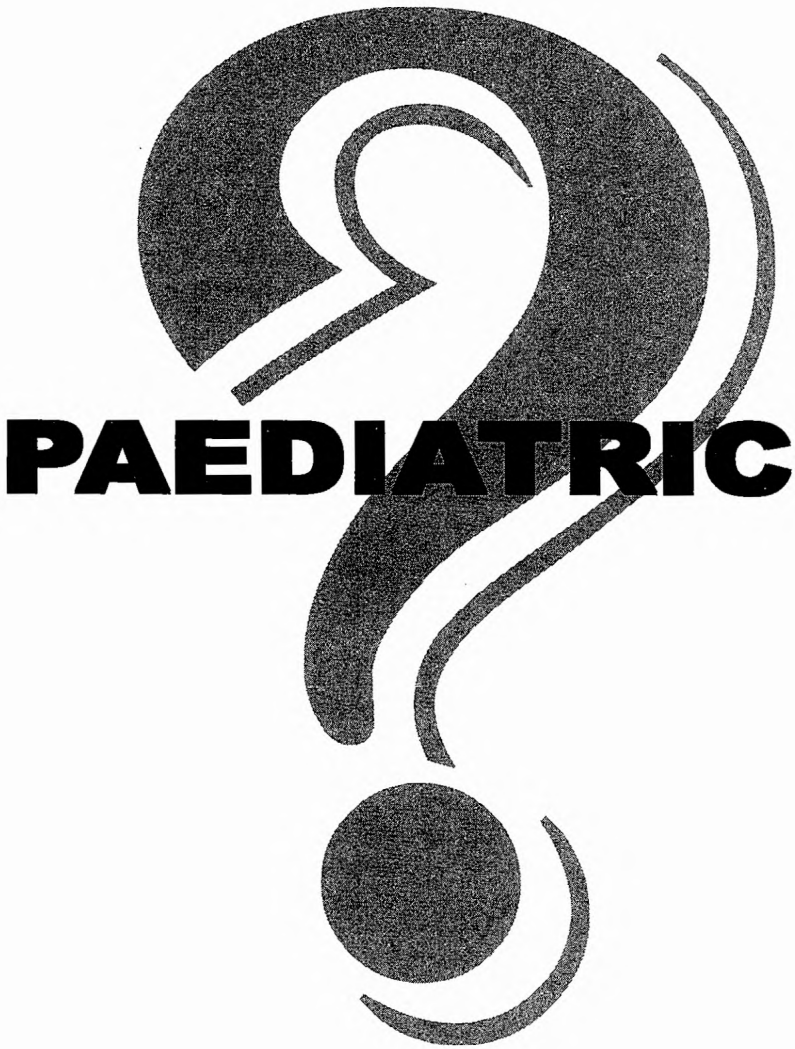
2549. Occular basement membrane is stained by -
a) Alcian blue b) PAS *(NIMHANS 89)*
c) Methylene blue d) Geimsa stain

2550. Acid mucin is best demonstrated by the stain -
a) Alcian blue b) Periodic Acid Schiff(P. A.S.)
c) VanGieson d)Reticulin *(KARNAT98)*

2551. Periodic acid schiff stain shows Block positivity in - *(Corned 08)*
a) Myeloblasts b) Lymphoblasts
c) Monoblasts d) Megakaryoblasts

2552. Chromosome defective in cystic fibrosis is-*(AMU05)*
a) Chromosome 5 b) Chromosome X
c) Chromosome 7 d) Chromosome 1

2553. Most common sarcoma in a person receiving immunosuppressive treatment is - *(Kerala 2001)*
a) Kaposi's sarcoma b) Lymphoma sarcoma
c) Osteosarcoma d) Angiosarcoma



2554. Intrauterine exposure of diethylstiboesterol is associated with - *(COMED 09)*
a) Squamous cell carcinoma of cervix
b) Adenocarcinoma of endometrium
c) Clear cell adenocarcinoma of vagina
d) Sarcoma of uterus

2555. Blood born metastasis is unusual of - *(AIIMS 92)*
a) Osteosarcoma
b) Medullary carcinoma breast
c) Choriocarcinoma
d) Renal cell carcinoma

2556. Plasma cells are increased in- *(AMU 86)*
a) Rheumatoid arthritis b) Acute appendicitis
c) Bronchitis d) Bristles of burnt skin

PAEDIATRICS

GROWTH & DEVELOPMENT

1. **The height of a child is double the birth height at the age of-** *(NEET/DNB Pattern)*
   a) 1 year, b) 2 years
   c) 4 yea d) 6 y
   e) 8 y«as
2. **Height of children in 2-10 years of age is increased by-** *(AI97)*
   a) 2 cm/year b) 4 cm/year
   c) 6 cm/year d) 10 cm / year
3. **Infant body weight is tripled by age of -** *(A1IMS 96)*
   a) 5 months b) 11 months
   c) 2 years d) 18 months
4. **TVue about head circumference measurement -**
   a) Measured in supra-orbital ridge *(PGIDec 04)*
   b) Measured hydrocephalus/microcephaly
   c) Serial measurement is useful
   d) Helps in measurement of neurological development
   e) Paediatric intelligence
5. **Anthropometric assessment, which does not show much change in 1-4 years -** *(PGIDec 96)*
   a) Mid arm circumference
   b) Skin fold thickness
   c) Chest circumference : Head circumference ratio
   d) Height
6. **A mother comes with her 3 year old female child with complain of that child is not eating anything. Her weight is 11 kg (50th percentile) and height is 88 cm. (75th percentile). What should be done next-**
   a) Vitamin rich tonic to be given *(AIIMS Nov 99)*
   b) Forceful eating
   c) Nothing should be done actively and assure the parent
   d) Complete investigation for UTI
7. **Cause of Failure to thrive include (s) -** *(PGINov 10)*
   a) Malabsorption b) Child abuse
   c) GERD d) Chromosomal disorders
8. **Which about development is not true -**
   a) Pincer grasp at 3 months *(AIIMS May 95)*
   b) Sitting at 6 months
   c) Social smile at 3 months
   d) 2 year old can use pleurals
9. **Pincer grasp is attained at months -**
   a) 4 b) 10 *(NEET-DNB Pattern)*
   c) 12 d) 18
10. **A3 year old child is expected to have all except -**
    a) Speak in sentences *(ARMSDec 94)*
    b) Copy a circle
    c) Hobble 5 steps
    d) Climb upstairs and downstairs
11. **A female child has recently learned to eat with spoon without spiling, to dress and undress herself with supervion and to understand that she is a girl. These skills are first mastered between the ages of-** *(ARMSNov 05, DPG 09)*
    a) 2 and 3 years b) 3 and 4 years
    c) 4 and 5 years d) 5 and 6 years
12. **A boy can grasp a rattle & recently he become able to transfer objects, hand to hand. He can do-** *(PGIDec 08)*
    a) Babble b) Say 'mama' or dada
    c) Sit without support d) Stand with support
    e) Able to walk
13. **A child climbs with alternate steps, builds a tower8-9 cubes, tells T but not his name and can not say his age and sex, the probable age is -** *(ARMSMay 01)*
    a) 36 months b) 24 months
    c) 30 months d) 48 months
14. **Which of the following cannot be done by 3 years old child-** *(NEET/DNB Pattern)*
    a) Draw a triangle b) Draw a circle
    c) Can arrange 9 cubes d) Can go up and down
    e) Stands on one foot for 5 second
15. **A3 year old child can do all, except-** *(ARMS May 93)*
    a) Eat with a spoon b) Climb stairs running
    c) Walk properly d) Vocabulary of20-100 words
16. **3 years old child can do -** *(PGI Nov 10)*
    a) Make bridge of 3 cubes
    b) Copy square
    c) Identfy left and right
    d) Use pronouns like I, you *8c* me
    e) Unscrew lids
17. **Which of the milestone develops first -** *(AI07)*
    a) Mirror play b) Crawling
    c) Creeping d) Pincer grasp
18. **A child is able to build blocks of 5 Cubes** developmental agepr *i ^EETR^|^B Pattern)*
    a) 12 months b) 15 months
    c) 18 months d) 24 months
19. **A baby has recently developed mouthing but has not developed stranger anxiety. Likes and dislikes for food. What is the most appropriate age of this baby-** *(AI 07)*
    a) 3 months b) 5 months
    c) 7 months d) 9 months
20. **A normally developing 10 months old child should be able to do all of the following except -** *(AI 06)*
    a) Stand alone
    b) Play peak to boo
    c) Pick up a pellet with thumb and index finger
    d) Build a tower of 3-4 cubes
21. **10 month old child can not do-** *(PGIDec. 05, June 04)*
    a) Change cube from one hand to another
    b) Can build a cube of six
    c) Can pull and stand
    d) Can talk a sentence of 4 to 5 words
    e) Pincer grasp
22. **An 8 week infant can do all the following except -**
    a) Head control *(PGI Dec 01)*
    b) Lift its head up to horizontal line in ventral suspension
    c) Follows red object upto 180
    d) Social smile
    e) Turns head towards sound

---

23. A two month old child is able to - *(AI04)*
a) Show a positive parachute protective reflex
b) Hold head steady in seated position
c) Lift head and chest of a flat surface with extended elbow
d) Sustain head level with the body when placed in ventral suspension

24. Development examination should be further evaluated in child of 12 weeks if he -
a) Does not vocalize *(AIIMS June 2K, AI 02)*
b) Does not babble
c) Does not change bright red ring from one hand to other even if given in hand
d) Does not hold head at 90°

25. A 4 year child can perform one of the following -
a) Can hop on single leg for 15 feet *(AIIMS Dec 98)*
b) Can skip without falling to either side
c) Can stand one feet for 20 seconds
d) Can walk down the stairs with alternating steps holding on the iron rail.

26. An 18 month old infant can do A/E - *(PGI Dec 03)*
a) Climbing upstairs
b) Can follows mother's activities
c) Can turn 2-3 pages at a time
d) Can say 2-3 words
e) Can make tower of 8 cubes

27. A 3 month baby will have - *(PGINov 09)*
a) Pincer grasp b) Head control
c) Sitting with support d) Transfer objects
e) Speak two words sentence

28. 2 years old child can do - *(PGIDec 04)*
a) Can ride tricycles
b) Climb up and downstairs with one step each time
c) Knows sex and age
d) Handles spoon well
e) Can read story with picture

29. A child is able to say short sentences of 6 words -
a) 2 years b) 3 years *(NEET/DNB Pattern)*
c) 4 years d) 5 years

30. A baby can follows an object with 180°, can hold neck, can sit with support but can not sit without support. The age of the baby is - *(PGI June 03)*
a) 1 month b) 3 months
c) 5 months d) 6 months
e) 9 months

31. A neonate is able to - *(PGI 2000)*
a) Fix his gaze at a object 8 to 12 inches apart
b) Focus on bright object
c) Left his head & chest on elbow
d) Roll from side to side

32. A1 & 1/2 yr child can do - *(PGIMay 10)*
a) Build tower of 4 blocks
b) Speak of 10-25 meaningful word
c) Scribble
d) Points 3-4 body parts
e) Copies parents in task

33. A year 6 old child with IQ of 50. Which of the following can the child do - *(AIIMSMay 07, Nov 06,*
a) Identify colours b) Read a sentence *AI 07)*
c) Ride a bicycle d) Copy a triangle

34. Achildhas a vocabulary of4-6 words however the main mode of communication and social interaction continues to be non-verbal what is the most likely developmental age of the child - *(AI 12)*
a) 12 months b) 15 months
c) 18 months d) 24 months

35. Which of the following is true about eruption of teeth - *(PGI Dec 05)*
a) Premolar appear in primary dentition
b) Incisors appear first in secondary dentition
c) 3rd molar is last to develop
d) Hypothyroidism delays dentition
e) Canines is last to appear in primary dentition

36. Ist permanent teeth to appear -*(NEET/DNBPattern)*
a) Molor b) Premolor
c)-Incisor. d) Cannirie

37. Milk teeth - Total no. in human being -
f||p8 |§ b) 28 1 *(NEWf/DflBPattem)*
c) 32 d) 24

38. Delayed Eruption of teeth is characteristics of- *(AIIMS June 97, Dec 1995)*
a) Scurvy b) Downs syndrome
c) Hypothyroidism d) Hypopituitarism

39. Delayed dentition is seen in all/except-
^||||§||j
b) Congenital hypothyroidism
c) Rickets
d) All of above

40. True about dentition - *(PGI June 04)*
a) Hypothyroidism causes delayed dentition
b) Premolar is not seen in primary dentition
c) 3rd molar is the last to appear in secondary dentition
d) Canine is the first in primary dentition
e) Incisor is the first in secondary dentition

41. Nails is formed in which week of IUL -*(NEET/DNB*
a) 0-6week b) 10-12week *Pattern)*
c) 14-18 week d) 20 - 24 week

42. WhenICF and ECF of child becomes equal to adult person- *(NEET/DNB Pattern)*
a) 1 year b) 2 year
'■'-'/■ c) 3 year' y dJ4year ■0¹

43. Upper segment to lower segment ratio in 3 yr age child is- *(NEET/DNB Pattern)*
a) 12 b) 1.3
c) 1.4 d) 1.6

44. Postnatally when is the growth velocity maximum ?
a) In the first year of life (*UPSC 06)*
b) In the second year of life
c) In the seventh year of life
d) In adolescence

45. 90% of brain growth is achieved by the-(*Corned 07,*
a) 2nd year b) 3rd year *Kerala04)*
c) 5th year d) 15th year

23) d 24) a 25) a,d 26) a,e 27) b 28)b,d 29) c 30)c,d 31)b 32)a,c,e 33) a 34)b 35)b,c,d, 36) a

46. **The maximum age for growth of lymphoid tissue -**
a) 3-4 years b) 5-7 years *(JIPMER 95)*
c) 7-11 years d) 11-14 years

47. **Increase in height in first year is by -** *(DNB 2001)*
a) 40% b) 50%
c) 60% d)75%

48. **Birth weight of a child doubles at five months of age while the birth length doubles at the age of -**
a) lyear b) 2 years *(UPSC98,07)*
c) 3 years d) 4 years

49. **The weight of the child at 3 years is usually times the birth weight -** *(Karn 11)*
a) 3 b)4
c) 5 d)7

50. **A newborn baby has a head circumference of 35 cms. at birth, His optimal head circumference will be 43 cms at-** *(UPSC 99)*
a) 4 months of age b) 6 months of age
c) 8 months of age d) 12 months of age

51. **In a healthy child, the head and chest circumference equal each other around the age of -** *(Karnat 06)*
a) 3-6 months b) 6-9 months
c) 9-12 months d) 12-15 months

52. **Weight gain in the second year of life is -** *(CMC 05)*
a) 1kg b)2kg
c) 3kg d)4kg
e) 5 kg

53. **A normal healthy child has a height of 100 cm and weighs 16 kg. What is his most likely age ?**
a) 3 years b) 4 years *(UPSC 06)*
c) 5 years d) 6 years

54. **The upper segment: lower segment ratio at 2 year of age in a normal child is -** *(Karnat 96)*
a) 1:8:1 b) 1:5:1
c) 1:25:1 d) 1:12:1

55. **A child plays a simple ball game at -** *(Manipal 08)*
a) 52 weeks b) 36 weeks
c) 12 weeks d) 48 weeks

56. **A boy draws triangle but not diamond shape age is ?**
a) 3 years b) 4 years *(APPG 08)*
c) 5 years d) 6 years

57. **A two-month old child is most likely** *to-(SGPGI05)*
a) Show a positive parachutte protective reflex
b) Hold head steady in a seated position
c) Lift head and chest off a flat surface with extended elbows
d) Sustain head level with the body when placed in ventral suspension

58. **A 40 weeks old infant can do all the following except-**
a) Waves bye bye *(Jipmer 03)*
b) Transfer object from one hand to another
c) Sits without support
d) Makes a tower of 3 - 4 cubes

59. **At what age does an infant discriminate strangers -**
a) 4 weeks b) 8 weeks *(COMEDK 05)*
c) 12 weeks d) 20 weeks

60. **The milestones achieved at 13 months in children are all except -** *(DELHIPG Mar. 09)*
a) Index finger approach b) Walking
c) Casting d) Single words

61. **A child draws circle at -** *(Manipal 06)*
a) 12 months b) 24 months
c) 30 months d) 36 months

62. **When a child is not able to perform the following motor functions such as skipping, walking on heels, hopping in place or going forwards in tandem gati, his motor development is considered to be below -**
a) 3 years b) 4 years
c) 6 years d) 8 years

63. **Child changes a rattle from one hand to another at the age of -** *(Corned 07)*
a) 3 months b) 6 months
c) 9 months d) 1 year

64. **A normal infant sits briefly leaning forward on her hands, reaches for and grasps a cube and transfer it from hand to hand. She babbles but cannot wave bye-bye nor can she grasp objects with the finger and thumb. Her age is -** *(UPSC 2K)*
a) 4 months b) 7 months
c) 10 months d) 10 months

65. **The age by which most of the normal babies know their gender is -** *(COMEDK 05)*
a) 1 year b) 2 years
c) 3 years d) 4 years

66. **A child can ride a tricycle, copy a circle and knows age sex by the age of -** *(J & K 05)*
a) 30 months b) 42 months
c) 36 months d) 48 months

67. **In a child, one should be worried if -***(PAL 93, Karn 06)*
a) Stammering occurs at 3 years
b) Lack of Toilet control at 2.5 years
c) Teeth do not erupt by 11 months
d) Social smile absent by 10 weeks

68. **Handedness develops at -** *(TN 01)*
a) 12 months b) 18 months
c) 24 months d) 36 months

69. **Vocabulary of 1.5 year old child is -** *(AMU95)*
a) 1-10 words b) 10-20 words
c) 20-30 words d) 30-40 words

70. **A normal child develops the ability to use 10 words with meaning at the age of -** *(Karn 11)*
a) 12 months b) 15 months
c) 18 months d) 24 months

71. **Which one of the following activities cannot be formed by a 7 month old infant -** *(UPSC 0 7)*
a) Pivot b) Cruise
c) Transfer objects d) Enjoy mirror

72. **An infant can sit with leaning forward on his hands. He bounces actively when made to stand. He laughs aloud and becomes concerned when the mother moves away. What is his most likely age -**
a) 12 weeks b) 16 weeks *(UPSC 0 7)*
c) 22 weeks d) 28 weeks

46) b 47) b 48) d 49) c 50) b 51) c 52) c 53) b 54) b 55) a 56) c 57) d 58) d 59) None

73. A normal infant sits briefly leaning forward on her hands, reaches for and grasps a cube and transfer it from hand to hand. She babbles but canot wave bye-bye nor can she grasp objects with the finger and thumb. Her age is - *(UPSC 2K)*
a) 4 months b) 7 months
c) 10 months d) 14 months

74. At which one of the following age period a child can remove front opening garment ? *(COMED 06)*
a) 24 months b) 36 months
c) 48 months d) 60 months

75. Child begins to sit with support, able to transfer objects from one hand to another hand and speak monosyllabic babbles at the age of - *(MH10)*
a) 3 months b) 6 months
c) 9 months d) 12 months

76. Gender from external genitalia of foetus becomes clearly distinguished by - *(Orissa 2K)*
a) 10 weeks b) 16 weeks
c) 12 weeks d) 20 weeks

77. Which of the following are the first incisors to erupt in an infant - *(UPSC 07)*
a) Lower central b) Lower lateral
c) Upper central d) Upper lateral

78. By_____ years all milk teeth are erupted -
a) 1.5 b) 2 *(AMC2K)*
c) 2.5 d)3

79. Which of the following X-ray should be advised for age determination between 1-13 years of age -
a) Shoulder b) Wrist *(MH11)*
c) Elbow d) Iliac bones

80. At the end of 1 year of age, the number of carpal bones seen in the skiagram of the hand is -
a) Nil b) 1 *(Corned08)*
c) 2 d)3

81. Fetal growth is maximally affected by - *(UP 2K)*
a) Insulin b) Growth hormone
c) Cortisol d) Thyroxine

82. Short stature is seen in - *(AIIMS June 04)*
a) Maternal deprivation syndrome
b) Hypothyroidism
c) Bulimia
d) Paternal smoking
e) IUGR

83. A child is below the third percentile for height. His growth velocity is normal, but chronologic age is more than skeletal age. The most likely diagnosis is - *(A111 06)*
a) Constitutional delay in growth
b) Genetic short stature
c) Primordial dwarfism
d) Hypopituitarism

84. The most common cause of short stature is -
a) Constitutional *(AI07, 08)*
b) Systemic diseases
c) Hypothyroidism
d) Growth hormone deficiency

85. A child is below the third percentile for height. His growth velocity is normal, but chronologic age is more than skeletal age. The most likely diagnosis is - *(AI 06)*
a) Constitutional delay in growth
b) Genetic short stature
c) Primordial dwarfism
d) Hypopituitarism

86. Short stature, secondary to growth hormone deficiency is associated with- *(NEET/DNB Pattern)*
a) Normal body proportion.
b) Low birth weight
c) Normal epiphyseal development
d) Height age equal to skeletal age

87. Infantile proportion in adult is seen in- *(PGIDec 01)*
a) Morquoi's disease b) Achondroplasia
c) Hypothyroidism d) Malnutrition
e) Constitutional dwarfism

88. A14 year old boy has difficulty in expressing himself in writing and makes frequent spelling mistakes, does not follow instruction and cannot wait for his turn while playing a game. He is likely to be sufering from -
a) Mental retardation *(AIIMS Nov 05)*
b) Lack of interest in studies
c) Specific learning disability
d) Examination anxiety

89. A 9 year old child is restless. He is hyperactive and his teacher complaints that he does not listen to the teachings. Disturbs other students, he also shows less interest in playing. The likely diagnosis is -
a) Cerebral palsy *(AIIMS May 02)*
b) Attention deficit hyperactive child
c) Deliruium
d) Mania

90. A10 year old child is always restless, inattentive to study and always wants to play outsite. Parents are extremely distressed. What would you adivise -
a) It is a normal behaviour *(AIIMS Nov 08)*
b) Behaviour therapy
c) It is a serious illness requires medical treatment
d) Needs change in environment

91. All of the following are essential features of attention deficit hyperactive disease (ADHD) except -*(AI 04)*
a) Lack of concentrationb) Impulsivity
c) Mental retardation d) Hyperactivity

92. Drugs used in ADHD are - *(PGIDec 08)*
a) Atomoxetine b)Methylphenida
c) Dextro-amphetamine d) Quetiapine

93. A 9 year old child disturbs other people, is destructive interferes when two people are talking, does not follow instructions and cannot wait for his turn while playing a game. He is likely to be suffering from - *(AIIMS Nov 05)*
a) Emotional disorders
b) Behavioural problems
c) No disorder
d) Attention deficit hyperactive disroder

73)b 74) b 75)b 76)a 77)a 78)c 79)b 80)c 81)a 82)a,b,e 83)a 84)a 85)a 86)a 87)b,c 88)c 89)b 90)b 91)c 92)a,b,c 93)d

94. **A 3 year old boy with normal developmental milestones with delayed speech and difficulty in communication and concentration. He is not making friends. Most probable diagnosis is -**
a) Autism *(AIIMSMay 07, AI07)*
b) ADHD
c) Mental retardation
d) Specific learning disability

95. **Which of the following is not true about the autistic specific disorder -** *(AI10)*
a) Impaired communication
b) Impaired imagination
c) Language developmental delay
d) Vision problems

96. **Infantile autism is characterized by -** *(PGIDec 04)*
a) Impaired vision
b) Impaired Neurobehavioural development
c) Impaired folate level
d) A socio-economic hazard
e) Parenting

97. **The following are characteristic of autism except -**
a) Onset after 6 years of age *(AI 06)*
b) Repetitive behaviour
c) Delayed language development
d) Severe deficit in social interaction

98. **A 6 year old child has history of birth asphyxia does not communicate well, has slow mental and physical growth, does not mix with people, has limited interest, gets widely agitated if disturbed, diagnosis is-** *(AIIMSNov 01)*
a) Hyperkinetic child
b) Autistic disorder
c) Attention deficity disorder
d) Schizophrenia

99. **A two year old girl child is brought to the out patient with features of hand wringing stereotype movements, impaired language and communication development, breath holding spells, poor social skills and deceleration of head growth after 6 months of age. The most likely diagnosis is -** *(AIIMS Nov 03)*
a) Asperger's syndrome b) Rett's syndrome
c) Fragile x-syndrome d) Colarad syndrome

100* Fragile X-syi«}rome is characterised b; all of the v^^hMving featiires e^ept^f *(NEET/DNB J\att$riy)*
a) Long face b) Large ear
c) Large-nose d) Large-testis

101. **Lowest recurrence in nocturnal enuresis is seen with-** *(AI 08)*
a) Bed alarms b) Desmopressin
c) Imipramine d)Oxybutynin

102. **Which of the following nasal spray is very effective in control of enuresis -** *(Karnat 99)*
a) Pitressin b) Desmopressin
c) Lipressin d) None of the above

103. **The behaviour therapeutic falls in management of enuresis, The pharmacological drug of choice for this case is -** *(UP 07)*
a) Phenytoin b)Diazepalm
c) Imipramine d)Alprax

104. **True regarding breath holding spells is all except -**
a) Antiepileptic treatment is necessary
b) Atropine is sometimes used *(AIIMS June 97)*
c) Attacks of cyanosis can occur
d) Occurs between 6 months to 5 years

105. **Treatment for breathholoding spells in a child is -**
a) Give extra care and love to the child
b) Inflicting painful stimulus at the beginning of the attack *(PGI Dec 01)*
c) Do not give attention to the child
d) Fulfil all the wishes of the child to prevent the attack
e) Low dose barbiturates

106. **Which is incorrect about Thumb sucking -**
a) Can lead to malocclusion *(JIMPER 91)*
b) Is a source of pleasure
c) Is a sign of insecurity
d) Must be treated vigorously in the first year

107. **To avoid displacement of permanent teeth, finger sucking should be terminated** *by-(PGI 79,AIIMS 78, 81)*
a) 8 years b) 5 years
c) 3 years d) 2 years

108. **Which of the following is not true regarding 'Thumb sucking"** *(UP 07, 05)*
a) Feels insecurity
b) Pleasurable sensation
c) Leads to dental problems
d) Child < 4 years of age

109. Pi^refersto-; - *(NEET/pNB Pattern)*
a) Finger sucking
b) Thumb sucking
c) Foreign object being put in the mouth
d) None of above

110. **Waking up at night, screaming with fear, at 2.5 years age, is generally a manifestation of -**
a) Organic illness *(PGI 01,79,01)*
b) Normal development pattern
c) Castration anxiety
d) Separation anxiety

111. **Cretinism is-** *(UP 08)*
a) Disproportionate dwarfism
b) Short stature with long trunk
c) Short stature with short trunk
d) Long stature with long trunk

112. **Which of the following childhood disorder improves with increase in age -** *(MP 2K)*
a) Conduct disorder b) Emotional problems
c) Temper tantrum d) Sleep disorder

94)a 95)d 96)b,d 97)a 98)b 99)b 100)c 101)a 102)b 103)c 104)a 105)None 106)d 107) a 108) None 109)c 110)d 11 l)a 112)c

113. Which of the following is incorrectly matched -
a) Stuttering-Toddler *(JIPMER 91)*
b) Sleep pattern of infancy - 2 to 3 year
c) Fear-preschool
d) Oedipal complex-infancy

114. The commonest cause of Enuresis in children is- *(UPSC96)*
a) Urinary tract infection b) Spina bifida
c) Psychologic stress d) Diabetes mellitus

115. Best treatment for enuresis is - *(DPGEE 08)*
a) Oxybutinin b) Desmopressin
c) Bed alarm d)Imipramine

116. Early strict toilet training can result in- *(Manipal 09)*
a) Nocturnal enuresis b) Encopresis
c) Night terror d) Temper tantrums

117. Consider the following behavioural conditions in a child of school age - *(UPSC-109)*
1. Fidgets with hands or squirms in seat
2. Easily distracted by extraneous stimuli
3. Often has difficulty awaiting turn
4. Does not seem to listen when spoken to directly
Which of the above diagnostic criteria are suggestive on inattention (attention deficit) in a child?
a) 1 and 2 only b) 1 and 3 only
c) 2 and 4 only d) 1,2, 3 and 4

118. A 18-month old baby presents with recurrent episodes of excessive crying followed by cyanosis, unconsciousness and occassional seizures since 9 months of age. The most likely diagnosis is - *(UPSC 98)*
a) Epilepsy b) Anoxic spells
c) Breath holding spells d) Vasovagal attack

119. A new born is noted to have a large head and short limbs. On further examination, short broad fingers, a small face, and low-normal length are noted. The trunk appears long and narrow, to confirm the diagnosis you should - *(MAHA 05)*
a) Order an ophthalmologic examination
b) Obtain skeletal radiographs
c) Order chromosome analysis
d) Examine the parents

ADOLESCENT

120. WHO defines adolescent age between - *(AI05)*
a) 10-19 years b)l 0-14 years
c) 10-25 years d) 9-14 years

121. Peak growth velocity in adolescent girls is seen just after - *(AI 96)*
a) Appearance of pubic & axillary hair
b) Breast enlargement
c) Onset of menstruation
d) Enlargement of external genitalia

122. First sign of puberty in girls - *(PGIDec 99, AI 08)*
a) Puberchy b) Thelarchy
c) Growth spurt d) Menarche

123. What is the order of puberty- **(AI2K)**
a) Telarchy - pubarchy - menarchy
b) Puberchy - telarchy - menarchy
c) Puberchy - menarchy - telarchy
d) Adrenarchy - telarchy - pubarchy

124. Order of development of secondary sexual characteristic in male - *(PGI96)*
a) Testicular development—pubic hair—axillary hair—beard
b) Pubic hair—testicular development—axillary hair — beard
c) Testicular development —beard—pubic hair-axillary hair
d) Axillary hair—beard —pubic hair—testicular development

125. Peak growth velocity in adolescent girl is indicated by-
a) Breast enlargment *(AI 98)*
b) Axillary hair
c) Public hair
d) Just before commensement of menarche

126. Maximum growth spurt is seen in girls at time of - *(NEET/DNB Pattern)*
a) Pubarche b) Thelarche
c) Menarche d) Adrenarche

127. A 13 year old boy has bilateral gynecomastia. His height is 148 cm, weight 58 kg; the sexual maturity rating is stage 2. The gynecomastia is most likely due to - *(AIIMS Nov 04)*
a) Prolactinoma b) Testicular tumour
c) Pubertal gynecomastia d) Chronic liver disease

128. What is thelarche - *(NEET/DNB Pattern)*
a) Pubertal breast enlargement in boys
b) Breast enlargementir^ pregnancy
jjj|I|n|p Hornone relatqdfjreast enlargement in girls
d) Post hormonal thera py breast enlargement in postmenopausal females

129. Increase in muscle mass at adolescence is probably caused by - *(AIIMS 81, PGI 83)*
a) Thyroid hormone b) Adrenal hormone
c) Growth harmone d) None of the above

130. Peak stage in height growth corresponds to-------- stage of pubic hair - *(JIPEMR 95)*
a) I b)D
c) m d)IV

131. Growth spurt occurs - *(SGPGI05)*
a) Just before appearance of axillary hair
b) Just before menarche
c) After 16 years
d) Before thelarche

132. Which one of the following is the correct order of events at puberty in a girl ? *(UPSC 06)*
a) Thelarche-puberche-menarche-growth spurt
b) Puberche-thelarche-growth spurt menarche
c) Menarche-growth spurt-thelarche-puberche
d) Thelarche-puberche-growth spurt-menarche

113) a,b,c,d 114) None 115)c 116)b 117)c 118)c 119)b 120)a 121)a 122)b 123)a 124)a 125)d

133. Which of the following is the first sign of puberty in girls? *(Maharashtra 10)*
a) Pubarche b)Thelarche
c) Menarche d) Growth spurt

134. The following is usually the first sign of puberty in girls- *(UPSC-I10)*
a) Onset of menstruation
b) Appearance of pubic hair
c) Change in voice
d) Increase in breast size

NUTRITION

135. Deficit in weight for height in a 3 year old child indicates - *(AIIMS Nov 05)*
a) Acute malnutrition
b) Chronic malnutrition
c) Concomittant acute and chronic
d) Underweight

136. Best indicator for nutritional status for a child is -
a) Mid arm circumference *(AIIMS May 10, Nov 06)*
b) Head circumference
c) Rate of increase of height and weight
d) Chest circumference

137. Acute malnutrition is manifested by - *(PGI June 05)*
a) Weight for age b) Weight for height
c) Age for height d) Brocas index
c) Ponderal index

138. Deficit in weight for height in a 3 years old child indicates- *(AIIMS Nov 05)*
a) Acute malnutrition
b) Chronic malnutrition
c) Concomittant acute and chronic
d) Under weight

139. Which of the following is the best indicator of long term nutritional status - *(AI0 7)*
a) Mid arm circumference b) Height for age
c) Weight for age d) Weight for height

140. Common to both acute and chronic malnutrition is - *(AIIMS May 0 7)*
a) Weight for age b) Weight for height
c) Height for age d)BMI

141. Grade HI malnurtition according to IAP is -
a) 50% b) 51 -60 % *(PGIJune 99)*
c) 61-80% d) 81-100%

142. A 2 year old child has a weight of 6.4 kg. and has vitamin A deficiency.What is the grade of malnutrition in this child - *(AIIMS 8 7)*
a) First degree b) Second degree
c) Third degree d) Fourth degree

143. The following statement about Gomez classification is false - *(AI 08)*
a) Based on height retardation
b) Based on 50th centile Boston standards
c) Between 75 and 89% implies mild malnutrition
d) This classification has prognostic value for hospitalization of children

144. Which of the following is the reference standard on which classfication of protein energy malnutrition is based- *(AIIMS 83)*
a) Gomez classification
b) 10th percentile of weight for age of ICMR
c) 80% of the 50th percentile of weight of ICMR
d) 80% of the 50th percentile of weight for age of American standard

145. Indicator of moderate to severe malnutritions is- *(PGI Dec 99)*
a) Serum transferrin 160 b) Body mass index 19
c) Albumin 2.1 g/dl d) Transthyretin

146. All of the following nutritional assessment methods indicate inadequate nutrition except - *(AI 09)*
a) Hb < 11.5 g/dl during 3rd trimester of pregnancy
b) Increased 1-4 year mortality rate
c) Birth weight < 2500 gm
d) Decreased weight for height

147. The amount of calories required at 1 year of age are- *(AI 96)*
a) 900 K cal/day b) 1000 K cal/day
c) 1200 K cal/day d) 1400 K cal/day

148. The normal calorie requirement for a 5 year old child is- *(PGI 93)*
a) 800 calories b) 1000 calories
c) 1500 calories d) 2000 calories

149. Kwashiorkar is diagnosed in growth retarded children along with- *(NEET/DNB Pattern)*
a) Edema and mental changes
b) HypopigmentationdAfeanemia^3
c) Edema and hypopigmentation
d) hepatomegaly and anemia >

150. Kwashiorkar is characterised by all of the following features except - *(AI 99)*
a) Edema b) Patchy depigmentation of hair
c) Fatty liver d) Fatty infiltration of pancreas

151. All are seen in Marasmus except- *(NEET/DNB Pattern)*
a) Hepatomegaly b) Muscle wasting
c) Voracious appetite d) Weight loss

152. Which of the following is seen in Marasmus and not in Kwashiorkor - *(Jipmer 11)*
a) Vocarious appetite b) Fatty change in liver
c) Hypoalbuminemia d) Edema

153. All of the following conditions are observed in Marasmus, except - *(AIIMS May 05, DPG 09)*
a) Hepatomegaly b) Muscle wasting
c) Low insulin levels d) Extreme weakness

154. Acute complication of PEM - *(PGI June 05, 06)*
a) Hypothermia b) Hypoglycemia
c) Hypokalemia d) Hypermagnesaemia
e) Eosinophilia

155. All are true regarding Kwashiorkar except -
a) Fatty liver *(AI91)*
b) Edema
c) Megaloblastic anemia not responding to folic acid
d) Bitot's spot

133)b 134) d 135)a 136) c 137)b 138)a 139)b 140) a 141)b 142) c 143) a 144) d 145) c 146) a
147) c 148) c 149) a 150) d 151)a 152) a 153) a 154)a,b,c 155)c

156. With reference to a malnourished child, the following statements are correct except- *(UPSC-109)*
a) Skin and mucosa are not effective barriers to infection
b) There is impairment of chemotaxis associated with defective candidicidal, bacteriocidal capacities of polymorphs
c) There is impairment of cell mediated immunity and delayed hypersensitivity
d) There is impaired of humoral response to immunizing agents and reduces number of B-cells

157. In Kwashiorkor, which immunoglobulin is most affected - *(AI94)*
a)IgD b) IgA
c)IgE d)IgM

158. Poor prognostic factors in a child with kwashiorkar include all of the following- *(Karnat 96)*
a) Hypothermia b) Hepatomegaly
c) Purpura d) Dermatosis

159. Mostly death in PEM is due to all except-
a) Hypothermia b) CCF *(IN 89, DPG 09)*
c) Worm infestation d) Electrolyte imbalance

160. A child is suffering from severe PEM. Calories to be given per kg of body weight to regain weight -
a) 200Kcal b) 150 Kcal *(AIIMSJune 99)*
c) 400Kcal d) 100 Kcal

161. Caloric supplementation required for a severely malnourished child (per kg-body weight) is -
a) lOOcal/kg b) 125 cal/kg *(AI99)*
c) 150cal/kg d) 175 cal/kg

162. Flaky paint appearance of skin is seen in- *(NEET/DNB Pattern)*
a) Dermatitis b) Pellagra
c) Marasmus d) Kwashiorkor

163. All of the following are characteristic features of Kwashiorkar, except - *(AIIMSMay 03)*
a) High blood osmolarity b) Hypoalbuminemia
c) Edema d) Fatty liver

164. Kwashiorkor is characterised by all except- *(AI89)*
a) Dermatitis b) Edema
c) Flag sign d) Alertness

165. Poor indicator to response during treatment of malnutirion includes - *(PGINov 10)*
a) Failure to gain appetite by day 10
b) Presence of edema on day 10
c) Failure to gain at least 5 g/kg/day by day 4
d) Failure to gain at least 5 g/kg/day by day 10
e) Failure to gain at least 5g/kg/day for 3 consecutive days during the rehabilitation phase

166. Exclusive breast feeding is at least *tti±-(NEET/DNB Pattern)*
a) 4 month b) 6 month
c) 8 month d) 10 month

167. Breast feeding should begin... hours after delivery-
a) 2 b)4
c) 8 d)24

168. The current recommendation for breast feeding is that- *(AI 04)*
a) Exclusive breast feeding should be continued till 6 month of age followed by supplementation with additional foods
b) Exclusive breast feeding should be continued till 4 month of age followed by supplementation with additional foods
c) Colostorum is the most suitable food for a new bom baby but it is best avoided in first two days
d) The baby should be allowed to breast feed till one year of age

169. Benifits of breast milk are - *(PGI June 08)*
a) Better nutrition b) Less infection
c) More diarrhea d) Less allergy
e) High sodium contents

170. Breast fed babies as compared to artificially fed babies have all the foilwing benefits except- *(AIIMS 84)*
a) Lower incidence of diarrhoea episodes
b) Lower incidence of respiratory infection
c) Lower incidence of late onset tetany
d) Lower incidence of future obesity

171. The protective effects of breast milk are known to be associated with - *(AI 05, DPG 09)*
a) IgM antibodies b) Lysozyme
c) Mast cells d) IgA antibodies

172. In breast fed infant less chance of enteric infection is due to - *(PGIDec 08)*
a) Alkaline pH of stool
b) Breast milk nutrients, beneficial effect an immune system
c) Ig in breast milk
d) Bacteroides & Clostridium in gut
e) Sterile nature of breast milk

173. The important fatty acid present in breast milk which is important for growth is - *(AIIMSNov 11, Nov 06)*
a) Docosahexaenoeic acid b) Palmitic acid
c) Linoleicacid d) Linolenic acid

174. What is deficient in exclusively breast fed baby -
a) Vitamin B b) Vitamin A *(AIIMS Feb 97)*
c) Vitamin C d) Proteins

175. Exclusive miik ingestion can manifest as- *(AIIMS 97)*
a) Scurvy b) Beri-Beri
c) Phryenoderma d) Night blindness

176. Which of the following will occur in an exclusively breast fed baby - *(AIIMS Sep 96)*
a) Jaundice b) Scurvy
c) Tetany d) Eczema

177. Exclusive breast feeding may be associated with all of the following except - *(AI 98, AIIMS 96)*
a) Hemolysis due to Vit-K deficiency
b) Evening colic
c) Golden colour stool
d) Prolongation of physiological jaundice

156) d 157) b 158) b 159)c 160)a 161)d 162)d 163)a 164)d 165)b,d,e 166)b 167)a 168)a 169) a,b,d 170) None 171)d 172)b,c,e 173)a 174)a 175)None 176)a 177)b

178. True about cow's milk are all except -
a) Cow's milk contains 80% whey protein not casein
b) Cow milk has less carbohydrate than mothers milk *(AIMS May 10, May 07)*
c) Has more K^+ and Na^+ than infant formula feeds
d) Has more protein than breast milk

179. Percentage of lactose in human milk is -
a) 7.2gm b)4.5gm *(AIIMS June 97)*
c) 8.0gm d) 6.7gm

180. Compared with Cow's milk, mothers milk has more-
a) Lactose b)VitD *(AI07)*
c) Proteins d) Fats

181. Hind milk is richer in - *(Corned 07)*
a) Carbohydrate b) Protein
c) Fat d) Minerals

182. Human colostrum contains more of the following nutrients than mature human milk, except -
a) Lactose b) Minerals *(Korn 94)*
c) Proteins d) Vitamin A

183. True about breast feeding - *(PGINov 09)*
a) Best for both preterm & term
b) 50% energy from protein
c) Promote lactobacillus growth in bowel
d) Predispose to necrotising enterocolitis
e) Decrease allergic disorder

184. Breast milk storage in a refrigerator is upto -
a) 4 hrs b) 8 hrs *(PGI Dec 98, UP 08)*
c) 12 hours d) 24 hrs

185. Breast milk at room temperature stored for-
a) 4 hrs b) 8 hrs *(NEET/DNB Pattern)*
c) 12 hrs d) 24 hrs

186. Recommendation of WHO for baby friendly hospital is- *(AIIMS June 98)*
a) With hold breast feed for 1 day after child birth.
b) Only breast feed, no other feed
c) For 24 hrs baby is kept with the mother.
d) Within 4 hrs of birth, breast feed is started.

187. Seen in rickets A/E - *(PGI June 98)*
a) Cupping of metaphysis
b) Defective Mineralization
c) Epiphyseal dysgenesis
d) Defective osteoid formation

188. Deficient mineralisation in epiphysical growth cartilage is seen in - *(All India 99)*
a) Rickets b) Osteomalacia
c) Scurvy d) Hyperparathyroidism

189. True about serology of rickets is - *(PGI June 97)*

	Alk.PO_4	Serum PO_4
a)	*i*	**T**
b)	T	T
c)	T	*i*
d)	*i*	*i*

190. In Rickets seen - *(PGI Dec 06)*
a) TALP b)tALP
c) Hypo $P0_4^{-2}$ in blood d) Hyper $P0_4^{-2}$ in blood
e) Hyperphosphaturia

191. A 2-year-old boyhas vitamin D-resistant rickets. His investigations revealed serum Calcium- 9 mg/dl. Phosphate- 2.4 mg/dl, alkaline phosphatase-1041 IU; normal intact, parathyroid hormone and bicarbonate 22 mEq/L. Which of the foliowijagj^5& most probable diagnosis - *(ALIMSMay 04, 02, NEET7*
r?^i|i^Jffe^aaJ4|buIar^i(Iosis$_s$ -$_1$, *DNE PaUetAj^*
HI b) Hypophosphatemic rickets
c) Vitamin D dependent rickets
g ,d) Hypoparathyroidism ||§|||| ||Sl8

192. A 2 year old boy has vitamin D refractory rickets. Investigations show serum calcium 9 mg/dl. Phosphate 2.4 mg dl, alkaline phosphate 1040IU. Parathyroid hormone and bicarbonate levels are normal. The most probable diagnosis is -
a) Distal renal tubular acidosis *(AIIMS Nov 02, 00)*
b) Hypophosphatemic rickets.
c) Vitamin D dependent rickets
d) Proximal renal tubular acidosis

193. A 10 year old boy has a fracture of femur. Biochemical evaluation revealed Hb 11.5 gm/dl and ESR 18 mm 1st hr. Serum calcium 12.8 mg/dL, serum phosphorus 2.3 mg/dL, alkaline phosphate 28 KA units and blood urea 32 mg/dL. Which of the following is the most probable diagnosis in his case-
a) Nutritional rickets b) Renal rickets *(AI04)*
c) Hyperparathyroidism d) Skeletal dysplasia

194. True about nutritional rickets - *(PGI Dec 03)*
a) Craniotabes b)Multiple#
c) Widening of wrist d) T Phosphate in serum
e) Growth retardation

195. Rickets in infant present as all except-*(AIIMSMay 07)*
a) Cranitabes b) Widened Fontanel
c) Rachitic Rosary d) Bow legs

196. All of the following are seen in Rickets except - *(AIIMS May 03)*
a) Bow legs b) Gunstock deformity
c) Pot belly d) Craniotabes

197. Most common cause of genu valgum in children is -
a) Osteoarthritis b) Rickets
c) Paget disease d) Rheumatoid arthritis

198. Wind swept deformity is *semm-(NEET/DNB Pattern)*
a) Scurvy b) Rickets
c) Achondroplasia d) Osteoporosis

199. True about vit-D deficiency rickets - *(PGIDec 04)*
a) Vit. D_3 given at a dose of50-150 mg/day
b) X-ray knee joint is diagnostic
c) Rickety rosary is tender
d) Increased chances of respiratory tract infection
e) Hyponatremia

200. Vit-D deficiency Rickets is Characterised by -
a) ted forehead sweating *(PGI June 03)*
b) Characteristically ted Ca^{2+}
c) Anterior fontanel widened
d) Ted alk. phosphatase

178) a 179) a 180) a 181)c 182) a 183)a,c,e 184)d 185)b 186)b,c 187)c,d 188) a 189)c 190)a,c,e 191)b
192)b 193)c 194)a,c,d,e 195)d 196)b 197)b 198)b 199)b,d 200)c,d

201. Earlier manifestation of Rickets is-*(AIIMSJune 97)*
a) Craniotabes b) Rachitic rosary
c) Harrison groove d) Pigeon chest

202. Craniotabes is seen in following except-*(PGIDec 97)*
a) Rickets b) Syphilis
c) Osteogenesis imperfecta d) Thalassemia

203. Splaying and Cupping of the metaphysis is seen in- *(PGI June 99)*
a) Rickets b) Scurvy
c) Paget's disease d) Lead poisoning

204. Rickety rosary seen in all except - *(PGIDec 97)*
a) Rickets b) Scurvy
c) Chondrodystrophy d) Syphilis

205. Costochondral junction swelling are seen in- *(JIPMER87)*
a) Scurvy b) Rickets
c) Chondrodystrophy d) All of the above

206. About scurvy true A/E - *(PGI June 2000)*
a) Subperiosteal haematoma with tenderness
b) Separation of epiphysis
c) T S. alkaline phosphatase
d) Gingival bleeding

207. Primary metabolic bone disorder in scurvy is -
a) Decreased mineralization *(AI10)*
b) Decreased osteoid matrix formation
c) Increased bone resorption
d) Decreased bone mass with normal mineralization and osteoid formation

208. A six month old infant fed totally on cow's milk has been brought with bleeding spots, anaemia, fever and generalised tenderness. On examination, there were swelling in both the lower extremities and the blood count was normal. The most likely diagnosis is - *(PGI96)*
a) Arthritis b) Poliomyelities
c) Osteomyelities d) Scurvy

209. Pseudoparalysis in an infant is suggestive of -
a) Acute Rheumatic fever *(PGI06)*
b) Vitamin B 6 deficiency
c) Vitamin E deficiency
d) Vitamin C deficiency

210. Following are radiological features of scurvy except-
a) Bony thickening *(PGIDec 99)*
b) Metaphyseal widening
c) Metaphyseal calcification
d) Epiphyseal separation

211. Winberger sign is present in - *(PGI2K)*
a) Rickets b) Scurvy
c) Secondary syphilis d) Tuberculosis

212. Deficiency of vit. C in infant is best estimated by Vit C level in- *(PGI95)*
a) Plasma
b) Urinary excretion
c) Buffy coat estimation
d) Adrenal cortical Vit. C estimation

213. Manifestations of vitamin C deficiency are -
a) Pseudoparalysis b) Sabre tibia *(PGIDec 08)*
c) Epistaxis d) Craniotabes
e) Costochondral junction become domeshaped

214. Anti infective vitamin is - *(PGI 87, 88 A.189)*
a) Vitamin B_g b) Vitamin A
c) Vitamin D d) Vitamin C

215. All of the following statements are true regarding Vitamin A deficiency except - *(PGI 96)*
a) Growth retardation is common
b) Frequent infections can occur
c) Hydrocephalus is infrequent
d) Anterior segment of the eye is initially involved

216. Vitamin A deficiency is characterized by-*(PGIDec 04)*
a) Bitot spot b) Xerophthalmia
c) Night blindness d) Tranta's spot

217. Daily dose of vitamin A in a 6-12 months old child is- *(AIMS June 97)*
a) 500 microgram b) 200 microgram
c) 300 microgram d) 700 microgram

218. The vitamin A supplement administered in "Prevention of nutritional blindness in children programme" contain - *(AI03, AIIMSNov 05)*
a) 25,000 IU/ml b) 1 Lakh IU/ml
c) 3 Lakh IU/ml d) 5 LakhlU/ml

219. In 30 years female; with high alkaline phosphatase, low serum calcium, low serum phosphatase diagnosis is ? *(NEET/DNB Pattern)*
a) Rickets b) Osteomalacia
c) Hypervitaminosis D d) Hyperparathyroidism

220. All are features of Vit. D intoxication, except -
a) Nausea and vomiting *(PGI 79, AIMS 86)*
b) Muscular weakness
c) Anorexia
d) Oliguria
e) Metastatic calcification

221. Hypervitaminosis of which of the following will cause bony abnormalities - *(PGI Dec 06)*
a) Vit A b) Vit D
c) VitC d)VitE
e) VitK

222. A child with alopecia, hyperpigmentation psoriatic dermatitis in genitals & mouth and hypogonadism is likely to be suffering from - *(AI 98)*
a) Cudefeciency b) Iron deficiency
c) Zn deficiency d) Mg deficiency

223. Selenium deficiency is seen in-*(NEET/DNB Pattern)*
a) Keshan disease
b) Wilson disease
c) Acrodermatitis enteropathica
d) None of above

224. Zinc deficiency causes - *(PGIDec 03)*
a) Sexual infant ilism b) Loss of libido
c) Poor weight gain d) Poor wound healing

201)a 202)d 203)a 204)d 205)d 206)c 207)b 208)d 209)d 210)b 211)b 212)c 213)a,c 214)b 215)d 216)a,b,c 217)c 218)b 219)b 220)d 221)a,b 222)c 223)a 224)AH

225. Diarrhoea ina childoJ12:inoDitfa,doseojrZinc iSK
a) 1 mg/10-14day *(NEET/DNB Pattern)*
b) lOmg/10-14 day
c) 15 mg / 1,0'" 14 day
d) 20 mg /10-14 day

226. Elemental iron and folic acid content of pediatric iron folic acid tablet supplied under RCH programme are- *(AI03)*
a) 20 mg iron & 100 microgram folic acid
b) 40 mg iron & 100 microgram folic acid
c) 40 mg iron & 50 microgram folic acid
d) 60 mg iron & 100 microgram folic acid

227. The most important factor to overcome protein energy malnutrition in children less than 3 years is- *(AIMS 83)*
a) Supply of subsidised food from ration shop
b) Early supplementation of solids in infants
c) Immunisation to the child
d) Treatment of anaemia and pneumonia in infant and toddlers

22$. Kwashirokar in Ghanian Ga language means-
a) Condition seen in 2nd child *(Kerala 2K)*
b) Condition seen in the displaced child
c) Condition seen in cousin
d) Condition seen in the stepchild
e) Condition seen in the 3rd child

229. In Kwashiorkor, the letter 'K' is post-fixed to denote- *(MH10)*
a) Weight for height b) Skin changes
c) Edema d) Muscle wasting

230. When can a severely malnourished child be safely discharged from the hospital ? *(UPSC-108)*
a) The child attains his height for age
b) The child reaches his ideal weight for height
c) The child loses edema and starts gaining weight
d) The child attains weight for his age

231. The skin changes seen in protein energy malnutrition can be due to deficiency all of the following nutrients except - *(DELHIPG Mar. 09)*
a) Zinc b) Tryptophan
c) Essential fatty acids d) Pyridoxine

232. Para amino benzoic acid of breast milk prevent the infection of - *(UP 07)*
a) Plasmodium vivax b) Kleibsella-pneumonia
c) Giardia d)E.coli

233. The substance that has anti infective property directly or indirectly in milk is all except- *(JIPMER 95)*
a) Lactoferin b) Lactalbumin
c) Lysozyme d) Nucleotides

234. One year old baby exclusively breast fed has a 1cm. hepatomegaly severe pallor and no spleen.The most important investigation is - *(TN 90)*
a) B 12 estimation
b) Serum iron estimation
c) Folic and estimation
d) Fetal hemoglobin estimation

235. Iron supplementation in a healthy term breast fed baby should be started at the age of - *(COMED 06)*
a) 2 weeks b) 4 weeks
c) 8 weeks d) 6 weeks

236. Breast milk is maximum at- *(APPGE04)*
a) 1-2 months b) 3-4 months
c) 5-6 months d) 7-8 months

237. Breast milk is known to transmit - *(MAHE 07)*
a) Tuberculosis b)CMV
c) Varicella d) Rubella

238. After premature delivery, mother's milk is low in -
a) Lactose b)Fat *(MH10)*
c) Protein d) Sodium

239. Lactose content of breast milk per 100 ml is - a) 3.5gm b) 4.5 gm *(MH11)*
c) 6 gm d) 7 gm

240. Which of the following is not a sign of active rickets? *(COMED 09)*
a) Prominent fontanelle b) Hot cross bun sign
c) Saddle nose d) Caries teeth

241. Definitive sign of scurvy in X-ray - *(Jipmer 11)*
a) Ringed epiphysis
b) Ground glass appearance
c) White line in metaphysis
d) Thin cortex

242. The recommended oral dose of vitamin Ato be given in a 10 month child with deficiency on each of day 1,2 and 28 is - *(Karn 11)*
a) 50,000 IU b) 1,00,000IU
c) 2,00,000 IU d) 6,00,000 IU

243. Phrynoderma is due to ...deficiency- *(Kerala 90, Karn 89, PGI90)*
a) Vitamin D b) Niacin
c) Vitamin A d) Essential fatty acid

244. Toad skin is seen in deficiency of vitamin -
a) A b)B_2
c) D d) Biotin

245. Growth retardation, taste alteration, hepatosplenomegly, hypochromic microcytic anemia, loss of hair, hypogonadism in a boy indicate deficiency of - *(Karn 95)*
a) Selenium b) Copper
c) Zinc d)Iron

246. Deficiency of which element can lead to syndrome of growth failure, anaemia and hypogonadism -
a) Calcium b) Copper *(COMED09)*
c) Zinc d) Magnesium

347. Abnormalities of copper metabolism are implicated in the pathogenesis of all the following except -
a) Wilson's disease *(UPSC-109)*
b) Monkes' Kinky-hair syndrome
c) Indian childhood cirrhosis
d) Keshan disease

248. Rett's syndrome occurs due to deficiency of -
a) Niacin b) Biotin *(Kerala04)*
c) Carotene d)VitD

225)d 226)a 227)b,c 228)b 229)c 230)c 231)d 232)a 233)b,d 234)b 235)None 236)c 237)b 238)a
239) d 240) c 241) a 242) b 243) d 244) a 245) c 246) c 247) d 248) b

249. Which one of the following vitamin deficiencies causes corneal vascularisation, poor growth and photophobia- *(UPSC 07)*
a) Riboflavin b)Pyridoxine
c) Niacin d) Thiamine

250. Shakir tape is used for- *(Delhi 96)*
a) Measurement of height
b) Measurement of length of infant
c) Measurement of midarm circumferance
d) Measurement of the learning ability of child

251. Dosage of Vitamin-A for children between 1-3 years-
a) 1250IU b) 1333IU *(Manipal 08)*
c) 1667IU d)2333IU

252. Child with frog like position and resistance to move the limbs- *(CMC 2001)*
a) Scurvy b) Rickets
c) Trauma d) Congenital dislocations

253. Pseudoparalysis is seen in - *(CMC 2001)*
a) Scurvy b) Rickets
c) Polio d) Osteomalacia

254. Calorie requirement per day of a child weighing 15 kg would be - *(MH10)*
a) 1150 kcal b) 1250 kcal
c) 1450 kcal d) 1550 kcal

NEWBORN INFANT

255. Neonatal period extends *u\>td- (NEET/DNBPattern)*
a) 21 days of life b) 30 days of life
c) 28 days of life d) 35 days of life

256. Which is not a normal finding in the newborn -
a) Systolic murmur *(Jipmer93)*
b) Pulse rate of 100/min
c) Peripheral Cyanosis
d) Central Cyanosis

257. Newborn commonly has following except-fPG/*Dec 98)*
a) Milia b) Mongolian spots
c) Epstein pearls d) None of the above

258. The apropriate approach to a neonate presenting with vaginal bleeding on day 4 of life is - *(AI05)*
a) Administration of vitamin K
b) Investigation for bleeding disorder
c) No specific therapy
d) Administration of 10 ml/kg of fresh frozen plasma over 4 hours

259. Common sites for mongolian spot are- *(PGIDec 08)*
a) Face b) Neck
c) Lumbosacral area d)Leg
e) Thigh

260. Skin changes in newborn that disappear spontaneously - *(PGI Dec 08)*
a) Harlequins skin change b) Mangolian spots
c) Erythema toxicum d) Lymphoma
e) Milia

261. A hymenal tag in a newborn is best treated by -
a) "Steroids b) Surgery *(NEET/DNB Pattern)*
c) Leaving it alone d) None of the above

262. A full term baby, exclusively breast fed, at the end of 1 week was passing golden yellow stools and was found to have adequate hydration with normal systemic examination. The weight of the baby was just same as it was at birth. The pediatrician should now advise- *(AIIMSMay02)*
a) Give oral solution with breast feeding
b) Start tap feeding
c) Investigate for lactic acidosis
d) Reassure the mother that nothing is abnormal

263. Normal finding in term neonate-(PG/*Dec 02,Dec 98)*
a) Erythema toxicum
b) Ebstein's pearl
c) Bilateral cryptorchidism
d) Subconjunctival hemorrhages
e) Erythema nodosum

264. New born babies are able to breathe and suck at the same time due to - *(AIIMS Nov 10)*
a) Wide short tongue b) Short soft palate
c) High larynx d) Short pharynx

265. Which of the following reflexes is not present at birth- *(AI07)*
a) Asymmetric Tonic Neck Reflex
b) Moro's Reflex
c) Symmetric tonic neck reflex
d) Crossed extensor reflex

266. Persistant Moro's reflex at 6-7 months indicates - *(PGI 02, DPG 09)*
a) Normal child b) Brain damage
c) Hungry child d) Irritable child

267. Child of 9 months, which reflex is most abnormal - *(PGI June 98)*
a) Asymmetric neck reflex b) Parachute reflex
c) Righting reflex d)None

268. Reflex which is not present in child at birth is -
a) Moro's reflex *(AIIMS May 07)*
b) Symmetric tonic neck reflex
c) Crossed extensor reflex
d) Asymmetric tonic neck reflex

269. A baby on examination shows unilateral moro's reflex with positive palmar grasp reflex. The site of lesion is - *(ARMS Nov 99)*
a) C_3-C_4 b) C_5-C_6
c) C_8-T_1 d) C_1-C_2

270. Persistence of Moro's reflex is abnormal beyond the age of - *(ARMS May 0 7)*
a) 3rd month b) 4th month
c) 5th month d) 6th month

271. Reflex which never reappears is - *(PGIJune 98)*
a) Moro's b) Grasp
c) Snout d) Glabellar

272. Palmomental reflex is seen in lesions of -
a) Frontal lobe b) Parietal lobe *(ARMS Dec 98)*
c) Temporal lobe d) Occipital lobe

273. Moro's Reflex disappears at - *(AI 0 7, ARMS May 07,Dec 95)*
a) 3 months b) 5 months
c) 6 months d) 7 months

249) a 250) c 251) b 252) a 253) a 254) b 255) c 256) b,d 257) d 258) c 259)c,d,e 260)a,b,c,e 261) c
262) d 263) a,b,d 264) c 265) c 266) b 267) a 268) b 269) b 270) d 271) a 272) a 273) c

274. Atypical moro's reflex is seen in A/E- *(PGIDec97)*
a) # clavicle
b) Stemomastoid tumor
c) Shoulder dislocation
d) Brachial plexus injury

275. All the following can occur in a neonate for heat production except - *(AIIMS Nov 11, Nov 06)*
a) Shivering
b) Breakdown of brownfat with adrenaline secretion
c) Universal flexion like a fetus
d) Cutaneous vasoconstriction

276. The different manifestations of hypothermia are -
a) Apnea b) Hypoglycemia *(PGIJune06)*
c) Hyperglycema d) Tachycardia
e) Hypoxia

277. Following features may be seen in cold injury of neonates except- *(AI 99)*
a) Bradycardia b) Uncontrolled shivering
c) Scleroma d) Metabolic acidosis

278. Hypothermia in neonate is characterised by- *(PGI Dec 02)*
a) Hyperactivity b) Hypoglycemia
c) Apnea d) ted urinary output

279. Small for date baby is - *(PGI June 00)*
a) < 10 percentile for the gestational age
b) < 50 percentile for gestational age
c) <2000gm
d) <2500gm

280. Low birth weight is defined as - *(PGIDec 08)*
a) Weight <2.5 kg
b) Weight <2.0 kg
c) Weight < 1.5 kg
d) Weight < 10 percentile for their gastational age
e) Weight < 2.5 SD for their gestational age

281. IUGR is caused by all except - *(NEET/DNB Pattern)*
a) Diabetes b) Alcohol
c) Smoking d) Chronic renal failure

282. Intra uterine growth retardation can be caused by all except - *(AIIMS 8 7)*
a) Nicotine b) Alcohol
c) Propranolol d) Phenothiazine

283. For a term small for date baby, true is -
a) No nipple nodule *(AIIMS May 93)*
b) No palmar/plantar crease
c) Weight less than 10th percentile
d) Hyperbilirubinemia

284. All of the following are features of prematurity in a neonate, except - *(AI 06)*
a) No creases on sole b) Abundant lanugo
c) Thick ear cartilage d) Empty scrotum

285. A women delivered a baby of 2.2 kg weight Her LMP is not known. To know the maturity of baby, following are used - *(PGI June 03)*
a) Sole Crease b) Ear Cartilage
c) Breast nodule d) Anterior fontanel
e) Weight of the baby

286. A premature infant is more likely than a full term infant to - *(AIIMS 80, PG 85)*
a) Suffer from jaundice of hepatic origin
b) Maintain in normal body temperature in a cold environment
c) Excrete urine with a uniform specific gravity
d) Suffer from anaemia

287. Full term Small for date infants are predisposed to -
a) Hypercalcemia b) CNS infections
c) Hypoglycemia d)PDA *(AIIMS May 95)*

288. Full term, Small for Date Babies are at high risk of-
a) Hypoglycemia *(AI 2000)*
b) Intraventricular haemorrhage
c) Bronchopulomonary dysplasia
d) Hyperthermia

289. True statement about IUGR is - *(AI 99)*
a) Hepatomegaly is due to fatty infiltration
b) Head circumference is 3 cm more than chest circumference
c) Hyaline membrane disease is a common cause of death
d) Hypothermia does not occur due to good shivering mechanisms

290. Small for gestational age infant is having-fPG*/Dec 97)*
a) Undescended testis b) Wrinkled sole
c) Lanugo sole d) Breast nodule

291. In asymmetrical IUGR which organ is not affected- *(NEET/DNB Pattern)*
a) Subcutaneous fat b) Muscle
c) Liver d) Brain

292. What is the ponderal index of a child with weight 2000 g and height 50 cm - *(AIIMS Nov 10)*
a) 1.6 b)3.6
c) *22* d)2.6

293. A neonate weighing 1500 grams is delivered at 33 weeks. Which of the following would be most appropriate method of nutrition for the baby?(^4/*11)***
a) IV fluids and oral feeding
b) Orogastric feeding/altemate oral feeding
c) Total parenteral nutrition
d) TV fluids and assessment/follow-up

294. A 7 day old infant develops symptoms of neonatal septicemia. Most likely cause is - *(AI 98)*
a) Local nursery environment
b) Infection through umblical cord
c) Exclusively breast fed baby
d) Infection by GIT bacteria

295. All of following are true about neonatal sepsis except- *(AI 96)*
a) Preterm babies are predisposed to sepsis
b) Late initiation of breast feeding is a predisposition
c) Most common transmission of infection is through nursery personel
d) Premature rupture of membranes predisposes to sepsis

274)b 275)a 276)a,b,e 277)b 278)b,c 279)a 280)a 281)a 282)d 283)c 284)c 285)a,b,c 286)a287)c
288) a 289) b 290) a 291)d 292) a 293) b 294) a 295) c

296. Most common cause of Neonatal sepsis in hospital in India is - *(AIIMS May 07)*
a) Escherichia coli b) Klebsiella
c) Staph aureus d) Listeria monocytogen

297. Most common cause of sepsis in India within 2 months - *(AIIMS Nov 09)*
a) H influenza
b) E.coli
c) Coagulase positive staph aureus
d) Group B streptococcus

298. True about Neo-natal sepsis - *(PGI June 03)*
a) Meningitis commonly occur lately
b) Jaundice predisposes
c) Fever
d) Jaundice is a common feature

299. *True* about neonatal sepsis - *(PGINov 10)*
a) Early sepsis is due to organism in maternal genital tract
b) Environmental factors cause late sepsis
c) Late sepsis is due to organism in maternal genital tract
d) Environmental factors cause early sepsis

300. Least observed laboratory finding in Neonatal Sepsis is- *(AI96)*
a) T C-reactive protein
b) Neutrophilia
c) Increased ESR
d) Increased Immature Neutrophils

301. Neonatal septicemia is most commonly caused by -
a) Group B Streptococci *(AIIMS May 93)*
b) E.coli
c) Streptococcus viridans
d) Staphylococcus aureus

302. Neonatal sepsis and meningitis most common cause - *(PGI 98)*
a) Streptococcus pyogenes
b) Streptococcus agalactacea
c) Enterococcus fecalis
d) Staphylococcus aureus

303. Most common cause of neonatal meningitis-(PG/ *99)*
a) Staphylococcus b) E. coli
c) H. influenze d) Pneumococcus

304. Community acquired Neonatal Pneumonia treatment of choice - *(AIIMS Feb 199 7)*
a) Cefotaxime+Amikacin
b) Ampicillin + Chloramphenicol
c) Ampicillin + Gentamicin
d) Metronidazole + Amikacin

305. Respiratory distress in newborn is defined when -
a) Respiration rate > 60/min *(PGI 04)*
b) Intercostal recession
c) Aspiration > 20ml
d) Hypoxaemia
e) Reticulonodular shadow in CXR

306. In a child cessation of breathing for 20 sec. With bradycardia is - *(NEET/DNB Pattern)*
a) Apried b) Dyspnea
c) Cheyne stokes respiration d) Nohe

307. Neonatal apnea is seen in all except -*(PGI June 08)*
a) Prematurity b) Hyperglycemia
c) Hypoglycemia d) Hypercalcemia
e) Hyperthermia

308. A New born weighing lOOOg is born at gestational age of 30 weeks with respiratory distress after 2-3 hrs of birth. What are the diagnostic possibilities -
a) Diaphragmatic hernia *(PGI June 01)*
b) Cong, bronchopulmonary cysts
c) Bronchopulmonary dysplasia
d) HMD
e) Pulmonary hemorrhage

309. Newborn with APGAR score of 2 at 1 min. & 6 at 5 min. has respiratory distress & mediastinal shift diagnosis is - *(PGIDec 2000)*
a) Congenital adenomatoid lung disease
b) Pneumothorax
c) Diaphragmatic hernia
d) Transient tahypnea of newborn
e) HMD

310. Meconium passage in utero leads to which of the following - *(NEET/DNB Pattern)*
a) Listeriosis f ' J b) Obstructive;emphyscma
?T cf Pathplogicaljatmdiee> d) Meconium ileus

311. A 3 kg term baby delivered by caesarian section develops respiratory distress soon after birth. The liquor was meconium stained. Breathing rate is 90/ min. correct statements - *(PGIDec 04)*
a) Transient tachypnoea of newborn
b) Meconium aspiration syndrome
c) Reticulonodular shadows in X-ray chest
d) I Surfactant production
e) Oral feeding started early

312. The cause of death in congenital diaphragmatic hernia is - *(AIIMS Dec 98)*
a) Septicaemia b) Hemorrhage
c) Pulmonary hypoplasia d) Intestinal obstruction

313. A new born baby has been referred to the casualty as a case of congenital diaphragmatic hernia. The first clinical intervention is to - *(AIIMS May 03)*
a) Insert a central venous pressure line.
b) Bag and mask ventilation
c) Insert a nasogastric tube
d) Ventilate with high frequency ventilator

314. A child presented with respiratory distress was brought to emergency with bag and mask ventilation. Now child is intubated. Chest X-ray shows right-sided deviation of mediastinum with scaphoid abdomen. His Pulse rate is increased. What is the next step ? *(AIIMS Nov 0 7)*
a) Endotracheal intubation
b) Put a nasogastric tube
c) Surgery
d) Endtidal $C0_2$ to confirm intubation

296)b 297)b 298)a,c,d 299)a,b 300)c 301)a 302)b 303)b 304)c 305) a 306)a 307)b,d,e 308)a,d,e 309)a,b,c 310)b 311)b 312)c 313)c 314)b

315. 2 days after birth, child developed respiratory distress and had scaphoid abdomen. Breath sounds were decreased on the left side. After bag and mask ventilation, ET tube was put and the maximal cardiac impulse shifted to the right side. What should be the next step in management ? *(AIIMSNov 07)*
a) Confirm the position of endotracheal tube
b) Emergency surgery
c) Naso gastric tube insertion
d) Chest x-ray

316. A neonate having congenital diaphragmatic hernia developed respiratory distress. Breath sounds were decreased on the left side. After bag and mask ventilation, ET tube was put and the maximal cardiac impulse shifted to the right side. What should be the next step in management - *(AI08)*
a) Confirm the position of endotracheal tube by x-ray chest
b) Remove tube & reattempt intubation
c) Naso gastric tube insertion
d) Chest x-ray

317. A neonate having congenital diaphragmatic hernia developed respiratory distress. Breath sounds were decreased on the left side. After bag and mask ventilation, ET tube was put and the maximal cardiac impulse shifted to the right side. What should be the next step in management - *(AI08)*
a) Confirm the position of endotracheal tube by x-ray chest
b) Emergency surgery
c) Naso gastric tube insertion
d) Chest x-ray

318. Which of the following is the least important prognostic factor in congenital diaphragmatic hernia? *(AIJMSNov 11, AI 11)*
a) Pulmonary Hypertension
b) Delay in emergent surgery
c) Size of defect
d) Gestational age at diagnosis

319. Most important prognostic factor in congenital diaphragmatic hernia - *(AI 11, AIIMS Nov 09)*
a) Pulmonary hypertension b) Size of hernia
c) Timing of surgery d) Gestational age

320. True about Bochdalek hernia is - *(AIIMS97)*
a) Seen on right side
b) Anterior position
c) Differential diagnosis for pleuropericardial cyst
d) Associated with lung hypoplasia

321. A 31 week pregnant lady delivers a child. In 4 hrs baby develops dyspnoea and cyanosis. X-ray chest shows ground glass appearance. The diagnosis -
a) Meconium Aspiration *(AIIMS Nov 99)*
b) Hyaline membrane disease
c) Tracheo esophageal atresia
d) Esophageal atresia

322. Respiratory distress syndrome in infants is seen in- *(PGI89)*
a) Babies of diabetics
b) Premature rupture of membrane
c) More than 2500 gm
d) Less than 37 weeks

323. Deficiency of s urfactant is seen in - *(PGIDec 99)*
a) BPD b) Neonatal asphyxia
c) HMD d) Anencephaly

324. Hyaline membrane seen in the lung is composed of- *(NEET/DNB Pattern)*
a) Globulin b) Fibrin
c) Mucoprotein d) Polysaccharide

325. The clinical sign of hyaline membrane disease generally first appears - *(PGI81 AMU88)*
a) In the first 6 hours of life
b) Between 12 and 24 hours of life
c) Between 36 and 48 hours of life
d) After 48 hours of lilfe

326. Which of the following are signs of neonatal respiratory distress syndrome - *(PGI 01)*
a) Intercostal retraction b)RR>60/min
c) Absence of cyanosis d) PH < 7.2
e) A linear streak on CXR

327. X-ray appearance in hyaline membrane disease is -
a) Homogenous ground glass appearance
b) Reticulonodular shadow *(Kerala 94)*
c) Normal X-ray
d) Air bronchogram

328. A term gestation newborn developed respiratory distress. Which of the following would favour Respiratory distress syndrome (HMD)? *(AIIMS May 12, Nov 10)*
a) History of receiving antenatal corticosteroids
b) Air bronchogram on chest x-ray
c) Onset of distress after 6 hrs of birth
d) Term birth

329. Granulomatous appearance of lung with air bronchogram in neonates represents - *(PGIDec 97)*
a) Aspiration pneumonia
b) Hyaline membrane disease
c) Staph pneumonia
d) ARDS

330. Eoetal lung maturity is assessed by -
a) L/g ratio *(NEET/DNB Pattern)*
b) Billirubin content of amniotic fluid
c) Ultra sound
d) Amniocentesis

331. Which one of the following is true of hyaline membrane disease of the newborn - *(UPSC 99)*
a) Prematurity provides relative protection of the occurrence
b) Maternal steroid exposure increase severity of the disease
c) Phosphatidyl glycerol estimation is a reliable method of diagnosis
d) Surfactant increases the surface tension of a lveoli

315)a 316)b 317)c 318)b 319)a 320)c,d 321)b 322)a,b 323)c 324)b 325)a 326)a,b,d 327)a,b,c,d 328) b 329) b 330) a 331)c

332. With reference to RDS, all of the following statements are true, except - *(AI 02)*
a) Usually occurs in infants bom before 34 weeks of gestation
b) Is more common in babies bom to diabetic mothers
c) Leads to cyanosis
d) Is treated by administering 100% oxygen

333. A 1.5 kg child born at 32 weeks by LSCS presents with moderate respiratory difficulty (RR 70/ minutes). Which of the following is the appropriate management- *(ARMSNov 10, 09)*
a) CPAP b) Mechanical ventilation
c) Warm oxygen d) Surfactant and ventilation

334. All are true regarding administration of betamethasone to a mother with premature delivery except- *(ARMS 99)*
a) Neonatal morbidity better
b) Helps lung maturity
c) Prevents hyperbilirubinemia
d) Decreases intraventricular hemorrhage

335. The dose of betamethasone in prenatal to ppyent respiratory distress syndrome is- *(NEET/DNB Pattern)*
a) 6 mg b) 12 mg every 24 hours
c) 6 mg every 12 hours d) 4 mg start

336. A neonate delivered at 32 weeks, is put on a ventilator, X-ray shows 'white out lung' and ABG reveals $P0_2$ of 75. Ventilator settings are an, $Fi0_2$ of 70, and rate of 50/minute. Next step to be taken should be?
a) Increase rate to 60 per minute *(AI01)*
b) Increase Fi02 to 80
c) Continue ventilation with the same settings
d) Weaning ventilator

337. Loss of pulmonary surfactant in premature infant -
a) Pulmonary edema *(PG1 Dec 07)*
b) Collapse of alveoli
c) Elastic recoil of lungs

338. Hyaline membrane disease of lungs is character-ized by - *(ARMS Nov 10)*
a) FRC is smaller than closing volume
b) FRC is greater than closing volume
c) FRC is equal to closing volume
d) FRC is independent of closing volume

339. All of following are causes of bronchopulmonary dysplasia except - *(AI96)*
a) Oxygen toxicity
b) Theophyline use
c) Traumatic damage to lungs
d) Pulmonary odema due to capillary damage

340. Broncho pulmonary dysplasia seen in all except -
a) Theophylline b) Prematurity *(AI98)*
c) Barotrauma d) 0_2 therapy

341. Transient tachypnea of new born (TTN) is commonly seen in which of the following situations -
a) Term delivery requiring forceps *(ARMSMay 02)*
b) Term requiring ventouse
c) Elective caesarean section
d) Normal vaginal delivery

342. Characteristics radiological feature of transient tachypnoea of newborn is - *(ARMSMay 05)*
a) Reticulogranular appearance
b) Low volume lungs
c) Prominent horizontal fissure
d) Air bronchogram

343. Transient tachypnea of new bora, all are true except-
a) Mild pleural effusion *(PGlDec 98)*
b) Air bronchogram
c) Reticular shadows
d) Prom, interlobar fissure

344. True about transient tachypnoea of new born is -
a) Air bronchogram seen *(PG1 Dec 99)*
b) Common in preterm infants
c) Interlobar fissure effusion
d) Respiratory distress resolves in 6-10 days

345. 3.5 kg term male baby, born of uncomplicated pregnancy, developed, respiratory distress at birth, not responded to surfactant, ECHO finding revealed nothing abnormal, X-ray showed ground glass appearance and culture negative. Apgars 4 and 5 at 1 and 5 minutes. History of one month female sibling died before. What is the diagnosis? *(ARMSMay 11,*
a) TAPVC *May 08, Nov 11, Nov 08, Nov 07)*
b) Meconium aspiration
c) Neonatal pulmonary alveolar proteinosis
d) Diffuse herpes simplex infection

346. Chandu, a one year old child should be admited in hospital for following complains except - *(AI97)*
a) Refusal of feed
b) Respiratory rate of 50 per minute with chest retraction
c) Fever39°C
d) Difficulty in waking

347. Components of neonatal resuscitation -*(PGIDec 07)*
a) Maintenance of temprature
b) Maintenance of respiration
c) Maintenance of circulation
d) Chest compression

348. Meconium aspiration is done for 3 times but no breathing occurs. Next step in resuscitation would be- *(AI 97)*
a) Chest compression b) 0_2 inhalation
c) Bag & mask intubation d) Trikling of sole

349. A 3 hours old neonate with apnea is on bag and mask ventilation for last 30 seconds, now showing spontaneous breathing with heart rate 110/min. The next step should be - *(AI 92)*
a) Discontinue ventilation b) Continue ventilation
c) Give chest compression d) ET intubation

350. True regarding neonatal resuscitation-fPG*/May 10)*
a) 1st nasal suctioning done
b) 1st mouth suctioning done
c) Max. length of nasal suctioning is upto 3 cm and mouth suctioning is upto 5 cm
d) Max. length of nasal suctioning is upto 5 cm and mouth Suctioning upto 3 cm.

332) d 333) a 334) c 335) b 336) c 337)a,b,c 338) a 339) b 340) a 341) c 342) c 343) b,c 344) c 345) c 346) c 347)All 348) d 349) a 350) b,c

351. A baby is born with meconium stained liquor which of the following is taken account of in terming a baby vigorous except - *(AIIMS Nov 09)*
a) Tone b) Colour
c) HR d) Respiration

352. A 5 year old child is rushed to casualty reportedly electrocuted while playing in a park. The child is apneic and is ventilated with bag and a mask. Which of the following will be the next step in the management - *(AIIMS Nov 04, Nov 05)*
a) Check pulses b) Start chest compressions
c) Intubate d) Check oxygen saturation

353. During intubation of a child, type of endotracheal tube and blade of laryngoscope is - *(AIIMS June 99)*
a) Uncuffed tube with curved blade
b) Uncuffed tube with straight blade
c) Cuffed tube with straight blade
d) Cuffed tube with curved blade

354. Bag and mask ventilation is contraindicated in -
a) Cleft lip *(AIIMS May 04, June 99)*
b) Meconium aspiration
c) Diaphragmatic hernia
d) Multicentric bronchogenic cyst

355. Which of the following is the principal mode of heat exchange in an infant incubator ? *(AI06, PGI98)*
a) Radiation b) Evaporation
c) Convection d) Conduction

356. All of the following therapies may be required in a 1-hour-old infant with severe birth asphyxia except- *(AI 05)*
a) Glucose b) Dexamethasone
c) Calcium gluconate d) Normal saline

357. Which is not a component of APGAR Score -
a) Colour of the body *(AIIMS June 97)*
b) Muscle tone
c) Heart rate/minutes
d) Respiratory rate per minute

358. Which of the following is not true about newborn assessment - *(AIIMS Nov 11)*
a) APGAR at 7 min indicates neonatal mortality depression
b) APGAR at 1 min, indicators for neonatal resuscitation
c) Fetus can rapidly washout $C0_2$ through placenta
d) Anaerobic metabolism causes acidemia

359. A newborn with respiratory distress with RR 86/ min, nasal flaring, audible grunting, abdomen lagged behind chest respiratory movement, no lower chest or xiphoid retraction. What is Silverman's score -
a) 1 b)3 *(AIIMS Nov 10)*
c) 5 d) 6

360. Dose of Lv. adrenaline in term infant is during neonatal resuscitation - *(NEET/DNB Pattern)*
a) 0.1 -0.3 ml/kg in 1:1000
b) 0.3-0.5 ml/kg in 1:1000
c) 0.1-0.3 ml/kg in 1:10,000
d) 0.3 -0.5 ml/kg in 1:10,000

mm One gm of Hb liberates mg of bilirubin -
a) 40 b) 34 *(NEET/DNB Pattern)*
c) 15 d) 55

362. A child has bilirubin of 4 mg. Conjugated bilirubin and alkaline phosphatase are normal, bile salts and bile in urine are absent. However urobilinogen in urine is raised. What is the likely diagnosis - *(AIIMS Nov 01)*
a) Obstructive jaundice b) Rotor's syndrome
c) Biliary cholestasis d) Hemolytic jaundice

363. Conjugated hyperbilirubinemia in infancy seen in -
a) Choledochal cyst *(PGIDec 04)*
b) Extra hepatic biliary atresia
c) Crigler - Najjar disease
d) Gilbert disease

364. Conjugated hyperbilirubinemia in infancy is seen in-
a) Gilbert syndrome *(PGIDec 06, June 09)*
b) Crigglernajjar syndrome
c) Dubin Johnson syndrome
d) Rotor syndrome
e) Neonatal hepatitis

365. Unconjugate hyperbilirubinemia is seen in- *(PGIDec 07)*
a) Physiological jaundice b) Breast milk jaundice
c) Gilbert syndrome d) Biliary atresia
e) Rotor syndrome

366. A three days old infant develops jaundice upto thigh. Mother's blood group O'- ve' and baby is A '+ ve' probable causes - *(PGI02)*
a) Physiological jaundice
b) Rh incompatibility
c) Septicemia
d) Extrahepatic biliary atresia
e) ABO incompatibility

367. Jaundice at birth or within 24 hours of birth is commonly due to - *(AI 95)*
a) Erythroblastosis
b) Congenital hyperbilirubinemia
c) Biliary atresia
d) Physiological

368. Neonatal Jaundice first time appears in the 2nd week not a cause is - *(NEET/DNB Pattern)*
Sit
a) Galactossemia b) Rh Incompatibility
c) Hypothyroidism d) Breast milk Jaundice

369. Jaundice in a new born at birth or before 24 hours is commonly due to - *(AI 95)*
a) Erythroblastosis b) Biliary atresia
c) Sepsis d) Rh incompatibility

370. A term baby developed jaundice on 3rd day upto the thigh with normal stool and urine. Mother's blood group is 'O'-ve and that of babies 'A'+ve. The cause of jaundice is - *(PGI Dec 04, Dec 02)*
a) Rh incompatibility
b) Physiological jaundice
c) Extrahepatic biliary atresia
d) Sepsis
e) Glucose - 6 phosphate dehydrogenase deficiency

351)b 352)a 353)b 354)c 355)c 356)b 357)d 358)a 359)c 360)c 361)b 362) d 363)a,b 364) c,d,e 365)a,b,c 366) a 367) a 368) b 369)a,c,d 370) b

371. True about physiological Jaundice - *(PGI June 03)*
a) Jaundice appear within first 24 hour
b) Jaundice disappear in 3rd week
c) Sudden rise of bilirubin
d) Breastfeeding should be stopped

372. Child (Breast fed) at 30 hrs. of life develops yellowing of face, palm and soles not true is - *(A1IMS May 95)*
a) Congenital obliteration of bile duct
b) Breast milk jaundice
c) Physiological jaundice
d) Due to septicemia

373. True about physiological jaundice in neonate -
a) Occurs in first 6 hrs of delivery *(PGI Dec 2000)*
b) Unconjugated hyperbilirubinemia
c) Neurological sequele are common
d) Best treated by phototherapy
e) Starts on 2nd day of life

374. A term neonate with unconjugated hyperbilirubinemia of 18 mg/dl on 20[1] day. All are common causes except** - *(AIIMS May 0 7)*
a) Breast milk jaundice
b) Congenital cholangiopathy
c) G 6PD deficiency
d) Hypothyroidism

375. A 5-years old male child presents with episodic anaemia and jaundice since birth. He is least likely to have which of the following- *(AIIMSNov 11)*
a) Hereditary spherocytosis b) Sickle cell anemia
c) PNH d) G-6-PD deficiency

376. Defective hepatic conjugation is seen in all the following except - *(A196)*
a) Neonatal j aundice b) Gilbert syndrome
c) Crigler-Najjar syndrome d) Novobiocin therapy

377. All are true about Gilbert's syndrome except -
a) Mild conjugated hyperbilirubinemia
b) Autosomal dominant *(ARMSDec 97)*
c) Normal liver histology
d) Almost normal liver function tests

378. Which of these are true of Gilbert's syndrome -
a) Increased liver transaminases *(PGI June 02)*
b) Unconjugated hyperbilirubinemia
c) Bleeding tendency
d) Presence of auto-antibodies
e) Increased toxicity of irinotecan

379. True about criggler najjar type-H syndrome is -
a) Diglucuronide deficiency *(PGIDec 97)*
b) Recessive trait
c) Kemicterus is seen
d) Phenobarbitone not useful

380. Unconjugated bilirubin is increased in all, except -
a) Criggler Najjar syndrome *(ARMSMay 93)*
b) Dubin Johnson syndrome
c) Gilbert syndrome
d) Hemolytic anaemia

381. A case of j aundince with 50% direct bilirubin, other LFTs normal. Diagnosis is - *(ARMS Nov 09)*
a) Rotor syndrome
b) Gilbert syndrome
c) Glucuronyl transferase deficiency
d) Primary biliary cirrhosis

382. Causes of conjugated hyperbilirubinemia is -
wAi ft a) Rotor Syndrome *'^ffrf^NEkP/DfWcFattern)*
b) Breast milk jaundice
c) Crigler najjar
• *[A] d) Gilbert syndrome *1,^1

383. Indirect hyperbilirubinemia are seen *w-(PGINov 10)*
a) Dubin-Johnson syndrome b) Rotor syndrome
c) Gilbert syndrome d) Gallstone
e) Ca head pancrease

384. Unconjugated hyperbilirubinemia in neonate is seen in all of the following except - *(AI98)*
a) Physiological jaundice
b) Dubin johnson syndrome
c) Hypothyroidism
d) Hemolytic anemia

385. Peripheral smear of neonate with ABO incompatibility with show? *(ARMSNov 10)*
a) Microspherocytes b) Elliptocytes
c) Fragmented RBCs d) Polychromasis

386. In unconjugated hyperbilirubinemia, the risk of kernicterus increases with the use of - **(AI 05)**
a) Ceftriaxone b) Phenobarbitone
c) Ampiciliin d) Sulphonamide

387. The late features of kernicterus include all except -
a) Hypotonia *(DELHIPG Mar. 09)*
b) Sensorineural hearing loss
c) Choreoathetosis
d) Upward gaze palsy

388. Risk of kernicterus is increased in all except -
a) Low level of serum albumin *(ARMS 84)*
b) Prematurity
c) Acidosis
d) High levels of serum albumin

389. All of the following statements regarding j aundice in a newborn are true, Except- *(AI 12)*
a) Physiological Jaundice usually peaks after 48 hours
b) Breast milk jaundice usually peaks after day 7
c) High levels of conjugated bilirubin may cause Kemincterus
d) All of the above are true

390. Drugs that can be used in kemicterus-fPG/*06, Dec 02)*
a) Barbiturates b) Benzodiazepines
c) Phenytoin d) Chlorpromazine
e) Carbamazepine

391. Which mechanism in phototherapy is chiefly responsible for reduction in serum billirubin -
a) Photo-oxidation *(ARMS May 05)*
b) Photo-isomerization
c) Structural isomerization
d) Conjugation

371)None 372)b,c 373)b,e 374)b 375)c 376)d 377)a 378)b,e 379)a 380)b 381)a 382)a 383)c 384)b 385) a 386) d 387) a 388) d 389) c 390) a 391) c

392. Bronze baby syndrome is due to - *(PGIDec 98)*
a) Phototherapy b) Wilson disease
c) Chloramphenicol toxicity d) Hemochromatosis

393. A full term, 80 hrs old new born baby develops jaundice what should be the minimum level of serum bilirubin to start phototherapy - *(A1IMS June 99)*
a) 20mg% b) 12.5mg%
c) 18mg% d) 15mg%

394. A 32 weeks premature infants, 900gm weight on the third days. The serum bilirubin is 13 mg%. The treatment of choice is - *(UP 07)*
a) Exchange transfusion
b) Phototherapy
c) Wait and watch therapy
d) Pharmacologic therapy

395. What should be measured in a newborn who presents with hyperbilirubinemia - *(A12000)*
a) Total & Direct bilirubin
b) Total bilirubin only
c) Direct bilirubin only
d) Conjugated bilirubin only

396. All of the following groups of newborns are at an increased risk of hypoglycemia except -
a) Birth asphyxia *(AIMS Nov 02)*
b) Respiratory distress syndrome
c) Maternal diabetes
d) Post term infant

397. Estimation of the blood sugar is relevant in all except-
a) Birth asphyxia *(AIMS 92)*
b) Large for date baby
c) Baby of hypothyroid mother
d) Rh Incompatibility

398. A large for gestational age baby delivered at 40 weeks was observed to be lethargic. The blood sugar was measured to be35mg/dl.The management is -*(AI12)*
a) Fortified Breast Milk b) 10% IV Dextrose
c) Oral Glucose Solution d) Normal Saline

399. Administration of glucose solution is prescribed for all of the following situations except -
a) Neonates *(AIMS May 06)*
b) Child of a diabetic mother
c) History of unconsciousness
d) History of hypoglycemia

400. All of the following are the complications in the new born of a diabetic mother except - *(AIMSMay 06)*
a) Hyperbilirubinemia b) Hyperglycemia
c) Hypocalcemia d)Hypomagnesemia

401. Which of the following malformation in a newborn is specific for maternal insulin dependent diabetes mellitus ? *(AI06)*
a) Transposition of great arteries
b) Caudal regression
c) Holoprosencephaly
d) Meningmyelocele

402. Infants of diabetic mother have the followings -
a) Macrosomia *(PGI June 03)*
b) Neural tube defect
c) Hyperglycemia
d) Hypocalcemia

403. Long term complication of infants born to I.D.D.M mother A/E - *(Al 95, AIMS 98)*
a) DM b) Ketotic hypoglycemia
c) Obesity d) Blindness

404. Infant of diabetic mother with weight 3.8 Kg presented with seizures after 16 hours of birth. What is the cause - *(AI 11, AIMS Nov 09)*
a) Hypoglycemia b) Hypocalcemia
c) Birth asphyxia d) Intraventricular hemorrhage

405. Infants of diabetic mother manifests - *(PGI Dec 07)*
a) Hyperglycemia b) Hypoglycemia
c) Hypocalcemia d) Increased fetal defect
e) Hyperbilirubinemia

406. Maximum concentration of dextrose that can be given through peripheral vascular line in neonate-
a) 5 b)10 *(NEET/DNB Partem)*
c) 12.5 d) 25

407. Hyperglycemia in Neonate if blood sugar is above -
a) 150 mg/dl b) 125mg'dl *(NEET/DNB*
c) ISO mg/dl d) 100 mg/dl ■ *Pattern)*

408. A newborn was given a drug in neonatal ICU, but then was found in respiratory distress. The likely drug is? *(AI 07)*
a) Morphine b) Naloxone
c) Salbutamol d) Soda-bicarb

409. A new born child developed respiratory depression in neonatal ward. Which of the following drug is the cause - *(AIMS Nov 10)*
a) Opioids b) Barbiturates
c) Diazepam d) Propofol

410. Asphyxial injury in a term baby is characterized by all except - *(AIMS Nov 03)*
a) Seizures
b) Differential hypotonia (lower limbs > upper limbs)
c) Altered sensorium
d) Difficulty in clearing oral secretions

411. A newborn with eyes closed 6 hrs after birth lustily crying, no chest retraction and movements of all four limbs. Neonatal behavioral response grading -
a) State 1 b) State 3 *(AIMS Nov 10)*
c) State 5 d) State 6

412. Hypoxic Ischemic encephalopathy true is -
a) Lower limbs affected more than upper limbs
b) Prox. Muscles > distal muscles *(AIMS Nov 10)*
c) Seizure
d) Trunk involved

413. Vomiting on the first day of baby's life may be caused by all of the following except - *(AI 97)*
a) Pyloric stenosis b) Oesophageal atersia
c) Aerophagy d) Amniotic gastritis

392) a 393) a 394) a 395) a 396) d 397) c 398) b 399) c 400) b 401) b 402)a,b,d 403) b 404) a
405)b,c,d,e 406)c 407)b 408)a 409)a 410)b 411)d 412)c 413)a

414. A non ventilated preterm baby in incubator is under observation. Which is the best way to monitor the baby's breathing and detect apnaea ? *(AI0 7)*
a) Infrared throraric movement study
b) Capnography
c) Nasal digital temperature monitoring
d) Impedence technique

415. In Erythroblastosis fetalis not involved is -
a) Anti C b) Anti D *(AIMS 97)*
c) AntiE d) Anti Lewis

416. Which of the following agents is likely to cause cerebral calcification and hydrocephalus in a newborn whose mother has history of taking spiramycin but was not complaint with therapy -
a) Rubella b) Toxoplasmosis*(AI09)*
c) CMV d) Herpes

417. A pregnant lady had no complaints but mild cervical lymphadenopathy in first trimester. She was prescribed spiramycin but she was noncompliant. Baby was born with hydrocephalous and intracerebral calcification. Which of these is likely cause? *(AIMS May 11)*
a) Rubella b) Toxoplasmosis
c) CMV d) Herpes

418. Which of the following disorder of mother leads to microcephaly in baby - *(AIMS Dec 1994)*
a) SLE b) Hepatitis A
c) Phenylketonuria d) Rubella

419. Which one is not unfavourable for fetal development-
a) Herpes b) Rubella *(AIMS89)*
c) Alcohol d) Tetracycline

420. Hydrops fetalis may be caused by the following, except - *(COMED 09)*
a) Congenital heart block
b) Cystic hygroma
c) Congenital varicella syndrome
d) Congenital nephrosis

421. Fetal alcohol syndrome is characterized by all except-
a) Microcephaly *(AIMSNov 09)*
b) Low intelligence
c) Large proportionate body
d) Septal defects of heart

422. Still born child is defined by - *(PGIDec 07)*
a) >20wks b)>24wks
c) > 28 wks d) > 32 wks
e) > 1300 gm

423. Which of the following is the least likely cause of neonatal mortality in India? *(AIMSNov 10)*
a) Severe infections b) Congenital malformation
c) Prematurity d) Birth asphyxia

424. Test used to differentiate maternal from fetal blood? *(AIMS Nov 10)*
a) Osmotic fragility test b) Water bulb test
c) Apt test d) Kleihauer Betke test

425. Grasp reflex develops by - *(Jipmer 11)*
a) 20 weeks b) 24 weeks
c) 28 weeks d) 32 weeks

426. The following is of serious pathological significance in infants - *(Karnataka 89)*
a) Loss of weight
b) Palpable left kidney
c) Palpable spleen
d) Deviation of trachea from midline

427. Harlequins Skin change in the newborn is seen in - *(Jipmer 93)*
a) Autonomic dysfunction b) Icthyosis
c) Septicemia d) Polycythemia

428. In a new born, what is the normal respiratory rate ?
a) 10-20 breaths/minute *(UPSC-II08)*
b) 30-40 breaths/minute
c) 40-60 breaths/minute
d) 60-80 breaths/minute

429. The newborn heart rate is about - *(TN 04)*
a) 120-160/min b) 160-180 /min
c) 180 - 200 /min d) 200 - 220 /min

430. "Microsomia" is defined as - *(MAHE 05)*
a) Birth weight below 90th percentile
b) Birth weight below 10th percentile
c) Birth weight below 20th percentile
d) Birth weight below 50th percentile

431. Most common newborn rash which presents at 24-48 hours of life is - *(UPSC - II09)*
a) Erythematous papular pustular lesions
b) Milia
c) Transient neonatal pustular melanosis
d) Haemangioma

432. Very low birth weight babies are - *(SGPGI 05)*
a) < 2500 gm of birth weight
b) < 1500 gm of birth weight
c) < 1000 gm of birth weight
d) Between 2500-3000 gm of birth weight

433. Early neonatal period is - *(Kerala 03)*
a) 1 day b) 7 days
c) 28 days d) 14 days

434. Which one of the following medical disorders leads to delayed foetal lung maturity - *(UPSC 07)*
a) Heart disease b) Diabetes
c) Thalassemia minor d) Epilepsy

435. Most common cause of respiratory distress after birth in first 24 hours is - *(JIPMER 95)*
a) Neonatal sepsis b) Meconium aspiration
c) Bacterial pneumonia d) Air embolism

436. Cephalhematoma usually disappears within - *(JIPMER 80, UPSC 82)*
a) 3-5 months b) 2-5 weeks
c) 3-5 weeks d) 5-7 weeks

437. Which one of the following is true of Transient Tachypnea of Newborn (TTNB) - *(UPSC 97)*
a) It is the commonest respiratory disorder caused by absence of surfactant
b) In premature babies, it is often fatal
c) Onset of respiratory distress is immediately after birth and it rarely lasts beyond 48 hrs
d) It often leads to chronic lung disease

414)d 415)d 416)b 417)b 418) c,d 419)a 420)c 421)c 422)c 423)b 424) c>d 425)c 426)a 427)a
428) b 429) a 430) b 431) a 432) b 433) b 434) b 435) b 436) d 437) c

438. A two-year child is classified as having pneumonia, if the respiratory rate is more than - *(COMED 09)*
a) 30/min b)40/min
c) 50/min d) 60/min

439. 8 days old neonate with extensor posture - *(TN99)*
a) Cerebral palsy
b) Hypoxic ischemic encephalopathy
c) Malnutrition
d) Infection

440. Hypoglycemia in late infant and child occurs if blood glucose level is - *(CUPGEE 2001)*
a) 40 mg/dl b) 60 mg/dl
c) 10 mg/dl d) 20 mg/dl

441. Bag and mask ventilation in newborn resuscitation is contraindicated in - *(UPSC 2002)*
a) Diapharagmatic herina
b) Pulmonary hypoplasia
c) Tracheo - oesophageal fistuala
d) Laryngomalacia

442. The foetus born during the 6th month of intrauterine life will NOT be able to survive due to - *(ICS 98)*
a) lack of subcutaneous connective tissue
b) Lack of co-ordination between the respiratory and nervous system
c) Absence or insufficient amount of surfactant
d) lack of sufficient capillaries

443. A 26 year old third__gravida mother delivered a male baby weighing 4-2 kg at 37 weeks of gestation through an emergency caesarean section, for obstructed labour. The child developed respiratory distress one hour after birth. He was kept nil per orally (NPO) and given intravenous fluids. He maintained oxygen saturation on room air. No antibiotics were given. Chest radiograph revealed fluid in interlobar fissure. Respiratory distress settled by 24 hours of life. What is the most likely diagnosis ? *(UPSC 06)*
a) Transient tachypnea of the newborn
b) Meconium aspiration syndrome
c) Persistent fetal circulation
d) Hyaline membrane disease

444. Failure to initiate and maintain spontaneous respiration following birth is clinically k/a -
a) Birth asphyxia *(Corned 07)*
b) RDS-Respiratory distress syndrome
c) Respiratoryfailure
d) Pulmonary oedema

445. All the following factors affect APGAR score except-
a) Prematurity *(Corned 07)*
b) Maternal retardation
c) Neurological condition of the new bom
d) Mode of delivery

446. The foetal length is affected if the mother has undernutrition during the - *(UPSC 98)*
a) First trimester
b) Second trimester
c) Third trimester
d) Any time during the pregnancy

447. Meconium contains all except - *(PGI88)*
a) Lanugo b) Bacterial flora
c) Epithelial debris d) Bilirubin

448. A term baby was brought with complaints of breathing difficulty. He was born normally to primigravida. Mother's antenatal period and labour record were normal. On examination he was in respiratory distress. Abdomen was flat. There was no organomegaly. The most likely cause is-
a) Congenital heart disease with dextrocardia
b) Respiratory distress syndrome *(UPSC 98)*
c) Diaphragmatic hernia
d) Aspiration pneumonia

449. Which of the following is best for transport of the newborn with maintainance of warm temperature -
a) Kangaroo Mother Care (KMC) *(MH11)*
b) Transport incubator
c) Thermacolbox
d) Hot bottle

450. A new bom presented with jaundice. Most diagnostic investigation of choice is - *(UP 08)*
a) Total and Direct bilirubin
b) Conjugated bilirubin
c) Serum, Bilirubin
d) Uroporphyrin levels

451. In Rh Iso Imunisation, exchange transfusion is indicated if- *(AIMS 89)*
a) Cord blood hemoglobin is less than 10 g %
b) Cord bilirubin is more than 5 mg.
c) History of previous sibling affected
d) Hydrops fetalis

452. Indications for exchange transfusion are all except-
a) Unconjugated bilirubin > 18 mg/100 ml
b) Cord hemoglobin <10 mg/100 ml *(Jipmer 03)*
c) Cord bilirubin <5 mg/100 ml
d) Bilirubin protein ratio > 3.5

453. Jaundice in the new-born is physiological when -
a) The infant is visibly jaundiced in the first 24 hours of birth *(UPSC 98)*
b) The total bilirubin concentration in the serum increases by 1 mg/dl per day
c) The total bilirubin concentration is above 15 mg/dl
d) Jaundice persists for more than one week in a term infant

454. Autosomal dominant familial nonhemolytic hyperbilirubinemia occurs in all except - *(UP 07)*
a) Crigler-Najjar syndrome
b) Dubin - Johnson syndrome
c) Gilbert syndrome
d) Cryoglobulinemia

455. Jaundice seen immediately after birth in - ***(AP 97)***
a) Septicemia b) Rh-incompatibility
c) Breast milk Jaundice d) Physiological j aundice

438)b 439)a,b 440)a 441)a 442)c 443)a 444)b 445)d 446)d 447)b 448)c 449)a 450)a 451)a,b,c 452) c 453) b 454) b 455) a,b

456. In a neonate, jaundice appears for the first time in the 2nd week. The following is not a cause- *(DPG 10)*
a) Galactosemia b) Rh Incompatibility
c) Hypothyroidism d) Breast milk jaundice

457. Which of the following is not true about late onset Hemorrhagic disease of newborn (HDN)? *(MH10)*
a) Begins between 2-7 days of life
b) Intracranial hemorrhage is common
c) Biliary atresia can predispose
d) Warfarin therapy is associated

458. Which of the following subtance is toxic to neurons-
a) Unconjugated bilirubin *(JIPMER 95)*
b) Bile salt
c) Haemoglobin
d) Melanin

459. A 50-hour old full-term breast-fed newborn boy weighing 3100g presents with clinically evident jaundice. Physical examination is otherwise normal. The total bilirubin is 11.0 mg/dl with a direct bilirubin of 0.4 mg/dl. What would be the correct treatment - *(UPSC 0 7)*
a) Continue breast feeds and review after 48 hours
b) Stop breast feeds and review after 24 hours
c) Continue breast feeds and start blue-light phototherapy
d) Arrange for a double-volume exchange transfusion

460. Infants receiving phototherapy - *(A1IMS 80, PGI83)*
a) Have increased insensible water loss
b) Generally develop a bronze discolouration of skin
c) Should have their eyes patched during therapy
d) Often become constipated

461. Hyperbilirubinemia in a child can be due to -
a) Breast milk jaundice *(MAHE 05)*
b) Cystic fibrosis
c) Fanconi's syndrome
d) a -1 antitrypsin deficiency

462. Vomiting on the first day of baby's life may be caused by all of the following except - *(MAHE 05)*
a) Pyloric stenosis b) Oesophageal atresia
c) Aerophagy d) Amnio tic gastritis

463. Fetal lung maturity assessed by all except - *(UP 08)*
a) Measurement of a-feto protein
b) Lecithin:sphingomyelin ratio
c) Measurements of amnotic fluid creatinine
d) Phosphatidyl choline concentration in amniotic fluid

464. Respiratory rate in a 2 month old, to label it tachypnea is - *(DPGEE 08)*
a) 40 b) 50
c) 60 d)70

465. The following factors contribute to hypothermia in preterm babies except - *(UPSC-108)*
a) Decreased subcutaneous fat and brown fat
b) Large surface area in relation to body weight
c) Less oxygen consumption
d) Increased muscular activity

466. Not seen in small for date babies ? *(APPG 08)*
a) Hypoglycemia b) Polycythemia
c) Intracranial bleed d) Hypocalcemia

467. The blood sugar in a neonate shortly after birth reaches the lowest level of 30 mg/dl at the age of -
a) 1 hour b) 3 hours *(DPGEE 08)*
c) 6 hours d) 8 hours

468. All of the following statements about prenatal steroids are true except - *(UPSC-108)*
a) They cause 50% reduction in respiratory distress syndrome and intra-ventricular haemorrhage
b) These are advocated to mothers at risk of pre term delivery at 24-34 weeks of gestation.
c) These can be safely administered to mothers with hypertension or diabetes.
d) These can be given even in the presence of chorioamnionitis clinically

469. Which of the following is NOT the correct sign of good attachment of a baby to the breast- *(UPSC-109)*
a) Baby's mouth wide open
b) Lower areola more visible
c) Baby's lower lip everted
d) Baby's chin touching the breast

470. Which is an abnormal finding in a neonate ?
a) Glycosuria *(DELHIPG Feb. 09)*
b) Bacteriuria
c) WBCs in urine
d) Hyperbilirubinemia

471. In a neonate with asymptomatic hypoglycemia immediate treatment should include which of the following? *(MH 11)*
a) 100 mg/kg Dextrose b) 2 mg/kg 10% Dextrose
c) 2 ml/kg 25% Dextrose d)4 ml/kg 25% Dextrose

472. Which of the following is not true about Rumination disorder ? *(MH 11)*
a) Failure to thrive
b) Appears between 3-5 years of age
c) Regurgitation of food
d) No nausea

CARDIOVASCULAR SYSTEM

473. Oxygenated blood to the fetus is carried by-
a) Umblical artery b) Umblical vein *(PGI June 07)*
c) SVC d) Pulmonary artery

474. Anatomical closure of ductus arteriosus occurs at - *(Delhi 93, A1IMS 86)*
a) Birth b) 3-4 day
c) 10^{th} day d) 30^{th} day

475. Ebstein's anomaly is seen with intake of -
a) Mercury b) Copper *(AIIMS Dec 97)*
c) Lithium d)Lead

476. Which of the following syndromes is best associated with congenital heart disease - *(AIIMSMay 05)*
a) Lesch-Nyhan syndrome
b) Rasumussen syndrome
c) Holt Oram syndrome
d) LEOPARD syndrome

456) b 457) a 458) a 459) b 460)a,b,c 461) a,d 462) a 463) a 464) c 465) d 466) c 467) b 468) d 469) b 470) b 471) None 472) b 473) b 474) c 475) c 476) c

477. The heart lesion not found in Congenital Rubella infection is - *(NEET/DNB Pattern)*
a) ASD b) VSD
c) PDA d) PS

478. N ADA's criteria are used for - *(AIIMSFeb 1997)*
a) Assessment of child for degree of dehydration
b) Assessment of child for degree of malnutrition
c) Assessment of child for presence of heart disease
d) Assessment of child for degree of mental retardation

479. NADA's criteria are used for - *(AI96)*
a) Assessment of child for degree of dehydration
b) Assessment of child for degree of malnutrition
c) Assessment of child for presence of heart disease
d) Assessment of child for degree of mental retardation

480. Congenital cyanotic heart disease with pulmonary oligemia is seen with - *(PGI Dec 99)*
a) ASD b) VSD
c) Tricuspid atresia d) Hypoplastic left ventricle

481. A child with central cyanosis and enlarged left ventricle the probable diagnosis is - *(Kerala 90)*
a) Tricuspid atresia
b) Eisenmengher's syndrome
c) Tetralogy of fallots
d) Anomolous pulmonary artery

482. Which one of the following does not produce cyanosis in the first year of life - *(AIIMSMay 03)*
a) Atrial septal defect
b) Hypoplastic left heart syndrome
c) Truncus arteriosus
d) Double outlet right ventricle

483. Right axis deviation is seen in all except-*(AIIMSJune*
a) VSD b) Tricuspid atresia *98)*
c) Pulmonary atresia d)ASD

484. Cyanosis is seen in - *(PGIDec 01)*
a) Persistent ductus arteriosus
b) Tricuspid atresia
c) Ostium primum ASD
d) Eisenmenger complex
e) Tetralogy of Fallot

485. Pulumonary plethora is seen in all except -
a) VSD b)ASD
c) Fallots tetralogy d)PDA

486. Commonest type of congenital heart disease is-
a) ASD b)VSD
c) TOF d)PDA

487. Commonest type of cong. cyanotic heart disease is - *(NEET/DNB Pattern)*
a) ASD b) VSD
c) TOF d) PDA

488. Recurrent respiratory tract infections may occur in all of the following except - *(ARMS Nov 05)*
a) Ventricular septal defect
b) Tetrology of Fallot
c) Transposition of great arteries
d) Total anomalous venous return

489. In which of the following conditions left atrium is not enlarged - *(AI 06)*
a) Ventricular septal defect
b) Atrial septal defect
c) Aortopulmonary window
d) Patent ductus arteriosus

490. Which one of the following congenital heart diseases has cyanosis without cardiomeglay and/ or congestive heart failure - *(UPSC 98)*
a) Transposition of great arteries
b) Fallot's tetralogy
c) Congenital mitral regurgitaion
d) Congenital pulmonary stenosis

491. ASD is seen in a/e - *(PGI June 01)*
a) Turner's synd b) Ellis van crevald synd
c) Down's synd d) Halt-oram synd
e) TAR synd

492. True about ASD - *(AI 98)*
a) Foramen ovale is patent
b) Left parasternal heeve is due to increased pulmonary artery flow
c) S_2 is wide and variable
d) Systolic murmur is due to rapid flow of blood across the shunt.

493. All of the following are true about ASD except -
a) Right atrial hypertrophy *(AI 01)*
b) Left atrial hypertrophy
c) Right ventricular hypertrophy
d) Pulmonary hypertension

494. The following is false about Atrial septal defect -
a) Ostium secundum most common *(ARMS 81)*
b) Right to Left Shunt
c) May be associated with TAP VC
d) CCF is very rare

495. In atrial septal defect the aorta *is-(NEET/DNBPattern)*
a) Small b) Normal
c) Enlarged d) Aneurysmal

mAyoungttmatepreseiih with history ofdyspnoea on exertion. On examination, she has wide, fixed split S_2 with ejection systolic murmur (III/VI) in left second intercostal space. Her ECG shows left axis deviation. The most probable diagnosis is -
a) Total anomalous pulmonary venous drainge.
b) Tricuspid atresia *(ARMSMay 2003)*
c) Ostium primum atrial septal defect.
d) Ventricular septal defect with pulmonary arterial hypertension.

497. Which of the following statements is/are false about ostium secundum ASD - *(PGI June 09)*
a) Fixed splitting of 2nd heart sound
b) Narrow splitting of 2nd heart sound
c) Lt axis deviation in ECG
d) Shunt murmur prominent
e) Rt axis deviation

477) a 478) c 479) c 480) c 481) a 482) a 483) b,c 484)b,d,e 485) c 486) b 487) c 488) b 489) b 490) b
491) a 492) b 493) b 494) b 495) a 496) c 497)b,c,d

498. ASD is associated with all except -
a) Infective endocarditis *(NEET/DNB Pattern)*
b) Stroke
c) Arrhythemia
d) Pulmonary hypertension.

499. Which is going to best declare the case as that of interatrial septal defect with other cardiac abnormalities - *(AI9 7)*
a) Elevated pressurein left atrium
b) Elevated pressure in right atrium
c) Elevated $P0_2$ in pulmonary artery
d) Systolic murmur

500. Most common congenital heart disease - *(AI 99)*
a) ASD b)VSD
c) PDA d)TOF

501. A child with large perimembranous VSD has congestive heart failure. What may be the cause of improvement of cardiac failure in the patient -
a) Aortic regurgitation *(ARMS Nov 01)*
b) Vascular changes in pulmonary circulation
c) Infective endocarditis
d) Closure of VSD spontaneously

502. A 29-day old child presents with features of congestive cardiac failure and left ventricular hypertrophy. Auscultation shows a short systolic murmur. Most likely diagnosis is-*(AIIMS Nov 2K)*
a) Rheumatic fever
b) Tetralogy of Fallot
c) Transposition of great arteries
d) Ventricular septal defect

503. A patient of VSD in CCF develops clubbing with no cyanosis diagnosis is - *(PGI98)*
a) Right to left shunt
b) Left to right shunt
c) Subacute bacterial Endocarditis
d) Pulm. edema

504. True about VSD is all except - *(ARMS June 97)*
a) Small hole closes spontaneously
b) Defect is usually in membranous part
c) Endocarditis is a common complication
d) Pulmonary Oligemia in chest x-ray

505. Which of the following features on X-ray chest can differentiate an Atrial septal Defect (ADH) from a Ventricular Septal Defect (VSD)- *(AI 11)*
a) Enlarged Left Atrium
b) Pulmonary Plethora
c) Enlarged pulmonary Artery
d) Enlarged Aorta

506. In patent ductus arteriosus connection is between -
a) Aorta and coronary artery *(NEET/DNB Pattern)*
b) Aorta and pulmonary artery
c) Aorta and subclavian artery
d) Pulmonary artery and subclavian artery

507. True statement about Ductus Arteriosus is -*(AI 2K)*
a) It undergoes anatomic closure within 24 hrs of birth
b) Forms the ligamentum venosum in later life
c) It is induced to close by high levels of prostaglandins
d) May cause a machinary murmur by its patency.

508. True about 1 year old child with *PJ)Ais-(AIlMSMay95)*
a) Symptoms similar to Aorto pulmonary window
b) Chances of spontaneous closure high
c) Indomethacin may help in closure
d) Endocarditis is rare

509. The following statements are true of patent ductus arteriosus(PD A) except - *(Kerala 2K)*
a) Spontaneous closure occurs in some term infants
b) Pulmonary hypertenison develops
c) Bacterial endocarditis is more frequent with small PDA
d) Recurrent chest infection and congestive failure may develop
e) Anatomic existence of PDA is an indication for surgery

510. MC cause of death in adult with PDA is -
a) CCF b) Infective endocarditis
c) Rupture d) Embolism *(PGI Dec 99)*

511. Preterm baby with PDA, which is the least likely findings? *(ARMS Nov 10)*
a) $C0_2$ washout
b) Bounding pulses
c) Pulmonary hemorrhage
d) Necrotising enterocolitis

512. A premature infant is born with a patent ductus arteriosus. Its closure can be stimulated by administration of - *(ARMS May 06)*
a) Prostaglandin analogue
b) Estrogen
c) Anti-estrogen compounds
d) Prostaglandin inhibitors

513. The most appropriate management for maintaining patency of ductus arteriosus in a neonate is -
a) Prostaglandin Ej b) Oxygen *(ARMS May 04)*
c) Nitric oxide d) Indomethacin

514. All of the following about PDA are true except -
a) More common in males *(AI 08)*
b) Common heart lesion in rubella
c) Treatment is closure of defect by ligation and division of ductus
d) Hypoxia and immaturity are important in maintaining the patency

515. Large PDA (Patent ductus arteriosus) leads to-
a) Endocardial valvulitis *(NEET/DNB Pattern)*
b) Eisenmenger syndrome
c) CE3F ^
d) All of abo#- fi§Bf

498) a 499) b 500) b 501) b 502) d 503) c 504) d 505) a 506) b 507) d 508) a 509) a,e 510) a 511) a 512)d 513)a 514)a 515)d

516. The following features are true for tetralogy of Fallot, except - *(AI06)*
a) Ventricular septal defect
b) Right ventricular hypertrophy
c) Atrial septal defect
d) Pulmonary stenosis

517. Essential criteria for TOF includes all except -
a) Valvular stenosis *(AIIMS Nov 07)*
b) Infundibular stenosis
c) Overriding of aorta
d) KVH

518. All of the following are true regarding Tetralogy of Fallot except - *(AIIMS May 05)*
a) Ejection systolic murmur in second intercostal space
b) Single second heart sound
c) Predominantly left to right shunt
d) Normal jugular venous pressure

519. Tetralogy of Fallot's present with one of the following- *(AIIMS Dec 98)*
a) Cenral cyanosis with clubbing
b) Cardiomegaly
c) Left ventricular hypertrophy
d) Normal ECG and Chest x-ray

520. Which of the following does not complicate into CHF-
a) Correlation of aorta *(AIIMS Dec 1995)*
b) Transposition of great vessels
c) Tetralogy of fallot's
d) Patent ductus arteriorus

521. True about TOF- *(PGINov 09)*
a) Recurrent chest infection b) Clubbing of feet
c) Squatting d) Cyanotic spells
e) CHF not occur

522. In which of the following a [6]Coeur en Sabot' shape of the heart is seen - *(AI 04)*
a) Tricuspid atresia
b) Ventricular septal defect
c) Transposition of great arteries
d) Tetralogy of Fallot

523. A 6 month old child with Tetralogy of Fallot develops cyanotic spell initiated by crying. Which one of the following drugs you would like to *avoid-(AUMS Nov o4)*
a) Sodium bicarbonate b) Propranolol
c) Phenylephrine d) Isoprenaline

524. Blalock and Taussig shunt is done between - *(AI 06)*
a) Aorta to pulmonary artery
b) Aorta to pulmonary vein
c) Subclavian artery to pulmonary vein
d) Subclavian vein to artery

525. Components of Tetralogy of Fallot is/are -
a) VSD *(PGI June 04)*
b) Lt. Ventricular hypertrophy
c) Lt. Axis deviation
d) Taussig-Blalock shunt is between pulmonary & subclavian artery
e) Morphine is given for cyanosis

526. Which of the following is a component of Pentalogy of Fallot- *(AI 11, 07, AIIMS May 10)*
a) Atrial septal Defect (ASD)
b) Patent Ductus Arteriosus (PDA)
c) Coarctation of Aorta (CO A)
d) Left Ventricular Hypertrophy (LVH)

527. Tetralogy of fallot is characterized by following Sti except- *attern)*
a) AS b) VSD
c) Over-riding of aorta d) Infundibular constriction

528. Potts shunt is - *(AI 01)*
a) Rt subclavian artery to rt pulmonary artery
b) Descending aorta to left pulmonary artery
c) Left subclavian to left pulmonary artery
d) Ascending aorta to right pulmonary artery

529. A five year old child presents with left ventricular hypertrophy and central cyanosis what is the most probable diagnosis - *(AIIMS Nov 2000)*
a) Tricuspid atresia
b) Eisenmenger syndrome
c) Tetrology of Fallot
d) Total anomalous pulmonary venous drainage

530. A patient presents with LVH. and pulmonary complications. ECQ shows left axis deviation. Most likely diagnosis is - *(AI 01)*
a) TOF b) Tricuspid atresia
c) TAPVC d)VSD

531. All of the following are characteristic features of Tricuspid Atresia except - *(AIIMSDec 98)*
a) Left Axis deviation
b) Right ventricular hypoplasia
c) Pulmonary vascularity is diminished
d) Splitting of S_2

jS32fe All are true regarding tricuspid atresia except -
a) Split S_2 *(METM B Pattern)*
bjPatpntfpramen ovale
y 11 *fX* Pujuonary oligemia i& che:tXray
d) teftaxis d^yi^tip^inECO ,

533. Ebsteins anomaly is associated with -
a) Tricuspid atresia *(JIPMER 80, DNB 91)*
b) Coarctation of aorta
c) Cardiomyopathy
d) Right ventricular hepertrophy

534. A neonate has central cyanosis and short systolic murmur on the 2nd day of birth.The diagnosis is -
a) Tetralogy of Fallot's *(AIIMS May 01)*
b) Transposition of great vessels
c) Atrial septal defect
d) Ventricular Septal defect

535. *True* **aboutTGA-** *(PGI99)*
a) Acyanotic heart disease
b) Cyanotic disease
c) Aorta anterior to pulmonary artery
d) VSD

516) c 517)a 518)c 519)a 520)c 521)b,c,d,e 522)d 523)d 524)a 525)a,d,e 526) a 527)a 528)b
529) a 530) b 531)d 532) a 533) a 534) b 535)b,c,d

536. TVue about TGA- *(PGIDec07)*
a) Cyanosis at birth b) CHF
c) VSD d) AS
e) None

537. A five day old, full term male infant was severely cyanotic at birth. Prostaglandin E was administered initially and later ballooned atrial septosomy was done which showed improvement in oxygenation. The most likely diagnosis of this infant is - *(AI04)*
a) Tetralogy Fallot
b) Transposition of great vessels .
c) Truncus Arteriosus
d) Tricuspid Atresia

538. The most common type of total anomalous pulmonary venous connection is - *(AI 05)*
a) Supracardiac b) Infracardiac
c) Mixed d) Cardiac

539. All of the following statements regarding total anomalous pulmonary connection are true except -
a) The total pulmonary venous blood reaches the right atrium *(AI 97)*
b) Always associated with a VSD
c) The oxygen saturation of the blood in the pulmonary artery is higher than that in the aorta
d) Infracardiac type is always obstructive

540. Figure of 8 configuration on chest x-ray is seen in -
a) TOF b)ASD *(AI99)*
c) TAPVC d) VSD

541. Total anomalous pulmonary venous connection false statements is- *(AI 97)*
a) All pulmonary viens enters by single trunk
b) Need not always be associated with septal defects
c) Radiologically has figure of 8 appearance
d) Is a cyanotic heart disease

542. Eisenmenger complex is common in adult in -
a) VSD b) ASD *(PGI June 2000)*
c) PDA d) Cushion defect

543. A child with VSD presents with development of cyanosis because of Eisenmenger physiology. What is the correct sequence of events which leads to this change - *(AIIMS Nov 2000)*
a) Left to right shunt, pulmonary hypertension, right ventricular hypertrophy, right to left shunt
b) Left to right shunt, right ventricular hypertrophy, pulmonary hypertension, right to left shunt.
c) Pulmonary hypertension, right to left shunt right ventricular hypertrophy, left to right shunt.
d) Left to right shunt, right ventricular hypertrophy, right to left shunt, pulmonary hypertension.

544. All are signs of impending Eisenmenger except -
a) Increased flow murmur across tricuspid & pulmonary valve *(AIIMS May 10)*
b) Single S2
c) LoudP2
d) Graham steel murmur

545. Eisenmenger syndrome is characterized by all except- *(AI 05)*
a) Return of left ventricle & right ventricle to normal size
b) Pulmonary veins not distended
c) Pruning of peripheral pulmonary arteries
d) Dilatation of central pulmonary arteries

546. Eisenmenger syndrome-True are*AJE-(AUMSMay 10)*
a) Pulmonary veins are not distended
b) RV & LV walls come back to normal size
c) Dilatation of central pulmonary artery
d) Peripheral pruning of pulmonary arteries

547. A neonate has recurrent attacks of abdominal pain, restless irritability and diaphoresis on feeding. Cardiac auscultation reveals a nonspecific murmur. He is believed to be at risk for M.I. Likely diagnosis here is - *(AI01)*
a) ASD b) VSD
c) TOF d) Anomalous coronaryartery

548. Coarctation of the aorta is common in which syndrome- *(NEET/DNB Pattern)*
a) Down's b) Turner's
c) Klinefelter's d) Noonan's

549. Coarctation of aorta is associated with all, except - *(AIIMS June 98)*
a) Turner's syndrome b) Bicuspid aortic valve
c) Pulmonary stenosis d) Atresia of aortic arch

550. TVue about co-arctation of aorta - *(AI 99)*
a) Most common site is distal to the origin of the left subclavian artery
b) Most common age of presentation is at 15-20 years
c) Upper rib notching is due to erosion by dilated collateral vessels
d) Right ventricular hypertrophy

551. In post ductal coarctation of the aorta, blood flow to the lower limb is maintained through which of the following arteries - *(AIIMS Nov 07)*
a) Umblical artery and subcostal arteries
b) Thoracic and pericardiophrenic arteries
c) Intercostal arteries and superior epigastric artery
d) Ant and post circumflex arteries

552. A child presented with headache, dizziness, intermittent claudication with occasional dyspnoea. The most probable diagnosis in - *(AI 99)*
a) ASD b) PDA
c) TOF d) Coarctation of aorta

553. All of the following causes death in coarctation of Aorta except - *(PGI June 2000)*
a) Infective endocarditis b)CCF
c) Intra cranial hemorrhage d) Anterior MI

554. A 1-month-old boy is referred for failure to thrive. On examination, he shows feature of congestive failure. The femoral pulses are feeble as compared to branchial pulses. The most likely clinical diagnosis is-*(AI 06)*
a) Congenital aortic stenosis
b) Coarctation of aorta
c) Patent ductus arteriosus
d) Congenital aortoiliac disease

536)a,b,c 537)b 538)a 539)b 540)c 541)None 542)a 543)b 544)a 545)a 546)b 547)d 548)b 549)c 550) a 551)c 552)d 553)d 554)b

555. A ten year old boy presents to the pediatric emergency unit with seizures. Blood pressure in the upper extremity measured as 200/140 mm Hg. Femoral pulses were not palpable. The most likely diagnosis amongst the following is - *(AI10)*
a) Takayasu aorto arteritis
b) Renal parenchymal disease
c) Grandmal seiures
d) Coarctation of aorta

556. A 4*Vi* year old girl always had to wear warm socks even in summer season. On physical examination, it was noticed that she had high blood pressure and her femoral pulse was weak as compared to radial and carotid pulse, a chest radiography showed remarkable notching of ribs along with their lower borders. This was due to - *(AIIMS Nov 02)*
a) Femoral artery thrombosis
b) Coarctation of aorta
c) Raynaud's disease
d) Takayasa arteritis

557. Ribnotching of 4-9th ribs with double bulging is seen in - *(AI 98)*
a) Aortic aneurysm b) Aortic dessection
c) Co - arctation of aorta d)Diaphragmatic hernia

558. Coarctation of aorta is most commonly associated with- *(AI 11, 08)*
a) VSD b) PDA
c) Bicuspid aortic valve d)ASD

559. A child is admitted on 7 days of life with severe respiratory distress and shock. He was discharged 2 days back healthy. What could be the probable diagnosis - *(AIIMS May 11)*
a) VSD large
b) Hypoplastic left heart syndrome
c) Ebstein anomaly
d) AP window defect

560. The following cardiac defects are characterized by ductus dependent blood flow except -
a) Transposition of great arteries with intact septum
b) Interrupted aortic arch *(AIIMSMay 02, 05)*
c) Truncus arteriosus
d) Hypoplastic left heart syndrome

561. PGE causes worsening in infant with ?
a) PS without VSD *(AIIMS Nov 11)*
b) Hypoplastic left heart syndrome
c) Obstructive TAP VC
d) Obstruction in aorta

562. Ductus dependent blood flow is required for all of these congenital heart diseases except -
a) Persistent truncus arteriosus *(AIIMS May 11)*
b) Hypoplastic left heart syndrome
c) Pulmonary stenosis
d) TGA with intact ventricular septum

563. A blue new born presents with cyanosis. The X-ray chest reveal oligaemic lung field and normal sized heart. Most likely diagnosis is - *(AIIMS Nov 01)*
a) Ebstein's anomaly
b) Pulmonary atresia
c) Transposition of great arteries
d) Tetralogy of fallot

564. A child after 4 weeks of birth acyanotic, ejection systolic murmur detected causes are/is -
a) VSD. b) P.D.A. *(PGIJune 08)*
c) TOF d) Coarctation of aorta
e) Tricuspid stenosis

565. 7 day old baby presented in emergency deparment with unconciousness, cyanosis and 85% oxygen saturation. The diagnosis - *(PGIDec 07)*
a) Tetralogy of fallot b)TGA
c) TAPVC d)PDA

566. Right aortic arch is most commonly associated with-
a) Tetrology of fallot *(AI 08)*
b) Truncus arteriosus
c) Corrected TGA
d) Total anomalous pulmonary venous connection

567. Obstruction in pulmonary stenosis may occur at the following sites - *(AI 9 7)*
a) Supravalvularb) Valvular
c) Subvalvular d) All of the above

568. Commonest cause of heart failure in infancy is- *(Corned08)*
a) Myocarditis b) Rheumatic fever
c) Cardiomyopathy d) Congenital heart disease

569. Congenital heart disease which causes death in the first week of life - *(AI88)*
a) VSD b) TOF
c) Ebstein's anomaly d) Hypoplastic left ventricle

570. The commonest cyanotic heart disease manifesting as congestive cardiac failure during first week of life is - *(MP98)*
a) Pulmonary stenosis
b) Fallot's tetralogy
c) Tricuspid atresia
d) Hypoplastic left heart syndorme

571. Congestive cardiac failure is diagnosed in an infant by- *(NEET/DNB Pattern)*
a) Basal crepts%*U* - *l* v b) Elevated JW *i*
; c) Pedal edema . d) Liver enlargement

572. Which of the following is not a characteristic of right sided failure - *(JIPMER 80, PGI 83)*
a) Pulmonary oedema b) Ascites
c) Oliguria d) Dependent oedema

573. The treatment of choice for a case of congestive failure with hypertension is - *(Jipmer 04)*
a) ACE inhibitors b) a-blockers
c) Cal. channel blockers d) Nitrates

555) d 556) b 557) c 558) c 559) b 560) c 561) c 562) a 563) b 564)a,b,d 565) b 566) b 567) d 568) d
569) d 570)d 571) d 572)a 573) a

574. All are true about rheumatic fever, except -
a) Common in poor socioeconomic group
b) Develops after streptococcal pharyngitis
c) Communicable disease *(AIIMS June 99)*
d) Seen in 5-15 years of children

575. What is NOT a major criteria for Rheumatic heart disease - *(AIIMS Dec 1994)*
a) Arthritis b) Carditis
c) Subcutaneous nodule d) Raised ASLO titer

576. True about Rheumatic carditis - *(PGI98)*
a) Only endocarditis b) Only myocarditis
c) Only Pericarditis d) Pancarditis

577. About carey commb's murmur which is false -
a) Delayed diastole murmur *(AIIMS Nov 06)*
b) Seen in rheumatic fever
c) Can be associated with AR
d) Low pitched murmur

578. Most common manifestation of rheumatic fever -
a) Arthritis b) Carditis *(AI98)*
c) Chorea d) Nodules

579. True about Rheumatic fever - *(PGIDec 03)*
a) Chorea is aggravated during pregnancy
b) Chorea & arthritis co-existing
c) Subcutaneous nodules are tender
d) Erythema multiforme seen

580. True about subcutaneous nodule in Rheumatic fever-
a) Non tender *(PGIDec 07)*
b) Most common manifestation
c) Present on extensor surfaces
d) Associated with arthritis

581. True statement about Rheumatic fever in children -
a) Polyarthritis *(PGIDec 03)*
b) Caused by a hemolytic streptococci
c) Erythema marginatum is most common manifestation
d) MC valve involvement is Mitral
e) Erythema marginatum is common in face

582. Earliest valvular lesion in a case of acute rheumatic fever is - *(AIIMS May 94)*
a) Mitral regurgitation (MR)
b) Aortic Regurgitation(AR)
c) Mitral stenosis (MS)
d) Aortic Stenosis (AS)

583. Drug of choice for Rheumatic fever prophylaxis in penicillin allergic patient - *(AIIMSMay 07)*
a) Erythromycin b) Clindamycin
c) Vancomycin d)Gentamycin

584. Steroids are given in rheumatic fever when there is-
a) Carditis b) Chorea *(AMU 95)*
c) Subcutaneous nodules d)All

585. In a patient of rheumatic carditis full dose of steroid is given for - *(Kerala 04)*
a) 3 weeks b) 6 weeks
c) 9 weeks d) 12 weeks

586. All of following are recognized manifestation of acute Rheumatic fever except - *(AIIMS 95)*
a) Abdominal pain b)Epistaxis
c) Chorea d) Subcutaneous nodules

587. Which is not a major criteria of Jones in Rheumatic fever? *(AIIMS Nov 10)*
a) Pancarditis b) Arthritis
c) Chorea d) Elevated ESR

588. Which of the following is a minor criteria for diagnosis of Rheumatic fever (RF) according to modified Jones criteria - *(AI 07)*
a) ASOtitre
b) Past history of Rheumatic fever
c) Fever
d) Subcutaneous nodules

589. Carey coomb murmur is seen in - *(PGIDec 97)*
a) Severe mitral stenosis
b) Acute rheumatic carditis
c) Pure aortic regurgitation
d) Severe pulmonary hypertension

590. Regarding ASO titre all are seen except -
a) ASO can be increased in school children
b) May be negative in post streptococcal glomerulonephritis *(AIIMS Nov 09)*
c) ASO titre included in major criteria in jones criteria
d) May not be elevated in 20% cases of carditis

591. Bacterial endocarditis is most commonly caused by-
a) a-Hemolytic Streptococci *(PGIDec 03)*
b) (3-Hemolytic Streptococci
c) Staphylococcus aureus
d) Cardiobacterium
e) Staph epidermidis

592. Infective endocarditis is not seen in -
a) ASD b) TOF *(AI 94, AIIMS Dec 98)*
c) VSD d)MR

593. A 2 year old known case of RHD presents with 3 wks history of fever, hematuria and palpitation diagnosis is- *(PGI Dec 99)*
a) Streptococcal endocarditis
b) Collagen vascular disease
c) Reactivation
d) Staphylococcal endocarditis

594. Sustained severe hypertension in children is most commonly suggestive of - *(AI95)*
a) Coarctation of aorta
b) Pheochromocytoma
c) Renal parenchymatous disease
d) Drug induced

595. A 10 year old boy is having hypertension. There is no other significant history and urine analysis is cause for his hypertension - *(AI 10)*
a) Chronic glomerulonephritis
b) Polycystic kidney disease
c) Reflux nephropathy
d) Renal Parenchymal disease

574) c 575) d 576) d 577) c 578) a 579) a 580) a,c 581) a,d 582) a 583) a 584) a 585) d 586) a,b 587) d
588) c 589) b 590) c 591) c 592) a 593) d 594) c 595) d>a

596. 2 year old child presented with sudden onset of altered sesorium on examination BP was 200/100 - *(PGIDec 04)*
a) Renal artery stenosis b) Coarctation of Aorta
c) Glomerulonephritis d) Essential hypertension
e) Phaeochromocytoma

597. 8 year old child presented with altered sensorium and seizure on examination BP was 180/120. Correct statements - *(PGIDec 04)*
a) Sodium nitroprusside drips
b) Cause of hypertension is essential hypertension
c) IV labetolol, hydralazine, and diazoxide are given
d) Nifedipine is used
e) Pheochromocytoma mimics the condition

598. The most common cause of secondary hypertension in children is - *(PGI93)*
a) Renal artery stenosis b) Renal disease
c) Systemic Vasculitis d) Adrenal Tumours

599. What is seen in severe AS - *(AIIMS 98)*
a) Pulsus bisferiens
b) Late ejection systolic click
c) Heaving shifted apex
d) Loud S_2

600. Loud SI in Mitral stenosis is seen in-*(PGI June 99)*
a) Prolonged flow through mitral valve
b) 1 st degree heart block
c) Calcification of the valve
d) Immobilization of the valve

601. Cardiomegaly is seen in - *(PGI Dec 01)*
a) Multivalvular disease b) Anemia
c) Pericardial effusion d) Tetralogy of Fallot
e) Constrictive paricarditits

602. Differential cyanosis is seen in - *(PGIDec 99)*
a) TGV b)TAPVC
c) PDA d)VSD

603. Cardiomyopathy is not a feature of - *(AI07)*
a) Duchenne's Muscular Dystrophy
b) Friedriech's ataxia
c) Pompe disease
d) Lowe's syndrome

604. Cardiomyopathy is recognised finding in all except-
a) Friedreich's ataxia *(PGI81, BHU87)*
b) Transfusion haemosiderosis
c) Cystic fibrosis
d) Muscular dystrophy (Duchenne)
e) Glycogen storage disease (type II pompe)

605. Pulsatile varicose veins in lower limbs is seen in -
a) Klippel trenaunay syndrome *(AIIMS 2001)*
b) TR
c) RV failure
d) Carcinoid stenosis of tricuspid

606. MC cardiac tumor in childhood - *(PGIDec 07)*
a) Rhabdomyoma b) Lymphoma
c) Atrial myxoma d) Sarcoma
e) Fibroma

607. Umbilical cord has- *(NEET/DNB Pattern)*
a) 1 vein and 2 arteriesb) 2 vein and 2 arteries
c) 1 vein and 1 artery d) 2 veins and 1 artery

608. Pick up the correct one: Total foeto placental blood volume at term is estimated to be - *(J&K 05)*
a) 100 ml/kg body wt b) 125 ml/kg body wt
c) 150 ml/kg body wt d) 160 ml/kg body wt

609. Children born to mothers with systemic lupus erythematosis are likely to have one of the following anomalies - *(Karnataka 03)*
a) Atrial septal defect
b) Tetralogy of fallot
c) Transposition of great vessels
d) Complete heart block

610. All of the following are acyanotic congenital heart diseases except - *(SGPGI05)*
a) VSD b) PDA
c) ASD d) Tetralogy of fallot

611. Which one of the following is a cyanotic congenital heart disease? *(UP SC II10)*
a) Patent ductus arteriosus b) Atrial septal defect
c) Ventricular septal defect d) Tetralogy of Fallot

612. Most common type of atrial septal defect is -
a) Ostiumprimum *(UP 07, 06)*
b) Ostium secondum
c) Endocardial cushion defect
d) Endocardial hypertrophy

613. Which one of the following is the most common cause of cyanotic heart disease - *(UPSC 2002)*
a) Dextrocardia b) Fallot's tetralogy
c) Atrial septal defect d) Coarctation of aorta

614. A child with tetralogy of fallot uses which of the following positions - *(DPG10, AIIMS 8 7)*
a) Supine b) Prone
c) Squatting d) Leaning forwards

615. A taussing - Bing malformation is best treated by -
a) Diversion of V.S.D. simultaneously with mustand operation *(JIPMER 81, AIIMS 84)*
b) Diversion of the septal defect
c) Reattachment and reversal of aorta and pulmonary arteries
d) No corrective procedure for this anomaly

616. Systolic murmur in TOF is due to ? *(APPG 08)*
a) VSD b) Pulmonary stenosis
c) ASD d)None

617. A two-year old boy presented with episodes of becoming dusky. On examination, there was central cyanosis and clubbing. There was no pallor, oedema or respiratory distress. The heart was normal sized with a parasternal heave. A systolic thrill was palpable over the left middle sternal border. First heart sound was normal and only the aortic component was audible in the second heart sound. Liver was not enlarged - *(UPSC 07)*
What would be the likely diagnosis -
a) Congenital methemoglobinemia
b) Eisenmenger syndrome
c) Aortic stenosis
d) Tetralogy of Fallot

596) c 597)a,c,d,e 598) b 599) b 600) a 601)a,b,c 602) c 603) d 604) None 605) a 606)a,c,e 607) a 608) None
609) d 610) d 611) d 612) b 613)b 614) c 615)b 616)b 617)d

618. In which of the following differential cyanosis found?
a) VSD with reversal of shunt *(UPSC-108)*
b) PDA with reversal of shunt
c) ASD with reversal of shunt
d) Tetralogy of Fallot

619. Ductus arteriosus closes in response to -
a) Decrease in peripheral oxygen saturation
b) Indomethacin therapy *(UPSC-II08)*
c) Prostaglandin El
d) Increase in pulmonary vascular resistance

620. In transposition of great vessles, all are true except-
a) Aorta arises from the right ventricle *(AP 97)*
b) Mitral valve is continuous with the aortic valve
c) Causes jaundice immediately after birth
d) None of the above

621. A new born presents with deepening cyanosis at birth, with congestive heart failure and normal first heart sound. X-ray reveals cardiomegaly diagnosis is- *(UP 08)*
a) Tetralogy of fallot's
b) Ebstein anomally
c) Transposition of great vessels
d) Tricuspid atresia

622. "Egg on side appearance" is seen in - *(UP 08)*
a) Fallot's tetralogy
b) Transposition of great vessels
c) Ebstein's anomaly
d) Ventricular septal defect

623. A two-month-old infant is brought to the hospital emergency with marked respiratory distress. On examination, the infant has cyanosis and bilateral crepitations. Heart rate is 180/min, respiratory rate 56/min and the liver span 7.5 cm. The child has had repeated episodes of fever, cough and respiratory distress since the time of birth. Cardiovascular examination reveals a grade ni ejection systolic murmur in left parasternal area and the chest X-ray reveals cardiomegaly with a narrow base and plethoric lung fields. What is the most likely diagnosis? *(UPSC-I09)*
a) Congenital methemoglobinemia
b) Transposition of great arteries
c) Cystic fibrosis
d) Tetralogy of Fallot

624. A newborn baby develops cyanosis on day three of life. On auscultation, there is a systolic murmur. Echocardiography reveals a cyanotic heart disease in the baby. Which one of the following drugs can be administered to prolong the life of the baby pending intervention - *(UPSC-109)*
a) Indomethacin b) Ibuprofen
c) Prostaglandin Ej d) Propanolol

625. Emergency treatment for TGV - *(TN 99)*
a) Balloon septostomyb) Oxygen
c) Ventilation d)Digoxin

626. The clinical features associated with coarctation of aorta in older children are the following except -
a) Upper body hypertension *(UPSC-II 08)*
b) Prominent pulsation in neck
c) Fatiguableness, tiredness in leg
d) Absence of flow murmurs over scapular region

627. Obstruction in pulmonary stenosis may occur at the following sites - *(MAHA 05)*
a) Supravalvular b) Valvular
c) Subvalvular d) All of the above

628. Severity of Aortic stenosis is determined by ?
a) Late ejection systolic murmur *(APPG08)*
b) ST -T changes
c) LV Hypertrophy with displaced apex
d) None

629. Uncommon finding in congestive cardiac failure in newborn- *(CMC01)*
a) Tachycardia b) Tachypnoea
c) Hepatomegaly d) Pedal edema

630. Commonest cause of enlarged cardiac shadow in X-ray of a child is - *(Karn. 2000)*
a) PDA b) Coarctation of Aorta
c) Pericarditis d) Rheumatic carditis

631. Dose of digoxin in a child as mg/kg is - *(UPSC 88)*
a) 0.02-0.04 b) 0.03-0.05
c) 0.04-0.06 d) 0.06-0.08

632. Pure left sided failure may be seen with -
a) ASD *(A11MS 78, PGI81)*
b) Aortic stenosis
c) Patent ductus arteriosus
d) Pulmonary valvular obstruction

633. Infantile myocarditis and pericarditis is due to -
a) CoxsackieA b)CoxsackieB *(TN99)*
c) Mumps d) Pox virus

634. Cause of death in Acute rheumatic fever is -
a) Pericarditis b) Myocarditis *(UP08)*
c) Endocarditis d) Streptococcal sepsis

635. Which of the following manifestation of rheumatic fever disappears completely? *(Jipmer11)*
a) Carditis b) Arthritis
c) Chorea d) Subcutaneous nodules

636. Which of the following are immune complex lesions in SBE - *(PGI86)*
a) Meningitis b)Osier nodes
c) Microscopic hematuria d) Roth spots
e) Mycotic aneurysms

637. In infective endocarditis which of the following is not immune mediated- *(Kerala97)*
a) Roth spots b) Osiers nodes
c) Glomerulonephritis d)None

638. Commonest cause of systemic hypertension in children is - *(AIIMS89)*
a) Coarctation of aorta
b) Acute glomeurlonephritis
c) Nephrotic syndorme
d) Congenital adrenal hyperplasia

618)b 619)b 620)b,c 621)c 622)b 623)b 624)c 625)a 626)d 627)d 628)a,b 629)d 630)d 631)c 632)b,c 633) b 634) c 635) b 636)b,c,d 637) None 638) b

639. The average B .P. of a 1 year old child is -
a) 120/80 b) 75/50 *(PGI78, AMC 81)*
c) 95/50 d) 60/30

640. Intracavitary electrocardiography is a diagnostic aid in- *(UPSC 96)*
a) Tricuspid regurgitation
b) Endocardial fibroelastosis
c) Endomyocardial fibrosis
d) Ebstein's anomaly of the tricuspid valve

641. Balloon valvotomy is successful in all of the following cases except - *(UPSC 9 7)*
a) Congenital pulmonary stenosis
b) Calcified mitral stenosis
c) Mitral stenosis is pregnancy
d) Congenital aortic stenosis

642. The most common anomaly seen in the fetus of a mother taking lithum carbonate is - *(UP 97)*
a) Cardiac deformities b) Neural tube defect
c) Limb reduction d) Genitourinary deformities

643. A 7 year old child with rheumatic heart disease presents with pallor, fever and a palpable spleen. The following investigations would be needed to arrive at a diagnosis except - *(UPSC-110)*
a) Electrocardiogram b) Echocardiogram
c) Blood culture d) Urine examination

644. An 8-month-old female child presented to emergency with a heart rate of 220/minute and features of congestive heart failure. Her heart rate comes down to normal after administering intravenous adenosine. What is the most likely diagnosis?
a) Atrial fibrillation *(UPSC-I10)*
b) Atrial flutter
c) Paroxysmal supraventricular tachycardia
d) Ventricular tachycardia

645. Lutembacher's syndrome comprises of -
a) Ventricular septal defect with aortic stenosis
b) Ruptured sinus of valsalva aneurysm
c) Atrial septal defect with mitral stenosis
d) Complete common atrioventricular canal

646. A newborn infant was referred with intermittent cyanosis which improved on crying but worsened when quiet. What is the most likely diagnosis?
a) Diaphragmatic hernia *(UPSC-I10)*
b) Congenital heart disease (Cyanotic)
c) Choanal atresia
d) Tracheal agenesis

RESPIRATORY SYSTEM

647. True about upper airways of neonate-(PG7*Dec 2000)*
a) Cricoid is narrowest part
b) Larynx extend from C_4 to C_6
c) Epiglottis is big & omega shaped
d) All

648. Child's respiratory physiology differs from adult because of - *(PGI June 99)*
a) Smaller airways
b) Increased 0_2 demand
c) Decreased tidal volume
d) Decreased residual volume

649. Wheeze in children caused by - *(PGI June 05, 06)*
a) Foreign body
b) Gastro-esophageal reflux disease
c) Bronchial asthma
d) Epiglottis
e) Laryngomalacia

650. Recognised cause of stridor in newbom-(PG7 *79, AIMS*
a) Cystic hygroma b) A Vascular ring *80)*
c) Laryngomalacia d) All are true

651. Acute onset of cough, stridor and dysponea in a child is mostly due to - *(PGI93)*
a) Foreign body b) Acute Asthma
c) Aspiration pneumonitis d) Primary complex

652. Immediate management of a child with foreign body inhalation is - *(AI97)*
a) IPPV b) Bronchoscopy
c) Tracheostomy d) Exploratory Thoracotomy

653. In child, foreign body in lung- *(NEET/DNB Pattern)*
|SSi| .a)f^g'0₂brbrichdscopy-' ˢ ^>£4>)'dhe
c) Flexible endoscopy d) Direct laryngoscopy

654. Commonest sign of intrabronchial foreign body in children is - *(CUPGEE 99)*
a) Cough b) Wheeze
c) Dyspnoea d) Stridor

655. A 3 month old child presents with intermittent stridor. Most likely cause is- *(AI 01, AIMS Dec 95)*
a) Laryngotracheobronchitis
b) Laryngomalacia
c) Respiratory obstruction
d) Foreign body aspiration

656. Most common cause of stridor shortly after birth- *(NEET/DNB Pattern)*
a) Laryngeal papilloma b) Laryngeal web
c) Laryngomalacia d) Vocal cord palsy

657. Croup syndrome is usually caused *by-(PGI80, AUMS*
a) Rhinoviruses b) CoxsackieAvirus *83)*
c) Coxsackie B virus d) Para influenza

658. A child with three days history of upper respiratory tract infection presents with stridor, which decreases on lying down postion. What is the most probable diagnosis - *(AI07)*
a) Acute Epiglottitis
b) Laryngotracheobronchitis
c) Foreign body aspiration
d) Retropharyngeal abscess

659. A 2 year old child is brought to emergency at 3 AM with fever, barking cough and stridor only while crying. The child was able to drink normally. On examination respirator rate is 36/min and temprature is 39.6°C. What will be your next step -
a) Racemic epinephrine nebulization
b) High dose dexamethasone injection
c) Nasal wash for influenza or RSV
d) Antibiotics and blood culture *(AIIMS Nov 08)*

639) c 640) d 641) b 642) a 643) a 644) c 645) c 646) c 647) c 648) a 649) a,c 650) d 651) a 652) b
653) a 654) a 655) b 656) c 657) a,d 658) b 659) b

660. A 4 yr old child has 'seal barking' like croupy cough. Management includes A/E - *(PGI June 2000)*
a) 0_2 inhalation b) Antibiotic
c) Hydration d) Morphine

661. Which of the following is the aetiological agent most often associated with Epiglottitis in children - *(AIIMS May 05, Nov 04, May 94)*
a) Streptococcus pneumoniae
b) Haemophilus influenzae type b
c) Neisseria sp
d) Moraxella catarrhalis

662. The most common etiological agent for acute bronchiolitis in infancy is - *(AI06, 94)*
a) Influenza virus b) Para influenza virus
c) Rhinovirus d) Respiratory syncytial virus

663. Which of the following is/are true about bronchiolitis in children - *(PGI June 01)*
a) Caused by respiratory syncytial virus
b) Hyperinflation of the chest
c) Pleural effusion
d) May lead to bronchial asthma later in life
e) Lymphopenia is seen

664. A 6 months old baby coming with H/o increasing difficulty in breathing of 2 days duration and on examination baby is afebrile & B/L wheeze & CXR shows B/L hyperinflation of the lungs with normal WBC count, the diagnosis is - *(PGIDec 03)*
a) Bronchiolitis b) Asthma
c) Ch. Bronchitis d) Pneumonia
e) F.B.

665. A11 month old child presents with complaints of respiratory distress. On examination there is bilateral crepitation and wheezing. Which of the following is the most likely cause - *(AIIMS Nov 2K)*
a) Pneumonia b) Adenovirus
c) Respiratory synchytial virus d) Rhinovirus

666. A child with recent onset of URTI after 2 days presents with acute onset of breathlessness cough and fever. All of the following can be given except - *(AIIMS May 01)*
a) Antipyreticsb) Morphine
c) Antibiotics d) 0_2 inhalation

667. Treatment of choice in bronchiolitis is *(NEET/DNB Pattern)*
a) Ribavirin b) Amantadine
c) Vidarabine d) Zidovudine

668. A month old HIV positive child following URTI developed sudden onset of breathlessness. The chest x-ray shows hyperinflation. The 0_2 saturation was greater than90%. The treatment of choice is- *(AIIMS May 01)*
a) Cotrimoxazole b)Ribavarin
c) IV Ganciclovir d) Nebulized Acyclovir

669. Aerosolized ribavirin is used in the treatment of bronchiolitis with - *(PGI June 98)*
a) RSV b) H.influenza
c) Pneumococcus d) Streptococcus

670. In a child 1 years the commonest cause of resp. Infection with wheeze is - *(PGI 95)*
a) RSV b) Influenza viurs
c) Adenovirus d) Para influenza

671. In Bronchiolitis followings is/are *seen-(PGIDec 02)*
a) Seen in children 5 months to 3 years of age
b) Caused by streptococcus pheumoniae
c) Chest X-ray shows hyperinflation bilaterally
d) Symptomatic treatment is given
e) Antibiotics should be started

672. Features of bronchiolitis are - *(PGIJune 01)*
a) Caused by R.S.V.
b) Wheeze present
c) Pulmonary edema common
d) Seen in immunocompromised hosts
e) Common age group is from 5-15 years age

673. The commonest cause of Bacterial Pneumonia in children is - *(AI 95)*
a) Streptococcus pyogenes
b) Hemophilus influenzae
c) Streptococcus pneumoniae
d) Staphylococcus aureus

674. An infant develops cough and fever. The X-ray examination is suggestive of broncho-pneumonia. All of the following viruses can be the causative agent except - *(AI 04)*
a) Parainfluenza viruses
b) Influenza virus A
c) Respiratory syncytial virus
d) Mumps virus

675. A child with pyoderma becomes toxic and presents with respiratory distress. His chest radiograph shows patchy areas of consolidation and multiple bilateral thin walled air containing cysts. The most likely etiological agent in this case is-
a) Mycobacterium tuberculosis *(AIIMS Nov 03)*
b) Staphylococcus aureus
c) Mycobacterium avium intracellulare
d) Pneumocystis carinii

676. Pneumatocele is caused by - *(AI98)*
a) Staphylococcus b) Streptococcus
c) E. coli d) P camii

677. Pneumothorax could be a complication of -
a) Staphylococcal pneumonia *(UPSC2K)*
b) Pneumococcal pneumonia
c) Klebsiella pneumonia
d) Viral pneumonia

678. The commonest organism causing Empyema in a child under 2 years - *(AIIMS 91)*
a) E.Coil b) Staphylocccus
c) Pneumococcus d) Klebsiella

679. Giant cell (Hecht's) pneumonia is due to - *(Dec 98)*
a) CMV b) Measles
c) Malaria d)P. carinii

660)b,d 661)b 662)d 663)a,b,d 664)a 665)c 666)b 667)a 668)b 669)a 670)a 671)c,d 672)a,b 673)c 674) d 675)b 676)a 677)a 678)b 679) b

680. The drug of choice in mycoplasma pneumonia in children is - *(AI95)*
a) Tetracycline b) Streptomycin
c) Cotrimoxazole d) Erythromycin

681. The lung abscess in children can be caused by all except- *(AI 91)*
a) Pneumococcus b) E. Histolytica
c) Staphylococcus d) Klebsiella

682. In an infant with aspiration pneumonitis, the most common lung segment to be involved is -
a) Left apical b) Right *apica\(AIIMS May 93)*
c) Right middle d) Right basal

683. NOT a feature of childhood asthma is -
a) History of atopic dermatitis *(AIIMS Dec 94)*
b) Raised IgG level
c) Improves with age
d) Absence of wheezing after exercise

684. All are seen in asthma except - *(AI97)*
a) Cyanosis b) Wheezing
c) Clubbing d) Dysnea

685. Most common mode of treatment of a 1 year old child with asthma is - *(AI07)*
a) Inhaled short acting beta 2 agonist
b) Oral short acting theophylline
c) Oral ketotifen
d) Leukotriene agonist

686. All are used in acute attack of asthma in a 4 year old child except - *(AIIMS June 97)*
a) Theophylline b) Corticosteroids
c) Sedatives d)Salbutamol

687. A 3- year old boy is brought to the casualty by his mother with progressive shortness of breath for 1 day. The child has history of bronchial asthma. On examination , the child is blue, gasping and unresponsive What will you like to do first -
a) Intubate *(AIIMS Nov 02)*
b) Administer 100 % oxygen by mask
c) Ventilate with bag and mask
d) Administer nebulised salbutamol

688. In a child with excercise induced asthma, which is done- - *(NEET/DNB Pattern)*
a) Prophylaxis with steroids
b) Prophylaxis with Beta, agonist *Wi*
c) Prophylaxis with theophyline *MMm*
g||§f!|| Breathingexcercise ?2 HJ |§||

689. Child requiring repeated short acting bronchodilators and what could be next line of management-
a) Methylxanthines b) Short acting budesonide
c) Oral prednisolone d) Montelukast

690. Most common mode of treatment of a 1 year old child with asthma is - *(AI 07)*
a) Inhaled short acting beta-2 agonist
b) Oral short acting theophylline
c) Oral ketotifen
d) Leukotriene antagonists

691. A 3 month old child has moderate fever and non productive cough and mild dyspnea. After course of mild antibiotic the condition of the child improved transiently but he again develops high fever, productive cough and increased respiratory distress. Chest X ray shows hyperluscency and PFT shows obstructive pattern. Most probable diagnosis is -
a) Alveolar microlithiasis *(A111, AIIMS May 07)*
b) Post viral syndrome
c) Follicular bronchitis
d) Bronchiolitis obliterans

692. A 7 year old child presents with non productive cough, mild stridor since 6 months. On oral antibiotics, patient is improving but suddenly develops wheezing, productive cough, mild fever. X-ray shows hyperlucency and PFT shows obstructive curve. Most probable diagnosis is - *(AI 11, 08, AIIMS Nov 08, 07)*
a) Post viral syndrome
b) Bronchiolitis obliterans
c) Follicular bronchitis
d) Pulmonary alveolar microlithiasis

693. Infant with cystic fibrosis (CF) are likely to develop-
a) Meconium ileus b) Loose motions *(MAHE07)*
c) Vomiting d) Constipation

694. Which of the following statements about cystic fibrosis (CF) is not true - *(AIIMS May 11)*
a) Autosomal recessive disorder
b) Abnormality in CFTR which leads to defective calcium transport
c) Mutation in cystic fibrosis transport regulator

695. Features of cystic fibrosis - *(PGI June 06)*
a) Lung normal at birth
b) Abnormal sweat chloride tests
c) Autosomal dominant
d) Defect in Chromosome 11

696. Most common organism associated with cystic fibrosis - *(AIIMS May 11)*
a) Pseudomonas aeruginosa (non mucoid)
b) Burkholderia cepacia
c) Pleisomonas
d) Aeromonas

697. 4 year old boy presented with recurrent chest infections. Sweat chloride test was done, showed values of 36 and 42. What is the next best investigation to confirm the diagnosis?
a) 72 hour fecal fat estimation
b) CT chest *(AIIMSMay 11, Nov 07)*
c) Transepithelial nasal potential difference
d) DNA analysis of delta F 508 mutation

698. A child is brought to the paediatric OPD with fever of 24 hours duration. History reveals 3 episodes of chest infection and passage of foul smelling stools. The most probable diagnosis is - *(AI 12)*
a) Cystic Fibrosis
b) Maple Syrup urine Disease
c) Bilirubin Congugation Defect
d) CrigglerNajar Syndrome

680) d 681) b 682) b 683) b 684) c 685) a 686) c 687) b 688) b 689) b 690) a 691) d 692) b 693) a,d 694) b 695) a,b 696) a 697) c 698) a

699. Mucoviscidosis is most commonly related to -
a) Fibrocystic disease of pancreas *(AI96)*
b) Duodenal atresia
c) Diaphragmatic hernia
d) Annular pancreas

700. Following are true about bronchial cyst except -
a) Mostly mediastinal *(AIIMS 96)*
b) 50-70% occur in lungs
c) Usually multiloculated
d) Are infected quite often

701. A 4 years child presents with a history of chronic left lower lobe pneumonitis. On contrast bronchography, the area involved with the pneumonitis does not fill whereas the area around it does fill. The most likely diagnosis -
a) Asthma b) Pulmonary sequestration
c) Cystic fibrosis d) Bronchopulmonary dysplasia
e) bronchogenic cyst

702. Which of the statements is not true regarding Macleod's Syndrome -
a) It is not a true emphysema
b) Occurs before 8 years of age
c) It is unilateral emphysema
d) The pulmonary artery on the affected side is hyperplastic
e) It is also called Swyer - Jame's Syndrome

703. A child present with recurrent sinusitis and recurrent chest infections. Chest X-ray reveals dextrocardia and situs invertus. The diagnosis is -
a) Kartagener's syndrome *(AIIMSNov 11)*
b) Good-pasture's syndrome
c) Ehlers-Danlos syndrome
d) William Campbell syndrome

704. Bronchitis in children is caused by - (PGI June 05)
a) H. influenzae b)R.S.V.
c) Mycoplasma d)EBV
e) Influenza virus

705. In which disease, symptoms improve with crying- *(NEET/DNB Pattern)*
a) Tetralogy of fallot b) Choanal atresia
c) Bronchial asthma d) All of above

706. Most common cause of mass in posterior mediastinum in children - *(PGI June 01)*
a) Rhabdosarcoma
b) Duplication cyst of oesphagus
c) Lymphoma
d) Neuroblastoma
e) Thymoma

707. A girl child with fever, cough, dyspnoea with x-ray showing right lower lobe patchy consolidation, for which treatment was given. After 8 weeks symptom improved but x-ray showed more dense consolidation involving the whole of the right lower lobe. What is the next best line of investigation? *(AIIMSNov 07)*
a) Bronchoscopy
b) Culture from nasopharynx
c) Barium esophagogram
d) Allergic skin test

708. In a 4 year old child with ASOM the infecting organism is likely to be - *(AIIMS 83, AI 88)*
a) Pneumococcus b) H.influenza
c) Streptococcus d) Staphylococcus

709. Which of the following is an indiction for tonsillectomy- *(AIIMS 83)*
a) Rheumatic fever
b) Glomerulonephritis
c) Recurrent upper respiratory infection
d) Persistent carrier of diptheria bacilli

710. Laryngeal papilloma- *(PGI 88)*
a) Single b) Multiple
c) Seen in children d) Cautery is treatment

711. A Primi mother having 3 weeks male child, which is presenting with noisy breathing sound child is afebrile, sleeping & feeding well & on clinical examination, He is normal. Management protocol include - *(PGIDec 08)*
a) Begin IV antibiotics
b) Reassure & give saline nasal drop
c) Give recemic epinephrine
d) Order for a chest X-ray
e) Give some decongestant

712. Child with which of the following throat infection needs systemic antibiotic *ihempy-(JIPMER 81,Delhi 92)*
a) Pneumococci b) B. hemolytic streptococci
c) Staph aureus d) All of the above

713. Combination chemotherapy is not indicative in-
a) Primary complex *(JIPMER95)*
b) Acute epiglottitis
c) Laryngotracheobronchitis
d) Immunologically supressed patients

714. If a 5-year-old child suddenly develops stridor, which one of the following would be the most likely diagnosis-
a) Laryngomalacia *(UPSC-109)*
b) Acute laryngo-tracheobronchitis
c) Foreign body aspiration
d) Acute epiglottitis

715. A 4-year child presents with a history of hoarseness, croupy cough and aphonia, the child has dyspnoea with wheezing. The most probable diagnosis is -
a) Asthmatic bronchitis *(DPG10)*
b) Laryngeal foreign body
c) Bronchopneumonia
d) Retropharyngeal abscess

716. The correct line of management in child who has swallowed a coin is - *(TNPSC 2K)*
a) Fibreoptic endoscopy b) Rigid endoscopy
c) Laparotomy d) Wait and watch

717. A 2-month old infant has had inspiratory stridor since the first month of life, but has been otherwise well. Physical examination is unremarkable except for moderate inspiratory stridor and retractions

699) a 700) b 701) b 702) c 703) a 704) e 705) b 706) d 707) a 708) a 709) c,d 710)a,b,c 711)b 712) d 713)c 714) c 715) b 716)d 717)b

which are worse when the infant is supine or agitated and better when he is prone and quiet. The most likely cause of these findings is - *(MAHA 05)*
a) Reactive airway disease
b) Laryngomalacia
c) Viral croup
d) An aspirated foreign body

718. A 9 month old infant presents with a 2- day history of fever, cough and breathlessness following an upper respiratory infection. She is febrile and has a respiratory rate of 80/min. Intercostal and subcostal retractions and extensive rhonchi on auscultation. A chest X-ray reveals a hyperinflated chest- *(UPSC 99)*
a) Bronchial asthma
b) Foreign body aspiration
c) Bacterial pneumonia
d) Bronchiolitis

719. Regarding bronchiolitis one of the following statements is not true - *(Kam 95)*
a) Bronchiolitis in a self-limiting viral illness secondary to respiratory syncitial virus
b) It occurs commonly in children above 2 years of age
c) Ribavirin is the drug of choice for treatment of this condition
d) It predisposes children for later development of asthma

720. Pneumatoceles often develop in children after pneumonia due to the following organism -
a) Klebsiella *(Corned 07)*
b) Streptococcus
c) Staphylococcus aureus
d) Haemophilus influenzae

721. Pneumatoceles on chest radiograms in a child with pneumonia are seen the infection -*(Kam 11)*
a) Staphylococcus b) Pneumococcus
c) Streptococcus d) Hemophilus influenza

722. The major advantage of alternate day prednisone therapy for conditions such as asthma-
a) There is less adrenal suppression
b) More effective *(PGI81, AP 89)*
c) More convenient
d) Less expensive

723. A children presents with running nose, breathlessness, family history positive, Most likely diagnosis is - *(UP 08)*
a) Bronchiolitis b) Viral pneumonia
c) Bronchial asthma d)None

724. The treatment of traumatic rupture of tympanic membrane is- *(JIPMER 91)*
a) Aural packing
b) Chloromycetin ear dorps
c) Tympanoplasty
d) No active treatment

GASTROINTESTINAL TRACT

725. A newborn has dribbling after feeds. He has respiratory distress and froths at the mouth. Diagnosis is - *(A101)*
a) Tracheoesophageal fistula
b) Tetralogy of fallot
c) Respiratory distress syndrome
d) None of the above

726. A newborn baby had normal APGAR score at birth and developed excessive frothing and choking on attempted feeds. The investigation of choice is -
a) Esophagoscopy *(AIIMS May 03)*
b) Bronchoscopy
c) MRI chest
d) X-ray chest and abdomen with the red rubber catheter passed per orally into esophagus

727. Congenital hypertrophic pyloric stenosis usually presents - *(AIIMS May 04)*
a) Within 2 days after birth
b) Around 1 week after birth
c) Around 2 weeks after birth
d) Around 2 months after birth

728. The metabolic derrangement in congenital pyloric stenosis is - *(AIIMS Nov 02, Nov 06)*
a) Hypochloremic alkalosis
b) Hyperchloremic alkalosis
c) Hyperchloremic acidosis
d) Hypochloremic acidosis

729. A 40 year old male presents with recurrent bouts of vomiting since 9 months because of pyloric obstruction. The compensatory biochemical change is- *(AIIMS May 01)*
a) Respiratory Alkalosis
b) Respiratory acidosis
c) Paradoxical aciduria with hyponatremia and hypochrorenia
d) Metabolic acidosis

730. A 6 year old boy presenting with palpable abdominal mass in the epigastrium. The clinical diagnosis is (There is no bile in vomitus)- *(NEET/DNB Pattern)*
a) Duodenal Atresia b) Choledochal cyst
c) Pyloric stenosis d) Oesophageal Atresia

731. Regarding congenital hypertrophic pyloric stenosis all are correct except- *(PGI87)*
a) Weight loss
b) Diarrhoea
c) Visible peristalsis
d) Remsted's operation is done

732. Acquired megacolon in children most commonly due to- *(SGPGI05)*
a) Psychological problems
b) Bad bowel habit
c) Chaga's disease
d) Hirschsprung's disease

718)d 719)b 720)a,c 721)a 722)a 723)c 724)d 725)a 726)d 727)c 728)a 729)c 730)c 731)b 732) b

733. Agangiionic segment is encountered in which part of colon in case of Hirschsprung's disease -
a) Distal to dilated segment *(AIMS Nov 99)*
b) In whole colon
c) Proximal to dilated segment
d) In the dilated segment

734. A male infant presented with distension of abdomen shortly after birth with passing of less meconium. Subsequently a full-thickness biopsy of the rectum was performed. The rectal biopsy is likely to show -
a) Fibrosis of submucosa *(AIMS Nov 04)*
b) Lack of ganglion cells
c) Thickened muscularis propria
d) Hyalinisation of the muscular coat

735. True statement regarding Hirschsprung's disease-
a) Giant ganglia are present *(AIMS June 99)*
b) Mucosa is involved and show foldings
c) Manometry excludes the disease
d) Rectal biopsy is contraindicated in infants

736. Failure to pass meconium within 48 hrs of birth in a newborn with no obvious external abnormality should lead to the suspicion of - *(AIMS Nov 02)*
a) Anal atresia
b) Congenital pouch colon
c) Congenital aganglinosis
d) Meconium ileus

737. True about Hirshprug's disease - *(PGIDec08)*
a) Agangiionic segment is contracted not dilated
b) Descending colon is most common site
c) Barium enema is diagnostic
d) Barium enema shows calcification

738. Most common cause of AcuteIntestinal Obstruction in neonates is - *(NEET/DNB Pattern)*
a) Jejunal atresia
b) Malrotation
c) Duodenal atresia
d) Acute Intussusception

739. Which one of the following is most suggestive of neonatal small bowel obstruction - *(AI03)*
a) Generalized abdominal distension
b) Failure to pass meconeum in the first 24 hours
c) Bilious vomiting
d) Refusal of feeds

740. Most important cause of abdominal distension in intestinal obstruction - *(AIMS Dec 1995)*
a) Cases produced by bacterial activity
b) Cases diffused from blood
c) Swallowed air
d) Products of digestion

741. A neonate presented with fever, lethargy, abdominal distension, vomiting and constipaton. Clinically he was diagnosed as volvulus neonatarum with suspected perforation. Best investigation would be -
a) Plain x-ray *(AI 10)*
b) Barium enema
c) Upper GI endoscopy
d) Barium meal follow through

742. Commonest cause of intestinal obstruction in children is - *(NEET/DNBPattern)*
a) Intussusception b) Volvulus
c) Hernia d) Adhesions

743. A10 month old infants presents with acute intestinal obstruction. Contrast enema X-ray shows the intussusceptions, likely cause is - *(AI 02)*
a) Peyer's patch hypertrophy
b) Meckle's diverticulum
c) Mucosal polyp
d) Duplication cyst

744. A 6 months old baby with H/O bloody diarrhoea of 2 days duration with abdominal distension and on examination the baby screams, diagnosis is -
a) Intussuscetion b)HUS *(PGIDec03)*
c) Appendicitis d) Ac. Enterocolitis

745. A 9 months old girl is presented with PR bleed, vomiting, mass & colicky pain in Rt lumbar region with masked liver dullness. She is in shocklike condition. Management should includes-(PG*/Nov 10)*
a) Barium enema b) Saline reduction
c) Give 0_2 d) Nasogastric tube
e) IV fluid

746. Infant with blood in stools and mass in abdomen, diagnosis is - *(PGI June 01)*
a) Intussusception
b) Volvulus
c) Idiopathic abdominal epilepsy
d) Hirschsprung's disease

747. Recurrent obstruction, mass per rectum and diarrhoea in child - *(PGI June 2000)*
a) Intussuception b) Rectal prolapse
c) Internal hernia d) Haemorrhoids

748. A previously healthy infant presents with recurrent episode of abdominal pain. The mother says that the child has been passing altered stool after episodes of pain, but gives no history of vomiting or bleeding per rectum. Which of the following is the most likely diagnosis: *(AI 11)*
a) Rectal Polys
b) Intussuception
c) Meckel's Diverticulum
d) Necrotizing Enterocolitis

749. Which of the following includes inflammatory bowel disease in children - *(PGI June 05)*
a) Coeliac disease b) Tropical sprue
c) Regional ileitis d) Cystic fibrosis
e) Ulcerative colitis

750. Common site of regional enteritis is ^
a) Colon *(NEET/DNB Pattern)*
b) Rectum
c) Distal ileum and colon
d) Caecum

751. Skip granulomatous lesions are seen in - *(AI96)*
a) Ulcerative colitis b) Crohn's disease
c) Whipple's disease d) Reiter's disease

733) a 734) b 735) c 736) c 737) a 738) c 739) c 740) c 741) a 742) a 743) a 744) a 745)a,c,d,e 746) a,b 747) a 748) b 749) c,e 750) c 751)b

752. Pseudopolyps are features of - *(AI94)*
a) Crohn's disease b) Ulcerative colitis
c) Celiac sprue d) Whipple's disease

753. Toxic megacolon is seen in - *(AI 98)*
a) Chronic nonspecific ulcerative colititis
b) Crohn's disease
c) Colonic diverticulosis
d) Hamartomatous polyp

754. In which of the following conditions the lead pipe appearance of the colon on a barium enema is seen -
a) Amoebiasis *(AIIMSNov04)*
b) Ulcerative colitis
c) Tuberculosis of the colon
d) Crohn's involvement of the colon

755. An eight year old boy had abdominal pain, fever with bloody diarrhea for 18 months. His height is 100 cms and weight is 14.5kg. Stool culture was negative for known enteropathogens. The sigmoidoscopy was normal. During the same period, child had an episode of renal colic and passed urinary gravel. The mantoux test was 5x5 mm. The most probable diagnosis is - *(AI 03)*
a) Ulcerative colitis b) Crohn's disease
c) Interstinal tuberculosis d) Strongyloidosis

756. True regarding crohn's disease are A/E -
a) Scleroderma *(AIIMS June 97)*
b) Transmural involvement
c) Cobble stone appearance
d) Skin involvement

757. All are features of neonatal necrotizing enterocolitis except - *(AI 98)*
a) Abdominal distension b) Increased bowel sound
c) Metabolic acidosis d) Pneumoperitoneum

758. A newborn suffering from perforated necrotizing enterocolitis is having very poor general condition. He is currently stabilized on ventilator. Which of the following should be done in the management of this patient - *(AI 08)*
a) Conservative treatment
b) Resection and anastomosis
c) Stabilization with membrane oxygenator and defer surgery
d) Peritoneal drainage by putting drains in the flanks

759. A premature neonate on top feeding develop abdominal destension and bleeding per rectum. He recently recovered from acute upper respiratory tract infection. What is the probable diagnosis -
a) Necrotizing enterocolitis *(PGIDec08)*
b) Valvulus
c) Meckel's diverticulum
d) Intussusception

760. A neonate is suspected to be suffering from necrotizing enterocolitis (NEC). On further examination and investigation, he is diagnosed to be Bell's stage I NEC. The management of choice would be- *(AIIMS May 12)*
a) Laparotomy and proceed
b) Insertion of bilateral pelvic drains
c) Conservative management with IV fluids and antibiotics
d) Initial conservative management and laparotomy after 24 hours

761. A 12 yead old girl has history of recurrent bulky stools and abdominal pain since 3 year of age. She has moderate pallor and her weight and height are below the 3rd percentile. Which of the following is the most appropriate investigations to make a specific diagnosis ? *(AIIMS Nov 04)*
a) Small intestinal biopsy
b) Barium studies
c) 24 hrs fecal fat estimation
d) Urinary d-xylose test

762. In children presence of increased fecal fat excretion and increased fecal nitrogen levels is a feature of All Except- *(AI 99)*
a) Pancreatic-insufficency
b) Bacterior overgrowth syndrome
c) Coeliac sprue
d) Ulcerative-colitis

763. The following cereals should be avoided in patients with celiac diseases, except - *(AIIMSNov 03)*
a) Wheat b) Barely
c) Maize d)Rye

764. The histological features of coeliac disease include all of the following Except - *(AI 02)*
a) Crypt hyperplasia
b) Increase in thickness of the mucosa
c) Increase in intraepithelial lymphocytes
d) Increase in inflammatory cells in lamina propyria

765. Gluten sensitive enteropathy is most strongly associated with - *(AI 03)*
a) HLA-DQ2 b) HLA-DR4
c) HLA-DQ3 d) Blood group ' B '

766. In celiac disease A/E - *(PGI June 2000)*
a) Gliadin is cause
b) Associated with HLA-B_g
c) Decreased villi to crypt ratio
d) Increased brush border

767. A boy comes with complains of vomiting, bloated abdomen and abdominal pain. He has history of attending ice-cream eating competition last night. He also has past history of similar episodes following ingestion of milk and milk products. The likely cause - *(AIIMS Nov 99)*
a) Pancreatic amylase deficiency
b) Lactase deficiency
c) Salivary amylase deficiency
d) Food poisoning

752) b 753)a 754)d 755)b 756)a 757)b 758) d 759)a 760)c 761)a 762)d 763)c 764)b 765) a 766) b 767) b

768. One of the intestinal enzymes that is generally deficient in children following an attack of severe infectious enteritis is - *(AI05)*
a) Lactase b) Trypsin
c) Lipase d) Amylase

769. In neonatal cholestasis, if the serum gamaglutamyl-transpeptidase (gamma GTP) is more than 600IU/L the most likely diagnosis is - *(AI 04, AIIMSNov 02)*
a) Neonatal hepatitis b) Choledochal cyst
c) Sclerosingcholangitis d) Biliary atresia

770. In a child presenting with obstructive Jaundice all are seen except - *(AIIMS Nov 06)*
a) Gamma glutamyl transpeptidase
b) Alkaline phosphatase
c) Glutamate dehydrogenase
d) 5' Nucleotidase

771. Neonatal cholestasis is seen in - *(AIIMS June 98)*
a) Chronic hepatitis
b) Hepatitis B & C
c) Glycogen storage disorders
d) Mucopolysacchroidosis

772. Most common cause of cholestatic janudice in new born is- , *(NEET/DNB Pattern)*
a) Hypoplasia of biliary tract
b) Neonatal heptitis
e) Choledochal cyst
d) Physiological

773. The most common genetic cause of liver disease in children is - *(AI 02)*
a) Haemochromatosis
b) (Xj antitrypsin deficiency
c) Cystic fibrosis
d) Glyocgen storage disease

774. A neonate presents with jaundice and clay coloured stools. Liver Biopsy shows giant cells diagnosis is -
a) Neonatal hepatitis with physiological jaundice
b) Neonatal hepatitis with extrahepatic biliary atresia *(AIIMS Nov 01, AI 01)*
c) Physiological jaundice
d) Physiological jaundice with extrahepatic biliary atresia

775. A neonate is being investigated for jaundice. A liver biopsy shows features of a "Giant Cell/Neonatal hepatitis". Which one of the following conditions usually results in this case - *(AIIMS Nov 04)*
a) Congenital hepatic fibrosis
b) Hemochromatosis
c) Alpha-1-antitrypsin deficiency
d) Glycogen storage disease Type 1

776. True about Extrahepatic biliary atresia -
a) Acholic stool *(PGI June 03)*
b) Unconjugated hyperbilirubinemia
c) Conjugated hyperbilirubinemia
d) Absence of nucleide in duodenum in HIDA scan
e) Jaundice is presenting feature

777. A 2 months old exclusively breast fed child develops jaundice since birth, acholic stool high conjugated bilirubin in blood and absent urobilinogen in urine. The likely cause is - *(AIIMSNov 99)*
a) Hypothyroidism
b) Congenital biliary atresia
c) Neonatal hepatitis
d) Breast milk jaundice

778. A 2 month baby presents with history of jaundice, turmeric colored urine and pale stools since birth. Examination reveals liver span of 10 cms. The most specific investigation for establishing the diagnosis would be- *(AI03)*
a) Liver function tests
b) Ultrasound abdomen
c) Peroperative cholangiogram
d) Liver biopsy

779. Portal hypertension in children in India is commonly due to - *(AIIMS Nov 03)*
a) Indian childhood cirrhosis
b) Extrahepatic portal venous obstruction
c) Idiopathic portal hypertension
d) Hepatic out flow tract obstruction

780. A12 year old boy presents with hemetemesis, malena and mild splenomegaly. There is no obvious jaundice or ascitis. The most likely diagnosis is - *(AI 11)*
a) EHPVO b)NCPF
c) Cirrhosis d) Malaria with DIC

781. Most common cause of portal hypertension in children is - *(NEET/DNB Pattern)*
a) Extrahepatic compression
b) Budd chiari syndrome
c) Veno-occlusive disease
d) Post necrotic

782. A 7 year old girl from Bihar presented with three episodes of massive hematemesis and melena. There is no history of jaundice. On examination, she had a large spleen, non-palpable liver and mild ascites. Portal vein was not visualized on ultrasonography. Liver function tests were normal and endoscopy revealed esophageal varices. The most likely diagnosis is - *(AI 03)*
a) Kala azar with portal hypertension
b) Portal hypertension of unknown etiology
c) Chronic liver disease with portal hypertension
d) Portal hypertension due to extrahepatic obstruction

783. Ramu, a 8 yr old boy presents with upper G1 bleeding. On examination, he is found to have splenomegaly; there are no signs of ascites, or hepatomegaly; esophageal varices are found on UGIE Most likely diagnosis is - *(AI 01)*
a) Budd chiari syndrome
b) Non cirrhotic portal hypertension
c) Cirrhosis
d) Veno-occlusive disease

768) a 769) d 770) c 771) b 772) b 773) b 774) b 775) c 776)a,c,d 777) b 778) d 779) b 780) a 781) a 782) d 783) b

784. A child is brought by mother with HO massive hematemesis with HO drug intake previously with NS AIDS and on Rx. Associated with moderate splenomegaly diagnosis is - *(PGIDec 06)*
a) Oesophageal varices b) Duodenal ulcer
c) Drug induced gastritis d) Peptic ulcer

785. Most common cause of severe hematemesis in a child is- *(UPSC 85, JIPMER 87)*
a) Portal hypetension b) Peptic ulcer
c) Mallory weiss syndrome d) None of the above

786. Cause of liver cirrhosis in childhood include-
a) Alpha-1 antitrypsin deficiency *(PGI 81, 84)*
b) Coeliac disease
c) Phenylketonuria
d) Cow's milk intolerance

787. Which of the following is not seen in Indian childhood cirrhosis - *(AI89)*
a) Mallory hyaline b) Fatty change
c) Creeping fibrosis d) Portal inflammation

788. In a child with active liver failure, the most important prognosis factor for death is - *(AIIMS May 06)*
a) Increasing transaminases
b) Increasing bilirubin
c) Increasing prothrombin time
d) Gram -ve sepsis

789. *True* **about diarrhea -** *(PGIDec 03)*
a) Defined as passage of 2-3 formed stool/day
b) Blood mixed with mucous stool is defined as dysentery
c) Rota virus is the MC organism in children
d) Persistent diarrhea is defined if duration is more than 21 days

790. The most common cause of diarrhea in children is -
a) Vibrio cholerae b) E. coli *(A195)*
c) Rota virus d) Pneumococcus

791. All can cause diarrhoea except - *(AIIMS June 98)*
a) Rota virus b) Calci virus
c) Reo virus d)Adenovirus

792. A 6-month-old infant presents to the 'diarrhoea clinic' unit with some dehydration. The most likely organism causing diarrhea is - *(AIIMSNov 03)*
a) Entamoeba histolytica b) Rotavirus
c) Giardia lamblia d) Shigella

793. The most common bacterial cause for diarrhea in children in India is - *(AI12)*
a) EnterotoxigenicE.coli (ETEC)
b) EnteropathogenicE.coli (EPEC)
c) EnterohaemorragicE.coli (EHEC)
d) Vibrio Cholerae

794. A child is diagnosed to have acute gastroenteritis. The consulting pediatrician wants to send a stool sample to a lab which is 16-18 hrs. away. Which of the following mediums should he use to send this sample- *(AIIMS Nov 2000)*
a) Charcol cotton bud
b) Carry Blair medium
c) Sterilized jar
d) A medium with high $C0_2$ content

795. Intractable diarrhoea in children is caused by all except - *(PGI June 2000)*
a) Cystic fibrosis b) Giardiasis
c) Secreting tumors d) Milk allergy

796. Profuse watery diarrhea in an immuno compromised child is due to - *(NEET/DNB Pattern)*
a) Cryptococcus ; b) Aiho6ba
c) Giardia d) Lactose intolerance

797. Recurrent abdomianl pain in children in most often due to- *(AIIMS 83)*
a) Roundworms
b) Emotional/hebavioural problems
c) Amoebiasis
d) Giardiasis

798. Commonest cause of abdominal pain in children is - *(PGI87)*
a) Porphyria b) Worm colic
c) Lead poisoning d) Appendicitis

799. Colic generally disappear by age- *(UPSC83,AMC81)*
a) 1 year b) 2 years
c) 4 months d) 8 months

800. Organic causes of constipation in infant are all except - *(PGI May 10)*
a) High fibre diet b) Cystic fibrosis
c) Hypothyroidism d)Hyperthyroidis

801. Chronic Constipation in children is seen in all A/E-
a) Hirschspring disease ; *(NEET/DNB Pattern)*
b) Jejunal polyp
c) Hypothyroidism
d) Stricture

802. Which of the following is the earliest indicator of pathological gastroesophageal reflux in infants (GERD) - *(AI 11)*
a) Respiratory Symptoms
b) Postprandial Regurgitation
c) Upper GI Bleed
d) Stricture Esophagus

803. Double bubble sign in children seen in A/E -
a) Ladds band *(PGI Dec 04)*
b) Annular pancreas
c) Pancreatic pseudocyst
d) Diaphragmatic hernia

804. Childhood cholelithiasis is seen *in-(AIIMS June 98)*
a) Hurler Syndrome
b) Mucopolysaccharidosis
c) Neimann Pick's disease
d) Autoimmune hepatitis

805. Pseudopancreatic cyst in a child is commonly due to- *(AI99)*
a) Annular pancreatitis
b) Drug induced pancreatitis
c) Traumatic pancreatitis
d) Choledochal cyst

784) a 785) a 786) a 787) b 788) d 789)b,c,d 790) c 791) c 792) b 793) a 794) b 795) b 796) c 797) b
798) c 799) c 800) a,d 801) b 802) a 803) b 804) c 805) c

806. A new born with recurrent vomiting, cyanosis after each feed is likely to be suffering *irom-(APPGE 05)*
a) Tracho oesophageal fistula
b) Tetrology offallot
c) Congenital hypertrophic pyloric stenosis
d) ARDS

807. Cause of "bloody" vomitus in a neonate-(M4ffiš *05)*
a) Meckel's diverticulum b) Intussusception
c) Malrotation d) Cholecystitis

808. A young boy presents with failure to thrive. Biochemical analysis of a duodenal aspirate after a meal reveals a deficiency of enteropeptidase (enterokinase). The levels of which one of the following digestive enzymes would be affected ?
a) Amylase b) Pepsin *(UPSC 07)*
c) Lactose d) Trypsin

809. 14 year old girl with history of abdominal pain (periumbilical), postprandial, passing blood in stools, fever, weight loss since ten months. She also has episodes of passing blood in stools. What may be the likely diagnosis? *(St Johns 02)*
a) Chronic appendicitis b) Chronic pancreatitis
c) Crohn's disease d) Bulimia

810. Most common cause of dysentery is - *(JIPMER 98)*
a) Shigella dysentrie b) E. Histolytica
c) Salmonella d) Compylobacter

811. X-ray detect congenital anorectal malformation at- *(UP 07)*
a) Immediately afterbirth b) 24-48 hours
c) 48-72 hours d) After 72 hours

812. Intrahepatic cholestasis is seen in - *(MP 98)*
a) Galactosemia b) Hypercalcemia
c) Haemochromatosis d) Cystic fibrosis

813. Absent stomach bubble on antenatal ultrasonography is an important finding for antenatal diagnosis of-
a) Congenital heart disease in the foetus
b) Oesophageal atresia in the foetus *(UPSC 96)*
c) Omphalocele in the foetus
d) Spina bifida in the foetus

814. A two year old child presents with persistent diarrhoea acidic stools and presence of one per cent of reducing substance in the fresh stools. What is the most probable diagnosis ? *(UPSC 0 7)*
a) Cystic fibrosis
b) Lactose intolerance
c) Rotavirus induced diarrhoea
d) Intestinal tuberculosis

815. To induce vomiting at home in a child who has ingested a poison, the recommended agent of choice would be- *(COMEDK05)*
a) Oral rehydration solution
b) Mustard in warm water
c) Apomorphine
d) Syrup of ipecac

816. The commonest cause of vomiting in a one month old infant is - *(Karanataka pgmee 06)*
a) Pyloric stenosis b) Cardiac chalasia
c) Aerophagy d) Gastro-esophageal reflux

817. In necrotising enterocolitis earliest change seen in X-ray abdomen is- *(Kerala 96)*
a) Non specific bowel dilatation
b) Gas in the intestinal wall
c) Gas in splenic flexure
d) Ground glass appearance
e) None

818. Which of the following is a charactersistic radiological finding in neonatal necrotizong enterocolitis -
a) Gas in the portal system *(Jipmer 2K)*
b) Gas in the intestinal wall
c) Pneumoperitonium
d) Air fluid levels

819. Pneumatosis intestinalis is most often seen in -
a) Neonatal necrotising enterocolitis *(Karn 95)*
b) Midgut valvulus
c) Meconium peritonits
d) Neonatal visual perforation

820. Most common bacteria causing diarrhea in children in India is- *(Karn 11)*
a) Enterotoxigenic E. coli
b) Enteroinvasive E. coli
c) Enterohemorrhagie E. coil
d) Enteropathogenic E. coil

821. Which one of the following hepatitis viruses have significant prenatal transmission? *(Delhi PGFeb. 09)*
a) Hepatitis E virus b) Hepatitis C virus
c) Hepatitis B virus d) Hepatitis A virus

822. Treatment of choice in 11 years old chidren with hepatitis C infections - *(UP 08)*
a) Vaccine b) Interferon
c) Gamma-globulin d) Corticosteroids

823. In a child with acute liver failure, the most important abnormal serum biochemical test that indicates poor prognosis is - *(COMED 09)*
a) Increasing transaminases
b) Increasing bilirubin
c) Increasing prothrombin time
d) Reversal of serum albumin-globulin ratio

824. Oesophageal atresia may occur as a part of VACTER group of anomalies. What does 'TE' stand for?
a) Tetralogy of Fallot *(UP SC II10)*
b) Thoracic empyema
c) Tracheo-oesophageal fistula
d) Talipes equinovarus

URINARY TRACT

825. The neonatal kidney achieves concentrating ability equivalent to adult's kidney by - *(AI04)*
a) One year of age
b) Eighteen months of age
c) Three to six months of age
d) Just before puberty

806)a 807)None 808)d 809)c 810)a 811)b 812)a,d 813)b 814)b 815)d 816)c 817)a 818)b 819)a 820) a 821) c 822) b 823) None 824) c 825) a

826. Whic one of the following is the most common cause of abdominal mass in neonates - *(AI03)*
a) Neuroblastoma
b) Wilm's tumour
c) Distended bladder
d) Multicystic dysplastic kidneys

827. Which of the following is the most common renal cystic disease in infants is ? *(AI 05)*
a) Polycystic kidney
b) Simple renal cyst
c) Unilateral renal dysplasia
d) Calyceal cyst

828. All of the following are true about childhood polycystic kidney disease, except - *(AI 09)*
a) Autosomal dominant
b) Pulmonary hypoplasia
c) Renal cyst present at birth
d) Hepatic fibrosis

829. Baby born at 30 weeks for 18 year old primi gravida of weight 2 kg which died after 48 hours. Apgar scores were 5 and 8 at 1 and 5 minutes. On autopsy bilateral enlarged kidney with multiple radially arranged cysts. Which of the following finding is expected to be associated with ? *(AIIMSNov 0 7)*
a) Imperforate anus
b) Hepatic cyst and fibrosis
c) Absence of ureter
d) Holoprosencephaly

8|I Unilateral renal agenesis is associated with -
a) Polycystic disease of pancreas
b) Hiatus Hernia , *(NEET/DNB Pattern)*
c) Single,umbilical artery.

831. "Potter's syndrome" is associated with - *(MAHE 05)*
a) Renal anomalies b) Severe oligohydramnio's
c) Flattened nose d) All the above

832. An 8 year old child suffering from recurrent attacks of polyurea since childhood presents to the paediatrics OPD. On examination the child is short statured vitals and B.P. are normal. Serum Creatinine - 6 mg%, HC03 -16 meq, Na -134, K+ 4.2 On USG bilateral small kidneys are seen. Diagnosis is - *(AIIMS May 01)*
a) Reflux Nephropathy
b) Nephronophthisis
c) Polycystic kidney disease
d) Medullary cystic kidney disease

833. A-13-year old boy is referred for evaluation of nocturnal enuresis and short stature. His blood pressure is normal. The hemoglobin level is 8g/dl. urea 112 mg/dl, creatinine 6 mg/dl, sodium 119 mEq/dl, potassium 4 mEq/1, calcium 7 mg/dl, phosphate 6 mg/dl and alkaline phophatase 300 U/l. Urinalysis shows trace proteinuria with hyaline casts; no red and white cells are seen. Ultrasound shows bilateral small kidneys and the micturating cystourethrogram is normal. The most likely diagnosis is - *(ARMS May 03,Nov 03)*
a) Alport's syndrome
b) Medullary sponge kidney.
c) Chronic glomerulonephritis.
d) Nephronophthisis

834. A 3 year old male child diagnosed to have acute UTI developed left flank pain on ulatrasonogram, the left ureter was found to be duplicated the most probable site of opening of ectopic ureter will be- *(AI99)*
a) Prostatic urethra b) Vas deferens
c) Seminal vesicle d) Trigone of bladder

835. Ectopic ureter may be frequently associated with-
a) Oliguria *(JIPMER 81, AMU 89)*
b) Dysuria
c) Bilateral hydroureter
d) Paradoxical incontinence

836. Which of the following is included in definition of Nephrotic syndrome - *(PGI June 04, Dec 02)*
a) Microalbuminuria
b) Massive Proteinuria
c) Microscopic haematuria
d) Oedema
e) Hyperlipidemia

837. All of the following are decreased in nephrotic syndrome, except - *(ARMS June 98, Dec 95, AI 9 7)*
a) Serum transferrin b) Serum fibrinogen
c) Serum ceruloplasmin d) Serum albumin

838. Which is seen in nephrotic sundrome -
a) Low serum calcium *(NEET/DNB Pattern)*
b) Raised A i-III
c) Low lipid
d) Platelet activation

839. Edema in nephrotic syndrome is due to - *(ARMSMay 12,Nov 10)*
a) Sodium & water retention
b) Increased venous pressure
c) Hypoalbuminemia
d) Hyperlipidemia

840. True about Nephrotic syndrome in a child -
a) Minimal change disease is commonest cause
b) Proteinuria of 4 gm/m^2 hr is characteristic
c) Cyclosporin & Azathioprine is mainstay of therapy *(PGI June 03)*
d) Pretreatment biopsy is done in all cases
e) Spontaneous bacterial peritonitis is associated with it

841. Nephrotic syndrome in children is caused by -
a) Minimal change disease *(PGI June 08)*
b) RPGN
c) MPGN
d) FSGS
e) Membranous nephritis

826) d 827) c 828) a 829) b 830) c 831)d 832) b 833) d 834) a 835) b,d 836)b,d,e 837) b 838) a 839) c 840) a,e 841)a,c,d

842. The finnish type of congenital nephritic syndrome occurs due to gene mutation affecting the following protein - *(AI06)*
a) Podocin b)Alpha-actinin
c) Nephrin d) CD_2 activated protein

843. The most common gene defect in idiopathic steroid resistant nephrotic syndrome - *(AIIMSNov 11, May 07,Nov 06)*
a) ACE b) NPHS 2
c) HOX11..... d) PAX

844. Most common cause of Nephrotic Syndrome in children - *(NEET/DNB Pattern)*
a) Minimal change disease b) IgA nephropathy
c) Mesangial GN d) FSGN

845. A 5 year old child suffering from nephrotic syndrome is responding well to steroid therapy. What would be the most likely finding on light microscopy-
a) No finding *(AI 01)*
b) Basement membrabne thicking
c) Hypercellular glomeruli
d) Fusion of foot processes

846. A 2 yrs old child comes with 1 year h/o of generalised edema. His B.P. is 107/70mm urine examination shows hyaline cast, proteinuria +++, WBC & RBC are nil. the likely diagnosis is - *(AIIMSNov 1999)*
a) Selective proteinuria
b) Uremia
c) Focal segmental glonurulosclerosil
d) Low serum complement level

847. Best response to steroids is observed with - *(AI 96)*
a) Focal glomerulonephritis
b) Lipoid nephrosis
c) Membranous GN
d) Membranoproliferative GN

848. All are true about minimal change GN. except -
a) Selective proteinuria *(PGIDec99)*
b) IgG deposition in mesangium
c) Common in age group 2-9 years
d) Responds to steroid's

849. A 7 year old girl is brought with complaints of generalized swelling of the body. Urinary examination reveals grade 3 proteinuria and the presence of hyaline and fatty casts. She has no history of hematuria. Which of the following statements about her condition is true - *(AI 09)*
a) No IgG deposits or C3 deposition on renal biopsy
b) C3 level will be low
c) IgA nephropathy is the likely diagnosis
d) Alport's syndrome is the likely diagnosis

850. A 9 year old boy has steroid dependent nephrotic syndrome for the last 5 year. The patient is markedly Cushingoid with blood pressure of 120/86 mmHg and small subcapsular cataracts. The most appropriate therapy of choice is -
a) Longterm frusemide with enalapril
b) Cyclophosphamide *(AIIMS Nov 04, May 03)*
c) Intravenous immunoglobulin
d) Intravenous pulse corticosteroids

851. A child comes with steroid resistant nephrotic syndrome secondary to FSGS, not responsive to methylprednisolone. What next should be given -
a) Oral cyclophosphamide *(AIIMS May 11)*
b) Oral cyclosporine
c) Oral mycophenolate
d) IV cyclophosphamide

852. Characteristic of acute GN. *(PGI June 2000)*
a) RBC cast b) Hemoglobinuria
c) Proteinuria d) Broad cast

853. Which of following is not seen in nephritic syndrome - *(NEET/DNB Pattern)*
a) Edema b) Hematuria
c)HTN d)j|^ppch^leshfe®^

854. Child with B.P. 190/lio, pedal edema ++ ; facial edema ascites-absent. Gross hematuria diagnosis is - *(PGI June 2000)*
a) Acute GN. b) Nephrotic syndrome
c) Renal thrombosis d) Renal amyloidosis

855. Post-streptococcal glomerulonephritis is associated with- *(PGIDec 01)*
a) Follows skin and throat infection
b) Antibiotic treatment induces remission
c) Is a cause of chronic renal failure in majority of children
d) Low complement level occurs
e) Caused by all serotypes

856. Marker for the renal vasculitis in children is -
a) Increased IgA level *(AI 98, AIIMS Sept 96)*
b) Low complement level
c) T Antineutrophilic cytoplasmic antibody titre
d) Increase antinuclear antibody

857. 12 years old Shyam presented with gross hematuria with 80% dysmorphic RBC's 2 days after a attack of upper respiratory tract infection diagnosis is -
a) Microangiopathic thrombotic anaemia
b) IgA Nephropathy *(AIIMS Nov 01)*
c) PSGN
d) H.S. purpura

858. A child presented with cola coloured urine, proteinuria 2+ & h/o rash 2 week ago. Probable Dx is -
a) IgA nephropathy b)HSP *(PGIMay 10)*
c) HUS d) Wegener Granulomatosis

859. A six year old male baby presents to a hospital with recurrent gross hematuria for 2 years. There is no h/o burning micturition or pyuria. Urine routine examination demonstrated no pus cells and urine culture was sterile. Serum C3 levels were normal. What is the most probable diagnosis ? *(AI 08)*
a) Wilm's tumor
b) IgA nephropathy
c) Post-streptococcal glomerulonephritis
d) Urinary tract infection

842) c 843) b 844) a 845) a 846) a 847) b 848) b 849) a 850) b 851)b 852) a 853) d 854) a 855) a,d 856) a 857) b 858) b 859) b

860. The renal biopsy of a 6-year-old boy with recurrent gross hematuria shows IgA nephropathy. The urinary protein excretion is 130 mg/day. Which of the following is the most appropriate next step in the management - *(AIIMS May 04)*
a) Administer corticosteroids
b) GiveAzathioprine
c) Start Cyclosporine
d) Urinary bag sample

861. Henoch-Schonlein purpura is characterized by the deposition of the following immunoglobulin around the vessels - *(AIIMS Nov 05)*
a) IgM b) IgG
c) IgA d) IgE

862. AI1 are seen in Henogh schonlein purpura except- *(NEET/DNB Pattern)*
a) Thrombocytopenia b) Glomerulonephritis
c) Arthralgia d) Abdominal pain

863. Which of the following is/are not the features of henoch-Schonlein purpura (HSP) - *(PGI Dec 08)*
a) Abdominal pain b) Splinter hemorrhage
c) Thrombocytopenia d)Epistaxis
e) Arthritis

864. A 8 year old male had non blanching rashes over the shin and swelling of knee joint with haematuria E-H- and protein +. Microscopic analysis of his renal biopsy specimen is most likely to show -
a) Tubular necrosis *(ARMSNov 07)*
b) Visceral podocyte fusion
c) Mesangial deposits of IgA
d) Basement membrane thickening

865. A child develops non-blanching macules and papules on lower extremities, mild abdominal pain and skin biopsy showed IgA deposition. Most appropriate diagnosis is - *(ARMSMay 09)*
a) Drug induced vasculitis
b) HSP
c) Wegener's granulomatosis
d) Kawasaki disease

866. A 5-year old child presents with perivascular IgA deposition and neutrophilic collection. There is erythematous rash on the lower limb and non-blanching purpura. Probable diagnosis is -
a) Henoch-Schonlein purpura *(ARMS Nov 11)*
b) Wegener's granulomatosis
c) Vasculitis
d) Kawasaki's disease

867. A child was diagnosed as a case of pauci-immune crescentic glomerulonephritis. The treatment to be given in this child is - *(ARMS May 02)*
a) Prednisolone + Cyclophosphamide
b) Methylprednisolone
c) Cyclophosphamide
d) Immunoglobins

868. A 8 yr old boy presents with petechie, azotemic oligurea altered sensorium in casualty. There is history of diarrhoea for the past 5 days. The clinical diagnosis is - *(ARMSDec 98)*
a) Acute prophyria
b) Idiopathic thrombocytopenic purpura
c) H.S. purpura
d) H.U.S.

869. Most conunon^use ofhemolytic^remic syndrome
a) E.coli b) ShigeJla
c) Salmonella d) Psedononas

870. Which is incorrect about hemolytic uremic syndrome - *(JIPEMR 91)*
a) Always fatal b) Burr cells are present
c) Acute renal failure d) Viral prodrome

871. In shigella,dysentjry associated hemolytic uremic syndrome, the false statement is *(NEET/DNB Pattern)*
a) Leucocytosis
b) Neurological abnormalities
c) Hepatio^failpr^ii
d) Thrombotic angiopathy

872. An infant with history of diarrhoea 5 days back has urea 200 mg% and creatinine 5mg%. The platelet count is 90000. Fragmented RBC s are found in the peripheral smear. The most possible diagnosis -
a) HUS b) TTP *(ARMS 99)*
c) HP d) Hemolytic anemia

873. Most common cause of urinary obstruction in a male infant is - *(A101)*
a) Anterior urethral valves
b) Posterior urethral valves
c) Stone
d) Stricture

874. Which is not a feature of posterior urethral valve -
a) Palpable bladder *(NEET/DNB Pattern)*
b) Painful stress incontinence
c) Recurrent UTI

875. True statements(s) about posterior urethral valves in neonate - *(PGIMay 10)*
a) Bilateral hydroneprhosis may be present
b) Creatinine & urea levels remain normal
c) Enlarge & widen prostatic urethra
d) More common in girls

876. A 3-year-old boy presents with fever; dysuria and gross hematuria. Physical examination shows a prominent suprapubic area which is dull on pecussion. Urinalysis reveals red blood cells but no proteinuria. Which of the following is the most likely diagnosis - *(ARMS May 06)*
a) Acute glomerulonephritis
b) Urinary tract infection
c) Posterior urethral valves
d) Teratoma

860) a 861)c 862)a 863)c 864)c 865)b 866)a 867)a 868)a 869)a 870)a 871)c 872)a 873) b 874) b 875) a,c 876) c

877. One year old male child presented with poor urinary stream since birth. The investigation of choice for evaluation is - *(AIIMSMay 03)*
a) Voiding cystourethrography (VCUG)
b) USG bladder
c) Intravenous urography
d) Uroflowmetry

878. A child presented with intermittent episodes of left sided flank pain. Ultrasonography reveals large hydronephrosis with dilated renal pelvis and cortical thinning with a normal ureter. Kidney differential function was observed to be 19% which of the following is the best management - *(AI10)*
a) Nephrectomy b) Pyeloplasty
c) External drainage d) Endopylostomy

879. A 6 year old girl presents with Recurrent E.coli infection in urine. Ultrasound of abdomen shows Hydroureter and Hydronephrosis. Micturating cystourethrogam shows filling defect in urinary bladder. The likely diagnosis is - *(AI 2000)*
a) Sacrococcygeal Teratoma
b) Vesicoureteric Reflux - grade II
c) Duplication of Ureter
d) Ureterocele

880. Most common cause of acute retention of urine in child of 2 year age - *(PGI Dec 2000)*
a) Posterior urethral valve
b) Duplication of renal pelvis
c) Meatal ulceration with scabbing
d) Urethral stones

881. The most common underlying anomaly in a child with recurrent urinary tract infections is-
a) Posterior urethral valves *(AIIMSNov 03, AI 05)*
b) Vesicoureteric reflux
c) Neurogenic bladder
a) Renal calculi

882. Vesicoureteric reflux is more common in-
a) Newborn females b) Older girls *(ARMS May 04)*
c) Older boys d) Only during pregnancy

883. The most common cuase of renal scarring in a 3 year old child is - *(AI 05)*
a) Trauma
b) Tuberculosis
c) Vesicoureteral reflux induced pyelonephritis
d) Interstitial nephritis

884. The treatment of choice for primary grade V vesico-ureteric reflux involving both kidneys in a 6 month old boy is - *(AIIMS May 03, Nov 04)*
a) Antibiotic prophylaxis
b) Ureteric reimplantation
c) Cystoscopy followed by subureteric injection of teflon
d) Bilateral ureterostomies.

885. A 4 month old female child presents with grade IV Vesico- Ureteral Reflux (VUR); without dilation of urinary bladder. The Treatment of choice is -
a) Septran + Follow up *(AI 2000)*
b) Re - implantation of ureter
c) Injection of collagen at ureteric orifices
d) Bilateral Ureterostomy

886. A six months old girl is having recurrent UTI. Ultrasound abdomen shows bilateral hydronephrosis. MCU (Micturating cysto urethrogram) shows bilateral Grade IV vesicoureteral reflux. The treatment of choice is - *(AI 02)*
a) Endoscopic injection of polyteflon at ureteric orifices
b) Ureteric re-implantation
c) Bilateral Ureterostomy
d) Prophylactic antibiotics

887. UTI in infant, true about - *(PGIDec 03)*
a) Common in female infants
b) If two episodes of UTI in females of 7 years occur, then cystometric evaluation needed
c) If two episodes of UTI in male of 5 year occur then cystometric evalution needed

888. A five year old male child presents with complaints of fever and abdominal distension. He is having vomiting for the last five days. On examination there are 6-8 Pus Cell/hpf in urine. WBC count shows 78% neutrophils. What is the best line of management-
a) Send urine for culture and sensitivity and wait for results *(AIIMS Nov 2000)*
b) Send urine for culture and sensitivity and start I.V. antibiotics immediately
c) Send urine for culture, do an USG and start chloroquine
d) Radio nucleotide studies

889. Which of the following is the most appropriate method for obtaining a urine specimen for culture in an 8 month old girl - *(AIIMS May 04)*
a) Suprapubic aspiration b) Indwelling catheter sample
c) Clean catch void d) Urinary bag sample

890. An 8 year old boy during a routine check up is found to have E. coli 1,00,000 cc/ml on a urine culture. The urine specimen was obtained by mid-stream clean-catch void. The child is asymptomatic. Which is the most appropriate next step in the management-
a) Treat as an acute episode of urinary tract infection
b) No therapy *(AIIMS May 04)*
c) Prophylactic antibiotics for 6 months
d) Administer long term urine alkalinizer

891. Which one of the following statements is false with regard to pyuria in children - *(AI 03)*
a) Presence of more than 5 WBC/hpf (high power field) for girls and more than 3 WBC/hpf for boys
b) Infection can occur without pyuria
c) Pyuria may be present without Urinary tract infection
d) Isolated pyuria is neither confirmatory nor diagnostic for Urinary tract infection

877) a 878) b 879) d 880) c 881) b 882) a 883) c 884) a 885) a 886) d 887) b,c 888) b 889) a 890) a 891) a

892. Which one of the following statements is false with regard to Xanthogranulomatous pyelonephritis in children - *(AI03)*
a) Often affects those younger than 8 years of age.
b) It affects the kidney focally more frequently than diffusely
c) Boys are affected more frequently.
d) Clinical presentation in chidren is same as in adults

893. Not true about chronic pyelonephritis in children - *(NEET/DNB Pattern)*
a) Associated with Ureteric reflux
b) Associated with Intrarenal reflux
c) Associated with renal scarring
d) Males are more affected than female

894. Renal causes of acute renal failure in children include- *(PGI Dec 01)*
a) Minimal change disease
b) Renal amyloidosis
c) Pre-eclampsia
d) Malignant hypertension
e) Hemolytic uremic syndrome

895. Achild with 22-25 stool/day, 3 day old pneumonitis, no passage of urine from 36 hrs. low B.P., Blood pH - 7.21. Urine Na^+ - 18 meq/L, S. Urea 120, serum Creatinine 1.2 indicate - *(AIIMSMay 95)*
a) Acute cortical necrosis
b) Acute tubular necrosis
c) Pre-renal Azotemia
d) Acute medullary necrosis

896. A child has diarrhea since 8 days. He is dehydrated and urine output is reduced. Which of the following is not correct regarding the renal failure in this patient- *(AI 10)*
a) Urinary sodium > 40 m.eq/L
b) Urinary osmolality > 500 Mosmol/L
c) FENa< 1%
d) BUN/creatinin > 20

897. An 8-day old breast-fed baby presents with vomiting, poor feeding and loose stools. On examination the heart rate is 190/minute, blood pressure 50/30 mmHg, respiratory rate 72 breaths/minute and capillary refill time of 4 seconds. Investigations show hemoglobin level of 15 g/dl. Na 120 mEq/I, K 6.8 mEq/1, Cl 81 meq/1, bicarbonate 15 mEq/1, urea 30 mg/dl and creatinine 0.6 mg/dl. the most likely diagnosis is - *(AIIMS Nov 03, Nov 04)*
a) Congenital adrenal hyperplasia
b) Acute tubular necrosis
c) Congenital hypertrophic pyloric stenosis
d) Galactosemia

898. In chronic renal failure - *(AIIMS83)*
a) Urine output is more than 3 litres per day
b) Urine concentration is decreased
c) Sodium conservation is poor
d) Polycythemia is present

899. In SCHWARTZ formula for calculation of creatinine clearance in a child, the constant depends on the following except - *(AIIMS Nov 06)*
a) Age b) Method of estimation of creatinine
c) Mass d) Severity of renal failure

900. A 2 month old girl has failure to thrive, polyuria and medullary nephrocalcinosis affecting both kidneys. Investigations show blood pH 7.48, bicarbonate 25 mEq/1, potassium 2 mEq/I, sodium 126 mEq/1 and chloride 88 mEq/1. The most likely diagnosis is -
a) Distal renal tubular acidosis *(AIIMS Nov 04)*
b) Primary hyperaldosteronism
c) Bartter syndrome
d) Pseudohypoaldosteronism

901. A 10-month-old boy, weighing 3 kg has polyuria, polydipsia and delayed motor milestones. Investigations show blood levels of creatinine 0.5 mg/ dl, potassium 3 mEq/L, sodium 125 mEq/L, chloride 88 mEq/L, calcium 8.8 mg/ dl, pH 7.46 and bicarbonate 26 mEq/L. Ultrasonography shows medullary nephrocalcinosis. The most likely diagnosis is - *(AIIMS Nov 03, May 03)*
a) Renal tubular acidosis
b) Diabetes insipidus
c) Bartter syndrome
d) Pseudohypoaldosteronism

902. A10 year old boy is having polyuria, polydypsia, laboratory data showed (in mEq/lit) -
Na-154
K-4.5
HC03-22
Serum osmolality - 295
Blood urea-50
Urine specific gravity -1.005
The likely diagnosis is - *(AIIMSMay 02)*
a) Diabetes insipidus b) Renal tubular acidosis
c) Barter's syndrome d) Recurrent UTI

903. 2 yrs female has been sucessfrilly treated for urinary tract incfection. Next step in management is -
a) Do nothing *(AIIMS 98)*
b) Ultrasound
c) Ultrasound + DMSA scan
d) 6 monthly culture sensitivity

904. In a child, non - functioning kidney is best diagnosed by- *(AI05)*
a) Ultrasonography b)IVU
c) DTPA renogram d) Creatinine clearance

905. Method of choice for a New born child not passing urine for 36 hrs - *(AIIMS May 95)*
a) Ultrasound of kidney & bladder
b) CT Scan
c) Cystoscopy
d) X-ray pelvis

892) a 893) d 894) e 895) c 896) a 897) b 898) b,c 899) d 900) c 901) c 902) a 903) c 904) c 905) a

906. A male child with Fanconi syndrome with nephrocalcinosis has a variant of dent disease. All are true except - *(AIIMS May 11)*
a) Hypercalciuria b) Proteinuria
c) Similar presentation in father d) Rickets

907. 8 yr old child with BP 180/100 mm Hg, urea 90, creatinine 5.3, urinalysis shows 15-20 pus cells, 1-2 RBC, protein 1+ & has no significant past h/o of similar complaint. Most likely diagnosis is-
a) Post infective glomerulonephritis *(ARMSNov 10)*
b) Accelerated hypertension with ARF
c) Idiopathic RPGN
d) Chronic interstitial nephritis with VUR

908. A 3 -year old boy is detected to have bilateral renal calculi. Metabolic evaluation confirms the presence of marked hypercalciuria with normal blood levels of calcium, magnesium, phosphate, uric acid and creatinine. A diagnosis of idiopathic hypercalciuria is made. The dietary management includes all, except - *(AIIMS May 03, Nov 04)*
a) Increased water intake b) Low sodium diet
c) Reduced calcium intake d) Avoid meat proteins

909. A child presents with abdominal colic and hematuria. On ultrasonography a stone 2.5 cm in diameter is seen in the renal pelvis. The next step in management of this case is - *(AIIMS Nov 2000, AI01)*
a) Pyelolithotomy b) Nephroureterostomy
c) Conservative d) ESWL

910. Most common cause of renal artery stenosis in children in India is - *(AIIMS May 0 7)*
a) Takayasu Aortoarteritis
b) Fibromedial hypertrophy
c) Fibrointimal hyperplasia
d) Polyarteritis Nodosa

911. Renal vein thrombosis is most commonly found in -
a) Focal glomerulosclerosis *(PGIJune97)*
b) Membranous
c) Minimal change GN
d) Acute pyelonephritis

912. Most common cause of Blood stained diaper in a Neonate is - *(AIIMS Dec 98)*
a) Bilharziasis b) Sickle cell trait
c) Meatal stenosis d) Urethral hemangioma

913. A 3-month old infant presents with bilateral medullary nephrocalcinosis. All of the following can cause medullary nephrocalcinosis except -
a) Hyperoxaluria *(AIIMS May 09)*
b) Bartter's syndrome
c) Prolonged use of furosemide
d) ARPKD

914. The maximum urinary concentration capacity in full term neonates is - *(Karnataka 02)*
a) > 1000 mOsm/litre b) 350 - 450 mOsm/litre
c) 900-1000 mOsm/litre d) 600 - 700 mOsm/litre

915. Malformations of the following organ system of the fetus are found to be most commonly associated with single umbilical artery - *(SGPGI05)*
a) Central nervous system b) Cardiovascular
c) Genitourinary d) Skeletal

916. In nephrotic syndrome the essential feature is -
a) Proteinuria b) Hypoalbuminemia
c) Hyperlipemia d) Edema *(AIIMS 83)*

917. Choose among the following the most important lab finding in nephrotic syndrome - *(TN 95)*
a) B-J protein b) Hyperkalemia
c) Hypoalbuminemia d) Hypertension

918. Most common infection in a child nephrotic syndrome-
a) Spontaneous bacterial peritonitis *(MAHE 07, 08)*
b) Pneumonia
c) un
d) Cellulitis

919. A four-year old child presents with mild fever, malaise, prupura, arithritis, abdominal pain and microscopic hematuria. What would be the most likely diagnosis - *(UPSC 07)*
a) Thrombobasthenia
b) Idiopathic thrombocytopenic
c) Systemic lupus erythematosus
d) Henoch-Schonlein purpura

920. The commonest type of renal lesion in children is-
a) Lipoid nephrosis *(TN 95)*
b) Membrano proliferative glomerulonephritis
c) Focal glomerulonephritis
d) Diffuse glomerulosclerosis

921. A12 year old boy had severe vomiting and diarrhoea. He was brought to the hospital bacause of severe oliguria. He was given IV fluids and furosemide without any diuresis. Blood beichemistry revealed: Urea 120 mg% and serum creatinine 4 mg%. The most likely diagnosis is - *(UPSC 96)*
a) Preneal azotemia
b) Haemolytic uraemic syndrome
c) Acute glomerulonephritis
d) Acute tubular necrosis

922. A3 year old child presents with four days history of puffiness of face, fever and tea coloured urine. During the course of his disease, he can have any of the complications except - *(UPSC 06)*
a) Hypokalemia
b) Hypertensive encephalopathy
c) Acute renal failure
d) Acidosis

923. Straining and dribbling of urine in a male infant with recurrent urinary infection should lead to the suspicion of - *(UPSC 0 7)*
a) Vesico-ureteric reflux
b) Posterior urethral valve
c) Pelvic ureteric junction obstruction
d) Phimosis

906) c 907) d 908) c 909)d 910) a 911)b 912) d 913)d 914) d 915) c 916) a 917)c 918)a 919) d 920) a 921)b 922)a 923) b

924. Posterior urethral valve is diagnosed on micturating cystometrogram by - *(Karn 95)*
a) Dilatation of posterior urethra
b) Bladder neck contracture
c) Vesico-Ureteric reflex
d) Bladder wall hypertrophy

925. An infant with severe dehydration secondary to diarrhea suddenly presents with proteins and blood in urine. The most probable diagnosis is- *(Delhi PG Feb. 09)*
a) Renal vein thrombosis b) Pyelonephritis
c) Acute glomerulonephritis d) Lower nephrosis

CENTRAL NERVOUS SYSTEM

926. *True* about febrile convulsions is - *(AIIMS June 97)*
a) Recurrent in nature
b) Follows high temperature
c) No spontaneous remission
d) Occurs at 6 years onwards

927. True regarding febrile convulsion - *(PGIDec 2000)*
a) Carbamazepine is good drug to treat it
b) Patient with family h/o F.C. have increased incidence of recurrence
c) Longterm neurological deficits are common
d) Usually last for short while

928. Which of the following is not associated wit increase in the risk of seizures in future in a child with febrile seizures - *(AI10)*
a) Developmental delay
b) Late age of onset
c) Complex partial seizures
d) Family history positive

929. 4 year old male child had febrile seizures, best prophylaxis - *(PGI June 2000, AIIMS 96)*
a) Paracetamol 6 hourly
b) Paracetamol & diazepam
c) Diazepam
d) Phenobarbitone

930. A 6 yr. old child with acute onset of fever of 104° F developed febrile seizures and was treated. To avoid future recurrence of seizure attacks what should be given - *(ARMSMay 01)*
a) Paracetamol 400 mg + Phenobarbitone daily
b) Oral Diazepan 6 hourly
c) Paracetamol 400 mg 6 hourly
d) I.V. diazepam infusion over 12 hrs

931. Hypsarrythmia in a child is due *to-(ARMS91, Delhi 93)*
a) Grandmal epilepsy b) Petitmal epilepsy
c) Myoclonic epilepsy d) Reflex epilepsy

932. Which one of the following in the characteristic feature of juvenile myoclonic epilepsy -
a) Myoclonic seizures frequently occur in morning
b) Complete remission is common *(ARMS May 06)*
c) Response to anticonvulsants is poor
d) Associted absence seizures are present in majority of patients

933. *True* about juvenile myoclonic epilepsy -
a) Focal seizure *(PGI June 05)*
b) Generalised seizure
c) Myoclonus
d) Response to sodium valproate
e) Spike and waves in EEG

934. True about Juvenile myoclonic epilepsy -
a) DOC is sodium valproate *(PGI Dec 07)*
b) Mental retardation
c) Seizure can develop
d) Neurological examination abnormal
e) Life long treatment needed

935. Following can be used in the treatment of myoclonic seizures except - *(AI 10)*
a) Valporate b) Carbamazepine
c) Topiramate d)Zonisamide

936. Most common cause of convulsion on the First day of life in a newborn is - *(NEET/DNB Pattern)*
a) Anoxia b) Head Injury
c) Hypoglycemia d) Hypocalcemia

937. Most common cause of seizure in newborn is -
a) Hypoxia induced ischemic encephalopathy
b) Hypocalcemia *(ARMS May 08)*
c) Metabolic abnormality
d) Sepsis

938. Which vitamin deficiency is responsible for neonatal seizure - *(ARMS Nov 09)*
a) Pyridoxine b) Vitamin C
c) Thiamine d)Cobalamin

939. Neonatal causes of seizures which carries the best prognosis - *(ARMS 83)*
a) Birth asphyxia
b) Hypoglycemia
c) Bacterial meningitis
d) Late onset hypocalcemia

940. Commonest type of seizure in newborn - *(AI 08,*
a) Clonic b) Tonic *ARMS Nov07)*
c) Subtle d) Myoclonic

941. Drug of choice of Neonatal seizure \s-*(ARMS Feb 97)*
a) Phenytoin b) Phenobarbitone
c) Diazepam d) Sodium valproate

942. Causes of status epilepticus in a child-(PG/*Dec 08)*
a) Hypernatremia b) Hyponatremia
c) Hyperkalemia d) Hypokalemia

943. All are features of absence seizures except - *(AI 04)*
a) Usually seen in childhood
b) 3-Hz spike wave in EEG
c) Postictal confusion
d) Precipitation by hyperventilation

944. The feature of petit mal epilepsy in EEG is -
a) Spike and dome *(ARMS 87)*
b) Continuous stunted spikes
c) Waves at the rate of 10/sec.
d) Continuous tall spikes

924) a 925) a 926) a 927) b,d 928) b 929) c 930) b 931)c 932) a 933)b,c,d 934)a,c,e 935) b 936) a
937) a 938) a 939) d 940) c 941)b 942) b 943) c 944) a

945. A school going boy was noted with vacant stare several times a day. There was no history of fever, seizures and neurological deterioration. What is the diagnosis - *(AI10)*
a) Atonic seizures b) Absence seizures
c) Myoclonic seizures d) School phobia

946. Absence-seizures are seen in - *(ARMSDec 98)*
a) Ground mal epilepsy b) Myoclonic epilepsy
c) Petitmal epilepsy d) Hyperkinetic child

947. All the following drugs are used for Absence seizures except - *(AI 94)*
a) Clonazepam b) Phenytoin
c) Valproate d) Ethosuximide

948. Drug of choice in absence seizure- *(NEET/DNB §1^ Pattern)*
b) Phenytoin
c) ACTH d) Ethosuximide

949. Drug of choice in simple partial seizure is - *(AI 97)*
a) Phenytoin b) Valproic acid
c) Carbemazepine d) Phenobarbitone

950. Initial drug .of choice'|i®^^pj^^f|^®§5 epilepticus- *(NEET/DNB Pattern)*
a) Lorazepam b) Phenobarbitone
c) Valproate d) Phenytoin

951. The drug of choice in petit seizures is - *(AI 95)*
a) Clonazepam b) Ethosuximide
c) Diazepam d) Sodium Valproate

952. Jitteriness can be distinguished from seizures by all of the following except - *(AI 0 7)*
a) Senstivity to stimulus
b) Frequency of movement
c) Abnormality of Gaze
d) Autonomic disturbance

953. Kernig's sign is seen in - *(PGI98)*
a) Pneumonia
b) Acute bacterial meningitis
c) Mental retardation
d) Cerebral palsy

954. The most common presentation of neonatal meningitis is - *(Orissa 98)*
a) Bulging fontanels b) Nuchal rigidity
c) Poor feeding d) Convulsion

955. Most common complication of meningitis in children is- *(AIMS May 1994)*
a) Hearing loss b) Seizures
c) Hydrocephalus d) Mitral regurgitation

956. What are the complication (s) of meningitis in a child - *(PGI May 10)*
a) Arachinioidits
b) Mental retardation
c) Status epilepticus
d) Sensorineural hearing loss

957. Prior to discharge of a patient of H. influenza meningitis the essential investigation to be done is -
a) ABER *(AIMSFeb 97, AI 99)*
b) EBG
c) Developmental screening test
d) BOG

958. CSF examination of a patient shows high protein markedly low sugar, low chloride and increased neutrophils. The diagnosis is - *(ARMSNov 1999)*
a) Viral meningitis
b) Meningococcal meningitis
c) Tuberculous meningitis
d) Fungal meningitis

959. A neonate develops signs of meningitis at seven days of birth. The presence of which of the following infectious agent in the maternal genital tract can be the causative agent of this disease - *(ARMSMay 04)*
a) Neisseria gonorrhoeae
b) Chlamydia trachomatis
c) Streptococcus agalactiae
d) Haemophilous ducreyi

960. A 25 year old woman had premature rupture of membranes and delivered a male child who became lethargic and apneic on the 1st day of birth and went into shock. The mother had a previous history of abortion 1 year back. On vaginal swab culture growth of ^-haemolytic colonies on blood agar was found. On staining these were found to be gram positive cocci. Which of the following is the most likely etiological agent - *(AI 04)*
a) Streptococcus pyogenes
b) Streptococcus agalactiae
c) Peptostreptococci
d) Enterococcus faecum

961. Most common cause of neonatal meningitis -
a) Staphylococcus b)E. coli *(PGI Dec 99)*
c) H. influenze d) Pneumococcus

962. Neonatal meningitis is caused by - *(PGI June 05)*
a) Group 'A' Streptococcus
b) Group 'B' Streptococcus
c) E.Coli
d) H. Influenza
e) Klebsiella

963. The following bacteria are most often associated with acute neonatal meningitis except - *(AI 05)*
a) Escherichia coli
b) Streptococcus agalactiae
c) Neisseria meningitidis
d) Listeria monocytogenes

964. After 5 days of birth, baby developed poor feeding, convulsions, fever with low protein low sugar and high chloride (in CSF) is most likely due to -
a) Listeria monocytogenes *(ARMS June 2000)*
b) Mycoplasma pneumoniae
c) T.B.
d) Leptospira

965. Most common cause of pyogenic meningitis in 6 month to 2 years of age *is-* *(ARMS June 99, AI 01, 98)*
a) Staphylococcus aureus
b) Pneumococcus
c) Streptococcus pneumonia
d) H. influeuenzae

945) b 946) c 947) b 948) d 949) c 950) a 951)d 952) b 953) b 954) c 955) b 956)a,b,c,d 957) a 958)b 959)c 960)b 961)b 962)b,c,e 963)c 964)a 965)c

966. The most common causative agent of meningitis in the age group of 6 months-3 year amongst the following is - *(NEET/DNB Pattern)*
a) Streptococcus b) H. influenzae
c) Staphylococcus d) N. gonorrhoeae

967. Bacterial meningitis in children (2 months-12 years of age) is usually due to the following organisms except- *(AI04)*
a) Streptococcus penumoniae
b) Neisseria meningitidis
c) Hemophilus influenzae type B
d) Listera monocytogenes

968. Most common organism causing meningitis in a 1 year old child - *(AI 07)*
a) Streptococcus pneumoniae
b) H. influenza
c) Listeria
d) Neisseria meningitidis

969. A newborn of 7 days old presented with meningitis. Most common cause - *(PGI dec 07)*
a) E.coli
b) Streptococcal pneumonia
c) N. Meningitis
d) Streptococcal agalactiae

970. The most common agent associated with neonatal bacterial meningitis is - *(AI 04)*
a) Haemophilus influenzae type b
b) Neisseria meningitidis
c) Streptococcus pneumoniae
d) Streptococcus agalactiae

971. Neonatal meningitis & Pneumonia may be caused by- *(PGIDec 98)*
a) Strep faecalis
b) Group C enterococci
c) Anaerobic Streptococci
d) S. agalactiae

972. Which of the following does not cause meningitis -
a) Listeria *(AIIMS Feb 1997)*
b) Pneumococcus
c) P - Streptococci
d) Streptococcus type A

973. Haemophilus influenzae has been isolated from the CSF of two year old boy suffering from meningitis. The strain is beta-lactamase producing and resistant to chloramphenicol. The most appropriate antimicrobial in such a situation is - *(AI 04)*
a) Trimethoprim-sulphamethoxazole combination
b) Ciprofloxacin
c) Third-generation cephalosporin
d) Vancomycin

974. A child presented with fever for 2 days, altered sensorium and purpuric rashes. His blood pressure is 90/60 mmHg. Treatment of choice is - *(AIIMS*
a) IV Quinine b) IV Artesunate *May 02)*
c) IV Penicillin d) Chloroquine

975. Child with generalized petechiae. CSF shows gram negative diplococci. Treatment - *(PGI June 07)*
a) IV Ceftriaxone
b) IV Penicillin G
c) IV Cefotaxime

976. A child presented in the casuality with fever, unconcous & papilloedema. What next to tbe done -
a) Intubation b) Oxygenation
c) CT scan d) Lumbar puncture

977. A10 month old child presents with two weeks history of fever, vomiting and alteration of sensorium Cranial CT scan reveals basal exudates and hydrocephalus, the most likely etiological agent is -
a) Mycobacterium tuberculosis *(AI 04, 95, DPG 09)*
b) Cryptococcus neoformans
c) Listera monocytogenes
d) Streptococcus pneumoniae

978. All of the following are known complications of tuberculous meningitis except - *(AI 97)*
a) Cranial nerve palsy b) Cerebral infarction
c) Ptosis d) Parkinsonism

979. The CSF findings in TB meningitis include -
a) High sugar + low protein *(AI 94, 07)*
b) Low sugar + high protein and Lymphocytosis
c) High sugar + high chloride
d) Low sugar + high protein and Lymphopenia

980. A10 year old girl presented with fever convulsions, neck rigidity. CSF findings are protein 150 mg, sugar 40 mg, chloride 2500 mg with lymphadenopathy-
a) Viral meningitis *(ARMS Dec 98)*
b) Pyogenic meningitis
c) Cryptococcal meningitis
d) Tuberculous meningitis

981. Which of the following is the most common cause of meningoencephalitis in children - *(AI 11, 10)*
a) Mumps b) Arbovirus
c) HSV d) Enterovirus

982. A neonate develops encephalitis without any skin lesions. Most probable causative organisms is -
a) HSV I b)HSVn *(ARMSMay 02)*
c) Meningococci d) Streptococci

983. True statement regarding Brain T\imor in children is - *(AI 2000)*
a) Mostly is infra - tentorial
b) Papilledema is rare
c) Is the most common tumour in children
d) Hydrocephalus is rare

984. The most common Intracranial tumor in children is- *(NEET/DNB Pattern)*
a) Glioma b) Ependymoma
c) Meningioma d) Lymphangioma

985. Most common posterior fossa tumour in children is- *(AI 97)*
a) Medulloblastoma
b) Glioblastoma multiformae
c) Astroytoma
d) Meningioma

966)b 967)d 968) a 969) a,d 970)d 971) a,d 972)d 973)c 974)c 975)All 976)a,b,c 977) a 978)d 979)b 980) d 981)d 982) b 983) a 984) a 985) c

986. l\imor associated with best prognosis in children is- *(AI97, 94)*
a) Medulloblastoma
b) Ependymoma
c) Cerebellar astrocytoma
d) Glioblastoma-multiformis

987. Common posterior cranial fossa tumours include all of following except - *(Al 99)*
a) Medulloblastoma b) Oligodendroglioma
c) Ependymoma d) Cystic astrocytoma

988. A 10 year old child presented with headache, vomiting, gait instability and diplopia. On examination he had papilloedema and gait ataxia. The most probable diagnosis is - *(AIIMS Nov 02)*
a) Elydrocephalus
b) Brain stem tumour
c) Suprasellar tumour
d) Midline posterior fossa tumour

989. A10 yr old boy presents with midline swelling arising from cerebellum the diagnosis is - *(AIIMSDec 98)*
a) Astrocytoma
b) Glioblastoma multiforme
c) Ependymoma
d) Medulloblastoma

990. Which of the following statements about cerebellar astrocytomas in pediatric age group is false -
a) These are usually low grade tumors *(AI08)*
b) These tumors have a good prognosis
c) These are more commonly seen in the 1 st and 2nd decades
d) These tumors are more common in females

991. Supra sellar cystic mass in children *is-(AHMSMay95)*
a) Medulloblastoma
b) Craniopharyngioma
c) Meningioma
d) Secondaries

992. Most common cause of suprasellar enlargement with calcification in children is - *(AIIMS Dec 94, AI97)*
a) Craniopharyngioma b) Astrocytoma
c) Meningioma d) Suprasellar tuberculoma

993. A 6 year old boy has been complaining of headache, ignoring to see the objects on the sides for four months. On examination he is not mentally retarded, his grades at school are good, and visual acuity is diminished in both the eyes. Visual charting showed significant field defect. CT scan of the head showed suprasellar mass with calcification. Which of the following is the most probable diagnos is? *(AIIMS Nov 04)*
a) Astrocytoma b) Craniopharyngioma
c) Pituitary adenoma d) Meningioma

994. Most common supratentorial tumour in children is- *(AIIMS Sep 96)*
a) Craniopharyngiomab) Astrocytoma
c) Glioma d) Meningioma

995. Which type of cerebral palsy is commonly associated with scoliosis and other orthopedic problems -
a) Spastic quadriplegia *(AIIMS June 97)*
b) Anterior cerebral palsy
c) Spastic deplegia
d) Atonic cerebral palsy

996. Features of cerebral palsy - *(PGI June 05)*
a) Athetosis b) Spasticity
c) Saturday night palsy d) Mixed palsy
e) Rigidity

997. Not found in cerebral palsy - *(PGI June 98)*
a) Hypotonicity b) Microcephaly
c) Ataxia d) Flaccid paralysis

998. Most common sequelae due to periventricular leukomalacia - *(AIIMS Nov 09)*
a) Spastic diplegia b) Spastic quadriplegia
c) Mental retardation d) Seizures

999. Neural tube defects are prevented by - *(AI 99,95)*
a) Pyridoxin b) Folic acid
c) Thiamine d)Iron

1000. Increase acetylcholinestrase in amniotic fluid indicates- *(AI99)*
a) Open neural tube defects b) Oesophageal atresia
c) Down syndrome d) Edward syndrome

1001. Which of the following is a marker for neural tube defects - *(AI09)*
a) T Phosphatidylesterase
b) t Pseudocholinesterase
c) t Acetylcholinesterase
d) t Butyrylcholinesterase

1002. All of the following are neural tube defects except- *(AI04)*
a) Myelomeingocoele b) Anencephaly
c) Encephalocele d) Holoprosencephaly

1003. Porencephaly refers to - *(AI99)*
a) Foetal alcohal syndrome
b) Dandy-walker-syndrome
c) Vascular lesion due to degenerative vessel disease and head injury
d) Neural tube defects

1004. Porencephaly is due to- *(MP2K)*
a) Dandly walker syndrome b) Cerebral infarction
c) Fetal alcohol syndrome d) Trisomy 13

1005. Which of the following statements is false about Sacral Meningomyelocele - *(AI95)*
a) Spasticity of the lower limbs is seen
b) Hydrocephalus is seen
c) Bladder incontinence may be seen
d) Lax anal sphincter is present

1006. A 7-day old infant has a leaky meningomyelocele. The most useful test for diagnosis and management of the condition is - *(AIIMS Nov 11)*
a) Blood-culture and sensitivity
b) Urine-culture and sensitivity
c) Rectal swab-culture and sensitivity
d) Wound swab-culture and sensitivity

986) c 987) b 988) d 989) d 990) d 991) b 992) a 993) b 994) a 995) a 996)a,b,d,e 997) b 998) a 999) b 1000) a 1001)c 1002)d 1003)c 1004)b 1005)a 1006)a

1007. Commonest cause of non-communicating hydrocephalus in children is - *(AI96)*
a) Congenital anomaly
b) Perinatal injury
c) Post-inflammatory obstruction
d) Brain tumors

1008. Which one of the following is the common cause of congenital hydrocephalus is ? *(AI 05)*
a) Craniosynostosis
b) Intra uterine meningitis
c) Aqueductal stenosis
d) Malformations of great vein of Galen

1009. Most common cause of hydrocephalus in children is-
a) Post inflammatory obstruction *(AI 98)*
b) Buddchiary syndrome
c) Brain tumour
d) Perinatal injury

1010. All are signs of hydrocephalus in a neonate except - *(AIIMS June 97)*
a) Enlarged head b) Sunset sign
c) Crack post sign d) Depressed fontanelle

1011. All are true regarding Pseudotumour cerebri except- *(AIIMS Feb 1997)*
a) Ventricular system is of normal size or small
b) CT Scan shows punctate hypodense areas
c) No focal neurological deficit
d) Intracranial pressure is raised

1012. Which one of the following drugs cannot cause Pseudotumour Cerebri? *(UPSC 04)*
a) Salicylic acid b) Nalidixic acid
c) Tetracycline d) Nitrofurantoin

1013. Mild MR - features are - *(PGIJune06)*
a) Present in 5-10% population
b) T Incidence in low socioeconomic group
c) Presents in 2 years
d) Genetic background Present

1014. A male child of 15 years with a mental age of 9 years has an IQ of - *(AI03)*
a) 50 b)60
c) 70 d)80

1015. IQ between 50-70 indicates - *(AI95)*
a) Mild mental retardation
b) Moderate retardation
c) Severe retardation
d) Profound retardation

1016. Mental retardation is not seen in- *(Kerala 94)*
a) Downs syndromeb) Cretinism
c) Hypopituitarism d) Birth asphyxia

1017. Which is MC genetic cause of mental retardation- *(NEET/DNB Pattern)*
a) Tuberous sclerosis b) Cri-du-chat syndrome
c) Fragile-x-syndrome d) Angel's syndrome

1018. Which of the following is a preventable cause of mental retardation - *(AI 95)*
a) Hypothyroidismb) Down syndrome
c) Cerebral palsy d) All of the above

1019. Preventable cusies of mental retardation are- *(NEET/DNB Pattern)*
a) Downs, b) Phenylketonuria.
c), Cretinism , d) Cerebral palsy

1020. Condition a/wMR- *(PGI June 08)*
a) Trisomy 21 b) Fragile-X
c) Homocystinemia d) Phenylketonuria
e) Tuberous sclerosis

1021. Reye's Syndrome is cause by all except - *(Kerala 95)*
a) Adeno virus b)RSV
c) Herpes d) Influenza

1022. All of the following are true of Reye's syndrome, except- *(UP 97)*
a) It fequently complicates viral infections
b) Prothrombin time is prolonged
c) Disease may be precipitated by salictylates
d) Deep jaundice is present

1023. Which is incorrect about Reyes syndrome -
a) Bilirubin of more than 3 mg.-+ *(JIPMER 91)*
b) Normal prothrombin time
c) Cerebral edema
d) Microfatty changes in Liver without inflummatory changes

1024. Aspirin is associated with - *(NEET/DNB Pattern)*
a) Reye's Syndrome b) Sjogren Syndrome
c) Reiter Syndrome d) None of above

1025. All are seen in Reye's syndrome except- *(UPSC 86)*
a) Aminoaciduria
b) Metabolic acidosis
c) Increased serum transaminases
d) Respiratory alkalosis

1026. Reye's syndrome is characterized by encephalitis, fatty liver and following biochemical changes except- *(PGI 79,83)*
a) Moderate elevation of SGOT and SGPT
b) Hypoglycemia
c) Hypoglycorrhoea
d) Hyperuricemia

1027. Reye's syndrome is characterized by - *(PGIDec 03)*
a) Viral infection is seen
b) Present as deep jaundice
c) Cerebral edema
d) Microvesicular fatty infiltration

1028. TVue about Reye's syndrome - *(PGIJune 05)*
a) Microvesicular fatty infiltration
b) Hepatic encephalopathy
c) Brain edema
d) Hypoglycemia

1029. Decorticate child - Flase statement is -
a) Acute Brain injury *(NEET/DNB Pattern)*
b) Susthalamic, CT & frontal lobe lesion
c) More dangerous than decerebrate lesion
d) Flexion of arm & extension of lower limb

1030. Closure of the anterior fontanelle is delayed in all except - *(PGI 98)*
a) Down's syndrome b) Osteogenesis imperfecta
c) Hypogonadism d) Hypothyroidism

1007) a 1008) c 1009)a 1010)c,d 1011)b 1012)a 1013)b,d 1014)b 1015)a 1016)c 1017)c 1018)a 1019)c
1020)A11 1021)b 1022)d 1023)a,b 1024)a 1025)a 1026)d 1027)a,b,e 1028)A11 1029)c 1030)c

1031. Bulging anterior fontanel is/are seen in-*(PGIDec 08)*
a) Rickets b) CMV infection
c) Scurvy d) Hypothyroidism
e) Tetracycline therapy

1032. TVue about infantile tremor syndrome-
a) Hyperpigmentation of extremities *(PGI June 09)*
b) Fine tremor
c) Cortical atrophy
d) Self limiting disorder
e) More common in girls

1033. Brachycephalyisduetofusionof- *(AIIMS Feb 97,*
a) Parietal suture b) Sagittal suture *AI96)*
c) Lambdoid suture d) Coronal suture

1034. Which one of the following is the most common tumor associated with type I neurofibromatosis -
a) Optic nerve glioma *(AIIMS03)*
b) Meningioma
c) Acoustic schwannoma
d) Low grade astrocytoma

1035. Which among the following is the most common tumour associated with neurofibromatosis in a child ? *(AI 11)*
a) Juvenile myelomonocytic leukemia
b) Acute lymphoblastic leukemia
c) Acute monocytic leukemia
d) Acute myeloid leukemia

1036. A triad of seizure, mental retardation and sebaceous adenoma is seen in - *(AIIMS June 9 7)*
a) Congenital syphilis b) Tuberous sclerosis
c) Toxoplasmosis d) Hypothyroidism

1037. A 2 year old child is brought by parents with history of seizures and developmental delay. He has multiple hypopigmented macules over the back. What is the most probable diagnosis - *(AI 10)*
a) Neurofibromatosis type 1
b) Tuberous sclerosis
c) Sturge weber's syndrome
d) Linear Sebaceous nevus syndrome

1038. Struge weber syndrome is associated with-
a) Port wine stain b) Cavernous hemangioma
c) Lymphangioma d) hemangiosarcama *(Delhi 96)*

1039. A 10-yr old male child was presented to the pediatrician for evaluation of a seizure disorder. On examination a vascular plaque was found along the ophthalmic and maxillary divisions of the trigeminal nerve. The mother informed the pediatrician that the lesion was present since birth and there was no change in morphology. The most likely possibility is- *(AIIMS May 12)*
a) Sturge Weber syndrome
b) Infantile hemangioma
c) Congenital hemangioma
d) Proteus syndrome

1040. A newborn presents with congestive heart failure, on examination has bulging anterior fontanellae with a bruit on ausculation. Transfontanella USG shows a hypoechoic midline mass with dilated lateral ventricles. Most likely diagnosis is -*(AIIMS Nov 11, Nov 06, AI 07)*
a) Medulloblastoma
b) Encephalocele
c) Vein of Galen malformation
d) Arachnoid cyst

1041. A10 yr old boy, unconscious with 2 days h/o fever, comes to pediatric ICU with R.R. 46/min, B.P. 110/80 and El VI M3 on Glasgow coma scale, next step of Mx includes - *(PGINov 09)*
a) Intubate and ventilate
b) Give 0.9% NaCl
c) Start dopamine at the rate of 1-2 g/min/kg
d) Dopamine at the rate of 1 -2 g / min / kg & furosemide
e) Start antibiotic and order for CT Scan

1042. Known to prevent intreventricular haemorrhage when given antenatally- *(PGI 96)*
a) Phenobarbitine b) Vitamin K
c) Both d)None

1043. Commonest cause of convulsions in a child with fever is- *(AIIMS 84, UPSC 08)*
a) Febrile convulsions b) Meningitis
c) Epilepsy d) Hypothyroidism

1044. Untrue about acute febrile convulsions is -
a) Focal in nature *(AMU 95)*
b) EEG normal after 2 weeks
c) usually occur below 6 years age

1045. Management of typical febrile seizures include except - *(DPG10, Karnat 05)*
a) Sponging
b) Paracetamol ibuprofen
c) Intermittent diazepam
d) Prophylactic phenobarbitone

1046. All of the following are true of febrile seizures except- *(AP97)*
a) Most commonly seen between 9 months and 5 years
b) Does not last more than 10 minutes
c) Almost invariably develop into epilepsy
d) Prognosis is good

1047. Not the cause of neonatal seizures ? *(APPG 08)*
a) Pyridoxine deficiency b) Hypokalemia
c) Hypoxia d)None

1048. Drug of choice for neonatal convulsions-*(JIPMER 98)*
a) Valproate b) Phenytoin
c) Phenobarbitone d) Carbamazepine

1049. A child in status epilepticus should not be given - *(Jipmer 04)*
a) Clonazepam b) Phosphenytoin
c) Lamotrigine d) Diazepam

1050. Neonatal seizures in the following disorders is associated with poorprognosis, except - *(UP 97)*
a) Hypoglycemia b) Intraventricular hemorrhage
c) Hypocalcemia d) Meningitis

1031)a,b,e 1032)a,c,d 1033)d 1034)a 1035)a 1036)b 1037)b 1038) a,b 1039) a 1040)c 1041)a,e 1042)b 1043)a 1044) a 1045)d 1046)c 1047)b 1048)c 1049)c 1050)c

1051. Which of the following has the worst prognosis - *(JIPMER 01)*
a) Rolandic epilepsy b) Versive epilepsy
c) Absence epilepsy d) Infantile spasm

1052. Residual auditory defect is a common complication in meningitis caused by - *(Kant 11)*
a) Staphylococcus b) Meningococcus
c) Escherichia coli d) Hemophilus influenza

1053. Which one of the following statements is true of brain tumours in childhood? *(SGPGI04)*
a) Is a rare from of malignancy
b) Most tumours are below the tentorium
c) Hemiparesis is a frequent from of presentation
d) Papilloedema is infrequent

1054. Commonest location for craniopharyngioma is -
a) Intrasellar b) Suprasellar *(SGPGI 05)*
c) Intraventricular d) Intracerebral

1055. Most severe papilloedema is caused by-*(Kerala 95)*
a) Pituitary tumor
b) Frontal lobe tumor
c) Posterior cranial fossa tumor
d) Medulloblastoma

1056. The common type of cerebral palsy seen in hospitals is- *(CUP GEE 9 5)*
a) Spastic b) Monoplegia
c) Quadriplegia d) Diplegia

1057. IQ (Intelligence quotient) of a child means-
a) The creative effciency of child *(Delhi 96)*
b) The capability of the child to perffom intellectual tasks in relation to other children of same age
c) The efficiency of memory of child
d) Quantiffcation of the learning ability of child

1058. Scapocephaly is due to premature closure of the -
a) Coronal sutrue b) Metopic suture *(Orissa 99)*
c) Sagittal suture d) Lambdoid suture

1059. The following are recognised signs any symptoms of raised intracranial tension in a 9 month old infant, except - *(SGPGI 05)*
a) Bulging fontanel b) Diplopia
c) Papilloedema d) Increase in head size

1060. Commonest cause of obstructive hydrocephalus in children- *(UP 07, 05)*
a) Acqueductal stenosis
b) Aqueductal gliosis
c) Subarachnoid hemorrhage
d) Tubercular meningitis

1061. A 5 year old child is admitted with headache, vomitting and difficulty in walking. Physical findings include truncal ataxia, papilloedema and left lateral recuts palsy. No finger-to-nose ataxia could be detected on the left side or right side. The most likely diagnosis is- *(UPSC 99)*
a) Dandy walker syndrome
b) Syringobulbia
c) Amold-chiari malformation
d) Medulloblastoma

1062. A 2 year old child without fever develops bone pain, vomiting and features of increased intracranial pressure following excessive medication. The drug most likely to be responsible for this is - *(UPSC 98)*
a) VitA b) Phenothiazine
c) Phenytoin d)VitD

1063. The normal concentration of protein in CSF at 4 weeks may be as high as- *(PGI80, Delhi 80)*
a) 500mg% b) 125mg%
c) 50mg% d) 25mg%

1064. In children with cerebral oedema which one of the following corticosteriods will be effecti\e-*(UPSC96)*
a) Hydrocortisone b) Prednisolone
c) Dexamethasone d)Betamethasone

1065. Banana sign seen in the foetal brain suggests -
a) Renal agenesis b) Encephalocele
c) Spina bifida d) Porencephaly *(COMEDK05)*

1066. A 25 year old man with congenital cyanotic heart disease reports to emergency with history of headache. On examination there is systolic murmur best heard on the left side of the sternum in the fourth intercostal space; the second sound is not split. Temperature is 37.5°C. What is most likely diagnosis - *(ICS 2K)*
a) Cortical vein thrombosis
b) Pyogenic septicemia
c) Cerebral abscess
d) Encephalitis

1067. Neural tube defects have which one of the following inheritance patterns ? - *(UPSC-II09)*
a) Autosomal dominant
b) Autosomal recessive
c) X-linked recessive
d) Multifactorial

1068. Acquired extra - cranial infection that causes Aqueductal Stenosis is - *(UPSC 04)*
a) Bacterial endocarditis
b) Mumps
c) Measles
d) Staphylococcal septicemia

1069. Wide open anterior fontanelle is found in following diseases except - *(COMEDK 05)*
a) Rickets b) Cretinism
c) Osteogenesis imperfecta d) Craniosynostosis

1070. Rapid antigen test for meningitis organisms in a child can be done on the following specimens except-
a) Blood b) CSF *(COMED06)*
c) Urine d) Throat swab

1071. Which type of shift in intracranial content is common in children with progressive hydrocephalus-
a) Transforaminal herniation *(Karn 06)*
b) Upward cerebellar herniation
c) Unilateral transtentorial herniation
d) Central transtentorial herniation

1051) d 1052) d 1053)b 1054)b 1055)c,d 1056) a 1057) b 1058)c 1059)c 1060)a 1061)d 1062)a 1063)d 1064)c
1065) c 1066) c 1067) d 1068)b 1069)d 1070)d 1071)d

1072. Porencephaly seen in - *(APPGE 04)*
a) Trisomy 13 b) Fetal alcohol syndrome
c) Down syndrome d) Dandy Walker syndrome

1073. A 5-year old child is assessed to have developmental age of one year. His developmental quotient would be- *(DPG10)*
a) 100 b) 80
c) 60 d)20

METABOLIC DISORDERS

1074. Child with recurrent hypoglycemic attack and hepatomegaly is likely to have - *(AI93)*
a) Von Gierke's disease b) Neonatal diabetes
c) Neonatal hepatitis d) Galactosemia

1075. All are liver glycogenosis except- *(NEET/DNB Pattern)*
a) Von Girke disease b) Hers disease
c) Type III glycogenosis d) Pompes disease

1076. A child presents with hepatomegaly and hypoglycemia. There is no improvement in blood sugar even after administration of epinephrine. What is the likely diagnosis - *(AI 10)*
a) Von girke's disease b) Anderson's disease
c) Pompe's disease d) Me Ardle's disease

1077. In a patient, muscle cramps on exercise, +ve myoglobulinemia, the disorder is - *(PGI June 98)*
a) Pompe's disease b) Myotonia congenita
c) Myotonic dystrophy d) Me ardle's disease

1078. An infant has hepatorenomegaly, hypoglycemia, hyperlipidemia, acidosis and normal structured glycogen deposition in liver. What is the diagnosis - *(PGI June 01)*
a) Her's disease b) Von Gierke's disease
c) Cori's disease d) Anderson's disease
e) Pompe's disease

1079. A child presents with massive hepatomegaly and hypoglycemia. There is no improvement in blood glucose on administration of glucagon. The probable diagnosis is - *(AI 08)*
a) Von - Gierke disease b) McArdle disease
c) Cor's disease d) Forbe's disease

1080. Coarse facies, hepatosplenomegaly and tall QRS on ECG are characteristic feature of - *(AIIMSNov 01)*
a) Glycogen storage disease type II
b) Hurler's disease
c) Hunters disease
d) Hemochromatosis

1081. A 3 day child vomits everything he feeds, has a distended abdomen & diarrhoea. The urine is positive for benedicts test for reducing substance. The substance in urine is - *(AIIMS Nov 10)*
a) Sucrose b) Glucose
c) Galactose d) Fructose

1082. An 8 days old child presents with yellow selera, whitish stool and turmeric colour urine on 3rd day of septicemia on broad spectrum antiboitics, the likely diagnosis is - *(AIIMS June 98)*
a) Galactosidase deficiency
b) Ammonia toxicity
c) Galactose 1-4 phosphatase uridyl transferase deficiency
d) Glucose 6 phosphatase deficiency

1083. True regarding galactosemia - *(PGIDec 01)*
a) Mental retardation occurs
b) Absent disaccharidase in intestine
c) Defect in epimerase
d) Defect in galactose $1P0_4$ uridyl transferase

1084. A child with increased conjugated bilirubin develops seizures and cataract the probable diagnosis is - *(AIIMS Sep 96)*
a) Tyrosenemia b) Fructosemia
c) Galactosemia d) Glycogen storage disorder

1085. Child of Vasanthi was weaned from breast milk on the 5th day and was given sugarcane juice the child developed hypoglycemia and hepatomegaly Biochemical examination showed hypophosphatemia and reducing substances in urine. The child is probably suffering from which of the following enzyme deficiencies - *(AIIMS Nov 2000)*
a) Fructokinase b) Aldolase B
c) Glucose 6 Phosphatase d) Beta galactosidase

1086. An infant presents with history of seizures & skin rashes. Investigations show metabolic acidosis increased blood ketone levels and normal NH_3. This child is likely to be suffering from - *(AI 02)*
a) Propionic aciduraria
b) Urea cyclic disorder
c) Phenylketonuria
d) Multiple carboxylase deficiency

1087. Treatment of multiple carboxylase deficiency -
a) Biotin b)Pyridoxine *(AI07)*
c) Thiamine d) Folic acid

1088. Enzyme deficient in phenylketonuria -
a) Tyrosinase *(NEET/DNB Pattern)*
b) Phenylalanine hydroxylase
c) Tyrosine transaminase
d) Homogentisic oxidase

1089. True statement regarding a 3 week old child with Phenyl-ketonuria is all, except - *(AI 2000)*
a) Provocative protein meal tests helps in the diagnosis
b) Tyrosine becomes an Essential amino - acid in diet
c) Serum Phenylalanine is increased and urinary Phenyl Pyruvate level is elevated
d) Phenylalanine should be completely stopped in diet

1090. In phenylketonuria, the treatment of choice is?
a) Limit intake of substrate for the enzyme
b) Provide the deficient amino- acid *(AIIMSNov 10)*
c) Correct the enzyme defect
d) Symptomatic management

1072)d 1073) d 1074)a 1075)d 1076)a 1077)d 1078)b 1079)a 1080)b 1081)c 1082)c 1083)a,c,d 1084)c
1085)b 1086) d 1087) a 1088)b 1089) d 1090) a

1091. A child has microcephaly, Blue eyes, Fair skin, and Mental retardation, Ferric chloride test is positive. What is the likely diagnosis - *(AI07)*
a) Phenylketonuria (PKU) b) Homocystinuria
c) Tyrosinosis d) Alkaptonuria

1092. A child of phenyl ketonuric mother may develop -
a) Microcephaly, mental retardation, congenital heart disease *(AIIMS June 99)*
b) Mental retardation, cataract, congenital heart disease
c) Hydrocephalus, cataract.
d) Microcephaly, cataract, renal dysplasia.

1093. In phenylketonuria $FeCl_3$ test with urine gives .....color – *(NEET/DNB Pattern)*
a) Green b) Blue
c) Red d) Purple

1094. Deficiency of enzyme a-keto acid decarboxylase leading to a block in the metabolism of branch chain amino acids is observed in - *(AIIMSMay 05)*
a) Maple syrup urine disease
b) Hartnup's disease
c) Alkaptonuria
d) Phenylketonuria

1095. In maple syrup urine disease $FeCl_3$ test with urine gives.....color - *(PGI97)*
a) Green b)Blue
c) Black d)Red

1096. A 5 day old child presents with intractable seizures. He had rashes all over the body. Blood examination sho wed hyperammonemia and lactic acidosis. The probable diagnosis is - *(AIIMS 2K)*
a) Organic aciduria
b) Mitochondrial, encephalopathy with lactic aciduria
c) Phenylketonuria
d) Urea cycle enzyme deficiency

1097. Darkening of urine on standing is associated with -
a) Alkaptonuria b) Cystinuria *(AI 07)*
c) Fabry's diseas d) Tyrosinemia

l$9&?!4ptasy odour uijine is seenin gj *p^^MNEEhttern)*
g8g a) Maple syrup urine b) Phenylketonuria
c) Isovalericacicluria **4)**Cystinuria

1099. In Gaucher's disease there is accumulation of— inside the cells - *(TN 95)*
a) Galactosidases b)Sphingomyeline
c) Glucosidases d) Cerebrosides

1100. Only male are affected in - *(AIIMS May 08)*
a) Scheie's syndrome b) Hunter's syndrome
c) Hurler's syndrome d) Gaucher's disease

1101. For which of the following diseases is enzyme replacement therapy available -
a) Albinism *(AI 04, AIIMS May 06, Nov 03)*
b) Neimann-Pick disease
c) Metachromatic leukodystrophy
d) Gaucher's disease

1102. Macrocephaly is seen in which of the following syndromes ? *(AIIMS May 08)*
a) Metachromatic leucodystrophy
b) Adrenoleukodystrophy
c) Canavan's disease
d) Krabbe's disease

1103. Deep white matter lesion with bilateral deep bright thalamic appearance is suggestive of -
a) Alexander disease *(AIIMSNov 07)*
b) Canavan's diseases
c) Krabbe's disease
d) Metachromatic leukodystrophy

1104. A 12 year old girl with the mood and emotional liability has a golden brown discoloration in descement membrane. Most likely diagnosis is -
a) Fabry's disease *(AI 04)*
b) Wilson's disease
c) Glycogen storage disease
d) Acute rheumatic fever

1105. True about Wilson's disease - *(AI10)*
a) Increase in urinary copper and increased serum ceruloplasmin and copper
b) Increased serum ceruloplasmin levels with increased urinary copper
c) Elevated hepatic copper level and increased serum ceruloplasmin levels
d) Increased in urinary copper and decreased serum ceruloplasmin

1106. A child presents with hepatosplenomegaly, abdominal distension, jaundice, anemia and adrenal calcification. Which of the following is the diagnosis? *(AIIMSMay 11, May 10, 09)*
a) Adrenal hemorrhage b) Wolman's disease
c) Pheochromocytoma d) Addison's disease

1107. Injection Glucagon is effective for management of persistent hypoglycemia in all, except-
a) Large for date baby *(AIIMSMay 04)*
b) Galactosemia
c) Infant of diabetic mother
d) Nesidioblastosis

1108. A 6 day old newborn infant develops lectonuria seizures and hypoglycemia. The likely diagnosis is-
a) Aromatic amino aciduria *(AIIMS June 99)*
b) Phenyl ketonuria
c) Intrauterine infectious
d) Tyrosinemia

1109. Large doses of pyridoxine are of value in some cases of- *(PGI 79,81, 87)*
a) Phenylketonuria
b) Homocystinuria
c) Nonketotic hyperglycemia
d) Ketotic hyperglycemia

1110. Which one of the following is not a pyridoxine dependent disorder - *(UPSC 0 7)*
a) Homocystinuria b) Methyl-malonic-acidemia
c) Cystathioninuria d) Xanthurenic aciduria

1091)a 1092)a li093)a 1094)a 1095)b 1096)a 1097)a 1098)b 1099)d 1100)b 1101)d 1102)c 1103)c 1104)b 1105) d 1106)b 1107)b 1108)a 1109)b 1110)b

1111. Cystinuria is characterised by - *(AIIMS 83)*
a) Generalised aminoaciduria
b) Systemic acidosis
c) Deposition of cystine crystals in Renal tubular cells
d) Recurrent urinary calculi

1112. Which of the following inborn errors of metabolism is associated with mental retardation - *(A1IMS 83)*
a) Alkaptonuriab) Homocystinuria
c) Pentosuria d) Galactosemia

1113. In Gaucher's disease there is accumulation of— inside the cells - *(TN 95)*
a) Galactosidasesb) Sphingomyeline
c) Glucusidases d) Cerebrosides

1114. Enzyme replacement therapy is available for which of the following disorders ? *(Delhi PG Feb. 09)*
a) Gaucher's disease
b) Niemann Pick disease
c) Mucolipidosis
d) Metachromatic leukodystrophy

1115. Cloudy cornea is a feature of - *(MH11)*
a) Hurler's disease b) Morquio's disease
c) Maroteaux Lomy disease d) All of the above

1116. LEIGH disease is due to the accumulation of- *(NIMHANS01)*
a) Glycogen b)Pyrodoxine
c) Sphingomyelin d)Lipofuscin

1117. All are seen in metachromatic leukedystrophy except- *(TN03)*
a) Mental retardation
b) Optic atrophy
c) Decerebrate posture
d) Exaggerated tendon reflexes

1118. Which one of the following is not a feature of Phenylketonuria? *(UPSC04)*
a) Severe mental retardation
b) Reduced tendon reflexes
c) Enamel hypoplasia
d) Vomiting in early infancy

1119. Guthrie test can be used for the diagnosis of -
a) Tyrosinemia b) Galactosemia *(UPSC-110)*
c) Alkaptonuria d) Phenylketonuria

1120. Which is not a feature of wilsons disease in a child- *(AIIMS 91)*
a) Fanconi syndrome b) Sensory changes
c) Hemolytic anemia d) Chronic active hepatitis

1121. Congenital Wilson's disease is characterized by-
a) KF ring is present at birth *(SGPG105)*
b) May present as acute hepatitis
c) Decreased Urinary copper excretion
d) Decreased hapatic copper concentration

1122. All of the following are recognised features of Wilson's disease except- *(UP 97)*
a) Psychological distrubances
b) Increased cerulplasmin levels
c) Increased copper content of liver
d) Histopathological features of chronic active hepatitis

1123. The gene for Wilson's disease is on- *(MH10)*
a) Long arm of Chromosome 13
b) Long arm of Chromosome 6
c) Short arm of Chromosome 13
d) Short arm of Chromosome 6

1124. Which glycogen storage disease doesn't affect muscles ? *(APPG 08)*
a) Type 1 b) Type 2
c) Type 3 d) Type 4

1125. Massive aminoaciduria without a corresponding increase in plasma amino acid level is characteristic of which one of the following diseases ? *(UPSC-108)*
a) Homocystinuria b) Hartnup disease
c) Tyrosinemia d) Maple syrup urine disease

1126. In children the most commonly recognised form of familial hyperlipidaemia is - *(COMED 09)*
a) Hypertriglyceridaemia
b) Hypercholesterolaemia
c) Hyperchylomicronaemia
d) Combined hyperlipidaemia

CHILDHOOD TUMORS

1127. Common childhood tumors are- *(PGIDec08)*
a) Acute lymphoblastic leukemia
b) Chronic lymphoblastic leukemia
c) Chronic myeloid leukemia
d) Brain tumor
e) Wilm's tumor

1128. TRUE statement regarding childhood malignancy is- *(ARMS Dec 1994)*
a) Wilm's tumour is the commonest
b) AML is the most common malignancy
c) Neuroblastoma arises in the first 4 years
d) None of the above

1129. Most common tumor in children is - *(Al07, 99)*
a) Leukemia b) Lymphoma
c) Wilm's tumor d) Neuroblastoma

1130. Which of the following is the most common tumor of the fetus and newborn - *(Al 12)*
a) Neuroblastomab) Wilm'si tumor
c) Leukemia d) Sacrococcygeal Teratoma

1131. Not seet in first decade - *{NEET/DNB Pattern)*
a) Retino blastoma b) Rhabdcl myosarcoma
c) Neuroblastoma d) Ameloblastoma

1132. Most of the ALLs have- .... *(PGI98)*
a) B-cell origin b) T-cell ori gin
c) NK cell origin d)None

1133. Which of the following prese nts as mediastinal enlargement - *(Al 95, 94)*
a) Promyelocytic Leukemia
b) CML
c) ALL
d) Diffuse histiocytic lymphoma

1111)d 1112)b,d 1113)d 1114)a 1115)d 1116)None 1117)d 1118)b 1119)d 1120)b 1121)b A122)b 1123)a 1124) a 1125) b 1126)d 1127)a.d.e 1128)c 1129)a 1130)d 1131)d 1132)a 1133)c

1134. A 5 year old child presents with history of fever off-and-on for past 2 weeks and petechial spots all over the body and increasing pallor for past 1 month. Examination reveals splenomegaly of 2 cms below costal margin. The most likely diagnosis is- *(AI04)*
a) Acute leukemia
b) Idiopathic thrombocytopenic purpura
c) Hypersplenism
d) Aplastic anemia

1135. ALL L_3 morphology is a malignancy arising from which cell lineage - *(AI 07)*
a) Mature B cell b) Precursor B cell
c) Immature T cell d) Mixed B cell &T cell

1136. Poor prognostic indicator of ALL is -
a) Female sex *(AIIMS May 02)*
b) Leukocyte count < 50,000
c) Age greater than 1 year
d) Hypodiploidy

1137. All of the following are good prognostic factors for childhood. All except - *(AI 07)*
a) Hyperdiploidy b) Female sex
c) Pre B cell ALL d) t (12 :21) translocation

1138. The poor prognostic factor associated with ALL in children is - *(AIIMSNov 09)*
a) Total leucocyte count 4000-100000
b) Age less than 2 years
c) Testicular involvement
d) Blast in peripheral smear

1139. Which of the following is poor prognostic factor in a child with ALL? *(AI 11)*
a) Age 2-8 yrs
b) Total leucocyte count < 50,000
c) t **(9; 22);** t **(4; 11); t (1; 19)**
d) Absent blasts in peripheral smear

1140. L-asparaginase is particularly used in which type of leukemia - *(AI 94, 95)*
a) AML b)CML
c) ALL d)CLL

1141. Commonestsite of extramedullary relapse of ALL-
a)CNS b)Lung *(NEET/DNB Pattern)*
11 g| c).Liver §g§§ 11 d) Tesfe v; §||§!§| |g§ | H

1142. Which of the following types of leukemia is administered prophylactic methotrexate for CNS prophylaxis- *(AI 97)*
a) ALL b) AML
c) CLL d)CML

1143. All of the following are good progonostic factor for ALL except - *(AIIMS Nov 08)*
a) Age of onset between 2-8 years
b) Initial WBC count less than 50000
c) Hyperdiploidy
d) t (9:22), t (8 :14), t (4:11)

1144. Non specific esterase in present in- *(PGIDec 97)*
a) Megakaryocytic leukaemia
b) Lymphocytic leukaemia
c) Erythroleukaemia
d) AML

1145. Non specific esterase is positive in all the categories of AML except - *(AI 07)*
a) M3 b)M4
c)M5 d)M6

1146. Chloroma is due to- *(PGI 99)*
a) AML b)CLL
c) ALL d) Non Hodgkin's lymphoma

1147. In the case of CNS relapse in AML, chemotherapy would consist of intrathecal - *(UPSC 9 7)*
a) Methotrexate
b) Methotrexate + cytosine arabinoside
c) Prednisolone
d) Adriamycin

1148. A child with acute myeloid leukemia presents with hyperleukocytosis. Treatment includes all of the following except - *(AI 09)*
a) IV fluid
b) Allopurinol
c) Alkalinization
d) Immediately start induction chemotherapy

1149. All ofthe followingfeatures uf juvenile CML except- *(NEET/DNB Pattern)*
a) Thrombocytopenia
^ Fetal Hb is increased £
■ c) Philadelphia chromosome is positive
d) Lymphadenopathy

1150. Increased fetal Hb is seen in - *(AIIMS 97)*
a) Juvenile CML
b) Congenital red cell aplasia
c) Hereditary spherocytosis
d) AML

1151. A2yearold boy suffering from leukemia, following are the x-ray findings - *(PGI June 03, Dec 2000)*
a) Osteolytic lesion in flat bones
b) Metaphyseal osteoporosis
c) Periosteal new bone formation
d) Osteosclerosis of long bones
e) Transverse line of dark band below the growth plate

1152. All of the following syndromes are associated with AML except - *(AI 0 7)*
a) Down's syndrome b) Klinefelter's syndrome
c) Patau syndrome d) Turner's syndrome

1153. Genetic risk factors for leukemia are all except - *(Kerala 04)*
a) Down's syndrome b) Bloom syndrome
c) Ataxia telangiectasia d) Turner's syndrome

1154. Transient myeloproliferative disorder of the newborn is seen in association with - *(AI03)*
a) Turner syndrome b) Down syndrome
c) Neurofibromatosis d) Ataxia telangiectasia

1155. The most common malignant neoplasm of infancy is - *(AI05)*
a) Malignant teratoma b) Neuroblastoma
c) Wilms'tumor d) Hepatoblastoma

1134) a 1135) a 1136)d 1137)c 1138)c 1139)c 1140)c 1141)a 1142)a 1143)d 1144)d 1145)d 1146)a 1147) None 1148)d 1149)c 1150)a 1151)b,c,e 1152)d 1153)None 1154)b 1155)b

1156. Neuroblastoma originates from - *(PGI June 08)*
a) Adrenals b) Mediastinum
c) Chest wall d) Peripheral nerves
e) Neck

1157. True about neuroblastoma - *(PGIMay 10)*
a) Tumor of autonomic nervous system
b) Metastasis rarely present
c) Earliest detected in late childhood
d) Most common site is Adrenal medulla

1158. A1-year-old child presented with a swelling in the left flank with episodes of flushing, diarrhea, sweating and bone pain. The diagnosis is - *(AI94)*
a) Neuroblastoma b) Wilm's tumor
c) Medulloblastoma d) Pheochromocytoma

1159. Most common presentation of neuroblastoma is -
a) Lytic lesion in skull with suture diasthesis
b) Lung metastasis *(AI 98)*
c) Renal invasion
d) Secondaries in brain

1160. 4 years old child having palpable abdominal mass & hypertension with sweating & diarrhea-is due to -
a) Neuroblastoma *(NEET/DNB Pattern)*
b) Nephroblastoma
c) PCKD (Polycystic kidney disease)

1161. A malignant tumor of childhood, that metastasizes to bones most often, is - *(AI 06, 02)*
a) Wilm's tumor
b) Neuroblastoma
c) Adrenal gland tumors
d) Granulosa cell tumor of ovary

1162. Which of the following statements about neuroblastoma is not true - *(AI 09)*
a) Most common extracranial solid tumor in childhood
b) > 50 % present with metastasis at the time of diagnosis
c) Lung metastasis are common
d) Often encase aorta and its branches at the time of diagnosis

1163. Opsomyoclonus is encountered as C/F of-
a) Meningioma *(PGI Dec 99)*
b) Neuroblastoma
c) Neurofibromatosis
d) Excision

1164. To which of the following events is 'good' outcome in neuroblastoma associated - *(AI 04)*
a) Diploidy
b) N-myc amplification
c) Chromosome lp depletion
d) Trk A expression

1165. Neuroblastoma-good prognostic factor is- *(PGIJune 2K)*
a) N-myc amplification b) RAS oncogene
c) Hyperdiploidy d) Translocation

1166. Which is the commonest abdominal mass in neonate - *(AIIMS Feb 9 7, AI 96, 94)*
a) Wilm's tumor b) Polycystic kidney
c) Neuroblastoma d) Rhabdomyosarcoma

1167. Child coming with proptosis, multiple skeletal limb secondaries, sutural separation is having - *(PGI95)*
a) Neuroblastoma b) Medulloblastoma
c) Retinoblastoma d) None of the above

1168. Wilm's tumor is associated with all the following except - *(AI 94)*
a) Aniridia b) Beckwith syndrome
c) Polycystic kidney d) Hemi-hypertrohy

1169. Which of the following are associated with Wilm's tumor- *(PGIDec 08)*
a) Aniridia b) Geni tourinary abnormalities
c) Cataract d) Hemihypertrophy
e) Macroglossia

1170. A 7-year old boy with left renal mass had bone pain and was detected to have bone metastatic deposits. The most likely renal tumor is - *(AIIMSNov 04)*
a) Favorable histology Wilms tumor
b) Renal cell carcinoma
c) Clear cell sarcoma
d) Rhabdoid tumor

1171. The most common presentation of a child with Wilms' tumor is - *(AI 05, AIIMS Dec 95, NEET/DNB Pattern)*
a) As asymptomatic abdominal mass
b) Haematuria
c) Hypertension
d) Hemoptysisdue to^pulmonafy'Si&dh^^ Jjf§§

1172. The most important determinant of prognosis in Wilms tumor - *(AI 06)*
a) Stage of disease
b) Loss of heterozygosity of chromsome I p
c) Histology
d) Age less than one year at presentation

1173. Which of the following is the treatment of choice for Stage-I Wilm's Tumor - *(AI 12)*
a) Laparoscopic Nephrectomy
b) Open Nephroureterectomy
c) Chemotherapy
d) Observation

1174. Wilm's Tumour is associated with all. except -
a) Hemihypertrophy *(AIIMSJune 97)*
b) Beckwith syndrome
c) Aniridia
d) Polycystic kidney

1175. Which statement(s) is/are true about neuroblastoma with respect to wilms tumor - *(PGIDec 08)*
a) Neuroblastoma causes displacement of kidney inferolaterally without distortion of collecting system
b) Stippled calcification is present in wilm's tumor
c) Aortic and IVC invasion by neuroblastoma
d) Neuroblastoma crossing mid line
e) Intraspinal extension by wilms tumor

1176. Histiocytosis X is seen in except- *(PGIDec 97)*
a) Hand schuller Christian disease
b) Eosinophilic granuloma
c) Letter-siwe. syndrome
d) Torres syndrome

1156) a,b,e 1157)a,d 1158)a 1159)a 1160)a 1161)b 1162)c 1163)b 1164)a 1165)c 1166)c 1167)a 1168) c
1169) a,b,d,e 1170)c 1171)a 1172)c>a 1173)b 1174)d 1175)a,c,d 1176)d

1177. A 2-year-old child comes with discharge, seborrheic dermatitis, polyuria and hepatosplenomegaly. Which of the following is the most likely diagnosis -
a) Leukemia *(AIIMS May 04, AI01, 94)*
b) Lymphoma
c) Langerhan's cell histiocytosis
d) Germ cell tumour

1178. Baby \)ith recurrent infection of ear & discharge & seborrheic dermatitis with hepatosplenomegaly with cystic skull lesions. Diagnosis is -
a) Hemophagocytic lymphohistiocytosis
b) Langerhans cell histiocytosis
c) ALL *(NEET/DNB Pattern)*

ll 79. A child presented in the OPD with multiple permeating lesions involving all the bones of the body which of the following is the most probable diagnosis - *(AIIMS Nov 2000)*
a) Neuroblastoma
b) Metastasis from osteosarcoma
c) Histiocytosis X
d) Metastasis from Wilm's tumour

1180. A one year old boy presented with hepatosplenomegaly and delayed milestones. The liver biopsy and bone marrow biopsy revealed presence of histocytes with PAS positive. Electron microscopic examination of these histiocytes is most likely to reveal the presence of - *(AIIMS 03)*
a) Birbeck granules in the cytoplasm
b) Myelin figures in the cytoplasm
c) Parallel rays of tubular structures in lysosomes
d) Electron dense deposit in the mitochondria

1181. A 2 year old child presents with scattered lesions in the skull. Biopsy revealed Langerhans giant cells. The most commonly associated is marker with this condition will be - *(AIIMS Nov 0 7)*
a) CD la b) CD 57
c) CD3 d)CD68

1182. True about Langerhan's histocytosis 'X'-
a) Can be associated with diabetes insipidus
b) X-ray shows pathognomonic osteosclerotic lesions *(PGI June 01)*
c) Birbeck's granules in langhan's cell
d) Proliferation of antigen presenting cells
e) Associated with specific HLA DR

1183. Which of the following drugs is used for the treatment of refractory histiocytosis -
a) High dose methotrexate *(AIIMSNov 08)*
b) High dose cytarabine
c) Cladribine
d) Fludrabine

1184. Cancer management in which of following malignancies has dramatically increased the survival? *(AIIMS May 12)*
a) Esophagus carcinoma
b) Glioblastoma multiforme
c) ALL in children
d) Cholangiocarcinoma

1185. Germ cell tumor(s) of paediatric includes all except-
a) Pure yolk sac tumor *(PGI Nov 09)*
b) Leydig cell tumor
c) Choriocarcinoma
d) Embryonal cell carcinoma
e) Endodermal sinus tumor

1186. Commonest tumor of face in chidren is- *(PGIDec 99)*
a) Rhabdomyosarcoma b) Sq. cell carcinoma
c) Basal cell carcinoma d) Mixed parotid tumor

1187. True about childhood tumor are all except -
a) Wilm's tumor *(PGI June 08)*
b) Neuroblastoma
c) Retinoblastoma
d) Embryonal rhabdomyoma
e) Pleomorphic rhabdomyosarcoma

1188. Most common urinary bladder tumour in childhood is - *(AIIMS June 97, AI 92)*
a) Haemangioma
b) Rhabdomyosarcoma
c) Transitional cell carcinoma
d) Squamous cell carcinoma

1189. Commonest sarcoma in children is - *(PGIDec 99)*
a) Rhabdomyosarcoma b) Lipoma
c) Angiosarcoma d) Fibrosarcoma

1190. Which of the following is the most common inherited malignancy - *(AIIMS May 05)*
a) Infant leukemia b) Retinoblastoma
c) Wilm's tumour d) Neuroblastoma

1191. Childhood malignancy producing proptosis is/are - *(PGI June 05)*
a) Neuroblastoma b) Hepatoma
c) Retinoblastoma d) Germ cell tumor
e) Nephroblastoma

1192. A10 years old child has lytic lesions in upper femur, the differential diagnosis can be all except-
a) Plasmacytoma *(AIIMSDec 97)*
b) Browns tumour
c) Metastasis
d) Histiocytosis

1193. 1 year old child abdominal mass with calcification, passibilities are - *(PGIDec 2 K)*
a) Neuroblastoma b) Wilm's tumor
c) Nephronophthisis d) Pheochromocytoma

1194. Highest cure rate is of - *(NEET/DNB Pattern)*
a) Wilm's Tumor b) Retinoblastoma
c) Rhabdomyosarcoma d)All

1195. Most common malignant tumour in childhood -
a) Rhabdomyosarcoma b) Leukemia *(UP 07)*
c) Lymphangioma *d)* Neuroblastoma

1196. Second most common neoplasm seen in children is-
a) Lymphoma b) Brain tumour *(Karn11)*
c) Wilm's tumour d) Neuroblastoma

1197. Which is the commonest childhood tumor -
a) ALL b)CLL *(Jipmer03)*
c) AML d)CML

1177)c 1178)b 1179)c 1180)a 1181)a 1182)a,c,d,e 1183)c 1184)c 1185)b 1186)a 1187)e 1188)b 1189)a
1190)b 1191)a,c,e 1192)a 1193)a,b,d 1194)b 1195)b 1196)b 1197)a

1198. The most characteristic radiographic sign in a child with leukemia is - *(COMED 06)*
a) Osteosclerosis of the metaphysic
b) Metaphyseal translucencies
c) Periosteal reaction
d) Osteolytic lesion

1199. A family of a child just diagnosed with acute lymphoblastic leukemia asks about the child's prognosis. Which of the following is a poor prognostic indicator ? *(UPSC-I09)*
a) Presence of mediastinal mass
b) Age between 1 and 10 years
c) Hyperploidy with more than 50 chromosomes
d) WBC count less than 50,000/mm^3 at diagnosis

1200. Acute leukemia in children is associated with - all except- *(DelhiPGFeb. 09)*
a) Down's syndrome b) Klinefelter's syndrome
c) Marfan's syndrome d) Turner's syndrome

1201. CMLin children is associated with- *(NIMH. 01)*
a) Down's syndrome b) Klinefelter syndrome
c) Marran's syndrome d) Turner's syndrome

1202. Transient myeloproliferative disorder of the newborn is seen in association with - *(DPG 10)*
a) Turner's syndrome b) Down's syndrome
c) Neurofibromatosis d) Ataxia telangiectasia

1203. All are associated with malignancy except*r(MP 2K)*
a) Down's syndrome b) Fragile X syndrome
c) Bloom syndrome d)Fanconi's anaemia

1204. Neuroblastoma is- *(PGI87)*
a) Associated with mild hypertension
b) Rare tumour to undergo regression
c) Commonest tumour of adrenal cortex
d) Treatment excision and post operative radiotherapy

1205. A1 year old child presenting with abdominal mass and calcification on X-rays is suggestive of -
a) Teratoma *(PAL 93, PGI86, 93)*
b) Neuroblastoma
c) Wilms tumour
d) Rhabdomyosarcoma

1206. A 2 day old newborn baby presented with microcephaly, macroglossia, visceromegaly and a blood glucose level of 20 mg/dl. What is the most likely diagnosis - *(Orissa 98)*
a) Prader-Willi syndrome
b) Beckwith Wiedman syndrome
c) Werner syndrome
d) Cockayne syndrome

1207. Wilms' tumor is associated with the following except- *(UPSC-I10)*
a) Aniridia b) Horse-shoe kidney
c) Hemihypertrophy d) Opsoclonus

1208. Increased fetal hemoglobin is seen in - *(DPG 10)*
a) Juvenile CML
b) Congenital red cell aplasia
c) Hereditary spherocytosis
d) AML

1209. Most common benign tumours during infancy is-
a) Lymphangioma b) Hemangioma*(UP 07)*
c) Cystic hygroma d) Lipoma

1210. Retinoblastoma gene is located on - *(TNPSC 2K)*
a) Chromosome 5 b) Chromosome 8
c) Chromosome 13 d) Chromosome 16

1211. Deletion of chromosome 11 leads to - *(DNB 2001)*
a) Wilm's b) Neuroblastoma
c) Retinoblastoma d) Osteosarcoma

1212. Ewing's tumour arises from- *(NIMS 96)*
a) Mesothelial cell b) Endothelial cell
c) Squamous cell d) None of the above

1213. Treatment for childhood hypothyroidism is with -
a) T_4 b) T_3 *(Manipal08)*
c) Levothyroxine d) TSH

1214. Most common cause of thyrotoxicosis in childhood?
a) Toxic nodular goitre *(APPG 08)*
b) Toxic adenoma
c) Graves disease
d) Thryotoxicosis factitia

HEMATOLOGY

1215. Which organ is the primary site of hematopoiesis in the fetus before midpregnancy - *(AlIMSMay 06)*
a) Bone b) Liver
c) Spleen d)Lung

1216. The hemoglobin to appear first in the fetus is -
a) Hb A b) Hb A_2 *(AIIMS 83)*
c) HbF d)HbGowers

1217. When does switchover from fetal to adult hemoglobin synthesis begin - *(AIIMS Nov 04, Nov 05, May 05)*
a) 14 weeks gestation b) 30 weeks gestation
c) 36 weeks gestation d) 7-10 days postnatal

1218. Feature of fetal RBC in adult - *(ARMS June 98)*
a) Alkali denaturation resistant
b) Small in size
c) Has more 2,3 DPG level
d) More iron than adult RBC

1219. All are true regarding fetal RBC's except -
a) Elevated 2,3 DPG *(ARMS Dec 9 7)*
b) Decreased carbonic anhydrase activity
c) Decreased life span
d) High RBC volume

1220. Macrocytic anaemia in children is produced by all except - *(ARMS 96)*
a) Thiamine deficiency b) Orotic acideueia
c) Copper deficiency d) Liver disease

1221. A 5 year old girl came with history of progressively increasing pollor since birth and hepatosplenomegaly. Which of the following is the most relevant test for achieving diagnosis - *(AI04)*
a) Hb electrophoresis
b) Peripheral smear examination
c) Osmotic fragility test
d) Bone marrow examination

1198) b 1199) a 1200) c 1201) a 1202) b 1203) b 1204)a,dl205)b 1206) b 1207) d 1208) a 1209) b 1210) cf 1211) a
1212) d 1213) c 1214) c 1215)b 1216)d 1217)c 1218)a 1219)a 1220)c 1221)a

1222. Defect leading to thalassemia lies in - *(PGIDec 97)*
a) Haemoglobin b) Osmotic fragility
c) RBC membrane d) Platelets

1223. Thalassemia occurs due to which mutations -
a) Missense b) Splicing *(PGIDec 2K)*
c) Transition d) Frame-shift
e) Truncation

1224. In beta thalassemia, there is - *(AIIMSMayOl)*
a) Increase in beta chain, decrease in alpha chain
b) Decrease in beta chain, increase in alpha chain
c) Decrease in beta chain, decrease in alpha chain
d) Increase in beta chain, increase in alpha chain

1225. P-thalasemia trait; true about - *(PGI June 04)*
a) tHbF b) t HbA2
c) Microcytosis d) Severe anaemia

1226. Hb A 2 concentration in thalassemia trait is -
a) 1 b) 1-2.5 *(PGI June 99)*
c) 2.5-3.5 d)>3.5

1227. Whichof the following haerndglobuf (Hb) estimation will be diagnostically helpful in a case of beta , thalassemia trait- *(A! I MS May 06, UP OS, MEET/ DNB Pattern)*
a) Hb-K b) tib,-C
c) Hb-A_2 d) Hb-H

1228. 6 months old infant with Hb of 6 gm% has anaemic features with peripheral blood showing target cells. Family history of similar complaints is (Positive). Diagnosis can be best done with which of the following - *(AIMS Nov 01, AI01)*
a) Hb electrophoresis b) ELISA
c) Coomb's Test d) Osmotic fragility

1229. Diagnosis of beta Thalassemia is established by -
a) NESTROFT Test *(AI 05)*
b) Hb Aj c estimation
c) Hb electrophoresis
d) Target cells in peripheral smear

1230. All of the following are true of P thalassemia major, except - *(AIMS May 06)*
a) Splenomegaly
b) Target cells on peripheral smear
c) Microcytic hypochromic anemia
d) Increased osmotic fragility

1231. NESTROFT test is a screeing test for-
a) p-thalassemia *(AIMS Nov 11)*
b) Hereditary spherocytosis
c) Autoimmune hemolytic anemia
d) Megaloblastic anemia

1232. Hair on end appearance is seen in X-ray skull in - *(AIMS June 97, PGI June 97)*
a) Thalassemia b) Hydrocephalus
c) Chronic malaria d) Sickle cell anemia

1233. In a-thalassemia r *(NEET/DNB Pattern)*
a) Excess a-chain b) No a-chain
c) Excess P-chain d) No P-chain ;

1234. Bart's hydrops fetalis is lethal because - *(AI05)*
a) Hb Bart's cannot bind oxygen
b) The excess a - globin form insoluble precipitates
c) Hb Bart's cannot release oxygen to fetal tissues
d) Microcytic red cells become trapped in the placental

1235. A child died soon after birth. On examination there was hepatosplenomegaly and edema all over body. Most probable diagnosis in - *(AIMS May 02)*
a) p-thalassemia
b) a-thalassemia
c) Hereditary spherocytosis
d) ABO incompatibility/sickle cell anemia

1236. The primary defet which leads to sickle cell anemia is - *(AI 03)*
a) An abnormality in porphyrin part of hemoglobin
b) Replacement of glutamate by valine in P-chain of HbA
c) A nonsence mutation in the P-chain of HbA
d) Substitution of valine by glutamate in the a-chain of HbA

1237. Mutation leading to sickle cell anemia-(PG7 *JuneOl)*
a) Crossover mutation b) Frame shift
c) Deletion d) Nondysjunction
e) Pointmutation

1238. Commonest presentation of sickle cell anemia -
a) Priapism b) Bone pain*(AIMS Nov 98)*
c) Fever d) Splenomegaly

1239. In sickle cell trait, number of bands found in Hb -
a) 2 b) 1 *(PGI June98)*
c) 4 d) 5

1240. Following are the findings in sickle cell Anemia, except- *(PGI June 98)*
a) Fish vertebra b) Enlarged heart
c) Splenomegaly usually seen d) Leukocytosis

1241. Salmonellosis is most common in*(NEET/DNB Pattern)*
a). Sickle cell anemia , b) Thalassemia
c) Hemophilia d) Cystic fibrosis

1242. HbE is common in - *(PGI96)*
a) Punjab b) Kerala
c) Bengal d) Maharstra

1243. Which enzyme deficiency causes hemolytic anemia-
a) G-6-PD b) Aldolase *(PGI 98)*
c) Isomerase d) Enolase

1244. Regarding G_6PD deficiency true are -
a) Autosomal dominant *(PGI June 06)*
b) Bite cell (+)
c) Protects against kala azar
d) Enzyme level directly proportional to age of RBC
e) Sex preponderance

1245. TVue about iron deficiency anemia in children -
a) Iron absorption from terminal ileum
b) Cow milk contain less iron than breast milk
c) Serum ferritin depletes first *(PGI June 09)*
d) Decreased alertness
e) Decreased Red cell distribution width (RDW)

1222) a 1223)b,d 1224)b 1225)a,b,c 1226)d 1227)c 1228)a 1229)c 1230)d 1231)a 1232)a,d 1233)b 1234)c
1235) b 1236) b 1237)e 1238)b 1239)a 1240)c 1241)a 1242)c 1243)a 1244)b,e 1245)c,d

1246. TVue about iron deficiency anemia - *(PGI June 05)*
a) Microcytic hypochromic anemia
b) Decreased TIBC
c) Increased ferritin
d) Bone marrow iron decreased earlier than serum iron

1247. A nine month old boy of Sindhi parents presented to you with complaints of pregressive lethargy, irritability & pallor since 6 months of age. Examination revealed severe pallor. Investigation showed Hb-3.8 mg%; MCV-58 fl; MCH-19.4 pg/ cell. Blood film shows osmotic fragility is normal (target cells and normoblasts). X-ray skull shows expansion of erythroid marrow. Which of the following is the most likely diagnosis - *(AJ 04)*
a) Iron deficiency anemia
b) Acute lymphoblastic anemia
c) Hemoglobin D disease
d) Hereditary spherocytosis

1248; First change of improvement noted after-irontherapy is initiated- *(NEET/DNB Pattern)*
a) Decreased irritability
b) Reticulcytosis
c) Increase in serum iron levels
d) Replenishment of iron-stores ggggg Spfc.*

1249. The earliest indicator of response after starting iron in a 6-year-old girl with iron deficiency is- *(AI06)*
a) Increased reticulocyte count
b) Increased hemoglobin
c) Increased ferritin
d) Increased serum iron

1250. The coagulation profile in a 13-year old girl with Menorrhagia having von Willebrands disease is -
a) Isolated prolonged PTT with a normal PT
b) Isolated prolonged PT with a normal PTT
c) Prolongation of both PT and PTT *(AI 05)*
d) Prolongation of thrombin time

1251. A child underwent a tonsillectomy at 6 years of age with no complications. He underwent a preoperative screening for bleeding at the age of 12 years before an elective laporatomy, and was found to have a prolonged partial thromboplastin time but normal prothrombin time. There was no family history of bleeding. The patient is likely to have-
a) Acquired Vit K deficiency *(AIIMS Nov 04)*
b) Acquired liver disease
c) Factor XII deficiency
d) Mild hemophilia A

1252. Major source of Von Willebrand factor (vWF) -
a) Erythrocytes b) Neutrophils *(AI98)*
c) Endothelial cells d) Monocytes

1253. Characteristic lab findings of hemophilia A are -
a) tPT *(PGI June 06)*
b) t aPTT
c) X-linked recessive
d) Presence of 30% of factor level express the disease
e) Increased bleeding time

1254. Hemophilic A have following diagnostic features except- *(AI 97)*
a) lvm factor b)tPTT
c) TPT d)NormalBT

1255. The commonest mode of inheritance of Von Willebrand's diasease - *(AIIMS Nov 2000)*
a) Codominant b)Autosomal recessive
c) Autosomal dominant d) X linked recessive

1256. Von willebrands disease all are true except -
a) Factor VIIIC deficiency *(AIIMS 97)*
b) B.T. Prolonged
c) Normal Ristocetin test
d) Defective aggregation

1257. A newborn baby presented with profuse bleeding from umbilical stump after birth. Probable diagnosis is -
a) Factor XIII deficiency *(AIIMSMay 07, Nov 06)*
b) VWF deficiency
c) Factor XII deficiency
d) Glanzmann thrombosthenia

1258. A 15-year-old female presented to the emergency department with history of recurrent epistaxis, hematuria and hematochezia. There was a history of profuse bleeding from the umbilicus stump at birth. Previous investigations revealed normal prothrombin time, activated partial thromboplastin time, thrombin time and fibrinogen levels. Her platelet counts as well as platelet function tests were normal but urea clot lysis test was positive. Which one of the following clotting factor is most likely to be deficient - *(AIIMSMay 06)*
a) Factor X b) Factor XI
c) Factor XII d) Factor XIII

1259. Feature of hemorrhagic disease of new born is -
a) Prolonged prothrombin time *(AIIMS June 97)*
b) Defective platelet count
c) Prolonged bleeding time
d) Prolonged thrombin time

1260. Late onset hemorrhagic disease of newborn is characterized by all of the following features except-
a) Usually occurs in cow-milk fed babies *(AI 06)*
b) Onset occurs at 4-12 week of age
c) Intracranial hemorrhage can occur.
d) Intramuscular vitamin K prophylaxis at birth has a protective role

1261. In thromboasthenia there is a defect in -*(Jimper 91)*
a) Platelet aggregation
b) Platelet adhesion
c) Decreased ADP release
d) Desordered platelet secretion

1262. Glanzmans disease is - *(PGI96)*
a) Congenital defect of platelets
b) Congential defect of RBCs
c) Defect of neutrophils
d) Clotting factor deficiency

1263. Thrombocytopenia in a new born baby can be caused by- ***(AIMS Nov 1999)***
a) ABO incompatibility
b) Isoimmune thrombocytopenia
c) Autoimmune thrombocytopenia
d) SLE

1264. Most frequent cause of neonatal thrombocytopenic purura is - *(PGI80, AIIMS 82)*
a) Infection
b) Drug idiosyncrasy
c) Large haemangiomas
d) Erythroblastosis

1265. Which of the following is generally not seen in idiopathic thrombocytopenic purpura (ITP) -
a) More common in females *(AIIMS Nov 04)*
b) Petechiae, ecchymosis and bleeding
c) Palpable splenomegaly
d) Increased megakaryocytes in bone marrow

1266. True about acute ITP - *(PGI June 05)*
a) More common in female
b) Specific anti platelet antibodies detected
c) Viral infection predisposes as seen after vaccination
d) 80% cases transforms to chronic
e) More common in children

1267. A Pt. has ecchymoses and petechiae all over the body with no hepatospleenongaly. All are true except -
a) Increased megakaryocytes in bone narrow
b) Bleeding into the foints *(AIIMS Nov 99)*
c) Decreased platelet in blood
d) Disease resolves itslef in 80% of Pt. in 2-6 weeks

1268. A 5 year old boy comes with overnight petechial spots 2 weeks back he had history of abdominal pain and no hepatosplenomegaly. Diagnosis is -
a) Aute lymphatic leukemia *(AIIMSMay 07)*
b) Aplastic anemia
c) Idiopathic thrombocytopenis purpura
d) Acute viral infection

1269. Drug of choice in Neonatal ITP is - *(AIIMS 91)*
a) Platelet transfusion b) Prednisolone
c) Dexamethasone d) Gammaglobulin

1270. True about Immune Thrombocytopenic purpura (ITP)- *(PGI Nov 10)*
a) Intracranial bleed is a rare complication
b) Splenomegaly is prominent
c) More common in female
d) Acute is Self-limiting condition
e) Chronic if > 3 months

1271. Kostmann's syndrome-treatment is -*(AIIMSNov 09)*
a) Anti-thymocyte globulin + cyclosporin
b) Anti-thymocyte globulin + cyclosporin + GM-CSF
c) G-CSF
d) GM-CSF

1272. A neonate delivered at 38 weeks of gestation with a birth weight of 2.2 kg develops intolerance to feed/ abdominal distension on second day. Physical examination is unremarkable. Sepsis screen is negative. PCV is observed to be 72%. Which of the following represents the best management option -
a) Hydration with IV Fluids *(AI11)*
b) Partial Exchange Transfusion
c) Presumptive treatment for sepsis
d) Medical Management for intestinal obstruction

1273. Infantile polycythemia is seen in - *(PGI June 98)*
a) Cerebellar haemangioma b) Retinoblastoma
c) Hepatoblastoma d)All

1274. Absent thumb, radial deviation of wrist, bowing of forearm with thrombocytopenia which investigation need not to be done ? *(AIIMS May 08)*
a) Echocardiography
b) Bone marrow examination
c) Platelet count
d) Karyotyping

1275. MCV (fl) in infant of 1 month of age *is-(PGINov 09)*
a) 76-80 b) 80-100
c) 90-100 d) 101-125
e) 125-135

1276. Fetal Hb is replaced by adult Hb completly at -
a) At birth b) 2 months *(TN99)*
c) 4 months d) 6 months

1277. % of HbF in a 6 month old infant is - *(Kerala 97)*
a) 10 b)30
c) 50 d)60

1278. Fetal erythropoeis is first occurs at what week of gestation ? *(Corned 08)*
a) 6 b) 10
c) 12 d) 14

1279. All of the following statements are true except -
a) At 2-3 yrs of age, lymphocytes form 60-70% of total leukocyte *(Delhi 96)*
b) After puberty, neutrophils replace lymphocytes as the predominant leukocyte
c) Lymphocytes are important protective influence against childhood infections
d) There is no change in proportion of lymphocytes with age

1280. The following are the features of P thalassemia major except - *(UPSC-109)*
a) Bone marrow hyperplasia
b) Hair-on-end appearance
c) Splenomegaly
d) Increased osmotic fragility

1281. 6 month old baby with severe pallor and hepatospenomegaly. Similar history with the sibling. Investigation of choice - *(TN 99)*
a) Bone marrow biopsy b) Hb electrophoresis
c) Hb estimation d) Platelet count

1263)b,c,d 1264) a 1265)c 1266)b,c,e 1267)b 1268)c 1269)d 1270)a,c,d 1271)c 1272)b 1273)a 1274)a
1275) b 1276) d 1277) a 1278) None 1279) a,d 1280) d 1281) b

1282. In hemolytic anemia what happens to skull bones -
a) Outer table thickness *(TN95)*
b) Diploic space narrows
c) Diploic sapce widness
d) None of the above

1283. Iron requirement is determined from the equation -
a) 3 x wt. (kg) x Hb deficit (gm/dl) *(AMU 05)*
b) 3.3 x wt. (kg) x Hb deficit (gm/dl)
c) 4 x wt. (kg) x Hb deficit (gm/dl)
d) 4.3 x wt. (kg) x Hb deficit (gm/dl)

1284. Constitutional pancytopenia can be seen in following except- *(MH10)*
a) Fanconi's anemia
b) Diamond-Blackfan syndrome
c) Dyskeratosis congenita
d) Schwachman Diamond syndrome

1285. Megaloblastic anemia develop in- *(PGI 88)*
a) Sideroblastic anemia
b) Thalassaemia
c) Infants fed on goats milk
d) Vitamin C deficiency

1286. Macrocytosis is seen in all of the following disorders, except- *(UP 97)*
a) Hypothyroidism b) Thalassemia major
c) Folic acid deficiency d) B_{12} deficiency

1287. A child who bleeds from gums and has swollen knee-probablydueto- *(Amu 95)*
a) Hemophilia b)ITP
c) Scurvy d) Trauma

1288. Aminocaproic acid would be recommended for a hemophilic child with - *(PGI79, A1IMS 81)*
a) Epistaxis b)Haematuria
c) Oral bleeding d) Hemarthrosis

1289. A10 year old boy presents with mucosal bleeding of 1 week duration. The investigation of choice that will be most useful in him is - *(COMED 06)*
a) Prothrombin time
b) Clotting time
c) Partial thromboplastin time
d) Platelet count

1290. The coagulation profile in a 13-year old girl with menorrhagia having von Willebrand's disease is -
a) Isolated prolonged PTT with a normal PT
b) Isolated prolonged PT with a normal PTT
c) Prolongation of both PT and PTT *(DPG10)*
d) Prolongation of thrombin time

1291. Quinine induced thrombocytopenia is - *(Jipmer 04)*
a) Antibody mediated
b) Dose related toxicity
c) Idiosyncratic reaction
d) Inhibits production of platelets

1292. Fanconi's anemia is a- *(Jipmer 03)*
a) Constitutional anemia
b) Hemolytic anemia
c) Iron deficiency anemia
d) Auto - immune anemia

1293. Drug which may lead to hemolysis in a child with G6PD deficiency is - *(Karn 11)*
a) Penicillin b) Primaquine
c) Ceftriaxone d) Erythromycin

ENDOCRINOLOGY

1294. Pseudohermaphroditism in a female child is most commonly due to- *(NEET/DNB Pattern)*
a) 21 -hydroxylase deficiency
h^n-h^^xylkse^ficieBley, *
c) 11-hydroxylase deficiency
d) 3-hydroxylase deficiency

1295. Male pseudohermaphroditism is seen in -
a) 5-a reductase deficiency *(PGI Dec 07)*
b) 21 hydroxylase deficiency
c) 17 hydroxylase deficiency
d) Gonadal dysgenesis

1296. The most common cause of ambiguous genitalia in a newborn is - *(AI02)*
a) 21 hydroxylase deficinece
b) 11 (5 - hydroxylase deficiency
c) 17 a - hydroxyalse deficiency
d) 3 P - hydroxysteroid deficiency

1297. Which of the following is the least common cause of ambiguous genitalia in a female child- *(AI 11)*
a) Fetal placental steroid sulfatase deficiency
b) Fetal placental aromatase deficiency
c) Congenital adrenal hyperplasia
d) WNT-4 gene mutation

1298. A10 day old male pseudohermaphrodite child with 46 XY karyotype presents with BP of 110/80 mmHg. Most likely enzyme deficiency is - *(AI 01)*
a) 21 hydroxylase b) 17 hydroxylase
c) 11 hydroxylase d) 3- beta hydroxylase

1299. : All qjf the following can cause precocious puberty in males except - *(NEET/DNB Pattern)*
a) 17; alpha hydroxylase deficten^ I||i / ᵛ ^
b) 21 alpha hydroxylase deficiency
c) 11 p hydroxylase deficiency
d) None of the above

1300. A five year old boy presents with precocious puberty and a blood pressure of 130/80 mmHg. Estimation of which of the following will help in diagnosis -
a) ↑ 17 hydroxy-progesterone *(AI 09)*
b) T Cortisol
c) T Aldosterone
d) Til deoxycortisol

1301. A 5-yr old boy presents with pubic hair development He is tall and has increased pigmentation of his genitalia and phallic enlargement. Blood pressure is 130/90 mm Hg. Measurement of which of the following hormones would be most likely to be diagnostic? *(AIIMS May 11)*
a) Increase 17 beta hydroxyl progesterone
b) Increase cortisol
c) Increase aldosterone
d) Increase 11 deoxycortisol

1282) c 1283) c 1284)b 1285)c 1286)b 1287)a 1288)a,c 1289)dl290)a 1291)a 1292)a 1293)b 1294)a 1295) a,c,d 1296)a 1297)a 1298)b 1299)a 1300) d 1301)d

1302. Congenital adrenal hyperplasia is associated with- *(PGI Dec 2K)*
a) Hypoglycemia b) Hyponatremia
c) Hypokalemia d) Hyperkalemia

1303. A 8 day old breast fed baby presents with vomiting, poor feeding and loose stoold. On examination the heart rate is 190/minute, blood pressure 50/30 mm Hg, respiratory rate 72 breaths/minute and capillary refill time of 4 seconds. Investigations show hemoglobin level of 15g/DL. Na-12mEq/L, K-6.8 mEQ/L, Cl-81 mEq/L, bicarbonate 15 mEq/L, Urea 30 mg/dL, creatinine 0.6 mg/dL. The most likely diagnosis is - *(A1IMS Nov 03)*
a) Congenital adrenal hyperplasia
b) Acute tubular necrosis
c) Congenital hypertrophic pyloric stenosis
d) Galactosemia

1304. A 5-year old girl presents with hypertension and virilization. There is also finding of hypokalemia what is the diagnosis - *(AIIMS May 0 7)*
a) 21-hydroxylase deficiency
b) 3-p hydroxy steroid deficeicny
c) 11 -p hydroxylase deficeincy
d) Conn's disease

1305. A 1-month old baby present with frequent vomiting and failure to thrive. There are features of moderate dehydration. Blood sodium in 122 mEq/1 and potassium is 6.1 mEq/1. The most likely diagnosis is-
a) Gitelman syndrome *(AI03)*
b) Bartter syndrome
c) 21-hydroxylase deficiency
d) 11 -p hydroxylase deficiency

1306. Which of the following statements about 21 alpha hydroxylase deficiency is false - *(AI 08)*
a) Most common cause of congenital adrenal hyperplasia in children
b) Affected females present with ambiguous genitalia
c) Affected males present with precocious puberty
d) Hypokalemic alkalosis is seen

1307. An 8 days old male infant is brought to the emergency department with vomiting, lethargy, dehydration and features of shock. Clinical examination reveals hyperpigmentation of the genital skin and normal external genitalia. Abdominal examination is unremarkable. Blood tests revealed sodium of 124 meq/1, potassium of 7 meq/1 and hypoglycemia. Which of the following is the most likely diagnosis - *(AI 11)*
a) Congenital Adrenal Hyperplasia (CAH)
b) Adrenal Haemorrhage
c) Acute Gastorenteritis with dehydration
d) Hyperaldosteronism

1308. A 7-year-old child presents to the paediatric clinic with amiguous genitalia increasing with age. On examination her height, weight and blood pressure were recorded within normal limits. Labia appeared bifid with 2 separate perineal openings, phallic length was 2.5 cm and no palpable gonads were noted in the inguinal region. USG shows presence of mullerian structures. The most probable diagnosis is - *(AI 12)*
a) Classic Salt-Wasting 21 Hydroxylase deficiency
b) Simple virilizing congenital adrenal hyperplasia
c) Complete Androgen Insensitivity Syndrome
d) 5-Alpha Reductase Deficiency

1309. A 3-month old male child with normal genitalia presents to the emergency department with severe dehydration, hyperkalemia and hyponatremia. The measurement blood levels of which of the following wifi be helpful ? *(AIIMSMay 09)*
a) 17-hydroxy progesterone b) Renin
c) Cortisol d) Aldosterone

1310. 2 year old child presented with diarrhoea and failure to thrive, Blood examination shows - Na—122, K - 6. He is most probably suffering from - *(NEET/DNB Pattern)*
a) Bartter syndrome
b) 21 -a Hydroxylase deficiency
c) 11 -(3 Hydroxylase deficiency
d) 17-a Hydroxylase deficiency

1311. A 4 week old female child with normal genitalia presents to the emergency department with severe dehydration, hyperkalemia and hyponatremia. The measurement blood levels of which of the following will be helpful? *(AIIMS May 11)*
a) 17 hydroxy progesterone b)Rennin
c) Cortisol d) Aldosterone

1312. Which one of the following drugs is used for fetal therapy of congenital adrenal hyperplasia ? *(AI 05)*
a) Hydrocortisone b) Prednisolone
c) Fludrocortisone d) Dexamethasone

1313. A female has previous child with congenital adrenal hyperplasia. In the present pregnancy, steroid therapy should be started - *(AI 2K)*
a) After karyotyping and determination of sex of the baby
b) At the time of delivery
c) Before conception
d) As soon as pregnancy is diagnosed

1314. The karyotype of a patient with androgen Insensitivity Syndrome is - *(AI 05)*
a) 46 XX b)46XY
c) 47XXY d)45 X0

1315. Gonads to testes differentiation-, *(NEET/DNB Pattern)*
a) SRY gene b) WNT-4 gene
c) DAX1 gene d) None

1302)a,b,c,d 1303)a 1304)c 1305)c 1306)d 1307)a 1308)b 1309)a 1310)b 1311)d 1312)d 1313)d 1314)b 1315)a

1316. What stimulates the gonads in male at 8 week to secret testosterone- ": *(NEET/DNB Pattern)*
a) Inhibin from corpus luteiim
mVb) .GnML fromhypothalamusofbaby
c)iPlacentalHGG *M 4'a §E |*
4XA$Itifabove |

1317. Precocious puberty is seen in - *(PGIDec02)*
a) Hypothyroidism
b) CNS irridation
c) Me cune-Albright syndrome
d) Turner's syndrome
e) Congenital adrenal hypoplasis

1318. True precocious puberty can occur in all, except -
a) McCune Albright syndrome *(AIIMSNov 93)*
b) Craniopharyngioma
c) Congenital adrenal hyperplasia
d) Hypothalamic hamartoma

1319. All of following may be causes of precocious puberty in girls except - *(AIIMS 95)*
a) Hypothalamic hamartoma
b) Me Cuone Albright syndrome
c) Granulosa cell tumor of human ovary
d) Congential21-a hydroxylase deficiency

1320. Delayed puberty seen in - *(PGIDec06)*
a) Chronic disease
b) Hypothyroidism
c) Turner's syndrome
d) Malabsorption syndrome

1321. Most common cause of delayed puberty in males is -
a) Kallaman syndrome *(AI08)*
b) Klienfelter syndrome
c) Constitutional
d) Prader-willi syndrome

1322. A child with decreased levels of LH, FSH and Testosterone presents with delayed puberty. Which of the following is the most likely diagnosis - *(AI 12)*
a) Klinfelter's syndrome
b) Kallman's syndrome
c) Androgen Insensitive syndrome
d) Testicular Infection

1323. NOT a feature of hypothyroidism is -
a) Short metacarpals in hands *(AIIMS Dec 1994)*
b) Delayed puberty
c) Delayed bone age
d) Altered upper and lower segment ratio

1324. Common presentations of Juvenile Hypothyroidism-
a) Growth retardation *(PGI June 06)*
b) Mental ratardation within 2 years
c) Delayed puberty
d) Umbilical Hernia
e) Moist skin

1325. 8 yrs. old child presents with lethargy multiple epiphyseal breaks, wormian bones with growth retardation and mental retardation Diagnosis is-
a) Rickets b) Hypothyroidism *(AIIMS Nov 01)*
c) Scurvy d) Hypoparathyroidism

1326. Manifestations of endemic cretinism include-^47 *01)*
a) Deafness and facial nerve involvement
b) Blindness and hypothyroidism
c) Strabismus and spastic diplegias
d) Multinodular goitre and mental retardation

1327. Which of the following is true regarding cretinism-
a) Short limbs compared to trunk *(AI 01)*
b) Proportionate shortening
c) Short limbs and short stature
d) Short limbs and long stature

1328. Which of the following is true in cretinism -
a) Goiter present at birth *(PGI Dec 01)*
b) Can be diagnosed by serum T_4 levels
c) Prolonged physiological jundice present
d) Common in iodine deficiency endemic areas
e) Delayed skeletal development

1329. A one year old child preents with short stature, lethargy, & constipation. Clinical examinaton shows a palpable goiter. Laboratory investigations revealed a low T4 and elevated TSH which of the following is the most likely diagnosis - *(AI 11)*
a) Thyroid Dyshormonogenesis
b) Thyroid Dysgenesis
c) Central Hypothyroidism
d) TSH Receptor Blocking Antibody

1330. Short child with low T4 and raised TSH and swelling of pituitary, what is the diangosis? *(AIIMS Nov 11)*
a) Primary hypothyrodism
b) Pituitary tumor
c) TSH Secreting pituitary adenoma
d) TSH resistance

1331. Blood specimen for neonatal thyroid screening is obtained on - *(AI 05)*
a) Cord blood b) 24 hours after birth
c) 48 hours after birth d) 72 hours after birth

1332. In neonatal screening programme for detection of congenital hypothyroidism, the ideal place and time to collect the blood sample for TSH estimation is -
a) Cord blood at time of birth *(AIIMS May 03)*
b) Heal pad blood at the time of birth
c) Heal pad blood on 4 day of birth
d) Peripheral venous blood on 28 day

1333. True about pendred syndrome - *(PGIDec 04)*
a) Diffuse colloid goiter
b) Nodular goiter
c) Mental retardation
d) B/L sensory neural deafness
e) Normal cochlea

1334. The features of neonatal hyperthyroidism include all except - *(Delhi PG Mar. 09)*
a) Triangular facies with craniosynostosis
b) Congestive cardiac failure
c) Advanced osseous maturation
d) Goiter is rare

1316)c 1317)a,b,c 1318)a,c 1319)d 1320) All 1321) c 1322)b 1323)a 1324)a,b,d 1325)b 1326)c 1327)a,c 1328) c,d,e 1329)a 1330)a 1331)a 1332)a 1333)a,b,c,d 1334)d

1335. A 9 year old boy presents with growth retardation and propensity to hypoglycemia. Physical examination reveals short stature, micropenis, increased fat and high-pitched voice. The skeletal survey reveals bone age of 5 years. Which of the following is most appropriate diagnosis -
a) Malabsorption *(AIIMS Nov 04)*
b) Growth hormone deficiency
c) Adrenal tumour
d) Thyroxin deficiency

1336. Characteristic features of growth hormone deficiency include all of the following except-
a) Short stature since birth *(AIIMS 83)*
b) Symptomatic hypoglycemia
c) Delayed tooth eruption
d) Sexual infantilism

1337. Deficiency of growth hormone leads to- *(AI89)*
a) Delayed fusion of epiphysis
b) Proportionate dwarfism
c) Acromegaly
d) Mental retardation

1338. 'Weak giants'are produced by- *(AIIMSMay 04)*
a) Thyroid adenomas b) Thyroid carcinomas
c) Parathyroid adenomas d) Pituitary adenomas

1339. Which is false in Congenital Hypopituitarism?
a) Growth hormone level < 7 ng/ml
b) Hypoglycemia
c) Baby small at birth
d) Delayed puberty

1340. Short stature, secondary to growth hormone deficeincy is associated with - *(AIIMSDec 95)*
a) Normal body proportion
b) Low birth weight
c) Normal epiphyseal development
d) Height age equal to skeletal age

1341. A 7 yr old boy underwent neurosurgery for craniopharyngioma following which pituitary functions were lost Which of the following hormone should be replaced first? *(AI11)*
a) Hydrocortisone b) Thyroxine
c) Growth hormone d) Prolactin

1342. Orchidopex is done in cases of undescended testes at the age of - *(AIIMS Nov 06)*
a) Neonate b)l-2yrs
c) 5 yrs d) Puberty

1343. A boy with undescended testis, your concern to ask for operation is due to - *(PGI01)*
a) Cosmetic reasons b) Infertility
c) Risk of malignancy d) Impotence

1344. Surgical treatment of cryptorchidism of right testis with normally descended left testis can be done-
a) Immediately *(AI 99)*
b) At 2 years of age
c) At 4 years before going to school
d) At puberty

1345. Unilateral undescended testes is ideally operated around- *(AI04)*
a) 2 months of age b) 6 months of age
c) 12 months of age d) 24 months of age

1346. A 10-month old baby previously normal, suddenly becomes distressed in his crib. The external appearance of genitalia was normal, except hyperpigmentation. Blood glucose showed a level of 30 mg%. What is the most probable diagnosis ?
a) 21 hydroxylase deficiency
b) Hyperinsulinism *(AI 11, AIIMS May 11,10, 09)*
c) Familial glucocorticoid deficiency
d) Cushing's syndrome

1347. Which one of the following is the earliest manifestation of Cushing's syndrome -
a) Loss of diurnal variation *(AIIMS May 05)*
b) Increased ACTH
c) Increased plasma cortisol
d) Increased urinary metabolites of cortisol

1348. ACTH secretion is highest during - *(PGIDec 99)*
a) Noon b) Evening
c) Morning d) Night

1349. A 10 year old boy has a fracture of femur. Biochemical evaluation revealed Hb 11.5 gm/dL and ESR 18 mm 1st hr. Serum calcium 12.8mg/dL, serum phosphorus 2.3 mg/dL, alkaline phosphatase 28 KA units and blood urea 32 mg/dL. Which of the following is the most probable diagnosis in his case-
a) Nutritional rickets b) Renal rickets *(AI 04)*
c) Hyperparathroidism d) Skeletal dysplasia

1350. A baby presents with tetany. First thing to be done is administration of - *(AIIMS June 2000)*
a) Diazepam b) Vitamin D
c) Calcium gluconate d) Calcitonin3

1351. The immediate treatment of 10 kg weight infants presented with tetany - *(UP 0 7)*
a) IV Diazepam
b) IV calcium gluconate with cardiac monitoring
c) IV slow phenobarbitone
d) Wait and watch

1352. True about nephrogenic diabetes insipidus in children - *(PGI Dec 2000)*
a) Decreased ADH secretion
b) Receptor insensitivity in kidney tubules
c) Decreased ADH
d) Commonly associated with WILM's tumor

1353. In India the commonest cause of Juvenile Onset of Diabetes mellitus - *(AIIMS May 01)*
a) IDDM b)Fibrocalcificpancreaticopathy
c) Mody d) Gall stones

1354. Oral glucose tolerance test in children is done with-
a) 1.5 gm/kg glucose *(PGI dec 07)*
b) 1.75 gm/kg glucose
c) 2 gm/kg glucose
d) 2.5 gm/kg glucose
e) 75 gm as an adult

1335)b 1336) a 1337) a,b 1338) d 1339) c 1340)a 1341)a 1342)b 1343)b,c 1344)None 1345)b 1346)c 1347)a 1348)c 1349)c 1350)c 1351)b 1352)b 1353)b 1354)b,e

1355. In children with type I DM when is ophthalmologic evaluation indicated - *(PGI June 06)*
a) At the time of diagnosis b) After 1 year
c) After 2 years d) After 5 years
e) After 10 years

1356. Injection of Glucagon is effective for management of persistent hypoglycemia in all EXCEPT -
a) Large for date baby *(AIIMS May 04)*
b) Galactosemia
c) Infant of diabetic mother
d) Nesidioblastosis

1357. A mother is exposed to Diethyl stilbesterol during pregnancy. All the following features may be seen in the child after birth except - *(ARMSMay 02)*
a) Clear cell carcinoma
b) Microglandular hyperplasia
c) Malformation of the vagina and uterus
d) Vaginal adenosis

1358. A 3 year old boy is detected to have bilateral renal calculi. Metabolic evaluation confirms the presence of marked hypercalciuria with normal blood levels of calcium, magnesium, phosphate, Uric acid and creatinine. A diagnosis of idiopathic hypercalciuria is made. The dietary management includes all, except - *(ARMSMay 03)*
a) Increased water intake b) Low sodium diet
c) Reduced calcium intake d) Avoid meat proteins

1359. A 6-month old boy weighing 3.2 kg presents with recurrent vomiting and polyuria. Investigations show blood area 60 mg/dl creatinine 0.7 mg/dL, calcium 12.8 mg/dL, phosphate 3 mg/dL, pH 7.45, bicarbonate 25 mEq/L and PTH 140 pg ml (normal <60 pg/ml). Daily urinary calcium excretion is reduced. Ultrasound abdomen show bilateral nephrocalcinosis. The most likely diagnosis is -
a) Bartter syndrome *(ARMS Nov 05)*
b) Mutation of the calcium sensing receptor
c) Pseudo-pseudohypoparathyroidism
d) Parathyroid adenoma

1360. The following is true about Nesidioblastosis except?
a) Presents with hypoglycemic attacks *(AJ11)*
b) More common in adults than in children
c) Histopathology shows hyperplasia of islet cells
d) Diazoxide is used for treatment

1361. Sexual ambiguity may be seen in which of the following conditions ? *(COMED 09)*
a) Androgen insensitivity
b) Pure gonadal dysgenesis
c) Sawyer syndrome
d) Mixed gonadal dysgenesis

1362. Adrenal hyperplasia due to 21 hydroxylase deficiency is treated with low dose - *(Kerala 04)*
a) Androgen b) Estrogen
c) Cortisone d) Anti-androgen

1363. A newborn baby presents with shock, hyperkalemia and hypoglycemia. What is the most likely diagnosis-
a) Septicemia *(UPSC-I 09)*
b) Inborn error of metabolism
c) Diabetes mellitus
d) Congenital adrenal hyperplasia

1364. All the following hormones can effect growth of a child except- *(JIPMER 98)*
a) GH b)ACTH
c) Insulin d) Somatostatin

1365. Treatment of choice in childhood thyrotoxicosis-
a) Radio Iodine b) Lugols Iodine
c) Carbimazole d) Surgery *(ARMS 92)*

1366. Commonest feature of hypothyroidism in children is- *(AI89)*
a) Cataract b) Recurrent seizures
c) Cold extremities d) Laryngospasms

1367. Infant with no social smile, no eyebrows, protruded tongue. Diagnosis - *(TN 99)*
a) Cretinism b) Down's syndrome
c) Mucopolysaccharidosis d) Rickets

1368. A 6 month old infant is brought with a history of constipation and excessive sleepiness. On exmination, he is lethargic, has periorbital puffines, large tongue and umbilical hernia. The investigation which will help to diagnose this condition is - *(UPSC 2002)*
a) T4 TSH assay b) Karyoptyping
c) Rectal mucosal biopsy d) Knee X ray

1369. Features of hypothyroidism in infancy include the following except - *(UPSC 06)*
a) Premature closure of posterior fontanelle
b) Coarse facies
c) Umbilical hernia
d) Constipation

1370. The most common presentation of hypoparathyroidism beyond the neonatal period is -
a) Syncope secondary to prolonged QT intervals
b) Tingling of extremities *(MAHA 05)*
c) Seizure
d) Bronchospasm

1371. Association of sexual precocity, multiple cystic bone lesions and endocrinopathies are seen in -
a) McCune-Albright's syndrome *(Corned 08)*
b) Granulosa cell tumor
c) Androblastoma
d) Hepatoblastoma

MUSCULOSKELETAL DISORDERS

1372. 10 years old Ramu has increasing muscle weakness and raised CPK levels. The most likely defect is in plasma membrane of - *(ARMS Nov 01)*
a) Nerves b) Muscle fibres
c) Basement membrane d) All body cells

1355) d 1356) b 1357)b 1358)c 1359)b 1360)b 1361)d 1362)c 1363)d 1364)b,d 1365)c 1366)c 1367)a 1368) a 1369) a 1370)b 1371)a 1372)b

1373. Myopathy is seen in all except - *(AIIMSMay 07)*
a) X-linked hypophosphatemic rickets
b) Oncogenic osteomalacia
c) Nutritional osteomalacia
d) Cushing syndrome

1374. All of the following are associated with proximal muscle weakness except - *(AIIMSMay 02)*
a) Spinomuscular atrophy
b) Duchenis muscular dystrophy
c) Polymyositis
d) Myotonic dystrophy

1375. Duchenne Muscular Dystrophy is a disease of-
a) Neuromuscular junction *(AI04)*
b) Sarcolemmal proteins
c) Muscle contractile proteins
d) Disuse atrophy due to muscle weakness

1376. A 6 year old boy presents with progressive weakness in muscles, and difficulty in walking upstairs. He has difficulty in walking on his toes and has a waddling gait. Hypertrophy of calf muscles in noted. His CPK levels are 10,000 IU. Which of the following is the most appropriate diagnosis - *(AI 10)*
a) Duchenne muscular dystrophy
b) Polymyositis
c) Congenital myopathy
d) Myotonia congenita

1377. Duchnne's muscular dystrophy-
a) X-linked dominant *(NEET/DNB Pattern)*
b) X - linked recessive
c) Autosomal dominant
d) Autosomal recessive

1378. An infant presents with hypotonia and hyporeflexia. During his intrauterine period there was polyhydramnios and decreased fetal movements. Most p robable diagnosis is - *(AIIMS May 02)*
a) Spinal muscular atrophy
b) Congenital myasthenia
c) Congenital myotonia
d) Muscular dystrophy

1379. Give the most probable diagnosis of a 1 yr. old child of normal intelligence with features of hypotonia. On examination there are tongue fasciculations and he keeps his body in a frog like position -
a) Guillian Barre Syndrome *(AIIMS Nov 2000)*
b) Limb girdle atrophy
c) Down's syndrome
d) Spinal muscular atrophy

1380. In a 6 months old baby, floppy infant syndrome is seen commonly due to infection with -
a) Clostridium welchii *(AIIMS June 2K)*
b) Clostridium tetani
c) Clostridium Botulinum
d) Clostridium septicum

1381. Most common chronic arthritis seen in children -
a) JRA *(PGI June 2000)*
b) Rheumatic arthritis
c) Rheumatic fever
d) Sepsis

1382. A ten-year old girl presents with swelling of one knee joint. All of the following conditions can be considered in the differential diagnosis except -
a) Tuberculosis *(AI 03)*
b) Juvenile rheumatoid arthritis
c) Haemophilia
d) Villonodular synovitis

1383. Not a criteria of J.R.A. (Juvenile Rheumatoid Arthritis) - *(PGI Dec 06)*
a) Age> 16 yrs
b) Arthritis > 3 wks
c) Arthritis > 6 months
d) 1 or more joint involvement

1384. All of the following are features of systemic Juvenile Rheumatoid Arthritis except - *(AIIMSMay 01)*
a) Uveitis b)Rash
c) Fever d) Hepatosplenomegaly

1385. All of the following are seen in Systemic Juvenile Arthritis, except- *(NEET/DNB Pattern)*
a) Rheumatoid Factor+ ve
b) Hepatosplenomegaly
c) High fever with rash
d) Elevated E.S;R.

1386. Diagnostic criteria of JRA - *(PGI Nov 09)*
a) Disease persisting 6 weeks or longer
b) Onset before age 16 years
c) Arthritis involving >5 joints
d) Polyarticular JRA ANA is +ve
e) Fever in all cases

1387. Which of the following is not a feature of Juvenile Idiopathic Arthritis - *(AIIMS May 11, AI 09)*
a) Rheumatoid nodule
b) Spikes of high fever
c) Uveitis
d) Raynaud's phenomenon

1388. Childhood osteopetrosis is characterized by -
a) B/L frontal bossing *(PGI June 04)*
b) Multiple # (fracture)
c) Hepatosplenomegaly
d) Cataract
e) Mental retardation

1389. Phocomelia is - *(NEET/DNB Patterhj*
a) Absence of long bones b) Absence of brain
b) Reduplication of bones d) Absence of heart

1390. A one year old child presented with multiple fractures seen in various stages of healing. The most probable diagnosis in this case is - *(AIIMS Nov 05)*
a) Scurvy
b) Rickets
c) Battered baby syndrome
d) Sickle cell disease

1373) a 1374)d 1375)b 1376)a 1377)b 1378)a 1379)d 1380)c 1381)a 1382)c 1383)a,b,c 1384)a 1385)a 1386) a,b 1387) d 1388) b,c 1389) a 1390)c

1391. An adolescent child complains of night pain in the knee. It could be due to - *(PGI Dec 02)*
a) Juvenile rheumatoid arthritis
b) Idiopathic growth pain
c) Osteosarcoma
d) Paget's disease
e) Osteomyelitis

1392. A 3 year old child comes with complaint of limp diagnosis is - *(PGI June 08)*
a) Septic arthritis
b) Slipped capital femoral epiphysis
c) Perthe's desease
d) DDH

1393. Septic arthritis in a 2 year old child is often caused by- *(AIIMS May 94)*
a) Hemophilous influenzae
b) Staphylococcus aureus
c) Gonococi
d) Pneumococci

1394. Acute osteomyelitis can best be distinguished from soft tissue infection by - *(AMC 2K)*
a) Clinical examinationb) X-Ray
c) CT scan d) MRI

1395. True statement regarding SLE in children-fPG*/96)*
a) Skin pigmentation more common than adults
b) No sex difference
c) Renal involvement more common
d) CNS invlovement more common

1396. Bilateral uveitis in 10 yr old child, proper investigation (s) for his work up would be - *(PGI 01)*
a) C.T. scan b) Tuberculintest
c) X-ray sacroiliac joint d) HIV test
e) X-ray chest

1397. Gower sign is classical of one of the following condition-
a) Congenital myopathy *(Karnataka 04)*
b) Werdig-Hoffman disease
c) Duchenne muscular dystrophy
d) Guillain-Barre syndrome

1398. Duchenne's muscular dystrophy is a disease of- *(Manipal 09)*
a) Neuromuscularjunction
b) Sarcolemmal proteins
c) Muscle contractile proteins
d) Disuse atrophy due to muscle weakness

1399. Drug of choice initially in Juvenile chronic arthritis is - *(AI89)*
a) Salicylates b) Indomethacin
c) Prednisone d) Phenylbutazone

1400. Perifascicular atrophy is seen in - *(DPGEE 08)*
a) Duchenne muscular atroply
b) Wilson disease
c) Beckers's dystrophy
d) Dermatomyositis

FLUID & ELECTROLYTE

1401. Daily water requirement in child weighing 30 kgs, height 123 m and BSA of 1 m^2 is-*(Delhi PGMar. 09)*
a) 1300ml b) 1700 ml
c) 2000ml d) 2500ml

1402. Maintenance fluid for a child weighing 10 kg -
a) 1500ml/day b) lOOOml/day *(Jipmer 11)*
c) 750ml/day d)500ml/day

1403. Which of the following would be the plasma osmolatity of child with plasma Na^+ 125 mEq/L, glucose of 108mg/dl, and blood urea nitrogen (BUN) of 140 mg/dl - *(AIIMS May 05, Nov 03)*
a) 360mOsm/kg b)306mOsm/kg
c) 312 mOsm/kg d) 318 mOsm/kg

1404. An alert 6 months old child is brought with vomiting & diarrhea. RR-45/min, HR-130/min, SBP-85 mm of Hg. Capillary refilling time is 4 secs. Diagnosis is- *(AIIMS May 10)*
a) Early compensated hypovolemic shock
b) Early decompensated hypovolemic shock
c) Late compensated hypovolemic shock
d) Late decompensated shock due to SVT

1405. Most dangerous dehydration is - *(PGI June 98)*
a) Hyponatremic b) Hypematremic
c) Isonatremic d) Non-diarrhoeal cause

1406. Hypematremic dehydration is characterised by -
a) Serum sodium >150 mmol/L *(PGI Dec 03)*
b) Signs of dehydration are minimal
c) ECF volume *izd*
d) Rapid carrection is required
e) Shift of water from ECF to ICF

1407. In a patient who has diarrhoea and vomiting with inadequate water intake is suffering from - *(AIIMS June 2K)*
a) Intracellular dehydration with hypernatremia
b) Intracellular dehydration with hyponatremia
c) Extracellular dehydration with hyponatremia
d) Extracellular dehydration with hypernatremia

1408. The most sensitive indicator of depletion of intravascular volume in infant is- *(AIIMS May 10,*
a) Cardiac output b) Stroke volume *AI09)*
c) Heart rate d) Blood pressure

1409. Kallu 2 yrs child weighing 6.7 Kg presents in the casualty with history of vomiting & diarrohea for last 2 days. On examination skin pinch over the ant. abdominal wall go quickly to its original position. Interpretation of skin - pinch test in this child will be- *(AI02)*
a) No dehydration
b) Some dehydration
c) Sever dehydration
d) Skin pinch can not be evaluated in this child

1391)a,c 1392) a,d 1393)b 1394)d 1395)None 1396)b,c,d,e 1397)c 1398)c 1399)a>b 1400)d 1401)b 1402)b 1403) b 1404) a 1405) b 1406) a,b 1407) c 1408) c 1409) d

1410. A girl of 8 years suffering from vomiting and diarrhoea for last 2 days when pinched on abdomen, skin goes within seconds, she is most likely to be suffering from - *(AIIMS June 2000)*
a) No dehydration
b) Some dehydration
c) Severe dehydration
d) Skin turgor cannot be commented

1411. A 5year old boy passed 18 loose stools in last 24 hours and vomited twice in last 4 hour. He is irritable but drinking fluids. The optimal therapy for this child is - *(AI03)*
a) Intravenous fluids
b) Oral rehydration therapy
c) Intravenous fluid initially for 4 hours followed by oral fluids
d) Plain water

1412. Treatment in 6 month old child with acute watery diarrhoea without signs of dehydration is -
a) Mothers milk and household fluids *(JIPMER 95)*
b) ORS and antibiotics
c) Mothers milk and antibiotics
d) Mothers milk and ORS

1413. A- 3 month old female infant weight 4 kg and is suffering from loose motions. On examiantion she is found to be suffering from some dehydration.The amount of ORS to be given to her in the first four hour will be - *(UPSC 97)*
a) 100ml b) 300 ml
c) 500ml d) 600ml

1414. When severe dehydration in a neonate occurs, amount of fluid replacement in 1st hour-
a) 20-40 mg/kg b) 5-10 mg/kg *(CUPGEE01)*
c) 10-15 mg/kg d) 15-20 mg/kg

1415. A 4 kg infant with severe dehydration(10% dehydration) needs the following amount of intravenous fluid in the first 24 hours -
a) 500ml b) 800 ml *(JIPMER 80, PGI83)*
c) 100ml d) 1200ml
e) 1400ml

1416. A child suffering from acute diarrhoea is brought to the casualty and is diagnosed as having severe dehydration with pH of 7.23. Serum Na-125, Serum K-3, HC03-16 The best I.V. fluid of choice is -
a) 3% Saline *(AIIMSMay 01)*
b) N/3 Saline + 10% dextrose
c) Normal saline
d) N/3 saline + 5% dextrose

1417. Treatment of choice in severe dehydration is -
a) Isolyte-P b) Normal saline *(Kerala 94)*
c) Plasma d) Ringer lactate

1418. WHO ORS contains - *(PGI June 02)*
a) Sodium chloride 2.5 g
b) Potassium chloride 1.5 g
c) Glucose 20g
d) Shift of water from ECF to ICF

1419. What is the correct composition (per litre) of WHO reduced osmolarity ORS? *(UPSC-110)*
a) NaCl 2.29 g; KC11.1 g; Glucose 13.1 g; Citrate 2.5 g
b) NaCl 2.49 g; KC11.3 g; Glucose 13.3 g; Citrate 2.7 g
c) NaCl 2.69 g; KC 11.5 g; Glucose 13.5 g; Citrate 2.9 g
d) NaCl 2.89 g; KC 11.7 g; Glucose 13.7 g; Citrate 3.1 g

1420. The sodium content of ReSoMal (rehydration solution for malnourished children) is - *(AI06)*
a) 90mmoI/L b)60mmol/L
c) 45 mmoI/L d)30mmol/L

1421. Glucose in ORS is - *(PGIDec 97)*
a) 200mmol b) 105 mmol
c) 1 lOmmol d) 115 mmol

1422. The function of glucose in ORS - *(PGI June 96)*
a) Increase Na+ absorption by co-transport
b) Gives sweet taste of ORS
c) Increase Na+-K+ pump activity

1423. WHO ORS composition are (mmol) - *(PGIJune 04)*
a) Glucose -111 b) K+ - 80
c) Na+-20 d) C1+ - 30
e) Total millimoles - 311

1424. Content of citrate in ORS is.....millimoles -
a) 20 b)25 *(JIPMER95)*
c) 30 d)35

1425. Sodium content in mmol/L in WHO oral rehydration solution is - *(Karn 11)*
a) 20 b) 80
c) 90 d) 111

1426. What is the amount of trisodium citrate dihydrate in WHO ORS? *(MH11)*
a) 1.5 gm b)2.5gm
c) 2.9gm d)3.9gm

1427. Molar concentration of oral rehydration fluid is - *(PGI 87)*
a) Sodium 30 meq b) Potassium 20 meq
c) Bicarbonate 30 meq d) Chloride 20 meq
e) Glucose 111 meq

1428. The concetration of potassium in microgram in ORS is- *(Kerala 97)*
a) 30 meq b) 20 meq
c) 90 meq d) 60 meq

1429. Which is not used in ORS- *(Kerala 94)*
a) Na^+ b) K^+
c) Glucose with salt d)Glucosewithoutsalt

1430. In malnourished children the following parameters are reliable indicators of dehydration except -
a) Skin turgor b) Dry buccal mucosa *(Karn 06)*
c) Oliguria d) Thirst

1431. As per the latest guidelines which of the following dehydration status requires ORT prescription -
a) Mild dehydration *(Karn 95)*
b) Moderate dehydration
c) Some dehydration
d) Any dehydration

1432. The requirement of potassium in a child is - *(AI 06)*
a) l-2mEq/kg b)4-7mEq/kg
c) 10-12 mEq/kg d) 13-14 mEq/kg

1410)b,c 1411) b 1412) a,d 1413)b 1414)a 1415)a 1416)c 1417)d 1418)b 1419)c 1420)c 1421)None 1422) a 1423) None 1424)None 1425)c 1426)c 1427)b 1428)b 1429)d 1430)a 1431)d 1432)a

1433. Acute hyponatremia in 8 month old infant may produce all except- *(JIPMER 79, PGI80)*
a) Diarrhoea
b) Convulsions
c) Muscle cramps and weakness
d) Vascular collapse

1434. Convulsions in a child with dehydration and vomiting can only be due to- *(Kerala 9 7)*
a) Decreased serum sodium
b) Decreased serum magnesium
c) Decreased serum potassium
d) Decreased serum potassium

1435. In hypernatremic dehydration following symptom & signs are seen- *(Kerala 97)*
a) Irritability b) Lethargy
c) Drowsiness d) Oliguria

1436. A 5-month old formula fed infant has been brought with complaints of watery diarrhoea of 2 days duration and irritability of one day duration.He had been receiving WHO ORS at home. Physical examination reveals a markedly irritable child with a rather doughy skin and rapid pulse.The most likely diagnosis is- (UPSC 98)
a) Meningitis
b) Encephalitis
c) Hyponatremic dehydration
d) Hypematremic dehydration

1437. Hypokalemia in an infant may be due to all of the following except - *(AI94)*
a) Adrenal tumor b) Acute renal failure
c) Thiazide therapy d) Diarrhea

1438. Hyperkalemia in children may occur in all except -
a) Insulin deficiency *(AIIMS Nov 93)*
b) Metabolic acidosis
c) Acute renal failure
d) Cushing's syndrome

1439. A child presents with peripheral circulatory failure. The arterial pH is 7.0, $pC0_2$ of 15 mmHg, $p0_2$ 76 mmHg. Which of the following will be the immediate therapy- *(AIIMSNov 04, 05)*
a) Sodium bicarbonate infusion
b) Bolus of Ringers lactate
c) Bolus of hydroxyethyl starch
d) Dopamine infusion

1440. A child had repeated vomiting and developed metabolic alkalosis. The treatment given is -
a) Ringer lactate *(AIIMS June 99)*
b) I. V. normal saline and potassium
c) ORS
d) I.V. Normal saline

1441. Late metabolic acidosis is seen in- *{AIIMSMay 1994)*
a) Term infant given formula feed
b) Preterm baby getting cow milk
c) Long term breast feeding
d) None of the above

1442. A10 days old neonate is posted for pyloric stenosis in surgery. The investigation report shows a serum calcium level of 6 mg/dL. What information whould you like to know before you supplement calcium to this neonate - *(AIIMS Nov 04)*
a) Blood glucose b) Serum protein
c) Serum bilirubin d) Oxygen saturation

1443. A 6 months old child having severe dehydration comes to the casualty with weak pulse and unrecordable B.P. Repeated attempt in gaining I.V. access has failed - The next best step is -
a) Try again *(AIIMS May 01)*
b) Jugular vein catheterization
c) Intra osseus I.V. fluids
d) Venesection

1444. In Pediatric advanced life support, intraosseous access for drug/fluid administration is recommended for pediatric age of - *(AIIMS Nov 02)*
a) < 1 year age b) < 5 years age
c) < 6 years age d) Any age

1445. A breast fed child presents with hypernatremia (Serum sodium > 170m Eq/L). His urine sodium is 70 mEq/L. Which of the following is the most likely cause - *(AIIMS Nov 2000)*
a) Diabetes insipidus
b) Acute necrosis
c) Severe dehydration
d) Excessive intake of sodium

1446. How will a staff nurse prepare normal saline from 10% Dextrose (per 100 ml) - *(AIIMSNov 10)*
a) 20 ml 10% D with 80 ml NS
b) 60 ml 10% D with 40 ml NS
c) 60 ml 10% D with 40 ml NS
d) 80 ml 10% D with 20 ml NS

GENETICS AND GENETIC DISORDERS

1447. A child with a small head, minor anomalies of the face including a thin upper lip, growth delay, and developmental disability can have all of the following, except- *(AI 06)*
a) A chromosomal syndrome
b) A teratogenic syndrome
c) A mendelian syndrome
d) A polygenic syndrome

1448. All of the following conditions have autosomal dominant inheritance except - *(AI 0 7)*
a) Fabry disease
b) Marfan's syndrome
c) Osteogenesis imperfecta
d) Ehlers Danlos syndrome

1449. The chances of having an unaffected baby, when both parents have achondroplasia, are - *(AI 05, AIIMS May 04)*
a) 0% b) 25%
c) 50% d) 100%

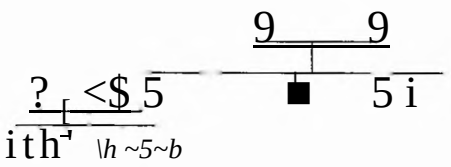
1433) a 1434) a 1435)a,b 1436)d 1437) b 1438) d 1439)b 1440)b 1441)b 1442)b 1443)c 1444)c 1445)d 1446)d 1447) d 1448) a 1449) b

1450. In a family, the father has widely spaced eyes, increased facial hair and deafness. One of the three children has deafness with similar facial features. The mother is normal. Which one of the following is least likely pattern of inheritance in this case-
a) Autosomal dominant *(AI06)*
b) Autosomal recessive
c) X-linked dominant
d) X-linked recessive

1451. A parent is homozygous and a parent heterozygous for an autosomal recessive gene. What will be the outcome - *(AIMS May 94)*
a) 75% children affected
b) No child affected, but all are carriers
c) 50% children affected, rest are carriers
d) 25% children affected, rest are carriers

1452. For a normal husband and wife the first child was diagnosed to have cystic fibrosis. What is the percentage of chances for the second child be affected - *(PGI June 06)*
a) 25 b)50
c) 0 d)75
e) 100

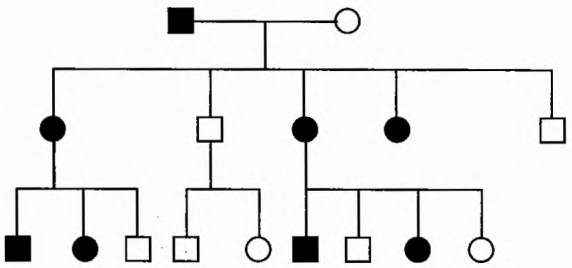
1453. An albino girl gets married to a normal boy, What are the chances of their having an affected child and what are the chances of their children being carriers ? *(AI 03)*
a) None affected, all carriers
b) All normal
c) 50% carriers
d) 50% affected, 50% carriers



1454. In an Autosomal Recessive (AR) disorder, one parent is normal and the other is carrier and the child is also affected. What is the reason - *(AI 07)*
a) Germ line mosaicism b) Genomic imprinting
c) Penetrattion d) Uniparental disomy

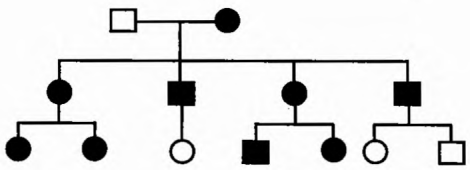
1455. An affected male infant born to normal parents could be an example of all of the following, except - *(AI 06)*
a) An Autosomal dominant disorder
b) An Autosomal recessive disorder
c) A polygenic disorder
d) A vertically transmitted disorder

1456. True statement about inheritence of an X linked recessive trait is - *(AI 97)*
a) 50% of boys of carrier mother are affected
b) 50% of girls of diseased father arecarrier
c) Father transmits disease to the son
d) Mother transmits the disease to the daughter



1457. Kinky hair desease is disorder where an affected child has peculiar white stubby hair, does not grow, brain degeneration is seen and dies by age of two years. Mrs A is hesitant about having children because her two sisters had sons who had died form kinky hair disease. Her mother's brother also died of the same condition. Which of the following is the possible mode of inheritence in her family - *(AI 04)*
a) X-linked recessive b) X-linked dominant
c) Autosomal recessive d) Autosomal dominant

1458. Study the following carefully -



Read the pedigree. Inheritance pattern of the disease in the family is - *(AI 05)*
a) Autosomal recessive b) Autosomal dominant
c) X-Linked dominant d) X-Linked recessive

1459. Which of the following is the most likely inheritance pattern in the pedigree given below-*(AIMSMay 04)*

a) Autosomal dominant b) Mitochondrial
c) Autosomal recessive d) X-linked dominant

1460. Pedigree analysis - Analyze the following pedigree and give the mode of inheritance -
a) Autosomal recessive *(AIMSMay 12, AI 07)*
b) Autosomal dominant
c) Mitochondrial inheritance
d) X linked dominant

1461. Differential expression of same gene depending on parent of origin is referred to as - *(AI05, 06)*
a) Genomic imprintingb) Mosaicism
c) Anticipation d) Nonpenetrance

1462. The process underlying differences in expression of a gene, according to which parent has transmitted, is called - *(AI 06)*
a) Anticipation b) Masaicism
c) Non-penetrance d) Genomic imprinting

1463. Maternal disomy of chromosome 15 is seen in -
a) Prader - Willi syndrome *(AIMS Nov 10)*
b) Klinefelter's syndrome
c) Angelman syndrome
d) Turner's syndrome

1450)a 145l)c 1452)c 1453)a 1454) d 1455)a 1456)a 1457)a 1458)d 1459) d 1460)c 1461)a 1462) d 1463)a

1464. Which of the following hormones are raised in Prader-Willi syndrome- *(AI12)*
a) Growth Hormone (GH)
b) Leutinizing Hormone (LH)
c) Follicle Stimulating Hormone (FSH)
d) Ghrelin

1465. Single gene defect causing multiple unrelated problems - *(ARMS Nov 06)*
a) Pleiotropismb) Pseudodominance
c) Penetrance d) Anticipation

1466. Atavism means child resembles with his -
a) Father b) Siblings *(ARMS Nov99)*
c) Grandparents d)Neighbour

1467. A baby presenting with multiple deformities, cleft lip, cleft palate, microcephaly, small eyes, scalp defect and polydactyly, seen in which syndrome-(S4/iMSWov
a) Trisomy 13 b) Trisomy 18 *06, May08)*
c) Trisomy 21 d) Monosomy 2

1468. Common ocular manifestation in Trisomy 13 is -
a) Capillary hemangioma *(AIIMS 03)*
b) Bilateral microphthalmos
c) Neurofibroma
d) Dermoid cyst

1469. Cat eye syndrome is - *(AI 07)*
a) Partial trisomy 18 b) Partial trisomy 13
c) Partial trisomy 21 d) Partial trisomy 22

1470. Increased nuchal fold thickness is a feature of -
a) Paul-Bunnel syndrome *(AI99)*
b) De-pan syndrome
c) Down's syndrome
d) Cri-duchat syndrome

1471. All the foflowingai€ ^ttires Of B6w#siyiidrome except- p| **J (NEET/DNB Pattern)*
a) Brushfield's spots in iris b) Simian crease
c) Mental retardation d) Hypertonicity

1472. All of the following may occur in Down's syndrome except- *(AI06)*
a) Hypothyroidism b) Undescended testis
c) Ventricular septal defect d) Brushfield's spots

1473. All are common in Down syndrome, except-
a) Simian crease *(AIIMS May 93)*
b) Clinodactyly
c) Mother's age >35 years
d) Respiratory tract infection uncommon

1474. True about Down's syndrome- *(PGI Dec 2000)*
a) Hypertoniab) Simian crease
c) Lymphedema d) Mangoloid slant

1475. All of the following are features of down's syndrome except - *(AIIMS Nov 0 7)*
a) Increased PAPPA
b) Increased free beta HCG levels
c) Absent nasal bone
d) Abnormal ductus venous flow velocity

1476. Triple test for diagnosis of down's syndrome includes all of the following except - *(AI 99, AIIMS 03)*
a) p-HCG b) a-Fetoprotein
c) Serum HPL level d) Serum oestriol level

1477. Commonest cause of intestinal obstruction in down's syndrome - *(AIIMS June 2 000)*
a) Colomic atresia b) Intestinal atresia
c) Duodenal atresia d) Oesophageal atresia

1478. A 35 years old lady has chromosomal translocation 21/21. The risk of down syndrome in the child is -
a) 100% b) 0% *(AIIMS June 99)*
c) 10% d)50%

1479. Down's syndrome most commonly occurs due to -
a) Reciprocal translocation *(AI 10)*
b) Nondysjunction in maternal meiosis
c) Translocation defect
d) Nondysjunction in paternal meiosis

1480. Most common chromosomal syndrome *\s-(AIIMSDec 94)*
a) Fragile X-syndrome b) Trisomy 17
c) Trisomy 21 d) Trisomy 13

1481. A Down syndrome child is mentally retarded. All cytogenetic abnormalities may occurs except?
a) Deleted 21 *(ARMS Nov 11)*
b) Trisomy 21
c) Robertsonia translocation
d) Mosaic

1482. Down **Syndrome,** AU **are seen except-** *(NEET/DNB*
a) t (14; 21) b) Trisomy 21 *Pattern)*
c) t (11 : 14) d) t (15 : 21)

1483. Infant with down syndrome have A/E - *(PGI June 03)*
a) VSD b) Duodenal atrestia
c) Leukaemia d) Normal intelligence
e) Delayed skeletal maturation

1484. In Down syndrome- *(PGI Dec 06)*
a) Sadie gap b) Antimongoloid slant
c) Clinodactyly d) Hypotonia

1485. A child presents with antimongoloid slant, pulmonary stenosis, short stature and undescended testis. The likely diagnosis *is-(AIIMSDec 94, AI 97)*
a) Hypoparathyroidism b) Noonan syndrome
c) Klinefelter syndrome d) XYY sex chromosomes

1486. Webbing of neck, increased carrying angle, low posterior hair line and short fourth metacarpal are characteristics of - *(AI 04)*
a) Klinefelter syndrome b) Turner syndrome
c) Cri du chat syndrome d) Noonan syndrome

1487. A nineteen year old female with short stature, wide spread nipples and primary amenorrhoea most likely has karyotype of - *(AI 03)*
a) 47,XX+18 b)46,XXXY
c) 47,XXY d) 45 XO

1488. Edema of hands & feet in Infants is characterised -
a) Klinefelter's syndrome *(NEET/DNB Pattern)*
b) Noonam syndrome
c) Turners syndrome
d) Fragile x syndrome

1489. Turner syndrome is maximally associated with -
a) Horseshoe kidney *(ARMS May 08)*
b) Coarctation of aorta
c) VSD
d) ASD

1464) d 1465) a 1466)c 1467)a 1468)b 1469)d 1470)c 1471)d 1472)b 1473)d 1474)b,d 1475)a 1476)c
1477) b,c 1478) a 1479) b 1480)c 1481)a 1482) c 1483) d,e 1484)a,b,d 1485)b 1486)b 1487)d 1488)c 1489)b

1490. All of the following may occur in Noonan's syndrome except - *(AI 03)*
a) Hypertrophic cardiomyopathy
b) Cryptoorchidism
c) Infertility in females
d) Autosomal dominant transmission

1491. A patient with short stature, sexual infantilism and congenital anomalies with chromosomal abnormalities ^{6}XO\ Diagnosis is - *(PGI June 04)*
a) Turner's syndrome
b) Klinefelter syndrome
c) Testicular feminization syndrome
d) Gonadal agenesis
e) Gonadal dysgenesis

1492. Barr body is abseni in female havihg -
a) 46 XX genome *(NEB T/DNB Pattern)*
b) 45 X0 genoitfe
c) 47XXX
d) "All of above -

1493. Patau syndrome feature included\/E -
a) ClS||p *(NEET/DNB Pattern)*
b) Hypotelorism
§§§ ®loj>foseMepSiiy |
d) Rbcker bottom foof

1494. Trisomy 13 is seen in - *(NEET/DNB Pattern)*
a) Edward Syndrome b) Patau Syndrome
c) Down Syndrome d) Turner Syndrome

Klinefelter syndrome is dignos ed by -
a) Karyotyping *(NEE /DNB Pattern)*
b) USG abdonieii
c) Triple test
d) Echocardiography

1496. A 4 year baby is having large face, large jaw, large ear and macro orchidism is - *(AMU05)*
a) Me Cuneal bright syndrome
b) Down's syndrome
c) Cri-du chat syndrome
d) Fragile X syndrome

1497. Edward syndrome is *(MH11)*
a) Trisomy 13 b) Trisomy 18
c) Trisomy 21 d) Trisomy 20

1498. Down's syndrome predisposes to — —— cancer -
a) AML b)CML *(MAHE 05)*
c) ALL d) CLL

1499. In 'Down's syndrome' the shape of the head is - *(MAHE 05)*
a) Oxycephalic b) Scaphocephalic
c) Brachicephalic d) Plagiocephalic

1500. Which one of the following is a distinguishing feature of Edward's syndrome - *(UPSC 07)*
a) Hypotonia b) Hypotelorism
c) Holoprosencephalyd) Rocker bottom feet

1501. Which one of the following is NOT a feature of Turner's syndrome - *(UPSC-109)*
a) Short stature b) Mental retardation
c) Coarctation of aorta d) Lymphedema

1502. Which one of the following is NOT true regarding Noonan's syndrome - *(COMED 06)*
a) Affects males and females
b) Short stature
c) Chromosomal abnormality
d) Congenital heart disease - ASD

1503. A Particular genetic disorder appears in three consecutive generations of a family without any sex predilection. It was also noticed that phenotypically normal family members were having healthy offspring, What is the pattern of inheritance of this disorder ? *(UPSC 06)*
a) Autosomal recessive
b) Autosomal dominant
c) Mitochondrial inheritance
d) Uniparental disomy

1504. The following is not a feature of pierre - Robin syndrome- *(Jipmer91)*
a) Hearing defect b) Coloboma Iris
c) Respiratory distress d) Mandibular hypoplasia

1505. Jeune syndrome is - *(Jipmer 11)*
a) AR b) AD
c) XR d)XD

INFECTIOUS DISEASE

1506. Trans-placental spread is least associated with?
a) HBV b) Rubella *(AI11)*
c) HSV d)MV

1507. All of the following statements are true about congenital rubella except - *(AI05)*
a) It is diagnosed when the infant has IgM antibodies at birth
b) It is diagnosed when Ig G antibodies persist for more than 6 months
c) M.C. congenital defects are deafness, cardiac malformation and cataract
d) Infection after 16 weeks of gestation results in major congenital defects

1508. Which of the following is not a common manifestation of congenital Rubella - *(AI 02)*
a) Deafness b)PDA
c) Aortic stenosis d) Mental retardation

1509. Cong, rubella manifestations are all except -
a) Rash appears first on trunk *(PGI June 2000)*
b) Pre-auricular L. nodes
c) Arthralgia
d) Retinopathy

1510. Which of the following methods can be used to detect rubella infection in children - *(AI 95)*
a) T4 cell count
b) Fetal hemoglobin
c) IgM antibody in fetal blood
d) IgA Antibody in fetal blood

1490) c 1491) a 1492)b 1493)d 1494)b 1495)a 1496)d 1497)b 1498)a,b,c 1499)c 1500)d 1501)b 1502)c
1503)b 1504)b 1505)a 1506)None>c 1507)d 1508)c 1509)a,c 1510)c

1511. All are true about congenital rubella syndrome, except - *(A1IMS Nov 1999)*
a) Cardiac abnormality b) Renal anomalies
c) Deafness d) Cataract

1512. Rubella causes all except - *(NEET/DNB Pattern)*
a) Microcephaly b) VSD
c) Conduction defect d)All -A:V,

1513. Congenital heart lesion(s) in rubella are-
a) VSD b)ASD *(PGI Nov09)*
c) PDA d) Coarctation of aorta
e) Pulmonary stenosis

1514. Which heart diseases is most commonly associated with rubella infection - *(AI96)*
a) PDA b)VSD
c) ASD d)Eisemenger's syndrome

1515. All of the following statements about congenital rubella are true except - *(AlIMSMay 11, Nov 08)*
a) IgG persists for more than 6 months
b) IgM antibody present at birth
c) Most common anomalies are hearing and heart defects
d) Increased risk of congenital malformation if infection occur after 16 weeks.

1516. TVue about chicken pox - *(PGIJuneOl)*
a) I.P. 2-3 days
b) Scabs are infective
c) Centrifugal rash
d) Rash appears on first day
e) Rash can occur in axilla

1517. MC complication of chicken pox in children - *(PGI June 2000)*
a) Encephalitis b) Sec. bacterial infection
c) Pneumonia d) Otitis media

1518. Complication of chicken pox except- *(NEET/DNB Pattern)*
a)Memngitis b) Pneumonia
d) Enteritis d) Reyes Syndrome

1519. Child (girl) is suffering from varicella (fever rash). And child's aunt is pregnant. When is it earliest that the child can meet her aunt - *(PGIDec 06)*
a) When the lesions have crusted
b) Immediately
c) Anytime as the child is aunt's favourite
d) After the delivery of the baby

1520. Which of the following intrauterine infections is associated with limb reduction defects and scarring of skin - *(AIMS May 11, AI 09)*
a) Varicella virus b) Herpes virus
c) Rubella d) Parvovirus

1521. Measles virus is - *(NEET/DNB Pattern)*
a) Paramyxovirus fr) Orthomyxovirus
c) Poxvirus d) Picomavinis

1522. Which of the following is the "Least Common" Complication of measles ? *(AI 98)*
a) Diarrhoea b) Pneumonia
c) Otitis media d)SSPE

1523. True about measles - *(PGIDec 05)*
a) Rash appear first on leg
b) Koplik spots are seen in retina
c) Long term complication follows in form of SSPE
d) Caused by RNA virus
e) IP-IS 2-3 day

1524. TVue about measles - *(PGI June 04)*
a) Koplik spot appears in prodromal stage
b) Fever stops after onset of rash
c) Vaccine given at 9 month
d) It is not diagnosed when coryza & rhinitis is absent

1525. Measles is infectious during - *(PGIDec 98)*
a) After 4 days of rash
b) 4 days before and 5 days after rash
c) Throughout disease
d) Only in incubation period

1526. SSPE (subacute sclerosing panencephalitis) is associated with - *(PGI June 01)*
a) Mumps b)Chickenpox
c) Herpes d) Measles

1527. Giant cell (Hecht's) pneumonia is due to -
a) CMV b) Measles *(PGI Dec 98)*
c) Malaria d) P. carinii

1528. Commonest complication of mumps is - *(AI00)*
a) Orchitis and oophritis b) Encephalitis
c) Pneumonia d) Myocarditis

1529. Which of the following is true of mumps -
a) Salivary gland involvement is limited to the parotids *(AlIMSMay 05)*
b) The patient is not infectious prior to clinical parotid enlargement
c) Menigoencephalitis can precede parotitis
d) Mumps orchitis frequently leads to infertility

1530. Differential diagnosis in a case of fever with vesicular rash for two days are all except -
a) Candida-albicans *(UP 07)*
b) Infectious mononucleosis
c) Klabsiella pneumonia
d) Influenza

1531. Erythema infectiosum is seen in - *(AIIMSDec97)*
a) Rubella b) Fifth disease
c) Scarlet fever d) Diphtheria

1532. Fever stops and rash begins is diagnostic of- *(Jipmer 95)*
a) Fifth disease b) Roseola infantum
c) Measles d) Toxic shock syndrome

1533. An 8 yr. old female child following URTI developed maculopapular rash on the jaw spreading onto the trunk which cleared on the 3rd day without desquamation and tender post auricular and suboccipital lymphadenopathy. The diagnosis is - *(AlIMSMay 01)*
a) Kawasaki disease b) Erythema infectiosum
c) Rubella d) Measles

1511) b 1512)c 1513) a,b,c,e 1514)a 1515)d 1516)d,e 1517)b 1518)c 1519)a 1520)a 1521)a 1522)d 1523)c,d 1524)a,b,c 1525)b 1526)d 1527)b 1528)a 1529)c 1530)A11 1531)b 1532)b 1533)c

1534. A patient had fever and coryza for last 3 days developed maculopapular erythematous rash with which lasted for 48 hrs and disappeared without leaving behind pigmentation is most commonly due to- *(AIIMS June 2000)*
a) Measles b) Typhoid
c) Roseola infantum d) Fifth disease

1535. Which of the following is true about roseola infantum - *(PGI Dec 05)*
a) Defervescene follows the rash
b) Caused by HHV 6 and 7
c) Slapped check appearance is seen
d) Otitis media is common complication
e) Rash appear first on face and neck

1536. True about Roseola infantum - *(PGI June 03)*
a) Also called 5th disease
b) Caused by HHV 6 & 7
c) Rash appear in trunk
d) During defeverescence, rash appears

1537. Which of the following is true about erythema infectiosum - *(PGIDec 04)*
a) Slapped check appearance seen
b) Caused by parvovirus
c) Defervescene before rash
d) Rash appears on head & neck

1538. A 3-month-old male infant developed otitis media for which he was given a course of Co-trimoxazole. A few days later, he developed extensive peeling of the skin; there were no mucosal lesions and the baby was not toxic. The most likely diagnosis is -
a) Toxic epidermal necrolysis *(AIIMS May 04)*
b) Staphylococcal scalded skin syndrome
c) Steven Johnson syndrome
d) Infantile pemphigus

1539. Regarding PRIMARY COMPLEX in children, all are true except - *(ARMS 98)*
a) Effusion seen
b) Consolidation present
c) Fibrosis
d) Mediastinal lymphadenopathy

1540. 20 years old Rajesh presence with fever and chronic cough ESR 35 mm sputum cytology is negative for AFB and tuberculin test show indurations of 19 X 23 mm. The probable diagnosis is - *(ARMSNov 01)*
a) Fungal pneumonia b) Viral pneumonia
c) Pulmonary T.B. d) Bacterial pneumonia

1541. First line ATT in children - *(PGI June 05)*
a) Streptomycin b) Pyrazinamide
c) Ethionamide d) Ethambutol
d) Ofloxacin

1542. Drugs included in ATT for children - *(PGI June 06)*
a) Streptomycin b) Ethionamide
c) Ethambutol d) Pyrazinamide
e) Ofloxacin

1543. Management of a newborn when Mother has active Tuberculosis & is taking ATT - *(AI2000)*
a) BCG + Rifampicin + INH + Breast Feeding
b) BCG + Isolation of baby
c) BCG + INH for 6 week+Breast Feeding
d) BCG + INH + withhold Breast Feeding

1544. Incubation period of pertussis is - *(ARMS 97)*
a) 7 days b) 7-14 days
c) 14-28 days d) 28 days

1545. Pertusis affects which age - *(PGI June 2000)*
a) 2-3 b)<5
c) 5-7 d)> 10 years

1546. All are features of Pertussis *except-(AIIMS Feb 97)*
a) Encephalopathy
b) Cerebellar Ataxia
c) Subconjunctival hemorrhage
d) Bronchiectasis

1547. Antibodies to one of the following infection is not transmitted to child - *(PGI 96)*
a) Measles b) Pertusis
c) Diphtheria d) Polio

1548. A child with complaints of cough. Characteristic inspiratory whoop. Sample for investigation is -
a) Nasopharyngeal swab *(ARMS Nov 09)*
b) Tracheal aspiration
c) Cough plate culture
d) Sputum culture

1549. A child presents with recurrent bouts of severe cough followed by an audible whoop. Which of the following is considered the best type of specimen to isolate the organism and confirm the diagnosis
a) Nasopharyngeal swab *(ARMS Nov 11, AI 11)*
b) Cough plate
c) Throat Swabs
d) Anterior Nasal Swab

1550. The antibiotic of choice of pertussis is - *(ARMS 79, AP 90)*
a) Ampicillin b) Gentamicin
c) Erythromycin d) Penicillin

1551. 'Bull neck'in Diphtheria is due to - *(AI96)*
a) Retropharyngeal abscess b) Laryngeal edema
c) Cellulitis d) Lymphadenopathy

1552. The most common ophthalmic affection of diptheria is - *(ARMS 91)*
a) Ptosis
b) Total ophthalmoplegia
c) Isolated ocular palsies
d) Ophthalmoplegia externa

1553. All are complications of diphtheria *except-(AUMS June 9 7)*
a) Myocarditis b) Ocular muscel palsy
c) Cerebellar ataxia d) Hepatic failure

1554. Which of the following act as a means of transmission of HIV infection in newborn - *(Kerala 97)*
a) Transplacental b) Transfusions
c) Breast feeding d) During delivery

1534)c 1535)b 1536)b,c,d 1537)a,b 1538)b 1539)None 1540)c 1541)a,b,d 1542) All 1543)c 1544)b 1545)b 1546)b 1547)b 1548)a 1549)a 1550)c 1551)d 1552)c 1553)d 1554)a,c,d

1555. Most common cause of HTV infection in infant is -
a) Perinatal transmission *(PGIJUNE 97)*
b) Breast milk
c) Transplacental
d) Umbilical cord sepsis

1556. True statements) regarding feeding of HIV-infected child is/are - *(TGI Dec 08)*
a) Breast feeding for 4-6 months then start weaning
b) Breast feeding for 1 year then start weaning
c) Exclusively top feeding
d) Breast feeding for 6 months & then rapid weaning

1557. Which of the following is NOT a feature of HIV infection in childhood - *(AIIMS Dec 1994)*
a) Failure to thrive
b) Hepatomegaly
c) Lymphoid interstitial pneumonitis
d) Kaposi sarcoma

1558. HIV in children, characteristic finding is -
a) Kaposi sarcoma is common *(AIIMS Dec 98)*
b) Recurrent candidiasis
c) Recurrent chest infection
d) Cryptococcal diarrhoea is common

1559. Diarrhoea syndrome in an AIDS patient can be d/t -
a) Rota virus b) Cryptospora
c) Adenovirus d) E. coli *(AIIMS June 97)*

1560. All of the following methods are used for the diagnosis of HIV infection in a 2 month old child, except - *(AIIMS May 03)*
a) DNA-PCR b) Viral culture
c) HTV ELISA d) p24 antigen assay

1561. All of the following strategies are effective in preventing mother to child transmission of HIV, except- *(AIIMSNov 03)*
a) Zidovudine to mother & baby
b) Vaginal cleansing before delivery
c) Stopping breast feeding
d) Elective caesarean section

1562. Perinatal prevention of mother to child, which of the following steps are useful - *(PGIDec 08)*
a) Cleaning mothers vagina with antiseptic lotion
b) Elective Caesarian section
c) Avoid breast feeding
d) ART prophylaxis

1563. Infant of HIV +ve mother, which should be done -
a) BCG vaccine should not be given
b) AZT therapy *(PGI June 98)*
c) Separation from mother
d) Other than BCG, all other vaccines are given

1564. Drugs used to prevent HTV from mother to child -
a) Zidovudin to mother *(PGI Dec 08)*
b) Nevirapine to mother
c) Nevirapine to baby upto 6 weeks
d) Zidovudin to baby

1565. Which drug is given to prevent HIV transmission from mother to child - *(AIIMS Nov 06)*
a) Nevirapine b) Lamivudine
c) Stavudine d)Abacavir

1566. True about HIV in the neonate includes all the following except - *(AIIMS 99)*
a) Cannot be diagnosed accurately by current methods
b) Failure to thrive may be presentation
c) Transmission rate during pregnancy exceeds 90%
d) Transmission vertically from mother

1567. Regarding HTV transmission to foetus all are true except- *(AIIMS 98)*
a) > 50% risk of transmission to foetus
b) Can present as failure to thrive
c) Greatest risk of transmission of in perinatal period
d) Cannot be diagnosed

1568. Vaccines contraindicated in HIV positive child -
a) OPV b) MMR *(PGI Dec 08)*
c) Rabies d) Influenza
e) Hepatitis

1569. Indications to start ART in children under NACO all except- *(Delhi PGMar. 09)*
a) <11 months infant-if CD4 Count <1500 cells/mm^3
b) 12-35 months-if CD4 Count <500 cells/mm^3
c) 36-59 months-ifCD4 Count<350 cells/mm^3
d) >5 years-if CD4 Count <200 cells/mm^3

1570. Prophylaxis with Cotrimoxazole is recommended in the following situation except - *(Delhi PG Mar. 09)*
a) All symptomatic HIV infected children>5 years of age irrespective of CD4
b) All HIV exposed infants till HIV infection can be ruled out
c) All HIV infected infants less than 1 year age irrespective of symptoms or CD4 counts
d) As secondary prophylaxis after initial treatment for pneumocystis carini pneumonia

1571. Incubation period of Hepatitis A is - *(Assam, 95)*
a) 2 wks - 2 months b) 6 wks - 6 months
c) 6 days - 6 wks d) 2 days - 2 wks

1572. Which one of the following hepatitis viruses have significant perinatal transmission - *(AJ 03)*
a) Hepatitis E virus b) Hepatitis C virus
c) Hepatitis B virus d) Hepatitis A virus

1573. In a 3 year old child, most common cause of hepatitis B is - *(PGI June 97)*
a) Pinprick b) Saliva exchange
c) Perinatal d) Blood transfusion

1574. A 45 day - old infant developed icterus and two days later symptoms and signs of acute liver failure appeared. Child was found to be positive for Hbs Ag. The mother was also HBs Ag carrier. The mother's hepatitis B serological profile is likely to be -
a) HBs Ag positive only *(AI03)*
b) HBs Ag and Hbe Ag positivity
c) HBsAg and anti - HBe antibody positivity
d) Mother infected with mutant HB V

1555) a 1556) c,d 1557)d 1558)c 1559)a,b 1560)c 1561)b 1562)b,c,d 1563)b 1564)a,b,d 1565)a 1566)c 1567)a,d 1568) a 1569)None 1570)a 1571)a 1572)c 1573)d 1574)b

1575. A 30-year old lady delivered a healthy baby at 37 week of gestation. She was a known case of chronic hepatitis B infection She was positive for HBsAG but negative for HBeAG Which of the following is the most appropriate treatment for the baby -
a) Both active and passive immunization soon after birth *(AIIMS Nov 05)*
b) Passive immunization soon afte birth and active immunization at 1 year of age
c) Only passive immunization soon after birth
d) Only active immunization soon afterbirth

1576. A 5 year old boy is detected to be HBs Ag positive on two separate occasions during a screening program for hepatitis B. He is otherwise asymptomatic. Child was given three doses of recombinant hepatitis B vaccine at the age of 1 year. His mother was treated for chronic hepatitis B infection around the same time. The next relevant step for further investigating the child would be to - *(AI03)*
a) Obtain HBeAg and anti-HBe levels
b) Obtain anti HBs levels
c) Repeat HBsAg
d) Repeat another course of Hepatitis B vaccine

1577. Aneonate born to infected hepatitis- B mother, should be treated with - *(AI 09, 99)*
a) Isolation
b) Immunoglobulins
c) Hepatitis-B-Vaccine
d) Immunoglobulins & hepatitis-B-vaccine

1578. All are features of Neonatal Tetanus except -
a) Refusal to feed is common initial symptom
b) Caused by clostridium tetani *(AIIMS Feb 1997)*
c) Usually occurs in 1st 2 days of life
d) Mortality is 50-75%.

1579. **Tetanus is correctly characterized by which of the following statement -** *(AIIMS Nov 1999)*
a) Neonatal tetanus develops after passage through a contaminated birth canal.
b) If given early enough after exposure human tetanus immune globulin can significantly modify the course of disease.
c) Trismus is a common manifestation.
d) In a patient who is uncertain about his or her immunization status both tetanus toxoid and immune globulin should be given for serious wound

1580. True about tetanus - *(PGI June 01)*
a) Tetanus bacilli can spread through blood
b) Spread along the nerves only
c) Requires oxygen
d) I.P. is variable
e) Causes deep wound invasion

1581. All are features of non paralytic polio except -
a) Absent deep tendon reflexes *(AIIMSDec 97)*
b) Head drop
c) Nuchal rigidity
d) Knee heel test negative

1582. Most common cause of death in case of acute poliomyelitis is - *(AIIMS June 97)*
a) Intercostal muscles paralysis
b) Convulsion
c) Cardiac arrest
d) Respiratory failure

1583. Polio virus infection can result in all except -
a) Anterior horn cell damage *(AIIMS Dec 94)*
b) Autonomic involvement
c) respiratory involvement
d) Paralysis in > 70% of cases

1584. Kenny Packs were used in the treatment of- *(AIIMS03)*
a) Poliomyelitis b) Muscular dystrophy
c) Polyneuropathies d) Nerve injury

1585. Acute flaccid paralysis is reported in a child aged -
a) 0-3 years b) 0-5 years *(AI 02)*
c) 0-15 years d) 0-25 years

1586. TVue about polio- *(AIIMS Nov 07, May 08)*
a) Paralytic polio is most common
b) Spastic paralysis
c) IM injections and increased muscular activity lead to increased paralysis
d) Polio drop given only in < 3 year

1587. Which of the following STDs cause fetal abnormality - *(AI94)*
a) Herpes b) Hepatitis
c) Gonococci d) Syphilis

1588. Congenital syphilis can be best diagnosed by -
a) IgM FTA- ABS b) IgG FTA-ABS *(AI 01)*
c) VDRL d) TPI

1589. Premature baby of 34 wks was delivered. Baby developed bullous lesion on the skin and X-ray shows periostitis. What should be the nect investigation -
a) VDRL for mother & baby *(AIIMS Nov 11, AI 07)*
b) ELISA for HIV
c) PCRforTB
d) Hepatitis surface antigen for mother

1590. Hutchisons traid is seen - *(Manipal06)*
a) Primary syphilis b) Congenital syphilis
c) Secondary syphilis d) Tertiary syphilis

1591. An 8 year old boy presented with fever and bilateral cervical lymphadenopathy with prior history of sore throat There was no hepatomegaly. The peripheral blood smear shows > 20% lympho-plasmacytoid cells. The most likely diagnosis is - *(AI 02)*
a) Influenza
b) Tuberculosis
c) Infectious mononucleosis
d) Acute lymphoblastic leukemia

1592. An 8 year old child with acute lymphadenopathy, fever, 20% lymphocytosis indicates the diagnosis of -
a) Infectious mononucleosis *(AIIMS May 93)*
b) ALL
c) Pulmonary Koch's
d) â-hemolytic Streptococcal infection

1575) a 1576)b 1577)d 1578)c 1579)b,c,d 1580)d 1581)a 1582)d 1583)d 1584)a 1585)c 1586)c 1587)d 1588) a 1589) a 1590)b 1591)b 1592)a

1593. Which of the following does not establish a diagnosis of congenital CMV infection in a neonate -
a) Urine culture of CMV *(AIIMS May 06)*
b) IgG CMV antibodies in blood
c) Intra-nuclear inclusion bodies in hepatocytes
d) CMV viral DNA in blood by polymerase chain reaction

1594. Congenital toxoplasmosis-False *is-(AUMSMay 10)*
a) Diagnosed by detection of IgM in cord blood
b) IgA is more sensitive than IgM for detection
c) Dye test is gold standard for IgG
d) Avidity testing must be done to differentiate between IgA & IgM

1595. Symptomatic neonatal CNS involvement is most commonly seen in which group of congenital intrauterine infection - *(A108)*
a) CMV and toxoplasmosis
b) Rubella and toxoplasmosis
c) Rubella and HSV
d) CMV and syphillis

1596. Cysticercosis present as - *(PG1 Dec 03)*
a) Seizures b) Neuropathy
c) Encephalitis d) Muscular hypertrophy

1597. Dengue shock syndrome is characterized by the following except - *(AIIMS May 05)*
a) Hepatomegaly
b) Pleural effusion
c) Thrombocytopenia
d) Decreased haemoglobin

1598. Which of the following is true regarding Typhoid in children- *(AI94)*
a) Leukochyosis is characteristic
b) Encephalitis is common
c) Mild splenomegaly is usual
d) Urine culture is positive in 4 to 6 days

1599. In neonatal herpes, true is - *(PGI June 2000)*
a) Caused by HSV-II
b) Hepatosplenomegaly is diagnostic
c) Spontaneous recovery occurs
d) If not treated, disseminates

1600. Most common cause of postauricular lymphadenopathy in children - *(ARMSMay 93)*
a) Sore throat
b) Pediculosis capitis
c) Pulmonary Koch's
d) Chronic suppurative otitis media

1601. A child with fever and sore throat developed acute cervical lymphadenopathy most likely investigation to be done is - *(ARMS June 2000)*
a) Open biopsy of node
b) Radical neck dissection
c) Neck X-ray
d) Complete hemogrant

1602. Most common manifestation of HPV infection in children - *(PGI2K)*
a) Single papilloma b) Multiple papillomatosis
c) Osteoma d) Sarcoma

1603. Resistant plasmodium falciparum malaria in the pediatric age group should be treated with *~(AI 08)*
a) Chloroquine b) Tetracycline
c) Clindamycin d) Doxycycline

1604. Treatment for the child with frequent tapeworm infestation - *(PGI June 09)*
a) Albendazole b) Niclosamide
c) Praziquantel d) Mebandazole
e) Ivermectin

1605. Which of the following is the most common congenital viral infection? *(UPSCII10)*
a) Rubella b) Cytomegalovirus
c) Herpes simplex d)HIV

1606. A line of conjunctival inflammation on lower eye lid margin is diagnostic of - *(JIPMER 95)*
a) Measles b) Rubella
c) Kawasaki disease d) Infectious monouncleosis

1607. Complication of measles are all except -*(Jipmer 95)*
a) Myocarditis b) Appendicitis
c) SSPE d) Pancreatitis

1608. Pleomorphic rash is a feature of - *(Delhi, 96)*
a) Chicken pox b) Small pox
c) Erythema infectiosum d) Erythema subitum

1609. The risk of neonatal chicken pox is the maximum, if maternal infection occurs - *(UPSC 98)*
a) During the first trimester
b) During the second trimester
c) Within five days of delivery
d) Within six weeks of delivery

1610. The following age group is most severely affected by Rubella infection - *(JIPMER 2002)*
a) Females aged 25-35 Year b) Young girls
c) Adolescent girls d) Unborn child

1611. All of the following are features of mumps, except-
a) Caused by paramyxovirus *(Delhi PG Feb. 09)*
b) Aseptic meningitis is a complication in children
c) Orchitis is a complication in adults
d) Incubation period is less than 2 weeks

1612. A poverty-stricken mother suffering from active tuberculosis delivers a baby. Which one of the following advices would be the most appropriate in her case - *(UPSC 96)*
a) Breast feeding and BCG immunization
b) Breast feeding and isoniazid administration
c) Expressed breast milk and BCG immunization
d) Stop feeds and isoniazid administration

1613. A 2 year old child has a Mantoux test reading of 12 mm x 12 mm after 48 hours. In this case -
a) Anti-TB drugs should be started even if x -ray chest and haemogram are normal *(UPSC 98)*
b) Treatment should be started only if x-ray chest and haemogram are suggestive
c) One should wait till overt sign of TB appear
d) No treatment is required

1614. % of HIV infection in child of a HTV +ve mother is-
a) 20-30% b) 10-20% *(KERALA 97)*
c) 70-80% d) 100%

1593) b 1594) d 1595)c 1596)a,c 1597)dl598)c 1599)a 1600)b 1601)d 1602)b 1603)c 1604)a,b,c,d 1605)b
1606) a 1607)d 1608)a 1609)c 1610)d 1611)d 1612)b 1613)a 1614)a

1615. The transmission of AIDS transplacentally is -
a) 10-20%b) 20-30% *(Kerala 97)*
c) 3040 %d) 40-50%

1616. The commonest route of transmission of HIV from the mother to the baby is - *(UPSC 99)*
a) Vertical transmission during pregancy
b) During delivery through vagina
c) Breast milk
d) Constant touch and handling

1617. For the prevention of parent to child transmission of HIV, the NACO's recommendation is to give- *(UPSC 07)*
a) Niverapine 200 mg in active labour to mother
b) Niverapine 200 mg, four hours after rupture to membranes, to mother
c) Niverapine 200 mg in active about to mother and syrup niverapine 2 mg/kg body weight to newborn with 72 hours of delivery
d) Syrup niverapine 2 mg/kg body weight to newborn within 72 hours of birth

1618. Which positive test does not necessarily indicate HTV infection in a newborn? *(Karnataka 04)*
a) ELISA for HIV lgG antibody
b) p24 antigen
c) Virus culture
d) ELISA for HTV IgA antibody

1619. The etiological agent for roseola infantum is - *(JIPMER 02)*
a) Parvovirus b) Human herpes virus 6
c) CMV d)EBV

1620. Roseola infantum can be caused by - *(Kerala 04)*
a) Herpes virus 6 b) Parvovirus B 19
c) Echo virus 19 d) All of the above

1621. Which of the following is the common clinical manifestation of human parvovirus B 19 (HPV-B 19) infection ? *(UPSC-109)*
a) Aplastic crisis in hemolytic anemia patients
b) Anemia in neonatal period
c) Erythema infectiosum
d) Hydrops fetalis

1622. All of the following are features of poliomyelitis except- *(ICS 98)*
a) Acute onset b) Progressive course
c) Intact sensation d) Febrile onset

1623. Newborns have transplacentally acquired immunity against all of the following diseases except -
a) Measles b) Pertusis *(SGPGI05)*
c) Diphteria d) Poliomyelitis

1624. Color of diphtheretic membrane is - *(Jipmer 95)*
a) Grey . ... b) White
c) Yellow d) Cream

1625. 12.6 m old baby was brought c/o difficulty in feeding. The child was found to be hypotonic with a weak gag. The child is on breast mild and mother also gives honey to the child during periods of excessive crying. The causative agent is - *(J & K 05)*
a) Gram positive aerobic coccus
b) Gram positive anaerobic spre-suffering bacillus
c) Toxin produced by gram positive anaerobic bacillus
d) Echovirus

1626. Which of the following is best used in the diagosis of congenital syphilis - *(Jipmer 2K)*
a) FTA-ABS b) TPHA
c) IgM-FTAABS d)TPI

1627. In early congenital syphilis, which is not seen -
a) Keratitis b) Vesicular rash *(UP 96)*
c) Chorioretinitis d)Rhinitis

1628. Thrombocytopenia, macerated skin lesions, rash and periostitis in a newborn are seen in - *(COMED 09)*
a) Erythroblastosis fetalis
b) Cytomegalovirus infection
c) Syphilis
d) HIV infection

1629. 10 years old child with 10 days continuous fever with soft, enlarged spleen, diagnosis is-*(JIPMER 02)*
a) Enteric fever b) Malarial
c) Hodgkins disease d) Meningitis

1630. A child born with microcephaly, chorioretinitis and intra cranial calciflction. Most likely diagnosis is - *(JIPMER 90)*
a) Congenital syphilis b) Rubella
c) Toxoplasmosis d) Trypanosomiasis

1631. In Congenital infection with intra - cranial calcification most Probable etiology is - *(Jipmer 03)*
a) Toxoplasmosis
b) Cryptococcus meningitis
c) Cytomegalo virus infection
d) Cerebral abscess

1632. The most common manifestation of congenital toxoplasmosis- *(Manipal 06)*
a) Hydrocephalus b) Chorioretinitis
c) Hepatospienomegaly d) Thrombocytopenia

1633. A new born presents with petechiae skin lesions, hematuria, and platelet count is 22,000/L. Most likely caused by - *(UP08)*
a) Congenital CMV infection
b) Congenital rubella infection
c) Premature infants
d) None

1634. Which microorganism is responsible for classical presentation of hydrocephalus, chorioretinitis, intracerebral calcification ? *(APPG08)*
a) Toxoplasmosis b) Rubella
c) Measles d) CMV

1635. Which of the following is not transmitted transplacentally - *(TN90)*
a) Mumps b) Syphilis
c) Rubella d) Toxoplasma

1615)c 1616) b 1617) c 1618)a 1619)a,b 1620)d 1621)c 1622)b 1623)b 1624)a 1625)c 1626)c 1627)a 1628)c 1629) a 1630)c 1631)a,c 1632)b 1633)a,b 1634)a 1635)a

1636. Patient was given chloroquine and doxycycline for 7 days. Patients fever decreases in 4 days, but, peripheral smear showed occasional gametocytes of plasmodium falciparum. This type of drug resistance is - *(CMC 05)*
a) R type b) R_2 type
c) R3 type d) R_4 type

1637. Which of the following is not a usual feature of Ascariasis - *(A1IMS 92)*
a) Abdominal pain b) Urticaria
c) Anaemia d) Loefflers syndrome

1638. All the following are true about measles vaccine except- *(AI95)*
a) Given subcutaneously
b) High efficacy
c) Given below 1 year of age
d) Diluent not required

1639. Which vaccine is contraindicated in child with history of convulsions - *(AIIMS Nov 07)*
a) DPT b)Measles
c) Typhoid d) BCG

1640. Which of the following vaccines has maximum efficacy after a single dose - *(AI09)*
a) Tetanus toxoid b) DPT
c) Measles d)Typhoid

1641. National immunization programme, all are involved except - *(AIIMS Nov 0 7)*
a) TT b) HepatitisB
c) OPV d)Measles

1642. A 4 year old child presented in O.P.D. with vaccination history of receiving one dose of OPV and DPT at 2 months of age. Correct statements are-
a) BCG should not be given *(PGI Dec 04)*
b) DPT and OPV should be repeated
c) Measles should be given
d) Hepatitis 'B' vaccine advised
e) Haemophilus vaccine not given

1643. Which vaccines are not given in a 8 yrs old unimmunized child - *(PGI Dec 06)*
a) Pertusis b) Salk vaccine
c) Measles d)BCG
e) DT

1644. 18 months old child, who has received one dose of DPT and OPV at 2 months of age. What will be your next immunization plan - *(AIIMS Nov 0 7)*
a) Restart immunization schedule, as per age
b) Measles, BCG, booster dose of DPTand OPV
c) Measles, booster dose of DPT and OPV
d) BCQ 2ND dose of DPT and OPV

1645. Contraindication to DPT is all except - *(AI95)*
a) Local reaction to previous DPT
b) High fever after previous dose
c) Infantile spasms
d) Seizures after previous dose

1646. DPT is contraindicated in - *(AI 91)*
a) Family H/O. convulsion and neurological illness
b) Acute upper respiratory infection
c) Malnutrition
d) Evolving neurological illness

1647. MMR. vaccination is given *skt-(JIPMER 86, PGI87,*
a) Birth b) 6th month *UPSC 88, AIIMS 87)*
c) One year d) $1V_2$ years

1648. Excessive crying is seen after which vaccination -
a) Polio b) DPT *(AMU95)*
c) BOG d) Measles

1649. Which one of the following is a conjugated vaccine-
a) Hepatitis B b) Rubella *(UPSC 04)*
c) Hemophilius influenza d) Pertussis

1650. Which is not given at the time of birth? *(DP GEE 08)*
a) OPV b)BCC
c) Hepatitis B d)HiB

1651. Typhoid Vi polysaccharide vaccine is usually administered in children above the age of-*(Kam 11)*
a) 6 months b) 1 year
c) 2 years d) 1 year 6 months

1652. Which one of the following antibacterial antibiotics are not recommend for lactating mothers -
a) Cephaslosporins *(COMED06)*
b) Anti tubercular drugs
c) Quinolones
d) Aminoglycoside

MISCELLANEOUS

1653. Right Sided Isomerism is associated with -*(AI 11)*
a) Asplenia b) One spleen
c) Two spleens d) Polysplenia

1654. A five year old child presents to the emergency department with burns. The bum area corresponding to the size of his palm is equal to *(AI 11)*
a) 1%BSA b) 5% BS A
c) 10%BSA d) 20% BSA

1655. All of the following about Vitamin D metabolism are true except *(AIIMS Nov 11)*
a) 25-a hydroxylation takes place in liver
b) 1 -a hydroxylation takes place in kidney
c) Daily requirement in the absence of sun-light is 450-600 IU/day
d) Williams syndrome is associated with obesity, mental retardation, precocious puberty

1656. What is the probable diagnosis for a cyst in a child which is located at and associated with vertebral defects- *(AI08)*
a) Myelocele b) Bronchogenic cyst
c) Neuroenteric cyst d) Neuroblastoma

1657. Best site to demonstrate capillary filling in infants-
a) Nail bed b) Sternum *(PGI Dec 98)*
c) Ear lobule d) Great toe

1658. Best artery to palpate for pulse in infants is -
a) Femoral a b) Radial a *(PGIDec 2K)*
c) Carotid a d) Brachial a

1636) b 1637) c 1638)d 1639)a 1640)c 1641)b 1642)c,d 1643)a,b,d 1644)d 1645)a 1646)d 1647)d 1648)b
1649)c 1650)d 1651)c 1652)c 1653)a 1654)a 1655)d 1656)c 1657)b 1658)d

1659. The most common fetal response to acute hypoxia is-
a) Tachycardia b) Tachypnea *(AI09)*
c) Bradycardia d) Arrhythmia

1660. All are true about septic shock in children except -
a) 1st response is TC.O. due to vasodilatation
b) Hypotension is a late sign *(PGI Nov 09)*
c) Heart rate remains same
d) ^Peripheral vascular resistance
e) Widespread endothelial dysfunction

1661. True about pediatric tracheostomy - *(PGIDec 08)*
a) Most common early complication is subcutaneous emphysema
b) 3rd & 4th tracheal rings are incised
c) Easy to remove the tracheostomy tube
d) Complete tracheal ring is removed
e) Moisturing of orifice should be done

1662. which of following statements are included in 2005 American Heart Association - *(PGI Dec 08)*
a) Newborn CPR is applied from first hour after birth until the newborn leaves the hospital
b) Newborn CPR is applied from first hour after birth until first 24 hours
c) Child CPR guidelines for lay rescuer apply to children from 1 to 8 years of age
d) Child CPR guidelines for healthcare providers apply to children from 1-8 years of age
e) Hospital paediatric advanced life support guideline for paediatric patient extend age to 16-18 years

1663. Retrolental fibroplasia has association with-
a) Prolonged labour *(AIIMSMay02)*
b) Intrauterine infection
c) Meconium aspiration
d) Low birth weight

1664. Retrolental fibroplasia is due to - *(PGIDec 99)*
a) Hypocapnia b)$C0_2$
c) Hypoxia d) Hyperoxygenemia

1665. Retinopathy of prematurity is commonly predisposed by- *(AIMS June 2000)*
a) Less gestation age b) Low birth weight
c) 0_2 toxicity d) Carbohydrate excess

1666; *G\iom'dOfoptitnerveismuMy-(NEET/DNBPattem)*
a) Gemistocytic b) Pilocytic
c) Fibrillary d) Lamellar

1667. Lowe's syndrome is characterised by the following except - *(AIMS 2002)*
a) Hypophosphatamic rickets
b) Undescended testes
c) Defect in the CNS and eyes
d) Aminoaciduria

1668. A15 days old baby is brought to the hospital with complains of seizures. Blood tests revealed serum Ca++= 5 mg/dL, Phosphorous levels = 9mg/dl, and PTH levels 30pg/ml (normal range= 10-60 pg/ml). What is the most probable diagnosis? *(AI 11)*
a) Pseudohypoparathyroidism
b) Vitamin D deficiency
c) Hypoparathyroidism
d) Hypoxic ischemic encephalopathy

1669. Stroke bite lesion are seen in - *(PGI June 09)*
a) Sturge weber syndrome
b) Blue rubber bleb nevus syndrome
c) Macular staining of infant
d) Craniofacial nevus

1670. All are true about cartilage, hair hypoplasia syndrome except - *(AIMSDec 97)*
a) Neutropenia b) Depigmentd hair
c) Non functioning T cells d) None of the above

1671. Posterior iliac horns are seen in -*(AIMS May 02)*
a) Fisher's syndrome
b) Crouzan syndrome
c) Nail patella syndrome
d) Pierre Robbins syndrome

1672. Ataxia telangiectasia is characterised by all of the following except- *(AI 04)*
a) Chronic sinopulmonary disease
b) Decreased level of a-fetoprotein
c) Chromosomal breakage
d) IgA deficiency

1673. Chromosomal anomalies more than 20% is associated with - *(AIMS Nov 09)*
a) Gastroschisis b) Omphalocele
c) Spina Bifida d) Cleft Palate

1674. Which of the following congenital malformation is seen in a child of a mother who is on treatment with oral anticoagulants - *(AIMS Nov 2000)*
a) Craniofacial malformations
b) Renal agenesis
c) Long bone defects
d) Chondrodysplasia punctata

1675. Which of the following statements regarding Kawasaki disease is true - *(AIMS Nov 11, AI 08)*
a) Associated with coronary artery aneurysm in up to 25% of untreated cases
b) It is the most common cause of vasculitis in children
c) IV immunoglobulins are recommended only if coronary artery is involved
d) Lymph node biopsy is used for diagnosis

1676. TYeatment of kawasaki disease in children is -
a) Oral steroids *(AIMS Nov 11, AI 01)*
b) IV steroids
c) IV Ig
d) Mycophenolate mefentil

1677. The most common leukocytoclastic vasculitis affecting children is - *(AIMSMay 03, AI 05)*
a) Takayasu disease
b) Mucocutaneous lymph node syndrome. (Kawasaki disease)
c) Henoch Schonlein purpura
d) Polyarteritis nodosa

1659) c 1660)c 1661) a,b,e 1662) a,c,e 1663)d 1664) d 1665) a 1666)b 1667)b 1668) c 1669) c 1670) c 1671)c 1672)b 1673)b 1674)a,d 1675)a 1676)c 1677)c

1678. Palpable purpura is seen in all. except -
a) H.S. Purpura *(AIIMS June 99)*
b) Mixed cryoglobulinemia
c) Giant cell arteritis
d) Drug induced vasculitis

1679. A child with an obvious rash presents with recurrent infections. Investigation revealed decreased platelet count and reduced lgM. Which of the following is the most likely diagnosis - *(A112)*
a) Idiopathic Thrombocytopenic Purpura
b) Thrombotic Thrombocytopenic Purpura
c) Wiskott-Aldrich Syndrome
d) Di' George anomaly

1680. A six year old child is admitted to the Paediatric ICU for seizures. He has been on tretment with Tacrolimus and Prednisolone. On investigations his blood urea is 68 mg/dl, Serum Sodium is 136 meq/1 likely cause of his seizures- *(A112)*
a) Uremia b) Hyponatremia
c) Hypocalcemia d) Tacrolimus Toxity

1681. A study under Australian collaborative trial on steroids use in neonates was done. Which of the following is true - *(ARMS May 11)*
a) No difference between placebo & corticosteroid
b) Corticosteroid to children causes behavioural worsening
c) Corticosteroid to children causes reduction in head circumference
d) Corticosteroid to children causes neuro sensitivity degradation

1682. GBS in a child treatment - *(NEET/DNB Pattern)*
a) IV Ig b) Ventilation
c) Plasmapharesis d) All of above

1683. Acute lead poisoning in children commonly presents with all of the following features except - *(A1 99)*
a) Encephalopathy b) Cerebellar Ataxia
c) Status epilepticus d) Peripheral neuropathy

1684. A child is brought with drowsiness, decreased deep tendon reflexes and seizures. On examination the child has a line on gums. There is history of constipation. Which will be most appropriate drug that should be used in this child - *(AJ 07)*
a) EDTA b) DMSA
c) BAL d) Pencillamine

1685. Iron poisoning in 4 year child, Rx includes -
a) Stomach lavage *(PGI June 2000)*
b) DesferrioxaminelV 100 mg
c) X-ray abdomen
d) Blood transfusion

1686. A two year old boy presents with fever for 3 days which responded to administration of paracetamol. Three days later he developed acute renal failure, marked acidosis and encephalopathy. His urine showed plenty of oxalate crystals. The blood anion gap and osmolal gap were increased. Which of the following is the most likely diagnosis -
a) Paracetamol poisoning *(ARMS Nov 05)*
b) Diethy glycol poisoning
c) Severe malaria
d) Hanta virus infection

1687. Auditory screening is required in children under following conditions - *(PGIDec 2000)*
a) Before doing exchage transfusion for hyperbilirubinemia
b) In premature babies
c) Before starting aminoglycoside therapy
d) In overweight babies
e) After H. influenzae meningitis

1688. Increased sweat chloride is seen in all except -
a) Ectodermal dysplasia *(AI99)*
b) Nephrogenic diabetes insipidus
c) Glucose 6 phosphatase deficiency
d) Obesity

1689. A child presents with complaints of oliguria, abdominal distension and diarrhoea. On examination there is deep jaundice. Hepatomegaly was present measuring 4 cm below the costal margin. Conjugated bilirubin in blood was 38 mg/dL, and there was urine urobilinogen and bile pigments. Hemoglobin was 4mg/dL and serum creatinine was 3mg/dL. Which of the following tests is of least importance to diagnose this case - *(ARMS Nov 2000)*
a) G-6-PD level in blood
b) Serum ceruloplasmin
c) Reticulocyte count
d) Leptospiral antibody level

1690. A child with j aundice being given food intravenously. Which of the following can occur out of it-
a) Infection b) Malnutrition *(PGIDec 07)*
c) Diarrhea d) Hyperglycemia
e) Metabolic acidosis

1691. Transplacental crossing is not seen in - *(ARMS 96)*
a) Iso immune haemolytic anemia
b) Rh-haemolytic anemia
c) Toxoplasmosis
d) Toxic erythema

1692. What is meant by suppositious child - *(PGIDec 01)*
a) Second bom of a twin pregnancy
b) Child bom out of wedlock
c) Child rear up by a woman & She claims the child
d) Heterozygous mother & father
e) Homozygous

1693. Aspergers syndrome is a - *(JIPMER 2002)*
a) Developmental delay b) Neuromuscular disease
c) Degenerative disorder d) Metabolic disorder

1694. Combination of retinitis pigmentosa and ichthyosis is seen in - *(JIPMER 2002)*
a) Netherton syndrome b) Refsum's syndrome
c) Down's syndrome d) Mob's syndrome

1678) c 1679)c 1680)d 1681)b 1682)d 1683)d 1684)a 1685)b,c 1686)b 1687)a,b,c,e 1688)d 1689)b 1690)a,d,e 1691)d 1692)c 1693)a 1694)b

1695. Sphenoid wing dysplasia is seen in - *(JIPMER 2K)*
a) Von Hippel Lindau's disease
b) Neurofibromatosis
c) Sturge Weber syndrome
d) Bouraville's disease

1696. A child presents with a history of scorpion sting. He is having increased sweating. What is the next best step - *(JIPMER 2K)*
a) Lytic cocktail b) Atropine
c) Antevenom d) Local xylocaine infiltration

1697. An infant is crying excessively even after being given good fed. He is passing a large quantity of urine and repeatedly getting dehydrated. Urine examination shows no proteinuria and a specific gravity of 1004. The most likely diagnosis is -
a) Diabetes mellitus *(UPSC96)*
b) Diabetes insipidus
c) Congenital nephrotic syndrome
d) Protein losing enteropathy

1698. Not true about sudden infant death syndrome -
a) Occurs in male child *(KERALA 97)*
b) Allergy to animal milk
c) Seen in premature babies
d) Cause is prolonged breast feeding

1699. Factor associated with increased incidence for sudden infant death syndrome is-*(Delhi PG Mar. 09)*
a) High socioeconomic status
b) Female gender
c) Supine sleep positioning
d) Maternal smoking

1700. A small boy who is brought to the emergency department by his parents is found to have a spiral fracture of the femur, with a variety of ecchymoses. What is the most likely cause of the injuries- *(Karnataka 03)*
a) Automobile hit - and - run accident
b) Fall from a tree
c) Child abuse
d) Fall from a bicycle

1701. 6 years old girl with vaginal spotting. Diagnosis is-
a) Ovarian cancer b) Foreign body *(DNB2001)*
c) Sexual abuse d)PED

1702. Which of the following is not a complication of smoking in pregnancy - *(JIPMER95)*
a) Congenital malformation
b) Intrauterine growth retardation
c) Poor weight gain
d) Foetal death

1703. In infants, the cause of blindness arising out of oxygen toxicity is - *(UPSC97)*
a) Degeneration of crystalline lens
b) Growth of blood vessels into vitreous followed by fibrosis
c) Damage to cornea
d) Enzymic defect in lens

1704. Factors which decrease insensible water losses are all, except- *(Delhi PG Mar 09)*
a) Humidified air b) Sedation
c) Hypothermia d) Prematurity

1705. What is the correct composition of the standard maintenance solution for intravenous administration in children - *(UPSC-109)*
a) 5% dextrose, 25 mEq/L of sodium, 20 mEq/L of potassium
b) 10% dextrose, 25 mEq/L of sodium, 30 mEq/L of potassium
c) 5% dextrose, 40 mEq/L of sodium, 20 mEq/L of potassium
d) 10% dextrose, 40 mEq/L of sodium, 20 mEq/L of potassium

1706. The likely diagnosis in a child with limb pain and pancytopenia is - *(COMED 09)*
a) Aplastic anaemia
b) Acute lymphocytic leukaemia
c) Rheumatic fever
d) Rheumatoid arthritis

1707. A two-year-old boy is brought to emergency with severe anemia (Hb = 2 gm%) and features of congestive heart failure. The most appropriate immediate therapy for this boy would be-
a) Packed cell transfusion *(UPSC-109)*
b) Partial exchange transfusion
c) Whole blood transfusion
d) Parenteral iron injection

1708. A 4-year-old child is admitted with fever, non-purulent conjunctivitis, rashes, cervical lymphadenopthy, hepatomegaly and desquamation of fingers and toes. Echocardiography shows coronary artery aneurysm. What is the most likely diagnosis?
a) Measles b) German measles *(UPSC-110)*
c) Progeria d) Kawasaki disease

1709. Biochemical screening of newborn infants by heelprick blood samples is performed by using the -
a) Tay-Sachs Card b) Duchenne Card
c) Guthrie Card d) Maple Card *(UP SC II10)*

1710. A small boy who is brought to the emergency department by his parents is found to have a spiral fracture of the femur, with a variety of ecchymoses. What is the most likely cause of the injures?
a) Automobile hit-and-run accident *(DPG10)*
b) Fall from a tree
c) Child abuse
d) Fall from a bicycle

Drug of choice for suspected or proved microbial pathogens (according to Harrison's 17th/e)

Infective organism	Drugs of choice	Ref.	Comments
Gram-Positive Cocci			
• **Staphylococcal infections**			**Alternative-**
• *Sensitive to penicillin*	Penicillin	**P. 880**	Naficiilin, Cefazolin, Vancomycin
• *Sensitive to methiciliin*	Naficiilin or oxacillin	**P. 880**	Cefazolin, Vancomycin
• *Resistant to methiciiiin*	Vancomycin	**P. 880**	TMP-SMX, Minocycline
• *Resistant to methiciliin with intermediate or complete resistance to vancomycin*	Uncertain	**P. 880**	
• **Streptococcal infections**			
Group A			
• *Pharyngitis*	Benzathine Penicillin G	**P. 883**	
• *Impetigo*	Benzathine Penicillin G	**P. 883**	
• *Erysipelas/cellulitis*	Severe - Penicillin G *mild to moderate* - Procaine Penicillin G	**P 883**	
• *Necrotizing Fasciitis/myositis*	Surgical debridement + Penicillin G + Clindamycin	**P. 883**	
• *Pneumonia/empyema*	Penicillin G + Drainage of empyema	**P. 883**	
• *Streptococcal toxic shock syndrome*	Penicillin G + Clindamycin + intravenous immunoglobulin	**P. 883**	
Group B	Penicillin	**P. 887**	Penicillin is the t/t of choice for all group B streptococcal infection
Group D Enterococci and nonenterococcal			
• *Combination therapy* • *If penicillin allergic*	Penicillin or Ampicillin + Gentamycin Vancomycin in combination with Gentamycin	**P 888**	Enterococci are resistant to all cephalosporins therefore this class of antibiotic should not be used for t/t of enterococcal infections
Viridans streptococci	Penicillin	**P. 889**	In neutropenic pts the t/t is first started with vancomycin (as they are often resistant to pencillin)
Streptococcus pneumonia *For otitis media*	Amoxicillin	**869, 870**	***Second line*** - Amoxicillin ***Third line*** Ceftriaxone
For Pneumococcal Pneumonia	***Oral therapy*** - Amoxicillin quinolone eg. Gatifloxacin ***Parenteral therapy*** - Penicillin, Ampicillin, Ceftriaxone Cefotaxime, Quinolone	**869, 870**	
Streptococcus meningitis		**P. 871**	
• *Antibitotic susceptibility unkown*	T/t with ceftriaxone + vancomycin		
• *Susceptibility results available*	***Susceptible*** - Ceftriaxone ***Resistant*** - T/t with both ceftriaxone & Vancomycin		
• *Life threatening penicillin allergy*	T/t with imipenem	**P. 871**	
Gram - neaative Cocci			
• **Meningococcus (Neisseria Meningitis)**	Ceftriaxone, Cefitixime	**P. 913**	**Alternatives** - Chloramphenicol, Meropenem
• **Moraxella Catarrhalis**	Penicillin/Clavulinicacid is highly appropriate	**P. 922**	**Alternatives -** Cephalosporins (2nd or 3rd generation) T etracyclines,Macrolides, Ketolides Trimethoprim Sulphamethoxazole

Infective organism	*Drugs of choice*	*Ref.*	*Comments*
Gonococcal infection Cervix, urethra, pharynx Rectum	First line - Cefriaxone, Ciprofloxacin ofloxacin	**920**	**Alternative** - Spectinomycin, Ceftizoxime, Cefotetan
Gonococcal conjunctivitis	Ceftriaxone	**920**	
Ophthalmia neonatarum	Ceftriaxone		
Disseminated gonoccal infection			
Patient tolearnt of (3 lactam drugs	Ceftriaxone, Cefotaxime, ceftizoxim		
Pattient allergic to p lactum drugs	Ciprofloxacin, Ofloxacin, Spectinomycin		
Continution therapy	Ciprofloxacin, Ofloxacin, Levofloxacin		
Gonorrhoea Epididymitis	Ceftriaxone followed by doxycycline	**824**	
Gonococcal urethritis	Cefopodoxime or ceftriaxone or Fluroquinodones	**824**	
PID	ORAL *Regimen A* - Ofloxacin or levofloxacin Plus metronidazole *Regimen B* - Ceftriaxone plus doxycycline plus metronidazole PARENTERAL *Regimen A* - Cefotetan or cefoxitin plus Gentamycin *Regimen B* - Clindamycin Plus gentamycin	**831**	
Gram - Positive bacilli			
• **Bacillus Anthrax**	Ciprofloxacin or Doxycycline + Rifampicin, penicillin or Chloram phenicol	**P. 1347**	
• **Clostridium**			
• Gas *gangrene*	Penicillin (i.v.) + Clindamycin	**P. 907**	
• *Clostridial sepsis*	Penicillin (i.v.) + Clindamycin	**P. 907**	
• *Suppurative deep tissue infections*	Penicillin (i.v.) + Gentamycin or third generation cephalosporin	**P. 907**	
• *Clostridium difficile* (diarrhoea)	Metronidazole and vancomycin	**P. 820**	Use of vancomycin in first episodes is discouraged because of possible drug reistance
• *Clostridium tetani*	I.V. Penicillin	**P. 899**	Some prefer metronidazole
• **Diphtheria** (*Respiratory)*	Erythromycin or Procaine penicillin	**892, 893**	Administration of diphtheria antitoxin is the most important element in the t/t of respiratory diphtheria
Listeria monocytogens	I.V. ampicillin or Penicillin	**P. 897**	
Enteric Gram - neaative bacili			
• **Escherichia Coli**		**C.M.D.T. 2004 1487-88**	
• *Sepsis*	Cefotaxime, Ceftrizoxime Ceftriaxone ceftazidine, Cefepime	**t. (37.1)**	
• *Urinary infection*	Fluoroquinolones, nitrofurantion		
• **Klebsiella infections**	Carbepenems	**P. 942**	Imipenem remain the most active antibiotic class against klebsieila
• **Salmonella**	Ciprofloxacin	**P. 959**	***Alternative*** - Azithromycin, ciprofloxacin

Infective organism	*Drugs of choice*	*Ref.*	*Comments*
• **Shigella** • *In developing countries* • In U.S.A.	Ciprofloxacin	**P. 964**	
• **Campylobacter**	Erythromycin	**P. 967**	
• **Yersinia pestis** (Plague)		**P. 984**	Gentamycin is considered as effective
	Streptomycin	**P. 984**	***Alternative*** - Tetracycline & Chloramphenicol
Other Gram - Neaative bacilli • **Haemophilus infections**		**P. 924**	
• ***Haemophilus influenzae 'b'***	Initial t/t consists of cephalosporins such as *Ceftriaxone or cefotaxime*		**Alternative -** Penicillin + Chloramphenicol
• ***Haemophilus ducreyi***	The recommended t/t is single 1gm oral dose of azithromycin	**P. 926**	***Alternative*** - Ceftriaxone ciprofloxacin, Erythromycin
• **Pertussis**	*Macrolides Antibiotics* - Erythromycin, clarithromycin, Azithromycin	**P. 936**	Trimethoprim and sulphamethoxazole can be given to macrolide allergic patients
• **Legionella**	*Newer Macrolides* - Azithromycin, clarithromycin *Respiratory Quinolones* - levofloxacin, moxifloxacin Gemifloxacin	**P. 932**	
• **Donovanosis**	Azithromycin, Erythromycin Tetracycline , Doxycycline	**P. 992**	Azithromycin being increasingly used as first choice
• **Brucella**	*Monotherapy* - Streptomycin *Dual therapy* - Streptomycin & Tetracycline	**975, 976** **975, 976**	*The gold standard is intra muscular streptomycin together with doxycycline*
• **Tuleremia**	Streptomycin (i.m.) for both adult & children	**P. 979**	
• **Gardenella Vaginosis**	Metronidazale	**P. 827**	
• **Chlamydia** *Chlamydia trachomatis*	Azithromycin	**P. 1075**	Erythromycin is D.O.C. in pregnant women
• *Chlamydia psittaci*	Tetracycline	**P. 1078**	
• *Chlamydia Pneumoniae*	Erythromycin, Tetracycline, Azitrhomycin,	**P. 1078**	**Alternatives** - Fluoroquinolones
Chlamydia urethritis	Azithromycin or Doxycycline	**P. 824**	
Rickettsial infections			
• *Rocky mountain spotted fever*	Doxycycline	**P. 1062**	
• *Rickettsial Pox*	Doxycycline or Ciprofloxacin	**P. 1063**	
• *Endemic typhus*	Doxycycline or Chloramphenicol	**P. 1064**	
• *Epidemic typhus*	Doxycycline	**P. 1063**	
• *Scrub typhus*	Doxycycline or Chloramphenicol	**P. 1065**	
Spirochaetes • **Syphilis**			
• *Primary, secondary or early latent* • *Late Latent cardiovascular or benign tertiary* • *Neuro syphilis* • *Syphilis in pregnancy*	Penicillin G benzathine **Normal C.S.F.** - Penicillin benzathine **Abnormal C.S.F.-** T/T as neurosyphilis Aqueous Penicillin G or Aqueous Penicilline G Procaine According to stage	**P. 1044**	
• **Leptospirosis**	*Mild* - Doxycyclin, Ampicilin or Amoxicillin Moderate/Severe - Penicillin G, Ampicillin, Amoxicillin, Erythromycin	**P. 1051**	
• **Borrelia** • *Relapsing fever*	Doxycycline (or other tetracyclines) Erytrhomycin, Chloramphenicol	**P. 1054**	

Infective organism	*Drugs of choice*	*Ref.*	*Comments*
• *Lyme disease*	*Oral therapy* **- *Adult-*** Doxycycline < 9year-Amoxycillin	**P. 1058**	**Second choice** -Amoxycillin **Third choice** - Cefuroxime
	Intravenous therapy- Ceftriaxone		**Second choice** - Cefotaxime **Third choice** - Na Penicillin
Mycoplasma	Erythromycin or doxycycline	**P. 1069**	**Alternatives** - Clarithromycin Azithromycine, Fluroquinolone Third generation cephalosphorins or cefotaxime in the initial therapy/ as it also covers meningitis causing bacteria
Actinomycetes			
• **Actinomycosis**	Penicillin	**P. 998**	
• **Nocardia**	Sulfonamides minocycline is an acceptible alternative	**P. 995**	Some believe that cotrimoxazole may be more effective but it poses a greater risk of hemato logical toxicity
Helminthic Infections			
• **Cestodes**			
H. Nana	Praziquantel	**P. 1340**	
Taenia saginata	Praziquantel	**P. 1336**	
Taenia Solium	Praziquantel	**P. 1338**	
• Trematodes			
Schistosomiasis	Praziquantel	**P. 1334**	
Liver flukes	Praziquantel		
Lung flukes	Praziquantel	**P. 1335**	
• ***Nematodes*** (tissue)			
Trichinella	*Enteric stage* - Mebandazole & Albendazole	**P. 1317**	Trichinella larva in muscle (Drugs ineffective)
• **Intestinal Nematodes**			
Ascariasis	Albendazole, Mebendazole, Pyrantel Pamoate (used in Pregnant women)	**P. 1320**	
Hook worm	Albendazole, Mebendazole, Pyrantel Pamoate	**P. 1321**	
Strongyloidiasis	Ivermectin,	**P. 1322**	**Alternative** - Albendazole
Trichuriasis (Whipworm)	Mebendazole or albendazole	**P. 1322**	
Enterobiasis (Pinworm)	Mebendazole, Albendazole, Pyrantel pamoal	**P. 1323**	
• ***Extraintestinal Nematodes***			
Filaria		**P. 1326**	
• *Filariasis*	Diethyl carbamazine		
• *Tropical Pulmonary* • *eosinophilia*	Diethyl carbamazine	**P. 1327**	
Onchocerciasis	Ivermectin is the D.O.C.	**P. 1328**	
Dracunculiasis (Guinea worm)	Metronidazole may relieve symptoms but has no proven activity against the worm	**P. 1329**	
• **Protozoal infectipp$**			
Amoeba		**P. 1278**	
• *Asymptomatic carrier*	Iodoquinol Paramomycin		
• *Acute Colitis*	Metronidazole + Luminal agent		
• *Amoebic liver abscess*	Metronidazole		
Trichomoniasis	Metronidazole	**P. 1315**	
Giardiasis	Metronidazole	**P. 1313**	
Toxoplasma infection		**P. 1310**	
• *Congenital infection*	Oral pyrimethamine and sulfadiazine		
• *Immunocompetent patients*	Usually do not require t/t		
• *Immunocompromised patients*	Trimethoprim sulphamethoxazole		
ANTIVIRAL			
• **Influenza A and B**		**P. 1087**	

Infective organism	*Drugs of choice*	*Ref.*	*Comments*
Prophylaxis Treatment	Amantadine or rimantadine Oseltamivir, Zanamivir, Amantadine	**t (171.1)**	Amantadine is used for influenza A only
· RSV infection	Ribavirin	»»	
• CMV-retinitis in immunocompromised host (AIDS)	Ganciclovir	>1	Valganciclovir, Foscarnet, cidofovir
• Varicella Immunocompetent host Immunocompromised host	Acyclovir Acyclovir	**P. 1088**	
• Herpes simplex			
Encephalitis	Acyclovir	ii	
Neonatal	Acyclovir	H	
Genital			
Primary (treatment)	Acyclovir	»	
Reccurrent (treatment)	Acyclovir		
Keratitis	Trifluridine	ii	
• Herpes zoster *Immunocompromised host* *Immunocompetent host*	Acyclovir Valacyclovir	ii	
• Herpes zoster ophthalmicus	Acyclovir	**P. 1089**	
• Condyloma acuminatum	IFN-o2b IFN-on3	ii	
• Chronic hepatitis B	IFN-o2b Lamivudine Adefovir, dipivoxi	ii	
• Chronic hepatitis C	IFN-a2a or -cc2b IFN-a2b/ribavirin Pegylated-IFN-a2b Pegylated-IFN-a2b/ribavirin Pegylated-IFN-a2a/ribavirin IFN alacon	ii	
• Chronic hepatitis D	IFN-oc2a or-a2b	ii	
Antifungal **Histoplasmosis**	"Intravenous Amphotericin B is the drug of choice for initial treatment of patient with disseminated histoplasmosis who are severely ill or immunosuppressed or whose infection involves the C.N.S."	**P. 1246**	
• Acute pulmonary	None	ii	
• Chronic pulmonary	Itraconazole	ii	**Alternatives** - Amphotericin B
• Disseminated Immunocompeten patient less severe	Itraconazole		**Alternatives** -Amphotericin B
· Rapid progressive severe illness CNS involvement, HIV infection	Amphotericin B	ii	**Alternatives** - Itraconazole
Coccidiodomycosis	Patients with severe or rapid progressive disseminated coccidiodomycosis are first given intravenous Amphotericin B patients whose condition improves or who have more indolent disseminated infection are given intraconazole	**1248-49**	

Infective organism	*Drugs of choice*	*Ref.*	*Comments*
• *No risk factors*	Itraconazole or Fluconazole	If	**Alternatives** - Observation
• *Risk factors, severe iiiness, rapid progression or diffuse pulmonary infiltrates*	Amphotericin B	99	**Alternatives-Switch** to itraconazole or flucanozle
• *Chronic dissemination (no CNS disease)*	Itraconazole or Fluconazole	»	**Alternatives** - Amphotericin B
• *Meningitis*	Fluconazole	”	**Alternatives-** Intrathecal Amphotericin B
Biastomycosis	I.V. Amphotericin B is the drug of choice for patients with rapidly progressive infections, severe illness or CNS lesions.	**1250-51**	
• Rapid progressing or severe illness	Amphotericin B	»	**Alternatives** - Switch to Itraconazole when condition stabilize
• CNS disease	Amphotericin B for 10-12 weeks	i»	**Alternatives** - Give fluconazole if patient improves
• Indolent infection	Itraconazole	”	
Cryptococcosis		**P. 1253**	
• *Disease in AIDS patients*	Amphotericin B		**Alternatives** - Itraconazole
• *Disease of Non AIDS patients*	Meningitis-Amphotericin B Pulmonary disease -Treat immunosuppressed patients as for meningitis	>»	**Alternatives** - Switch to fluconazole **Alternatives** - Itraconazole
Candidiasis		**P. 1255**	
• *Cutaneous*	Topical Azole		
• *Vulvovaginal*	Azole cream or suppository or oral fluconazole	ii	**Alternatives** - Nystatin
• *Oropharyngeal*	Clotrimazole or fluconazole	99	**Alternatives-** Nystatin
• *Esophageal*	Fluconazole tablet	i>	**Alternatives** - For azole unresponsive disease
• *Deeply invasive*	Non neutrophenic - Fluconazole or Amphotericin caspofungin Neutropenic - Amphotericin B	ii	
Asperaillosis		**P. 1207**	
• *Fungus base of the lung*	Surgical resection		**Alternatives** - Bead embolization for hemoptysis
• *Allergic branchopulmonary apergillosis*	Short course of Glucocorticoids	ii	**Alternatives** - Itraconazole prophylaxis
• *Invasive aspergillosis*	Voriconazole liposomal or conventional Amphotericin B	ii	**Alternatives** - Amphotericin B colloidal dispression or lipid complex itraconazole or caspofungin
Mucormycosis	Intravenous amphotericin B is useful	**P. 1262**	
Pityriasis versicolor	Azole creams, Application of Selenium Itraconazole is also effective	**P. 1263**	
Sporotrichosis	Itraconazole is the drug of choice	**P. 1265**	
Mycetoma		**P. 1266, P. 1264**	
• Actinomycetoma	Streptomycin Dapsone and Cotrimoxazole		
• Eumycetoma	Rarely responds to chemotherapy		
Pneumocystosis *Pneumocystis carinii*	Trimethoprim, Sulfamethoxazole	**P. 1269**	These are D.O.C. for all forms of Pneumocystosis

PHARMACOLOGY

GENERAL - PHARMACOLOGY

1. A substance havine affinity but no instrinsic activity is - *(Delhi 88, 90)*
a) Agonist b) Partial agonist
c) Antagonist d) Physiological antagonist

2. A substance having affinity and intrinsic activity is-
a) Agonists b) Partial agonist *(DELHI87)*
c) Antagonist d) Physiological antagonist

3. Detoxification or protective synthesis occurs by -
a) Oxidation b) Reduction *(AIIMS 84)*
c) Conjugation d) All of the above

4. Which of the following drugs are highly protein bound- *{AIIMS81, PGI86)*
a) Digitalis b) Warfarin
c) Phenytoin d)Rifampicin
e) None of the above

5. Estimation of serum levels is essential in treatment with- *{AIIMS82)*
a) Impiramine b) Chlorpromazine
c) Lithium d) Haloperidol

6. Elimination after 4 half lives in first order Kinetics is - *(A189)*
a) 84% b) 93%
c) 80.5% d) 4.75%

7. The following undergoes high first pass metabolism - *(PGI88)*
a) Propranolol b) Amitryptyline
c) Labetalol d)Acebetalol

8. Which of the following drugs do not enhance the effect of anti coagulants - *(AIIMS82)*
a) Quinine b) Griseofulvin
c) Salicylate d) Phenylbutazone

9. Drugs which increase the metabolism of warfarin is/are - *{PGI90)*
a) Rifampicin b)Septran
c) Phenylbutazone d)Phenobarbitone

10. The Alkaline drug (Amidopyrine) is absorbed from-
a) Stomach *(AI91)*
b) Proximal small intestine
c) Distal small intestine
d) Colon

11. Which drug has a high first pass effect - *(Jipmer91)*
a) Amiodarone b) Phenytoin
c) Verapamil d) Disopyramide

12. What is the advantage of sublingual route of administration of drugs - *(Jipmer91)*
a) Prevents first pass effect
b) Easy to administer
c) Lipid soluble
d) Can be spitted out with signs of toxicity

13. All the following induce hepatic enzymes except -
a) Rifampicin b) Phenytoin *(AIIMS 91)*
c) Barbiturates d) Tolbutamide

14. Serum level of drug is monitored when the patient is on- *(Jipmer 92)*
a) Lithium b) Haloperidol
c) Diazepamd) Acetazolamide

15. Drug with extensive first pass metabolism-
a) Propranolol b) Digoxin *(Jipmer92)*
c) Quinidined) Chlorpromazine

16. What is prodrug- *(Jipmer 92)*
a) Drug which Increases efficiency of another drug
b) Metabolic end product
c) Inactive drug which gets activated in the body
d) Drug which competes with another for metabolism

17. T *Vi* of a drug can determine all the following A/E
a) Dosing interval *(AIIMS 92)*
b) Elimination time
c) Steady Plasma concentration
d) Therapeutic dosage

18. Zero order Kinetics are seen in all except-
a) Salicylate b) Phenytoin *(PGI93)*
c) Barbiturates d) Ethanol

19. Which of the following avoids first pass effect of drugs - *(Jipmer 93)*
a) Oral Ingestion
b) Rectal Suppository
c) Intra venous injection
d) Intra-arterial injection

20. Increased efficiency of the contraceptive pill is recognised with the use of - *(PGI 81, 88)*
a) Rifampicin b) Warfarin
c) Phenytoin d)Frusemide

21. All of the following are protein bound except-
a) Propranolol b)Atenolol *(Delhi92)*
c) Phenylbutazone d) Warfarin

22. Drugs significantly affected by enzyme induction include the following except- *(AMU 90)*
a) Barbiturate b) Chlorpromazine
c) Diphenyl hydantoin d) Warfarin

23. Drug which crosses the placental barrier is- *(DELHI841, 92)*
a) Phenytoin b) Diazepam
c) Corticosteroids d) All of the above

24. Which of the following is not a dose related reaction-
a) Myocardial Irritation of Quinidine *(JIPMER 92)*
b) Hypoglycemia of tolbutamide
c) Digitalis induced arrythmia
d) Drug fever of sulpha

2 5. The factors contributing to the unequal distribution of drugs are all except- *(AIIMS 80, 83)*
a) Heterogenesity of the drug
b) Binding to plasma proteins
c) Cellular
d) Concentration in body fat
e) Blood-brain barrier

15) a 16) c 17) None 18) c 19)c,d 20) None 21) b 22) a 23) d 24) d 25) a

26. Following drugs are contraindicated in lactation except - *(AIIMS 84, 88)*
a) Lithium b) Ciprofloxacin
c) Spiramycin d) Diazepam

27. The dosage of drugs in renal disease should be changed based on- *(PGI80)*
a) Urine output b) Blood urea
c) Serum creatinine d) Creatinine clearance

28. The elimination of following drugs is dose dependant except - *(AIIMS 80)*
a) Phenytoin b) Salicylate
c) Theophylline d)Digoxin

29. Which of the following statements is correct?
a) Most drugs are absorbed in ionised form
b) Basic drugs are generally bound to plasma albumin
c) Microsomal enzymes are located in the mitochondria of hepatic cells *(Karn 94)*
d) Blood brain barrier is deficient at the chemoreceptor trigger-zone

30. All the prodrugs except- *(Jipmer95)*
a) Enalapril b) Paracetamol
c) Sulphamethoxazole d) Trimethoprim

31. The study of dose, distribution, metabolism & excretion of drugs in the body is known as -
a) Pharmacognosia *(Kerala 95)*
b) Pharmacodynamics
c) Dose effective study
d) Pharmacotherapy

32. Which does not cross placental barrier -
a) Diazepam b) Pethidine
c) Atropine d) Dicumerol

33. Therapeutic index of a drug is an indicator of -
a) Potency b) Safety *(Al 95)*
c) Toxicity d) Efficacy

34. Which cytochrome is responsible for drug metabolism? *(IN95)*
a) P-450 b) C-3b
c) C-3a d) C-2a

35. All of following drugs are metabolized in body by acetylation except - *(AI96)*
a) INH b) Hydralazine
c) Procainamide d)Dilantoin

36. All of following are examples of prodrugs except
a) Levodopa b) Enalapril *(A196)*
c) Omeprazole d) Indomethacin

37. Zero order kinetics is seen with - *(All India 96)*
a) Phenytoin b) Phenobarbiton
c) Erythromycin d)Digoxin

38. Most common indication for therapeutic monitoring of plasma levels of a drug is - *(Al 96)*
a) Hit & run drugs
b) Drugs with irreversible action
c) Narrow therapeutic range
d) Failure of response

39. Which one of the following drugs does not exhibit zero order kinetics - *(CUPG.EE 96)*
a) Phenytoin b) Ethanol
c) Salicylate d) Ranitidine

40. Idiosyncrasy is- *(Karnat 96)*
a) A genetically determined abnormal reaction to drugs
b) A characteristic toxic effect at therapeutic doses
c) An altered physiological state produced by repeated drug use
d) An immunologically mediated reaction

41. The effectiveness of oral contraceptives is definitely affected by - *(Al 9 7)*
a) Captopril b)Frusemide
c) Ranitidine d)Rifampicin

42. Drugs absorbed by active transport is - *(NIMS 96)*
a) Propranolol b) Ergotamine
c) Levodopa d) Amantidine

43. Zeor order kinetic in high doses is seen in -
a) Phenytoin b) Propranolol *(AI98)*
c) Chlorpropamide d)Digoxin

44. All are PRO DRUGS except- *(MAHE 98)*
a) Sulindac b) Codeine
c) Talampicillin d) Chlorpromazine

45. Plasma concentration of drug at time 0 is 96 gml. If tl/2 is 2 hours concentration in plasma at 10 hours will be- *(MAHE98)*
a) 48 b) 24
c) 12 d)3

46. Which of the following shows high first pass me tabolism- *(ROHTAK98)*
a) Propranolol b) Phenobarbitone
c) Phenylbutazone d) Phenytoin

47. Drugs mostly cross biological membranes by-
a) Passive diffusion *(ROHTAK98)*
b) Active diffusion
c) Active transport
d) Carrier mediated transport
e) All of the above

48. Not a prodrug- *(JIPMER99)*
a) Lisinopril b) Enalapril
c) Ramipril d) Famotidine

49. Km value indicates- *(UP2K)*
a) Purity of enzyme
b) Physiological role
c) Half life enzymes drug complex
d) Affinity

50. Time for peak plasma concentration (Tmax) indicates- *(Karnataka 2001)*
a) The rate of elimination
b) The rate of absorption
c) The onset of effect
d) The intensity of effect

51. The following is a prodrug- *(JIPMER 2002)*
a) Lovastatin b) Pravastatin
c) Cetrivastatin d) Fluvastatin

26)c 27)d 28)a,b,c 29)d 30)b,c,d 31)None 32)c 33)b 34)a 35)d 36)d 37)a 38)c 39)d 40)a
41)d 42) c 43) a 44)d 45)d 46)a 47)a 48)a,d 49)c 50)b 51)a

52. Prodrugs are- *(NIMHANS01)*
a) Lisinopril b) Ramipril
c) Enalapril d)Captopril

53. Drugs causing nephrotoxicity - *(PGI02)*
a) Gentamycin b) Cloxacillin
c) Phenacetin . d) Erythromycin

54. Blood brain barrier crossed by- *(PGI 02)*
a) Dopamine b)Propanolol
c) Glycopyrrolate d) Physostigmine
e) Streptomycin

55. Low theraputic range is seen in- *(PGI 02)*
a) Lithium b) Erythromycin
c) Phenytoin d) Propranolol
e) Tricyclic antidepressant

56. In hepatic metabolism phase II reactions are- *(PGI*
a) Dealkylation b) Sulforunation *02)*
c) Methylation d) Glucuronization
e) Deamination

57. High hepatic excretion ratio seen in - *(PGI 02)*
a) Propranolol b)Lidocaine
c) Ampicillin d)Imipramine
e) Theophylline

58. Urine is colored by- *(PGI 02)*
a) Thiamine b)Rifampicin
c) Mepacrine d)INH
e) Riboflavin

59. Cyt-P-450 is inhibited by- *(PGI2000)*
a) Phenobarbitone b)Cimetidine
c) Phenytoin d)CCI_4

60. Displacement of protein bound drug- *(PGI2000)*
a) T Tfree drug plasma level b) T t side effects
c) *i* free levels d) 4 Effect

61. Which is true about Max. distribution -*(PGI2000)*
a) Highly lipophilic b) Blood brain barrier
c) 1 excretion d) *i* receptors

62. Characteristic feature of agonist is-
a) Has affinity only *(PGI 99)*
b) Has affinity as well as intrinsic activity
c) Has intrinsic activity only
d) Neither has affinity nor activity

63. True regarding dose-response curve is - *(PGI 99)*
a) Cannot determine the potency of a drug
b) Log dose response curve is sigmoid shaped
c) Cannot find response to antagonist
d) A wide range of doses can not be plotted

64. The max effect of a drug is defined by its -
a) Therapeutic index b) Potency *(PGI 98)*
c) Efficacy d) Adversity

65. In drug antagonis, 1st event to occur is-
a) Deactivation of receptors *(PGI 98)*
b) Receptor configuration changes
c) A&B
d) None

66. Dosage of drug is determined by following except-
a) Volume of distribution b) Half life *(PGI 97)*
c) Lipid solubility d) Exeretion of drug

67. About acidic drug true is - *(PGI 97)*
a) Best absorbed in acidic medium
b) Best absorbed in alkaline medium
c) Not absorbed in acidic medium
d) Binds to alpha glycoprotein

68. Enzyme cytochrome p450 inhibitors are -
a) Sodium valproate b) INH *(NIMHANS 01)*
c) Rifampicin d)Ethambutol

69. In which one of the following drug overdosages, is haemodialysis useful - **(***UPSC 02)*
a) Digoxin b) Paracetomol
c) Barbiturate d) Diazepam

70. In which of the following phases of clinical trial of drug ethical clearance is not required - *(AI04)*
a) Phase I b) Phase II
c) Phase III d) Phase IV

71. Which of the following is not a prodrug -(*AIIMS 04)*
a) Enalapril b) Oxcarbazepine
c) Chloralhydrate d) Diazepam

72. Half life does not help in estimating - *(SGPGI05)*
a) Margin of safety
b) Time taken to eliminate the drug completely from the body
c) Dosing schedule for drug
d) Cone, of drug in body at a particular time after its administration

73. FB 506 acts by which mechanism - *(SGPGI 05)*
a) Cyclophilin b)Calcinurin
c) TNF-alfa d) Phosphophylin

74. The antagonism of leukotrience by terbutaline is an example of - **(***COMEDK 05)*
a) Pharmacological antagonism
b) Physical antagonism
c) Physiological antagonism
d) Chemical antagonism

75. All are reasons for reducing drug dosage in elderly except- *(MAHE05)*
a) They are lean and their body mass is less
b) Have decreasing renal function with age
c) Have increased baroreceptor sensitivity
d) Body water is decreased

76. Which one of the opioids has maximum plasma protein binding capacity - **(***JIPMER 05)*
a) Morphine b) Sufentanil
c) Fentanyl d) Pethidine

77. Drug distribution is influenced by - (*PGI June 05)*
a) Drug binding b) Drug solubility
c) Degree of blood flow d)Age

7 8. Drugs given by I. V. route - **(***PGI June 05)*
a) Heparin b) Pantoprazole
c) Ranitidine d) Sumitriptan
e) Neomycin

52)b,c 53) a,c 54)b,d 55)a,c,e 56)b,c,d 57)a,b,d 58)b,e 59) b 60) a 61) a 62) b 63) b 64) c 65)d
66) None 67) a 68) b 69) c 70) d 71) d 72) a 73) b 74) c 75) c 76) c 77) All 78)a,b,c

79. CYP-450 inducers are - *(PGI June 05)*
a) Cimetidine b) Ketokonazole
c) Phenobarbitone d)DDT
e) Theophylline

80. Therapeutic index of a drug is an indicator of -
a) Potency b) Safety *(J &K 05)*
c) Action d) Efficacy

81. What would be the maintenance dose for oral administration of a drug every 8 hours if the calculated dosing rate were 20 mg/hr and the bioavailability were 0.5 - *(MAHA 05)*
a) 40 mg b)75mg
c) 110 mg d) 320 mg

82. Side effects of a drug arise due to the interactions of the drug to molecules other than the target These effects of a drug can be minimized by its high- *(AIMS NOV 05)*
a) Specificity b) Affinity
c) Solubility d) Hydrophobicity

*** 83. Which of the following property of drug will enable it to be used in low concentrations -** *(AIMSNO V 05)*
a) High affinity b) High specificity
c) Low specificity d) High stability

84. A highly ionized drug - *(AI05)*
a) Is excreted mainly by the kidney
b) Can cross the placental barrier easily
c) Is well absorbed from the intestine
d) Accumulates in the cellular lipids.

85. When a drug is evaluated for its usefulness in controlled conditions, it is termed as a trial signifying ? *(AI 06)*
a) Efficacy b) Effectiveness
c) Efficiency d) Effect modification

86. Drug transport mechanism include -*(PGI June 06)*
a) Active transport b) Passive transport
c) Lipid solubility

87. IV drug duration of action depends on -*(PGIJune 06)*
a) Protein binding b) Clearance
c) Distribution volume d) Lipid solubility

88. Causes for less bioavailability - *(PGI June 06)*
a) High first pass metabolism
b) Increased absorption
c) IV drug administration
d) High solubility

89. Loading dose depends on the following factors except-
a) Drug concentration to be achieved (*APPG 06)*
b) Volume of distribution
c) Clearance of the drug
d) Bioavailability of drug

90. When two different chemicals act on two different receptors and their responses is opposite to each other on the same cell is called as - *(APPG 2006)*
a) Physiological antagonism
b) Chemical antagonism
c) Reversible antagonism
d) Competitive antagonism

91. Clearance - *(Karnataka - PG MEE 2006)*
a) Refers to the efficacy of elimination of a drug by an organ or whole body
b) Cannot be greater than blood flow to an organ
c) Determinds the steady of the drug concentrations
d) All the above

92. Ligand gated ion channel is - *(PGMCET 07)*
a) GABA-A Receptor
b) GABA-B Receptor
c) VIP Receptor
d) Somatostartin Receptor

93. In case of drug that follows first order elimination
a) The rate of elimination is constant (*Corned 08)*
b) The elimination half life varies with dose
c) The clearance varies with dose
d) The rate of elimination varies directly with dose

94. All of the following have receptors which are transcription factors, except - *(AI 07)*
a) Insulin b) Estrogen
c) Glucocorticoids d) Vitamin D

95. Which of the following is a prodrug - *(AI 07)*
a) Ticlopidine b) Aspirin
c) Clopidogrel d) Dipyridamole

96. All are inhibitors of Cytochrome P-450 enzymes except- *(MAHE 07)*
a) Amiodarone b) Disulfiram
c) Fluoxetine d) Rifampicin

97. Which of the following is excreted in saliva -
a) Tetracyclines b) Ampicilline *(UP 07, 05)*
c) Lithium d) Chloramphenicol

98. The pharmacokinetics to deals with geriatic harmacokinetics to decline the - *(UP 07, 05)*
a) Gastric absorption b) Liver metabolism
c) Renal clearance d) Hypersensitivity

99. Volume of distribution is affected by all except -
a) Binding to plasma protein *(UP 07)*
b) Drug clearance
c) Lipid insolubility
d) Absence of blood brain barrier

100. Therapeutic index is - *(UP 07)*
a) $\frac{ED'_{50}}{LD_{SO}}$ b) $\frac{LD_{50}}{ED_{S0}}$
c) ED_{50}-LD_{S0} d) $ED_{S0^x}LD_{50}$

101. Which drugs not given in hepatic failure -
a) Diazepam *(PGIJune 07)*
b) Theophylline

102. Therapeutic drug monitoring is advised in all except- *(AIMSNov 07)*
a) Metformin b) Phenytoin
c) Tacrolimus d) Cyclosporine

103. Good clinical practice (GCP) seen in all except- *(AIMSNov 07)*
a) Preclinical trials b) Phase I trials
c) Phase II trials d) Phase IV trials

79) c,d 80) b 81) d 82) a 83) a 84) a 85) a 86)a,b,c 87)All 88) a 89) c 90) a 91)d 92) a
93) d 94) a 95)a,c 96) d 97) c 98) c 99) d 100) b 101) b 102) a 103) a

104. Phase II in a clinical drug trial is done to assess -
a) Therapeutic efficacy *(AI08)*
b) Maximal tolerated dose
c) Maximal lethal dose
d) Toxicity

105. Therapeutic index is a measure of a drugs - *(AI 08)*
a) Safety b) Potency
c) Efficacy d) Toxicity

106. ED 50 is a measure of - *(AI 08)*
a) Toxicity b) Safety
c) Potency d) Efficacy

107. All of the following enzymes and their reactions are involved in the metabolism of Xenobiotics, except- *(AI08)*
a) Cytochrome oxidase b) Cytochrome p 450
c) Methylation d) Hydroxylation

108. Which drug is not acetylated ? *(Aiims May 08)*
a) INH b) Dapsone
c) Hydralazine d) Metoclopropamide

109. Which is a prodrug ? *(Aiims May 08)*
a) Enalapril b) Clonidine
c) Salmeterol d) Acetazolamide

110. Free water clearance decreased by *?(Aiims May 08)*
a) Vincristine b) Vinblastine
c) Chlorpropamide d) Furosemide

111. Loading dose depends on - *(AiimsMay 08)*
a) Volume of distribution b) Clearance
c) Rate of administration d) Half life

112. Which is Cyt. P450 inhibitor ? *(Aiims May 08)*
a) Ketoconazole b)Rifampicin
c) Phenytoin d)INH

113. A drug has volume of distribution 13.6 L/Kg which is true - *(PGI June 08)*
a) It is present in plasma & interstitium
b) Confined to extra cellular intravascular space
c) Hemodialysis is effective
d) Substance solubility is more
e) Less protein bound

114. Following are prodrug except - *(PGI June 08)*
a) Enlapril b) Diazepam
c) Lisinopril d) Cyclophosphamide

115. True about first-pass metabolism - *(PGI June 08)*
a) Only seen in orally taking drugs
b) High rectal administration, less first pass metabolism
c) Vomiting affect first pass metabolism
d) Affected by portal and gastrointestinal endothelium
e) Prodrug has low first-pass metabolism

116. All are inhibitors of cytochrome P-450 enzymes except- *(Manipal 08)*
a) Amiodarone b)Disulfiram
c) Fluoxetine d) Rifampicin

117. Idiosyncratic reaction with drugs occurs due to -
a) Antigen-Antibody reaction *(DPGEE 08)*
b) Enzymatic abnormalities of genetic origin
c) Tolerance
d) Supersensitivity of receptors

118. For a drug obeying first order kinetics, 97% of the drug is eliminated after - *(DPGEE 08)*
a) Two half lives b) Five half lives
c) Six half lives d) Seven half lives

119. The ratio of the dose that produces toxicity to the dose that produces a clinically desired or effective response in a population of individual is known as -
a) Efficacy b) Potency *(UP 08)*
c) Therapeutic index d) Partial agonist

120. Which of the following statement (s) is/are true regarding drug transport mechanism -(PGI Dec 08)
a) Facilitated diffusion require energy
b) Facilited diffusion is carrier mediated
c) Active transport is carrier mediated
d) Passive diffusion is same as faciliated diffusion
e) Faciliated diffusion may transport against concentration gradient

121. Regarding absorption of therapeutic dose of drugs which of the following statements are true -
a) Kd means 50% efficacy of the drug *(PGIDec 08)*
b) Kd means 50% saturation of receptors
c) Molecular wt. of most drug should b/w 100 to 1000 dalton
d) All drug are toxic in man
e) All drug act via receptor

122. Compliance of drug increased by - *(PGIDec 08)*
a) T no. of dose
b) T duration of treatment
c) Past history of unpleasant events like Myocardial infarction
d) Less frequent dose
e) Involvement of family member

123. Absorption of drug in gut is decreased by -
a) Food *(PGIDec 08)*
b) Non-ionised state
c) First pass metabolism
d) Small size of particle
e) Increase expression of p-glycoprotein

124. In metabolism of xenobiotics all of the following reactions occur in phase one except?
a) Oxidation b) Reduction *(AIIMS Nov 08)*
c) Conjugation d) Hydrolysis

125. Pharmacovigilance is used for - *(AIIMSMay 09)*
a) To monitor drug toxicity
b) To monitor unauthorized drug manufacture
c) Monitoring of students
d) Check costs

126. MDR gene acts by - *(AIIMSMay 09)*
a) Block drug activation
b) Block intracellular DNA synthesis
c) Cause efflux of drug
d) DNA repair inhibition

104) a 105) a 106)c 107)a 108)d 109)a 110)d lll) a 112)a 113)d,e 114)b,c 115)d,e 116)d 117)b
118) b 119) c 120) b,c 121)b,c,d 122)d,e 123)a,c,e 124)c 125)a 126)c

127. Therapeutic Drug Monitoring (TDM) involves monitoring of plasma concentration of the drug when there is similar relation b/w plasma drug concentration & its effect TDM has widely used to guide therapy with which of the following group of drugs -
a) Antiarryhythmics *(PGIJune09)*
b) Anticoagulants
c) Antihypertensive agents
d) Hypoglycemic agents
e) Anti depresents

128. True about active transport of the drug -
a) Carrier mediated *(PGIJune09)*
b) Requires ATP (energy)
c) Transport drugs along concentration gradient
d) Saturation occurs

129. True about competitive inhibition- *(PGI June 09)*
a) Raise V_{max} & K_m
b) Inhibitors bind to substance binding site on en2yme
c) Example is malonate
d) Inhibitors resemble structurally to the substance

130. True about competitive antagonist - *(PGI June 09)*
a) Maximum rate of reaction can be attained by increasing agonist concentration
b) ED_{50} remain same with or without antagonist
c) Binding site of agonist & antagonist essentially same
d) Reversal of blockade by antagonist can be achieved by higher dose of agonist

131. Combination of ampicillin and gentamicin is an example of - *(Corned09)*
a) Indifference b) Synergy
c) Antagonism d) Bacterial symbiosis

132. Clinically significant drug interaction occurs between pyridoxine and all the following drugs except- *(Manipal09)*
a) Isoniazid b) Cyclosporine
c) Levodopa d) Hydralazine

133. Clinically significant drug interaction occurs between pyridoxine and all the following drugs except- *(Manipal09)*
a) Isoniazid b) Cyclosporine
c) Levodopa d) Hydralazine

134. The time required to achieve maximal concentration (T_{max}) - *(DELHIPG Feb. 09)*
a) Is important for designing multiple dosage regimen
b) Is the time when rate of absorption exceeds rate of elimination
c) Depends on the type of formulation in case of oral medications
d) Is a critical parameter for acute conditions

135. Identify the wrong statement - *(DELHIPG Mar. 09)*
a) Acidic drugs bind to albumin in plasma
b) Basic drugs bind to a_1 acid glycoprotein
c) Drugs having higher affinity can displace the other from the same protein
d) Sex steroid hormones do not bind to any protein in plasma

136. The effect of thiopentone on the CNS is quickly terminated because of - *(DELHIPG Mar. 09)*
a) Rapid metabolism in the CNS
b) Quick first-pass elimination
c) Redistribution
d) Rapid metabolism in systemic circulation

137. Combined phase I & II trial done *fox*-*(PGINov 09)***
a) Antihypertensive agent
b) Anticancer drugs
c) Immunosuppresant
d) Antiarrhythmatic agents
e) Antiparkinsonism drugs

138. Volume of distribution depends on - *(PGI Nov 09)*
a) Protein binding b) Lipid solubility
c) Glomerular secretion d) Tissue affinity
e) pKa

139. Which of the following is a metabolite of prodrug Carisoprodol - *(AIIMS Nov 09)*
a) Amphetamine b) Meprobamate
c) Doxylamine d) Dimethadione

140. In India all drugs are given under supervised regimen except ? *(AIIMS Nov 09)*
a) Dapsone b) Clofazimine
c) Pyrazinamide d)Rifampicin

141. Which of the following is not a prodrug?
a) Quinapril b)Fosinopril *(AIIMS Nov 09)*
c) Benzopril d) Lisinopril

142. Pharmacovigilance is done for monitoring -*(AIIMS*
a) Drug price b) Unethical practices *May 10)*
c) Drug safety d) Pharmacology students

143. Narrow therapeutic index is seen with - *(AI10)*
a) Desipramine b) Lithium
c) Penicillin d) Diazepam

144. Following drugs show change from first order to zero order kinetics except - *(Maharashtra 10)*
a) Phenytoin b)Ampicilin
c) Tolbutamide d) Theophyline

145. True about Transferable drug resistance is following except- *(Maharashtra 10)*
a) Degree of resistance is high
b) Simultaneous resistance to multiple drugs occurs
c) Combination of drugs can prevent it
d) High drug-dosage is ineffective

146. Which of the following is a prodrug- *(Punjab 10)*
a) Vanciclovir b) Lisinopril
c) Carbamazepine d) Phenobarbitone

147. What is the drug does to body - *(Punjab 10)*
a) Pharmacodynamics
b) Pharmacokinetics
c) Adverse drug reaction
d) Idiosyncratic reaction

148. All the following drugs inhibit Cytochrome P-450 except- *(Jipmer 10)*
a) Alcohol
b) Cyclophosphamide
c) Isoniazid
d) Disulfiram

127) a,e 128)a,b,d 129)b,c,d 130)a,c,d 131)b 132) b 133) b 134)c 135) d 136) c 137)b 138)a,b,d,e
139) b 140) a 141) d 142) c 143) b 144) b 145) c 146) c 147) a 148) b

149. One of the following drug can be given IV, IM, SC epidural and oral route - *(Jipmer 10)*
a) Ketamine b) Propofol
c) Diazepam d) Nitrous oxide

150. A160 mg dose of a drug was administered i.v, and 80 mg was eliminated during the first 120 minutes. If the drug follows first order elimination kinetics how much of the drug will remain 6 hours after its administration? *(Corned 10)*
a) None b)20mg
c) 10 mg d)40mg

151. The stomach motility is inhibited by - *(Corned 10)*
a) Histamine b) Angiotensin
c) Acetylcholine d) Dopamine

152. Following are durgs except - *(PGIMay 10)*
a) Nutrients
b) Blood component
c) Essential dietary ingredient
d) Poison

153. True statement regarding Bioassay - *(PGIMay 10)*
a) Done to know activity of endogenous substance
b) To know toxicity & efficacy of drug

ADVERSE DRUG EFFECT

154. Pseudo lymphoma is manifestation of -*(JIPMER 95)*
a) Phenytoin b) Carabamazepine
c) Sodium valporate d) Pheno barbital

155. Which of the following drug can cause dyspnoea in children - *(PGI 79, AIIMS 79, 82)*
a) Paracetamol b)Salicylates
c) Ampicillin d)Propranolol

156. Dysguesia is seen with the use of- *(AIIMS92)*
a) Co-trimoxazole b)Clotrimazol
c) Ciprofloxacin d)Captopril

157. Which of the following drugs cause diarrhoea -
a) Morphine *(UPSC 85, 87, Kerala 88)*
b) Atropine
c) Magnesium sulphate
d) Guanethidine

158. Which drug causes bone marrow depression -
a) Sulfonylurea b) Lithium *(PGI 86)*
c) Testesterone d) Chlorambucil

159. Photodermatitis and corneal microdeposits are side effects of- *(JIPMER 80, AIIMS 81)*
a) Verapamil b) Procainamide
c) Flecainide d)Amiodarone

160. Transient deafness is most commonly associated with - *(PGI 79, AIIMS 80)*
a) Lasix b) Ethacrynic acid
c) Bumetanide d) Spironolactone

161. Peripheral neuropathy is caused due to -*(AIIMS 97)*
a) Bleomycin b) Busulphan
c) Cisplatin d)Cyclophosphamide

162. Acanthosis nigricans is caused by wihch drug- *(PGI 2K)*
a) Amphotericin - B b) Ketoconazole
c) Nicotinic acid d) Nalidixic acid

163. Pigmentary retinopathy is a side effect of- *(PGI 79, AIIMS 84)*
a) Chlorpromazine b) Thioridazine
c) Trifluoperazine d) Fluphenazine

164. Inj ection of which is followed by p *ain-(Burwan 2K)*
a) Succinyl choline b) Neostigmine
c) Curare d) Morphine

165. The following causes severe hypotension -
a) Sod. Nitroprusside b) Ether *(PGI 89)*
c) Halothane d) Cyclopropane

166. Liver cell necrosis can occur due to - *(Kerala 90)*
a) Digoxin b) Gallamine
c) Halothane d) Ether

167. Drug causing obstructive jaundice is - *(AI88)*
a) Chloropromazine b) Carbon tetrachloride
c) Tetracycline d) Methyl dopa

168. The effects of hypoglycemia is marked by- *(TN 90)*
a) Warfarin
b) Beta blockers
c) Calcium channel blockers
d) Aminoglycosides

169. Which of the following drugs causes post anaesthetic muscle stiffness - *(AI91)*
a) Fentanyl b) Pyridostigmine
c) Suxamethonium d) Gallamine

170. Nystagmus can be caused by- *(AJ.89)*
a) Phenytonin b)Quinidine
c) Lignocaine d) Chlorpromazine

171. Osteomalacia can be caused by- *(AJ.89)*
a) Phecytonin b)Quinindin
c) Chloroquine d)All

172. Which of the following drugs cause retroperitoneal fibrosis - *(AIIMS 85)*
a) Methysergide b) Cyclosporine
c) Melphalan d) Vincristine

173. Drug fever is associated with all except - *(AP 88)*
a) INH b) Dapsone
c) Chloramphenicol d) Streptomycin

174. Hypothyroidism can be caused by- *(PGI 88)*
a) PAS b) Resorsinol
c) Amiaodarone d) Cimetidine

175. Drug causing pancreatitis- *(PGI 88)*
a) Steroids b) Vincristine
c) Diuretics d)INH

176. One of the following in high doses can cause convulsions - *(AI90)*
a) Penicillin b) Sulfonamides
c) Aminoglycosides d) Erythromycin

177. Psychosis can be caused by- *(JIPMER 91)*
a) Steroids b)INH
c) Chloroquine d) All of above

149) c 150) b 151) d 152)a,b,c 153)a,b 154)a 155)b 156)d 157)c 158)a,d 159)d 160)b 161)c 162)c 163) b 164) a 165)a,c 166)c 167)a 168)b 169)a 170)a 171)a 172)a 173)None 174)a,c 175)a,c 176) a 177) a

178. Hemolysis in G-6-P- deficiency is precipitated by all except- *(PGI80,88, AIMS 93)*
a) Dapsone b) Cotrimoxazole
c) Quinine d) Penicillin

179. Cough is an adverse reaction seen with intake of -
a) Thiazide b) Nifedipine*(PGI 93)*
c) Enalapril d) Prazosin

180. Chronic ulceration would most likely occur following administration of- *(DNB 91)*
a) Carbenicillin b) Clindamycin
c) Cholramphenicol d)ColistinB

181. One of the following is not a side effect of captopril -
a) Cough b) Renal dysfunction *(AI95)*
c) Hyperkalaemia d) Hemolytic anaemia

182. Which drug causes osteporosis on long terms use-
a) Estrogen b) Progesterone *(AI 95)*
c) GnRH analogues d) Warfarin

183. The intake of which of the following is associated with an increase in weight- *(CUPG.EE 95)*
a) Chlorpromazine b) Methyl dopa
c) OCP d) Thyroxine

184. Urine is coloured due the intake of - *(CUPGEE 96)*
a) Phenindione b) Phenobarbitione
c) Phenytoin d) Quinine

185. Which of the following causes delirium? *(CUPGEE*
a) Cocaine b) Amphetamine *96)*
c) L-Dopa d)All

186. Paralytic ileus is caused by- *(KERALA 97)*
a) Vincristine b) Cisplatinum
c) Cyclophosphamide d) Melphalan

187. The following has maximum propensity for photo dermatitis- *(JIPMER 98)*
a) Oxytetracycline b) Doxycycline
c) Minocycline d) (3_2 agonist

188. Which is an Ototoxic drug- *(MP 98)*
a) Tetracycline b) Vincristine
c) Penicillin d) Sulphonamide

189. Gout is precipitated by all except- *(MP 98)*
a) Furosemide b) Pyrizinamide
c) Thiazides d) Sulfinpyrazone

190. All cause hyperprolactinemia except - *(MAHE 98)*
a) Metoclopromide b) Haloperidol
c) Trifluoperazine d) Lasix

191. Which of following causes retinal pigmentation as a side effect- *(KERALA 98)*
a) Adriamycin b) Bleomycin
c) Tamoxifen d) Stilbesterol

192. Pleural fibrosis caused by- *(PGI 02)*
a) Phenytoin b) Methysergide
c) Amiodarone d) Ergotamine
e) Ranitidine

193. Which drug is implicated in the causation of nephrotic syndrome - *(PGI 01)*
a) Gold b) Amphoterecin B
c) Rifampicin d) Ibuprofen
e) Captopril

194. Drugs which cause pericarditis is - *(PGI 01)*
a) Hydralazine b) Procainamide
c) Bretylium d) Methysergide
e) Amiodarone

195. Drugs causing constipation are- *(PGI 01)*
a) Verapamil b) Quinidine
c) MAO-Inhibitor d) Tricylic antidepressants
e) Ferrous sulphate

196. Drugs producing ANA- *(PGI2000)*
a) Phenytoin b) Penicillin
c) INH d) Procainamide

197. At pharmacological doses unwanted unavoidable effects are called - *(PGI 99)*
a) Side effects b) Idiosynchrotic reaction
c) Toxicity d) Pharmacogenetics

198. Galactorrhea is caused by all except- *(Orissa 2K)*
a) Metoclopromide b) Digitalis
c) Reserpine d) Methyl Dopa

199. The following drug is used for osteoporosis -
a) Ranitidine b) Raloxifen *(JIPMER 02)*
c) Remipril d)Riclopride

200. Peripheral neuropathy may occur with the use of all the following except - *(AIMS 03)*
a) Vincristine b) Cisplatin
c) L-Asparginase d) Procarbazine

201. Hypokalemia can be caused by - *(PGI 04)*
a) Spironolactone b) ACE inhibitor
c) AmphotercinB d) Chlorthalidone
e) Rifampcin

202. Drugs causing pulmonary fibrosis - *(PGI 04)*
a) Bleomycin b) Buspirone
c) Cyclophosphamide d) Nitrofurantoin

203. Which of the following does not cause hyperglycemia - *(Kerala 04)*
a) Pentamidine b) Thiazide
c) Diazoxide d) Quinine

204. Which of the following does not cause convulsions -
a) Lignocaine b) Phenothiazines *(APPGE 04)*
c) Lamotrigine d) Penicillin

205. Neutrophilia is seen in - *(APPGE 04)*
a) Steroids b) Lithium
c) Both d) None

206. The following drugs can cause SLE like syndrome except- *(COMEDK05)*
a) Isoniazid b) Gatifloxacin
c) Hydralazine d) Procainamide

207. Megaloblastic anaemia may be caused by the following except - *(UPSC 05)*
a) Phenytoin b) Amoxycillin
c) Methotrexate d) Pyrimethamine

208. Drugs causing SLE - *(PGI June 05)*
a) INH b) Hydralazine
c) Procainamide d) Ranitidine
e) Methyldopa

178) d 179) c 180)b 181)d 182)c 183)c 184)a 185)d 186)a 187)b 188)a 189)d 190)d 191)c 192)b,c 193)a,d,e 194)a,b,d 195)a,d,e 196)a,c,d 197)a 198)b 199)b 200)c 201)c 202)a,c,d 203)d 204)c 205) c 206) b 207) b 208)a,b,c,e

209. Drugs causing osteoporosis - *(PGIJuneOS)*
a) VitK b) Lithium
c) Dilantin d) Heparin
e) Etidronate

210. Fanconi's syndrome is caused by - *(J&K 05, JIPMER91)*
a) Cephalosporins
b) Chloramphenicol
c) Decreased cholinesterase
d) Old adn degraded tetracyclines

211. Oculogyric crisis is known to be produced by all of the following drugs except - *(AI 05)*
a) Trifluoperazine b) Atropine
c) Perchlorperazine d) Perphenazine

212. Megaloblastic anemia is side effect of all the drug except- *(APPGE05)*
a) Acyclovir b) Lamivudine
c) Methotrexate d) Flurocytosine

213. The drugs that does not cause Raynaud's phenomenon - *(APPGE 05)*
a) Vincristine b) Bleomycin
c) Vinblastine d) Cisplatin

214. Which of the following drugs is known to cause granuloma in the liver - *(AIIMS NO V 05)*
a) Allopurinol b) Nifedipine
c) Tetracycline d) Methyl testosterone

215. All the following drugs may cause hyperkalemia except - *(AIIMS NO V 05)*
a) Cyclosporine b) Amphotericin B
c) Heparin d) NS AIDs

216. Which one of the following drugs increases gastrointestinal motility - *(AI 05)*
a) Glycopyrolate b) Atropine
c) Neostignime d) Fentanyl

217. Which one of the following drugs causes constipation ? *(AI06)*
a) Propranolol b) Verapamil
c) Nitroglycerin d) Captopril

218. Drugs causing Addison's disease ar*e-(PGI June 06)*
a) Ketoconazole b) Aminoglutethimide
c) Cyclosporine d) Glucocorticoids

219. When causes least "gain in weight" ? *(NIMHANS 06)*
a) Olanzapine b) Risperidone
c) Quetiapine d) Ziprasidone

220. Antimicrobial that produces haemolysis in G7PH deficient patient - *(Corned 07)*
a) Ciprofloxacin b) Nitrofurontoin
c) Norfloxacin d) Mandelamine

221. The following drug has maximum propensity to cause peripheral neuropathy - *(AI07)*
a) Didanosine b) Zidovudine
c) Stavudine d) Lamivudine

222. Gynaecomastia is caused by - *(Aiims May 07)*
a) Clomiphene citrate b) Tamoxifen
c) Spironolactone d) Testosterone

223. Impotence is most commonly caused by which antihypertensive agent - *(A iims May 07)*
a) Calcium channel blocker b) ACE inhibitors
c) AT_1 receptor antagonist d) P blockers

224. Bone marrow aplasia is seen with all except -
a) Methicillin *(Aiims May 07)*
b) Chloramphenicol
c) Alpha methyl hydantoin
d) Phenylbutazone

225. Hypertension is seen with all except -*(Aiims May 07)*
a) Erythropoietin b) Cyclosporine
c) NS AID d) Levodopa

226. No - cause of Hepatitis is - *(UP 07)*
a) Nitrous oxide (N_20) b) Diethyl ether
c) Halothane d) Pyrizinamide

227. Which of the following drug deposited in the retina is - *(UP07)*
a) Isoniazid b)Chloroquine
c) Rifampicin d)Pyrizinamide

228. Which of the following drugs deposited in the muscles - *(UP07)*
a) Verapamil b)Digoxin
c) Adenosine d) Phenytoin

229. Which teratogen causes deafness ? *(Aiims May 08)*
a) Isotretinoin b)Chloroquine
c) Alcohol d) Warfarin

230. Cerebellar toxicity is seen with - (AIIMS May 09)
a) Cisplatin b) Cytarabine
c) Bleomycin d) ActinomycinD

231. Drug causing peptic ulcer are all except -
a) m b) Diclofenac *(PGINov 09)*
c) Cyclosporine d) Clopidegrel
e) Mycophenolate

232. One of the following caused nephrotoxicity -
a) Azathioprine *(AIIMS Nov 09)*
b) Cyclophosphamide
c) Mycophenolate mofetil
d) Tacrolimus

233. Oligospermia caused by - (AIIMS May 10)
a) Methotrexate b) Hydroxychloroquine
c) Leflunomide d) D-peniollamine

234. Which one of the following drugs cause hypomagnesemia by increased excretion? *(AIIMS*
a) Frusemide therapy b) Cisplatin *May 10)*
c) Digitalis d) Aminoglycosides

235. Which of the following teratogenic effects in incorrectly matched - *(AI10)*
a) Phenytoin - Cleft lip / palate
b) Zidovudine - Skull defects
c) Valproate - Neural tube defects
d) Warfarin - Nasal bone dysplasia

236. All of the following drugs may cause Hirsuitism, except- *(AI 10)*
a) Danazol b) Phenytoin
c) Norethisterone d) Flutamide

209)b,c,d 210)d 211)b 212)d 213)a,c 214)a 215)b 216)c 217)b 218)a,b 219)d 220)b 221)c 222)c
223) d 224) a 225) d 226) a,b 227) b 228) b 229) a 230) b 231)c 232) d 233) a 234) a 235) b 236) d

237. Pancreatitis occurs with - *(AI10)*
a) Abacavir b) Zidovudine
c) Lamivudine d) Didanosine

238. Pseudolymphoma is manifestation of - *(DPG10)*
a) Phenytoin b)Carbamazepine
c) Sodium valproate d) Phenobarbital

239. All the following anti viral drugs cause dyslipidemia except- *(Jipmer10)*
a) Saquinavir b)Lipinavir
c) Atazanavir d) Amprenavir

240. Conversion of acetaldehyde to acetate is inhibited by- *(Jipmer10)*
a) Ciprofloxacin b)Carbamazepine
c) Disulfiram d) Cefoperazone

241. Neutropenia is seen in all except - *(Jipmer10)*
a) Scurvy
b) Aplastic anemia
c) Typhoid fever
d) Chloramphenicol therapy

242. Discoloration of teeth in an infant is due to -
a) Phenytoin b) Porphyria *(Jipmer 10)*
c) Barbiturated) Tetracycline

243. Drugs that do not increase QT interval -
a) Amiodarone b) Quinldine *(PGINov.10)*
c) Digitalis d) Amitryptyline
e) Procainamide

244. Erythropoitin leads to - *(PGINov. 10)*
a) Hypertension b)Thrombocytopenia
c) Reticulocytosis d) Flu-like symptoms
e) Hypokalemia

245. Hemorrhagic cystitis is caused by - *(AIIMSNov 10)*
a) Busulphan b) Cisplatin
c) Cyclophosphamide d) Doxorubicin

246. A child has phocomelia. This is due to drug taken by mother - *(AIIMS Nov 10)*
a) Tetracyclineb) Thalidomide
c) Warfarin d) Chloroquine

247. Which of the following doesn't worsen angina -
a) Sumatriptan b)Oxyfedrine *(AIIMS May 11)*
c) Dipyridamole d) Thyroxine

248. Which does not causes megaloblastic anemia -
a) Phenytoin b) Chloroquine *(AIIMSMay 11)*
c) Sulfasalazine d) Alcohol

249. Which of the following is not a side effect of naloxone- *(AIIMS May 11)*
a) Seizure
b) Hypertension
c) Pulmonary edema
d) Ventricular dysrrthymia

250. All of the following are known adverse effects of thalidomide, except - *(AI 11)*
a) Diarrhea b) Teratogenicity
c) DVT d) Peripheral Neuropathy

251. Hyperprolactinemia is not caused by -*(PUNJAB 11)*
a) Metoclopramide b) Apomorphine
c) Chlorpromazine d) Methyldopa

252. Thrombocytopenia is not caused by - *(PUNJAB 11)*
a) Aspirin b) Acyclovir
c) Ampicillin d) Amiodarone

253. The following drugs can cause Acute Interstitial Nephritis except - *(UPSC111)*
a) NSAIDs (Non Steroidal Anti-Inflammatory Drugs)
b) Prednisolone
c) Allopurinol
d) Penicillamine

A.N.S.

CHOLINERGIC SYSTEM

254. All of the following do not cross the blood brain barrier except - *(AIIMS 79)*
a) Pyridostigmine b) Neostigmine
c) Physostigmine d) Ambenonium

255. A patient complains of muscle weakness. On administration of neostigmine, it diasppears. What is its mechanism of action is - *(AP 89)*
a) It blocks action of acetycholine
b) It interferes with the action of amine oxidase
c) It interferes with the action of carbonic anhydrase
d) It interferes with the action of acetylcholine esterase

256. Vagal stimulation following intake of food does not affect secretion of - *(JIPMER 93)*
a) Stomach b) Pancreas
c) Parotid d) Gall bladder

257. Vigal stimulation can cause all except - *(AI91)*
a) Delayed A-V conduction
b) Increased ventricular contraction
c) Increased atrial contraction
d) Decreased heart rate

258. Parasympathetic stimulation would decrease the following except - *(JIPMER 81, Kerala 88)*
a) SA node rhythmicityb) Heart rate
c) A. V. conduction time d) Atrial contractility

259. In carbamate poisoning all the following should be administered except - *(AP 91)*
a) Atropine b) Artificial respiration
c) Gastric lavage d) Oximes

260. Pin point pupil is seen with..... administration -
a) Organophosphorus poisoning *(PGI88)*
b) Atropine
c) Cocaine
d) Morphine

261. Drugs which does not crosss blood brain barrier-
a) Neostigmine b) Physostigmine *(PGI88)*
c) Atropine d) Hyoscoine

262. Anticholinesterase are used in the diagnosis of -
a) Poliomyelitis *(AIIMS 85)*
b) Polymyositis
c) Myasthenia gravis
d) GullainBarre Syndrome

237) d 238) a 239) c 240) c 241) a 242) d 243) c 244)a,c,d 245) c 246) b 247) b 248) b 249) a 250) a 251)b 252)None 253)b 254)c 255)d 256)d 257)b,c 258)c 259)d 260)a,d 261)a 262)c

263. The Effect of D-tubocurarine can be antagonised by- *(AI91)*
a) Atropine b) Neostigmine
c) Edrophonium d) Gallamine

264. Therapeutic use of acetyl choline is not possible because it is- *(Jipmer 92)*
a) Highly protein bound b) Rapidly degraded
c) Repidly excreted d) Orally ineffective

265. Pralidoxime is not useful in poisining with-
a) Eldrin b) DFP *(AIMS 92)*
c) Malathion d) Parathion

266. Which of the following in not a contraindication for cholinomimetic drugs - *(Kerala 89)*
a) Post operative urinary retention
b) Bronchial constriction
c) Coronary insufficiency
d) Peptic ulcer

267. Neostigmine can be used in all except - *(AIMS 92)*
a) Myaesthenia gravis
b) Curare poisoning
c) Cholinergic crisis
d) Supraventricular tachycardia

268. Acetylcholine acts as a postganglionic sympathetomimetic at- *(JIPMER 80)*
a) Mammary glands b) Penis
c) Sweat glands d) Lacrimal glands

269. Which of the following is true of the use of pilo carpine - *(DELHI 8 7)*
a) Congenital glaucoma
b) Chronic simple glaucoma
c) Absolute glaucoma
d) Secondary glaucoma

270. Antidote for organophosphorous poisoning is - *(Kerala 95)*
a) Atropine b) Neostigmine
c) Succinylcholine d) D-Tubocurarine

271. The sub-type of Cardiac Muscarinic receptor is predominantly- *(Karn 95)*
a) Ml b) M3
c) M2 d)Ml &M3

272. Maximum Nicotinic effect is seen with- *(AIMS 96,*
a) Pilocarpine b) Carbachol *PGI97)*
c) Bethanechol d) Methacholine

273. Nicotinic receptors are seen in- *(NIMS 96)*
a) Skeletal muscle b) Visceral smooth muscle
c) Cardiac muscle d) Salivary glands

274. Neostigmine does not cross blood brain barriers due to its- *(M.P 98)*
a) Secondary structure b) Tertiary structure
c) Quaternary structure d) Primary structure

275. Baclofen is given in - *{CUPGEE 2001*)
a) Cerebral palsy b) Infective polyneuritis
c) C-J disease d) Cerebral tumours

276. Neostigmine- *{PGI02)*
a) It is a quartamary amounium compound
b) Metabolised in liver
c) It can cross the blood brain barrier
d) Prominent effect on smooth muscles

277. Atropine-mechanism of action in poisoning-
a) Reactivation of choline-esterase *(PGI 2000)*
b) Acts on central and peripheral post, ganglionic receptors
c) Acts on central and peripheral cholinergic receptors
d) Acts on peripheral cholinergic receptors only

278. Ganglion blockers act by- *(PGI 99, 96)*
a) Inhibition of release of acetyl choline
b) Competing for acetyl choline receptor
c) Preventing conduction from pre post ganglionic
d) Inhibiton of Ach destruction

279. Shortest acting anticholinesterase is - *(TN04)*
a) Edrophonium b)Pyridostigmine
c) Glycopyrolate d) Neostigmine

280. Timolol is preferred in Glaucoma over Pilocarpine, because - *(J&K 05)*
a) It is most effective than Pilocarine
b) Enhances Uveo-sacral outflow
c) Produces less ocular side effects
d) It has no contraindications

281. Neostigmine is useful for - *(PGMCET 07)*
a) Cobra b) Krait
c) Both (1) and (2) d) Viper

282. Cholinesterase reactivators are used in -
a) OPC poisoning *(PGMCET 07)*
b) Mushroom poisoning
c) d-tubocurare poisoning
d) All of the above

283. Sarin, war gas is a - *(PGMCET 07)*
a) Organophosphorus poisoning
b) Organochlorous poisoning
c) Caustic
d) Phosnides

284. Most poisonous mushroom is - *(PGMCET07)*
a) Amanita phylloides
b) Amanita muscarica
c) Amanita pantherina
d) Hebeloma crustuliniforme

285. The features of organophosphorus poisoning include the following except - *(UPSC 07)*
a) Fasciculations b) Pulmonary oedema
c) Epileptic seizures d) Mydriasis

286. Short acting mydriatic used in fundoscopy is -
a) Atropine *(UP 07, 06)*
b) Homatropine
c) Cyclopentolate
d) Tropicamide

---

263) b,c 264) b 265) a 266) a,c 267) c,d 268) c 269) b 270) a 271) c 272) b 273) a 274) c 275) a 276) a
277) c 278) a,b,c 279) a 280) c 281) a 282) a 283) a 284) a 285) d 286) d

287. In a child with organo-phosphorns poisoning, which one of the following is the correct order of priority in management ? *(UPSC-108)*
a) Pralidoxime, diazepam, atropine, clear airway
b) Clear airway, atropine, diazepam, pralidoxime
c) Diazepam, atropine, clear airway, pralidoxime
d) Atropine, pralidoxime, diazepam, clear airway

288. Mechanism of action of pralidoxime is - *(AI08)*
a) Direct activation of cholinergic receptors
b) Reactivation of cholinesterase
c) Inactivation of cholinesterase
d) Inhibition of acetyl choline

289. D-tubocurarine acts by - *(DELHI PG Mar. 09)*
a) Inhibiting nicotinic receptors at myoneural junction
b) Inhibiting nicotinic receptors at autonomic ganglion
c) Producing depolarizing block
d) By inhibiting reuptake of acetylcholine

290. A patient complains of muscle weakness. On administration of neostigmine, it disappears. What is its mechanism of action? *(DPG10)*
a) It blocks action of acetylcholine
b) It interferes with the action of amine oxidase
c) It interferes with the action of carbonic anhydrase
d) It interferes with the action of acetylcholine esterase

291. The enzyme pseudocholinesterase acts on -
a) Decamethonium b) Tubocurarlne *(DPG 10)*
c) Gallamine d) Suxamethonium

292. Pralidoxime is ineffective or fails against treatment of carbamate poisoning because - *(Maharashtra 10)*
a) Esteric site of acetylcholine esterase is blocked
b) Anionic site of acetylcholine esterase is not free
c) It cannot break the molecule of carbamate
d) None of the above

293. All of the following are actions of muscarinic antagonists, except - *(AI 11)*
a) Decrease gastric secretions
b) Decrease Respiratory secretions
c) Contract radial muscles of iris
d) Fascilitates AV conduction

ANTI CHOLINERGIC

294. Atropine should never be started when the patient is cyanosed due to the danger of-*(PGI79, Orissa 91)*
a) Cerebral edema b) Respiratory arrest
c) Ventricular fibrillation d) None of the above

295. Antidote for muscarine posoning is - *(JIPMER 80, DNB 91)*
a) Sodium benzoate b) Thiocyanate
c) Atropine d)BAL

296. Which is the shortest acting mydriatic- *(ARMS92,*
a) Atropine b)Tropicamide *UP 04)*
c) Cyclopentaolate d) Homatropine

297. Pralidoxime acts in organopho sphorus poisoning by- *(PGI 89, AI 97)*
a) Regenerating Cholinesterase
b) Inhibiting cholinesterase
c) Cholinergic action
d) None of the above

298. Atropine is contraindicated in -*(AIIMS 80, 81, 86)*
a) Scleritis b) Corneal ulcer
c) Galucoma d) Infants

299. Hyoscine differs from atropine in that hyoscine does not cause- *(AI 90)*
a) Mydriasis b) Drowsiness
c) Dryness of mouth d) Tachycardia

300. Hexamethonium is a- *(Jipmer 91)*
a) Parasympathetic blocker b) Sympathetic blocker
c) Nicotinic blocker d) All of the above

301. Botulin acts by- *(ARMS 80, 91)*
a) Secretion of Ach b) Synthesis of Ach
c) Inhibits Ach release d) Muscle nerve block

302. One of the following is not a side effect of atropine-
a) Blurring of vision *(All India 96)*
b) Diarrhoea
c) Urinary retention
d) Confusion of elderly

303. Which of the following anticholinergic is claimed to act selectively on bronchial muscle- *(Karn 95)*
a) Isopropamide b) Ipratropium
c) Benztropine d) Pirenzepine

304. Atropine does not inhibit which secretion -
a) Tear b) Saliva *(CUPGEE96)*
c) GI. Secretion d) Bile

305. The following anti cholinergic drug has comparitively specific action on gastric secretion & is useful in peptic ulcer- *(AI 97, 89)*
a) Atropine b) Pirenzipine
c) Oxyphenonium bromide d) Dicyclomine

306. Physostigmine can reverse the effect of all except- *(MAHE98)*
a) Amitryptiline b) Edrophonium
c) dTC d)Organopho

307. Atropine causes - *(PGI01)*
a) Decreased cardiac output b) Heart block
c) Hypertension d) Miosis
e) Sweating

308. All are true of atropine except - *(PGI98)*
a) TBP b)THR
c) IBP d)Rubor

309. Amatoxins in mushroom poisoning acts by inhibiting- *(PGI98)*
a) DNA b)mRNA
c) Adenosine d)G-proteins

310. Ipratropium bromide is contraindicated in - *(AI08)*
a) Asthma b) Urinary retention
c) Hypertension d) Peptic ulcer

287) b 288) b 289)a 290)d 291)d 292)b 293)c 294)b 295)c 296)b 297)a 298)c 299)d 300)c
301)c 302)b 303)b 304)d 305)b 306)b,c,d 307)None 308)a,c 309)b 310)b

311. Tiotropium is used for - *(AI08)*
a) Treating urinary retention
b) Treating ileus
c) Increasing salivation
d) Treating asthma

312. All of the following drugs may be used to relieve urinary spasms after urological procedures Except-
a) Darifenacin b) Oxybutynin *(AI 08)*
c) Tolterodine d) Tiotropium

313. Which of the following drugs is shortest acting mydriatic and cycloplegic - *(DPGEE 08)*
a) Scopolamine b) Homotropine
c) Cyclopentolate d) Tropicamide

314. Botulinum toxin blocks neuromuscular transmission by which of the following mechanism-
a) Closure of Ca^{++} channels at the presynaptic membrane *(DELHIPG Feb. 09)*
b) Closure of $Na^{4\wedge}$ channels at the postsynaptic membrane
c) Opening of K^{++} channels at the presynaptic membrane
d) Opening of Ca" channels at the postsynaptic membrane

315. Which is the shortest acting mydriatic? *(DPG10)*
a) Atropine b) Tropicamide
c) Cyclopentolate d) Homatropine

316. Anticholinergic drug used in Alzheimer's disease -
a) Memantine b) Neostigmine *(Jipmer10)*
c) Physostigmine d) Rivastigmine

317. Which of the following side-effects is UNLIKELY with glycopyrrolate? *(Corned 10)*
a) Tachycardia
b) Inhibition of salivation
c) Suppression of gastric secretion
d) Central anticholinergic syndrome

318. Atropine is drug of choice in - *(PUNJAB 11)*
a) Angle closure glucoma
b) Cataract
c) Acute iridocyclitis

ADRENERGIC SYSTEM

319. Preganglionic Parasympathetic fibres are not carried by which cranial nerve - *(CUP GEE 99)*
a) m b)V
c)vn d)x

320. Vessels not under sympathetic control are- *(PGI79, Delhi 93)*
a) Cerebral b) Splanchnic
c) Cardiac d) Cutaneous

321. Tachycardia in hypertension is caused by stimulation of - *(JIPMER 91)*
a) $Alpha_1$ receptor b) $Alpha_2$ receptor
c) $Beta_t$ receptor d) $Beta_2$ receptor

322. Heart is most sensitive to - *(AIIMS 91)*
a) Norepinephrine b)Epinephrine
c) Metanephrine d)Ephedrine

323. Adrenaline increases all of the following in heart except- *(AI97)*
a) Automaticity b) Conduction velocity
c) Refractory period d) Contractility

324. The molar ratio of catecholamines to ATP is -
a) 1:1 b)2:l
c) 4:1 d) 8:1
e) 9:1

325. Immediate treatment of anaphylaxis is - *(A197)*
a) Hydrocortisone b) Atropine
c) Adrenaline d) Benzyl penicillin

326. Latanoprost acts by - *(AIIMS 98)*
a) Decreased aqueous production
b) Expanding trabecular meshwork
c) Increased uveoscleral outflow
d) None

327. Adrenaline is used in - *(PGI 88)*
a) Bronchial asthma
b) Cardiac asthma
c) Cardiac arrest
d) Hypersensitivity reactions

328. Which is not an inotropic agent - *(AI 95)*
a) Amrinone b) Amiodarone
c) Isoprenaline d) Dopamine

329. Which drug increases renal perfusion -
a) Adrenaline *(NIMHANS 88, JIPMER 98)*
b) Nor adrenaline
c) Dopamine
d) Isoprenaline

330. Which of the following drugs sensitises the C.V.S. to catecholamines - *(A II India 93)*
a) Corticosteroids b) Insulin
c) Growth hormone d) Testosterone

331. Drug which exerts an inotrophic action, produces peripheral vasodilatation and decrease capillary pulmonary resistance - *(AIIMS 84)*
a) Levarterenol b) Epinephrine
c) Phenoxybenzamine d) Aramine

332. All the following drug act at the dopaminergic receptors exept - *(Jipmer 80, AIIMS 84)*
a) Dopamine b) Domperidone
c) Metoclopramide d)Dobutamine

333. The vasodilator effect of isoproterenol can be abolished by - *(Jipmer 81, AIIMS 87)*
a) Pheyoxy benzamine b) Propranolol
c) Chlorpromazine d) Hydralazine

334. The following are indirectly acting sympathomimetic agent except- *(AIIMS 84)*
a) Amphetamine b)Tyramine
c) Ephedrine d) Dopamine

335. Decrease in vascular resistance of mesentric and renalvasculature is caused by - *(AI 90)*
a) Dopamine b)Dobutamine
c) Ephedrine d) Nordrenaline

311) d 312) d 313) d 314)a 315)b 316)d 317)d 318)c 319)b 320)a 321)c 322)b 323)c 324)c
325) c 326) c 327) c,d 328) b 329) c 330) a 331)b 332) d 333) b 334) c,d 335) a

336. Phenylephrine is useful for all of the following except- *(AI91)*
a) Anaphylactic shock b) Mydriasis
c) Nasal decongestant d) Atrial tachycardia

337. Dales vasomotor reversal phenomenon occurs with - *(AI 91)*
a) Dopamine b) Adrenaline
c) Nor Adrenaline d) All of the above

338. Dopamine is preferred in treatment of shock be cause- *(AI92, AIIMS91)*
a) Renal Vasodilatory effect
b) Increased Cardiac Output
c) Peripheral Vasoconstriction
d) Prolonged action

339. Effect of Dopamine on Kidney is blocked by -
a) Pindolol b) Phentolamine *(Jipmer93)*
c) Propranolol d) Haloperidol

340. Which of the following causes rise in systolic as well as diastolic BP for prolonged *period-(AIIMS 86)*
a) Ephedrine b) Epinephrine
c) Dopamine d) Norepinephrine

341. True about tyramine are all except -
a) Direct acting amine *(AIIMS 86, Delhi 93)*
b) Indirect acting amine
c) Cheese is a rich source
d) Excess can lead to hypertensive crisis

342. The following are anorexiants *except-(AIIMS82,86)*
a) Amphetamines b)Biguanides
c) Fenfluramine d) Cyproheptadine

343. Dopamine is- *(DELHI 84, Orissa 88)*
a) Alpha and beta agonist
b) Beta agonist
c) Alpha agonist
d) A beta blocking agent
e) Alpha blocking agent

344. Most potent cardiac stimulant is-(DAB *98MIMS81)*
a) Adrenaline b) Noradrenaline
c) Ephedrine d) Salbutamol

345. The drug of choice in cardiogenic shock is -
a) Dopamine b) Propranolol *(JIPMER 81)*
c) Dobutamine d) Adrenaline

346. Use of adrenaline is in - **(***Kerala 94)*
a) Vasovagal syncopy b) Hypotension
c) Anaphylactic shock d) Bradycardia

347. Which of the followig statements about dopamine is correct - *(Karn 94)*
a) Used in congestive cardiac failure
b) Its plasma half-life is 6 hours
c) Theraputically useful in parkinsonism
d) Acts only on dopaminergic receptors

348. Not a catecholamine- *(All India 95)*
a) Epinephrine b) Norepinephrine
c) Dopamine d) Phenylephrine

349. True about terbutaline is - *(NIMS 96)*
a) It is an alpha agonist
b) It is an alpha antagonist
c) It is a p_2 agonist
d) It is a p_2 blocker

350. All of the following are selective b2 agonists except-
a) Ritodrine b) Isoproterenol *(AP 97)*
c) Salbutamol d) Terbutaline

351. Dales vasomotor reversal - *(PGI2000)*
a) Stimulation of alpha-1 receptors
b) Stimulation of alpha-2 receptors
c) Stimulation of beta-1 receptors
d) Stimulation of beta-2 receptors

352. Uses of salbutamol are/is - *(PGI 2000)*
a) Acute asthma b) Premature labour
c) Bronchitis d) Asthma prophylaxis

353. Dale's vasomotor reversal is due to - *(PGI99, 96)*
a) Alpha blocker b) Beta blocker
c) ACH inhibitor d) All of the above

354. Alpha one stimulation produces - *(PGI98)*
a) HR? b) BP t
c) HR! d)None

355. Adrenaline cause vaso constriction in all of the following vessels except - *(PGI 9 7)*
a) Gut b) Cerebral
c) Cutaneous d) Renal

356. Not an endogenous catecholamine - *(APPG 03)*
a) Isoprenaline b) Dopamine
c) Noradrenaline d) Adrenaline

357. Most common receptor in heart are-(Jharkand 03)
a) Betal b) Beta 2
c) Alpha 1 d) Alpha 2

358. Beta II receptors are found in - *(SGPGI05)*
a) Artioles b) Veins
c) SAnode d) Myocardium

359. Which one of the following is not an alpha-adrenoceptor agonist - *(AIIMS May 05)*
a) Clonidine b) Methyldopa
c) Guanabenz d)Guanfacine

360. Tamsulosin, a competitive a_2 adrenoceptor antagonist has affinity for which of the following receptors - *(Karnataka PG MEE 2006)*
a) ^{a}iA **b)«lB**
c) None of the above d) Both of a and b

361. Mefanteramine is given in patient of shock along with IV fluids, because it causes - *{PGMCET 01)*
a) Increased cardiac output
b) Increased systolic BP
c) Increased diastolic BP
d) All of the above

362. A patient who is using a direct acting sympathomimetic agent as a decogestant is most likely to be taking - *{Corned 07)*
a) Ephedrine b) Amphetamine
c) Phenylephrine d) Metaraminol

336) a,d 337) b 338) a 339)None 340) a,d 341) a 342) d 343) a 344) a 345) c 346) b,c 347) a 348) d 349) c
350) b 351) d 352) a,b 353) a 354)b 355) a,b 356) a 357) a 358) a,b 359) b 360) a,d 361) d 362) c

363. AO of the foUowing may be associated with the use of Beta agonist in preterm labour Except - *{AI07)*
a) Hyperkalemia
b) Hyperglycemia
c) Tachycardia
d) Relaxation of uterine muscles

364. TVue statement about clonidine are aU except -
a) Increases parasympathetic outflow *(AI07)*
b) Decreases sympathetic outflow by blocking central alpha receptor
c) Used in Hypertension
d) Prazosin is used to antagonize side effects of clonidine

365. AU are endogenous catecholamines except - *(Aiims*
a) Epinephrine b) Norepinephrine *May 07)*
c) Dopamine d) Dobutamine

366. Dopamine used in shock because - *(UP 08)*
a) Increases cardiac output
b) Decrease peripheral resistance
c) Renovascular constriction
d) Renovascular dilatation

367. Beta blockers used in CHF are - *(PGI Dec 08)*
a) Propranolol b)Bisoprolol
c) Carvedilol d) Nebivolol
e) Pindolol

368. Correct about P blocker- *(PGI June 09)*
a) Membrane stability
b) Used in glaucoma
c) Esmolol metabolize by kidney
d) Nadolol metabolize by liver
e) Have intrinsic sympathomimetic activity

369. One of the following activities is not mediated through P2 adrenergic receptors -
a) Stimulation of lipolysis *(DELHIPG Feb. 09)*
b) Increased hepatic gluconeogenesis
c) Increased muscle glycogenolysis
d) Smooth muscle relaxation

370. Use of a agonist- *(PGI Nov 09)*
a) Relief of spasticity / muscular spasm
b) Erectile dysfunction
c) Terminal cancer pain
d) Councious sedation in intubaed ICU patients
e) Post herpetitis neuropathy

371. MAO inhibitors should not be used with - *(AI 10)*
a) Pethidine b) Pentazocine
c) Buprenorphine d) Morphine

372. Dopamine is preferred in treatment of shock because -
a) Renal vasodilatory effect
b) Increased cardiac output
c) Peripheral vasoconstriction
d) Prolonged action

373. The adrenergic drug Sibutramine is used as -
a) Antipsychotic *(Maharashtra 10)*
b) Antiglaucoma
c) Anorectic
d) Antiparkinsonian

374. One of the following drug is an orally active partial alpha-1 agonist used in the treatment of postural hypotension and autonomic instability -*(Jipmer 10)*
a) Midodrine b) Phenyllephrine
c) Metaraminol d) Methamphetermine

375. Dopamine causes all except- *(Jipmer 10)*
a) Decreases splanchnic blood flow
b) Increases cardiac output
c) Decreases peripheral resistance
d) Increases heart rate

376. Side- effects of Salbutamol includes - *(PGINov. 10)*
a) Tremor b) Arrhythmia
c) Hypoxemia d) Uterine relaxation
e) Vasodilation

377. Propanolol does not reverse the which effect of adrenaline - *(PUNJAB 11)*
a) Mydriasis b) Tremors
c) Lipolysis d) Smooth muscle relaxation

378. Alpha 2 agonist used to relieve muscle spasm is -
a) Tizanidine b) Clonidine *(Jipmer11)*
c) Brimonidine d) Aproclonidine

ANTI-ADRENERGIC

379. The following are the advantages of timolol except -
a) No miosis (*.AIIMS 81, 87)*
b) No accomodative spasm
c) A few systemic side - effects
d) Reduced IOP
e) Increased aqueous outflow

380. Cardioselective beta bockers is are - *(PGI 86)*
a) Metoprolol b)Practalol
c) Atenolol d)Acebutalol
e) Timolol

381. Propranolol is contra indicated in - *(KERALA 89)*
a) Mycardial infarction b)CCF
c) Tachycardia d) HOCM
e) All

382. Propranolol causes all except - *(AI 89, 97)*
a) Decrease heart rate
b) Increase coronary flow
c) Decrease cardiac output
d) Reduce systolic-perssure

383. Clonidine is indiated in all except - *{AI 89)*
a) Migraine b) Morphine withdrawal
c) Hypertension d) Cardiac arrythmias

384. Propanolol is contra indicated in -*(AMU95, Kerala*
a) Bronchial asthma b) Hypertension *89)*
c) Migraine d) Angina

385. Ultra short acting beta blocker most commonly used in anaesthesia is - *{IN02)*
a) Esmolol b) Nadalol
c) Propanalol d) Atenolol

386. p-BIockers are contra indicated in -*(.NIMHANS86)*
a) Hypertension b) Congestive cardiac failure
c) Anxiety states d) Hyperthyroidism

363) a 364) d 365) d 366) d 367) b,c 368)a,b,e 369) a 370)a,c,d 371) a>b 372) a 373) c 374) a 375)c 376)All 377)a 378)a 379)e 380)a,c,d 381)b 382)b 383)a,d 384)a 385)a 386)b

387. Cardioselective P blockers is/are- *(AIIMS 86)*
a) Atenolol b)Labetalol
c) Sotalol d) Propranolol
e) None of the above

388. Drug which is alpha as well as beta blocker-
a) Atenolol b)Acebutalol *(AIIMS 86)*
c) Metorprolol d)Labetalol
e) Sotalol

389. Beta blocker without local anesthetic effect is -
a) Metoprolol b) Pindolol *(DELHI 89, PGI92)*
c) Atenolol d) Timolol

390. Following drugs have a membrane stabilizing effect except - *(PGI -90, 93)*
a) Atenolol b) Timolol
c) Metoprolol d) Nadolol

391. The advantages of metoprolol over propranolol include all of the following except - *(AIIMS 86)*
a) Less likely to provoke bronchoconstriction
b) More likely to be effective in sinus bradycardia
c) Less likely to produce temporary rise in peripheral resistance at the start of therapy
d) Less likely to produce sudden rise in blood pressure after physical exertion

392. True about Timolol - *(PGI 80, 89)*
a) Cardioselective P-blocker
b) Reduces formation of aqueous humor
c) Cautions use in bronchial asthma
d) May be combined with pilocarpine
e) Has membrane stabilising activity

393. A selective alpha-1 antagonist is - *(PGI 80)*
a) Methoxamine b) Prazosin
c) Phentolamine d)Clonidine

394. Alpha -1 receptor actions are mediated through -
a) c AMP b) cGMP *(JIPMER 79)*
c) Calcium ions d) ADP

395. The Beta - blocker with maximum local anaesthetic property is - *(AIIMS 80)*
a) Metoprolol b)Acebutalol
c) Pindolol d) Propranolol

396. Beta blockers are contraindicated in all of the following except - *(PGI 80)*
a) Diabetes b) Angina
c) Congestive heart failure d) Asthma

397. Selective Beta -1 blocker is - *(PGI 80)*
a) Nodolol b) Atenolol
c) Pindolol d) All of theabove

398. The Beta-Blocker to be avoided in renal failure is -
a) Propranolol b) Metoprolol *(PGI 80)*
c) Atenolol d)Oxprenolol

399. Which of the following is beta specific blocker-
a) Esmolol b) *Betoxalo\(Kam 94)*
c) Atenolol d) Satolol

400. One of the following has shortest plasma half life-
a) Propranolol b) Esmolol *(AI95)*
c) Timolol d) Atenolol

401. Presynaptic blocker is- *(PGI '95)*
a) Clonidine b) Yohimbine
c) Phenoxybenzamine d) Methyl Dopa

402. All are true about prazocin except - *(AIIMS 9 7)*
a) Selective α_1 blocker b) First dose effect
c) Glucose intolerance d) Favourable lipid profile

403. Clonidine is a- *(All India 97)*
a) (X2 agonist b) ai antagonist
c) a + (5 antagonist d) Pi agonist

404. P Blocker are used in all, except- *(AllIndia 97)*
a) Variant angina b) Mild hypertension
c) Glaucoma d) Thyrotoxicosis

405. P Blocker with least entry cross blood brain barrier- *(All India 97)*
a) Propranolol b) Atenolol
c) Esmolol d) Timolol

406. Which is not a selective P$_2$ agonist - *(Kerala 97)*
a) Ocriprenaline b) Terbutaline
c) Albutalol d) Isoproterenolol

407. Timolol is- *(ROHTAK 97)*
a) Anti hypertensive b) Antiglaucoma drug
c) Anticancer drug d) Cholinergic
e) None

408. All are a blockers except- *(ROHTAK 97)*
a) Tolazoline b) Prazosin
c) Chlorpromazine d) Butoxamine
e) Yohimbine

409. (XjA antagonist - *(AI 99, PGMECT 07)*
a) Prazosin b) Terazosin
c) Inderamine d) Tamsulosin

410. Specific Pj agonist - *(AI 99)*
a) Dobutamine b) Albuterol
c) Terbutaline d) Isotharine

411. Which of the following non selective adrenergic antagonists causes periphral vasodilatation - *(Kerala 01)*
a) Osteoporosis b)Carvidelol
c) Sotalol d) Nadolol

412. p-blockers with intrinsic sympathomimetic properties are - *(PGI02)*
a) Propanolol b) Oxprenolol
c) Practolol d) Esmolol
e) Butoxamine

413. Properties making cardioselective beta blockers desirable are - *(PGI 02)*
a) Less bronchoconstriction
b) Adverse effect on lipid profile
c) Cause glucose intolerance
d) May be used in Raynaud's disease
e) Less liable to impair exercise capacity

414. True of the following is/are- *(PGI 01)*
a) Betaj receptors in heart stimulate its contractions
b) Beta$_2$ receptors in heart stimulate its contractions
c) Beta receptors are present in smooth muscles
d) Alpha$_t$ receptors cause preganglionic stimulation
e) Alpha$_2$ receptors cause postganglionic feedback inhibition

387) a 388) d 389) c,d 390)a,b,d 391)b 392)b,c,d 393) b 394) c 395) d 396) a,b 397) b 398) c 399)a,b,c 400)b 401)b 402)c 403)a 404)a 405)b 406)d 407)a,b 408)d 409)d 410)a 411)b 412)b 413)a,d,e 414) a,c

415. In aperson with HR= 120, rate is reduced by - *(PGI98)*
a) Propranolol b) Phentolamine
c) Phenoxybenzamine d) Prazosin

416. P blocker acts by - *(PGI97)*
a) i Cardiac output b)AHR
c) iBP d)AIl

417. True about alpha blocker is - *(St. Johns 02)*
a) Improves glucose profile
b) Improves lipid profile
c) UsedinBPH
d) All of the above

418. The drug which has Pj antagonistic action and P_2 agonistic action is - *(Jipmer 03)*
a) Carvedelol b)Acebutalol
c) Metaprolol d) Atenolol

419. Short elimination half - life (8 to 10 min) of esmolol (beta 1 - adrenergic blocker) is due to - *(Karn 03)*
a) Rapid redistribution
b) Rapid elimination by kidney
c) Hydrolysis by blood esterases
d) Rapid protein binding

420. Propranolol is indicated in the following conditions except - *(UPSC 04)*
a) Intermittent claudication
b) Portal hypertension
c) Migraine
d) Benign essential tremors

421. Pure alpha 2 blocker is - *(TN 04, PGI 79)*
a) Timolol b)Sotalol
c) Yohimbine d)Carvidolol

422. Combined Alfa & Beta blockers are all except -
a) Pindolol b) Levobunolol *(PGI June 05)*
c) Carvedilal d)Labetalal
e) Acebutolal

423. Esmolol true is/are - *(PGI June 06)*
a) a Blocker
b) Long *Vi* life
c) Not cardioselective
d) Used in LV decompensation
e) Cause bradycardia

424. All of the following may be associated with Beta 2 agonist treatment except - *(AI07)*
a) Hyperkalemia
b) Hyperglycemia
c) Detrusor relaxation
d) Relaxation of gut and bronchial muscles

425. All of the following are nonselective Beta blockers with additional actions except- *(AI 07)*
a) Carvedilol b) Betoxalol
c) Cartelol d) Labetalol

426. Both alpha and beta blocker - *(PGI June 07)*
a) Labetalol b) Carevedilol
c) Prazosin d)Tamsulosin
e) Milrinone

427. This short acting selective b-blocker is used in treatment of arrhythmias - *(Manipal 08)*
a) Esmolol b) Carveoilol
c) Celiprolol d)Bisoprolol

428. Which of the following drug (s) is/are used in b-blocker overdose - *(PGI Dec 08)*
a) Atropine b) Acetycholine
c) Glucagon d) Octreotide
e) Isoprenaline

429. What is/are true about Terazosin w.r.t. phenoxybenzamine - *(PGI Dec 08)*
a) More, al selective b) Less S/E
c) Longer acting d) Once daily dosing

430. Tolazoline is used as - *(AIIMS May 09)*
a) As thrombin inhibitor in peripheral angiography
b) As vasodilator in treating coronary artery stenosis during angio procedures
c) As vasoconstrictor in *tit* of varices
d) Antispasmodic during biliary spasm

431. Beta blocker without local anaesthetic effect is -
a) Metoprolol b) Pindolol *(DPG10)*
c) Atenolol d) Timolol

432. Following is the advantages of topical (i-blocker over other miotic drugs except- *(Maharashtra 10)*
a) Does not cause miosis
b) No systemic side effects
c) Does not cause myopia
d) Iris spasm and headache

433. Which of the following are P_t selective antagonist- *(PGI May 10)*
a) Propanalol b) Atenolol
c) Metoprolol d) Pindolol

434. Not true about P blockers is - *(PUNJAB 11)*
a) Delay recovery from hypoglycemia due to oral hypoglycemic agents
b) Should not be used with NSAIDs
c) Performance of athletes increased with P blockers
d) Thiazides can be combined with P blockers for treatment of hypertension

MUSCLE RELAXANT

435. Curare in therapeutic doses - *(AIIMS 88)*
a) Decreases the amplitude of skeletal muscle
b) Prevents propagation of action potential in skeletal muscle
c) Enhances the action of choline esterase
d) Enhances the action of catecholamines

436. Succinyl choline is a muscle relaxant which act by -
a) Persistent depolarisation *(Delhi 84, AP 85)*
b) Competitive blockade
c) Mechanism of action uncertain
d) a and b

415)a 416)d 417)d 418)b 419)c 420)a 421)c 422)a,b,e 423)e 424)a 425)b 426)a,b 427)a 428)a,c,e 429) a,b,d 430) b 431)c,d 432) b 433) b,c 434) c 435) a 436) a

437. Which drug is contra indicated in myasthenia gravis - *{AI88)*
a) Succinyl choline b) Tubocurare
c) Neostigmine d) Halothane
e) Cycloporpane

438. Site of action of anaesthetic muscle relaxants is -
a) Myoneural junction *{PGI88)*
b) Central
c) Ascending reticular activating system
d) Red nucleus

439. Which of the following occurs first with the use ofDTC - *(AIIMS 87 AP 88)*
a) Diaphragmatic relaxation
b) Abdominal wall relaxation
c) Diplopia
d) Ptosis

440. The muscle which is affected last with DTC is -
a) Facial b) Diaphragm *(A1IMS 87, AP 88)*
c) Ocular d) Abdominal

441. Shortest acting muscle relaxant is-*(A1IMS 87, AP 88)*
a) Curare b) Pancuronium
c) Gallamine d) Succinylcholine

442. The most effective muscle relaxant is - *(TN89)*
a) Ether b) N_20
c) Halothane d)Trilene

443. Which of the following are antagonists of non depolarising muscle relaxants- *(PGI84)*
a) Neostigmineb) Edrophonium
c) Pyridostigmine d) Cyclopyronium

444. The following antagonise the visceral side effects of neostigmine used in reversal of DTC blockade
a) Atropine b) Nicotine *{PGI89)*
c) Pilocarpine d) Pyridostigmine

445. Atracurium is eliminated from the body by -
a) Renal excretion *(IN90)*
b) Hepatic excretion
c) Both renal and hepatic excretion
d) Hoffmann degradation

446. The following are muscle relaxants except-(PG7*90)*
a) Decamethonium b)Suxamethonium
c) Hexamethonium d) Pancuronium

447. Intubation dose of pancuronium is - *(AIIMS 91)*
a) 0.02 mg/kg b) 0.06 mg/kg
c) 0.08 mg/kg d) 1.2 mg/kg

448. Which is not a ganglion blocker - *{AIIMS 91)*
a) Trimethaphan b) Curare
c) Pancuronium d) Halothane

449. The enzyme pseudocholinesterase acts on - *{AI92)*
a) Decamethonium b) Tubocurarine
c) Gallamine d)Suxamethonium

450. Which is not true on Non depolarising skeletal muscle relaxant - **(***JIPMER 92)*
a) Cause Histamine release
b) Hypothermia
c) Fasciculation of muscle
d) Ganglion blockades

451. Antibiotics found to possess some neuro-muscular blocking activity includes the following except -
a) Streptomycin b) Polymyxin *(Kam 94)*
c) Gentamycin d) Penicillin

452. Site of action of vecuronium is - *(ARMS 95)*
a) Cerebrum b) Reticular formation
c) Motor neurone d) Myoneural junction

453. Shortest acting muscle relaxant - *(AI 97)*
a) Pancuronium b) Atracurium
c) Mivacurium d) Vecuronium

454. Malignant hyperthermia is best treated with- *(Delhi 87)*
a) Dantrolene sodium b) Potassium chloride
c) Atropine d) Corticosteroids

455. Central muscle relaxants act by-
a) Decreased nerve conduction *(PGI 02)*
b) Inhibits spinal polysynaptic reflexes
c) Block conduction across NM junction
d) CNS depression
e) Decreased muscle excitation

456. The action of non-competitive muscle blockers is affected by - *(PGI 99)*
a) Hypocalcemia b) Hyponatremia
c) Hyperthermia d) All of the above

457. The action of d-tubocurarine is potentiated by -
a) Streptomycin b) Cephalexine *{Kerala 04)*
c) Tetracycline d) Doxycycline

458. Which is the drug which causes post-anesthetic muscle stiffness - *(J&K 05)*
a) Fentanyl b) Pyridostigmine
c) Succinylcholine d)Gallamine

459. Which one of the following drugs is not a long acting neuromuscular blocking agent ? -*(Kam -PGMEE*
a) Doxacurium b) Mivacurium *06)*
c) Pancuronium d) Pipecuronium

460. Depolarizing neuromuscular blockade is associated with - ***(****Corned 0 7)*
a) Fasciculations
b) Fade on tetanic stimulation
c) Enhancement by volatile anaesthetic agents
d) Antagonized by anticholinesterases

461. Shortest acting non-depolorising muscle relaxant -
a) Mivacurium b) Atracurium *(PGMCET07)*
c) Pancurium d) Recuronium

462. Suxamethonium is - *(UP 08)*
a) Non depolarising muscle relaxants
b) Depolarising muscle relaxants
c) Direct acting muscle relaxants
d) All of the above

MIGRAINE

463. In an acute attack of migraine, the drug of choice is- *(TN89)*
a) Ergotamine tartrate b) Methysergide
c) Propranolol d) Caffeine

437) b 438) a,b 439) c,d 440) b 441) d 442) a 443)a,b,c 444) a 445) d 446) c 447) b,c 448) d 449) d 450) b,c
451)d 452)d 453)c 454)a 455)b 456)a 457)a,c,d 458)a 459)d 460)a 461)a 462)b 463)a

464. Drugs used in migraine prophylaxis are all except - *(NIMHANS2K)*
a) Flunarazineb) Propranolol
c) Cyprohaptidine d) Sumatriptan

465. Triptans in migraine acts on which receptor -
a) 5 HTIA b) 5 HT IB/ID *(AIIMSNov 07)*
c) 5HTIF d) 5 HT 3

466. Use of Ergotamine is contraindicated in - *(A108)*
a) Diabetes mellitus
b) Anemia
c) Ischaemic heart disease
d) PPH (Postpartum haemorrhage)

467. Drug of choice in Acute migraine is - *(UP 08)*
a) Ergotamine b) Sumatriptan
c) Dihydroergotamine d)Propranol

468. Which of the following drug is used for prophylaxis of migraine? *(Karn 11)*
a) Diclofenac b)Flunarizine
c) Sumatriptan d) Dihydroergotamine

469. The WRONG statement of sumatriptan is that it -
a) Is a selective 5- HT ID/IB receptor agonist
b) Is safe for use in patients with epilepsy *(Karn 11)*
c) Suppresses neurogenic inflammation of cranial blood vessels
d) Is useful in the treatment of an acute attack of migraine

MISCELLANEOUS

470. Heart Rate is is slowed by which of the following drugs-
a) Propranolol b) Amino Phylline *(TN91)*
c) Atropine d)Ephedrine

471. To prevent sweating in a hot climate ..... is used- *(PGI88)*
a) Alpha blockers b) Beta blockers
c) Atropine d) Antihistamines

472. A 3 year old child is seen with coma, weakness, salivation and one sided constricted pupil. The most probable diagnosis is - *(TN 89)*
a) Tetanus
b) Organophosphorus poisoning
c) Phenobarbitone poisoning
d) Electrolyte imbalance

473. Drug contra - indicated in infants - *(CUPGEE 99)*
a) Ciprofloxacin b) Barbiturate
c) Theophylline d) Chloroquine

474v* Drug which enhances sports performance -
a) Erythropoiten b) Propranolol *(NIMHANS01)*
c) Clabeterol d) Aspirin

475. Which of the following is wrong about autonomic nervous system - *(AIIMS 2K)*
a) Sympathetic activity more localized while parasym pathetic activity is more generalised
b) Preganglionic to post ganglionic nerve is at a ratio 20:1
c) The highest center is at medulla
d) Post ganglionic parasympathetic nerves are as fast as motor nerves

476. Following is an example of competitive enzyme blockade, except - *(JIPMER 2002)*
a) Thymidylate synthase by 5FU
b) DHFR by methotrexate
c) Cyclooxygenase by aspirin
d) Coagulation by dicoumarol

477. Drug used in anaphylaxis is- *(TN 89)*
a) Norepinephrine b) Epinephrine
c) Dopamine d) Antihistaminic

478. Drugs which impair sweating *(TN 89)*
a) Scopolamine b) Atropine
c) Phenothiazines d)All

479. Beta agonist used in bronchial asthma exert their action by- *(Jipmer 90)*
a) selective 01 agonism
b) selective 02 agonism
c) selective 01 antagonism
d) selective 02 antagonism

480. What is the advantage of glycopyrrolate over atropine
a) Less CNS action *(JIPMER 91)*
b) Less mydriasis
c) Less tachy cardia
d) Less neuromuscular blockade

481. The following is a M_1 blocker- *(AIIMS 91)*
a) Pirenzepine b) Propanthaline
c) Atropine d) Probanthine

482. Mj blocker used in peptic ulcer treatment - *(AI92)*
a) Probanthine b) Atropine
c) Pyridostigmine d) Pirenzepine

483. Which of the following does not prevent the uptake of adrenaline at end plate - *(AI 92)*
a) Imipramine b) Phenoxybenzamine
c) Isoxsuprine d) Guanethidine

484. The most commonly used drug in open angle glaucoma is - *(NIMHANS 89)*
a) Pilocarpine b)Physostigmine
c) Epinephrine d)Norepinephrine

485. Only mydriatic action is by- *(AI 97)*
a) Tropicamide b) Homatropine
c) Phenylephrine d)Cyclopentolate

486. Which is a lisotropic drug? *(Burdwan 2K)*
a) Pilocarpine b) Carbachol
c) Bethanecol d) Methacholine

487. Mannitol decreases the intraocular pressure by: -
a) Withdrawing water from vitreous *(COMED 06)*
b) Increasing uveoscleral outflow
c) Increasing aqueous through trabecular meshwork
d) Inhibiting the enzyme carbonic anhydrase in the ciliary body

464)d 465)b 466)c 467)b 468)b 469)b 470)a 471)c 472)b 473)a 474)a 475)a,b,c 476)c 477)b
478) d 479) b 480) a 481) a 482) d 483) b,c 484) a 485) c 486) b 487) a

488. An example of covalent drug receptor interaction- *(DELHIPGMar. 09)*
a) Noradrenalin binding to beta-1 adrenergic receptor
b) Acetylcholine binding to muscarinic receptor
c) Prazosin binding to alpha-1 adrenergic receptor
d) Phenoxybenzamine binding to alpha adrenergic receptor

489. All of the following agents are used in glaucoma treatment except - *(DELHI PG Mar 09)*
a) Apraclonidine b) Timolol
c) Pilocarpine d) Metoprolol

490. Bimatoprost is used in - *(PGI Nov 09)*
a) Glaucoma b) Barett oesophagus
c) Hypertrichosis of eyelid d) NS AIDS ulcer
e) Induced abortion

491. True about Hyoscine? *(PGI Nov. 10)*
a) Penetrate cornea
b) Obtained from atropa belladona
c) Shorter duration of action than Atropine
d) Cross Brain- blood barrier
e) Used in motion sickness

ANAESTHESIA

492. Percentage of xylocaine used in spinal anaesthesia-
a) 1% b) 2 % (*Delhi 84, AP 85)*
c) 4% d)5%

493. Maximum dose of xylocaine for local anaesthesia -
a) 200 mg b) 250 mg *{AllMS 87)*
c) 300 mg d) 650 mg
e) 700 mg

494. Longest acting local anaesthetic solution is- *(AIIMS 87, AP 88)*
a) Lignocaine b) Chlorprocain
c) Amethocaine d) Bupivacine

495. Lignocaine can cause - *(AIIMS 87, AP 88)*
a) Cardiac arrest b) Syncope
c) convulsions d) All of the above

496. The following is not used when giving local anaesthesia in the fingers - *(AIIMS 87, AP 88)*
a) 2 % xylocaine b) Rubber tourniquet
c) Ring block d) Adrenaline

497. In spinal anaesthesia the drug is deposited between-
a) Dura and arachnoid *(AP 88)*
b) Pia and arachnoid
c) Dura and vertebra
d) Into the cord substance

498. Cauda Equina syndrome can be caused by - *(AP 88)*
a) Spinal anaesthesia b) Epidural anaesthesia
c) Both d)None

499. Lignocaine can be used in all except - *(PGI 88)*
a) Ventricular fibrillation b) Spinal anaesthesia
c) Epidural anaesthesia d) Convulsions

500. Local anesthetics act by - *(JIPMER 90)*
a) Forming area of nerve block along a neuron
b) Binding to calcium receptor on nerve membrane
c) Blocking calcium chanels of nerve membrane
d) Inhibiting the sodium pump

501. All are surface anaesthetics except - *(AIIMS 91)*
a) Lignocaine b) Bupivacaine
c) Procaine d) Cinchocaine

502. Which local anesthesia causes vasconstriction -
a) Procaine b) Cocaine *(PGI97)*
c) Lidocaine d) Bupivacaine

503. Local constriction is seen in - *(AIIMS 98)*
a) Cocaine b) Xylocaine
c) Bupivacine d) Mivacaine

504. All are vasodilator except - *(AI98)*
a) Procaine b) Lidocaine
c) Cocaine d) Chlorprocaine

505. All are Amide linked Local anesthetics except -
a) Procaine b) Bupivacaine *(AIIMS 96,*
c) Lidocaine d)Dibucaine *AI98)*

506. All of the following are effective topically except -
a) Procaine b) Cocaine *(AP97)*
c) Lidocaine d) Amethocaine

507. Which of the following is an ester linked local anaesthesia - *(Kerala 98)*
a) Cocaine b) Lidocaine
c) Bupivacaine d) Dubicaine

508. Guedels stages of anaesthesia is seen classically with - *(JIPMER 86, PGI 87)*
a) Ether b) Chloroform
c) Morphine d) Nitrous oxide
e) Halothane

509. Dose of Thiopentone used for induction is -
a) 1 mg/kg *(JIPMER 86, PGI87)*
b) 2 mg/kg c) 5 mg /kg
d) 10 mg /kg e) 15 mg/kg

510. Pre-anaesthetic medication is given to - *(Delhi 87)*
a) Reduce anxiety and fear
b) Reduction of secretion of saliva
c) To produce amnesia
d) To prevent undesirable reflexes
e) All of the above

511. In the second stage of anaesthesia the pupil is - *(JIPMER 87)*
a) Constricted b) Partially dilated
c) Normal in size d) Totally dilated

512. Hallucinations are seen after.....anaesthesia -
a) Ketamine b) Thiopenlone^4788)
c) Fentanyl d) Nitrous oxide

513. Liver damage can be induced by- *(AI89)*
a) Halothane b) Ether
c) Trilene d) Nitrous oxide

514. Best analgesic is - *(AI 89)*
a) Ether b) Halothane
c) Trilene d) Chloroform

488)d 489)d 490)a 491)a,c,d,e 492)d 493)c 494)d 495)d 496)d 497)b 498)a 499)d 500)a,d 501)b
502)b,d 503)a,c 504)c 505)a 506)a 507)a 508)a 509)c 510)e 511)b 512)a 513)a 514)c

§15. Adrenaline is contraindicated during..... anaesthesia -
a) Thiopentone b) Ether *(PGI88)*
c) Trilene d) Halothane

516. Drugs used as anaesthesia are - *(PGI88)*
a) Ketamine b) Methohexitone
c) Etomidate d) Thiopentone
e) All

517. In which phase of anaesthesia, movement of eyeball is lost - *(PGI 85)*
a) Stage 3 phase 1 b) Stage 1, phase 3
c) Stage 2, phase 3 d) Stage 4

518. Short 1/2 life of thiopentone is due to - *(PGI89)*
a) Excretion
b) Metabolism
c) Spontaneous degradation
d) Redistribution

519. Complication of inhalational anaesthesia is -*(TN91)*
a) Hypertension b) Hypotension
c) Aspiration d) None of the above

520. Triad of Anaesthetic are all except - *(J1PMER 92)*
a) Delirium b) Analgesia
c) Amnesia d) Sleep

521. IV anesthetic agent causing maximum bronchodilation- *(JIPMER 93)*
a) Halothane b) Fentanyl
c) Thiopentone d) Ketamine

522. The dosage of morphine used for preanaesthetic purposes in an adult patient ℓs-*(PGI80,DNB 90, 91)*
a) 5 mm.I/M b) 10 mg.I/M
c) 20mg.I/M d) 30 mg *W*

523. Diphasic respiratory depression is usually seen after - *(JIPMER 79, AMU 88)*
a) Neurolept anesthesia b) Regional anesthesia
c) Halothane anesthesia d) Isoflurane anethesia

524. The activity of muscles of eyeball during ether anaesthesia is well marked in - *(JIPMER 80,*
a) Stage I b) Stage II *UPSC87)*
c) Stage III d) Stage IV

525. MAC is - *(PGI 81, AIIMS 87, JIPMER 03)*
a) Maximum air current
b) Maximum air concentration
c) Maximum alveolar compression
d) Minimum alveolar concentration

526. The measure or index of anaesthetic potency is -
a) Molecular weight *(AIIMS 81, TN 90)*
b) Boiling point
c) Minimum alveolar concentration
d) None of the above

527. Regarding paraldehyde excretion which of the following is true - *(PGI 80, AIIMS 84)*
a) It is excreted through kidneys
b) It is excreted through sweat
c) It is excreted through lungs
d) It is excreted by none of the above means

528. All are seen in ketamine anesthesia except -
a) Hypertension b) Hallucinations *(Kerala 94)*
c) Bronchospasm d) Analgesia

529. Definitive sign of phase I of anaesthesia is - *(JIPMER 95)*
a) Fixation of eyeball b) Pupillary dilatation
c) Blurring of vision d) Intercostal paralysis

530. Anaesthetic that have a smooth induction is -
a) Diethyl ether b) Thiopental *(JIPMER 95)*
c) N_20 d) Halothane

531. Oxygen content in aneasthetic mixture is -
a) 25 % b) 30 *%* *(JIPMER 95)*
c) 33% d) 38%

532. Not an intravenous anaesthetic - *(AI95)*
a) Etomidate b) Thiopentone
c) Ketamine d) Cyclopropane

533. The concentration of O_z in adequate anaesthesis is -
a) 15% b) 18% *(Delhi96)*
c) 33% d) 50 *%*

534. Following is a potent anti-emetic agent used in pre-operative period- *(AIIMS 95)*
a) Atropine b) Glycopyrolate
c) Hyoscine d) Haloperidol

535. Thiopentone is contraindicated ℑn-*(AIIMS 97, AP 97,*
a) Acute intermittant porphyria *JIPMER 93)*
b) Electro convulsive therapy
c) Sarcoidosis
d) Diabetic patients

536. Highest analgesic effect is a feature of - *(AI 97)*
a) Ketamine b) Thiopentone
c) Propofur d)Ethomidate

537. Index of potency of general anesthesia - *(PGI 97)*
a) Minimum alveolar concentration
b) Diffusion coefficient
c) Deed space concentration
d) Alveolar blood concentration

538. The anaesthetic drug that is contraindicated in the presence of jaundice is - *(CMC 98)*
a) Halothane b) Ether
c) Gallamine d) Nitrous oxide

539. Which of the following is used as preanaesthetic medication causes longest amnesia - *(MP 98)*
a) Diazepam b)Lorezapam
c) Midazolam d) Flunitrazepam

540. Highly lipid soluble agent would be associated with- *(MAHE98)*
a) Potent anaesthetic action
b) Potent analgesic action
c) Excellent muscle relaxant action
d) Least respiratory depression

541. Diffusion hypoxia seen during - *(PGI 98)*
a) Induction of anesthesia
b) Reversal of anesthesia
c) Post operative period
d) None of the above

515)d 516)e 517)a 518)d 519)b,c 520)a 521)d 522)b 523)a 524)b 525)d 526)c 527)c 528)c
529) a 530) b 531)b 532)d 533)c 534)c 535)a 536)a 537)a 538)a 539)a 540)a 541)b

542. Which anaesthesia decreases cortisol levels -
a) Thiopentane b) Halothane *(UP 2K)*
c) Etomidate d) Propofol

543. Diffusion hypoxia is seen with - (*JIPMER 03)*
a) Ether b) Cyclopropane
c) Halothane d) Nitrous oxide

544. Induction agent that may cause adrenal cortex suppression is - *(AI03)*
a) Ketamine b) Etomidate
c) Propofol d) Thiopentione

545. Which one of the following inhalational anesthetic agents has rapid onset and rapid recovery actions and is most desirable for use day.....case (out pa tient) surgical procedures - *(Karn 03)*
a) Ether b) Halothane
c) Trichloroethylene d) Desflurane

546. Drugs employed in anaesthesia causing hypertension resulting in increased blood loss during surgery is/are - *(PGI79, A1IMS 81)*
a) Pancuronium b) Pentazocine
c) Ketamine d) All of the above
e) Only A and C are true

547. The anesthetic that affects the laryngeal & Pharyngeal reflexes minimally - **(***AP 9 7)*
a) Propanidid b) Methohexitane
c) Thiopentone d) Ketamine

548. Which of the following muscles relaxants is known to cause jaundice as a side effect - **(«***JIPMER 78,*
a) Metaxalone b) Mephenesin *Delhi 83)*
c) D-tubocurarine d) All of the above

549. All of the following are vasodilators except -
a) Cocaine b) Etomidate *(AIIMS96)*
c) Cyclopropane d) Procaine

550. Source of curare - *(Kerala 97)*
a) South America plant b) South African plant
c) Himyalayan plant d) Synthetic

551. Local anaesthetics act by inhibiting- *(Kerala 97)*
a) Motor fibers only
b) Motor and sensory fibres
c) Only sensory fibres
d) None of the above

552. Naturally occuring local anaesthetic - *(Kerala 97)*
a) Cocaine b) Procaine
c) Lignocaine d) Bupvacaine

553. Rapid termination of the action of Suxamethonium is due to - *(MAHE 98)*
a) Rapid renal elimination
b) Enzymatic degradation by pseudocholinesterase
c) Metabolized by liver to acetyl CoA
d) Redistribution

554. Halothane metabolism causes formation of all the following except - **(.***JIPMER 99)*
a) Iodide b) Bromide
c) Chloride d) Trichoroacetic acid

555. In the clinical use of general anesthetic agents -
a) Chloroform is a stable agent for cardiovascular surgery *(MAHA 05)*
b) Diethyl ether is still highly regarded and widely used
c) Methoxyflurane is reserved for long anesthetic procedures
d) The concept of "balanced anesthesia" is usually employed

556. Which of the following when given with adrenaline increases arrhythmogenic action on heart -
a) Halothane b) Etomidate *(PGMCET07)*
c) Enflurane d) Propofol

557. Hyperkalemia is a dangerous complication when succinyl choline is given to patient with -
a) Spinal cord injury *(PGMCET 07)*
b) Head injury
c) Thoracic trauma
d) Abdominal trauma

558. Which is NOT an ester linked LA - *(PGMCET07)*
a) Procaine b) Tetracaine
c) Bupivacaine d) Chlorprocalne

559. The following is eliminated by Hoffmann's Elimination - *(PGMCET07, TN04)*
a) Atracurium b)Rocuronium
c) Pancuronium d) Doxacuronium

560. The local anaesthetic with the longest duration of action is - *(Corned 07)*
a) Procaine b) Bupivacaine
c) Lidocaine d) Mepivacaine

561. Ketamine is contraindicated in - *(MAHE 07)*
a) Hypertension b) Bronchial asthma
c) Hypovalaemia d) All the above

562. TVue statement regarding Halothane is -*(UP 07, 05)*
a) Hepatitis occurs in susceptible individuals after repeated dose
b) It potentiates competitive neuromuscular blockers
c) Causes respiratory depression
d) All of the above

563. All are true about Bupivacain except - *(UP 07)*
a) Less cardiotoxic than lignocaine
b) Dose increases with adrenaline
c) Long acting
d) Cannot given in veins

564. Induction agent of choice in day care surgery is -
a) Ketamine b) Propofol *(UP07)*
c) Methohexitone d) Thiopentone sodium

565. Post dural (spinal) puncture headache is due to -
a) Seepage of CSF *(UP07)*
b) Fine needle
c) Toxic effects of the drugs
d) Traumatic damage to nerve roots

566. Patients is not breathing after anaesthesia is due to-
a) Prolonged anaesthesia *(UP07)*
b) Neuro muscular blockage
c) Recurrent intubation leading cord's failure
d) All of the above

542) c 543) d 544) b 545) d 546) d 547) d 548) b 549) a 550) a 551)b 552) a 553) b 554) a 555) d
556) a 557) a 558) c 559) a 560) b 561) a 562) d 563) a 564) b 565) a 566) d

567. Ketamine is contraindicated in - *(Manipal 08)*
a) Hypertension b) Bronchial asthma
c) Hypovolemia d) All of the above

568. Skeletal muscle most sensitive to tubocurarine ?
a) Muscles of respiration *(APPG 08)*
b) Muscles of limb
c) Muscles of jaw and larynx
d) all

569. Blockade of nerve conduction by a local anesthetic is characterized by - *(DELHI PG Feb. 09)*
a) Greater potential to block a resting nerve as compared to stimulated nerve
b) Need to cross the cell membrane to produce the block
c) Large myelinated fibres are blocked before the unmyelinated fibers
d) Cause consistent change of resting membrane potential

570. All are vasodilator except - *(DPG10)*
a) Procaine b)Lignocaine
c) Cocaine d) Chlorprocaine

571. Which of the following agents is not associated with Hyperthermia- *(AI11)*
a) Amphetamines b) MAO inhibitors
c) Atropine d) Alcohol

ANTI HISTAMINICS

572. The drug fenfluramine is used to treat -
a) Gout b) Radiationsickness
c) Dressier syndrome d) Obesity

573. Irone is store in - *(AI 90)*
a) RBC b) Reticulo endothelial system
c) Plasma d) All

574. Commonest side effect of antihistaminics is-
a) Sedation b) Tinnitus
c) Euphoria d) Lassitude

575. H-l receptor blocker with least sedative action-
a) Terfenadine b) Promethazine *(AIIMS92, 93)*
c) Astemizole d) Chlorpheniramine

576. Which of the following is the longest acting newer antihistaminic- *(AIIMS 92, JIPMER 93)*
a) Mequitazine b)Loratidine
c) Astemizole d) Terfenadine

577. All of the statement about H^ntihistaminics are true except- *(KARN-94)*
a) Tolerance may develop to some of its side effects
b) local application can cause contact dermatitis
c) combination with an H_2 antogonist may control some cases of chronic urticaria
d) many of them exhibit cholinergic effect

578. Ketanserin is - *(PGI98)*
a) 5 HT 2 reuptake blocker
b) Antipsychotic
c) Useful in movement disorder
d) Anti tussive

579. Which of the following actions is not caused by Hj receptor - *(SRMC 02)*
a) Vasocontriction
b) Gastric acid secretion
c) Cardiac stimulation
d) Bronchoconstriction

580. Advantage of fexofenadine is - *(St. Johns 02)*
a) Less sedating b) Orally absorbed well
c) Fast acting d) None of the above

581. True about sumatriptan include all except -
a) Used in acute migraine *(Manipal 04)*
b) 5 HT1 antagonist
c) Safe in heart disease
d) Rapidly absorbed from oral route

582. Sumatriptan in pharmacological doses is useful in migraine due to action on -*(PGMCET07, AIIMS 07)*
a) 5 HT 1A b) 5HT 1B/1D
c) 5HT3 d) 5 HT 4

583. Maximum anti-cholinergic action is seen with which Hj blocker - *(MAHE07)*
a) Diphehydramine b) Cinnarizine
c) Loratidine d)CPM

584. Which is not a 2nd generation antihistaminic ?
a) Loratidine *(AiimsMay08)*
b) Acrivastatine
c) Cyclizine
d) ---

585. Maximum anti-cholinergic action is seen with which Hj blocker - *(Manipal08)*
a) Diphehydramine b) Cinnarizine
c) Loratidine d)CPM

586. Which of the following selectively acts on 5HT3 receptors? *(Maharashtra10)*
a) Ondansetron b) Bupropion
c) Sumatriptan d) Renzapride

587. Following drugs which act on HI receptors have active metabolite except - *(Maharashtra10)*
a) Loratidine b) Mizolastine
c) Azelastine d) Ebastine

PROSTAGLANDINS

588. Infusion of which prostaglandin increases the patency of ductus arteriosus in infants insufficiency-
a) PGF_2 b) PGF_2 *(TN 87)*
c)PGE_1 d)PG_t

589. Bone resorption is enhanced by - *(JIPMER 95)*
a) PGD2 b) PGF2
c) PGE2 d)PG12

590. Prostaglandins cause uterine contractions in -
a) First trimester *(KERALA 95)*
b) Second trimester
c) Third trimester
d) All

591. Prostaglandins are not indicated in - *(PGI98)*
a) PDA b) Labour
c) Gastric ulcer d) Paralytic ileus

567) a 568) c 569)b 570)c 571)d 572)d 573)b 574)a 575)a 576)c 577)d 578)None 579)b
580) a 581)b,c,d 582) b 583) a 584) c 585) a 586) a 587) b 588) c 589) c 590) d 591) a

592. Platelet aggregation is caused by - *(SRMC 02)*
a) TxA2 b) Guanethidine
c) Clonidine d) Hydralazine

593. Prostanoids are used in the following except -
a) Post partum hemorrhage *(Jipmer 03)*
b) Cervical priming
c) To avoid platelet damage during dialysis
d) Asthma

594. Misoprostol is a - *(AI06)*
a) Prostaglandin El analogue
b) Prostaglandin E2 analogue
c) Prostaglandin antagonist
d) Antiprogestin

595. Which of the following drugs can help the ductus arteriosus patent prior to surgery for pulmonary stenosis in a neonate - *(Corned 08)*
a) Alprostadil b) Indomethacin
c) Carboprost d) Misoprostol

596. The following are true about latanaprost except -
a) It is a prostaglandin inhibitors *(Manipal 09)*
b) It reduces the intraocular pressure by increasing the uveal scleral outflow
c) It has a greater effect than beta blockers in reducing the intraocular pressure
d) Hypertrichosis is a known side effect

597. Prostaglandin analogs have therapeutic utility in the following, except - *(DELHI PG Feb. 09)*
a) Palliative treatment of patient ductus arteriosus
b) Pulmonary hypertension
c) Impotence
d) Inflammatory bowel disease

ASTHMA

598. In status asthmaticus, the anesthetic agent used as bronchodilator is - *(AIIMS 86)*
a) Morphine b) Thiopentone sodium
c) Ketamine d) Halothane

599. Sodium cromoglycate acts by- *(AP 88, PGI97)*
a) Antihistaminic action
b) Mast cell stabilisation
c) Bronchorelaxation
d) Prevents antigen antibody reaction

600. Which is not true of Aminophylline - *(AIIMS 91)*
a) Interacts with Erythromycin
b) Dose decreased in smokers
c) Decreases $P0_2$
d) Increases diaphragmatic contractility

601. The drug which interferes with metabolism of Theophylline- *(AIIMS 92)*
a) Gentamicin b) Penicillin
c) Erythromycin d) Sulfonamide

602. Ipatropium bromide is an- *(AI 93)*
a) Sympatholytic b) Anticholinergic
c) Anti ematic d) Anti psychotic

603. Which of the following is most useful in Acute Asthma- *(Jipmer 93)*
a) Ketotifen b) Cromolyn
c) Terbutaline d) Corticosteroids

604. Ipratropium bromide is useful in bronchial asthma because of - *(AI 93)*
a) Anticholinergic effect
b) Vasodilator properties
c) Antiallergic action
d) Stabilization of mast cells

605. Theophylline levels in blood are increased by- *(Delhi 92, PGMECT 07)*
a) Erythromycin b) Ciprofloxacin
c) Smoking d) Digitalis

606. Best -route to treat is steroid dependent asthmatic is - *(JIPMER 80, UPSC 87; AIIMS 87)*
a) Oral b) Intravenous
c) Subcutaneous d) Inhalation

607. The most potent bronchoconstrictor is- *(PGI 79)*
a) Histamine b)Bradykinin
c) Leukotrienes d) Acetylcholine

608. Serum levels of theophylline are not increased by -
a) Erythromycin b) Ciprofloxacin *(AIIMS 94)*
c) Cimetidine d) Steroids

609. Which is not true about beclomethasone ?
a) indicated for chroninc use *(TN 95)*
b) Inhalation steroid
c) Effective in acute asthma
d) Predipose to fungal infection

610. All of the following side effects are seen with Ipratropium bromide except - *(AI 96)*
a) Urinary retention b) Dryness of mouth
c) Scratching in trachea d) Bad taste

611. Drug of choice in Theophylline poisoning-
a) Cortisone b) Propranolol *(Kerala 96)*
c) Thyroxine d) Phenobarbitone

612. Ciprofloxacins increases the toxicity of theophyllin by- *(A197)*
a) Inhibiting metabolism
b) Decreasing excretion
c) Decrease seizure threshold
d) Promote absorption

613. Steroids in asthma - *(PGI 2000)*
a) Decreases sensitivity of bronchial epithelium to allergen
b) Decreases inflammatory response
c) Increases action of bronchodilators
d) Cause potent bronchodilation

614. The pharmacological effects of Methylxanthine include the following except - *(Kerala 2K)*
a) Mild cortical arousal with increased alertness
b) A direct positive chrontropic effect on the heart
c) Stimulation of secretion of gastric acid
d) Decreased in the contractility of diaphragm
e) A direct relaxant action on the smooth muscle airway

592)a 593)d 594)a 595)d 596)a 597)d 598)c,d 599)b 600)b,c 601)c 602)b 603)c 604)a 605)a,b 606)d 607)c 608)None 609)c 610)a 611)d 612)a 613)a,b 614)d

615. Zafirlukast is a potent - *(Jipmer 03)*
a) a-blocker
b) a - agonist
c) Leukotriene receptor inhibitor
d) Phosphodiesterase inhibitor

616. Which of the following leucotrine is used in treatment of Asthma - *(SGPGI05)*
a) Zilutin b) Zafirlukast
c) Cromoglycate d) Ipratropium

617. The drug NOT used in acute asthma is - *(MAHE 05, AIIMS03)*
a) Salbutamol b) Ipratropium
c) Monteleukast d) Hydrocortisone

618. With which of the following theophylline has an antagonistic interaction - *(AI05)*
a) Histamine receptors
b) Bradykinin receptors
c) Adenosine receptors
d) Imidazoline receptors

619. Which enzyme is inhibited by aminophylline ?
a) Monoamine oxidase *(AI 06)*
b) Alcohol dehydrogenase
c) Phosphodiesterase
d) Cytochrome P- 450

620. Reduced inflammation in airway produced by -
a) Fluticasone b) Budesonide *(PGI June 06)*
c) Theophylline d) Salbutamol
e) Ipratropium

621. 5-LO synthesis inhibitor is - *(COMED 2006)*
a) Zileuton b) Zafirlukast
c) Monteleukast d) All of the above

622. Which of the following is a leukotriene antagonist-
a) Montelukast b) Zileuton *(AI07)*
c) Omalizumab d) Nedocromil

623. Following has action on leukotriene receptor -
a) Montelukast b)Nicorandil *(PGMCET01)*
c) Ketotifen d) Zileuton

624. Which one of the following is the drug of choice for control of exercise-induced bronchial asthma ?
a) Theophylline *(UPSC-108)*
b) Ipratropium
c) Cromolyn sodium
d) Prednisolone

625. Which one of the following plants is a source of a medicinal substance called Theophylline ?
a) Cocoa b)Tea *(UPSC-108)*
c) Turmeric d) Vanilla

626. Long acting beta-2 agonist ? *(Aiims May 08)*
a) Albuterol b)Salmetarol
c) Pirlbuterol d) Orciprenaline

627. Sodium chromoglygate used in ? *(APPG 08)*
a) Phlyctenular conjunctivitis
b) Vernal conjunctivitis
c) Mucopurulent conjunctivitis
d) Membranous conjunctivitis

628. Ipratropium bromide used in Bronchial asthma is - *(UP 08)*
a) p - Sympothomimetics b) Methylxanthines
c) Anticholinergics d) Mast cell stabilizers

629. Which of the following is long acting sympathomimetics used in Bronchial asthma -
a) Salbutamol b) Terbutaline *(UP 08)*
c) Bamboterol d)Salmetrol

630. Theophylline metabolism interaction with ciprofloxacin - *(UP 08)*
a) Increases theophylline metabolism
b) Decreases theophylline metabolism
c) Increases ciproflexacin metabolism
d) Decreases ciprofloxacin metabolism

631. Theophylline over doses causes - *(UP 08)*
a) Bradycardia b)Seizures
c) Drowsiness to coma d) Bronchospasm

632. Theophylline therapeutic blood ranges - *(UP 08)*
a) 0-5 b)5-10
c) 5-15 d) 5 - 20

633. In Theophylline metabolism, drug interactions occurs with all except - *(UP 08)*
a) Cimetidine b) Phenobarbitone
c) Rifamipine d) Tetracyclines

634. Mechanism of action of theophylline in bronchial asthma include all of the following except - *(AI 10)*
a) Phosphodiesterase inhibition
b) Adenosine receptor antagonism
c) Increased histone deacteylation
d) Beta-2 receptor stimulation

635. Mechanism of action of theophylline in bronchial asthma is- *(AI10)*
a) Phosphodiesterase inhibition
b) Mast cell stabilization
c) Leukotriene antagonism
d) P_2 agonism

636. Which of the following is very effective in treatment of acute exacerbation of asthma and status asthmaticus? *(Maharashtra10)*
a) Fluticasone b) Budesonide
c) Ciclesonide d) None of the above

637. Theophylline toxicity level is increased by all except - *(PGIMay 10)*
a) Smoking b) Carbamazepine
c) Alcohol intake d)Rifampicin
e) Ciprofloxacin

ENDOCRINOLOGY

BROMOCRIPTINE

638. Bromocriptine is used in - *(NIMHANS 88, 89)*
a) Hyperthyroidism
b) Parkinsonism
c) Cushing syndrome
d) Stein leventhal syndrome

615)c 616)b 617)c 618)c 619)c 620)a,b 621)a 622)a 623)a 624)c 625)b 626)b 627)b 628)c 629) d 630) b 631)b 632) d 633) d 634) d 635) a 636) d 637)a,b,c,d 638) b

639. Prolactin secretion is inhibited by - *(PGI88)*
a) Dopamine b) Metoclopramide
c) TRH d)ACTH

640. Hyperprolactinamia is caused by- *(PGI88)*
a) Metoclopromide b) Pitutary adenoma
c) Bromocriptine d) Dopamine

641. Hyperprolactinemia is a side effect of- *(PGI 83)*
a) Bromocriptine b) Levedopa
c) Amntadine d) Metoclopramide

642. Bromocriptine is useful in all of the following except- *(AI89)*
a) Endogenous depression b) Parkinsonism
c) Infertility d) Acromegaly

643. Bromocriptine is not used in - *(JIPMER 92)*
a) Shock b) Suppression of lactation
c) Parkinsonism d) Protactinoma

644. Mechanism if action of bromocroptine is -
a) Action of post synaptic dopamine receptors
b) Inhibition of reuptake *(JIPMER95)*
c) Inhibition of hydrolysis of dopamine
d) Increase dopamine synthesis

645. Bromocriptine is used in the following disease excepts- *(AIIMS97)*
a) Postpill ammenorrohea
b) Galctorrohea
c) Corpus luteum cyst
d) Induction of ovulation

646. Drug of choice for hyperprolactinemia is -
a) Bromocriptine b) Dopa *(MAHE 98)*
c) Maprotiline d) Carbidopa

647. Which drug does not cause prolactin release - *(KERALA 2001)*
a) Metoclopromide b)Reserpine
c) Methyl dopa d) Apomorphine

648. True regarding bromocriptine - *(PGI02)*
a) Natural derivative b) Synthetic derivative
c) Has alfa-blocking action d) Decrease GI motility

649. LHRH agonist used in Ca prostate - (*PGMCET01)*
a) Goserelin b) Flutamride
c) Tamoxifen d) Finasteride

650. Which of the following is administered in a pulsatile manner - (*PGMCET 01)*
a) GnRH b)GHaH
c) FSH d) Estrogen

651. True about Octreotide are all except - *(AI 07)*
a) Is active orally
b) Supresses growth Hormone secretion
c) Useful for variceal bleeding
d) Useful in secretory diarrhea

ANTM-TH YROi P

652. Regarding T3 and T4 which is incorrect - *(AI 89)*
a) T3 concentration is more
b) T3 is more potent than T4
c) T3 and T4 have unequal biological activity
d) Concentration of T4 is more than T3

653. Thiouracil inhibits thyroid function by -*(DELHI 89)*
a) Destruction of thyrotropin
b) Formation of thiocyanate from thiouracil
c) Reduction of TSH production by the pituitary
d) Inhibition of thyroxine synthesis

654. The one which is a proved teratogen in experimental animals - *(AP 96)*
a) Propranol b) Propylthiouracil
c) Caffeine d) Vitamin- D

655. Which of the following is not antithyroid drug -
a) I_{131} *(JIPMER87)*
b) Carbimozole c) Potassium perchlorate
d) Thiouracil e) Propranolol

656. Radioiodine is used in the treatment of - *(AI 92)*
a) Papillary carcinoma
b) Follicular carcinoma
c) Hurthle cell adenoma
d) Anaplastic carcinoma

657. Thiocyanates and perchlorates acts by -
a) Inhibiting the uptake of iodide into the acinar cells *(NIMHANS86)*
b) Inhibiting convension of iodide into the acinar cell
c) Inhibiting the synthesis of monoiodotyrosine from iodine
d) Inhibiting the release to T3 and T4 in to the blood

658. Antithyroid drug propylthiouracil acts by all except-
a) Inhibiting iodinisation *(AI91)*
b) Inhibiting conversinon of mono iodotyrosine to Dicodotyrosine
c) Inhibiting peripheral deiodination of T3 and T4
d) Inhibiting the release of the hormone

659. Lugols iodine act by inhibiting- *(AIIMS 92)*
a) Peroxidase b) d-Iodinase
c) Iodide uptake d) Tyrosine coupling

660. Which of the following is true of propylthiouracil-
a) It is used in the treatment of myxedema
b) It has a long haff-life in the circulation *(AIIMS 93)*
c) It increases proteolysis of thyroglobulin
d) It blocks thyroxine synthesis

661. Methimazole differ from propylthiouracil in all except- *(JIPMER 98)*
a) Is secreated into milk
b) Has more volume of distribution
c) More protein bound
d) Degrades faster

662. Hypothyroidism may be caused by- *(PGI 98)*
a) Ethionamide b) Thiocetazone
c) Ethambutol d) Streptomycin

663. One of the following statement is NOT true -
a) T_4 is more plasma protein bound that T_3
b) T_3 is 3-5 times more potent than T_4 *(SGPGI05)*
c) T_4 is completely converted to T_3 in peripheral tissues
d) T_3 has short T1/2 than T_4

639)a 640)a,b 641)d 642)a 643)a 644)a 645)a 646)a 647)d 648)b,c,d 649)a 650)a 651)a 652)a 653) d 654) b 655) e 656) a,b 657) a 658) d 659) None 660) d 661) c,d 662) a 663) c

664. Which of the following is not used in the management of thyroid storm - *(Karnat 05)*
a) Potassium iodide b) Reserpine
c) Propranolol d) Calcium channel blockers

665. Carbimazole is associated with all except -
a) Choanal atresia *(AiimsMay07)*
b) Cleft lip and cleft palate
c) Scalp defect
d) Neck swelling

666. Which of the following is not used in the management of thyroid storm? *(DPG10)*
a) Potassium iodide b) Reserpine
c) Propranolol d) Calcium channel blockers

ANTI-DIABETES

667. Amino acid sequence of human insulin differs from porcine insulin in - *(PGI8 7)*
a) 1 Amino acid b) 2 Amino acid
c) 5 Amino acid d) None of the above

668. The use of phenformin is associated with development of- *(AIMS 88)*
a) Matabolic alkalosis b) Metabolic acidosis
c) Lactic acidosis d) Respiratory alkalosis

669. Newer insulins are - *(PGI 98)*
a) Acidic b) Alkaline
c) Neutral d) Monomers

670. Which of the following is not an indication for starting sulfonylurea therapy - *(AIIMS 99)*
a) Total pancreatectomy b)NIDDM
c) Diabetes after 60 years d)None

671. The following is an oral hypoglycemic agents excepts- *(AIIMS 84)*
a) Tolbutamide b) Dichlorophan
c) Chloropropamide d) Phenformin

672. Machanism of action of sulphonylureas - *(AI88)*
a) Increase in the number of insulin receptors
b) Increased sansitivity of receptors
c) Increase in insulin synthesis
d) None of the above

673. Chloropropamides metabolism is enhanced by-
a) Ethyl alcohol b) Diazepam *(TN90)*
c) Lorazepam d) Chlordiazepoxide

674. Insulin having the longest duration of action is -
a) Isophane insulin *(Karnat. 90)*
b) PZI
c) Insulin-zinc suspension
d) Crystalline insulin

675. Blood glucose levels in diabetics may be lowered by-
a) Codeine administration *(BHU 90)*
b) Insulin administration
c) Subcutaneous injection of adrenaline
d) All of the above

676. Least antigenic type of Insulin is- *(JIPMER 92)*
a) PZI b) Lente insulin
c) Humulin d) Isophaine insulin

677. Which of the following drugs enhance insulin release- *(JIPMER 95)*
a) Phenyton b) Carbamazepine
c) Sodium valproate d) Diazoxide

678. Best preparation of insulin for IV injection is -
a) Lente b) Semi lente *(Kerala 95)*
c) Regular insulin d) Humulin

679. Mechanism ofaction of Tolbutamide is- *(PGI 95)*
a) Production of insulin from pancreas
b) Glucose absorption from intestine
c) Gly cogenes is
d) None of the above

680. Oral hypoplycenic which causes cholestatic jaundice- *(AIIMS 95)*
a) Tolbutamide b) Glibenclamide
c) Glipizide d) Chlorpropamide

681. The main advantage of human insulin is -
a) Can be given to Patients allergic to animal insulin
b) Less side effects *(Delhi PG 96)*
c) Greater tl/2
d) Greater eficency

682. Sulfonylureas are mainly used in - *(Delhi, PG 96)*
a) Juvenile onset diabetes
b) Maturity onset diabetes
c) Diabetes in Pregnancy
d) Diabetes resistant to conventional insulin

683. Indication of newer insulins include all of the following except- *(Karn. 96)*
a) Insulin resistance
b) Pregnancy
c) Diabetic kidney disease
d) Insulin lipodystrophy

684. True about lente insulin- *(TN 98)*
a) Duration of action is 36 hours.
b) Clear alkaline solution
c) Cloudy acidic solution
d) Made up of 3 para of insulin zinc suspension (amophous) and 7 parts of insulin zinc suspension (crystaline)

685. Antidiabetic used safely in renal failure - (*PGI 02)*
a) Metformin b) Glimeperide
c) Glibenclamide d) Rosiglitazone
e) Repaglinide

686. Biguanides acts by following except - *(PGI97)*
a) t Insulin release from pancreas
b) t Glycolysis
c) *i* Gluconeogenesis
d) t Insulin binding to its receptors

687. True about lispro insulin is- *(Calcutta 2K)*
a) Given within 1/2 hour of meal
b) Reduces post prandial hypoglocemic episodes
c) Reduces preprandial glucose

688. $T_{1/2}$ of plasma insulin is- *(Calcutta 2K, Orisa 2K)*
a) 3-5 min b) 20-40 min
c) 6 hours d) 48 hrs

664)b 665)b 666)b 667)a 668)b,c 669)d 670)a 671)b 672)a 673)a 674)b,d 675)b 676)b 677)None
678) c 679) a 680) d 681) a 682) b 683) c 684) d 685) d 686) a 687) b 688) a

689. Which one of the following insulin secretagogue has shortest duration of action- *(UPSC 2001)*
a) Glibenclamide b) Glipizide
c) Gliclazide d)Repaglinide

690. The benzoic acid derivative which stimulates insulin secretion during meals used in treatment of diabetes mellitus - *(JIPMER 2002)*
a) Acarbose b) Rosiglitazone
c) Repaglinide d)Glimpride

691. Lactic acidosis is more likely to be caused by -
a) Gliclazide b) Acarbose *(UPSC02)*
c) Metformin d) Pioglitazone

692. The drug which reduce post - prandial hyperglycemia is - *(Jipmer 03)*
a) Metformin b) Guargum
c) Troglitazone d) Proglitazone

693. Oral hypoglycemic with anorectic action, used in obese patient is - *(Jipmer 03)*
a) Glibenclamide b) Glipizide
c) Metformin d) Trogitazone

694. Drug reducing post prandial blood glucos*z-(Jipmer*
a) Repiglitazone b) Glibenclaomide *04)*
c) Rosiglitazone d) Glyburide

695. Hypoglycemia is most common with - *(Jipmer 04)*
a) Glyburide b) Metformin
c) Rosiglitazone d) Acarbose

696. True about lispro insulin is - *(SGPG104)*
a) Action is faster and longer in duration than regular insulin
b) It is given after meals
c) Source is lamb
d) Action is faster and short in duration than regular insulin

697. New drug for increasing sensitivity of cells to Insulin - *(J&K 05, UP 02)*
a) Glibenclamide b) Venlafaxine
c) Pioglitazone d)Glipizids

698. Regarding Biguanides, all are true except -
a) Causes lactic acidosis *(APPGE 05)*
b) Causes hypoglycaemia
c) Glycogen synthesis
d) Insulin sensitizer

699. Insulin causes - *(APPGE 05)*
a) Na^+ entry into cells b) K^+ exit from cells
c) Na^+ exit/K^+ entry d) K^+ entry into cells

700. Hypoglycemia is side effect of which of following drug individually - *(PGMCET 01)*
a) Glipizine b) Metformin
c) Pioglitazone d) All of the above

701. All are short and rapid acting insulins except-
a) Lispro b)Aspart *(AI07)*
c) Glargine d)Glulisine

702. Longest acting insulin is - *(UP 08)*
a) Global zinc suspension
b) Insulin - zinc suspension
c) Neutral protamine hagedorm (NPH)
d) Protamine - zinc insulin

703. Which of the following statements regarding acarbose is false ? *(A11MS Nov 08)*
a) It acts by inhibiting the enzyme alpha-glucosidase
b) It reduces both pre and post-prandial hyperglycemia
c) It decreases the progression of impaired glucose tolerance to overt diabetes mellitus
d) It reduces fibrinogen level

704. Monomeric insulin is/are - *(PGI June 09)*
a) Glargine b)Detemir
c) Lispro Insulin d) Aspart insulin
e) NPH

705. All of the following statements about an alpha glucosidase inhibitor are true except- *(Manipal 09)*
a) Reduces intestinal absorption of carbohydrates
b) Effective in both type 1 and 2 diabetes mellitus
c) Hypoglycemia is a common and serious side effect
d) Can be used with other oral hypoglycemic

706. Which one of the following statements about biguanides is not true - *(Manipal 09)*
a) Do not stimulate insulin release
b) Decrease hepatic glucose production
c) Renal dysfunction is not a contraindication for their use
d) Can be combined with sulfonylureas

707. All of the following statements about an alphaglucosidase inhibitor are true except- *(Manipal 09)*
a) Reduces intestinal absorption of carbohydrates
b) Effective in both type 1 and 2 diabetes mellitus
c) Hypoglycemia is a common and serious side effect
d) Can be used with other oral hypoglycemic agents

708. Release of insulin from Pancreatic Beta cells is an example of- *(DELHIPG Mar. 09)*
a) Lipid diffusion b) Active
c) Endocytosis d) Exocytosis

709. Which of the following is/are sulfonylureas -
a) Glipizide b) Glibenclamide *(PGINov 09)*
c) Repaglinide d)Nateglinide
e) Exenatide

710. Insulin causes - *(DPG10)*
a) Na+ entry into cells b) K+ exit from cells
c) Na+ exit/K+ entry d) K+ entry into cells

711. Which of the following anti-diabetic drugs acts by inhibiting PRAR-g ? *(Maharashtra 10)*
a) Sulfonylureas b) Biguanides
c) Thiazolidinediones d) Acarbose

712. Not a sulfonylurea - *(Punjab 10)*
a) Glibenclamide b) Metformin
c) Chlorpropamide d) Glimepride

713. Glitazones act by - *(Jipmer 10)*
a) Increased insulin secretion
b) Increasing insulin sensitivity in peripheral tissues
c) Modifying receptor action
d) Increasing the number of GLUT-4

689) d 690)c 691)c 692)b 693)c 694)a 695)a 696)d 697)c 698)c 699) d 700)a 701)c 702) d 703)b 704)a,b,c,d 705)c 706)c 707)c 708)d 709)a,b 710)d 711)c 712)b 713)b

714. Features of metformin are - *(PGINov 10)*
a) Notorius for causing hypoglycaemia
b) Decreases LDL
c) Increases insulin release
d) vit B deficiency

715. Long acting Insulin are - *(PGI Nov 10)*
a) Glargine b) Insulin lispro
c) Protamine zinc insulin d) Insulin aspart
e) NPH

716. False about pioglitazone - *(A1IMS May 11)*
a) It PPARg agonist
b) It metabolized in liver
c) Not given in case of diastolic dysfunction
d) It acts on insulin gene and even in absence of insulin helps in metabolism of carbohydrate

717. A patient develops hypoglycemia. He was on insulin and acarbose. For treatment of above what is to be given - *(AIIMS May 11)*
a) Glucose b) Maltose
c) Sucrose d) Starch

718. Which does not cause hypoglycemia -
a) Insulin b) Glimipiride *(AIIMS May11)*
c) Nateglinide d) Acarbose

719. All are true about Exenatide except - *(AIIMSMay 11)*
a) Decreases glucagon secretion
b) It is GLP1 analogue
c) Used in type 1DM
d) Given subcutaneously

720. All of the following statements about meglitinides are true, except - *(AI11)*
a) Act by stimulating insulin release
b) Decrease Postprandial Hyperglycemia
c) Hypoglycemia is less common than with sulfonylureas
d) Act by decreasing insulin resistance

721. A patient with type II diabetes mellitus is taking metformin for last 10 years. Deficiency of which vitamin will be seen in this patient - *(PUNJAB 11)*
a) Thiamine b) Riboflavin
c) Vitamin B12 d)Pyridoxine

722. DPP - 4 inhibitor is - *(PUNJAB 11)*
a) Exenatide b) Vildagliptin
c) Pramlintide d) Repaglinide

723. In a patient with diabetes which of the following does not cause weight gain - *(Jipmer 11)*
a) Rosiglitazone b) Glibenclamide
c) GLP -1 analogues d) Metformin

STEROID

724. Adrenocortical steroids are inactivated by the following except - *(AP 86)*
a) By oxidation of the ring to various organic acids
b) By reduction of ring double bonds
c) Mainly in the Liver
d) By oxidation oaf 17-OH to 17 - keto

725. Metyrapone is useful in congenital adrenal hyperplasia because it inhibits - *(AI 90)*
a) 17-alpha hydroxylase b) 21 -alpha hydroxylase
c) 11-betahydroxlase d)Desmolase

726. Steroids are contra indiated in - *(PGI 87, AI88)*
a) Uveitis b) Spring catarrh
c) Episcleritis d) Herpetic corneal ulcer
e) Chronic simple glaucoma

727. Topical steroids cause - *(AI 88, MP 98)*
a) Glaucoma b) Cataract
c) Corneal opacities d) Optic neuritis

728. Cortisone and ACTH causes which CNS manifestation - **(***AIIMS 89)*
a) Affective disturbance b) Delirium
c) Confusion d)Schizophrenia

729. Parenteral steroids cause - *(AIIMS 86)*
a) Cataract b) Glaucoma
c) Corneal opacity d) Papilloedema

730. The type of cataract caused by the intake of steroid is - **0***CUPGEE 96, Orisa 98)*
a) Posterior subcapsular b)Anterior subcapsular
c) Central d) None of these

731. Steroid inhalation side effect - *(AP 96)*
a) Cushing syndrome
b) Oropharyngeal Candidiasis
c) Sedation
d) None

732. All of the following have mineralo-corticoid effect except- *(AI 89)*
a) Hydrocortisone b) Cortisone
c) Fluprednisolone d) Prednisolone

733. All of the following glucocorticoid has the least mineralocorticoid activity except- *(AI89)*
a) Betamethasone b) Triamcinolone
c) Hydrocortisone d)Fluprednisolo

734. Long term steroid treatment results in -
a) Resorption of bone matrix *(AIIMS 92)*
b) Decreased vitamin D activation
c) Dereased calcium loss in Urine
d) Increased calcium absorption from gut

735. Advantage of ACTH over prednisolone include a lower incidence of- *(PGI87)*
a) Osteoporosis
b) Fluid retention
c) Acne
d) Adrenal Insufficiency with intercurrent stress
e) Growth retardation in children

736. Inhalational glucocorticoids - *(AI95)*
a) Beclomethasone b) Flecticasone propionate
c) Budesonide d) Triamcinolone acetonide
e) Flunisolide

737. The corticosteroid without any glucocorticoid activity is - *(AI96)*
a) Aldosterone b) Fludrocortisone
c) DOCA d) Cortisol

714)b,d,e 715)a,c 716)d 717)a 718)d 719)c 720)d 721)c 722)b 723)d 724)a 725)c 726)d 727)a
728) a 729) a 730) a 731)b 732) None 733) c 734) a 735) d,e 736)All 737) c

738. Anabolic steroids may produce the following side effects except- *(Karnat 96)*
a) Precocious puberty in children
b) Cholestatic jaundice
c) Delayed closure of epiphysis in children
d) Acne in males and females

739. Long term steroid use has following effect on bone-
a) Decrease matrix of bone *(AI97)*
b) Disassociation of matrix to mineral ratio
c) Marked demineralisation
d) All of the above

740. Glucocorticoids causes - *(PGI98)*
a) *i* osteoid formation
b) IgF stimulation
c) T Ca^ absorption from stomach
d) Calcification of bone

741. Glucocorticoids are contraindicated in all except - *(MAHE98)*
a) Organ transplant b) Peptic ulcers
c) Hypertension d) Diabetes Mellitus

742. Which steroid is used as an aerosol - *(JIPMER 91)*
a) Prednislone b) Triamcinolone
c) Baclomethasone d) Betamethasone

743. Which of the following is the most potent miner alocorticoids- *(IN01)*
a) 11-deoxycorticosterone b) Fludrocortisone
c) Aldosterone d) Triamcinolone

744. All of the following are side effects of steroids except- *(J&K01)*
a) Osteoporosis b) Muscular Hypertrophy
c) Cataracts d) Psychoses

745. Steroids are not indicated in treatment of -
a) Hypercalcemia *(Kerala01)*
b) Respiratory distress
c) Intraventricular hemorrage
d) Enterocolitis

746. Which of the following affects adrenal secretion -
a) Reserpine b) Guanethidine *{SRMC 02)*
c) Clonidined) Hydralazine

747. Anti-inflammatory action of corticosteroids is due to blocking of- *{ J & K 05, AI1MS 91)*
a) 15 Lipo oxygenase
b) Prostaglandin syntheses
c) Thromboxane syntheses
d) Breakdown of phospholipids

748. Which one of the following is true of adrenal suppression due to steroid therapy - *(AI05)*
a) It is not associated with atrophy of the adrenal glands
b) It does not occur in patients receiving inhaled steroids
c) It should be expected in anyone receiving > 5 mg, Prednisolone daily.
d) Following cessation, the stress response normalizes after 8 weeks

749. Glucocorticoids act in inflammation by -
a) *i* Lipocortin b)TlL2 *(PGI June 06)*
c) T Lipocortin d)tCRP

750. Side effects of steroids are decreased by all of the following methods except - *(Manipal 2006)*
a) Alternate day dosing b) Biphosphonates
c) Along with NS AIDs d) Vit D and calcium

751. In which of the following disease is corticosteroids indicated - *(Karnataka - PG MEE 2006)*
a) Osteoporosis b) Peptic ulcer
c) Collagen disease d) Tuberculosis

752. Glucocorticoids with miner alocorticoids activity seen in - *(UP 07, 06)*
a) Triamcinolone b) Fludrocortisone
c) Cortisol d) Dexamethosone

753. In Equivalent concentrations, steroids are more potent in which form - *(AI 10)*
a) Gd b) Cream
c) Ointment d) Lotion

754. Which is not true about beclomethasone? *(DPG10)*
a) Indicated for chronic use
b) Inhalation steroid
c) Effective in acute asthma
d) Predispose to fungal infection

755. Which of the following is glucocorticoid receptor blocker? *(Maharashtra10)*
a) Aminoglutethemide b) Mifepristone
c) Trilostane d) Ketoconazole

756. Mineralocorticoid Receptors are found in all of the following, Except - *(AI11)*
a) Liver b) Colon
c) Hippocampus d) Kidney

757. The corticosteroid without mineralocorticoid activity is - *(Karn 11)*
a) Hydrocortisone b) Prednisolone
c) Methylprednisolone d) Triamcinolone

758. Steroids does not cause - *(PUNJAB 11)*
a) Hypertension b) Diabetes mellitus
c) Osteomalacia d) Infection

759. Not true about corticosteroids is - *(PUNJAB 11)*
a) Beclomethasone is used by inhalation in asthma
b) They are used as replacing agent
c) Prednisolone is used as antiinflammatory agent
d) Seroids increses the osteoid formation

760. Intermediate acting corticosteroid - *(Jipmer 11)*
a) Dexamethasone b) Triamcinolone
c) Cortisol d) Betamethasone

SEX-HORMONE

761. Estrogen is contra indicated in- *(PGI 88)*
a) Liver disease b)P.I.D
c) History of menorrhagia d) Carcinoma prostate

762. Drug used for medical castration is - *(AIIMS 82)*
a) G5H b) FSH antagonist
c) LHRH agonist d) Aminoglutathemide

738)c 739)a 740)a 741)a 742)b,c 743)c 744)b 745)None 746)b 747)a 748)c 749)c 750)c 751)c
752) b,c 753) c 754) c 755) b 756) a 757) d 758) c 759) d 760) b 761) a 762) c

763. Side effect of clomiphine citrate is - *(Kerala 95)*
a) Alopecia
b) Hot flushes
c) Hyper stimulation syndrome
d) All

764. Loss of libido in apostmenopausal women, treatment is - *(JIPMER 98)*
a) Low dose testesterone b) Estrogen
c) GnRH d) Prolactin

765. No t a p rogesterone is- *(TN 99)*
a) Mestranol b) Megestrol
c) Dehydrogesterone d) Norgesterol

766. Kalavathi, 22 years, recently married is receiving oral contraceptives. She develops cough with ex pectoration which was not controlled by antibiot ics. She was diagnosed to be having tuber culosis, and was put to ATT. Which ATT will result in failure of contraception? *(AIIMS 2001)*
a) INH b) Pyrazinamide
c) Rifampicin d) Streptomycin

767. Androgen antagonists includes- *(TGI01)*
a) Cyproterone b) Spironolactone
c) Cimetidine d) Progesterone
e) Minocycline

768. IVue of tamoxifen - *(PGI2000)*
a) Binids to estrogen receptors
b) T Estrogen production
c) *i* FSH production
d) T LH secretion

769. People with high risk for developing breast cancer can be prevented by prophylactic administration of- **(***Karnataka 02)*
a) Tamoxifen b) Aminoglutethimide
c) Diethystibesterol d)Flutamide

770. Use of oral contraceptive pills provides protection against all of the following except - *(Karnat 05)*
a) Carcinoma endometrium
b) Carcinoma ovary
c) Carcinoma cervix
d) Fibrocystic breast diseases

771. All are antiandrogens except - *(NIMHANS 06)*
a) Cytoproterone b) Cyprohepatadine
c) Spironolactone d) Cimetidine

772. Following are the adverse effects of estrogens except one - *(Karnataka - PG MEE 2006)*
a) Suppression of libido
b) Fusion of epiphyses
c) Hot flushes
d) Gynaecomastia in males

773. The drug that has the fastest onset of action in benign prostatic hyperplasia is - **(***Corned 08)*
a) Finesteride b) Tamsulosin
c) Dutasteride d)Flutamide

774. Finasteride is - *(MAHE 07, A107, Manipal 01)*
a) 5 a Reductase inhibitor
b) Androgen receptor inhibitor
c) Estrogen agonist
d) Steroids

775. Oral contraceptive failure occurs with - *(UP 07)*
a) Cimetidine b) Rifampicin
c) Morphine d) Ethanol

776. OCP should not be used with - *(AIIMSNov 07)*
a) Rifampicin b)INH
c) Streptomycin d) Pyrazinamide

777. Which one of the following antibiotics reduces effectiveness of oral contraceptive pills and may cause breakthrough bleeding ? *(UPSC-II08)*
a) Doxycycline b) Penicillin
c) Rifampicin d) Clindamycin

778. Mechanism of action of Clomiphene Citrate is -
a) Binds to estrogen receptors & causes negative feedback at hypothalamus *(A108)*
b) Binds estrogen receptors & prevents negative feed back at hypothalamus
c) Binds to progesterone receptors
d) Progesterone agonist

779. Finasteride is - *(Manipal 08)*
a) 5a reductase inhibitor
b) Androgen receptor inhibitor
c) Estrogen agonist
d) Steroids

780. Estrogen causes A/E- *(Manipal 08)*
a) Decreased appetite
b) Fluid and water retention
c) Disappearance of comedones
d) Venus thrombosis

781. Use of Tamoxifen for Breast cancer can cause all of the following adverse effects, Except - *(AI09)*
a) Thromboembolism
b) Endometrial carcinoma
c) Carcinoma in contralateral breast
d) Cataract

782. Effects of estrogen are all of the following, except- *(AI 09)*
a) Reduces HDL b) Reduces LDL
c) Increases triglycerides d) —

783. True about Drospirenone - *(PGI June 09)*
a) Spironolactone analogue
b) Used in OCP
c) Mineralocorticoid receptor agonist
d) Third generation progesterone
e) Dose in OCP is 3 mg

784. Which of the following is a selective estrogen receptor modulator ? *(DELHI PG Feb. 09)*
a) Raloxifene b) Mifepristone
c) Danazol d) Anastozole

763) d 764) b 765) a 766) c 767)a,b,c,d 768) a,c 769) a 770) c 771) b 772) c 773) d 774) a 775) b 776) a
777) c 778) b 779) a 780) c 781) c 782) a 783)a,b,d,e 784) a

785. Which of the following is true about clomiphene citrate- *(Punjab 10)*
a) Multiple ovulation in 15-30%
b) Used in male infertility
c) 20% of patients ovulate
d) Risk of ovarian malignancy is increased

786. Chronic treatment with tamoxifen can cause -
a) Carcinoma ovary *(Corned 10)*
b) Carcinoma endometrium
c) Carcinoma cervix
d) Carcinoma vulva

787. All of the following statements about Selective Estrogen Receptor Downregulator (SERD), Fulvestrant are true, Except - *(AI11)*
a) It is a selective estrogen antagonist
b) Used in the treatment of breast cancer
c) Slower acting, safer and less effective than SERM
d) May be administered as 'once a month' dose

788. Flutamide is - *(PUNJAB 11)*
a) 5 a reductase inhibitor
b) Androgen analogue
c) Androgen receptor blocker
d) Steroid synthesis inhibitor

OXYTOCIN & DRUGS ACTING ON UTERUS

789. The most active oxytocic of the ergot alkaloids is - *(AUMS 84)*
a) Ergotamine b) Bromocriptine
c) Ergonovine d) Dihydroergotamine

790. Regarding oxytocin - *(PGI02)*
a) Secreted by anterior pituitary
b) Acts on myoepithelial cells of breaSst
c) Causes contraction of uterus during labour
d) May cause retention of water
e) Has sympatholytic activity

791. All are true about misoprostol except - *(Punjab 10)*
a) It is a PGE1 analogue
b) Is used in MTP
c) Can be given in the patients of heart disease
d) Used in induction of labour

CONTRACEPTIVES

792. Which of the following are true of 'SahelP-
1. It is commenced on the fifth day of the start of menstrual bleeding *(UPSC 97)*
2. One tablet is taken twice a week in the first three months
3. It is a non-hormonal contraceptive Select the correct answer using the codes given below

Codes
a) 1,2 and 3 b) 1 and 2
c) 1 and 3 d) 2 and 3

793. Which of the following is predisposed by oral contraceptive therapy- *(PGI 86)*
a) Carcinoma breast b) Hepatic adenomas
c) Thromboemblism d) Endometrial carcinoma

794. Absolute contra indication for oral contraceptive are all except - *(AUMS87)*
a) Heart disease b) Epileptic patient
c) Migraine d) More than 30 years old

795. Oral Contraceptives are contra - indicated in -
a) Hypertension *(PGI 8 7)*
b) Fibroid c) Menorrhagia
d) Thromboembolism e) All of the above

796. Oral contraceptives is contra indicated in - *(PGI 90)*
a) Diabetes mellitus b) Hypertension
c) Fibroids d) Menorrhaiga

797. All of the following statements concerning methods of limiting family size, are true, except - *(UPSC 97)*
a) Women who do not breastfeed are much more likely to become pregnant than those who do
b) Globally the number of tubectomies far exceeds the number of vasectomies
c) The barrier methods (condoms and ddiaphragms) are perhaps the most effective at limiting family size
d) All anovulatory drugs are particularly likely to cause side effects in women over 35 years of age and women who smoke

798. OCPs can cause all except - *(AIIMS 98)*
a) Mastalgia b) Dysmennorhea
c) Chloasma d) Breakthrough bleeding

799. Absolute contraindication for oral contraceptive pills are - *(PGI 2K)*
a) Migraine b) Epilepsy
c) Pregnancy d) Thromboembolic episodes
e) Controlled diabetes

800. Drug which increase the activity of oral contraceptives is - *(AP 85 Jipmer)*
a) Rifampicinb) Sulphonamide
c) Pyrazinamide d) Streptomycin

801. The effect of oral contraceptives is decreased by all except- *(AI89)*
a) Phenytoin b) Phenobarbitone
c) Rifampicin d) Chlorpheniramine

802. Therapeutic indication of oral contraceptive is-
a) Suppression of lactation *(PGI 88)*
b) Atrophic rhinitis
c) Fibrocytic disease of breast
d) Stein leventhal syndrome

803. Select the appropriate statement about contraception in males - *(AIIMS 86)*
a) Gossypol is an effective oral contraceptive in males
b) Most promising regimen is the dual administration of androgen and progestin
c) The use of Gn-Rh antagonists with or without androgen may also be effective
d) Estrogen in combination with androgens is also effective
e) Contraception in the male remains investigational

785)d 786)b 787)c 788)c 789)c 790)b,c,d 791)c 792)d 793)a,b,c 794)b,c,d 795)a,b,d 796)a,b,c 797) c 798) b 799)c,d 800)None 801)d 802)c,d 803)a,e

804. The following are likely adverse reactions of oral contraceptives except- *(KARN94)*
a) Thromboembolism b) Weight gain
c) Carbohydrate intolerance d) Galactorrhea

805. Oral centraceptives produce all of following side effects except- *(DELHI PG 96)*
a) Chloasma b) Hyperlipidemia
c) Hypotension d) Breakthrough bleeding

806. Drug which decreases the efficacy of oral contra ceptives - *(AIIMS 9 7)*
a) Streptomycin b) Ranitidine
c) Rifampicin d)Captopril

807. Regarding oral contraceptive pills, untrue is-
a) Increased risk of fibroadenosis *(AIIMS 98)*
b) Decreased risk of ovarian epithelial carcinoma
c) Increased hepatic cell hematoma
d) Increased hepatic cell adenoma

808. OCP produces in liver - *(PGI98)*
a) CholangioCa b) Adenoma
c) Cirrhosis d) Atrophic changes

809. Ayoung lady on OCP develops severe abdominal pain and frank psychosis. Most likely cause is -*(PGI99)*
a) Hysteria b) Porphyria
c) Thrombosis d) Mesenteric infarct

810. Mechanism of action of an oral contraceptive containing a combination of oestrogen-progestin is the following except- *(KERLA 2K)*
a) Inhibition of ovulation
b) A change in the cervical mucus
c) Inhibition of motility of the uterine tubes
d) Inhibition of motility of sperms
e) Changes in the uterine endometrium

811. Mala-N contains- *(PGI 2000)*
a) Ethinyl estradiol 0.3 mg b) Norethisterone 1 mg
c) D-norgestrol 0.5 mg d) D-norgestrol 0.3 mg

812. Oral contraceptive pills can cause all except -
a) Mastalgia b) Dysmenorrhea *(DPG10)*
c) Chloasma d) Breakthrough bleeding

TOCOLYTICS

813. Not a tocolytic- *(AIIMS 97)*
a) Ethanol b) Dexamethasone
c) $MgS0_4$ d)Ritodrine

814. Prostaglandin synthetase inhibitors NOT used for tocolysis in premature labour becuase they-
a) Are ineffective in promoting uterine contraction
b) Are expensive *(UPSC97)*
c) May cause premature closure of ductus arteriosus
d) Are associated with metabolic acidosis

815. Which tocolytic drug results in pulmonary oedema (adverse effect)- *(AIIMS 2001)*
a) Ritodrine b) Indomethacin
c) Nifedipine d) Etosiban

816. All of the following are tocolytic agents, except - *(SGPGI05, AI80)*
a) Ritodrine b) Magnesium sulphate
c) Ergonovine d) Ethanol

MISCELLANEOUS

817. Receptors for all belong to steroid receptors super family except - *(AI 2002)*
a) Thyroxine b) Vitamin D
c) Epinephrine d) Retinoic acid

818. Failure of lactation occurs due to - *(AIIMS 82)*
a) Ergot b) Bromocriptine
c) Chlropromazine d) Metalclopromide

819. Calcitonin is not given in which diseaase-£4M£7*95)*
a) Paget's disease b) Thyrotoxicosis
c) Hyperparathyroidsm d) Hypervitaminosis D

820. Cyclic AMP serves as a second messenger in the secretion of all except - *(JIPMER 90)*
a) FSH b) Estrogen
c) Glucagon d) Epinephrine

821. Which does not penetrate the cell membrane -
a) Androstenedione b) Thyroxine *(AIIMS 91)*
c) Epinephrine d) Estrogen

822. All are true of absorption of calcium from the gut except - *(AIIMS 84)*
a) Vitamin D increases the absorption
b) Parathormone increase it
c) Calcitonin decreases it
d) An alkaline pH in the gut decreases calcium absorption

823. Which of the following hormone does not need a second a messenger - *(Delhi 84, 90)*
a) Oestrogen b) LH
c) FSH d) Glucagon

824. Which of the following is orally effective -
a) Thyroxine b) TSH *(JIPMER 81, DELHI 93)*
c) FSH d) Insulin

825. Humulin is - *(JIMPER 78, AMU87)*
a) An antagonist of growth homone
b) A newer penicillin
c) Human insulin
d) Human gonadotrophic hormone
e) A potent platelet aggregator

826. Somatostatin inhibits all except- *(AIIMS 79, 91)*
a) Insulin b) GH
c) Thyroxine d) Epinephrine

827. Most important use of calcitonin is in- *(AI96)*
a) Osteoporosis b) Renal osteodystrophy
c) Paget's disease d) Malignant hypercalcemia

828. Galactorhoea can be seen with all except - *(AI97)*
a) Methyl dopa b) Metoclopromide
c) Phenothiazine d) Bromocriptine

829. Stress increases all homones level except -*(AI97)*
a) ACTH b)Noradrenalin
c) Insulin d) Glucagon

804)d 805)c 806)c 807)a,c 808)b 809)b 810)c,d 811)b 812)b 813)b 814)c 815)a 816)c 817)c

830. ***True*** **about metabolism of vitamin D in kidney is -**
a) Conversion of 25 to 1,25 dihydroxy cholecalciferol
b) Formation of 25 hydroxylase *(PGI99)*
c) Activated form is deactivated
d) None

831. **All of the following hormones have cell surface receptors except -** *(AI 05)*
a) Adrenalin b)Growth Hormone
c) Insulin d)Thyroxine

832. **Which of the following is the drug of choice for Syndrome of Inappropriate Secretion of Antidiuretic Hormone (SIADH) -** *(AIIMS May 05)*
a) Demeclocycline b)Vasopressin
c) Thiazide diuretic d)Chlorpropamide

833. **Bisphosphonates act by -** *(AI 06)*
a) Increasing the osteoid formation
b) Increasing the mineralization of osteoid
c) Decreasing the osteoclast mediated resorption of bone
d) Decreasing the parathyroid hormone secretion

834. **Bisphosphonates are used in all of the following conditions except -** *(AIIMS Nov 07)*
a) Post menopausal osteoporosis
b) Steroid induced osteoporosis
c) Hypervitaminosis D
d) Malignancy associated Hypercalcemia

835. **Which of the following drugs used in osteoporosis acts both by decreasing the resorption of bone as well as inducing new bone formation ?** *(AIIMSNov 08)*
a) Teriparatide b) Ibadronate
c) Strontium ranelate d) Calcitonin

836. **Which of the following drugs is a long-acting somatostatin analogue -** *(Corned 09)*
a) Leuprolide b) Somatropin
c) Goserelin d) Octreotide

837. **Increased prolactin is associated with -**
a) Increased FSH *(AIIMS Nov 09)*
b) Increased libido
c) Increased testosterone
d) Increased estradiol

838. **Which of the following drugs is both antiresopti ve and bone formative?** *(AIIMS May 10)*
a) Strontium ranelate b) Calcitonin
c) Ibadronate d) Teriperatide

839. **Bone resorption is enhanced by -** *(DPG10)*
a) PGD2 b) PDF2
c) PGE2 d)PG12

840. **Aldosterone antagonist are -** *(PGINov. 10)*
a) Eplerenone b) Spironolactone
c) Amiloride d) Triamterene
e) Amiloride

841. **SERM drug used in treatment of osteoporosis -**
a) Raloxifene b) Estrogen *(AIIMS Nov 10)*
c) Strontium d)Alendroate

842. **Octreotide is used in all except -** *(AIIMSMay 11)*
a) Insulinoma b) Glucagonoma
c) Glioma d) Carcinoids

843. **Which of the following agent increases bone resorption?** *(Karn11)*
a) Fluorides b) Growth hormone
c) Loop diuretics d) Androgens

844. **The FALSE statement about desmopressin is that it-**
a) Is a synthetic peptide *(Karn11)*
b) Can be administered intranasally
c) Is a selective VD receptor agonist
d) Is effective in nephrogenic diabetes insipidus

845. **Intranasal calcitonin is used for the treatment of -**
a) Hypercalcemia *(Jipmer11)*
b) Paget's disease
c) Post menopausal osteoporosis
d) Secondary hyper parathyroidism

C.N.S.

ALCOHOL

846. **All are the side effects of disulfiram except -**
a) Breath odour, metallic taste *(PGI 81, AIIMS 83)*
b) Increase in libido
c) Confusional states
d) Hypothyroidism

847. **Alcohol should not be given with-** *(TN 89)*
a) Sulphonamide b)Clonidine
c) Reserpine d) Metronidazole

848. **Methanol causes blindnes due to its-**
a) Hypersensitivity reactions *(AI 89, Kerala 90)*
b) Conjugated products
c) Idiosyncratic reaction
d) Oxidative products

849. **In severe alcohol intoxication, the blood ethanol exceeds -** *(AIIMS 82)*
a) 100 mg/dL b) 200 mg/dL
c) 300 mg/dL d) 400 mg/dL

850. **Drug of choice for Delirium tremens is -***(AIIMS 91)*
a) Haloperidol b) Chlorpromazine
c) Diazepam d) Morphine

851. **Alcohol intolerence is not caused by -** *(AIIMS 92)*
a) Sulfonamide b) Penicillin
c) Furazolidine d) Cephalosporin

852. **Paraldehyde on exposure to air changes into -**
a) Acetaldehyde b) Benzoic acid (*DNB89*)
c) Ethanol d) Benzaldehyde
e) Acetic Acid

853. **The major factor in terminating the action of ethanol is-**
a) Biotransformation *(AIIMS 80, 86)*
b) Excretion through lungs
c) Excretion unchanged in urine
d) Excretion in feces
e) None of the above

854. **Alcohol cannot act as complete food because -**
a) Calories produced are inadequate even for basal metabolism *(AIIMS 79, Delhi 86, 88)*
b) Absence of vitamins
c) Cannot be stored in body
d) All of the above

830) a 831) d 832) a 833) c 834) c 835) c 836) d 837) d 838) a 839) c 840) a,b 841) a 842) c 843) c
844) d 845) c 846) b,d 847) d 848) d 849) c 850) c 851)a,b,c 852) e 853) a 854) d

855. Flushing occurs following alcohol ingestion in patents taking- *(Kerala 95)*
a) Metronidazole b) Penicillin
c) Tetracyclin d) Chloramphenicol

856. For detoxification of alcohol withdrawal drug used in-
a) Disufiram b) Oxazepam *(JIPMER99)*
c) Naltrexone d) Adrenaline

857. Drug used to prevent from indulging in alcoholism in one who has abstenance from alcohol -*(PGI2000)*
a) Clonidine b) Disulfiram
c) Chlordiazepoxide d) Naltrexone
e) Acamprosate

858. Drug used in uncomplicated alcohol withdrawal ?
a) Diazepam b) Clonidine *(AiimsMay08)*
c) Propanalol d) Methadone

859. Ethanol increases urine output by - *(Corned 10)*
a) Inhibiting Na+ ion reabsorption
b) Suppressing ADH secretion
c) Increasing glomerular filtration rate
d) Suppressing H+ ion secretion

SEDATIVES & HYPONOT1CS

860. Mandrax is combination of - *(JIPMER 90)*
a) Hypnotic and analgesic
b) Hypnotic and antihistamine
c) Hypnotic and antipyretic
d) Hypnotic and antiinfluenzal

861. Which is true regarding benzodiazepines-
a) GABA agonist *(PGI 01)*
b) Diazepam is a short acting benzodiazepine
c) Diazepam causes lesser respiratory depression
d) Nitrazepam is metabolized in liver
e) Diazepam has higher abuse potential than midazolam

862. True about benzodiazepines- *(PGI2000)*
a) Increased release of GABA (GABA agonist)
b) Antagonzing release of GABA
c) Lorazepam is shorter acting than temazepam
d) Atropine its antagonist

863. Mechanism of action of GABA is on - *(PGI 99)*
a) G protein b) Tyrosine kinase
c) PIP/DAG d)5-HT

864. Barbiturate is metabolized by- *(PGI 97)*
a) Glucuronide conjugation
b) Oxidation, dealkylation
c) Acetylation
d) All of the above

865. Alkalinity of urine is done in - *(PGI 97)*
a) Barbiturate poisoning b) Lithium toxicity
c) Alprazolam overdose d) Diazepam toxicity

866. The mechanism of action of barbiturate on cerebrum is- *(PGI 97)*
a) Scavenger of radicles
b) Increase BMR in active area of brain
c) Acts on Cl" channel complex
d) Decrease intracranial pressure

867. Which of the following does not bind to GABA receptor chloride channels - *(AI04)*
a) Ethanol b) Alphaxolone
c) Zolpidem I d) Buspirone

868. Drugs of choice for insomnia in elderly - *(Manipal 04)*
a) Diazepam b)Fluoxetin
c) Flurazepam d) Oxazepam

869. Inverse agonist of benzodiazepine receptor is -
a) Phenobarbitone b)Flumazenil *(AI05)*
c) Beta-carboline d) Gabapentin

870. All of the following are hallucinogens, except -
a) LSD b) Phenhylcyclidine *(AI 05)*
c) Mescaline d) Methylphenidate

871. Which of the following statements best describes mechanism of action of benzodiazepenes -
a) Benzodiazepenes activate GABA receptor in the spinal cord *(Karnat 05)*
b) Their inhibition of GABA transminase lead to increased levels gaba
c) Benzodiazepenes block glutamate receptors in hierarchical neural pathways in the brain
d) They increase the frequency of opening of chloride ion channels that are coupled to GABA receptors

872. The following are the benzodiazepines of choice in elderly and those with liver disease, *except-*
a) Lorazepam b) Oxazepam *(AI06)*
c) Temazepam d) Diazepam

873. The following statements regarding benzodiazepines are true except - *(AI 06)*
a) Binds to both $GABA_a$ and $GABA_b$ receptors
b) They have active metabolites
c) Decreases nocturnal gastric secretion in human being
d) Extensively metabolized by CYP enzymes 3

874. Tiazinadine is - *(Manipal 2006)*
a) $GABA_a$ agonist b) Central a_2 agonist
c) Anti-muscaranic agent d) GABA B agonist

875. Moclobemide is - *(APPG 2006)*
a) SSRI
b) Antipsychotic drug
c) MAO inhibitors
d) Prevent recyclation of adrenaline

876. p-carboline is_____ of benzodiazepines -
a) Inverse agonist *(PGMCET07)*
b) Partial agonist
c) Antagonist
d) Agonist antagonist

877. All act through GABA receptors except -
a) Benzodiazepine *(AIIMS Nov 07)*
b) Barbiturates
c) Zopiclone
d) Promethazine

878. Which of the following drugs is not given for sedation, but has sedation as side effect -
a) Antihistamine and antidepressant *(AIIMSNov 07)*
b) Phenytoin
c) Cyclosporine and macrolides
d) Amphotericin B

855) a 856) b 857)b,c,d,e 858) a 859) b 860) b 861)c,d 862) c 863) a 864) d 865) a 866) c 867) d 868) d
869) c 870) d 871) d 872)d 873)a 874)b 875)c 876)a 877)d 878)a

879. The following is true regarding benzodiazepines -
a) It alters sleep pattern more than sedatives
b) All have pharmacologically active metabolites
c) Induces liver enzymes *(ARMSNov 07)*
d) If taken in higher doses it is less toxic than other sedatives

880. Flumazenil is a - *(A108)*
a) Diazepam antagonist
b) Diazepam reverse agonist
c) Agonist at BZD receptors
d) Selective serotonin reuptake inhibitor (SSRI)

881. Benzodiazepine antagonist ? *(AiimsMay08)*
a) Flumazenil b) Naloxone
c) Furazolidone d) Naltrexone

882. Shortest acting benzodiazipine ? *(APPG 08)*
a) Midazolam b) Lorazepam
c) Diazepam d) Clonazepam

883. Flumazenil is - *(UP08)*
a) Benzodiazepine antagonist
b) Benzodiazepine agonist
c) Melatonin receptor agonist
d) GABA analogue

884. Morphine cannot be used in all the following conditions except - *(Manipal09)*
a) Head injury b) Asthma
c) Hypot hydroidism d) Diabetes

885. Morphine cannot be used in all the following conditions except- *(Manipal09)*
a) Head injury b) Asthma
c) Hypothyroidism d) Diabetes

886. Flumazenil, false is - *(AIIMSNov 09)*
a) It is specific antagonist of BZD
b) It may be used in barbiturate poisoning as it acts on the same receptor i.e. gabaA
c) Given intravenously
d) Acts on gabaA receptor

887. Action not mediated by omega 2 receptors of benzodaizepines - *(Punjab 10)*
a) Hypnosis b) Anxiety
c) Sedation d) Muscle relaxation

888. Which among the following benzodiazepines has no active metabolite - *(Corned 10)*
a) Diazepam b) Lorazepam
c) Flurazepam d)Prazepam

889. All the following statements are true of diazepam EXCEPT thatit- *(Karn 11)*
a) Has high therapeutic index
b) Causes less distortion of sleep architecture
c) Causes microsomal enzyme induction
d) Has lower abuse liability

EPILEPSY

890. When carbamazepine is administered one should avoid- *(JIPMER 95)*
a) Erythromycin b) Amoxycillin
c) Ceftriaxone d) Sulfamethoxazole

891. Arun, diagnosed to have epilepsy recently and put on phenytoin. He was previously on antidepressents. He has developed fatigue and anorexia. His Hb=8.0; TC=7500 ; ESR=30 in first hour; SGOT=35; SGPT=35 and B-=0.6. the test for diagnosis would be - *(ARMS99)*
a) Chest x-ray b) Urine culture
c) MCV d) Blood culture

892. Treatment of choice of myoclonic jerks and absence seizure is - *(JIPMER 79, ARMS 87, 88)*
a) Carbamazepine b) Phenytoin
c) Valproate d) Ethosuximide

893. Which anti-eplieptic acts by potentiating the action of GABA - *(ARMS87)*
a) Valproic acid b) Carbamazepine
c) Phenytoin d) Suxinamides
e) Barbiturate

894. Which anticonvulsant is not used in Generalised Tonic clonic convulsion- *(ARMS82)*
a) Phenobarbitone b) Ethosuximide
c) Phenytoin d) Carbamazepine

895. Drug used to treat myoclonus in children is - *(PGI88)*
a) Clonazepam b) Sod. valproate
c) Phenobarbitone d) Ethosuximide

896. Absence seizures is treated by- *(AI91)*
a) Phenobarbitone b) Ethosuximide
c) Diazepam d) Phenytoin

897. Phenytoin dose should be reduced with all of the following except- *(ARMS79)*
a) Cimentidine b)Clofibrate
c) Choramphenicol d) Rifampicin

898. All are used in treatment of epilepsy except-
a) Ethosuximide b) Reserpine *(Kerala 94)*
c) Acetazolamide d) Vigabatrine

899. Use of which antiepileptic drug causes gingival hypertrophy and hirusitism? *(TN95)*
a) Primidone b) Diphenil hydantoin
c) Diazepam d) Carbamazepine

900. Which antiepileptic drug in therapeutic doses causes least sedation? *(TN 95)*
a) Primidone b) Clonazepam
c) Phenytoin d) Phenobarbitone

901. Carbamazepine is useful in the following conditions EXCEPT- *(Karn95)*
a) Grandmal epilepsy b) Petitmal epilepsy
c) Psychomotor epilepsy d) Trigeminal neuralgia

902. Phenytoin Causes- *(Assam95)*
a) Paracortical Hyperplasia
b) Follicular Hyperplasia
c) Osteoporosis
d) Paracortical Hypertrophy

903. Phenytoin does not cause- *(U.P96)*
a) Osteomalacia b) Gynacomastia
c) Gum hyperplasia d) Megaloblastic anemia

879) d 880)a 881)a 882)a 883)a 884)d 885)d 886)b 887)a 888)b 889)c 890)a 891)c 892) c
893) a,e 894) b 895) a,b 896) b 897) d 898) b 899) b 900) c 901) b 902) a 903) None

904. The drug carbamazepine is used for all except-
a) MDP *(AIIMS 97)*
b) Partial seizures
c) Trigeminal neuralgia
d) Migraine

905. Carbamezipine is used in all the following conditions except- *(All India 97)*
a) Mania b) Schizophrenia
c) Alcohol withdrawl d) Temporal lobe epilepsy

906. Drugs which increase GABA level in brains-(.4/*97)*
a) Diazepam b) Phenobarbitone
c) Sodium valproate d) Carbamazepine

907. Drug of choice of psychomotor epilepsy is - *(Rajasthan 97)*
a) Valproic acid b) Carbamazepine
c) Ethosuccimide d) Phenytoin

908. VIGABATRINis- *(Al 99)*
a) GABA agonist
b) GABA transaminase inhibitor
c) NMDA agonist
d) Dopa decarboxylase inhibitor

909. Which is not used in status epilepticus? *(Burdwan*
a) Lorazepam b) Phenytoin *2K)*
c) Phenobarbitone d) Valproate

910. Which of the antiepileptic drug contraindicated in pregnancy - **(***APPGE 04)*
a) Carbamazepine b) Phenobarbitone
c) Valproate d) Phenytoin

911. Antiepileptic which is also a mood stabilizer is - *(IN04)*
a) Phenytoin b) Phenobarbitone
c) Sodium valproate d) Diamox

912. All of the following are indicated in the treatment of petitmal epilepsy except - **(***SGPGI05)*
a) Ethosuximide b) Sodium-valproate
c) Phenytoin d) Clonazepam

913. Drug of choice in simple partial seizure is -
a) Carbamezapine b) Phenobarbitone *(SGPGI 05)*
c) Diazepam d) Phenytoin

914. With chronic use is seizure state, the adverse effects of this drug include coarsening of facial features, hirsutism, gingival hyperplasia and osteomalacia- *(Kamat 05)*
a) Carbamazepine b) Ethosuccimide
c) Gabapentin d) Phenytoin

915. Which of the following drugs exerts its antiseizures activity mainly as a result of interference with ion conductance through sodium channels, which results in inhibition of high frequency repetitive firing of neurons - *(MAHA 05)*
a) Carbamazepine b) Clonazepam
c) Ethosuximide d) Gabapentin

916. Which of the following antiepileptic agents acts on the GABAergic system to decrease the uptake of GABA into neurons and glial cells- *(AIIMS Nov 05)*
a) Vigabatrin b) Progabide
c) Gabapentin d)Tiagabine

917. Ethosuximide is used in the treatment of - *(AI06)*
a) Tonic-clonic seizure b) Absence seizure
c) Myoclonic seizure d) Simple partial seizure

918. Concomitant administration of clonazepam with which of the following antiepileptic drug can precipitate absence status - *(AI 06)*
a) Sodium valproate b) Phenobarbitone
c) Carbamazepine d) Phenytoin

919. Which one of the following drugs does not interfere with folic acid metabolism ? *(AI06)*
a) Phenytoin b) Gabapentin
c) Phenobarbitone d) Primidone

920. All are side effects of phenytoin -except -*(NINHAMS*
a) Hirsutism b) Gum hypertrophy*06)*
c) Ataxia d) Hypoglycemia

921. All are side effects of valproic acid except - *(NIMHANS06)*
a) Polycystic ovaries b) Fulminant hepatitis
c) Tremor d) Ataxia

922. Carbamazepine in elderly causes - *(COMED 2006)*
a) Hypernatremia b) Hyponatremia
c) Hyperkalemia d) Hypokalemia

923. Hepatotoxicity caused by valproate can be prevented by- *(Manipal 2006)*
a) Zinc b) Carnitine
c) Pyridoxine d) VitK

924. Which of the following is not an antiepileptic agent-
a) Phenytoin b) Topiramate (*AI 07)*
c) Flunarazine d) Carbamazepine

925. All of the following antiepileptic agents act via Na^+ channel except - *(AI07)*
a) Vigabatrin b) Phenytoin
c) Valproate d) Lamotrigne

926. Regarding phenytoin all are true except -
a) Potent microsomal enzyme inducer
b) Highly protein bound *(AIIMS Nov 07)*
c) At lower concentration it follows zero order kinetics
d) With increasing dose, the T 1/2 increases

927. Which one of the following anti epileptic drugs can be used as a mood stabilizing drug - *(UPSC-108)*
a) Phenobarbitone b) Phenytoin
c) Sodium valproate d) Lamotrigine

928. Which one of the following is an anticonvulsant of choice for alcohol withdrawal seizures -*(UPSC-108)*
a) Phenytoin b) Sodium valproate
c) Carbamezapine d) Benzodiazipine

929. Which statement is true about carbamazepine -
a) Used in trigeminal neuralgia *(AiimsMay08)*
b) Carbamazepine is an enzyme inhibitor
c) Can cause megaloblastic anemia
d) It is the drug of choice for status epilepticus

930. What is the drug of choice of antiepilepsy in porphyria ? *(APPG 08)*
a) Phenytoin b) Phenobarbitone
c) Valproate d) Clonazepam

904)d 905)b 906)c 907)b,d 908)b 909)d 910)c 911)c 912)c 913)a,d 914)d 915)a 916)d 917)b
918)a 919)b 920)d 921)a 922)b 923)b 924)c 925)a 926)c 927)c,d 928)d 929)a 930)d

931. Anticonvulsant drugs, which are also used to cure psychiatric disorders are - *(PGIDec 08)*
a) Phenytoin b) Na valproate
c) Lamotrigine d)Topiramate
e) Levetiracetam

932. Adverse effects of valproic acid derivatives include the following, Except - *(AI09)*
a) Alopecia b) Liver failure
c) Weight gain d) Osteomalacia

933. TVue about anticonvulsants - *(PGI Nov 09)*
a) Carbamazepine safe in pregnancy
b) Lamotrigine is safe
c) Monotherapy is recommended
d) Newer drugs are safe

934. Which of the following about phenytoin is true -
a) It follows zero order kinetics *(AIIMSNov09)*
b) Not a hepatic enzyme inducer
c) It is excreted unchanged in urine
d) It is not teratogenic

935. Ethosuxamide is the drug of choice for - *(AI10)*
a) Generalized tonic clonic seizures
b) Complex partial seizures
c) Absence seizures
d) Myoclonic seizures

936. All of the following statements about phenytoin are true, except - *(AI 10)*
a) Follows saturation kinetics
b) Is teratogenic
c) Is highly protein bound
d) Stimulates insulin secretion

937. Fetal hydantoin syndrome is caused by - *(AI 10)*
a) Phenytoin b) Alcohol
c) Tetracycline d) Sodium valproate

938. Carbamazepine in elderly causes - *(DPG10)*
a) Hypernatremia b) Hyponatremia
c) Hyperkalemia d) Hypokalemia

939. True about phenytoin is - *(PUNJAB 11)*
a) Not highly protein bound
b) Induces metabolism of other drugs
c) At very low doses, zero order kinetics occurs
d) Sedating antiepileptic

ANTI-PARKINSONISM

940. In the basal ganglia, the dopaminergic activity is balanced by- *(UPSC 2K)*
a) Serotonergic system b) Cholinergic system
^ c) GABA d) Glutamate

941. Bromocriptine is- *(Jipmer 87)*
a) A partial agonist of dopamine
b) A partial antagonist of dopamine
c) Used in the treatment of parkinsonism
d) Used to reduce GH secretion in acromegaly
e) All except b are correct

942. Which drug should not be given alongwith Levodopa-
a) Carbidopa b) MAO Inhibitors *(AI88)*
c) Atropine d)Benserzide

943. Drug of choice in drug induced parkinsonism is -
a) Levodopa b)Benzhexol *(AI90)*
c) Amantidine d) Carbidopa

944. Central Inhibitor of dopamine metabolism is-
a) Carbidopa b)Deperenyl *(AI 93)*
c) Orphenadrine d) Bromocriptine

945. Which of the following is contraindicated with levodopa? *(Karnat 96)*
a) Carbidopa b) Vitamin B Complex
c) Selegilline d) Methyldopa

946. Pergolide used in the treatment of Pasrkinsonism acts as- *(J&K2001)*
a) Dopamine agonist b) MAO - B inhibitor
c) MAO-A inhibitor d) Anticholinergic

947. COMT inhibitors is - (*PGMCETOn*)
a) Tolcapone b) Sertraline
c) Amantadine d) Fluoxetine

948. Drug of choice in drug induced parkinsonism is -
a) Levodopa b)Benzhexol *(UP 08)*
c) Selegilline d) Amantadine

949. Antiparkinsonism drugs are - *(PGI Dec 08)*
a) Rotigotine b) Rivastigmine
c) Quinagolide d)Ropinirole
e) Amantadine

950. Which of the following agents enhances the bioavailability of levodopa in patients with Parkinson's disease ? *(DELHIPGFeb. 09)*
a) Amantadine b)Ropinirole
c) Entacapone d) Selegiline

951. True statements about antiparkinsonism drugs -
a) Off & on phenomenon is seen with levodopa because up & down regulation of dopamineric receptor *(PGI Nov 09)*
b) Tolcapone cause greenish discolouration of urine
c) Apomorphine is used in treatment
d) Quinagolide is an ergot derivative
e) Ropinirole is used in restless leg syndrome

952. Methyldopa is primarily used in - *(AI 10)*
a) Parkinsonism
b) Pregnancy induced hypertension
c) Hirsuitism
d) Refractory hypertension

953. L-Dopa is combined with carbidopa in the treatment of parkinsonism to - *(AI 10)*
a) Decrease the efficacy of levodopa
b) Inhibit peripheral decarboxylation of levodopa
c) Increase the dose of levodopa required
d) Inhibit conversion of levodopa to dopamine in theCNS

954. Dopamine agonist used in treatment of parkinsonism? *(Maharashtra 10)*
a) Ropinirole b) Pramipexole
c) Bromocriptine d) All of the above

931)b,c,d,e 932)d 933)c 934)a 935)c 936)d 937)a 938)b 939)b 940)b 941)a,b,c,d 942)b,c 943)b 944) b 945) b 946)a 947)a 948)b 949)a,d,e 950)c 951)a,b,c,e 952)b 953)b 954)d

955. Not true about levodopa - *(PUNJAB 11)*
a) Shows on/off phenomenan
b) Penetrates poorly in brain
c) It can cause involuntary movements
d) Should not be given with pyridoxine

ANTI-PSYCHOTIC

956. Rabbit syndrome is a - *(Karnat 99)*
a) Late onset. Drug induced extra pyramidal symptoms
b) Late onset, drug induced anticholinergic side effect
c) Intermediate onset, drug induced extra pyramidal symptoms
d) Late onset effect of Parkinson's disease

957. Patient on phenothiazines complains of involuntary perioral movement this is suggestion of - *(AJ 9 7)*
a) Tardive dyskinesia
b) Torsion dystonia
c) Good pronnosis schizophrenia
d) All of the above

958. Cannabis has been used for the following medici nal purposes except - *(JIPMER 80, DNB 88)*
a) Epilepsy b) Glaucoma
c) Nausea d)TICS

959. Refractory schizophrenia - What is the treatment of choice- *(JIPMER 2003)*
a) Haloperidol b) Flupenthixol
c) Trifluoperazine d) Clozapine

960. The treatment of akathisia includes - *{PGI81, AIIMS*
a) Amantadine b)Benzhexol *86)*
c) Propranolol d) All of the above

961. The rabit syndrome (consisting of fine, rapid movement of the lips that mimic chewing movements of a rabit) is effectively treated by - *(PGI 81, NIMHANS 90)*
a) Trihexyphenidyl b) Lorazepam
c) Lithium d) Levodopa

962. Clozapine (a newer antipsychotic) is commonly associated with - *(PGI 80, NIMHANS 90)*
a) Seizures b) Depression
c) Agranulocytosis d) Tardive dyskinnesia

963. Phenothiazines are used in treatment of -
a) Depression *(Delhi 96)*
b) Organic brain syndrome
c) Anxiety neurosis
d) All

964. Irresistable urge to move about and increased motor activity is- *(IN 97)*
a) Rabbits syndrome
b) Malignant neuroleptic syndrome
c) Akathisia
d) Tardive dyskinesia

965. Treatment of choice for Ballismus - *(PGI 97)*
a) Chlorimipramine b) Amtryptiline
c) Haloperidol d) Busipirone

966. Clozapine causes - *(PGI 98)*
a) Sialorrhoea b) Hypertension
c) Akathesia d) Agranulocytosis

967. Vasanthi 45 years, was brought to casualty with abnormal movements which included persistent deviation of neck to right side one day before she was prescribed Haloperidol 5 mgs three times daily from the psychiatry OPD. She also had an altercation with her husband recently. Which of the following is the most likely cause for her symptoms - *(AIIMS 2K)*
a) Acute drug dystonia
b) Conversion reaction
c) Acute psychosis
d) Cerebrovascular accident

968. Akathisia is best treated with - *(Jipmer 2002)*
a) Haloperidol b) Fluoxetine
c) Lithium d) Propranolol

969. Least extrapyramidal side effects are seen with -
a) Clozapine *(PGI 2002)*
b) Thioridazine c) Haloperidol
d) Triflouperazine e) Chlorpromazine

970. Which phenothiazine has the least extra pyramidal effect- *(AI89)*
a) Thioridazine b) Chlorpromazine
c) Triflupromazine d) Fluphenazine

971. Which of the following is a longest acting butyrophenone- *(PGI 90, 93)*
a) Haloperidol decanoate b)Triperidol
c) Flupenthixol d) Penfluridol

972. I.V. fluphenazine decanoate is drug of choice in-
a) Simple Schizophrenia *(AIIMS 81, 84)*
b) Hebephrenic Schizophrenia
c) Catatonic Schizophrenia
d) Paranoid Schizophrenia

973. False statement regarding clozapine-
a) Used in resistant schizo phrenia *(All India 97)*
b) Can cause agranulocytosis
c) Decreases on & off effect
d) Has maximum extrapyramidal effects

974. Apatient on haloperidol for psychosis develops fever, altered sensorium and labile hypertension. Drug useful in treatment of this patient is - **(***UPSC 02)*
a) Cefotaxime b) Bromocriptine
c) Largactil d)Propanolol

975. Drug of choice for the treatment of negative symptoms of schizophrenia is - **(***Karnataka 02)*
a) Chlorpromazine b) Haloperidol
c) Clozapine d) Doxepin

976. Long term antipsychotic use definitely causes -
a) Depression b) Mania (*APPG 03)*
c) Schizophrenia d) Tardive dyskinesia

977. Antipsychotic with less extra pyramidal side effects- **(***Jipmer 04)*
a) Loxapine b)Pinozide
c) Qutetapine d) Resperidone

978. Which of the following medication is associated with an increased risk of agranulocyosis - *{Karnat 05,*
a) Clozapine b) Imipramine *UPSC 07,01)*
c) Lithium d) Haloperidol

955) b 956) a 957) a 958)a,c,d 959) d 960) d 961) a 962) a,c 963) c 964) c 965) c 966) a,d 967) a 968) d
969) a 970) a 971) d 972) a 973) d 974) b 975) c 976) d 977) c 978) a

979. Which one of the following drugs does not produce central anticholinergic syndrome - *{AIMS NOV05)*
a) Atropine sulphate
b) Glycopyrrolate
c) Antihistaminics
d) Tricyclic antidepressants

980. The major difference between typical and atypical antipsychotics is that - *(AI05)*
a) The latter cause minimal or no increase in Prolactin
b) The former cause tardive dyskinesia
c) The former are available as parenteral preparations.
d) The latter cause substantial sedation.

981. Antipyschotic drug - induced Parkinsonism is treated by- *(AI 05)*
a) Anticholinergics b) Levodopa
c) Selegiline d)Amantadine

982. All are side effects of Clozapine, except - *(AI06)*
a) Granulocytopenia
b) Seizures
c) Sedation
d) Extrapyramidal side effects

983. The most common side effect reported with treatment with haloperidol is - *(AI 06)*
a) Hypotension b) Akathisia
c) Dryness of mouth d) Tic disorder

984. Which of the following is true regarding olazapine except - *(Manipal 2006)*
a) It caused marked anti-muscaranic action
b) It causes weight gain
c) It cause mild increases in prolactin
d) Less epileptogenic action than phenothiazine

985. The following is a life-threatening side effect associated with the use of clozapine - (*Corned 08)*
a) Pancreatitis b) Hypoglycemia
c) Agranulocytosis d) Acute renal failure

986. Antipsychotic induced 'akathisia[9] is characterized by- (*Corned 08)*
a) Rigidity
b) Tremor
c) Spasm of muscle/muscle group
d) Restlessness

987. Antipsychotic drug with least extra pyramidal side effect is seen in - *(UP07)*
a) Triflupromazine b) Thioridazine
c) Pimozide d) Trifluoperazine

988. Antipsychotic drugs are - *(Manipal08)*
a) Clomipramine b) Carbamazepine
c) Sodium valproate d) Chlorpromazine

989. Pimozide belongs to - *(APPG 08)*
a) Thioxanthines b) Phenothiazines
c) Buprenorhine group d) Diphenyl group

990. Which of following are selective serotonin reuptake inhibitors (SSRI) except - *(PGI Dec 08)*
a) Duloxetine b) Paroxetine
c) Fluvoxamine d) Venlafaxine
e) Escitalopram

991. Which of the following drugs is not used in Acute angle closure glaucoma - *(AI 09)*
a) Pilocarpine b) Clozapine
c) Fluphenazine d) Duloxetine

992. Which of the following premedications is associated with extra pyramidal side effects - *(Corned 09)*
a) Metoclopramide b)Cimetidine
c) Scopolamine d) Glycopyrrolate

993. The following is a life-threatening side effect associated with the use of clozapine - *(Corned 10)*
a) Pancreatitis b) Hypoglycaemia
c) Agranulocytosis d) Acute renal failure

994. Not a mechanism of action of Neuroleptics -
a) Dopamine blockage *(PUNJAB 11)*
b) Block p receptors
c) Serotonin blockade
d) Blocks a receptors

ANTI-DEPRESSANT

995. All are side effects of tricyclic antidepressants except - *(AIIMS 86, AI 88)*
a) Diarhoea b) Metallic taste
c) Dry mouth d) Epigastric discomfort

996. Which does not compete with protein binding of imipramine - *(All India 93)*
a) Ethosuximide b) Phenytoin
c) Aspirin d) Phenyl butazone

997. Nausea is troublesome in the treatment with newer antidepressant -(,*JIPMER 80, NIMHANS 89)*
a) Trazodone b) Mianserin
c) Fluoxetine d)Doxepin

998. MAO inhibitors induced hypertensive crisis is reversed with - *{AIIMS 80, NIMHANS 88)*
a) Chlorpromazine b)Reserpine
c) Phentolamine d) Propranolol

999. Tricyclics adversely interact with-(PG7*80, AIMS 84)*
a) Tranylcypromine b) Propranolol
c) Furosemide d) Digoxin

1000. An antidepressant found to be associated with tardive dyskinesia and neuroleptic malignant syndrome is - *{JIPMER 81, NIMHANS 89, AI96)*
a) Fluoxetine b) Amineptin
c) Amoxapine d) Trazodone

1001. Drug of choice in an elderly with depression and coronary artery disease is - *{JIPMER 81)*
a) Fluoxetine b)Dothiepin
c) Mianserin d) Amoxapine

1002. Safest anti depressant in hypertension is -*{Kerala 95)*
a) Imipramine b) MAO inhibitors
c) Fluoxetine d) Amitryptylin

1003. Anti depressant is- *{Kerala 96)*
a) Chlorpropamide b) Imipramine
c) Benzhexol d) Lithium
e) Haloperidol

979) b 980) a,b 981) a 982) d 983) b 984) d 985) c 986) d 987) b 988) d 989) d 990) a,d 991) b 992) a 993)c 994)b 995)a 996)a 997)c 998)a,c 999)a 1000)c 1001)a 1002)c 1003)b

1004. Tricyclic antidepressants are contra indicated in-
a) Gastric ulcer b) Angle Closure Glaucoma
c) Depression d) Anxiety *(AP 97)*

1005. The second generation antidepressants are *~(PGI88)*
a) Trimipramine b)Mianserine
c) Maprotiline d) Amitriptyline

1006. Which is a antidepressant with no anti cholinergiceffects - *(ARMS 82)*
a) Imipiramine b) Fluvoxamine
c) Mainserine d)Amitriptyilne

1007. Imipramine is contra indicated in - (*A192)*
a) Diabetes b) Glaucoma
c) Hypertension d) Peptic ulcer

1008. Newer MAO inhibitors are useful in the treatment of- *(Kerala 94)*
a) Mania b) Schizophrenia
c) Hypertension d) Depression

1009. Specific MAO-B inhibitor is- *(Jimper 95)*
a) Phenelzine b) Tranylcypromine
c) Selegeline d) Haloperidol

1010. Selective 5 hydroxytryptophan antagonist is -
a) Amitriptyline b) Fluoxetine *(ARMS 97)*
c) Imipramine d) Clozapine

1011. Not an antidepressant- *(A197)*
a) Amitriptilline b) Fluoxetine
c) Trazodone d) Pimozide

1012. Mechanism of action of fluoxetine is- *(AJ 99,*
a) Serotonin uptake inhibition *ARMS 96)*
b) Serotonin uptake facilitation
c) Dopamine synthesis inhibition
d) Adrenaline synthesis inhibition

1013. Which is a 5 - HT receptor agonist? *(Orissa R)*
a) Ondansetron b) Ketanserine
c) Sumatriptan d) Risperidone

1014. 62 year old male who was on antidepressant treatment was brought to the hospital with history of having taken overdose. He was complaining of dry mouth, blurring of vision and history of having not passed urine for 12 hours.The bladder is palpable. The medication could be - *(UP 2K)*
a) Lithium b) Selengilline
c) Amitrytiline d) Dexamphetamine

1015. Mood stabilizing drugs are all except - (*Jipmer 03)*
a) Sodium valproate b) Carbamazepine
c) Lithium d) Ehosuximide

1016. Tianeptine is an antidepressant which is very popular nowadays. Its mechanism of action is -
a) Norepinephrine agonist *(Kerala 04, MAHA 05,*
b) Selective serotonin reuptake inhibitor *ARMS 98)*
c) Selective serotonin reuptake enhancer
d) Selective non-epinephrine reuptake inhibitor

1017. Dry mouth during antidepressant therapy is caused by blockade of - *(AI 05)*
a) Muscarinic acetylcholine receptors
b) Serotonergic receptors
c) Dopaminergic receptors
d) GABA receptors

1018. The common side effect with Fluoxetine therapy is -
a) Seizure b) Anxiety *(AI06)*
c) Hypotension d) Loose stools

1019. Patient with hypotension and cardiac disease best antidepressant is - *(N1MHANS 2006)*
a) Venlafaxine b) Mirtazapine
c) Duloxetine d)Cifaloprax

1020. MAO-A inhibitors should not be used with -
a) Amitryptiline b) Sertraline (*PGMCETOTl*)
c) Fluvoxamine d) All of the above

1021. The drug used prophylactically in bipolar mood disorder is- *(Manipal 08)*
a) Lithium b)Aripiprazole
c) Paliperidone d) Levomepromazine

1022. All of the following drugs are useful in detrussor instability except - *(ARMS Nov 08)*
a) Solefenacin b) Tolterodine
c) Flavoxate d) Duloxetine

1023. Drug (s) used in incontinence of urine is/are -
a) Oxybutynin b) Tolterodine *(PGI Dec 08)*
c) Tiotropium d) Solifenacin
e) Imipramine

1024. A woman consumes several tabs of Amitryptilline (case of amitryptiline poisoning). All of the following can be done except - *(ARMS Nov 10)*
a) Sodium bicarbonate infusion
b) Gastric lavage
c) Diazepam for seizure control
d) Atropine as antidote

1025. True about tricyclic antidepressants is -
a) May be useful in Nocturnal enuresis
b) Wide safety margin *(PUNJAB 11)*
c) Low oral bioavailability
d) Response time is short

1026. All of the following statements about serotonin syndrome are true, except - *(AI 11)*
a) It is not an idiosyncratic reaction
b) Can be caused by SSRI
c) Dantrone is the drug of choice
d) Associated with hyperthermia and hypertension

LITHIUM

1027. Which organ is not affected in Lithium toxicity -
a) Brain b) Liver *(ARMS 92)*
c) Heart d) Kidney

1028. The commonest symptom of lithium Toxicity is- *(ARMS 81, AMC 92)*
a) Nephrotic syndrome b) Polyurea
c) ARF d) Renal calculi

1029. Lithium is absolutely contraindicated in-*(ARMS81,*
a) Lactation b) Diabetes insipidus *93)*
c) Jaundice d) Hypothyroidism

1004)b 1005) b,c 1006) b 1007)b 1008)d 1009)c 1010)b 1011)d 1012)a 1013)c 1014)c 1015)d 1016)c 1017)a 1018) b 1019) b 1020) a 1021)a 1022)d 1023)a,b,d,e 1024)d 1025)a 1026)c 1027)b 1028)b 1029)a

1030. All of the following are recognised side effects of lithium carbonate therapy except - *(UPSC 95)*
a) Hypothyroidism b) Leucocytosis
c) Polyuria d)Hypercalcaemia

1031. Chronic use of lithium can result in - *(AIMS 97)*
a) Hepatotoxicity b) Bone marrow depression
c) Hypothyroidism d) Neutropenia

1032. Lithium clearance is decreased by -*(Karnataka 01)*
a) Hyperkalemia b) Hypokalemia
c) Hypernatremia d) Hyponatremia

1033. All of the following are true about lithium carbonate except- *(AI96)*
a) Very safe drug
b) Causes polyuria
c) Drug of choice in prophylaxis of MDP
d) Contraindicated in pregnancy

1034. Young female with bipolar disorder who failed to respond to adequate lithium therapy should be prescribed - *(MAHE 98)*
a) Chlorpromazine b) Amitryptilne
c) Carbamazepine d) Haloperidol

1035. Lithium level is increased by administration of which of the following drugs - *(SRMC 02)*
a) NSAIDs b) Diuretics
c) Verapamil d)Bronchodilators

1036. Pre-treatment evaluation for lithium therapy should include - *(AI06)*
a) Fasting blood sugar b) Serum creatinine
c) Liver function tests d) Platelet count

1037. All of the following are part of the treatment of lithium toxicity, *except* **-** *(AI 06)*
a) Treating dehydration
b) Ingestion of polystyrene sulfonate
c) Hemodialysis
d) Using an antagonist

1038. Long term use of lithium is associated with the following endocrine abnormality - **(***Corned 08)*
a) Hypothyroidism b) Diabetes mellitus
c) Hyperthyroidism d) Cushing's syndrome

1039. False statement regarding Lithium is - *(UP 07, 05)*
a) Contraindicated in pregnancy
b) Only marginal changes in high therapeutic dose
c) No individuals variation in the rate of excretion
d) No specific antidote

1040. Which one of the following renal injuries is characteristic of lithium toxicity ? *(UPSC-108)*
a) Acute tubulointerstitial nephritis
b) Acute tubular necrosis
c) Nephrogenic diabetes insipidus
d) Proliferative glomerulonephritis

1041. Which of the following continue drug treatment increases thirst and clear dilute diuresis - *(UP 08)*
a) Phenobarbitone b) Lithium
c) Chlorpramazine d) Clozapine

1042. Correct about the use of lithium is an important component of management of manic-depressive psychosis - *(DELHIPG Feb. 09)*
a) Is associated with delayed (>2 weeks) electrolyte disturbances
b) Can be given alone for acute episodes
c) Monitoring of serum lithium concentration is seldom useful for guiding dose adjustment
d) Cause benign and reversible depression of T wave onECG

1043. Most common congenital anomaly associated with lithium- *(AI10)*
a) Cardiac malformations
b) Neural tube defects
c) Renal anomaly
d) Fetal hydantoin syndrome

1044. Abnormality to check if lithium is given to a pregnant female - *(AIMS Nov 10)*
a) Cardiac anomaly b) Neural tube defect
c) Facial defect d) Urogenital defect

1045. Which of the following antihypertensive drugs should not be used in a patient on Lithium in order to prevent Lithium Toxicity - *(AI11)*
a) Clonidine b) Beta blockers
c) Calcium Channel Blockers d) Diuretics

1046. Not a side effect of lithium - *(PUNJAB 11)*
a) Tremors b) Polyuria
c) Sedation d) Tardive dyskinesia

ANXIOLYTIC

1047. The first of benzodiazepines, synthesized was -
a) Diazepam *(PGI81, AIMS 85)*
b) Chlordiazepoxide
c) Chloral hydrate
d) Lorazepam

1048. Which one of the following drugs produce rapid induction of sleep with least effect on sleep structure - *(St. Johns 02)*
a) Zolpidem b) Diazepam
c) Chlorpromazine d) Haloperidol

1049. Anxiolytic without benzodiazepineola structure -
a) Alprazolam b) Chlordiazepoxide *(Jipmer03)*
c) Diazepam d) Zolpidem

1050. Lorazepam differs from diazepam in that it is -
a) More lipid soluble
b) Fast entry into brain
c) Short-acting
d) Active metabolic produced

1051. Diazepam produces its effects by acting of the....
a) Ascending reticular activating system *(PGI88)*
b) Hippocampus
c) Amygdala
d) Cerebral cortex

1030)d 1031)c 1032)d 1033)a 1034)c 1035)a,b 1036) b 1037) d 1038)a 1039)c 1040)c 1041)b 1042)d 1043)a 1044) a 1045) d 1046)d 1047)b 1048)a 1049) None 1050)c 1051)a

1052. The specific antagonist for Benzodiazepines is -
a) Flumazenil *{Kerala 90)*
b) Alprozolam
c) Di-Isoprophyl phenol
d) Cremopher-ei

1053. Drug of choice of insomnia due to anxiety *is-(AP 85)*
a) Para aldehydeb) Meprobamate
c) Imipramine d) Morphine

1054. Non-sedating nonhabit forming anxiolytic is - *(ASSAM 95, JIPMER 02, PGI92, 93)*
a) Triazolamb) Buspirone
c) Alprazolam d) Oxazepam

1055. Secobarbitone is - *(DNB 90)*
a) Long acting barbiturate
b) Intermediate acting barbiturate
c) Short acting barbiturate
d) Ultra short acting barbiturate

1056. Secobarbital and ethanol when given together show- *(PGI 82)*
a) Additive sedative action
b) Reduced sedative action
c) Competitive antagonism
d) Chemical antagonism
e) None of the above

1057. Which of the fllowing are side effect of flumazenil - **(***PGI 92)*
a) Nausea b) Headache
c) Withdrawal seizures d) Dizziness

1058. Barbiturates are derivatives of - *(JIPMER 80,BIHAR*
a) Urea b) Ethyl alcohol *90)*
c) Tungstic acid d) Opium
e) Cinnamon

1059. Which of the folowing drugs is absorbed slowly-
a) Pitrazepam b) Oxazepam *(AMU87)*
c) Diazepam d) Chloral hydrate

1060. Nitrazepam is considered as a useful hypnotic in the sense that it does not produce marked-
a) Addiction *(AIIMS 84)*
b) Respiraty depression
c) Habitutation
d) Hang over

1061. Midazolam as compared to diazepam is - *(PGP95)*
a) Less cerebroprotective
b) More cerebroprotective
c) Same as diazepam
d) No cerebroprotective effect

1062. All are complications of Benzodiazepines except -
a) Ataxia b) Headache *(AP 96)*
c) Amnesia d) Tinnitus

1063. All are true about Alprazolam except- *(TN97)*
a) Anxiolytic b) Is a Benzodiazepine
c) Causes sedation d) Very short *Vi* life

1064. Primarily anxiolytic benzodiazepine is - *(MAHE 98)*
a) Flurazepam b) Oxazepam
c) Temazepam d) Alprazolam

1065. Least sedating drug among the following is -
a) Clonazepam b) Phenytoin *(MAHE 98)*
c) Primidone d) phenobarbital

1066. An anxiolytic benzodiazepine that has additional antidepressant property is- *(TNPSC 2K)*
a) Chlordiazepoxide b) Oxazepam
c) Alprazolam d)Lorazepam

1067. All are short acting barbiturates except - *(UP 07)*
a) Buto barbitone b) Seco barbitone
c) Pento barbitone d) Hexobarbitone

1068. Which of the following drug is not used in anxiety ?
a) Risperidone b) SSRI *(AI08)*
c) Clonazepam d) Buspirone

NSAIDS

1069. Aspirin inhibits - *(PGI 89)*
a) Lipoxygenase b) Prostacyclin synthesis
c) Cyclo oxygenase d) Phospholipase

1070. The major toxicity of acetaminophen overdose involves - *(PGI 78, AIIMS 84)*
a) TheCNS b) The heart
c) Liver d) Acid-base metabolism

1071. Incidence of Nasal allergy in asprine users is -
a) 1-2% b) 2-5% *(PGI 93, PGI 80)*
c) 5-7% d) 10-15%

1072. Which of the following is true of salicylate poisoning - *{PGI 88)*
a) Respiratory acidosis b) Metabolic acidosis
c) Respiratory alkalosis d) Common in children

1073. Chemically paracetomol is -
a) N-acetyl-p-aminophenol b) Chloroquine
c) Acetyl salicylate d) Acetophen

1074. Aspirin has all the properties except- *(TN91)*
a) Brings down elevated temperature
b) Brings down normal temperature
c) Prevents platelet aggregation
d) Used in rheumatoid arthritis

1075. Aspirin is contraindicated in a case who is on treat mentwith- *(Delhi 92)*
a) Predinisolone b) Warfarin
c) Theophyline d) Oral contraceptives

1076. Ketorolac tromethamine is useful as-
a) A bronchodilator *(JIPMER 84)*
b) An antihypertensive
c) Non-narcotic non steroidal
d) Narcotic non-steroidal analgesic

1077. Development of hepatic centrilobular necrosis secondary to acetaminophen overdose can be prevented effectively by which of the following if given within a few hours after ingestion?
a) N-acetylcysteine *(AIIMS 80, 84)*
b) Dimercaprol c) Sodium nitrite
d) Amyl nitrite e) Phenobarbital

1052) a 1053)b 1054)b 1055)c 1056)a 1057)c 1058)a 1059)b 1060)a,b,c 1061)None 1062)d 1063)d 1064)b,d
1065)b 1066) c 1067) d 1068)a 1069)c 1070)c 1071)a 1072)A11 1073) a 1074) b 1075)b 1076)c 1077)a

1078. The inhibitor of Lipoxygenase pathway is -
a) Ibuprofen *(J1PMER 79)*
b) Benoxzprofen
c) Indomethacin
d) None of the above

1079. Indomethacin reverses all the features of bartters syndrome except- *(ARMS 78)*
a) Hyperreninemia b) Hyperaldosteronism
c) Hypotension d) Hypokalemia

1080. Ibuprofen acts by inhibiting- *(Kerala 94)*
a) Lipoxygenase
b) Cyclo oxygenase
c) Resetting the hypothalamic thermostat
d) Increases the pain threshold

1081. None of the following analgesics is available in sublingual formulation except- *(Kam 94)*
a) Piroxicam b)Pentazocine
c) Buprenorphine d) Ketorolac

1082. Aspirin is used for secondary prevention of IHD because- *(A1IMS '95)*
a) It inhibits TXA2 synthesis by platelets
b) Inhibits prostacyclin synthesis
c) Inhibits release of EDRF
d) Inhibits synthesis of endothelium

1083. Single dose NS AID- *(IN 96)*
a) Aspirin b) Diclofenac
c) Naproxen d) Piroxicam

1084. Low dose aspirin during pregnancy is used in all except- *(All India 97)*
a) SLE b)IUGR
c) Deep veins thrombosis d) Preeclampsia

1085. Which drug does not cause platelet dysfunction-
a) Aspirin *(Kerala 97)*
b) Ibuprofen
c) Acetaminiphen
d) All of the above

1086. True about ketorolac is all except- *(M.P. 98)*
a) It inhibit cyclo-oxygenase
b) It is as effective for pain as morphine
c) It acts on opoid receptor
d) It acts only as an injectable

1087. Selective Cyclo oxygenase-2 inhibitor is -*(ARMS98)*
a) Ketorolac b) Nabumetone
c) Oxprazin d) Paracetamol

1088. Aspirin is useful in all except - *(MP 2K)*
a) Pre-eclampsia b) Deep ven thrombosis
c) Myalgia d) Deep seated abdominal pain

1089. All of the following are risk factors for NS AID induced mucosal injury except- *(ICS 2K)*
a) Old age and female sex
b) Prolonged use of high dose therapy
c) NS AID with steroid therapy
d) NS AID with misoprostol

1090. Selective COX - II inhibitor is - *(J&K2001)*
a) Diclofenac b) Mefanemic acid
c) Nimesulide d) Sulindac

1091. COX pathway is inhibited by- *(PG102)*
a) Aspirin b) Indomethacin
c) Betamethasone d) Calcitonin
e) Diclofenac

1092. Which one of the following statements is not true about NSAIDSs - *(ARMS May 05)*
a) Acetyl salicylic acid is an irreversible inhibitor of COX enzyme
b) Salicylic acid reduces in vivo synthesis of prostaglandins
c) Duration of action of aspirin is primarily related to the pharmocokinetic clearance of the drug from the body
d) Anitplatelet effect of low-dose aspirin as related to presystemic COX inhibition

1093. Aspirin toxicity true are - *(PGI June 06)*
a) Tinitus early symptom
b) 10-30 gm causes poisoning
c) Hyperthermia, tachypnea early complications
d) Cause thrombocytopenic purpura

1094. Which one of the following drug is not a non-opioid analgesic drug - *(COMED 2006)*
a) Meloxicam b) Methadone
c) Nimesulide d) Nabumetone

1095. NSAIDs which does not inhibit prostaglandin synthesis - *(Manipal 2006)*
a) Sulindac b)Nefopan
c) Ketorolac d) Mefenamic acid

1096. Selective inhibitors of COX2 does not have following action- **(***PGMCETOl***)**
a) Antipyretic b) Antiplatelet
c) Analgesic

1097. The salicylate intoxication in adults usually causes the following except - *(UPSC 07)*
a) Severe respiratory alkalosis
b) Mixed metabolic acidosis-respiratory alkalosis
c) Pure high aniion gap metabolic acidosis
d) Hyperchloremic Metabolic acidosis

1098. Which of the following is beneficial in NS AID induced gastric ulcer - *(AI07)*
a) PGE 1 agonist b) PGE 2 agonist
c) PGD agonist d) PGF 2 agonist

1099. Which of the following NS AID has good tissue penetrability with concentration in synovial fluid- *(UP 07, 06)*
a) Ketorolac b) Diclophenac sodium
c) Sulindac d) Piroxicam

1100. Early feature (s) of aspirin poisoning is/are -
a) Throbbing headache b) Rash *(PGI June 09)*
c) Ringing sensation in ear d) Vertigo
e) Metabolic acidosis

1101. Regarding COX-2 which of the following is its function - *(ARMS Nov 09)*
a) Cell adhesion b) Cell proliferation
c) Cell migration d) Cell differentiation

1078) None 1079)d 1080)b 1081)c 1082)a 1083)d 1084)c 1085)c 1086)c,d 1087)b 1088)d 1089)d 1090)c 1091)a,b,e 1092)c 1093)a,b 1094)b 1095)b 1096)b 1097)d 1098)a 1099)b 1100)a,c,d,e 1101)b

1102. Opioid agonist are A/E - *(AlIMSMay 10)*
a) Morphine b) Codeine
c) Ketamine d) Methadone

1103. Non selective COX-2 inhibitor - *(Jipmer 10)*
a) Meloxicam b) Parecoxib
c) Etoricoxib d)Tenoxicam

OPIOIDS

1104. Morphine withdrawal is characterized by all except- *(A195)*
a) Miosis b) Muscle aches and body pain
c) Yawning d) Rhinorrhoea

1105. The most potent derivative of morphine is -
a) Oxymoiphine b) Heroin *(JIPMER 79, PGI)*
c) Meperidine d) Codeine

1106. Therapeutic indications of morphine - *(PGI 90)*
a) Preterm labour b)Pain
c) Intractaole diarrhoea d) Abolishes rigors

1107. Methadoneis- *(TN90)*
a) Useful for long term treatment
b) No addiction liability
c) Better compliance
d) Used in maintenance of treatment

1108. Use of preoperative morphine is to - **(***Kerala 94)*
a) Decrease anxiety
b) To produce analgesia
c) For sedation
d) For muscle relaxation

1109. An orally effective opoid agonist without an antagonistic action - *(JIMPER 90)*
a) Dextropropoxyphene b) Buprenorphine
c) Pentazocine d) Cyclazocine

1110. Heroin differs from morphine in all respects except-
a) Causes more euphoria *(AI90)*
b) More constipation
c) Slowly metabolised to morphine
d) Synthetic congener of morphine

1111. The most potent narcotic analgesic is- *(AI 91)*
a) Morphine b) Pethidine
c) Bupheronorphine d) Pentazocine

1112. Morphine causes vomiting by stimulating- *(AI91)*
a) Medullary centre b) Spinal cord
c) Hypothalamus d) Chemoreceptor trigger zone

1113. Which is not a feature of morphine with drawal -
a) Constipation b) Pilo erection *(AIIMS 92,*
c) Rhinorrhoea d) Insomnia *PGI 93)*

1114. Opioid Specific antagonist is- *(AI93)*
a) Naloxone b) Naltrexone
c) Methadone d) Nalorphine

1115. Anti Spasmodic effect is seen with- *(Jipmer 93)*
a) Neostigmine b) Propantheline
c) Nikethamide d) Ambenonium

1116. The chemical name of Heroin is - *(JIPMER 81,*
a) Methyl dihydromorphinone *AIIMS 88)*
b) Dihydromorphinone
c) Diacetylmorphine
d) N-allynormorphine
e) Oxymorphone

1117. As compared to morphine, methadone is- *(DNB 89)*
a) Superior analgesic and inferior hypnotic
b) Superior hypnotic and inferior analgesic
c) Superior analgesic and superior hypnotic
d) Inferior analgenic and inferior hypnotic

1118. Buprenorphine is a- *(AI 95)*
a) Pure agonist
b) Pure antagonist
c) Agonist-antagonist
d) Opiate naturally occuring

1119. Pentazocineione of the following is false- *(AI95)*
a) Decreases vomiting and constipation compared to morphine
b) Risk of addiction is less
c) Agonist-antagonist
d) Risk of addiction is present

1120. One of the following acts on m receptors in CNS-
a) Morphine b) Buprenorphine *(AI 95)*
c) Pethidine d) Pentazocine

1121. One of the followig opioid derivatives is a partial agonist as well as antagonist - *(AI 96)*
a) Buprenorphine b) Naloxone
c) Nalorphine d) Naltrexone

1122. Morphine- *(Kerala 97)*
a) Stimulates CTZ zone of medulla
b) Stimulates respiratory centre of medulla
c) Depresses CTZ zone of medulla
d) None of the above

1123. In epidural analgesia morphine acts by acting on -
a) Substantia gelatinosa b) Axons *(AIIMS 98)*
c) Ventral horn d) Sensory nerve

1124. Wrong about pentazocine- *(TN 99)*
a) Orally effective b) Decreases B.P.
c) Tachycardia d) Addictive

1125. Most potent opioid is- *(Kerala 01)*
a) Fentanyl b) Sulfentanyl
c) Pethidine d) Morphine

1126. Which is true regarding naltrexone- *(PGI 01)*
a) It is an opioid antagonist
b) It is an opioid agonist
c) Used in alcohal dependence
d) Used to treat opioid dependence
e) Used as a respiratory stimulant

1127. Morphine canno't given in which of the following route- *(PGI 02)*
a) IM b) Transdermal
c) Epidural d) Subarachnoid
e) Oral

1102)c 1103)a 1104)a 1105)a 1106)b 1107)d 1108)a,b 1109)a 1110)a,b llll)c 1112)d 1113)a 1114)a,b 1115)b 1116) c 1117) a 1118) a 1119)None 1120)a,c 1121)c 1122)a 1123)a 1124)b 1125)b 1126)a,c,d 1127)b

1128. Which of the following actions is ascribed to delta type of opoid receptors- **(*AI04*)**
a) Supraspinal analgesis
b) Respiratory depression
c) Euphoria
d) Reduced intestinal motility

1129. The Mu receptor of the opioids is responsible for the following clinical actions *except-(AIIMSNov 05)*
a) Analgesia b) Respiratory depression
c) Sedation d) Diuresis

1130. Addition of which of the following agent can help in elimination of 15-20 Thblets of lOmgdextroamphetamine-
a) Acetazolamide b)NH_4Cl
c) Penicillamine d)$NaHC0_3$

1131. Following is 100 times more potent than morphine -
a) Codiene b) Pentozocine(*PGMCET0T7*)
c) Fentanyl d) Heroin

1132. Naloxone is not used during resuscitation of a child whose mother is on - *(Aiims May 07)*
a) Methadone b) Phenycyclidine
c) Amphetamine d) Cocaine

1133. Which of the following is non opioid analgesic and does not inhibit prostaglandin synthesis - *(UP 07)*
a) Nefopam b)Tenoxicam
c) Ketorolac d) Piroxicam

1134. No - tolerance is seen with - *(UP 07)*
a) Heroin b) Cocaine
c) Dextro propoxyphane d) Pethidine

1135. Buprenorphine is ? *(Aiims May 08)*
a) Pure agonist b) Pure antagonist
c) Partial agonist d) None

1136. Least narcotic - *(AIIMS Nov 09)*
a) Morphine b) Codeine
c) Heroine d) Papaverine

1137. Which is NOT used in treatment of heroin dependence? *(AIIMS May 10)*
a) Disulfiram b) Buprenorphine
c) Clonidine d)Lofexidine

1138. Which of the following statements about opioid receptor antagonists is false - *(AI10)*
a) Naloxone can be used to for treatment of opioid induced constipation
b) Naltrexone may be used for treatment of alcohol dependence
c) Nalmefine has a longer half life than naloxone
d) Naloxone is more potent than naltrexone

1139. Naloxone reduces the biliary colic induced by all the following drugs except - *(Jipmer 10)*
a) Fentanyl b) Morphine
c) Pethidine d) Buprenorphine

1140. Routes for fentanyl administration are-(PG7*Nov. 10)*
a) Oral b) Transmucosal
c) IV d) Spinal/Epidural
e) Transdermal

1141. TVue about buprenorphine- *(PGINov. 10)*
a) Naloxone cannot reverse its effects
b) Agonist at 5 receptor
c) Long acting
d) More potent than morphine
e) Partial receptor agonist

1142. Which is opioid - *(PG1 Nov. 10)*
a) Pethidine b) Diacetylmorphine
c) Naloxone d) Pentazocine
e) Morphine

1143. True statement about pethidine w.r.t morphine -
a) Cause more bradycardia *(PGINov 10)*
b) Constipation less marked
c) Cough more suppressed
d) More potent
e) Rapid onset

1144. Muscle rigidity due to opiods is becasue of their effect on - *(AIIMS May 11)*
a) b) kappa
c) sigma d) delta

1145. Buprenorphine is classified as - *(AI 11)*
a) Partial agonist at receptor
b) Partial agonist at k receptor
c) Full agonist at receptor
d) Full agonist at k receptor

1146. Opioid tolerance develops to all of the following actions, Except- *(AI 11)*
a) Miosis b) Analgesia
c) Euphoria d) Nausea and Vomiting

1147. All of the following statements about Epidural opioids are true, Except - *(AI 11)*
a) Acts on the dorsal horn substantia gelatinosa
b) May cause pruiritis
c) May cause Respiratory Depression
d) Gastrointestinal adverse effects are not seen

1148. Which of the following drug is most commonly used world wide in maintenance doses for opioid dependence- *(AI 11)*
a) Naltrexane b) Methadone
c) Imipramine d) Disulfiram

GOUT-ARTHRITIS

1149. The most common toxic reactions of gold therapy in the treatment of rheumatoid arthritis include
a) Agranulocytosis *(AIIMS 80, AMC 85)*
b) Dermatitis and stomatitis
c) Nausea and vomiting
d) Alopecia
e) Thrombophlebitis

1150. Drug which is used in rheumatoid arthritis and heavy metal poisoning - *(Kerala 97)*
a) Desferrioxamine b)Gold
c) Pencillamine d) Chloroquine

1128) a 1129) d 1130)b 1131)c 1132)a 1133)a 1134)b 1135)c 1136)d 1137)a 1138)d 1139)d 1140)A11
1141)a,c,d,e 1142)A11 1143)b,e 1144)a 1145)a 1146)a 1147)d 1148)b 1149)b 1150)c

1151. Colchicine is used in all except -
a) Adrenal adenoma *(JIPMER 79, AIIMS 92)*
b) Amyloidosis
c) Familial mediterranean fever
d) Cirrhosis of liver

1152. Which is an uricosuric drug- *(AI89)*
a) Allopurinol b) Probenecid
c) Indomethacin d) Aspirin

1153. In case of CCF with gout which diuretic is preferred-
a) Lasix b) Thiazide *(AI 89)*
c) Ticaynafen d) Ethacrynic acid

1154. Drug used in acute gout is- *(PGI88)*
a) Aspirin b)Indomethacin
c) Phenylutazone d) Allopurinol

1155. Gold and penicillaminne used in rheumatoid arthritis because- *(A195)*
a) They bring about immediate relief
b) Decreases severity and progression of disease on long term use
c) Useful in acute arthritis
d) None on the above

1156. Remission inducing drug for rheumatoid arthrits include- *(AIMS 86,88; PGI 86)*
a) Asprin b) Ibuprofen
c) Gold thiol d) Neproxan

1157. Prolonged allopurinol therapy in a patient with gout is not indicated for - **(***UPSC04)*
a) Acute gouty arthritis
b) Tophi
c) Urate nephropathy
d) Evidence of bone/joint damage

1158. Mechanism of action of Methotrexate in Rheumatoid arthritis - *(PGI June 08)*
a) Decreased Folate synthesis
b) Decreased thymidylate synthesis
c) Decreased purine synthesis
d) Increased purine synthesis

1159. Drug of choice in over producers of uric acid -
a) Probenecid b) Allopurinol *(Jipmer 10)*
c) Sulfasalazine d) Colchicine

MISCELLANEOUS

1160. Least addictive is - *(AI 99)*
a) Alprazolam b) Fluoxetine
c) Dihydroxypropoxyphene d) Buprinorphine

1161. The most efficient respiratory stimulant is -
a) Nikethamide b) Amiphenazole
c) Protheamide d)Doxapram

1162. C.N.S. stimulant action of nikethamide has target cells mainly in the - *(UPSC 88)*
a) Pons b) Medulla
c) Midbrain d) Cerebral cortex

1163. The term "soporofic" is synonymous with-
a) Aphrodisiac *(BIHAR 90)*
b) Psychotomimetic c) Hypnotic
d) Euphoric e) CNS stimulant

1164. No physical dependence is seen in - *(AIIMS 97)*
a) Dextropropoxyphene b)Fortwin
c) Fluoxetine d) Alprax

1165. Doxapramis---------—drug- *(TN99)*
a) Respiratory stimulant b) Antiepileptic
c) Sedative d) Antidiabetic

1166. Kaloo, 40 year old adult man on medication for psychiatric illness for the last 2 weeks, suddenly develops marked rigidity, immobility, fever, flue tuating BP and heart rate. Most likely diagnosis-
a) Akathisia *(AIIMS01)*
b) Parkinsonism
c) Malignant neuroleptic syndrome
d) Catatonic schizophrenia

1167. Drug used in alzheimer's disease having adverse effect on liver - **(***Jipmer 04)*
a) Tacrine b) Dionezepil
c) Thiocticacid d)Flumazenil

1168. The drug of choice for attention deficit hyperactivity disorder is - **(***COMEDK 05)*
a) Haloperidol b) Imipramine
c) Methyl phenidate d) Lecithin

1169. For treatment of cognitive symptoms of dementia, the drug most effective is - **(***COMEDK 05)*
a) Serotonergic drugs
b) Dopaminergic drugs
c) Catecholamines
d) Cholinesterase inhibitors

1170. Donepezil is used in the treatment of which of the following of the following conditions - *(Karnat 05)*
a) Schizophrenia b) Depression
c) Anxiety d) Alzheimer dementia

1171. One of the following is not true about nesiritide -
a) It is a brain natriuretic peptide analogue *(AI 05)*
b) It is used in actuely decompensated heart failure
c) It has significant oral absorption
d) It has a short half-life.

1172. All of the following drugs require dose reduction in cirrhosis except - *(AIIMS Nov 08)*
a) Lorazepam b) Diazepam
c) Metronidazole d)Rifampicin

1173. All of the following drugs can cause neuroleptic malignant syndrome except - *(AIIMSNov 08)*
a) Amantadine b) Domperidone
c) Haloperidol d) Metoclopramide

1174. All the following drugs are known to cause pseudotumour cerebri except - *(UPSC-109)*
a) Gentamicin b) Tetracycline
c) Vitamin A d) Oral contraceptive pills

1175. Buspirone is an - *(AIIMS Nov 09)*
a) Anxiolytic b) Muscle relaxant
c) Sedation d) Anti convulsant

1176. Which of the following drugs should not be used with rivastigmine in patients with alzheimer's disease- *(AI 10)*
a) SSRI b) Tricyclic antidepressant
c) RIMA d) Atypical antidepressants

1151)a,d 1152) b 1153)c 1154)b,c 1155)b 1156)c 1157)a 1158)None 1159)b 1160)b 1161)d 1162)b
1163) c 1164)c 1165) a 1166)c 1167)a 1168)c 1169)d 1170)d 1171)c 1172)a 1173)b 1174)a 1175)a 1176)b

1177. All of the following agents are used for prophylaxis of migraine, Except - *(A110)*
a) Propanalol b) Valproate
c) Topiramate d) Ethosuxamide

1178. Buspirone acts on which receptor - *(Punjab 10)*
a) 5-HTla b)5-HTlb
c) 5-HTlc d)5 -HTld

1179. All are true about Remelteon except -
a) It acts on both MT1 and MT2 receptors
b) Metabolized by CYP-450 *(AIIMSNov 10)*
c) It has a high addiction potential
d) Recently approved for insomnia

C.V.S.

DIGITALIS

1180. In infants, extracardiac digitalis toxicity is manifested by - *(TN 88)*
a) Vomiting b) Blurring of vision
c) Convulsions d) Rashes

1181. Digitalis given to atrial flutter often produces -
a) Atrial fibrillation *(AIIMS 79, Rohtak 85,*
b) Atrial tachycardia *JIPMER 86)*
c) Atrial asystole
d) Atrial bigeminy

1182. Drug Contra indicated in Hypertensive cardiac failure is - *(JIPMER 93)*
a) Nifedepine b)Captopril
c) Atenolol d) Hydrallazine

1183. Primary arterial dilators are all except - *(PGI88)*
a) Isosorbide b) Hydralazine
c) Phenoxybenzamine d)Captopril

1184. Drugs contraindicated in CCF - *(PGI 88)*
a) Propranolol b) Spriniolactone
c) Sorbitole d) Dopamine

1185. Pure arterial vasodilators are - *(PGI 84)*
a) Prazocin b) Hydralazine
c) Minoxidil d) Sod.Nitroprusside
e) Diazoxide

1186. Digitalic toxicity produce the following changes inECGexcept- *(KERALA 89)*
a) Inverted T wave b) Prolonged QT interval
c) ST depression d) Prolonged PR interval

1187. Drug of choice in hypertrophic cardiomyopa-thy is -
a) Propranolol b) Verapamil *(AP88)*
c) Digoxin d) Amiodarone

1188. The mechanism of action of digitalis is-*(JIPMER 90)*
a) Increase in heart rate with increase in oxygen consumption
b) Increase in heart rate without increase in oxygen consumption
c) Decrease in heart rate with out decrease in oxygen consumption
d) Decrease in heart rate with decrease in oxygen consumption

1189. Which of the following is false about digoxin -
a) Does reduced when used with quinidine *(AI90)*
b) Dose reduced in liver disease
c) Characteristic arythmia is PAT with block
d) Anorexia, nausea and vomiting are common side effects

1190. The dosage of dogoxin should be reduced in all except
a) Old age b) Liver failure *(A191)*
c) Hypercalcemia d) Renal faiture

1191. The side effects of digitalis are all except-
a) Ventricular tachycardia *{AIIMS 91)*
b) Vasodilatation
c) Nausea and vomiting
d) Ventricular Bigemini

1192. Digoxin is eliminated from the body by -
a) Tubular filtration *(JIPMER 92)*
b) Hepatic Conjugation
c) Glomerular filtration
d) Oxidation

1193. Drug of choice for Digitalis Induced arythmia is -
a) Verapamil b) Dilantin *(JIPMER 92)*
c) Quinidine d)Encainide

1194. True about Digoxin is all except - *(AIIMS 87,*
a) High therapeutic index *Delhi 93)*
b) Absorbed better than digitoxin
c) Decreases AV conduction
d) Dose to be decreased in elderly

1195. Digoxin can produce - *(AMC83)*
a) Tachycardia b) Bradycardia
c) Heart block d) All the above

1196. Digoxin toxicity: be treated by - *(AMC83)*
a) Phenytoin b) Potassium supplements
c) Diuretics d) All the above

1197. Both the therapeutic and toxic effects of digitalis are enhanced by - *{AIIMS 89)*
a) Sodium b) Chloride
c) Calcium d) Potassium

1198. In terms of therapeutic usefulness, the most important pharmacological action of digoxin in congestive heart failure is - *{JIPMER 78)*
a) The reduction in cardiac size
b) The increase in ventricular contracitile force
c) The slowing of heart rate
d) The diuretic effect
e) The increase in arterial

1199. Dose of oral digoxin in an adult (mg/kg) is -
a) 0.06-0.08 b) 0.05-0.1 *(JIPMER 80,Delhi89)*
c) 0.75-1.5 d)l.0-2.0

1200. The drug of choice in left ventricular failure-
a) IVFurosemide *(PGI80, 87)*
b) IVAminophylline
c) IV Morphine
d) Rapid digitalization

1201. The toxic level of digitalis is -*(BIHAR 91, AIIMS 82)*
a) 0.1-0.5ng/ml b)0.5-1.5ng/ml
c) 1.5-2.0 ng/ml d) More than 2.4 ng/ml

1177) d 1178) a 1179)c 1180)a 1181)a 1182)None 1183)a 1184)a 1185)b,c,e 1186)b 1187)a 1188)d 1189)b
1190)b 1191) b 1192)c 1193)b 1194)a,b,d 1195)d 1196)a,b 1197)c 1198)b 1199)b 1200)a 1201)d

**1202. The therapeutic plasma level of Digoxin \s-(*A!IMS*
a) 0.1-0.3ng/ml b)0.8 -1.5 ng/ml *87)*
c) 2-3 ng/ml d) 3-4 ng/ml

1203. The half life of digoxin is - *(AIIMS 79)*
a) 12hrs b)24hrs
c) 40 hrs d) 5 days

1204. Digoxin acts on the heart by - *(Kerala 94)*
a) Decreasing preload
b) Increasing the force of contraction
c) Decreasing the after load
d) Decreasing heart rate

1205. Levels of digoxin are increased by one of following-
a) Amiodarone b) Metoclopramide *(AI96)*
c) Antacids d) Propranolol

1206. Treatment of Digitals toxicity can include all except-
a) Potassium b) Phenytoin *(A197)*
c) Lidocaine d) Dialysis

1207. Cardiotonic action of digitalis is due to - *(PGI96)*
a) Na^+, K^+ pump bolck
b) K^+ $H^{4'}$ pump bolck
c) Increase $ca^{\wedge+}$ Ionic entry
d) Increase CAMP

1208. Regarding milrinone all are true except -
a) PGEIH inhibitor *(AIIMS 98)*
b) Used for short term control of CHF
c) Antiarrythmic properties present
d) Thrombocytopenia rare

1209. Digoxin is used in CHF due to - *(PGI99)*
a) HOCM
b) High output failure
c) AF with high ventricular rate
d) All

1210. Interaction occurring when quinine and digoxin are given together - *(PGI 99)*
a) Quinine decreases excretion of digoxin
b) Quinine displaces digoxin from protein binding sites
c) Increases the metabolism of digoxin
d) Digoxin causes cinchonism

1211. Diagoxin levels are increased by addition of which of the following - *(SGPGI05)*
a) Pheneytoin b) Quinidine
c) Furesemide d) Steroids

1212. Which of the following drug is contraindicated in hypertrophic cardiomyopathy - *(SGPGI 05)*
a) Digoxin b) Propranolol
c) Verapamil d) Phenylephrine

1213. First drug of choice for acute pulmonary edema is - *(Karnat 05)*
a) Frusemide b) Morphine
c) Aminophyline d) Oxygen

1214. The following drugs have significant drug interaction with digoxin, except - *(AI05)*
a) Cholestyramine b) Thiazide diuretics
c) Quinidine d)Amlodipine

1215. Digoxin toxicity aggravated in - *(PGI June 06)*
a) Hypokalemia b) Hyperkalemia
c) Hypercalcemia d) Hypermagnesemia

1216. Digitalis acts by inhibiting - *(TN02, PGMCET 01,*
a) Na^+K^+ ATPase *AIIMS 95, MAHE 05)*
b) H^+K^+ATPase
c) Na^+K^+ Cotransporter
d) Na^+H^+ ATPase

1217. Digoxin toxicity is precipitated by all except -
a) Electrolyte disturbance *(AiimsMay07)*
b) Acute myocardial infarction
c) Hepatic disease
d) Renal disease

1218. Drugs used in CHF - *(PGI June 07)*
a) Nesiritide b) Digoxin
c) Spironolactone d) Losartan

1219. Digoxin can accumulate to toxic levels in patients with - **(***Corned 08)*
a) Renal insufficiencyb) Chronic hepatitis
c) Advanced cirrhosisd) Chronic pancreatitis

1220. Following ECG changes can be caused by Digoxin except - *(DPGEE 08)*
a) P-R internal prolongation b) T-wave alteration
c) Q-T interval prolongation d) QRS widening

1221. Which of the following factors do not result in increased risk of digitalis toxicity? *(AIIMS Nov 08)*
a) Hypomagnesemia b) Hypercalcemia
c) Hyperkalemia d) Renal failure

1222. Digoxin toxicity is increased by all except -
a) Renal impairment *(AIIMS May 09)*
b) Hyperkalemia
c) Hypercalcemia
d) Hypomagnesemia

1223. Digoxin is used in CHF due to -
a) HOCM (Hypertrophic obstructive cardiomyopathy)
b) High output failure
c) Atrial fibrillation with high ventricular rate
d) All of the above

1224. Not true about digoxin is - *(PUNJAB 11)*
a) Slowing of A-V conduction
b) Causes nausea
c) Results in vision defects
d) Increase in heart rate

1225. Which of the following drug should be avoided in elderly? *(Jipmer 11)*
a) (3 - blockers in MI
b) Digoxin in CCF
c) ACE inhibitor in LV dysfunction
d) Warfarin in atrial fibrillation

ANTI-ARRHYTHMIC

1226. The drug available for the treatment of resistant cases of atrial fibrillation is- (*JIPMER 81,Rohtak*
a) Amiodarone b) Quinidine *88)*
c) Propranolol d) Digoxin

1202)b 1203) c 1204) b 1205)a 1206)d 1207)a 1208)c 1209)c 1210)a,b 1211)bl212)a 1213)a 1214)d 1215)a,c
1216) a 1217) c 1218) All 1219) a 1220)c 1221)c 1222)b 1223)c 1224)d 1225)b 1226)a

1227. In the treatment of presistent ventricular arrhythmias, the recommended infusion rate of lidocaine is - (*JIPMER 80, AIIMS 86)*
a) 5.0 to 10.0 mg/minb) 2.0 to 4.0 mg/min
c) 1.0 to 1.5 mg/min d) 0.5 to 1.0 mg/min
e) 0.1 to 0.5 mg/min

1228. Bretylium interferes with the release of -*(PGI84)*
a) Adrenaline b) Nor adrenaline
c) Dopa d) Dopamine

1229. All of the following drugs are used in the prophylaxis of ventricular tachycardia except - *(UPSC 95)*
a) Verapamil b) Amiodarone
c) Diagoxin d)Mexiletine

1230. Quinidine is contra indicated in - *(AI93)*
a) Atrial fibrillation b) Atrial flutter
c) Digitoxicity d) Supraventicular tachycardia

1231. Class III antiarrythmic agents are all except -
a) Sotalol b) Amiodarone *(Delhi 92)*
c) Verapamil d) Bretylium

1232. The appearance of ventricular tachycardia with the use of quinidine in the treatment of artial fibrillation is usually prevented by prior administration of - *(JIPMER 79, 81)*
a) Phenoxybenzamineb) Epinephirine
c) Digitalis d) Atropine

1233. Drug of choice for ventricular tachycardia is -
a) Pethidine b) Digoxin *(JIPMER 78, AMU*
c) Propranolol d)Xylocaine *87)*

1234. AO of the side effects are seen with amiodarone except- (*AI96)*
a) Hypothyroidism
b) Photosenstivity
c) Hyperthyroidism
d) Cardiac failure (Congestive heart failure)

1235. The false statement amongst following is -
a) Intravenous Procainamide causes hypotension
b) Quinidine causes cinchonism *(Delhi PG 96)*
c) Lidocaine causes lupus like syndrome
d) Bretylium causes orthostatic hypotension

1236. Antiarriythymic with greatest repolarisation phase is - *(AIIMS96)*
a) Quindine b) Amiodarone
c) Lignocaine d) Propranolol

1237. The ERP is reduced by (effective refractive period ERP)- *(JIPMER98)*
a) Procainamide b) Amiodarone
c) Lignocaine d) Sotalol

1238. All are side effects of Amiodarone except- *(AI98)*
a) Pulmonary fibrosis b) Corneal deposites
c) Osteoporosis d) Thyroid dysfunction

1239. The following are true (actions) of amiodarone except- *(KERALA98)*
a) Contains iodine
b) Shortens conduction across A.Vnode
c) Increased threshold for induction of VF
d) Does not depress myocardium in the usual dosage

1240. Quinidine exerts its action of hearts by inhibiting
a) Na^+ channel b) K^+ channel *(AI 99)*
c) Cl-channel d) $Ca2^+$ channel

1241. Pharmacological defibrillator is - *(PGI 99)*
a) Adenosine b) Bretylium
c) Lignocaine d) Amiodarone

1242. Best used in digoxin induced arrhythmia-fPG/ *97)*
a) Phenytoin b) Lignocaine
c) Quinidine d) Procainamide

1243. A Patient presents to the casulaty with the history of ringing in the ears, headache for taking some 'heart drug' the name of which is he does not know. Examination reveals incresed QT in *ECG*, theprobable drug is - (*NIMHANS 01)*
a) Quindine b) Lignocaine
c) Digoxin d) Amiodarone

1244. Cardiac or central nervous system toxicity may result when standard lidocaine doses are administered to patients with circulatory failure. This may be due to the following reason - *(AI 03)*
a) Lidocaine concentration are initially higher in relatively well perfused tissues such as brain and heart
b) Histamine receptors in brain and heart gets suddenly activated in circulatory failure.
c) There is a sudden outburst of release of adrenaline, noradrenaline and dopamine in brain and heart
d) Lidocaine is converted into a toxic metabolite due to its longer stay in liver

1245. The drug of choice in patient with Parkinson-White syndrome with fibrillation is - *(AIIMS 03)*
a) Digitalis b) Procainamide
c) Verapamil d) Adenosine

1246. Which of the following is not an adverse effect of chronic amiodarone therapy - *(AI 04)*
a) Pulmonary fibrosis
b) Hypothyroidism
c) Hyperthyroidism
d) System lupus erythmatosus

1247. Drug of choice for ventricular arrhythmias due to Myocardial infarction (MI) is - *(Karnat 05)*
a) Quinidine b) Amiodarone
c) Xylocaine d)Diphenylthy

1248. Drug of choice for Paroxysmal supraventricular tachycardia (PSVT) is -*(Karnat 05,Aiims 80, 83, 87)*
a) Verapamil b) Digitalis
c) Quinidine d)Diphenylthy

1249. Supra-ventricular arrhythmia can be treated with -
a) Adenosine *(Karnataka - PG MEE 06, AI 95)*
b) Flecainide
c) Tocainide
d) Disopyramide

1250. Drugs which shortens the duratio of action potential in Purkinje fibres is - *(PGMCET07)*
a) Amiodarone b) Quinidine
c) Flecainide d) Lignocaine

1227)c 1228) b 1229) a,c 1230) c 1231)c 1232)c 1233)d 1234)d 1235)c 1236)b 1237)c 1238)c 1239)b 1240)a
1241)b 1242)b 1243)a 1244)a 1245)b 1246)d 1247)c 1248)a 1249)a 1250)d

1251. All are toxicities seen with Amiodarone therapy except - *(AIIMS May 09)*
a) Pulmonary fibrosisb) Corneal micro-deposits
c) Cirrhosis of liver d) Productive cough

ANTI-ANGINAL

1252. Which of the following acts directly on blood vessels - *(AI89)*
a) Hydralazine b) Alphamethyl dopa
c) Captopril d) Propanolol

1253. Verapamil acts by - *(TN 89)*
a) Blocking membrane depolarisation
b) Calcium channel blockers
c) Membrane stabilising
d) Blocking membrane repolarisation

1254. Which of the following is a calcium channel blocker selective on cerebral blood vessels -
a) Nifedipineb)Nimodipine *(AIIMS 82)*
c) Verapamil d) Amiodarone

1255. Calcium channel blocker with predominant peripheral action is - *(AI 90, 91)*
a) Verapamilb) Diltiazem
c) Depranil d) Nifidepine

1256. All are true of minoxidil except - *(AI90, AI 97)*
a) Increased potassium permiability
b) Calcium channel blocker
c) Useful in hypertension
d) Increase hair synthesis

1257. All of the following are predominant arteriolar dilators except- *(AI 91)*
a) Sodium Nitroprusside b) Hydralazine
c) Nifedipine d) Nitrates

1258. Which antihypertensive does not have central actions- *(AI92)*
a) Clonidine b)Indapamide
c) Propranolol d) Alpha Methyl dopa

1259. Drug of choice in Acute myocardial infarction is- *(JIPMER93)*
a) Morphine b)I.V. heparin
c) Nitroglycerine d) Streptokinase

1260. Longest acting Nitro glycerin in preparation is -
a) Glyceryl trinitrate *(JIPMER 93)*
b) Amyl Nitrate
c) PentaErythritaltetranitrate
d) Isosorbide dinitrate

1261. Following side effects of diltiazem differs from lisinopril - *(AP 91)*
a) Bradycardia b) Ankle oedema
c) Headache d) Nausea

1262. Pentooxyphylline is contraindicated in the following except - *(AIIMS 84,89)*
a) Peripheral vascular disease
b) Massive retinal Haemorrhage
c) Acute M-I
d) Pregnancy

1263. Following are side effects of Nimodipine expect -
a) Hypotension *(PGI 89,91)*
b) Flushing
c) Headache
d) Marked changes in GIT motility

1264. Which following can be relieve angina pectoris by decreasing mycardial work, but may precipitate congestive heart failure- *(AIIMS 79, 81)*
a) Phentolamine b) Phenoxybenzamine
c) Propranolol d) Atropine
e) None of the above

1265. Masster's testis employed to evaluate clinically
a) Antihypertensive drugs *(AIIMS 80-84)*
b) Anti-anginal drugs
c) Anti-diabetic drugs
d) Anti-epileptic drugs

1266. In a patient with myocardial infarction, if congestive cardiac failure develops, the does of digoxin should be - *(DNB 89)*
a) Reduced b) Increased
c) Unaltered d) None of the above

1267. All of following are examples of calcium channel blockers except - *(AI 96)*
a) Nifedipine b) Diltiazem
c) Pirenzepine d) Verapamil

1268. Nitrites used in management of Angina have all the following action except - *(AI 9 7)*
a) Increase total coronary blood flow
b) Decrease cardiac 0_2 consumption
c) Decrease preload & after load
d) Redistribution of blood in subendocardial vessels

1269. Preferential arteriolar dilatation is by all except -
a) Hydralazine b) Minoxidil *(AI97)*
c) Diazoxide d) Sodium nitroprusside

1270. Verapamil increase toxicity of all except - *(PGI 96)*
a) Digoxin b) Phenobarbitone
c) Beznodiazepine d)NAIDS

1271. False about calcium channel blockers is -
a) Prevents leak of calcium channels *(Kerala 97)*
b) Causes increase in coronary blood flow
c) Cause negative inotropic effect
d) Closes voltage operated calcium channels

1272. Mechanism of action of dipyridamole- *(AI99)*
a) Adenosine reuptake inhibition
b) Increases PGI2
c) Inhibits cycloxygenase
d) None

1273. Not true about nitroglycerine is that - *(AI 99)*
a) Causes AV conduction delay
b) Causes tolerance
c) Caused reflex tachycardia
d) Caused hypotension

1251) d 1252) a 1253)b 1254)b 1255)d 1256)b 1257) a,d 1258) b 1259)d 1260)c 1261) a,b 1262) a 1263)d 1264)c
1265) b 1266) a 1267)c 1268)a 1269)d 1270)d 1271)a 1272)a 1273)a

1274. About the use of nitrates all are true except -
a) In HOCM-not given *(PGI2000)*
b) Acute M.I can be given
c) CHF and acute LVF
d) Methemoglobinemia

1275. Coronary steal phenomenon is shown by- *(AI2K)*
a) Disopyramide b) Verapamil
c) Nitroglycerin d)Amiodarone

1276. The beneficial effects of nitrates in the treatment of angina include the following except -
a) Decreased arterial pressure *(KERALA 2K)*
b) Decreased ventricular volume
c) Decreased diastole perfusion time
d) Decreased ejection time
e) Decreased left ventricular diastolic

1277. Mechanism of action of sodium nitroprusside in cyanide poisoning - *{PGI June 05)*
a) Produces metheoglobinemia
b) Increased blood flow to liver
c) Increased blood flow to heart
d) Increased blood flow to kidney

1278. Appropriate treatment of transient ischaemic attack is - *(HP 2006)*
a) Aspirin b) Heparin
c) Dipyrmidol d)Coumarin

1279. Which of the following is the function of nitric oxide- *(COMED2006)*
a) Vasodilatation b) Platelet inhibition
c) Immune regulation d) All of the above

1280. Dipyridamole is a drug which acts by inhibiting uptake and degradation of adenosine; Adenosine here acts by - *(MAHE 07)*
a) t Total coronary flow
b) t Myocardial contractility
c) Smooth muscle constriction
d) Smooth muscle relaxation

1281. Dipyridamole is a drug which acts by inbiting uptake and degradation of adenosine. Adenosine here acts by -
a) Total coronary flow *(Manipal 08)*
b) Myocardial contractility
c) Smooth muscle constriction
d) Smooth muscle relaxation

1282. Calcium channel blocker showing affinity to cerebral vessels ? *(APPG 08)*
a) Nimodipine b) Verapamil
c) Diltiazem d) All

1283. Nitroglycerine causes all, Except - *(AI09)*
a) Hypotension and Bradycardia
b) Methamoglobinemia
c) Hypotension and tachycardia
d) Vasodilatation

1284. Nitrates are not used in - *(AIIMS Nov 09)*
a) CCF b) Esophageal spasm
c) Renal Colic d) Cyanide poisoning

1285. Potassium Channel Openers are following except -
a) Pinacidil b)Diazoxide *(Maharashtra 10)*
c) Nicorandil d)Amiodarone

1286. All of the following statements about Ranolazine are true, except - *(AI 11)*
a) Piperazine derived antianginal agent
b) May be used as first line agent in chronic angina
c) May improve Glycemic control
d) Hypotension is an established adverse effect

ANTI-HYPERTENSIVE

1287. What is true of hydralazine therapy in hypertension - *{PGI80, AIIMS 87)*
a) Drowsiness b) Lupus syndrome
c) Positive coomb's test d) Syncope

1288. Postural hypotension and failure of ejaculation is most commonly seen in treatment with -
a) Guanethidine b) Minoxidil *(KERALA 91)*
c) Propranolol d) Sodium Nitroprusside

1289. Nifedipine and B-blockers is used to combat-
a) Pedal oedema by Nifedipine *(AIIMS 96, 95)*
b) Sympathetic overactivity due to Nifedipine
c) CCF caused by B- blockers
d) Heart block caused by B-blocker

1290. Antihypertensive drug which inhibits labour -
a) Reserpine b) Diazoxide *(UPSC 85 PGI 88)*
c) Minoxidil d) Captopril

1291. Verapamil must be used very carefully in the presence of - *(JIPMER 80, Delhi 8 7)*
a) Aminoglycosides
b) High cervical spinal injury
c) Extensive bums
d) Tricyclic antidepressants
e) Beta-adrenergic blocking agents

1292. Drug used for accelerated hypertension- *(PGI 88)*
a) Diazoxide b) Nitroprusside
c) Trimethaphan d) Reserpine
e) All of above

1293. All the antihypertensive drugs has central effects except- *(AI91,97)*
a) Clonidine b) Alpha methyldopa
c) Propranolol d) Sodium nitroprusside

1294. Which drug is not used in hypertensive emergency-
a) Trimethapan b) IV hydrallazine *(AIIMS 92)*
c) Indapamide d) Sublingual nifedipine

1295. Drug of choice in Renovascular hypertension is - *(JIPMER 93)*
a) Captropril b) Aldomet
c) Nifedipine d) Propranolol

1296. Drug which reduces afterload but not preload -
a) Captopril *(DELHI 92, UPSC 93)*
b) Isosorbide dinitrate
c) Nitroglycerin
d) Hydralazine

1297. All of the following drugs are used in hypertensive emergencies except - *{Delhi 93, AIIMS 92)*
a) Hydrallazine b)Labetolol
c) Minoxidil d) Thiazide

1274) d 1275) None 1276) c 1277) a 1278) a 1279) d 1280) d 1281) a 1282) a 1283) a 1284) c 1285) d 1286) d 1287) b 1288) a 1289)b 1290)b 1291)e 1292)a,b,c 1293)d 1294)c 1295)a 1296)d 1297)d

1298. The drug of choice in hypertension with dissection of aorta is - *(AIIMS 80,82, PGI87)*
a) Reserpine b) Sodium nitroprusside
c) Nefedipine d) Pindolol

1299. Drug of choice in hypertensive crisis of phaeochromocytoma is - *(PGI 80)*
a) Guanethidine b) Methoxamine
c) Trimethaphan d) Phentolamine

1300. All of the following antihypertensives decrease plasma renin activity except - *(Karn 94)*
a) Clonidine b) Methyldopa
c) Atenolol d) Chlorothiazide

1301. True about minoxidil is - *(KERALA 95)*
a) Increase hair growth b) Antihypertensive
c) Both d)None

1302. Sodium nitroprusside causes hypotension mainly by- *(KERALA 95)*
a) Arterial dilatation
b) veno dilatation
c) Central action
d) Negative ionotropic efect on heart

1303. Postural hypotension is commonest with- *(AI96, Kerala 04, AIIMS 98, MAHE 05)*
a) Captopril b) Prazosin
c) Hydralazine d) Clonidine

1304. Which of the following antihypertensives is an alpha-adrenoceptor blocker - *(KARN95)*
a) Clonidine b) Alpha-methyldopa
c) Atenolol d) Prazosin

1305. Drug contra indicated in insulin dependant dibetics with hypertension - *(AP96)*
a) Methyl Dopa b) Captopril
c) Propranolol d) colnidine

1306. Which antihypertensives is contraindicatd in pregnancy - *(JIPMER98)*
a) Methy dopa b) Beta-Blockers
c) Alpha and Beta Blockers d) ACE inhibitors

1307. K+ Channel opener is - *(MP 98)*
a) Verapamil b) Sodium nitropruside
c) Minoxidil d)Amrinone

1308. K^+ channel openers are all except- *(MAHE 01)*
a) Minoxidil b) Nicorandil
c) Glebenclamide d)Penacidil

1309. An elderly patient on antihypertensive treatment developed renal failure - *(PGI 2002)*
a) ACE inhibitors b) Ca^{2+} channel Blockers
c) Beta Blockers d) Prazosin
e) Angiotensin receptor antagonist

1310. Bradycardia is seen in all except- *(All India 95)*
a) Methyl dopa b) Reserpine
c) Hydralazine d) Propranolol

1311. Combination use of beta blockers and calcium channel blockers cause- *(PGI 01)*
a) Heart block b) Hypertension
c) Hypotension d) Bradycardia
e) Tachyarrhythimias

1312. All of the following are useful intravenous therapy for hypertensive emergencies except - *(AI 03)*
a) Fenoldopan b)Urapidil
c) Enalapril d) Nifedipine

1313. The anti-hypertensive contraindicated in pregnancy - *(UPPGMEE 04)*
a) Enalapril b) Hydralazine
c) Clonidine d) Alpha Methyldopa

1314. Calcium channel blocker with maximum effect on conduction of heart is - *(J & K 05, AIIMS 92, 81)*
a) Verapamil b) Nifedipine
c) Diltiazem d) Phenylanine

1315. For diabetes mellitus with hypertension & glomerulopathy. Drug of choice is - *(Orissa 05)*
a) ACE inhibitors b) Diuretics
c) a blockers d) Ca channel blocker

1316. Which of the following is the mechanism of action of methyldopa ? - *(Manipal 2006)*
a) a_2 agonist in the CNS
b) a_2 methylnorepinephrine act peripherally
c) Blocking B, receptor in heart
d) ACE inhibitor

1317. According to WHO, The guidelines for isolated systolic hypertension - *(Manipal 2006)*
a) 120mmHg b)130mmHg
c) 140mmHg d)145mmHg

1318. The major clinical use of nimodipine is in -
a) Hypertension *(Kanataka - PG MEE 2006)*
b) Angina pectoris
c) Subarachnoid haemorrhage
d) Raynaud's phenomenon

1319. All of the following drugs may be used in hypertensive crisis except - *(Corned 0 7)*
a) Nifedipine b) Labetalol
c) Furosemide d) Pindolol

1320. Antihypertensive not contraindicated in pregnancy-
a) Spironolactone *(Aiims May 07)*
b) Labetalol
c) Sodium Nitroprusside
d) ACE inhibitor

1321. Drug which increases Nitrix Oxide are all except-
a) Glycerine trinitrate *(Aiims May 07)*
b) Hydralazine
c) Sodium Nitroprusside
d) Fenoldopam

1322. Drug of choice in a patient with diabetic nephropathy and hypertension - *(MAHE 07)*
a) Enalapril b) Verapamil
c) CCB d)Diureties

1323. Side effects of directly acting vasodilators are -
a) Hypertrichosis *(PGI June 07)*
b) Hypotension

1324. Which of the following is the preferred drug for treatment of hypertension during pregnancy ?
a) Enalapril b) Prazosin *(UPSC-108)*
c) Indapamide d) Alpha methyl dopa

1298) b 1299) d 1300)d 1301)c 1302)a,b 1303) b 1304) d 1305)c 1306)d 1307)c 1308)c 1309)a,e 1310)c 1311)a,d
1312) d 1313) a 1314)a 1315)a 1316)a 1317)c 1318)c 1319)d 1320)b 1321)d 1322)a 1323)a,b 1324)d

1325. The following drugs have been found to be useful in the treatment of primary pulmonary hypertension except - *(UPSC-108)*
a) Calcium channel blockers
b) Prostacyclins
c) Beta blockers
d) Phosphodiesterase V inhibitors (Sildenafil)

1326. Drug of choice in a patient with diabetic nephropathy and hypertension - *(Manipal 08)*
a) Enalapril b) Verapamil
c) GCB d) Diuretics

1327. A anti hypertensive drugs develops positive coomb's test- *(UP 08)*
a) Methyldopa b)Clonidine
c) Hydralazine d) Sodium - nitropruside

1328. Rebound hypertension is seen with - *(PGI June 09)*
a) Amlodipine b) Methydopa
c) Clonidine d) Na nitroprusside
e) Atenolol

1329. Reduces blood pressure primarily by directly decreasing heart rate alone - *(DELHIPG Mar. 09)*
a) Propranolol
b) Prazosin
c) Alpha methyl dopa
d) Nitroprusside sodium

1330. Fenoldopam is used in the management of -
a) Hypertensive emergency *(DELHIPG Mar 09)*
b) Congestive heart failure
c) Migraine prophylaxis
d) Tacharrhythmias

1331. Which of the following is primarily a venodilator ? *(DELHIPG Mar 09)*
a) Hydralazine b) Minoxidil
c) Nitroprusside d) Nifedipine

1332. Which of the following is not a first line antihypertensive agent ? *(DELHI PG Mar 09)*
a) Enalapril b) Hydrochlorothiazide
c) Amlodipine d) Atenolol

1333. Which of the following can cause first dose syncope-
a) Prazosin b)Propanolol *(PGINov 09)*
c) ACE inhibitors d) Nitroprusside
e) Diuretics

1334. Reversible hearing loss can be seen (as side-effect) with- *(Maharashtra10)*
a) Clarithromycin b) Azithromycin
c) Roxithromycin d) Clindamycin

1335. Which of the following is true about diazoxide except-
a) K^+ channel opener *(AIIMS May 11)*
b) Can be used as antihypertensive agent
c) Causes severe hypoglycemia
d) Used in insulinoma

1336. Anti hypertensive of choice in a patient with diabetes and micro albuminuria - *(Jipmer 11)*
a) ACE inhibitors b) p - blockers
c) Diuretics d) Nitrates

1337. Mechanism of action of methyl dopa is at -
a) Vasomotor center *(Jipmer 11)*
b) Sympathetic nerve endings
c) Autonomic ganglia
d) Vascular smooth muscle

DIURETIC

1338. Diuresis is caused by - *(AIIMS 81 Delhi 92)*
a) Mannitol b) Glycerol
c) Urea d) All of the above

1339. One of the following diuretics should not be used inCRF - *(JIPMER 80)*
a) Lasix b) Chlorthiazide
c) Bumetanide d) Spironolactone

1340. All of the following occurs when aldosterone antagonist is given except - *(JIPMER 95)*
a) Hyponatremia b) Hyperkalemia
c) Hypovolemia d) Hyperuricemia

1341. Which of the following is false about mannitol -
a) Sugar with low mol. weight
b) Prevents ARF in shock
c) Used in crush syndrome
d) Used in obstructive jaundice surgeries

1342. Aldosterone antagonist is - *(AIIMS 97)*
a) Cyperoterone acetate b) Mifiprestone
c) Mistranol d)Riwazul

1343. Potassium conserving diuretic is - *(PGI 86, JIPMER 85, 88)*
a) Ethacrynic acid
b) Spirinolactone
c) Thaizide
d) Frusemide

1344. Chemically fresumide is - *(AP 86)*
a) Carbonic anhydrase inhibitor
b) Mercurial derivative
c) Sulphamoyl derivative
d) Aldostarone antogonist

1345. Potassium supplements are given with - *(AP 88)*
a) Spirinolactone b) Prednisolone
c) Thiazides d) None of the above

1346. Which is not a K^+ sparing diuretic - *(AIIMS 91)*
a) Indapamide b) Triamterene
c) Amiloride d) Spirinolactone

1347. Therapy with thiazide diuretics may result in - *(DNB89)*
a) Hypergeycemia b) Hypokalaemia
c) Both the above d) None of the above

1348. The drug of choice for treatment of diabetes insipidus is - *(AIIMS86)*
a) Desmopressin b) Diazoxide
c) Thiazide diuretics d) Chlorpropamide

1349. For quick and vigorous diuresis the drug of choice would be - *(AMU87)*
a) Thiazides b)Furosemide
c) Sprionolactone d) Acetazolamide

1325) c 1326) a 1327)a 1328)b,cl329)a 1330)a 1331)c 1332)d 1333)a,c 1334)a 1335)c 1336)a 1337)a 1338)d 1339) b,d 1340) d 1341) a 1342) None 1343)b 1344) c 1345) c 1346) a 1347) c 1348) a 1349)b

1350. Hyperkalemia may occur if potassium sparing diureties are given alongwith - *(Karnat 96)*
a) Captopril b) Atenolol
c) Prazosin d)Clonidine

1351. The following drugs are useful in diabetes insipidus except - *(Karnat 96)*
a) Desmopressin b) Lithium
c) Chlorpropamide d) Hydrochlorothiazide

1352. Frusemide differ from Thiazides by - *(A197)*
a) Acts on proximal & distal tubles
b) Onset & duration of action
c) Potassium loss
d) Potentiate ADH action

1353. TVue about triamterene is A/E- *(PGI99)*
a) Saluretic effect is greater than thiazide
b) Triamterence is often combined with thiazide
c) Action is just like amiloride
d) It is a K+ sparing diuretic

1354. Mannitol when given I/V causes - *(PGI98)*
a) >1 Blood viscosity b) T Blood viscosity
c) iGFR d) t ICT

1355. Osmotic diuretics cause following excepts-
a) Inhibit Renin release *(PGI98)*
b) T Intravascular volume
c) Reduce salt reabsorption in ascending limb
d) None of the above

1356. In chronic renal failure which one is contraindicated-
a) Furosenmide b) Ethacrynic acid *(PGI 98)*
c) Triamterene d)Bumetanide

1357. Spirinolactone & ACE inhibitors are not used concurrently because of danger of - *(JIPMER 98)*
a) Hyperglycemia b) Hypokalemia
c) Hyperkalemia d) Hypogycemia

1358. Side effects of Spironolactone are accelarated by concurrent administration by - *(JIPMER 98)*
a) Thyroxine b) ACE inhibitor
c) Salicylates d) Paracetamol

1359. The toxic effects produced by the thazide diuretics include the following except - *(Kerala 2K)*
a) Metabolic alkalosis
b) Metabolic acidosis
c) Impaired carbohydrate tolerance
d) Hyperlipidemia
e) Hyponatremia

1360. Drug which is useful in neuronal diabetes inspidus in both children and adults given intra nasally -
a) Vasopressin b) Desmopressin *(MAHE 01)*
c) Lypressin d) Presselin

1361. Thiazide diuretics are best avoided in which of the following conditions when associated with hypertension? - *(UPSC2001)*
a) Heart failure b) Diabetes mellitus
c) Heart block d)Gout

1362. The following thiazide diuretic is active if the GFR is 30 - 40 mm Hg. - *(JIPMER 2002)*
a) Metalozone b) Chlorthiazide
c) Chlorthalidone d) Benzthiazide

1363. Which does not cause hypercalcemia - (*Kerala 03)*
a) Thiazides b) Loop diuretics
c) Sipronolactanone d)All

1364. Mineralocorticoid antagonist is - **(***TN 03)*
a) Frusemide b) Cryptoterone acetate
c) Spironolactone d) Thiazides

1365. A vasopressin analogue does not produce therapeutic effect through vasopressin V-2 receptor in which one of the following - *(AI03)*
a) Central diabetes insipidus
b) Bleeding esophageal varices
c) Type I van Willebrand's disease
d) Primary nocturnal enuresis

1366. Canrenone is the prodrug of - *(APPGE 04)*
a) Ampicillin b) Spironolactone
c) Frusemide d)Acetazolamide

1367. Aldosterone antagonists are not useful in the treatment of - **(***AIIMS 04)*
a) Hypertension b) Congestive heart failure
c) Gynecomastia d) Hirsutism

1368. One of the following diuretics doesnot require its presence in the tubular lumen for its pharmacological effects - **(***JIPMER 05)*
a) Thiazide diuretics
b) Loop diuretics
c) Carbonic anhydrase inhibitors
d) Aldosterone antagonists

1369. Which among the following is NOT an adverse effect of furosemide - **(***Corned 08)*
a) Hypokalemia b) Ototoxicity
c) Hypercalcemia d) Hyperuricemia

1370. All are true about mannitol except - *(MAHE 07)*
a) iGFR b) Osmotic diuretic
c) Non - electrolyte d) Renal vasodialator

1371. Which of the following diuretics causes, Hypercalcemia and renal calcium stone formation-
a) Spironolactone *(UP 07, PGI 81, Karn 94)*
b) Furosemide
c) Chlorothiazine
d) Mannitol

1372. Following is true about frusemide - *(AIIMSNov 07)*
a) It is given only by IV route
b) It causes mild diuresis
c) It is used in pulmonary edema
d) Acts on PCT

1373. Thiazides false is - *(AIIMS Nov 07)*
a) Used in CCF
b) Causes hyperglycemia
c) Increases uric acid concentration in serum
d) Increases calcium excretion in urine

1374. All are true about mannitol except - *(Manipal 08)*
a) iGFR b) Osmotic diuretic
c) Non-electrolyte d) Renal vasodilator

1375. The electrolyte abnormality seen with the use of loop diuretics - *(Manipal 08)*
a) Hyperkalemia b) Hypokalemia
c) Hypouricaemia d) Hypernatremia

1350) a 1351)b 1352)b 1353)a 1354)b 1355)d 1356)c 1357)c 1358)b 1359)b 1360)b 1361)d 1362)a 1363)b,c
1364)c 1365)b 1366)b 1367)c 1368)d 1369)c 1370)a 1371)c 1372)c 1373)d 1374)a 1375)b

1376. In which of the following conditions acetazolamide is not used ? *(APPG 08)*
a) Epilepsy b) Cirrhosis
c) Meningitis d) All

1377. Loop diuretics act by - *(PGI Dec 08)*
a) Inhibition of Na^+-Cl* symport
b) Inhibition of Na^+-K^+-2C1' cotransport
c) Inhibition of Na^+-K^+ATPase
d) Inhibition of H^+-K^+ ATPase
e) Inhibition of renal epithelial Na^+channel

1378. Which of the following is associated with Thiazide diuretics - *(A1IMS Nov 09)*
a) Hyperkalemic paralysis b) Hypouricemia
c) Hypolipidemia d) Impotence

1379. All of the following statements about trientine are true, Except - *(AI10)*
a) More potent than penicillamine and orally absorbed
b) Alternative to penicilliamine in non tolerant
c) Not given with iron within two hours of ingestion
d) May cause iron deficiency anemia

1380. Adverse effects of thiazides - all except '■ *(Jipmer 10)*
a) Hypokalemia b) Hypercalcemia
c) Hyper uricemia d) Metabolic acidosis

1381. Vasopressin is inhibited by - *(Jipmer 11)*
a) Alcohol b)Clofibrate
c) Carbarnazepine d)Amiodarone

ACE - INHIBITORS

1382. Most potent vasopressor is - *(AI 88)*
a) Angiotesin II b) Renin
c) Aldosterone d) Cortisol

1383. Captopril exerts antihypertensive effect by- *(AIMS 89)*
a) Inhibits conversion of angiotensin Ilto I
b) Inhibits conversion of angiotensin I to II
c) Decreases renin production
d) Inhibits conversion of angiotensinogen to angiotensin

1384. Which of the following is an ACE inhibitor -
a) Saralasin b)Diltiazem (*AI90*)
c) Captopril d) Spirinolactone

1385. Which is correct of Enalapril as compared to captopril- *(PGI 93)*
a) Longer action
b) More potent
c) Faster onset of action
d) More adverse reactions

1386. Contraindication of lisinopril includes - *(UPSC93)*
a) Renovascular hypertension
b) Cardionegaly
c) Bilateral renal artery stenosis
d) Unilateral renal artery stenosis

1387. All of the following are true about Enalapril except -
a) A prodrug *(Delhi 93)*
b) Used in treatment of hypertension
c) Blocks angiotensin Ij
d) Inhibits ACE

1388. False about enalapril - *(AI 95)*
a) It is a produrg
b) It is more effective than captopril
c) It is a dipeptide
d) Less adverse effects

1389. ACE inhibitors are contraindicated in all of the following except- *(Karnat. 96)*
a) Pregnancy b) Renal failure
c) Single kidney d) Congestive cardiac failure

1390. About losartan false is - *(AIIMS 98)*
a) Angiotensin II inhibitor
b) Long acting metabolite present
c) Does not cause cough
d) Hyperuricemia is a side effect

1391. About Losartan - true is - *(Calcutta 2K)*
a) Cough
b) No angioedema
c) No hypotension with high renin hypertension
d) No foetopathic effect

1392. A patient was started on antihypertensive medications; developed Renal failure, the drug offended is- *(PGI02)*
a) Beta-blocker b) Alfa-blocker
c) Calcium channel blocker d) ACE inhibitor
e) Clonidine

1393. ACE inhibitors are given in Diabetes mullitus in which situation - *(Jharkand03)*
a) Type I nephropathy b) Type II nephropahty
c) Both d)None

1394. Cough & Angioedema in ACE inhibitors are because of- *(Jharkand03)*
a) Bradykinin b) Renin
c) Angiotensin II d)All

1395. Action of Angiotensin II- *(PGI June 05)*
a) Systemic vasconstriction
b) Systemic vasodilatation
c) Renal vasodilatation
d) Re-absorption of Na proximal renal tubule
e) Water re-absorption

1396. All of the following are the indications for use of ACE inhibitors, except - *(AIIMS May 05)*
a) Hypertension
b) Myocardial Infarction
c) Left Ventricular Dysfunction
d) Pheochromocytoma

1397. Which of the following statements regarding ace inhibitors is true ? *(AIIMS Nov 08)*
a) These convert angiotensinogen to angiotensin-1
b) Omission of prior diuretic dose decreases the risk of postural hypotension
c) Lisinopril is shorter acting the enalapril
d) These are contra-indicated in diabetic patients

1376)b 1377)b 1378)d 1379) a 1380) d 1381)a 1382)a 1383)b 1384)c 1385)a,bl386)c,d 1387) c 1388) c 1389)c,d
1390)d 1391) b 1392)d 1393}c l¦394)a 1395)a,d,e 1396)d 1397)b

1398. Regarding ACE inhibitor which of the following is true - *(A1IMS May 09)*
a) Inhibits conversion of angiotensinogen to angiotensin 1
b) T *Vi* of enalapril is more than lisinoproil
c) Omission of prior diuretic dose decreases the risk of postural hypotension
d) It is effective only with left ventricular systolic dysfunction

1399. Angiotensin converting inhibitors when used for a long time in patients with hypertension, cause - *(DELHI PG Feb. 09)*
a) rightward shift in renal pressure-natriuresis curve
b) Reduction in filtration fraction
c) Significant increase in heart rate
d) No change in compliance of large arteries

1400. Which diuretic could be considered appropriated for combining with ACE inhibitors? *(DELHI PG Feb. 09)*
a) Spironolactone b)Eplerenone
c) Hydrochlorothiazide d)Amiloride

1401. Regarding ACE inhibitor which of the following is true - *(AIIMS May 11)*
a) Inhibits conversion of angiotensinogen to angiotensin 1
b) *TVz* of enalapril is more than lisinopril
c) Omission of prior diuretic dose decreases the risk of postural hypotension
d) It is effective only with left ventricular systolic dysfunction

1402. Which of the following is an Angiotensin Converting Enzyme (ACE) inhibitor? *(UPSC 111)*
a) Atenolol b) Prazosin
c) Hydralazine d) Enalapril

ANTI-COAGULANT

1403. The treatment of choice in dicumarol poisoning is- *(PGI 86,89)*
a) Heparin b)Aminocaproicacid
c) Vitamin K d) Vitamin C

1404. Vitamin K is required for - *(PGI80, AIIMS 81)*
a) Overdosage of Dindevan
b) Overdosage of Heparin
c) Haemophilia
d) Chrishmas disease

1405. Streptokinase overdose is treated with-^TTVS'C *2K)*
a) Warfarin b) Aspirin
c) Epsilon aminocaproic acid d) Vit K

1406. Platelet aggregation is inhibited by all except -
a) Indomethacin b) Salycylates (*AI88)*
c) Dipyradimole d) Phenobarbitone

1407. Warfarin is stopped----------days prior to surgery -
a) 1-3 b)3-5 *(AIIMS 98)*
c) 6-8 d)8-10

1408. What is the interaction of phenobarbitone and warfarin - *{PGI 89)*
a) Displacement of warfarin from binding site
b) Dereased absorption of warfarin
c) Increased metabolism of warfarin
d) Decreased metabolism of warfarin

1409. Platelet aggregation is inhibited by- *(JIPMER 90)*
a) Clofibrate b) Aspirin
c) Dipyridamole d) All of the above

1410. Streptokinase acts by - *(AIIMS 91)*
a) Vasodilator action
b) Anticoagulant action
c) Fibrinolysis
d) Antiplatelet action

1411. All the following drugs are used in preventing fibrinolysis except - *(PGI88)*
a) EACA b) Tranexamic acid
c) Stanazoid d) Aprotinine

1412. Antitode for heparin is - *(Kerala 95)*
a) Protamine b) EDTA
c) VitK d) Desferrioxamine

1413. Which does not have antiplatelet action- *{Kerala 95)*
a) Paracetamol b) Dipiridamole
c) Aspirin d) Ibuprofen

1414. In Dicumarol poisoning, which Vit K is used- *{JIPMER 98)*
a) Menadione b) Menaqunone
c) Phytonadione d) None of the above

1415. Heparin is- *(ROHTAK97)*
a) Polysaccharide b) Lipoprotein
c) Monosaccharide d) Polyenoic acid
e) Ceramide

1416. Among following least anaphylaxis is seen with-
a) Streptokinase *(PGI 2000)*
b) Urokinase
c) Anisolated streptokinase
d) TPA

1417. A patient on warfarin was given phenobarbitone, The result would have been - *(PGI 99)*
a) Increase the dose of warfarin
b) Decrease the dose of warfarin
c) Increase the dose of phenobarb
d) Decerease the dose of phenobarb

1418. Not true about heparin is - *(PGI 98)*
a) Activates antithrombin III
b) Small unionized molecule are not absorbed orally
c) Protamine sulphate always used to reverse its action
d) Release lipoprotein lipase from vessel wall and tissues

1419. Antifibrinolytic agent is - *{DNB 01)*
a) Aspirin b) Aminocaproic acid
c) Ticlopidine d)Abciximab

1420. Dazoxiben is a - *{Kerala 01)*
a) Lipoxygenase inhibitor
b) Prostacyclin synthetase inhibitor
c) Cycloxygenase inhibitor
d) TXA2 inhibitor

1398)c 1399)b 1400)c 1401)c 1402)d 1403)c 1404)a 1405)c 1406)d 1407)c 1408)c 1409)b,c 1410)c 1411)c 1412) a 1413)a 1414)c 1415)a 1416)d 1417)a 1418)b,c 1419)b 1420)d

1421. Which of the following is an inhibitor of fibrinolysis-
a) Tranexemic acid b)Tictopidine *(JIPMER02)*
c) Alteplase d) Urokinase

1422. The tissue plasminogen activator produced by recombinant DNA technology is - *(JIPMER 2002)*
a) Anestreplase b) Reteplase
c) Altepase d)Abciximab

1423. Which one of the following statements is NOT correct - *(UPSC 02)*
a) Unfractionated Heparin does not cross the placenta
b) Low molecular Heparins can cross the placenta
c) Warfarin crosses the placenta
d) Breast feeding is safe for the infant of a mother taking Warfarin

1424. Epsilon aminocaproic acid given prophylactically is useful in - *(Karnat 05)*
a) C_8 deficiency b) Cj inhibitor deficiency
c) C_5 deficiency d) C_{3b} inactivator deficiency

1425. Heparin is the commonly used anticoagulant in cardiac surgery. All of the following are true about heparin except - *(AIIMS NO V 05)*
a) Weakest acid found in living things
b) Most commercial preparations of heparin now utilize pig intestinal slimes
c) Act via Antithrombin activation
d) Produce thrombocytopenia

1426. In a warfarin treated patient skin necrosis found m-
a) Protein C deficiency *(PGI June 06, PGI03)*
b) Protein S deficiency
c) AT III deficiency

1427. Synthetic factor Xa inhibitor is - *(COMED 2006)*
a) Enoxaparin b)Dalptrin
c) Fondaparinux d) Heparin

1428. Bleeding due to urokinase overdose controlled by- *(Manipal 2006)*
a) Adrenochrome b) Vasopressin
c) EACA d) Protamine sulphate

1429. All have anti-platelet action, except - (*PGMCET01)*
a) Thromboxane A_2 b) ADP uptake inhibitors
c) PGlj d) Aspirin

1430. Following is administered as a bolus -*(PGMCET 07)*
a) rPA b) TPA
c) r TPA d) None of the above

1431. Abciximab acts by inhibiting - *(PGMCET07, MANIPAL 01, AMU 05)*
a) GP Ilb/IIa
b) Platelet aggregation
c) Adenosine reuptake
d) Anti-thrombin III

1432. Which one of the following is direct thrombin inhibitor - *{Corned 08)*
a) Enoxiparin b)Daltiparin
c) Fondaparinux d) Argatroban

1433. Prothombin time (PT) of a patient is 26, control PT is 13 seconds and sensitivity index is 1.41. What will be the INR of this patient - *(AI07)*
a) 26/13 b) (26/13) 1.41
c) $(26/13)^{141}$ d) $(26/13)^{1/141}$

1434. All of the following statements about Heparin are true except - *(AI 07)*
a) Causes Alopecia
b) Non Teratogenic
c) Releases lipoprotein lipase
d) Causes Hypokalemia

1435. All of the following are GpIIb/HIa antagonist except-
a) Abciximab b) Clopidogrel *(AI07)*
c) Tirofiban d) Epitifibatide

1436. The anticoagulant of choice in pregnancy is -
a) Heparin b) Warfarin *(UP 07, 06)*
c) Dicumarol d) Phenindione

1437. Phenytointoxicity- *(PGIJune 07)*
a) Gum hypertrophy
b) Acne rosacea
c) Exacerbation of acne vulgaris
d) Loss of hair

1438. All the following drugs are used for thrombo prophylaxis except - *(AIIMS Nov 07)*
a) Heparin b) Warfarin
c) Aspirin d) Anti thrombin

1439. Heparin acts by following mechanisms except -
a) Prolong prothrombin time *(DPGEE 08)*
b) Clears lipemic plasma
c) Fibrinolytic activity
d) Prevents fibrin formation

1440. Which of the following drug crosses placenta -
a) Heparin b) Warfarin *(UP 08)*
c) Dicumarol d) Nicoumalone

1441. All are true about warfarin, *e\cept-(AIIMSMay 09)*
a) It causes inhibition of vitamin K dependent clotting factors
b) *TVi* 36 hours
c) Crosses placenta
d) Dose is increased in liver disease

1442. Drug used in heparin overdose - *(AIIMSMay 09)*
a) Protamine sulfate b) Phylloquinone
c) Ticlopidine d) Clopidogrel

1443. Heparin is the most widely used antithrombotic agent. IT act by activating - *(PGI June 09)*
a) Plasmin b) Antithrombin III
c) Fibrinolysin d) Factor X
e) Thrombin

1444. Drug (s) used in prevention of thrombosis is/are -
a) Antiplatelets drugs *(PGIJune 09)*
b) Anticoagulent
c) Antifibrinolytic
d) Antiinflamantory agents (NS AIDS)

1445. As compared to unfractionated heparin, low molecular weight heparins - *(DELHIPG Feb. 09)*
a) Are absorbed more uniformly when given subcutaneously
b) Require more frequent lab monitoring
c) Can be given to patient with heparin induced thrombocytopenia
d) A higher risk of osteopenia

1421) a 1422) b,c 1423) b 1424)b 1425)a 1426)a 1427)a,b,c 1428)c 1429)a 1430)c 1431)a 1432)d 1433)c
1434) d 1435)b 1436)a 1437) a,c 1438) d 1439)c 1440)b 1441)d 1442)a 1443)b 1444)a,b 1445)a

1446. Which of the following drugs is recommended for the treatment of heparin induced thrombocytopenia-
a) Abciximab b) Lepirudin *(AI10)*
c) Warfarin d)Alteplase

1447. Abciximabis- *(Maharashtra 10)*
a) Antithrombin III inhibitor
b) Gp Ilb/IIIa antibody
c) Alanine analogue
d) P2YAC Purine receptor antagonist

1448. Which among the following drugs blocks platelet glycoprotein Hb/IHa receptors - *(Corned 10)*
a) Abciximab b) Etanercept
c) Adalimumab d) Infliximab

1449. Oral Anticoagulants dose will not be altered in co-administration with following drugs -
a) Nifedipine b)Rifampicin *(PGINov.10)*
c) Diltiazem d)Isoniazid
e) Procainamide

1450. Large dose of EDTA are used in carbonic anhydrase enzyme inactivation. The mechanism by which EDTA act is- *(AIIMS Nov 10)*
a) It chelates with the metal ion of the enzyme
b) It combines with the substrate and doesn't react with the enzyme
c) Combines with the substrate and doesn't react with the enzyme
d) Enzyme-EDTA complex can not be attached to substrate

1451. The following are true of heparin EXCEPT that -
a) It inhibits plasma antithrombin 111 *(Kam 11)*
b) It is administered parenterally
c) It is safe during pregnancy
d) Bleeding occurs in its overdose

HYPOLIPIDEMIC

1452. Which is contraindicated in treating a Child with familial hypercholesterolemia -*(AIIMS 80, Delhi 80)*
a) Cholestyramine b) Oestrogen
c) Nicotinic acid d) Thyroxine

1453. About plasma expanders all are true except-
a) Dextran interferes with platelet aggregation
b) Albumin is have 69 AA *(PGI2000)*
c) Half life of albumin -15 hours
d) Amylopectin

1454. Lipid lowering agents Statins, acts in all the following ways, except - *(AIIMS 2K)*
a) Decreased hepatic cholesterol synthesis
b) Decreased LDL receptors
c) Inhibiting HMG Co-A reductase
d) Decreasing VLDL

1455. Statin induced myopathy is not exacerbated by which of the - *(AIIMS 2K)*
a) Nicotinic acid b) Enalpril
c) Erythromycin d)Clofibrate

1456. Agents which dissolve cholestrol stones are -
a) Lithocholic acid *(AIIMS 88)*
b) Chenodeoxycholic acid
c) Ursodeoxycholic acid
d) Cholestyramine
e) B & C are correct

1457. Cholestyramine increases activity of - *(AI95)*
a) HMG CoA reductase
b) Acetyl CoA carboxylase
c) Pyruvate Kinase
d) Glucose 6 phosphatase

1458. For tratment of hypertriglyceridemia drug used inthe primary stage - **(***JIPMER 98)*
a) Cholestyramine b) Nicotinic acid
c) Gemfibrozil d) Resins

1459. The HMG CoA reductase inhibitor is - *(TN98)*
a) Gemfibrozil b) Clofibrate
c) Lovastatin d) None of the above

1460. Which (Enzyme) inhibits initial step of cholesterol synthesis - *(PGI 2000)*
a) Lovastatin b) Gemfibrozil
c) Probucol d) Cholestyramine

1461. Machanism of action of nicotinic acid are all except-
a) Increased catabolism of HDL (*CUP GEE 01)*
b) Catabolism of LDL
c) Catabolism of VLDL
d) Catabolism of cholesterol

1462. All the following drugs increase statin induced rhabdomyolysis except - *(AIIMS 2K)*
a) Nicotinic acid b) Clofibrate
c) Erythromycin d) Captopril

1463. Drug acting on rate - limiting step in cholesterol synthesis is - **(***Jipmer 03)*
a) Nicotinic acid b) Simvastatin
c) Gemfibrozil d) Cholestryamine

1464. Which one of the following statements about stavudine is accurate - **(***COMEDK 05)*
a) Bone marrow suppressions is dose limiting
b) It cause neurotoxicity
c) It inhibits HIV protease
d) It is a non nucleoside reverse transcriptase inhibitor

1465. Orlistat is effective in obesity by - *(COMEDK 05)*
a) Reduction of food intake
b) Beta-1 adrenoreceptor agonist activity
c) Inhibition of pancreatic lipase
d) 5 HT receptor agonist activity

1466. Blood and serum sample for blood group and cross matching will be providing non-reliable results when, which of the following colloidal solution is given to patient - *(PGMCET07)*
a) Dextran b)Hemacceal
c) Albumin d) Mannitol

1467. HDL is increased by - *(PGMCET07)*
a) Lovastatin b) Nicotinic acid
c) Clofibrate d) Gemfibrozil

1446) b 1447) b 1448) a 1449)a,c,e 1450) a 1451) a 1452) b 1453) c 1454) b 1455) b 1456) e 1457) a 1458) c 1459) c 1460) a 1461)a 1462)d 1463)b 1464)b 1465)c 1466)a 1467)b

1468. Type II DM patient, poorly controlled has hypertriglyceridemia with normal LDL and decrease HDL. Avoiding risk of myopathy what would you give-
a) Nicotinic acid b) Gemfibrozil *(PGMCET07)*
c) Statin d) Cholestryramice

1469. Plasma expanders are used in - *(UP 0 7)*
a) Severe anemia b) Severe trauma
c) Pulmonary oedema d) Cardiac failure

1470. Fibrates - false is - *(AIIMS Nov 07)*
a) They increase lipoprotein lipase activity through PPAR alpha, and cause increased lipolysis of triglycerides.
b) They are better absorbed when taken on empty stomach, than when taken with food
c) Cause utricaria, rashes, alopecia, myopathy and GI. distress.
d) Are first line of drugs in severe dysbetalipoproteinemias and hypertriglyceridemias

1471. Fibrates acts by reducing ? *(APPG 08)*
a) Chylomicrons b)VLDL
c) IDL d)HDL

1472. Which of the following anti-lipidemic drugs reduces cholesterol levels by reducing the cholesterol absorption in inte tine by acting on NPC1L1 receptors? *(Maharashtra 10)*
a) Ezetimibe b) Nicotinic acid
c) Lovastatin d) Fibrates

1473. Drug contraindicated in hypertriglyceridemia -
a) Cholestyramine b) Fibrates *(Jipmer10)*
c) Niacin d) Simvastatin

1474. Favorable lipid profile is provided by the following hypolipidemic drug - *(Jipmer 11)*
a) Atorvastatin b) Nicotinic acid
c) Cholestyramine d)Clofibrate

G.I.T.

ANTI-ULCER

1475. Omeprazole blocks- *(AIIMS87)*
a) H^+/K^+ - ATPase pump
b) H^+Na^+ -ATPase pump
c) Na^+K^+-Diffusion across cell membrane
d) Na^+CL^--pump diffusion across cell membrane
e) None of the above

1476. Carbenoxolone sodium is used in peptic ulcer because it - *(AI91)*
a) Systemic antacid
b) Orally used antacid
c) Promotes the ulcer healing
d) Defoaming agent

1477. Antacid interfere with the absorption of all except- *(AIIMS 92)*
a) Ketoconazole b) Erythromycin
c) Ofloxacin d) Oxytetracycline

1478. Theprimary aim of duodenal ulcer management is -
a) To excise the ulcerogenic mucosa *(JIPMER 93)*
b) To prevent complications
c) To rule out malignancy
d) To derease acid output

1479. Which of the following is not a recomended gastric antacid- *(DELHI 83)*
a) Aluminium hydroxide
b) Silicon dioxide
c) Sodium bicarbonate
d) Magnesium trisilicate

1480. Of the following which is a constipating antacid -
a) Calcium carbonate *(DELHI 86, 92)*
b) Sodium bicarbonate
c) Magnesium hydroxide
d) Aluminium hydroxide

1481. Action of one of following is not affected by food
a) Cimetidine b) Ranitidine *(AI96)*
c) Famotidine d)Roxatidine

1482. True about Omeprazole is - *(AI97)*
a) Causes leiomyoma
b) Is a competitive antagonist of histamine receptor
c) Anticancer drug
d) It is a implicated in causation of carcinoid in rats

1483. Decreased gastric acid secretion is by - *(MP 98)*
a) PGE, b)PGF_{2a}
c) PG^ d) Thromboxane A_2

1484. Which prostaglandin is used in NSAID induced ulcer- *(PGI2000)*
a) Misoprostol b) Carboprost
c) Mirtazapine d)Miprinone

1485. A patient was detected to have acid peptic disease. He was given omeprazole, antacid and sucralfate. What is the defect in the rationale with this therapy *4AI2K, 04)*
a) Omeprazole cannot act in presence of antacid
b) Antacids should not be given along with sucralfate since sucralfate needs a low pH for its activation
c) Omeprazole cannot act in presence of sucralfate
d) All of the above

1486. Which of the following is true regarding omeprazole except- *(Manipal 2006)*
a) It is H^+ K^+ATPase pump inhibitor
b) It is most potent H_2 antagonist
c) It is the treatment of choice in GERD
d) Warfarin inhibitor omeprazole

1487. Which of the following doesn't change pH of stomach-
a) Sucralfate b)H_2 blocker *(APPG 08)*
c) Omeprazole d) Ranitidine

1488. Proton pump inhibitors suppress gastric acid secretion by inhibition of - *(Corned 09)*
a) H^+/C1 ATPase pump b) H^+/K^+ ATPase pump
c) Na^+/K^+ ATPase pump d) Na^+/K^+ ATPase pump

1468) b 1469) b 1470)b 1471)b 1472)a 1473)a 1474)b 1475)a 1476)c 1477)b 1478)b 1479)b 1480)a,d 1481)a
1482) d 1483) a,c 1484) a 1485) b 1486)b 1487)a 1488)b

1489. A patient of peptic ulcer was prescribed ranitidine and sucralfate in the morning hours. Why is this combination incorrect - *(Manipal 09)*
a) Ranitidine combines with sucralfate and prevents its action
b) Combination of these two drugs produces serious side effects like agranulocytosis
c) Ranitidine decreases the gastric pH so sucralfate is not able to act
d) Sucralfate inhibits absorption of ranitidine

1490. Which of the following is a 'Protein pump inhibitor'-
a) Ranitidine b) Misoprostol *(AI10)*
c) Omeprazole d)Laxatidine

1491. Sucrolfate does not interfere with the absorption of-
a) Phenytoic b) Digoxin
c) Ciprofloxacin d) Phenoxymethyl penicillin

1492. Adverse effect of Cimetidine includes -
a) Constipation *(PGINov. 10)*
b) Impotence
c) t In plasma Aminotranferase
d) 1 In prolactin level
e) Gynaecomastia

1493. Alginates adn simethicone are given with antacids in peptic ulcer disease because of - *(PGINov 10)*
a) Alginates decrease proton secretion from stomach
b) Alginates prevent GERD
c) Simethicone relieve flatulence
d) Simethicone forms protective layer over ulcer
e) Simethicone prevent GERD

ANTI-EMETIC

1494. Drug of choice in intractable hiccoughs is -
a) Metoclopramaide *(JIPMER81, AMU 89)*
b) Haloperidol
c) Thioridazine
d) Chlorpromazine

1495. Drug of choice in motion sickness is - *(AI 90)*
a) Metoclopromide
b) Transdermal scopolamine
c) Diphenhydramine
d) Chlorpromazine

1496. Which of the following emetic agents stimulate nodose ganglion of the vagus - *(AIIMS 91)*
a) Quinidine b) Salicylate
c) Veratrum alkaloids d) Apomorphine

1497. Not used as an anti emetic in motion sickness -
a) Domperidone b)Cyclizine *(AI97)*
c) Hyoscine d) Meclizine

1498. Metoclopramide is useful for all except - *(TN98)*
a) Motion sickness
b) Chemotherapy induced vomiting
c) Anti emetic
d) Promoting lactation

1499. Granisetron causes antiemetic action due to blockade of - *(MP 98)*
a) Dopamine b)5HT
c) Alpha-Receptors d) Opoid receptors

1500. Patient is on Cisapride for gastroesophageal reflux develops upper respiratory tract infection, and physician prescribes erythromycin. What pharmalogical interaction would be expected -
a) Dereased level of erythromycin and exacerbation ofURTI *(AIMS 01)*
b) Decreased effect of cisapride due to enzyme inductor of erythromycin
c) Fatal ventricular arrhythmia
d) Hemorrhagic cystitis

1501. Drug with highest emitogenic potential is -
a) Cis-platinum b) Emetine *(J&K 2001)*
c) Bleomycin d)Vanomycin

1502. Anti emitic action is through - *(PGI 02)*
a) iChemorceptor triggerzone (CTZ)
b) Hj agonist
c) Dj antagonist
d) Olfactory apparatus
e) 5 HT_4 agonist

1503. Ondansteron used in cancer acts in - *(PGI2002)*
a) 5 HT3 antagonism
b) Vomiting centre
c) D1 & D2 receptors
d) Chemoreceptor trigger zone
e) Orphan receptors

1504. Prokinetic drug without D_2 blockade is-*(Kerala 03)*
a) Metoclopramide b) Cisapride
c) Domperidome d) Chlorpromazine

1505. Which one of the following drugs has been shown to offer protection from gastric aspiration syndrome in a patient with symptoms of flux - *(AI 05)*
a) Ondansetron b) Metoclopramide
c) Sodium citrate d) Atropine

1506. Which one of the following is an antiemetic with minimal CNS side effects ? *(UPSC 07, UP 2K)*
a) Ondansetron b) Chlorpromazine
c) Metoclopramide

1507. All are antiemetics except - *(AiimsMay07)*
a) Domperidone b) Ondensetron
c) Phenazocine d)Cyclizine

1508. Which of the following 5HT3 receptor blockers has highest receptor affinity - *(AIIMS Nov 07)*
a) Ondansetron b) Granisetron
c) Dolasetron d) Palonosetron

1509. Drug used to control post-operative vomiting -
a) Diazepam b) Phenobarbitone *(PGI June*
c) Apretitant d)Droperidol *08)*
e) Ondansetron

1489) d 1490)c 1491)d 1492)a,b,c,e 1493) b,c,ci,e 1494)d 1495)b 1496)c 1497)a 1498)d 1499)b 1500)c 1501)a 1502) a 1503)a.d 1504)b 1505)bl506)a 1507)c 1508)d 1509)d,e

1510. Metoclopramide- *(DELHIPG Feb. 09)*
a) Inhibits cholinergic smooth muscule stimulation in the gastrointestinal tract
b) Decreases lower esophageal sphicter pressure
c) Stimulates D_2 receptor
d) Enhances colonic motility

1511. The statement that is NOT true of domperiodone is that- *(Karn 11)*
a) It rarely causes extrapyramidal side effects
b) It is a DO receptor antagonist
c) Its antiemetic efficacy is higher than metoclopramide
d) It causes loose stool

MISCELLANEOUS

1512. Which of the following is true of oral rehydration solution concentration - *(AI90)*
a) Sodium 70 mEq/litre
b) Potassium 20 mEq/litre
c) Chloride 30 mEq/litre
d) Bicarbonate 80 mEq/litre

1513. Osmolality of ORS recommended by WHO is -
a) 330mosm b)300mosm *(A199)*
c) 270mosm d)260mosm

1514. The average fecal sodium excretion in rota virus diarrhoea is - *(AIIMS 83)*
a) 120meq/l b)90meq/l
c) 30meq/l

1515. Diarrhoea which respond to antibiotic therapy is -
a) Tropical sprue *(JIPMER 92)*
b) Irritable bowel syndrome
c) Travellers diarrhoea
d) Salmonella diarrhoea

1516. True about lactulose are all except - *(MP2K)*
a) It is a cathartics
b) Inhibits absorption of ammonia
c) Inhibits absorption of amino acids
d) Causes bacteria to utilize ammonia

1517. The of choice in the treatment of gastroparesis is
a) Bisacodyl b) Liquid paraffin *(TNPSC 2K)*
c) Cisapride d) Eposom salt

1518. Methyl Poly Siloxane is (MPS) - **(***AI91)*
a) Sysntemic antacid b) Orally used antacid
c) Promotes ulcer healing d) Defoaming agent

1519. Constipation is caused by all except -
a) Morphine *{AIIMS 80 Delhi 92)*
b) Codeine
c) Verapamil
d) Magnesium Sulphate

1520. Which of the following drug is useful in dissolving Gall bladder stone - *{DELHI93)*
a) Clofibrate b) Chenodeodycholic acid
c) Lactulose d) Lithocholic acid

1521. Anthrol acts as purgative due to - *(AIIMS 79,82)*
a) Irritant action
b) Bulk formation in intestinal lumen
c) Osmotic action
d) Emollient effect

1522. Ture about lactulose is - *(PGI98)*
a) Blood ammonia
b) 10% absorbed from gut
c) Osmotic laxative
d) Disaccharide of lactose and sucrose

1523. Which purgative causes hypokalemia - *(UP2K,*
a) Liquid parffin b) Bisacodyl*J&.K05)*
c) Castor oil d) Osmotic purgatives

1524. Which of the following is a tertiary bile acid -
a) Cholic acid *{J&K01)*
b) Chenodeoxycholic acid
c) Urso-deoxycholic acid
d) 7-keto deoxycholic acid

1525. Neither addictive nor constipation - *(HP 06)*
a) Codeine b) Dextromethorphan
c) Diphenoxylate d) Levophenol

1526. False statement about lactulose - *(MAHE 07)*
a) Not effective in opium induced constipation
b) Flatulence is common
c) Not absorbed
d) Osmotic purgative

1527. Bisacodyl is - *(UP 07)*
a) Bulk forming b) Stool softner
c) Stimulant purgative d) Osmotic purgative

1528. The following drugs for the treatment of peptic ulcer disease alter gastric acid pH except - *(UPSC-108)*
a) Ranitidine b) Sucralfate
c) Rabeprazole d) Pirenzepine

1529. False statement about lactulose - *(Manipal 08)*
a) Not effective in opium induced constipation
b) Flatulence is common
c) Not absorbed
d) Osmotic purgative

1530. Ezetimibe acts by - *(DELHI PG Feb. 09)*
a) Enhanced excretion of bile acids
b) Decreased absorption of cholesterol
c) Inhibits intracellular lipase
d) Inhibits intracellular lipase

1531. For oral iron supplements used for iron deficiency anemia - *(DELHI PG Feb. 09)*
a) Treatment dose will deliver 40 to 60 mg of iron per day
b) Mass of total salt is important in determining daily dose
c) Treatment should be stopped as soon as normal hemoglobin level is reached
d) Desired rate of hemoglobin imporovement is 0.5 mg per day

1510) None 1511)c 1512)b 1513)None 1514)c 1515)c,dl516)c 1517)c 1518)d 1519)d 1520)b 1521)a 1522)c 1523) b,c 1524) None 1525)b 1526)a 1527)c 1528)b 1529)a 1530)b 1531)a

ANTI MICROBIAL

GENERAL PROPERTY

1532. All of the following drugs are of fungal origin except - *(AIIMS 80, Delhi 83)*
a) Colistins b) Polymyxins
c) Cycloserine d) Aztreonam

1533. Which of the following combination is not synergistic-
a) Penicillin and streptomycin in endocarditis
b) Amphotericin B and flucytosine in cryptococcal meningitis
c) Pencillin and chlortetracycline in pneumococcal meningitis
d) Sulphmethoxazole and trimethoprim in UTI

1534. In the presence of renal failure.....should not be given - *(JIPMER 86)*
a) Furosemide b) Bumetanide
c) Spironolactone d) Thiazides

1535. Safest antibiotic in Renal failure - *(PGI93)*
a) Cloxacillin b) Streptomycin
c) Gentamicin d) Cephaloridine

1536. Prolonged use of antibiotics orally will result in- *(AIIMS 85)*
a) Diarrhoea b) Fungal infection
c) Enterocolitis d) All of the above

1537. Antibiotic which act by inhibiting cell wall synthesis- *(AIIMS 85, PGI 87, AI88)*
a) Penicillin b)Gentamycin
c) Vancomycin d) Chloramphenicol

1538. All of the following are bactericidal except- *(AI 89)*
a) Cephalexin b) Rifampicin
c) Isoniazid d) Oxytetracycline

1539. Inhibition of protein chain initiation at the ribosomal level is the principal mechanism of antibacterial action of- *(AIIMS 80, 85)*
a) Chloramphenical b) Amikacin
c) Erythromycin d) Tetracycline
e) Nitrofurantoin

1540. Nucleic acid synthesis is inhibited by- *(Kerala 94)*
a) Ampicilin b) Sulpha drugs
c) Griseofulvin d) Cephalosporins

1541. Drugs used in neutropenic patients should be- *(Kerala 94)*
a) Bactericidal b) Bacteriostatic
c) Highly potent d) Be given by IV route

1542. Does not act by inhibting cell wall synthesis -
a) Griseofulvin b) Bactitracin *(AI95)*
c) Cycloserine d) Penicillin

1543. Drug clinically interacting with ribosomes to interfere with translation in bacteria - *(PGI2000)*
a) Tetracycline b) Erythromycin
c) Puromycin d) Oilgomycin

1544. Bacitracin acts on - *(AI 03)*
a) Cell wall b) Cell membrane
c) Nucleic acid b) Ribosome

1545. AO of the foUowing drugs act on cell membrane except- *(A103)*
a) Nystatin b) Griseofulvin
c) Amphotericin B d) Polymixin

1546. The antimicrobial agent which inhibits the ergoterol biosynthesis is - *(AIIMS 03)*
a) Ciprofloxacin b) Amphotercin B
c) 5-Fluorocytosine d) Griseofluvin

1547. All of following inhibit protein synthesis except- *(Manipal 04)*
a) Chloramphenicol b) Tetracycline
c) Puromomycin d) Erythromycin

1548. Streptomycin acts by utilizing differential action in prokaryote & eukaryokate of - *(Orissa 04)*
a) Translation b) Transcription
c) Transmethylation d) DNA interference

1549. Drug resistance most commonly transmitted by- *(Jipmer 04)*
a) R. plasmid b) Bacteriophages
c) Episomes d) Introns

1550. Which of the following drugs combination shows antimicrobial synergism - *(PGI June 05)*
a) Penicillin + streptomycin in SABE
b) Ampicillin + tetracycline in endocarditis
c) Sulphamethoxazole + Trimethoprim in UTI
d) Amphotericin B + fluocytocin in cryptococeal meninges

1551. Creatinine clearance < 10 ml/min. Which of the foUowing drugs does reduction is needed-(PG7 *June 05)*
a) Anaikacin b) Ketoconazole
c) Lithium d) Budesonide
e) Theophylline

1552. Tetracycline inhibits protein synthesis by -
a) Inhibiting initiation and causing misreading of mRNA
b) Binding to 30 S subunit and inhibits binding of aminoacyl tRNA
c) Inhibiting peptidyl transferase activity
d) Inhibiting translocation

1553. The group of antibiotics which possess additional antiinflammatory and immunomodulatory activities is- *(AI05)*
a) Tetracyclines b) Polypeptide antibiotics
c) Fluoroquinolones d) Macrolides

1554. EpsUometer test is done to detect - *(COMEDK 05)*
a) Bacterial motility
b) Rate of bacterial growth
c) Antibiotic susceptibility
d) Coliform count

1555. AU of the foUowing antibacterial agents acts by inhibiting ceU wall synthesis, except - *(AI 06)*
a) Carbapenems b)Monobactams
c) Cephamycins d) Nitrofurantoin

1556. Which of the following medications is contraindicated in patients with allergy to sulphonamides ? *(AI 06)*
a) Levobunolol b) Bimatoprost
c) Brinzolamide d) Brimonidine

1532) All 1533)a,c 1534)c,d 1535)a 1536)d 1537)a,c 1538)d 1539)b 1540)b 1541)a 1542)a 1543)a,b 1544)a 1545)b 1546)b 1547)None 1548)a 1549)a 1550)a,c,d 1551) a,c 1552)b 1553)d 1554)c 1555)d 1556)c

1557. In antibiotic associated colitis, organism involved is - *(PGI June 06)*
a) Clostridium difficile b) Pseudomonas
c) Staphylococcus d) Enterococcus

1558. Antimicrobial of choice in pregnancy is - *(Manipal 06)*
a) Clarithromycin b) Streptomycin
c) Doxycycline d) Chloramphenicol

1559. FK-506 is a - *(Aiims May 07)*
a) It is a macrolide antibiotic
b) Immunoglobulin antibody
c) Non depolarising muscle relaxant
d) Opioid analgesic

1560. Mechanism of action of vancomycin is - *(UP 07)*
a) Inhibit protein synthesis
b) Inhibit cell wall synthesis
c) Inhibiting bacterial DNA replication
d) Inhibit DNA dependent RNA synthesis

1561. All the following drugs action pseudomonas infection except - *(UP 07)*
a) Carbenicillin b)Azlocilline
c) Peperacilline d) Azithromycin

1562. Which of the following drug is given in renal failure-
a) Carbenicilline b)Rifampicin *(UP 07)*
c) Cotrimoxazole d) Pefloxacine

1563. Cell wall synthesis is inhibited by all of the following Except- *(AI08)*
a) Amoxycillin b) Penicillin G
c) Tetracycline d) Cefotetan

1564. Which of the following antibiotics is least Nephrotoxic - *(AI 08)*
a) Streptomycin b)Gentamycin
c) PolymixinB d) Doxycycline

1565. Which of the following antibiotics acts by inhibiting cell wall synthesis ? *(Aiims May 08)*
a) Cefepime b) Aminoglycosides
c) Erythromycin d) Doxycycline

1566. All of the following drugs inhibit cell wall synthesis except- *(Jipmer 10)*
a) Cycloserine b) Dactinomycin
c) Amoxicillin d) Bacitracin

SULFONAMIDE

1567. The most common adverse effect of silver sulfadiazine is - *(AIIMS 79, AMU 88)*
a) Crystalluria
b) Methaemohlobinemia
c) Transient leucopenia (Neutrophenia)
d) Transient jaundice

1568. The drawback of mafenide application is -
a) Expensive *(JIPMER 81, AP 88)*
b) Toxicity
c) Painful
d) All of the above

1569. The cells most commonly affected by silver sulfadiazine cream are - *(JIPMER 80,81, TN 90)*
a) Lymphocytes b) Neutrophils
c) Mast cells d) Eosinophils

1570. Mafenide is effective as an ll.l%suspension in a water soluble cream base in all of following infections except - *(JIPMER 81, PGI 86)*
a) Staph aureus b) Clostridia
c) Candida albicans d) Streptococcus

1571. Sulphonamides are conjugated by - *(AIIMS 86)*
a) Glucoronic b) Cysteine
c) Metionine d) Acetic acid

1572. Sulphamethoxazole is combined with - *{Kerala 94)*
a) Trimethoprim b) Clotrimazole
c) Cotrimoxazole d) Nitrofurantoin

1573. Sulpha drugs act by- **(***Kerala 94)*
a) Covalent modification
b) Non competitive inhibition
c) Allosteric modification
d) Competitive inhibition

1574. TVimethoprim acts by- *(PGI95)*
a) Inhibiting DHFR b) Bleomycin
c) Nitrosoureas d) Vincristine

1575. All of the following are topically used sulphonamides except- *(AI 05)*
a) Sulphacetamide b) Sulphadiazine
c) Silver sulphadiazine d) Mafenide

1576. A girl on sulphonamides developed abdominal pain and presented to emergency with seizure. What is the probable cause ? *(AIIMS Nov 08)*
a) Acute intermittent porphyria
b) Congenital erythropoietic porphyria
c) Infectious mononucleosis
d) Kawasaki's disease

1577. Which of the following is not an indication of cotrimoxazole - *(AIIMS May 11)*
a) Lower UTI b) Prostatitis
c) Chancroid d) Typhoid

QUINOLONES

1578. Ciprofloxacillin acts by inhibiting - *(JIPMER 92, 93*
a) Protein synthetsis b) DNA gyrase
c) Cell wall synthesis d) mRNA synthesis

1579. Following drug often interacts with ofloxacin except - *(AIIMS89)*
a) Antacids b) Theophylline
c) Captopril d) Ketorolac

1580. Ciprofloxacin should not be used with theophylline because- *(AI96)*
a) it decreases efficiency of theophylline
b) it increases toxicity of theophylline
c) it decreases efficiency of ciprofloxacin
d) it decreases absorption of theophylline

1581. The most phototoxic quinolone is - *(AI97)*
a) Ciprofloxacin b) Norfloxacin
c) Ofloxacin d)Pefloxacin

1557) a 1558) a 1559)a 1560)b 1561)d 1562)b 1563)c 1564)d 1565)a 1566)b 1567)None 1568)c 1569)b 1570)c 1571) None 1572)a 1573)d 1574)a 1575)b 1576)a 1577)c 1578)b 1579)c 1580)b 1581)d

1582. CNS side effects of ciprofloxacin are increased by simultaneous intake of - *(JIPMER 98)*
a) Salicylates b) Ceftriaxone
c) Nifedipine d) Erythromycin

1583. All are true about fluoroquinolones except-
a) Found to be teratogenic *(ALL INDIA 99)*
b) Cause arthropathy in children
c) Potentiate action of muscle relaxants
d) Increase the toxicity of theophylline

1584. Fluoroquinolones in children are contraindicated as it causes- *(CUPGEE 2001)*
a) Arthropathy b) Agranulocytosis
c) Anemia d) Thrombocytopenia

1585. Increased photosensitivity is seen with - *(Kerala 03)*
a) Ciprofloxacin b) Sparfloxacin
c) Floxacin d)Pefloxacin

1586. Whic of the following fluoroquinolones does not require dose adjustment in a patient with creatinine clearance of < 50mg/min - *(AJ 04)*
a) Ciprofloxacin b) Trovafloxacin
c) Lomefloxacin d) Sparfloxacin

1587. Flouroquinolones act by - *(SGPGI05)*
a) Binding to DNA gyrase and preventing DNA synthesis
b) Inhibiting protein synthesis
c) Inhibiting cell wall synthesis
d) Causing misreading of RNA

1588. Fluoroquinolones acts by - *(PUNJAB 11)*
a) Inhibits cell wall synthesis
b) Inhibits protein synthesis
c) Inhibits DNA gyrase
d) Interferes with intermediary metabolism

PENICILLIN & CEPHALOSPORIN

1589. Penicillin acts on which component of cell wall -
a) Hyaluronic acid *(AIIMS 83)*
b) Muramic acid
c) N-acetylmuranic acid
d) Cellulose

1590. Major advantage of phenoxymethyl penicillin over penicillin G is - *(AIIMS 79, UPSC 82)*
a) Broader spectrum b) Longer shelf life
c) Lower cost d) More reliable

1591. First generation cephalosporins are not effective in...infection - *(AI 90)*
a) Pseudomonas b) Proteus
c) Streptococci d) Staphylococci

1592. Ampicillin is used in all except - *(TN 91)*
a) Urinary tract infection
b) Lower respiratory infection
c) Typhoid
d) Infectious mononucleosis

1593. Acid Labile penicillin is- **(***Jipmer91***)**
a) Cloxacillin b) Flucloxacillin
c) Methicillin d) Phenoxy Methyl penicillin
e) None of the above

1594. Third generation caphalosporine include -
a) Cephalexin b) Cepharadine *(NIMHANS 87)*
c) Cephazolin d)Moxalactum
e) Cefactor

1595. The following is not a penicillinase resistant penicillin - *(AIIMS 84)*
a) Methicillin b) Ampicillin
c) Oxacillin d) Nefacillin

1596. Orally as well as parenterally effective penicillin is- *(IN 90)*
a) Phenoxymethyl penicillin b) Amoxycillin
c) Cloxacillin d) Carbenicillin

1597. Beta lactam ring is present in all except •*(JIPMER*
a) Vancomycin b)Imipenem *91)*
c) Cephalexin d) Sulbactam

1598. The penicillin that is effective against proteus and pseudomonas aeruginosa is - *(AIIMS 79,86,*
a) Ampicillin b) Cloxacillin *JIPMER 80)*
c) Amoxycillin d) Carbenicillin

1599. The antibacterial spectrum of penicillin most closely resembles that of- *(AMU87)*
a) Sulphonamides b) Streptomycin
c) Nitrofurantoin d) Bacitracin

1600. For the commercial production of penicillin, extraction is made from- *(JIPMER 80, AMU 86)*
a) Penicillium notatum
b) Penicillium chrysogenum
c) Bacillus cereus
d) Streptomyces erytheus

1601. Following drug interact with cefotaxime- *(JIPMER*
a) Digoxin b) Paracetamol *84, AIIMS 90)*
c) Loop diuretics d) Nifedipine

1602. One milligram of penicillin G is equivalent to- *(PGI80, 82, DNB 90)*
a) 16,667 units b) 1,667 units
c) 166.7 units d) 16.7 units

1603. The penicillin with longest duration of action is-
a) Pottassium phenethicillin *(DNB 91)*
b) Benethamine penicillin
c) Procaine penicillin
d) Benzathine penicillin

1604. Most serious adverse effect of penicillin is -
a) Skin rashes *(Kerala 94)*
b) Jarish hexheimer reaction
c) Anaphylaxis
d) Convulsion

1605. Procaine in procaine penicillin- *(Kerala 95)*
a) Relieves pain
b) Prolongs duration of action
c) Increases absorption
d) Adjuvant

1606. The *Vi* life of Benzyl Penicillin is - *(CUPGEE 95)*
a) 30 minutes b) 60 minutes
c) 90 minutes d) 24 hours

1607. 1 gm penicillin is equivalent to - *(ROHTAK 98)*
a) 1.667MIU b) 1667 MU
c) 16667MIU d).1667MIU

1582) a 1583)c 1584)a 1585)b 1586)b 1587)a 1588)c 1589)c 1590)d 1591)a 1592)d 1593)c 1594)d 1595)b
1596) b,c 1597) a 1598) d 1599)d 1600)b 1601)c 1602)b 1603)d 1604)c 1605)b 1606)a 1607)a

1608. Antifungal agent having affinity for keratin-(77V99)
a) Gresieofulvin b) Ketoconazole
c) Nystatin d) Clotrimazole

1609. Drug of choice of MRSA infection - *(KERALA 01)*
a) Cloxacillin b) Amoxicillin
c) Teicoplanin d) Carbenicillin

1610. Which is true regarding cefepime -
a) 4th generation cephalosporin *(01)*
b) Once a day dose is sufficient
c) Antipseudomonal action
d) Dose should be reduced in liver pathology
e) It is a prodrug

1611. Amoxycillin clavulanic acid combination-fPG*/2000)*
a) t spectrum b) 11/2 life of amoxy
c) *i* 1/2 life of both d) t Side effects

1612. When allergic to penicillin, other drugs C.I. -
a) Monobactams *(PGI2000)*
b) Carbapenems
c) Cephalosporins
d) Semisynthetic penicillin

1613. Of the patients who have previously been given penicillin without incident, what percentage will have an allergic reaction when given penicillin-
a) Fewer that 1 % b) 1 to 5% *(MAHA 05)*
c) 5 to 10% d) 10 to 15%

1614. 4th Generation Cephalosporin is - **(***Orissa 05)*
a) Cefepime b) Cefuroxime
c) Cefoperazone d)Cefactor

1615. One of the following is not penicillinase susceptible-
a) Amoxicillin b) Penicillin G *(A105)*
c) Piperacillin d) Cloxacillin

1616. All of the following are therapeutic uses of penicillin G, except - *(AI06)*
a) Bacterial meningitis b) Rickettsial infection
c) Syphilis d) Anthrax

1617. A diabetic patient developed cellulitis due to staphylococcus aureus, which was found to be Methicillin resistant on the antibiotic sensitivity testing. All the following antibiotics will be appropriate except - *(AI 06)*
a) Vancomycin b)Imipenem
c) Teichoplanin d) Linezoiid

1618. Cilastatin is an inhibitor of - **(***Corned 07)*
a) Beta lactamase b) Dihydropeptidase
c) Transpeptidase d) Peptide transferase

1619. Which among the following drugs is safest in a patient allergic to penicillin - **(***Corned 08)*
a) Cephalexin b)Imipenem
c) Cefepime d) Aztreonam

1620. The following drug is not useful for MRSA -
a) Cefaclor *(AiimsMay07,AI07)*
b) Cotrimoxazole
c) Ciprofloxacin

1621. All of the following statements regarding penicillin-G are true Except - *(AI 08)*
a) Can be given orally
b) Active against gram positive organisms
c) Probenecid given along with penicillin-G increases its duration of action
d) Acts by inhibition of cell wall synthesis

1622. All are true about cefuroxime except - *(UP 08)*
a) Inhibit cell wall synthesis
b) III generation cephalosporins
c) Same aquired resistance with penicilline
d) More active against gram negative organism

1623. In Ampicilline & Amoxycilline, Amoxycilline is better due - *(UP 08)*
a) Better bioavailobility in taken with foods
b) Lesser bioavailability in taken with foods
c) Incidence of diarrhoea is higher
d) More active against Shigella and H. influenza

1624. Cephalosporin that does not require dose reduction in patient with any degree of renal impairment is- *(AIIMSNov 08)*
a) Cefuroxime b) Cefoperazone
c) Ceftazidime d) Cefotaxime

1625. Which of the following cephalosporins does not need dose modifications even in presence of raised levels ofGFR- *(AI09)*
a) Cefipime b)Cefoperazone
c) Cefotaxim d) Cefuroxime

1626. All are true about cephalosporins, except- *(AIIMSMay 09)*
a) Cephtazidime is a 3rd generation cephalosporin
b) Cephoperazone has got antipseudomonal effect
c) Cefoxitine has got no activity against anaerobes
d) Cephalosporin act by inhibiting cell wall synthesis

1627. True about Methicillin resistance staphylococcus aureus (MRSA) - *(PGI June 09)*
a) Isoxazolyl pencillin is highly effective
b) All MRSA are multi drug resistance
c) Vancomycin is effective
d) MRSA are more virulent than sensitive strains
e) Resistance develop due to altered binding protein

1628. Drug of choice for treatment of infection caused by Methicillin resistant Staphylococcus aureus is :
a) Macrolides *(DELHIPG Mar 09)*
b) Third generation cephalosporins
c) Carbapenems
d) Glycopeptides

1629. Caphalosporin having renal excretion (or renal failure) is/are - *(PGINov 09)*
a) Cefazolin b) Ceftriaxone
c) Ceftazidime d) Cefuroxime
e) Cefoperazone

1630. Drug most useful in Bacteroides fragilis -
a) Cefipime b) Ceftazidine *(Jipmer11)*
c) Cefotetan d) Cefoxitin

1608) a 1609) None 1610) a,c 1611)a 1612)d 1613)a 1614)a 1615)d 1616)b 1617)b 1618)b 1619)d 1620)a
1621)a 1622)b 1623)a 1624)b 1625)b 1626)c 1627)b,c,d 1628)d 1629)a,c,d 1630)c

TETRACYCLINE

1631. Compared with tetracycline, chloramphenicol is more effective in typhoid fever but ineffective in-
a) Entamoeba histolytica *(DNB 89)*
b) E.coil
c) Streptococcus aureus
d) Pseudomonas
e) Klebsiella

1632. Mechanism of action of tetracycline- *(PGI2K)*
a) Prevents binding of tRNA to mRNA
b) Misreading of mRNA
c) Transcription of DNA to RNA inhibited
d) Binds to 30 S ribosome

1633. All of the following statements about adverse effects of tetracyclines are true Except - *(AI08)*
a) May lead to discolouration of teeth
b) Are a common cause of superinfections
c) May precipitate liver damage
d) Are not known to be teratogenic

CHLORAMPHENICOL

1634. Mechanism of action of chloramphenicol - *(PGI 2K, 96)*
a) Binds to 50 S and prevents activity
b) Prevents chain elongation
c) Misreading of DNA
d) Binds to nuclear proteins

1635. Metabolism of chloramphenicol is by- *(PGI 97)*
a) Glucoronide conjugation b) Oxidation
c) Acetylation d) Sulfation

163 6. Chloramphenicol inhibits protein biosynthesis by
a) Releasing the incomplete peptide material from ribosomes *(ICS 98)*
b) Inhibiting the binding of mRNA to ribosomes
c) Inhibiting DNA polymerase
d) Inhibiting union of 60s and 40s lobes of ribosomes to form full ribosome

1637. Mechanism of action of chloramphenicol *is-(PGI 99)*
a) Preventing binding of t RNA to ribosome
b) Polypeptide elongation
c) Protein chain elongation
d) Inhibiting cell wall synthesis

AMINOGLYCOSIDES

1638. Mechanism of action of clindamycin is inhibiton of- *(AI 98)*
a) Protein synthesis b) DNA gyrase
c) Lysosomal enzyme d) Cell wall synthesis

1639. Intraperitoneal irrigation with which antibiotic(s) cause(s) a potentiation of the curare effect and results in respiratory distress - *(JIPMER 81, AMC 85)*
a) Kanamycin b) Neomycin
c) Choramphenicol d)Linomycin
e) Ampicillin

1640. Nerve deafness is caused by- *(AIIMS 85)*
a) Gentamycin b) Dihydrostreptomycin
c) Rifampicin d) Neomycin

1641. An aminoglycoside with an outstanding feature of being little or not affected by majority of inacti vating enzymes is- *(Kamat, 89, 95)*
a) Gentamycin b) Tobramycin
c) Amikacin d) Sisomycin

1642. Aminoglycoside which is not ototoxic- *(Jipmer 91)*
a) Tobramycin b) Amikacin
c) Netilmycin d) Gentamycin

1643. Which of the following is not a Aminoglycoside -
a) Cycloserine *(JIPMER 84, AMC 90)*
b) Framycetin
c) Amikacin
d) Paramomysin

1644. Which of the following aminoglycosides is not available for parenteral use? *(TN 95)*
a) Sisomycin b) Amikacin
c) Framycetin d) Gentamycin

1645. Which aminoglycoside can't be used as Anti TB drug- *(JIPMER 98)*
a) Gentamycin b) Amikacin
c) Tobramycin d) Streptomycin

1646. False about streptomycin- **(***TN98***)**
a) has poor bioavailability
b) has high urine clearance
c) extensively bound to plasma proteins
d) has poor enterohepatic circulation

1647. Mechanism of action of streptomycin- *(AI 99)*
a) Inhibition of translation
b) Inhibition of signal transduction
c) Inhibition of citric acid cycle
d) Inhibits mitochondria

1648. Mechanism of resistance to aminoglycosides-
a) Produces enzymes *(PGI 2000)*
b) Inactivation of RNA dependent DNA polymerase
c) Inactivation of RNA
d) Prevents chain elongation

1649. Streptomycin single dose is more effective than multiple small doses because it is - *(Jipmer 04)*
a) Concentration dependent lytic effect
b) Longer half life
c) Not dependent on renal clearance
d) Tubular secretion and reabsorption is more

1650. Gentamycin, the amino glycoside antibiotic produces nerve deafness by causing - (J & K 05)
a) Demyelination of 8th cranial nerve fibres
b) Thickening of ear drum
c) Destruction of auditory ossicles
d) Obstruction of mechanosensitive channels in the stereocillia of hair cells

1651. All are aminoglycoside antibiotics except -
a) Lincomycin b) Netilmycin *(MAHE 07)*
c) Framycetin d) Sisomycin

1631)a 1632) a,d 1633) d 1634)a 1635)a 1636)a 1637)a 1638)a 1639)a,b 1640)a,b,d 1641)c 1642)None 1643)a
1644)c 1645) a,c 1646)c 1647)a 1648)a 1649)a 1650)d 1651)a

1652. True about aminoglycoside is all except -
a) Are bacteriostatic *(AiimsMay08)*
b) Distributed only extracellularly
c) Excreted unchanged in urine
d) Teratogenic

1653. All are aminoglycoside antibiotics except -
a) Linocomycin b)Netilmycin *(Manipal 08)*
c) Framycetin d) Sisomycin

1654. Which of the following is not an adverse effect of aminoglycosides - *(DPGEE 08)*
a) Nephrotoxicity b) Ototoxicity
c) Hepatic damage d) Neuromuscular blokade

1655. Least nephrotoxic aminoglycoside is -*(Maharashtra 10)*
a) Amikacin b)Gentamycin
c) Streptomycin d) Netilmycin

1656. Aminoglycosides are used against following organisms except - *(PGI May 10)*
a) Staph, aureus b) Streptococci
c) E. coli d) Anaerobes
e) Salmonella typhi

U.T.I.

1657. The drug which acts by the release of formaldehyde in the urinary tract is - *(JIPMER 80, AIIMS81, 87)*
a) Ammonium chloride
b) Nalidixic acid
c) Nitrofurantoin
d) Methenamine mandelate

1658. Nalidixic acid is used in - *(Kerala 94)*
a) UIT b) Bacillary dysentry
c) Enteric fever d) Malaria

1659. Erythromycin acts on 50S ribosome by the inhibiting-
a) Translocation b) Translation *(PGMCET07)*
c) Transcription d) Secretion

ANTI-TUBERCULOSIS

1660. In tuberculosis, multidrug treatment is used for the following reason - *(JIPMER 90)*
a) Decrease drug resistance
b) Action at different level
c) Reduced complication
d) All of the above

1661. In the treatment of tuberculosis, corticosteroid therapy is indicated in all of the following except -
a) Progressive primary pulmonary tuberculosis
b) Miliary tuberculosis *(UPSC 98)*
c) Tubercular pericardial effusion
d) Tubercular meningitis

1662. Which of the following are indications of prophylactic anti tuberculosis therapy-
a) Infant of infectious parents *(JIPMER 86)*
b) Recent tuberculin convertes in 3 years
c) Patients on immunosuppression
d) Tuberculin positive adolescents
e) All of the above

1663. Which drug is most active against intracellular mycobacteria - *(PGI 89)*
a) Rifampicin b)Isoniazid
c) Ethambutol d) Pyrazinamide

1664. Bactericidal anti T.B. drug- **(***PGI87, UPSC 85)*
a) Streptomycin b)Gthambutol
c) Cycloserine d)Ethinomide
e) Pyrazinamide

1665. Antituberculur drug which crosses the blood brain barrier - *(Kerala 86, AP 85)*
a) Streptomycin b) Ethambutol
c) Cycloserine d) INH
e) Pyrazinamide

1666. Optic neuritis is caused by - *(TN89)*
a) INH b) SM
c) Rifampicin d) Ethambutol

1667. The drug causing peripheral neuropathy is -
a) Rifampicin b)INH *(AI91)*
c) Ethambutol d) Cycloserine

1668. INH is metabolied in the body by - *(Jipmer 93)*
a) Acetylation b) Conjugation
c) Hydroxylation d) Decarboxylation

1669. Flu like syndrome is a side effect of- *(Jipmer 93)*
a) PAS b) Rifampicin *(CUPGEE96)*
c) Pyrazinamide d) Streptomycin

1670. Resistance to drugs in Tuberculosis develops by -
a) Transduction b) Conjugation *(DELHI92)*
c) Transformation d) Mutation

1671. The least toxic antitubercular drug *is-(KERALA 90)*
a) Thiacetazone b) Cycloserine
c) Ethambutol d) Rifampicin

1672. Which of the following is not a side effect of Rifampicin- **(** *UPSC 8 7)*
a) Renal damage b) Jaundice
c) Purpura d) SGOT increase

1673. Safest drug in pregnancy is- *(AllIndia 95)*
a) INH b) Rifampicin
c) Ethambutol d) Streptomycin

1674. Which drug increases uric acid level- *(U.P 96)*
a) Pyrazinamide b) Rifampicin
c) INH d) Ethambutol

1675. Short course chemotherapy is not used in any of the following except - *(Kamat 96)*
a) HIV associated T.B.
b) Bone and joint T.B.
c) Central nervous system T.B.
d) T.B. lymphadenitis

1676. Steroids are indicated in - *(Kamat 96)*
a) Miliary T.B. b) T.B, Meningitis
c) T.B. Spine d) Endobronchial T.B.

1677. Neuropsychiatric side effect is a manifestation of - *(AI97, Kerala 97)*
a) Ethosuximide b) Cycloserine
c) Pyrazinamide d) Rifampicin

1652) a 1653) a 1654)c 1655)c 1656)d,e 1657)dl658)a 1659)a 1660)d 1661)a 1662)e 1663)d 1664)a,e 1665)b,c,d,e 1666)b,c,d 1667)b,c 1668)a 1669) b 1670) d 1671)c 1672)a 1673)a,b,c 1674) a,d 1675) b,c,d 1676)a,b 1677)b

1678. The following can be used as a second line antituberculous drug except- *(AI99)*
a) Kanamycin b) Cycloserine
c) Ofloxacin d) Thicytosine

1679. Which antitubercular drug metabolism is under genetic control - *(PGI2000)*
a) Rifampicin b)INH
c) Cyclosporine d)PZM
e) Kanamycin

1680. The most important factor which limits the use of the combination of isoniazid, rifampicin and pyrazinamide in tuberculosis patient is - *(UPSC 02)*
a) Ototoxicity
b) Nephrotoxicity
c) Bone marrow suppression
d) Hepatotoxicity

1681. The following drug penetrates into caseous necrosis inTB- *(JIPMER2002)*
a) INH b) Rifampicin
c) Pyrazinamide d) Streptomycin

1682. A 35 year old pilot has been detected to have pulmonary tuberculosis. Which one of the following should not be prescribed for him - *(UPSC 02)*
a) Isoniazid b) Ethambutol
c) Pyrazinamide d) Streptomycin

1683. Drug which is NOT used for TB and leprosy is -
a) Ofloxacin b) Rifampicin *(Kerala 03)*
c) Ethionamide d) None

1684. The anti tubercular drug safe in liver disease is -
a) INH b) Rifampicin *(UPSC 04)*
c) Ethambutol d) Pyrazinamide

1685. Patients suffering from multidrug resistant tuberculosis can be treated with all the following drugs except - *(AI 04)*
a) Tobramycin b) Amikacin
c) Ciprofloxacin d) Clarithromycin

1686. The following drugs are useful in the treatment of isoniazid poisoning - *(Karnataka 04)*
a) Pyridoxine b) Diazepam
c) Bicarbonate d) All of the above

1687. All of the following are complication of INH except -
a) Psychosis *(SGPGI05)*
b) Optic neuritis
c) Hepatitis
d) Peripheral neuropathy

1688. All of the following antimicrobial agents are bactericidal except - *(SGPGI05)*
a) Cephalexin b)Roxithromycin
c) Isoniazid d) Rifampicin

1689. Which of the following is most active against both Dormant & nondormant bacilli - *(AMU 05)*
a) Pyrazinamide b) Rifampicin
c) Streptomycin d) INH

1690. Which one of the following ant T.B. drugs is contraindicated in pregnancy - *(UPSC 05, Delhi 86)*
a) Rifampicin b) Isoniazid
c) Streptomycin d) Pyrazinamide

1691. Which one of the following anti tuberculosis drugs does not have bactericidal action - *(UPSC 05)*
a) Rifampicinb) Para-aminosalicylic acid
c) Pyrazinamide d) Isoniazid

1692. Which of the following Antitubercular Drugs inhibits mycotic acid synthesis - *(Orissa 05)*
a) Rifampicinb) Pyrazinamide
c) Ethambutol d) Cycloserine

1693. All are known side effects of INH except -
a) Hepatitis *(NIMHANS 06)*
b) Rash
c) Peripheral neuritis
d) Flu syndrome

1694. Treatment of mycobacteria avium complex is all except - *(APPG 2006)*
a) Ciprofloxacin b) Clarithromycin
c) Rifabutin d) Pyrizinamide

1695. Most common drug resistance in TB in India is found for - *(Corned 07, AI 89)*
a) INH b) Rifampicin
c) Streptomycin d) Ethambutol

1696. INH toxicity may cause the following except -
a) Psychosis *(UPSC-108)*
b) Nephropathy
c) Hepatitis
d) Peripheral neuropathy

1697. Cross resistance of isoniazid is seen with -
a) Rifampicin b) Ethionamide *(Aiims May 08)*
c) Cycloserine d) Ethambutol

1698. Which of the following antitubercular drug is prefer in severe liver disorder - *(UP 08)*
a) Streptomycin + Isoniazid
b) Streptomycin + Ethambutol
c) Isoniazid+Rifampicin
d) Rifamicin+Ethambutol

1699. Which of the following antimicrobial agents do not require reduction in dose in patients with renal failure- *(AI09)*
a) Rifampicin b) Fluconazole
c) Vancomycin d)Imipenem

1700. Ethambutol causes - *(DELHI PG Feb. 09)*
a) Retrobulbar neuritis b) Deafness
c) Red urine d) Peripheral neuritis

1701. Which of the following anti-tubercular drugs is associated with cross-resistance? *(Maharashtra 10)*
a) INH b) Rifampicin
c) Ethambutol d) None of the above

1702. True about ATT - *(PGINov. 10)*
a) Ethambutol readily cross BBB
b) Pyrazinamide is bacteriocidal for intracellular bacteria
c) INH does not has cross-resistance with other antitubercular drugs.
d) Resistance to rifampin is difficult to develop

1678)d 1679)b 1680)d 1681)b 1682)b 1683)d 1684)c 1685)a 1686)d 1687)a 1688)b 1689)d 1690)c 1691)b
1692)b 1693)d 1694)d 1695)a 1696)b 1697)b 1698)b 1699)a 1700)a 1701)a 1702)b,c

1703. Prolonged treatment with INH leads to deficiency of- *(All!)*
a) Pyridoxine b) Thiamine
c) Pantothenic acid d) Niacin

1704. Patients receiving INH therapy require supplementation with which of the following vitamins? *(UPSCI11)*
a) Thiamine b)Pyridoxine
c) Niacin d) Folic acid

ANTI-LEPROTIC

1705. The first line antileprosy drugs include all except- *(PGI78,Delhi 83)*
a) Dapsone b) Thiacetazone
c) Clofazimine d)Rifampicin

1706. One of the following is a side effect of clofazimine used in leprosy therapy- *(AI96)*
a) Hyperpigmentation
b) Erythema
c) Discoloration of body secretions
d) Macular rash

1707. Commonest side effect of Dapsone- *(PGI 97)*
a) Hemolytic anemia
b) Thrombocytopenia
c) Cyanosis
d) Bone marrow depression

1708. Dapsone is useful for treating all except - *(AP85)*
a) Leprosy b) Dermatitis Herpetiformis
c) Madura Foot d) Lymphoma

1709. Pigmentation & lcthyosis are side effects of-
a) Clofazamine b)Rifampicin *(AIIMS97)*
c) Minocycline d) Dapsone

1710. Minimal lethal dose of Dapsone in mice is -
a) 0.30 mg/dl b) 0.003mg/dl *(JIPMER 98)*
c) 0.3ng/dl d) 3ng/dl

1711. All of the following are used to treat leprosy except-
a) Ofloxacin b) Dapsone *(J & K O I)*
c) Clofazimine d) Pyrimenthamine

1712. Skin pigmentation occurs with which of the following drugs- *(PGI 01)*
a) Clofazimine b) Minocycline
c) Sulfonamides d)Gold
e) Rifampicin

1713. The most effective drug against M. leprae is -
a) Dapsone b) Rifampicin *(AI03)*
c) Clofazamine d) Prothionamide

1714. Adverse effect of dapsone includes - *(PGI Nov 09)*
a) Peripheral neuropathy b) Hemolytic anemia
c) Agranulocytosis d) Hepatitis
e) Methemoglobinemia

ANTI-FUNGAL

1715. Broad spectrum antifungal agent is - *(UP 07)*
a) Econazole b) Miconazole
c) Ketoconazole d) Clotrimazole

1716. Antifungal drugs include all except - *(PGI87 AI88)*
a) Miconazole b) Amphotericin B
c) 5-FU d) Flucytosine
e) Ketoconazole

1717. Econazole is useful for the treatment of all except
a) Tinea corporis *(AIIMS82)*
b) Histoplasma capsulatum
c) Cutaneous candidiasis
d) Tinea pedis

1718. Griseofulvin is not useful in one of the following-
a) Tinea capitis b) Tinea cruris *(Kerala 90)*
c) Tinea versicolor d) Tinea pedis

1719. Not used topically - *(AI 95)*
a) Nystatin b) Ketoconozole
c) Griseofulvin d) Miconazole

1720. Which is wrong about griseofulvin - *(AI 93)*
a) Antabuse like action
b) Fat increases absorption
c) Halflife-48hours
d) Increased Phenobarbitone absorption

1721. Intravenous amphotericin - B is the treatment of choice for - *(Orissa 90)*
a) Onychomycosis
b) Candidiasis
c) Cutaneous larva migrans
d) Disseminated forms of N. American blastom cosis

1722. Treatment of systemic fungal infection *is-(UPSC 88)*
a) Oral fluorocytosine + I/V amphotericin
b) I/V Fluorocytosine + I/V amphotericin
c) Oral miconzole + I/V amphotericin
d) I/V miconazole + I/V amphotericin

1723. Which is not useful in fungal infections- *(Kerala 94)*
a) Nystatin b) Clotrimozole
c) Gentian violet d)Ampicillin

1724. The drug used to treat epidermophyton infection is -
a) Nystatin b) Griseofiilvin *(IN95)*
c) Amphotericin B d) Salicylic acid

1725. Maximum endocrinal side effects are seen with -
a) Ketoconazole b) Fluconazole *(JIPMER*
c) Miconazole d) Nystatin *98)*

1726. All are true about Ketoconazole except -(.*MAHE 98)*
a) Antacids reduce absorption
b) Extensively metabolized
c) Highly protein bound
d) Rifampicin increases its activity

1727. Antifungal which is used orally only *\s-(CUPGEE 99)*
a) Fluconazole b) Clotrimazole
c) Itraconazole d) Econazole

1728. The antifungal antibiotic used intravenously for systemic mycosis is- *(TNPSC 2K)*
a) Griseofulvin b) Nystatin
c) Amphotericin d)Hamvein

1729. Which of the following antifungal drugs given orally is not useful in systemic fungal infections-
a) Griseofulvin b) Flucytosine *(Kerala 2K)*
c) Fluconazole d) Ketoconazole
e) Itrconazole

1703) a 1704) b 1705)b 1706)a,c 1707) a 1708) d 1709)a 1710)a 1711)d 1712)a,b,d 1713)b 1714)A11 1715)c
1716)c 1717) b 1718)c 1719)c 1720)c 1721)d 1722)a 1723)d 1724>b 1725)a 1726)d 1727)c 1728)c 1729)a

1730. MAO of amphotericin B - *(St. Johns 02)*
a) Acts on DNA
b) Acts on RNA
c) Acts on sterols in membrane
d) Alters protein synthesis

1731. Which of the following drug absorption is increased in Achlorhydria - *(Jharkand 03)*
a) Ketoconazole b) Penicillin
c) Chloramphenicol d) Ciprofloxacin

1732. True about of antifungal drug is all of the following except- *(Karnataka 04)*
a) Ketoconazole inhibits ergosterol synthesis
b) Ketoconazole causes adrenal insufficiency
c) Nystatin is used in Systemic disease
d) Fluoconazole is used in candidiasis

1733. Drug which is antifungal and anticancer *-(AMU05)*
a) Ketoconazole b) Flucytosine
c) 5-Flurouracil d) Cytosine arabinoside

1734. Amphotericin should be administered in- *(COMEDK05)*
a) Glucose infusion b) Mannitol infusion
c) Saline infusion d) Ringer lactate infusion

1735. Which one of the following antifungal agents is used only intravenously - *(UPSC05)*
a) Fluconazole b) Amphotericin
c) Miconazole d) Ketozonazole

1736. Patients on amphotericin 'b' therapy may develop signs and symptoms of deficiency of one of the cations. The cations is - *(Karnat 05)*
a) Sodium b) Potassium
c) Magnesium d) Calcium

1737. Treatment of choice of cryptococcus neoformans -
a) Amphoterecin B b) INH *(HP06)*
c) Ketoconazole d) Metronidazole

1738. Amphotericin may be administered mixed in any of the following EXCEPT - *(Corned 0 7)*
a) Glucose infusion b) Mannitol infusion
c) Saline infusion d) Lipid-complex (ABLC)

1739. Which of the following drugs is not an antifungal agent- *(AI08)*
a) Ciclopiroxolamine b) Ketoconazole
c) Undecylenic acid d) Clofazimine

1740. Which drug would treat both dermatophysis and candidal infection ? *(A iims May 08)*
a) Ketoconazole b) Griseofulin
c) Nystatin d) Tolnafet

1741. Liposomal amphotericin B has the following advantage over conventional amphotericin B:
a) Lesser nephrotoxicity *(DELHIPG Feb. 09)*
b) Lesser cost
c) Absence of infusional toxicity
d) Once a week administration

1742. Voriconazole is not effective against *-(AIIMSNov 09)*
a) Aspergillosis b) Mucormyocosis
c) Candida albicans d) Candida tropicalis

1743. Amphoterecin B toxicity can be lowered by -
a) Giving it with glucose *(AI 10)*
b) Decreasing the dose
c) Using liposomal delivery systems
d) Combining with flucytosine

1744. Amphotericin B treatment madates the monitoring of which of the following electrolytes - *(AI 11)*
a) Na^+ b) Ca^{2+}
c) K^+ d) Mg^{2+}

ANTI-VRAL

1745. The analogue for bromodeoxyuridine is - *(A196)*
a) Adenine b) Guanine
c) Cytosine d) Thymine

1746. The antiviral drug 5-iodo-2 deoxy uridine- *(IDU)* **inhibits the synthesis of -** *(KARNA T 98)*
a) DNA b)RNA
c) DNA and RNA d) None of the above

1747. The following are side effects of interferons except-
a) Hypertension b) Prostration *(PGI88)*
c) Fever d) Hepatitis

1748. Ganciclovir is most effective against which viral infection - *(AIIMS 8 7)*
a) Herpes simplex I b) Herpes simplex II
c) Vericella Zoster d) Cytomegalovirus

1749. Interferon 3 to 5 million units thrice a week for three to six months is useful in the treatment of-
a) Wilson's disease *(ICS 98)*
b) 1- antitrypsin deficiency
c) Chronic hepatitits B
d) Chronic autoimmune hepatitis

1750. Amantidine an antiflu drug is useful in *-(NIMHANS*
a) Acromegaly b) Interstitial lung disease *88)*
c) Parkinsonism d) Toxoplasmosis

1751. The contraindications of amantadine include all except - *(PGI80, AMU88)*
a) Peptic ulcer b) Severe renal disease
c) History of convulsion d) Pregnancy

1752. Antiviral drugs are- *(PG 90)*
a) ketoconazole b) Amantidine
c) Acyclovir d)Flucytosine

1753. The following drug blocks the action of reverse transcriptase in HTV infection (AIDS) - *(AIIMS 88)*
a) Azathioprine b) Zidovudine
c) Cyclophosphamide d)Adriamycin

1754. Hie following is a side effect ofDidanosine-^4/ZMS^r *91)*
a) Mycarditis b) Pancreatitis
c) Aplastic anemia d) Seizures

1755. Which is not an antiviral drug - *(Keala 94)*
a) vidarbine b) acyclovir
c) zidovidin d) mitomycin

1756. Primary mechanism of action of Zidovudin is -
a) Proliferation of B & T cells *(Kam. 94, PGI99)*
b) Inhibition of transcriptase
c) Activation of macrophages
d) Stimulation of lymphokines

1730)c 1731)a 1732)c 1733)c,d 1734)a 1735)None 1736)b 1737)a 1738)c 1739)d 1740)a 1741)a 1742)b 1743)c>d 1744)c>d 1745)d 1746)a 1747)a,d 1748)d 1749)c 1750)c 1751)b 1752)b,c 1753)b 1754)b 1755)d 1756)b

1757. Drug of choice in acute bronchiolitis is - *{AI96, PGI98)*
a) Acyclovir b) Ribavarin
c) Vidarabine d) Interferon

1758. Side effect of zidovudine in AIDS patients is -
a) Megaloblastic anemia *(AIIMS 98)*
b) Peripheral neuropathy *
c) Marrow suppression
d) Pancreatitis

1759. Amantadine- *{PGI98)*
a) Inhibits DNA b) Inhibits mRNA
c) Inhibits tRNA d) Inhibits rRNA

1760. Idoxuridine- **(***Karnat 99)*
a) Is an analogue of thymidine
b) Is too toxic for routine systemic use
c) Inhibits the replication of somema-containing viruses by causing the synthesis of fraudulent visral protein
d) Is useful as topical treatment for herpes simplex infection of the skin and cornea

1761. Which of the following antiviral drugs cannot be given orally- *{Kerala 2K)*
a) Zidovudine b) Zalcitabine
c) Acyclovir d) Iodoxuridine
e) Amantadine

1762. Protease inhibitors are- *(PGI 02)*
a) Saquinavir b) Nevirapine
c) Nelfinavir d)Abacavir
e) Efavirenz

1763. AZT has following side effects except- *(PGI2000)*
a) i platelet b) Megaloblastic anemia
c) Pancreatitis d) Cardiomyopathy

1764. Mechanism of Acyclovir resistance - *(PGI2000)*
a) Thymidine kinase
b) DNA - dependent RNA polymerase
c) *i* spectrum
d) *X* Side effects

1765. Zidovudine given for HTV in preganancy because -
a) Decreases chance of vertical transmission
b) Decrease severity of infection in mother *(PGI 99)*
c) Decrease severtiy of infection in new bom
d) Cause no benefit

1766. Which is a protease inhibitor- *{NIMHANS 01)*
a) Azothymidine b)Zidovidine
c) Squanavir d) Acyclovir

1767. Nucleoside reverse transcriptase inhibitors -
a) Lamivudine b) Zalcitabine *(PGI04)*
c) Nevirapine d) Ticlopidine
e) Delaveridine

1768. Which of the following is not a nucleoside reverse transcriptase inhibitor - *(AI 04)*
a) Zalcitabine b) Lamivudine
c) Nevirapine d) Didanosine

1769. The antiretroviral drug which is also effective in chronic active hepatitis-B infection is - *(Kam 04)*
a) Zidovudine b) Nelfinavir
c) Efacirenz d) Lamivudine

1770. Nucleoside analogues used in the treatment of HIV infection include - *(Karnataka 04)*
a) Indinavir b)Nevirapine
c) Didanosine d) Efavirenz

1771. Which is not used as a antiherpes drug - *(AMU 05)*
a) Acyclovir b) Nelfinavir
c) Ganciclovir d) Foscamet

1772. Which of the following will be optimum treatment in a patient of chronic hepatitis B whose serum AST levels are arised - *(MAHA 05)*
a) Lamivudine b) Lamivudine + interferons
c) Immunoglobulins d) Interferons

1773. Drug safe in pregnancy with HIV infection is -
a) Zidovudine b) Indinavir *(Orissa 05)*
c) Lamuvidine d) All of the above

1774. Resistance to zidovudine develops due to - *(AIIMS May 05)*
a) Mutations at reverse transcriptase
b) Increased efflux of the drug from inside the cell
c) Increased metabolism of the drug
d) Decreased zidovudine 5 triphosphate formation

1775. All of the following drugs are protease inhibitors except- *(AI 06)*
a) Nelfinavir b) Saquinavir
c) Abacavir d) Ritonavir

1776. Nevirapine is a - *(AI 05, 06, 07)*
a) Protease inhibitor
b) Nucleoside reverse transcriptase inhibitor
c) Non-nucleoside reverse transcriptase inhibitor
d) Fusion inhibitor

1777. Complications of Zidovudine - *(PGI June 06)*
a) Nausea & Vomiting b) Anemia
c) Steatosis

1778. Which one of the statements is false regarding adefovir dipivoxil ? - *(Karnataka PGMEE2006)*
a) Acyclic nucleotide analogue
b) Well tolerated orally
c) Used in chronic hepatitis C infection
d) Used in anti-retroviral therapy

1779. All the following anti-retroviral drugs produce dyslipidemia except - *(Kamakata-PGMEE 2006)*
a) Atazanavir b) Saquinavir
c) Amprinavir d) Nelfinavir

1780. The recommended drug for the prophylaxis of influenza A and B is - *(Corned 08)*
a) Acyclovir b) Ganciclovir
c) Amantadine d) Foscamet

1781. False about protease inhibitors in HIV is -
a) They are powerful enzyme inhibitors
b) Of all the protease inhibitors saquinavir is the most powerful inhibitor of CYP3 A4 *(AIIMSNov 07)*
c) They cause hepatic toxicity
d) All protease inhibitors are substrates for P glycoprotein coded by MDR gene

1757) b 1758) a 1759)d 1760)a,b,d 1761)d 1762)a,c 1763)c 1764)a 1765)a 1766)c 1767)a,b 1768)c 1769)d 1770)c 1771)b 1772) a 1773)a 1774)a 1775)c 1776)c 1777)a,b,c 1778)c 1779)a 1780)c 1781)b

1782. AZT, DDI, HAART are combination of three drugs are used in AIDS acts by - *(UP 08)*
a) Inhibitory effects on viral DNA
b) Nucleoside reverse transcriptase inhibitors
c) Inhibit the synthesis of group 24
d) P53 anti - apoptotic molecule synthesis

1783. Which of the following HIV drug inhibit drug metabolizing enzymes - *(PGI Dec 08)*
a) Ritonavir b)Lamivudine
c) Nevirapine d) Delavirdine
e) Enfuvirtide

1784. Peripheral neuropathy is limiting factor in use of -
a) Zidvudine b) Stavudine *(PGI June 09)*
c) Efavirenz d) Zalcitabine
e) Nevirapine

1785. The basis of combining ritonavir with lopinavir is - *(DELHIPG Feb. 09)*
a) Pharmaceutical compatibility
b) CYP3 A4 inhibition by ritonavir
c) Long elimination half life of ritonavir
d) Ability to couteract side-effects of lopinavir

1786. Which one of the following is a nucleotide reverse transcriptase inhibitor ? *(UPSC-109)*
a) Ritonavir b) Indinavir
c) Tenofovir d) Nelfinavir

1787. Which of the following combination (s) is/are false-
a) Oral valacyclovir - DOC for herpes zoster
b) Cidifovir - CMV retinitis *(PGI Nov 09)*
c) Ribavarin - chronic HBV infection
d) Valganicyclovir - >90% oral bioavailability
e) Fomivirsen-An antisense oligonucleotide for treatment of CMV retinitis

1788. Adverse effect (s) of Foscarnet includes all except-
a) Hypercalcemia b) Hyperkalemia *(PGINov 09)*
c) Hypocalcemia d) Hypokalemia
e) Penile ulcer

1789. SNRI is/are - *(PGI Nov 09)*
a) Escitalaprom b) Venlafaxine
c) Mirtazepine d) Duloxetine
e) Parmexetine

1790. Integrase inhibitors approved for HIV is - *(AI11)*
a) Raltegravir b) Indinavir
c) Lopinavir d) Elvitegravir

1791. Not effective in herpes zoster - *(PUNJAB 11)*
a) Acyclovir b) Valacyclovir
c) Ganciclovir d) Famciclovir

ANTI-MALARIAL

1792. Which of the following statements anout antimalarial drugs is/are correct - *(UPSC 86)*
a) A standard course of treatment with chloro quine will prevent relapses of vivax malaria
b) The 4- amonoquinolines are no longer useful for malaria prophylaxis
c) Primaquine is the antimalarial drug of choice for perosns with glucose-6- phosphate dehydro genase deficiency
d) Pyrimethamine or trimenthoprim in combination with a sulfonamide has been used successfully to treat chloroquine resistant falciparum malaria

1793. Halofantrine is used in the treatment of -
a) Plasmodium falciparum b)AIDS *(AIIMS97)*
c) Leprosy d) Toxoplosmosis

1794. Chloroquine in large doses causes- *(AP97, 04)*
a) Irreversible retinopathy b) Cataract
c) Corneal deposits d) Glaucoma

1795. The aim of Radical treatment of falciparum malaria is - *(AIIMS91)*
a) Transmission prevention
b) Resistant ffoms are eliminated
c) Compliations are pervented
d) Exo-Erythrocytic cycle is eliminated

1796. Drug of choice for cerebral malaria is - *(PGI 93)*
a) Metkalfin b) Quinine
c) Chloroquine d) Primaquin

1797. The half life of chloroquine is- *(AIIMS 81, UPSC 83)*
a) 6 hours b) 7 days
c) 12 hours d) 24 hours

1798. Primaquine has no role in infection *with-{AIIMS 78, UPSC 84)*
a) P. vivax b) P.falciparum
c) P. malariae d) P. ovale

1799. Malarial relapse is due to - **(***JIPMER 95)*
a) Sporozoites b) Hypnozoites
c) Merozoites d) Trophozoites

1800. Chloroquine cause exacerbation of- *(AI91)*
a) Malaria b) Psorisasis
c) DLE d)Photosensitivity

1801. Chloroquine is used in the treatment of - *(AI89)*
a) DLE b) Pemphigus
c) Psoriasis d) Nummular eczema

1802. Radial cure ofplasmodium vivax is by- *(PGI86)*
a) Quinine b) Chloroquine
c) Proguanil d) Primaquines

1803. Primaquine sensitivity is due to def!ciency-(vlPSS)
a) cholinesterase
b) pseudocholinesterase
c) glucose 6 phosphates
d) Glucose-6 phophate dehydrogenase

1804. Side effects of chloroquine is/are- **(***PGI 89)*
a) Retinopathy b)Arrythmias
c) Ataxia d) Tranquision

1805. Chloroquine is used in all except - *(TN91)*
a) Intestinal amoebiasis b) Hepatic amoebiasis
c) DIE d) Malaria

1806. Which drug is used to treatP.Vivax in pregnancy- *(AIIMS 91)*
a) Quninine b) Chloroquin + Proguanil
c) Chloroquin d) Chloroquin + Pyrimethamine

1782) b 1783) a,d 1784)b,d 1785)b 1786)c 1787)c,d 1788)b 1789)b,d 1790)a 1791)c 1792)d 1793)a
1794) a 1795) a 1796)b 1797)b 1798)b 1799)b 1800)b 1801)a 1802)d 1803)d 1804)a,bl805)a 1806)c

1807. Primaquine is not a - *(AIIMS 92)*
a) Primary tissue Schizonticidal
b) Secondary tissue Schizonticidal
c) Gametocidal
d) Sporozoiticidal

1808. Dose of Chloroquine for infants under NMEP is -
a) lOmg b)50mg *(AIIMS92)*
c) 60 mg d)75mg

1809. Treatment for chloroquine resistant plasmodium falciparum infection is- *(Kerala 95)*
a) Pyrimethamine b) Primaquine
c) Fancidar d)all

1810. Chloroquine in malaria acts on- *{Kerala 95)*
a) Erythrocytic cycle b) Exo erythrocytic cycle
c) liver d) schizonts

1811. The drug active against malarial sporozoites -
a) Proguanil b) Chloroquine *(AI95)*
c) Pyrimethamine d) Quinine

1812. Long term use of chloroquine does not lead to -
a) lichenoid eruptions *(All India 95)*
b) visual; deterioration
c) T-Wave changes in EKG
d) Weight gain

1813. Chloroquine is cidal to - *(AIIMS }95)*
a) Tissue schizonts b) Merozoites
c) Blood schizonts d) Gemetocytes

1814. Volume of distribution (Vd) for chloro quine is -
a) 5-8L b) 9-15L *(KarnOl)*
c) 100-650L d) above 1300L

1815. Druge safely given in pregnancy-(PG7 *02, Karn 94)*
a) Antifolate b) Quinine
c) Chloroquine d) Primaquine
e) Tetracycline

1816. Quinine given to a patient of falciparum malaria caused sweating and palpitation, the likely cause is- *(PGI99)*
a) Cinchonism b)Hyperglycemia
c) Hypoglycemia d) Hypokalemia

1817. Mefloquine should not be used with - *(PGI98)*
a) Quinine b) Verapamil
c) Ajmpicillin d) Aspirin

1818. Antimalarial of choice in a pregnant woman (1 timester) who is chloroquine resistant is-
a) Quinine *(JIPMER2002)*
b) Proguanil
c) Dapsone & pyrimethamine
d) Mefloquine

1819. Primaquine is used to treat Falciparum malaria in order to - *(UPSC 02)*
a) Prevent transmission b) Prevent relapse
c) Hasten recovery d) Protect liver

1820. Pyronaridine is- *(AIIMS 03)*
a) Antimalarial b) Anti-HIV
c) Antifungal d) Antibacterial

1821. Chloroquine toxicity manifests as all except -
a) Myopathy b) Retinopathy *{APPGE 04)*
c) GI bleed d) Hypertension

1822. Which of the following antimalarial is a slow acting schizontocide -
a) Artemether b) Mefloquine
c) Pyrimethamine d) Quinine

1823. Which of the following drug is contraindicated in pregnancy ? - *(APPG 2006)*
a) Chloroquine b) Primaquine
c) Quinine d)Amidoquine

1824. Chloroquine resistant malaria is treated by all except- *(Manipal 2006)*
a) Quinine b) Proguanil
c) Mefloquin d) Halofantrin

1825. Anti-malarial which causes neuropsychiatric side effects- *(PGMCET 07)*
a) Mefloquine b) Quinine
c) Artemisin d) Artesunate

1826. Artemisin is discontinued because of its which of the following side effect - *(PGMCET 0 7)*
a) Hemolysis
b) Hypoglycemia
c) Rapid recrudescence
d) Neuropsychiatric features

1827. Which of the following drugs will not precipitate folate deficiency - *(AI09)*
a) Alcohol b) Chloroquine
c) Sulfasalazine d) Phenytoin

1828. Treatment of choice for severe falciparum malaria is- *(AI09)*
a) Chloroquine b) Intravenous artesunate
c) Intravenous quinine d) Intravenous quinidine

1829. Most common side effect of artemisin is -
a) Nausea b) Vomiting *(PGI Nov 09)*
c) Diarrhoea d) Bone marrow suppression
e) Pigmentation

1830. Drug of choice for severe malaria is - *(PUNJAB 11)*
a) Artesunate b) Quinine
c) Mefloquine d) Chloroquine

1831. A patient who was given primaquine develops dark coloured urine one day after administration of the drug. The likely diagnosis is - *(AI 11)*
a) Glucose -6 phosphate dehydrogenase deficiency
b) Glucose -6 phosphate deficiency
c) Galactose -6 phosphate dehydrogenase deficiency
d) D. Galactose -6 phosphatase deficiency

ANTI-AMOEBIC

1832. Which is not cysticidal for entamoeba - *{PGI93)*
a) Paramomycin b) Chloroquine
c) Tetracycline d)Diloxanide

1833. Intraluminal amoebicide of choice is-
a) Metronidazole *{PGI87, AIIMS87, UPSC88)*
b) Diloxanide furoate
c) Chloroquine
d) Tetracycline
e) Quinidochlor

1807) None 1808)d 1809)b,c 1810)a 1811)a,c 1812)d 1813)c 1814)c 1815)c 1816)c 1817)a 1818)a 1819)a
1820) a 1821) d 1822)c 1823)b 1824)b 1825)a 1826)c 1827)b 1828)b 1829)a,b,c 1830)a 1831)a 1832)b 1833)b

1834. Side effect of Diloxanide furoate is - *(AIIMS 88)*
a) Flatulance b) Constipation
c) Vomitting d) Pruritus
e) Gastritis

1835. Iodohydroxy quinoline causes- *(UPSC 82, 85)*
a) Jaundice b) Diarrhoea
c) Fibrosing alveolitis d) Eye defects

1836. All are used in treatment of amoebic liver abscess except- *(Manipal 08)*
a) Diloxanide furoate b) Chloroquine
c) Metronidazole d) Emetine

ANTI HELMINTHS

1837. Invermectin is used in the treatement *of-(AIIMS 79)*
a) Schistosomiasis b)Filariasis
c) Ascarisasis d) Strongyloidosis

1838. Antihelminthic which acts by flaccidly paralysis of worms is- **(***AI89)*
a) Piperazine b)Bephenium
c) Pyrantel d)None

1839. Drug of choice in Guinea worm infestation is -
a) Metronidazole b) Mebendazole *(AIIMS 84)*
c) Niridazole d)Hetrazan

1840. Drug of choice for cutaneous larva migrans is -
a) Mebendazole b) Niridazole
c) Hetrazan d) Thiabendazole

1841. Drugs used in cysticercosis- **(***PGI88)*
a) Praziquantal b) Metronidazole
c) Niclosamide d) Pyrantel

1842. Levamisole is used as all except - *(PGI89)*
a) Single dose in ascariasis
b) Immunostimulant
c) Paralysis of worms by depolarisation
d) Immuno depressant in high doses

1843. Niclosemide is not effective for treatment of -
a) T. Saginata b) T. Solium *(Kerala 91)*
c) D. Latum d) Echinococcus granulosum

1844. Mebendazole is used in the treatment of all except-
a) Hookworm b) Trichuris trichura *{AIIMS 91)*
c) Roundworms d) Strongyloides

1845. Mebendazole is effective against all except -
a) Strongyloides b) Trichuris *(AIIMS92)*
c) Ascaris d) Ancylostoma

1846. False regarding mebendazole - *(AIIMS 94)*
a) It is broad spectrum
b) Can be used in pregnancy
c) Effective against both larva and adults
d) Decreased bioavailability when given orally

1847. Drug used in Cysticecosis are all, except -
a) Niclosemide b) Praziquental *(AIIMS 96)*
c) Albendazole d) Flubendazole

1848. Neurocysticercosis all can be given except -
a) Albendazole b) Prazequantel *(JIPMER 98)*
c) Niclosemide d) Ivermectin

1849. Albendazole is not used for- *(AIIMS 97)*
a) Cysticercosis b) Schistosomiasis
c) Ascariasis d) Thread worm

1850. Pyrantel pamoate is effective in both- *(Kerala '97)*
a) Amoebiasis and trichuriasis
b) Enterobius and ascariasis
c) Amoebiasis and strogyloides
d) Taenia solium and ascariasis

1851. DEC is preferred over Ivermectin inWuchereria scortal filariasis because- *(AI 99)*
a) DEC kills mecrofilaria and is more effective than ivermactin
b) DEC kills adult and is more effective than ivermactin
c) DEC kills microfilaria and adult and is more effective than ivermectin
d) Ivermectin is more effective in adult and DEC more effective in microfilaria

1852. Drug effective for most trematodes and many cestodes- *(TN89)*
a) Praziquental b) Pirenzipine
c) Niclosamids d) Pyrantel palmoate

1853. DOC in tapeworm infestation - *(PGI98)*
a) Niridazole b) Niclosamide
c) Albendazle d) Praziquantel

1854. Mebendazole is effective for following except -
a) Cysticercosis b) T.trichuria *(PGI 97)*
c) Trichinella d) Ascaris

1855. Broadspectrum Antihelminthes - *(PGI04)*
a) Niclosamide b) Praziquantel
c) Albendazol d)Mebendezol
e) Pyrantel pamote

1856. Crusted scabies is caused by sarcoptis scabei Ivermectin is used to treat it. It acts by following neurotransmitter - **(***UPPGMEE 04)*
a) Acetylcholine b) Adrenaline
c) Noradrenaline d) GABA

1857. Round worm infection is best treated with -*(UP 07)*
a) Metronidazole b) Mebendazole
c) Albendazole d) Pyrantel pamoate

1858. Praziquantel is an effective drug to treat the following conditions except - *(UPSC-108)*
a) Schistosomiasis b) Cysticercosis
c) Hydatid disease d) Trichinosis

1859. Ivermectin is used in all except - *(Jipmer 10)*
a) Malaria b) Filariasis
c) Onchocerciasis d) Ascariasis

1860. Anti helminthic contraindicated in epilepsy patients-
a) Pyrantel pamoate b) Albendazole *(Jipmer 11)*
c) Piperazine d) DEC

ANTI-PSEUDOMONALS

1861. The following are a ureidopenicillins except-
a) Aztapenicillin b) Mezlopenicillin *(TN89)*
c) Piperacillin d) Carbenicillin

1834) a,b 1835) d 1836) a 1837) b,d 1838) a 1839) a 1840) d 1841) a 1842) d 1843) d 1844) d 1845) a 1846)b 1847) a 1848) c,d 1849)b 1850)b 1851)c 1852)a 1853)d 1854)a 1855)c,d 1856)d 1857)b,c 1858)d 1859)a 1860)c 1861)d

1862. The penicillin that is effective against proteus and pseudomonas aeruginosa is - *(AIIMS 86)*
a) Ampicillinb) Cloxacillin
c) Amoxycillin d) Carbenicillin

1863. Which one of the following anbtibiotics is not effective against pseudomonas aeruginosa -
a) Cefatazidime b) Piperacillin *(UPSC04)*
c) Vanomycin d)Aztreonam

1864. Which one of the following drugs is an antipseudomonal penicillin ? *(AI06)*
a) Cephalexin b) Cloxacillin
c) Piperacillin d) Dicloxacillin

MISCELLANEOUS

1865. Spectinomycin is not effective in which gonococcal infection - *(JIPMER 81)*
a) Urethritis
b) Anorectal gonorrhea
c) Gonococcal pharyngitis
d) Arthritis

1866. An organism which has a tendency to infect patients receiving cephalosporins is - *(AIIMS 88)*
a) Escherichia coil b) Salmonella
c) Pseudomonas d) Mima Herellea

1867. Erythromycin is the drug of choice in the treatment of childhood infection due to the following organisms except - *(UP 97)*
a) Pertussis
b) Mycoplasma pneumoniae
c) Pneumocystis carini
d) Chlamydia trachomatis

1868. What antibiotic therapy results in superinfection-
a) Tetracycline *(NIMHANS 88)*
b) Gentamycin
c) Chloramphenicol
d) Streptomycin

1869. Probenecid excretion is increased by -*(Kerala 94)*
a) Penicillin b) Cephalosporin
c) $NaHC0_3$ d) Tetracyclin

1870. Drug which is commonly used in Renal dysfunction- *(IN 89)*
a) Tetracycline b) Doxycycline
c) Oxytetracycline d) Minocycline

1871. Which of the following drug can be used without reducing the dosage in renal failure - *(AI 91)*
a) Cefaclor b) Rifampicin
c) Erythromycin d) Tetracycline

1872. Which is true of Bacitracin- *(Jipmer 91)*
a) Poly peptide
b) Systemic antifungal
c) Derived from bacteria
d) Effective against gram negative organism

1873. Which antibiotic is preferably not used in myasthenia gravis? *(PGI81)*
a) Cephalosporins b) Tetracyclines
c) Erythromycin d) Streptomycin

1874. Enterohepatic circulation is seen in- *(TN97)*
a) Ampicillin b) Benzylpenicillin
c) Norfloxacin d) Streptomycin

1875. Pick the true statement- *(Chandigarh Dec '96)*
a) Amox: Clavalunic, Clavalunic increases amox.activity
b) Sulbactum is used in treatment of Leprosy
c) Aztreonam is a metabolite of clarethromycin
d) Cilastatin imipenam-cilastatin prevents hydrolysis of imipenam

1876. In renal disease, dose of the following need to be reduced, except: *(AIIMS '97)*
a) Doxycycline b) Clindamycin
c) Vancomycin d) Chloramphenicol

1877. In a CRF patient does is reduced for all except -
a) Polymyxin-B b) Vancomycin *(MP 98)*
c) Amoxycillin d) Gentamycin

1878. Creatinine clearance < 30 ml/min. Drug which requires dose reduction is all except- *(AIIMS 98)*
a) Rifampicin b) INH
c) Kanamycin d)Ethambutol

1879. DNA gyrase inhibitor - *(JIPMER99)*
a) Tetracyclines b) Quinolones
c) Monobactums d) Erythromycin

1880. A patient on terfenadine for the allergy developed arrythymia on starting treatment for upper respiratory infection. The antibiotic used could be- *(AIIMS 99)*
a) Erythromycin b) Amoxycillin
c) Co-trimoxozole d)Cephalex

1881. Which antibiotic causes Torsade-de-pointers ?
a) Erythromycin b) Griseofulvin
c) Ciproflaxin d) Amoxicilin *(Burdwan 2K)*

1882. Which of these antibiotics are safe in renal failure-
a) Cephalexin *(PGI 02)*
b) Tetracycline c) Nitrofurantoin
d) Gentamicin e) Doxycycline

1883. Drugs useful for treatment of H.pylori are-
a) Bismuth sulphate *(PGI2000)*
b) Tetracycline c) Metronicazole
d) Ranitidine e) Albendazole

1884. Drug contraindicated in infectious mononucleosis is - *(PGI 99)*
a) Ampicillin b) Doxycycline
c) Atropine d) Gentamicin

1885. Macrolide antibiotic which causes minimal hepatic cytochrome 450 involvement is-*(Kerala 03)*
a) Erythromycin b) Roxithromycin
c) Azithromycin d)None

1886. Which of the following drug acts on "motilin" receptors - *(SGPGI04, MP 2K)*
a) Erythromycin b) Tetracycline
c) Norfloxacin d) Chloramphenicol

1887. The antibiotic known to cause "Red Man" syndrome is- *(Karnataka 04)*
a) Clindamycin b) Cefadroxil
c) Vancomycin d) Azithromycin

1862)d 1863) c 1864)c 1865)c 1866)c 1867)c 1868)a,c 1869)None 1870)b 1871)c 1872)a,c 1873)d 1874)a 1875)d 1876) a,d 1877) a 1878) a 1879)b 1880)a 1881)a 1882)e 1883)a,b,c,d 1884)a 1885)c 1886)a 1887)c

1888. All of the following drugs are indicated in the treatment of MRS A except - (*SGPGI05)*
a) Ciprofloxacin b)TMP-SMZ
c) Vancomycin d) Oxacillin

1889. Which one of the following is best associated with Lumefantrine - *(AI05)*
a) Antimycobacterial b) Antifungal
c) Antimalarial d) Antiamoebic

1890. Which of the following does NOT increase neuromuscular blockade - *{Corned 08)*
a) Clindamycin b)Lincomycin
c) Streptomycin d) Erythromycin

1891. Orange coloured urine is due to - *(AI07)*
a) Rifampicin b)INH
c) Pyrazinamide d) Ethambutol

1892. Anthraquinones cause - *(MAHE 07)*
a) Adenoma b) Lung Ca
c) Bladder CA d) CA Oesophagus

1893. All the drugs are used in treatment of enteric fever except - *(MAHE07)*
a) Vancomycin b) Cefoperazone
c) Refampicin d) Azithromycin

1894. Discolouration of the teeth seen in following intake- *(UP 07, 03)*
a) Tetracyclines b) Chloramphenicol
c) Minocycline d)Lymecycline

1895. Which of the following is an antipseudomonal penicillin ? *(AI08)*
a) Piperacillin b) Amoxycillin
c) Oxacilline d)Nafcillin

1896. Which of the following drugs is not given in enteric fever- *(AI08)*
a) Amikacin b) Co-trimoxazole
c) Ciprofloxacin d) Ceftriazxone

1897. Drug not used in H. pylori - *(AiimsMay08)*
a) Metronidazole b)Omeprezole
c) Mosapride d) Amoxicillin

1898. All the drugs are used in treatment of enteric fever except - *(Manipal 08)*
a) Vancomycin b) Cefoperazone
c) Rifampicin d)Azithromyin

1899. About silver sulfadiazine which of the following is true-
a) Penetrate sore *(PGI Dec 08)*
b) Bacteriostatic
c) Thrombocytopenia occur as a S/E.
d) Adverse reactions are frequent
e) Systemic absorption may occur

1900. C YP 3 A inhibitors is/are - *(PGI June 09)*
a) Ritonavir b)Amiodarone
c) Verapamil d) Rifampin
e) Barbiturates

1901. mutational drug resistance is/are seen in -
a) Rifampin - Staphylococcus aureus
b) Multi drug resistant - Mycobacteria
c) Fluoroquinolones-S.typhi *(PGI June 09)*
d) Tetracyclin-Vibrio chloreae
e) lactam Enterococus

1902. Synegistic action is used in - *(PGI June 09)*
a) Enterococcal endocarditis
b) Viridans streptococcal endocarditis
c) Pencillin + Erythromycin - Gr. A streptococci
d) Carebencillin/ticarcillin + gentamicin - pseudomonas infection
e) Pencillin + Tetracycline/ chloramphenicol - pneumococci

1903. Which of the following statements is not true about tacrolimus - *(Manipal 09)*
a) It is a macrolide antibiotic
b) It is indicated for the prophylaxis of organ transplant rejection
c) Glucose intolerance is a well recognized side effect
d) It can be safely administered with any nephrotoxic drug

1904. A post-operative patient developed septicemia and was empirically started on combination chemotherapy by a new resident doctor. However, when the patient did not respond even after 10 days of antibiotics treatment, the review of the charts was done. It was found that the resident doctor had started the combination of antibiotics which was mutually antagonistic in action. Which one of the following is the most likely combination that was given -
a) Vacomycin and amikacin *(Manipal 09)*
b) Cephelexin and gentamicin
c) Ampicillin and chloramphenicol
d) Ciprofloxacin and piperacillin

1905. Which of the following drugs is effective against Pseudomonas infection ? *(DELHI PG Feb. 09)*
a) Ampicillin b) Ceftriaxone
c) Colistin d) Cefixime

1906. Imipenem is co-administered with cilastin because:
a) Cilastatin aids the gastrointestinal absorption of the active moiety, imipenem *(UPSC-109)*
b) Cilastatin inhibits (3-lactamase that destroys imipenem
c) Cilastatin inhibits an enzyme in the kidney that destroys imipenem
d) Cilastatin prevents the hypoprothrombotic effect of imipenem

1907. Erythromycin is given in decreased bowel motility because - *(AIIMS Nov 09)*
a) It increases bacterial count
b) It decreases bacterial count
c) It binds to adenyl cyclase
d) It binds to motilin receptor

1908. All of the following drug is CYP3A inhibitor except - *(AIIMS May 10)*
a) Erythromycin b) Itraconazole
c) Ritonavir d) Saquinavir

1909. Which of the following should be monitored in patient receiving linezolid therapy - *(AI 10)*
a) Renal function b) Liver function
c) Auditory function d) Platelet count

1888) d 1889)c 1890)d 1891)a 1892)None 1893)a,b,c 1894)a 1895)a 1896)a 1897)c 1898)a 1899)b,c,e
1900)a,c 1901)a,b,c 1902)a,b,d 1903)a 1904)c 1905)c 1906)c 1907)d 1908)d 1909)d

1910. Which of the following is a aldosterone antagonist?
a) Eplerenone *(Maharashtra 10)*
b) Amiloride
c) Triamterene
d) All of the above

1911. All of the given drugs inhibit microbial cell wall synthesis except - *(Corned 10)*
a) Neomycin b) Vancomycin
c) Meropenem d) Bacitracin

1912. Drugs not effective in pseudomonas infection -
a) Ciprofloxacin *(PGI May 10)*
b) Norfloxacin
c) Aminoglycosides
d) Ampicillin
e) Piperacillin

1913. Correctly matched pairs are - *(PGIMay 10)*
a) Rifampicin- inhibit bacterial DNA polymerase
b) Terbinafine- inhibit fungal DNA polymerase
c) Acyclovir - inhibit viral DNA polymerase
d) Cytarabine- inhibit human DNA polymerase

1914. Amphotericin B toxicity is ted by -
a) Normal saline *(PGIMay 10)*
b) Cardiac failure
c) Lipid formulations
d) Aminoglycosides

1915. Drugs not used in MRSA - *(PGINov. 10)*
a) Vancomycin b) Teicoplanin
c) Imipenem d) Cloxacillin
e) Amoxi-clav

1916. Drugs not used in gram - ive infections -
a) Imipenem *(PGINov. 10)*
b) Ceftazidime
c) Vancomycin
d) Cimprofloxacin
e) Amikacin

1917. A patient in the ICU having fever since 1 week. He empirically started on a ceftriaxone & amikacin, the pus sent for culture after 48 hours blood culture report showed klebsiella with ESBL, what is the next step- *(AIIMS Nov 10)*
a) Increasing the dose of the same antibiotics
b) Change amikacin to quinolone
c) Change cerftriaxone to Imipenem
d) Change ceftriaxone to ceftazidime

1918. All are true about ESBL except - *(AIIMSMay 11)*
a) Sensitive to carbapenems
b) Ambler classification is based on molecular structure
c) Classification is based on 3rd g. cefalosporin sensivity
d) 3rd & 4th g. cefalosporin sensivity testing is must to confirm the ESBL

1919. The statement that is NOT true of linezolid is that it-
a) Is suitable for treatment of enterococcal endocarditis
b) Is a monoamine oxidase inhibitor *(Kam 11)*
c) Inhibits bacterial protein synthesis
d) Is active against Vancomycin Resistant Staphylococcus Aureus (VRSA)

1920. The following antimicrobial produces its action primarily by inhibiting cell wall synthesis -
a) Ciprofloxacin b) Nystatin *(Kam 11)*
c) Sulfamethoxazole d) Cycloserine

1921. Which of the following drug interferes with neuromuscular blockade - *(Jipmer 11)*
a) Aminoglycosides b) Cephalosporins
c) Ampicillin d) Penicillin

1922. Linezolid is- *(Jipmer 11)*
a) Macrolide b) Streptogramins
c) Aminoglycosides d) Oxazolidonediones

1923. A non specific MAO inhibitor - *(Jipmer 11)*
a) Ampicillin b) Linezolid
c) Spectinomycin d)Tazobactam

DbObCb

1924. Drug of choice in Legionella pneumonia is - *(Jipmer 878, Kerala 88)*
a) Ampicillin b) Amikacin
c) Erythromycin d) Streptomycin
e) Dapsone

1925. Drugs used in LGV - *(PGI 88)*
a) Erythromycin b) Sulphonamides
c) Tetracyclines d) Penicillins

1926. The drug of choice for chloramphenicol resistant typhoid fever is - *(AI91, JIPMER 93)*
a) Cefaclor b)Cefotaxine
c) Ciprofloxacin d)Cefazoline

1927. Erythromycin is the drug of choice for all except -
a) Diptheria *(AI91)*
b) Whooping cough
c) Pneumocystitis carinii
d) Chlamydia trachomatis

1928. Drug of choice in Gonorrhoea is - *(Jimper 92)*
a) Norfloxacillin b) Doxycycline
c) Sulfonamide d) Penicillin

1929. The drug of choice in 6 months old child with mycoplasma infection - *(AI 95, AIIMS 94)*
a) Tetracycline b) Streptomycin
c) Clotrimazole d) Erythromycin

1930. Drug of choice for P.Carnii - *(Assam 95)*
a) Cotrimoxazole b)Erythromycin
c) Gentamycin d) Pentamidine

1931. Drug of choice for penicillinase producing gonocococcus - (C. *U.P. GE.E 95)*
a) Benzathine Penicillin G
b) 3rd generation cephalosporin
c) Quinolines
d) None

1932. Drug of choice for plague is - *(C. U.P.G.E.E. 95)*
a) Tetracycline b) Chloramphenicol
c) Streptomycin d) Any of the above

1933. Not effective against pseudomonas aeroginosa-
a) Cefotaxime b) Cefaclor *(ARMS 97)*
c) Ceftazidime d) Ceftrioxone

1910)a 191 l)a 1912) b,d 1913)c,d 1914) b,d 1915)d,e 1916)c 1917)c 1918)d 1919)a 1920)d 1921)a 1922)d 1923) b 1924) None 1925)a,c 1926)c 1927)c,d 1928)None 1929)d 1930)a 1931)b>c 1932)c 1933)b

1934. Drug of choice for cholera prophylaxis- *(Kerala 96)*
a) Chloramphenicol b) Procaine penicillin
c) Doxycycline d) Erythromycin
e) Septran

1935. Not used in H .Pylori gastritis is - *(AIIMS 97)*
a) Colloidal bismuth b) Metronidazole
c) Clarithromycin d) Cisapride

1936. Anaerobic streptococci ; which is the most effective *(AIIMS97)*
a) Penicillin b) Clindamycin
c) Vancomycin d) Erythromycin

1937. Drug of choice in pseudomonas aeroginosa is all except- *(Rajasthan97)*
a) Carbenicillin b)Azlocillin
c) Meziocillin d)Moxalactum

1938. All are effective against pseudomonas except -
a) Azithromycin b)Imipenem *(AI98)*
c) Ceftazidine d) Piperacillin

1939. Drug of choice for Kala-azar - **(***MP2K***)**
a) Diethyl carbazine b) Pentamidine
c) Albendazole d) Metronidazole

1940. Drug of choice for Methicillin resistant staphylococcus aureus is (MRSA) - *(PGI01)*
a) Amoxicillin-Clavulanate b) Vancomycin
c) Flucloxacillin d) Clindamycin
e) Erythromycin

1941. Drug of choice for Tropical Pulmonary Eosinophilia is - *(Karnat05)*
a) Diethylcarbamazipine (DEC)
b) Corticosteroids
c) Ivermectin
d) None of the above

1942. The drug that is not effective against strep tococcus-
a) Ciprofloxacin b) Azithromycin *(APPGE 05)*
c) Chloramphenicol d) Vancomycin

1943. The blood culture from a patient of febrile neutropenia has grown Pseudomonas aeruginosa, It was found to be a producer of extended spectrum beta lactamase enzyme. The best choice of antimicrobial therapy should be - **(***ARMS NOV 05)*
a) Ceftazidine+Amikacin b)Aztreonam+Amikacin
c) Cefpirome+Amikacin d) Imipenem+Amikacin

1944. Which one of the following is used in therapy of Toxoplasmosis - *(AI05)*
a) Artensenuate. b) Thiacetazone
c) Ciprofloxacin d) Pyrimethamine

1945. Drug of choice for chemo prophylaxis against Rheumatic fever is - *(Karnat 05)*
a) Penicillin V b) Erythromycin
c) Benzathine penicillin d) Procaine penicillin

1946. Drugs used in MRSA - *(PGI June 06)*
a) Quinupristine/dalfopristine
b) Linezolid
c) Teicoplanin
d) Penicillin
e) Piperacillin (Tazobectum)

1947. Drug of choice for prophylaxis in diphtheria is -
a) Erythromycin b) Doxycycline *(AI08)*
c) Tetracycline d) Clindamycin

1948. The drug of choice for treatment of Neurosyphilis is - *(AI08)*
a) Benzathine penicillin G b) Procaine penicillin G
c) Penicillin V d) Tetracycline

1949. Drug of choice in nocturnal enuresis is - *(UP 08)*
a) Imipramine b) Diazepam
c) Amoxapine d) Reboxetine

1950. Drug of choice for Zollinger-Ellison syndrome -
a) Antihistaminics *(ARMS May 10)*
b) Proton lump inhibitors
c) Dopamine agonists
d) Antacids

1951. A young male presents with meningococcal meningitis and allergy to penicillin. Which is the most suitable drug - *(AI 10)*
a) Chloramphenicol b)Meropenem
c) Ciprofloxacin d) Teicoplanin

ANTI-CANCER

1952. Acitomycin D interferes with enzyme induction by combining with - *(AMU 86)*
a) TRNA
b) DNA
c) R-RNA
d) Repressor protein
e) Negative feedback inhibition system

1953. Inhibitors of DNA synthesis - *(DNB 88, Bihar 88)*
a) Penicillin b) Polymyxins
c) Chloramphenicol d) Actinomycin

1954. Anticancer drug with maximum emetic effect is -
a) Busulphan b) Chlorambucil
c) Thiotepa d)Cisplatinum

1955. Mode of action of actinomycin - D is to prevent-
a) Transcription of D.NA. *(JIPMER 79, Delhi 88)*
b) D.NA. synthesis
c) D.N.A. elongation
d) Diabetes mellitus

1956. Bulsulfan cause-*(ARMS 78, PGI82, NIMHANS88)*
a) Hemorrhagic cystitis b) Neurotoxicity
c) Pulmonary fibrosis d) Alopecia

1957. Commonest side effect of 5 flouro-uracil is -*(AI 97)*
a) Cardiotoxiciyt b) Bone marrow supression
c) Stomatitis d) Neurotoxicity

1958. Sodium 2 - mercapto ethance sulfonate (mesna) is used as a protective agent in - **(***ARMS2003)*
a) Radiotherapy b) Cancer chemotherapy
c) Lithotrypsy d) Hepatic encephalopathy

1959. Which antimaliganacy drug is most nephrotoxic -
a) Vincristine b) Cyclohposphamide
c) CIS-Platinum d) Methotrexate
e) 5-fu

1934)c 1935) d 1936)b 1937)d 1938)a 1939)b 1940)b 1941)c 1942)d 1943)d 1944)d 1945)c 1946)a,b 1947)a

1960. Anticancer drug which crosses the blood brain barrier - *(JIPMER 86 UPSC 88)*
a) CIS-Platinum b) Vincristine
c) Vinblastine d) Procabazine
e) Nitroso-ureas

1961. Methotrexate acts by- **(***AI89)*
a) folic acid antagonism b) Purine antagonism
c) Pyramidine antagonism d)All

1962. Which of the following is not and adverse effect of cyclophosphamide - *(AI89)*
a) Cystitis b) Alopecia
c) Hypoglycemia d) GIT disorder

1963. 5-FU is not used in.....Cancer - *(AI89)*
a) Liver b) Stomach
c) Mycosis Fungoides d) Breast

1964. The following are alkylating agents except -
a) Cyclophosphamide b) Methotrexate
c) Chlorambucil d) Busulphan

1965. Busulfan toxicity does not include - **(***AIIMS89)*
a) Hyperpigmentation b) Toxic carditis
c) Hyperuricemia d) Pulmonary fibrosis

1966. Mitosis is inhibited by - *(Kerala 91)*
a) 5-Fu b) Methotrexate
c) Vincristine d) Cyclophosphamide

1967. The dose of 6 Mercaptourine is altered when given along with - *(AIIMS 91)*
a) Allopurinol b) Vincristine
c) Folic acid d) Azothioprine

1968. Drug which arrests mitosis in metaphase - *(AI93)*
a) Busulfan b)5-fu
c) Vinca Alkaloids d) Methotrexate

1969. An antimetabolite which undergoes biotransformation to form an inhibitor of DNA polymerase is - *(JIPMER 81, AIIMS 86, 90)*
a) Vinablastine b) Cytosine arabinoside
c) Methotrexate d) Chlorambucil

1970. Successful treatment with single drug in hodgkin's disease has been seen with- *(DNB89)*
a) Procarbazine b) Mithramycin
c) Mechlorethamine d) Radiophosphorus

1971. Which of the following anticancer antibiotics is cardiotoxic - *(KARN 94)*
a) Mitomycinb) Adriamycin
c) Bleomycin d) Mithramycin

1972. Whichis chemotheraputic agent that must be included in treatment of ovarian carcinoma - *(JIPMER 95)*
a) Methotrexateb) Cyclo phosphamide
c) Flouro uracil d) Pro carbazine

1973. To treat methotrexate toxicity_____ is used -
a) Folic acid b) Folinic acid *(JIPMER 95)*
c) Riboflavin d) Cyanocobalamin

1974. The folic acid antagonist which has antineoplastic activity & extensively used as a chemothera peutic agent is - *(DELHIPG 96)*
a) Pentamidine b) Methotrexate
c) Trimethoprim d) Pyrimethamine

1975. The chemotherapentic agent used in brain tumour is- *(PGI95)*
a) Cisplatin b) Bleomycin
c) Nitrosoureas d) Vincristine

1976. Which of the following is not an alkylating agent -
a) Cytarabine b) Nitrosoureas *(CUPG.EE96)*
c) Thiotepa d) Melphalan

1977. The enzyme which is used as an anticancer drug- *(IN98)*
a) L-asparginase b) Cytosine arabinoside
c) Methotrexate d) Vincristine

1978. Adriamycin is classified as - *(PGI97)*
a) Antibiotic b) Antimetabolite
c) 5-FU antagonist d) Vinca alkaloids

1979. All are S/E of chemotherapeutic agents except- *(PGI98)*
a) Dermatitis b) Teratogenicity
c) BM suppression d) Hypertension

1980. Non-myelosuppressive agent is - *(PGI98)*
a) Vinblastine b) Vincristine
c) Bleomycin d) Methotrexate

1981. Cyclophosphamide is used in all except - *(PGI98)*
a) Burkitt's lymphoma b) Hodgkin's
c) Choriocarcinoma d) Ovarian Ca

1982. Adenosine deaminase inhibitors is - *(PGI 98)*
a) Pentostatin b)TxA2
c) Cladribine

1983. Inhibits mitosis by forming microtubules-(PG7*98)*
a) Vinca alkaloids b) Docetaxel
c) Etoposide d) Colchicine

1984. Drugs which act by intercalating with DNA-*(PGI2K)*
a) Actinomycin D b) Tetacycline
c) Bleomycin d) Doxorubicin

1985. Drugs inhibiting formation of purines - *(PGI2K)*
a) 5-FU b) 6- mercaptopurine
c) Hydroxyurea d) Methotrexate
e) Cytosine arabinoside

1986. Hormone used in breast cancer are - *(PGI02)*
a) Danazol b) Cyproterone acetate
c) Tamoxifen d) LHRH analogue

1987. Metaphase arrest is caused by- *(PGI02)*
a) Griseofiilvin b) Vincristine
c) Paclitaxel d) Colchichine
e) Etoposide

1988. Methotrexate causes - *(PGI 02, 03)*
a) Inhibition of dihydrafolate reductase
b) Inhibition of folate synthatase
c) Not absorbed oraly
d) Folic acid antagonizes it's toxicity

1989. Alkylating agents include - *(PGI 02)*
a) Doxorubicin b) Chlorambucil
c) Vinblastine d) Busulphan
e) Methtrexate

1990. All of the anticancer agents cause bone marrow depression except - *(AI 04)*
a) Chlorambucil b) Daunorubicin
c) Doxorubicin d)Flutamide

1960)e 1961)a 1962)c 1963)c 1964)b 1965)b 1966)c 1967)a 1968)c 1969)b 1970)c 1971)b 1972)b 1973)b 1974)b 1975)c 1976)a 1977)a 1978)a 1979)d 1980)c 1981)c 1982)a,c 1983) b 1984) a,c,d 1985)b,d 1986)a,c 1987)b,c,d 1988) a 1989)b,d 1990)d

1991. Vincristine arrests cell cycle at - (*Jipmer 04)*
a) Metaphase b) Anaphase
c) Telophase d) Prophase

1992. Antineoplastic drug not acting at cell level -
a) Cisplatin b) Vincristine (*Jipmer 04)*
c) Hydroxyurea d)Busulfan

1993. Actinomycin D acts by - *(SGPGI05)*
a) Inhibiting cell wall synthesis
b) Inhibiting protein synthesis
c) Antagonising c-AMP
d) Damaging DNA linkage in the cell

1994. Which one of the following statements is false regarding vincristine - (*JIPMER 05)*
a) It is an alkaloid
b) It use is associated with neurotoxicity
c) It does not cause alopecia
d) It is useful drug for induction of remission in acute lymphoblastic leukaemia

1995. Which of the following chemotherapeutic drugs has selective action on hypoxic tumor cells - *(AIIMS NOV 05)*
a) Mitomycin C b) Cisplatin
c) Doxorubicin d) 5 Flurouracil

1996. The chemotherapeutic agent, most commonly administered by continuous infusion is -*(ARMSNOV 05)*
a) Ara-C b) F-FU
c) Cisplatin d) Etoposide

1997. In treatment of Papillary Carcinoma thyroid, Radioiodine destroys the neoplastic cells predominantly by - (*AIIMS NO V 05)*
a) X rays b) P rays
c) yrays d) a particles

1998. The new agent pemetrexed, useful in breast cancer, belongs to which of the following category of drugs- *(AIIMS NOV 05)*
a) Antitumor antibiotic b) Alkylating agent
c) Hormonal agent d) Antimetabolite

1999. Which one of the following drugs is 'Topoisomerase 1 inhibitor - *(AI05)*
a) Doxorubicin b) Irinotecan
c) Etoposide d) Vincristine

2000. Eternacept acts by one of the following mechanisms
a) By blocking tumor necrosis factor *(AI 05)*
b) By blocking bradykinin synthesis
c) By inhibiting cyclo-oxygenase -2
d) By blocking lipoxygenase

2001. The most important target of action of chlorambucil is- *(COMED2006)*
a) Myeloid tissue b) Lymphoid tissue
c) Neural tissue d) Skin

2002. Which of the following antitumor agents works by impairing de novo purine synthesis - *(Corned 08)*
a) Hydroxyurea b) 5-fluorouracil
c) Methotrexate d) Allopurinol

2003. Which among the following is a cell cycle specific anti-neoplastic drug - *(Corned 08)*
a) Cyclophosphamide b) Doxorubicin
c) Methotrexate d) Cisplatin

2004. Which of the following is not an alkylating agent -
a) Cyclophosphamide b) 5 - FU ' *(AI 07)*
c) Busulfan d) Chlorambucil

2005. The following drug acts by hypomethylation -
a) Gemcitabine b) Capecitabine *(AI07)*
c) Decitabine d) Cytosine arabinoside

2006. Drug causing hypercoagulability is - *(AI 07)*
a) L asparginase b) Busulfan
c) Melphalan d) 5 FU

2007. Methotrexate is used in high doses in - *(AI 07)*
a) Osteosarcome b) Retinoblastoma
c) Rhabdomyosarcoma d) Ewing's sarcoma

2008. Which is an antimetabolite - *(AiimsMay07)*
a) Cyclosporine b) Methotrexate
c) Etoposide d) Vinblastine

2009. Imatinib used in CML acts by - *(Aiims May 07)*
a) inhibiting Bcr/abl translocation via tyrosine kinase
b) Blocking the action of P-glycoprotein
c) Competitive inhibition of ATP binding site of Abl kinase
d) C-kit kinase inhibition

2010. Which one of the following is not an alkylating agent? *(UPSC-108)*
a) Melphalan b) Methotrexate
c) Cyclophosphamide d)Ifosfamide

2011. Which of the following antibiotics is an anti tumour peptide? *(AI 08)*
a) Bleomycin b)Doxorubcin
c) Valinomycin d) L. Asparaginase

2012. Mechanism of action of paclitaxel is- *(AI 08)*
a) Inhibits DNA synthesis
b) Topoisomerase II inhibitor
c) Inhibition of tubulin
d) Stabilisation of tubules

2013. Leucovorin is given with - *(AI 08)*
a) Methotrexate b) Cytosine arabinoside
c) 6-MP d) Thio Tepa

2014. Imatinib is used in the treatment of -*(Aiims May 08)*
a) Chronic myelomonocytic leukemia
b) MDS
c) ALL
d) GIST

2015. Sustained neutropenia is seen with -*(Aiims May 08)*
a) Vinblastin b) Cisplatin
c) Carmustine

2016. Drug used in the treatment for methotrexate toxicity are all except - *(Manipal 08)*
a) Folinicacid b) Folic acid
c) Carboxypeptidase - G_2 d) Thymidine

2017. Anticancer antibiotics are - *(PGIDec 08)*
a) Bleomycin b) Spiramycin
c) Mitomycin d) Actinomycin
e) Tetracyclin

1991)a 1992)None 1993)d 1994)c 1995)a 1996)c 1997)b 1998)d 1999)b 2000)a 2001)b 2002)c 2003)a 2004)b 2005)c 2006)a 2007)a 2008)b 2009)c 2010)b 2011)a 2012)d 2013)a 2014)a,d 2015)c 2016)b 2017)a,c,d

2018. Which of the following is not an alkylating agent?
a) Cyclophosphamide *(AIIMSNov08)*
b) Busulfan
c) 5-Fluorouracil
d) Melphalan

2019. Ifosfamide belongs to which group of anticancer drugs- *(AIIMSNov 08)*
a) Alkylating agents
b) Antiimetobolites
c) Mitotic inhibitors
d) Topoisomerase inhibitors

2020. Thalidomide can be used in all of the following conditions except? *(AIIMS Nov 08)*
a) Behcet syndrome
b) HIV associated peripheral neuropathy
c) HIV associated mouth ulcers
d) Erythema nodosum leprosum

2021. Which of the following anticancer drug is excreted by lungs ? *(AIIMS Nov 08)*
a) 5-Fluorouracil b) Cyclophosphamide
c) Doxorubicin d) Cisplatin

2022. Ifosfamide is an - *(AI09)*
a) Alkylating agent b) Antimetabolite
c) Folate antagonist d) Plant alkaloid

2023. Which of the following anticancer drugs in cell cycle phase specific - *(AI09)*
a) Ifosfamide b) Bleomycin
c) Cisplatin d) Chlorambucil

2024. Bleomycin toxicity is characterized by hyperplasia of- *(AI 09)*
a) Endothelial cells
b) Type I pneumocytes
c) Type II pneumocytes
d) Alveolar macrophages

2025. 'Hand Foot' syndrome can be caused by ? *(AI09)*
a) Cisplatin b) Capecitabine
c) Vincristine d)Azathioprine

2026. All except, aggravates myastheia gr avis-f^Z/MS*May*
a) Aazathioprine b) Phenytoin *09)*
c) Tetracycline d) Aminoglycoside

2027. Which of the following can be given *OY2J\y-(AIIMS*
a) Cytosine ara b) Actinomycin D *May 09)*
c) Doxorubicin d) Mesna

2028. Cetuximab (an EGFR antagonist) can be used in -
a) Palliation in head and neck cancer
b) Anal canal ca *(AIIMS May 09)*
c) Gastric ca
d) Lung ca

2029. Most emetogenic drug is - *(AIIMS May 09)*
a) Cisplatin
b) Carboplatin
c) High dose cyclophosphamide
d) High dose methotrexate

2030. All are alkylating agents, except - *(AIIMSMay 09)*
a) 5-FU b) Melphalan
c) Cyclophosphamide d) Chlorambucil

2031. Thaliomide is used in all except - *(AIIMS May 09)*
a) ENL b) HIV neuropathy
c) HIV associated ulcer d) Behcet's syndrome

2032. Aromatase inhibitors which are used in Breast Ca- *(PGI June 09)*
a) Letozole b) Anastrozole
c) Exemestone d)Flutamide
e) Fluoxymesterone

2033. Alkyalating agents (s) is/are - *(PGI June 09)*
a) Isosfamide b) Chlorambucil
c) Paclitaxel d) Nitrosoureas
e) Cytarabine

2034. All of the following anticancer agents cause bone marrow depression except- *(Manipal 09)*
a) Chiorambucil b) Daunorubicin
c) Doxorubicin d)Flutamide

2035. All of the following anticancer agents cause bone marrow depression except- *(Manipal 09)*
a) Chlorambucil b) Daunorubicin
c) Doxorubicin d)Flutamide

2036. Antifolate cancer drug are - *(PGI Nov 09)*
a) Methotrexate b) Azathioprine
c) Cyclosporin d) Vincristine
e) Cisplatin

2037. Which of the following statement (s) is/are true regarding anticancer drugs - *(PGI Nov 09)*
a) Cell cycle non specific agents - can act on any phase of cycle including GO
b) Mitosis during cell division - devoted to DNA replication
c) No mitotic activity - GO phase
d) Cytarbine act on S phase of cell cycle
e) Cyclophosphamide is cell cycle specific

2038. Most common dose limiting toxicity of chemotherapeutic agent ? *(AIIMS May 10)*
a) Myelosuppression b) GI. toxicity
c) Neurotoxicity d) Alopecia

2039. Which is NOT an alkylating agent?*(AIIMSMay 10)*
a) 5-FU b) Chlorambucil
c) Melphalan d) Cyclophosphamide

2040. All of the following statements about thalidomide are true, Except - *(AI 10)*
a) It has been reintroduced for its activity in ENL
b) Developed as antiemetic in pregnancy but withdrawn because of phacomelia
c) Used for new and relapsed cases of multiple myeloma
d) Most common side effects are diarrhea and euphoria

2041. Which of the following newer drugs has activity on both HER 1 and HER 2 neu receptors - *(AI 10)*
a) Erlotinib b)Gefitinib
c) Canertinib d)Lapatinib

2018)c 2019)a 2020)b 2021)a 2022)a 2023)b 2024)c 2025)b>a 2026)a 2027)d 2028)a 2029)a 2030)a 2031)b 2032)a,b,c 2033)a,b,d 2034)d 2035)d 2036)a 2037)a,b,c,d 2038)a 2039)a 2040)d 2041)d

2042. Tyrosine kinase inhibitors are used in the treatment of- *(A110)*
a) Gastrointestinal stromal tumors (GIST)
b) Acute myeloid leukemia
c) Neurofibromatosis
d) Small cell carcinoma lung

2043. Which of the following agents is recommended for treatment of gastrointestinal stromal tumors (GIST)- *(Al10)*
a) Sorafenib b) Imatinib
c) Gefitinib d)Erlotinib

2044. Which of the following statements about mycophenolate mofetil is not true - *(AI10)*
a) Most common adverse effect is nephrotoxicity
b) Used in transplant rejection
c) It is a prodrug and converted to mycophenolic acid
d) Is not used with azathioprine

2045. Which of the following is not used in hormonal therapy of breast carcinoma? *(Maharashtra 10)*
a) Letrozole b) Anastrozole
c) Tibolone d)Exemestane

2046. Which of the following is/are used in hormonal therapy of breast carcinoma? *(Maharashtra 10)*
a) Letrozole b) Anastrozole
c) Tamoxifen d) All of the above

2047. Methotrexate is - *(Jipmer 10)*
a) Antibiotic b) Alkylating agent
c) Anti metabolite d) Folate agonist

2048. Epilation agents are - *(PGI Nov. 10)*
a) Methotrexate b) Vincristine
c) 5-FU d)Cisplatin
e) Adriamycin

2049. Methotrexate resistance occurs by -*(AIIMSNov 10)*
a) Depletion of folate
b) Overproduction of DHFR
c) Deficiency of thymidylate synthase
d) Deficiency of thiamine kinase

2050. HER-2/ neu receptor play a role in - *(AIIMSNov 10)*
a) Predicting therapeutic response
b) Determining treatment for recurrence of tumor
c) Diagnosis of breast Ca
d) Screening of breast Ca

2051. Drug used in estrogen dependent breast cancer -
a) Tamoxifen *(AIIMS Nov 10)*
b) Clomiphene citrate
c) Estrogen
d) Adriamycin

2052. Methotrexate is used in all except -(*AIIMS May 11)*
a) Sickle cell anemia
b) Psoriasis
c) Rheumatoid arthritis
d) Ankylosing spondylitis

2053. All are true about Ifosfamide except -
a) It is nitrogen mustard *(AIIMS May 11)*
b) Metabolised by CYP3 A4 to form active metabolite
c) Chloracetaldehyde is active form
d) Less neurotoxic than cyclophosphamide

2054. Topical mitomycin C is used in the treatment of -
a) Basal skull ca *(AIIMS May 11)*
b) Tracheal stenosis
c) Skull base osteomyelitis
d) Angiofibroma

2055. Blenomycin toxcity is characterized by destruction of- *(AIIMS May 11)*
a) Endothelial cells
b) Type I pneumocytes
c) Type II pneumocyutes
d) Alveolar macrophages

2056. Use of tamoxifen for breast cancer can cause all of the following adverse effects, except-
a) Thromboembolism *(AIIMS May 11)*
b) Endometrial carcinoma
c) Carcinoma in contralateral breast
d) Cataract

2057. All of the following statements about Erlotinib are true, except - *(AI 11)*
a) Tyrosine kinase inhibitor
b) Food decreases its absorption
c) Rashes may occur
d) Used in Non small cell lung carcinoma

2058. Which of the following agents is used for the treatment of Thrombocytopenia secondary to myelosupressive cancer chemotherapy - *(AI 11)*
a) Filgrastim b) Sargramostim
c) Oprelvekin d) Erythropoetin

2059. Alkalinization of urine is done during administration of which of the following chemotherapeutic drugs - *(AI 11)*
a) Ara-C b) Methotrexate
c) Cisplatin d) Ifosafamide

2060. Pulmonary fibrosis is caused by - *(PUNJAB 11)*
a) Buspirone b) Bleomycin
c) Mitoxantrone d) Vincristine

2061. PPI's for peptic ulcer disease should be taken -
a) Before breakfast *(Jipmer11)*
b) After breakfast
c) After lunch
d) After dinner

2062. Tyrosine kinase inhibitor imatinib is used for the treatment of - *(Jipmer 11)*
a) Fibrosarcoma phylloides b)GIST
c) MALT d) Seminoma

■MMUNOMOPULATOR

2063. Cyclosporin mainly affects - *(AIIMS 96, 97)*
a) CD4+cells b)CD8+cells
c) B-cells d)CD3+cells

2042)a 2043)b 2044)a 2045)c 2046)d 2047)c 2048)e 2049)b 2050)a 2051)a 2052)a 2053)d 2054)b 2055)b
2056)c 2057)b 2058)c 2059)b 2060)b 2061)a 2062)b 2063)a

2064. Which one of the following is an immunostimulant- *(NIMHANS 88)*
a) Miconazole b)Levamisole
c) Ketonazole d) Albendazole

2065. The following are the toxicity of cyclosporin except - *(AIIMS 80, KERALA 90)*
a) Nephrotoxicity b) Hypokalemia
c) Tremor d) Hirsutism

2066. Which drug is immunomodulator - *(DNB 2001)*
a) Levamisole b) Methotrexate
c) Ifosfamide d) Procarbazine

2067. Which is an immuno stimulant - *(Kerala 94)*
a) Methimazole b) Levamizole
c) Ketokonazole d)Zidovidine

2068. Cyclosporin acts by inhibiting - *(AI99, AIIMS 2K)*
a) IL. 1 production b) IL.2 production
c) IL.6 d) Macrophage

2069. FK-506 is used in - *(PGI2000)*
a) Organ transplant
b) Bronchial asthama
c) Diabetic diarroea
d) Chemotherapecutic agent

2070. A 50 year old male from renal failure underwent kidney transplant. He was prescribed a nucleotide derivative following the organ transplant. The nucleotide derivative of therapeutic importance in this organ transplant is - *{AIIMS 03, TN 89)*
a) Azathioprine b) 5-Flurouracil
c) Cytarbine d)Allopurinol

2071. Cyclosporin nephrotoxicity aggravated by - *(PGI04)*
a) Amphototerian B b) Itraconazole
c) INH d) Lovastatin

2072. IL-2 mediated effects are inhibited by - *{PGI 04)*
a) Cyclosporin b) Tacrolimus
c) OKT4 d) Steroids
e) Azathioprine

2073. Which of the following statements is not true about tacrolimus - *(AI04)*
a) It is a macrolide antibiotic
b) It is indicated for the prophylaxis of organ transplant rejection
c) Glucose intolerance is a well recognized side effect
d) It can be safely administered with any nephrotoxic drug

2074. Immunosupressant- *{Manipal04)*
a) Steroids b) Cyclosporine
c) Tacrolimus d)All

2075. Which of the following pharmacologic agents is most effective in causing activation of phagocytes and production of oxygen metabolites that are toxic microorganisms - *(MAHA 05)*
a) Dexamethasone b) Interferon-alpha-2b
c) Interferon-beta-la d) Interferon-gamma-lb

2076. Which of the following is the established biological therapy for Crohn's disease - *(AIIMSNOV05)*
a) Anti TNF a-antibody b) IL-1 antagonist
c) IL-6 antagonist d) IL-8 antagonist

2077. Nephrotoxicity is a side effect of one of the following immuno-suppressives - *(AIIMS NO V 05)*
a) Sirolimus b) Tacrolimus
c) Mycophenolate mofetil d) Azathioprine

2078. How long does the protection from passive immunization using an immune globulin preparation typically last - *(MAHA 05)*
a) 1 to 3 days b) 1 to 3 weeks
c) 1 to 3 months d) 1 to 3 years

2079. One of the following statements regarding mycophenolate mofetil is incorrect - *(AI 06)*
a) It is a prodrug
b) It is a selective uncompetitive and reversible inhibitor
c) It also inhibits calcineurin
d) Selectivity inhibits lymphocyte proliferation

2080. Complications of cyclosporine are - *(PGI June 06)*
a) Hypertension
b) Pulmonary fibrosis
c) Hirsutism

2081. All of the following is true about "Imiquimod"except-
a) Direct antiviral activity *(APPG 2006)*
b) Indirect antiviral
c) Antitumor activity
d) It release cytokines

2082. Which one of the following drugs is useful in treating Crohn's disease ? - *(Karn PGMEE 2006)*
a) Infliximab b) Azathioprine
c) Tacrolimus d) Cyclosporine

2083. Tacrolimus acts by - *{PGMCET 01)*
a) Specific action on T cells
b) Reducing lymphoproliferation
c) Negative stimulation of B cells
d) All of the above

2084. Fully humanized TNF a antagonist used in RA -
a) Anakinra b)Etanercept *{PGMCET 01)*
c) Infliximab d)Adalimumab

2085. All of the following are tumor necrosis factor blocking agents except - *{Corned 08)*
a) Adalimumab b) Etanercept
c) Infliximab d)Abciximba

2086. All are true about immunosuppressants except -
a) Tacrolimus inhibits calcineurin pathway *{AI 07)*
b) Steroids binds to cytosolic receptors and heat
c) Mycophenolate inhibit purine synthesis via GMP dehydrogenase
d) Sirolimus will block kinase in the IL 2 receptor pathway

2087. Adverse effect of Tacrolimus include all of the following Except- *(AI 08)*
a) Neurotoxicity b) Nephrotoxicity
c) Diabetes d) Hirsutism

2088. Immunomodulator which is used for genital warts is -
a) Podophyllin b) Imiquimod *(AI08)*
c) Predrisolone d)sIFN

2064)b 2065)b 2066)a 2067)b 2068)b 2069)a 2070)a 2071)a 2072)a,b 2073)d2074)d 2075)d 2076)a 2077)b 2078) b 2079) c 2080) a,c 208 l)c 2082) a 2083) a 2084) d 2085) d 2086) c 2087) d 2088) b

2089. All are true about cyclosporine - A- EXCEPT -
a) Given orally as too toxic to intravenous *(UP 08)*
b) Prophyloactic given in renal transplant
c) Selectively inhibit T - lymphocytes proliferations
d) It causes renal toxicity

2090. All of the following drugs are used as immunosuppressants except - *(AIIMSNov 08)*
a) Glucocorticoids b) Cyclosporin
c) Cephalosporin d) Azathioprine

2091. A 56 year old female presented with breast carcinoma and she was prescribed herceptin (trastuzumab). Which of the following statement regarding this drug is true ? *(AIIMS Nov 08)*
a) It is an antibody produced entirely from mouse containing no human component
b) It is a monoclonal antibody produced by injecting her-2 antigen
c) It is a polyclonal antibody
d) It is a monoclonal antibody containing only human component

2092. All of the following drugs can precipitate Tacrolimus toxicity, Except - *(AI09)*
a) Gentamycin b)Cisplatin
c) Vancomycin d) Rifampicin

2093. All ofthe following are side effects of tacrolimus except-
a) Nephrotoxicity b) Ototoxicity *(AI09)*
c) Neurotoxicity d) Hepatotoxicity

2094. Interferon is used in *(PGIJune 09)*
a) Hairy cell leukemia b) Multiple myeloma
c) Breast carcinoma d) Kaposi sarcoma
e) Leiomysarcoma

2095. Correct pair (s), of drug & Mechanism of action is/ are - *(PGI June 09)*
a) Erlotinib-Human EGFR1 monoclonal Ab
b) Trastuzumab -Human EGFR 1 monoclonal Ab
c) Cetuximab -Angiogenesis inhibitors
d) Rituximab Anti CD 24 monoclonal Ab
e) Omalizumab-IgG monoclonal Ab

2096. False about cyclosporin A- *(Manipal 09)*
a) Is a fungal metabolite
b) Has poor tissue penetration when applied topically
c) Is the drug of choice in Behcet's disease
d) Causes hepatotoxicity as the main side effects

2097. Thalidomide, used for multiple myeloma is- *(DELHIPGFeb. 09)*
a) Associated with peripheral neuropathy
b) Characterized by enantiomeric interconversions
c) Metabolized extensively by hepatic C YP system
d) Safe for use in pregnant females

2098. Anti TNF is not used in - *(AIIMS Nov 09)*
a) RA with HIV b) RA with Hepatitis B
c) RA with HCV d) RA with pulmonary fibrosis

2099. Thalidomide is used in all except - *(AIIMSMay 10)*
a) HIV induced peripheral neuropathy
b) HIV induced mouth ulcer
c) Bechet's syndrome
d) Erythema nodosum leprosum

SKIN

2100. Following is the disadvantage of iodine as an antiseptic agent - *(AIIMS 84)*
a) Limited microbial spectrum
b) Allergic reaction in some patients
c) Long contact time
d) High cost

2101. The mechanism of action of psoralen is -
a) Binding to DNA *(JIPMER 79, PGI 80)*
b) Inhibiting protein synthesis
c) Inhibits angiogenesis
d) Inhibits keratinization

2102. Ciclopirox Oleamine is used in - *(AP 96)*
a) Dermatophytosis b)Acne
c) Psoriasis d) Lichen Planus

2103. Drug of choice in chronic recalcitrant cystic acne is- *(AIIMS 92)*
a) Steroids b) Retinoids
c) Erythromycin d) Tetracycline

2104. The oxdising antiseptics are *excej)t-(AIIMS 82, 86)*
a) Phenol
b) Zinc peroxide
c) Sodium perborate
d) Potassium permanganate

2105. Calamine powder contains zinc oxide and -
a) Salicyclic acid b) Benzoic acid *(Delhi 87)*
c) Mercuric chloride d) Ferric oxide

2106. The following are keratolytic agents except -
a) Salicyclic acid b) Resorcinol *(CMC 98)*
c) Zinc oxide d) Dithramol

2107. Which is NOT used in Acne - *(Kerala 03)*
a) Erythromycin b)Ampicillin
c) Clindamycin d) Doxycycline

2108. NOT used in scabies ? *(Aiims May 08)*
a) BHC b) Permethrin
c) Ciclopirox oleamine d)Crotamiton

CHELATING AGENT

2109. Penicillamine is used in..... poisoning - *(PGI85)*
a) Lead b) Copper
c) Arsenic d) Mercury

2110. D.Penicillamine is used to treat - *(NIMHANS 88)*
a) Wilson disease b) Rheumatoid arthritis
c) Lead poisoning d) Arsenic poisoning
e) AH

2111. D.penicillamine is useful in all except -
a) Rheumatoid arthritis *(NIMHANS 88)*
b) Mercury poisoning
c) Wilsons disease
d) Hemochromatosis

2112. Diethylene Triamino penta acetic acid is used in .....chelation - *(PGI 89)*
a) Copper b)Lead
c) Iron d) Molybdeum

2089)a 2090)c 2091)b 2092)d 2093)b 2094)a,b,d 2095)a 2096)d 2097)a 2098)a 2099)a 2100)b 2101)a 2102)a 2103)b 2104)a 2105)d 2106)c 2107)b 2108)c 2109)a,b,d 2110)a,b,c 211 l)d 2112)b

2113. Pencillamine is commonly used in the management of following heavy metal poisoning, except - *(UP 97)*
a) Arsenic b) Copper
c) Lead d) Mercury

2114. The iron preparation that can be given intravenously is- *(TNPSC2K)*
a) Ferrous sulphate
b) Iron dextran
c) Iron sorbitol citric acid complex
d) Colloidal ferric hydroxide

2115. The most appropriate drug used for chelation therapy in beta thalassemia maj or is - *(AI03)*
a) Oral desferrioxamine b) Oral deferiprone
c) Intramuscular EDTA d) Oral succimer

2116. N-acetyl penicillamine is used in the treatment of poisoning by - *(UPSC 04)*
a) Mercury b)Lead
c) Cadmium d) Arsenic

VITAMIN

2117. Half life of cyanocobalamine is - *(DNB91)*
a) About 24 hours b) About 2 months
c) About 6 months d) About 12 months

2118. Isotretinoin is - *(PGI02)*
a) A vitamin A analogue b) Used in cystic acne
c) Safe in pregnancy d) Used in psoriasis
e) Bony hyperostoses is a side effect

2119. Drug which increases absorption of oral iron -
a) Folic acid b) Nalidixic acid *(Orissa 04)*
c) Vitamin C d) Tetracycline

2120. Clinically significant drug interaction occurs between pyridoxine and all the following drugs except - *(AI 04)*
a) Isoniazid b) Cyclosporin
c) Levadopa d) Hydralazine

2121. Hypervitaminosis A is chracterized by all of the following, except - *(SGPGI04)*
a) Alopecia b) Anorexia
c) Bony Swellings d) Peripheral neuritis

2122. Which of the following given in pregnancy has teratogenic affects - *(APPGE 04)*
a) $VitB_6$ b) Vit B_3
c) Folic acid d)VitD

2123. Oral iron chelating agent (s) is/are -*(PGI June 09)*
a) Desferropxamine b) Deferiprone
c) Defersirox d) BAL
e) Succimer

2124. BAL is useful in treating poisoning due to all except - *(Manipal 09)*
a) Lead b) Organic mercury
c) Cadmium d) Arsenic

2125. Pyridoxine deficiency can cause all except- *(DELHIPGFeb. 09)*
a) Convulsion in infants b) Anemia
c) Peripheral neuritis d) Growth retardation

MISCELLANEOUS PREGNANCY

2126. Breast feeding is contraindicated if the mother is receiving - *(AIIMS 83)*
a) Streptomycin
b) Insulin
c) Antithyroid drugs
d) Broad spectrum antibiotics

2127. Breast feeding is contraindicated if the mother is taking - *(PGI 88)*
a) Propranolol b) Broad spectrum antibiotics
c) Sulfonyl ureas d) Insulin

2128. A new born child is having cleft lip, cleft palate and inter atrial septal defect. A list of the drugs taken by the mother during pregnancy is given. Which of the following could be the likely cause for the above anomalies - *(AIIMS2K)*
a) Ibuprofen b) Dicyclomine
c) Erythromycin d) Isotretinoin

2129. Anti hypersensitive contraindicated in pregnancy -
a) Losartan b) Methyldopa *(CUPGEE 02)*
c) Hydralazine d) All of the above

2130. Congenital malformations with use to drug in 1st trimester is seen with - *(AIIMS92)*
a) Steroids b) Heparin
c) Cloxacillin d) Aminoglycosides

2131. Which anticoagulant is not contra indicated in pregnancy - *(JIPMER93)*
a) Warfarin b)Caumarin
c) Phenindione d) Heparin

2132. A lady gave birth to a child with multiple defects like spina bifida, cleft palate, causative drug -
a) Isotretinoin b) Thalidomide *(AIIMS 01)*
c) Penicillin d)None

2133. Following drugs are contraindicated in lactation except- *(AIIMS84, 88)*
a) Lithium b) Ciprofloxacin
c) Spiramycin d) Diazepam

2134. The following are significantly excreted in milk, except - *(AIIMS80)*
a) Iron b) Opium
c) Alcohol d) Antibiotics

2135. Intake of which one of the following drugs by a nursing mother is an indication for immediate stoppage of breast feeding - *(CUPGEE96)*
a) Lithium b)Digoxin
c) Ranitidine d) Amoxycillin

2136. Drug Contraindicated in pregnancy - *(AIIMS 97)*
a) Penicillin b) Cephalexin
c) Tetracyline d) Erythomycin

2137. Which of the following drugs are secreted in breast milk- *(PGI01)*
a) Antithistaminics b) Antithyroid drugs
c) Penicillin d) Diazepam
e) Antiepileptics

2113)a 2114)b 2115)b 2116)a,b 2117)c 2118)a,b,e 2119)c 2120)b 2121)d 2122)d 2123)b,c 2124)c 2125)d 2126)c,d 2127)b 2128)d 2129)a 2130)a 2131)d 2132)a 2133)c 2134)a 2135)a 2136)c 2137)A11

2138. Which drug is contra indicated in pregnancy -
a) Chloroquine b) Primaquine *(DNB 2001)*
c) Ampiciliin d) Erythromycin

**2139. Drug not safe in pregnancy - (<*Orissa 04)*
a) Thiazide b) Prazosin
c) Clonidine d) Quinine

2140. The class of antihypertensive drugs which is contraindicated in pregnancy is - *(Corned 10)*
a) Central sympatholytics
b) Calcium channel antagonists
c) Beta-blockers
d) Angiotensin converting enzyme inhibitors

2141. All the following can occur in a pregnant woman taking tetracycline except - *(Jipmer 11)*
a) Staining of teeth
b) Gingival hyperplasia
c) Increased intracranial tension
d) Reduced linear growth of bone

MISCELLANEOUS

2142. BAL is used for.....poisoning - *(AJ 89)*
a) Mercury b)Lead
c) Copper d)Iron

2143. Which is a wrong combination - *(A189)*
a) Mercury-Bal
b) Organophosphorus cpd-Atropine
c) Lead - Penicillamine
d) Morphine Apomorphine

2144. Hemodialysis is useful in poisoning with all except -
a) Salicylate b) Barbiturates *(JIPMER 80)*
c) Methanol d) Diazepam

2145. No speicific antivenin is available for treatment of enviommentation by which of the following -
a) Rattlesnake (Crotalus species) *(PGI83, AMC*
b) Water moccasin (Agkistrodon species) *85)*
c) Brown recluse spider (Loxosceles reclusa)
d) Black widow spider (Latrodectus mactans)
e) Coral snake (Micrurus fulvitus)

2146. Strychnine acts by - *(PGI 86, AI88)*
a) Removing the inhibitory effects of renshaw cell in the spinal cord
b) Direct excitation of nervous pathway
c) Decreasing level of GABA
d) Increasing post sympatic stimulation
e) None of the above

2147. Drugs to be avoided in the first trimester of pregnancy - *(AI 88)*
a) Insulin b) Phenytoin
c) Tinidazole c) Methyl dopa

2148. Chloropropamide Intracts with - *(AI91)*
a) Diazepam b) Alcohol
c) Lorazepam d) Chlordia zepoxide

2149. The drug causing curare like effect is - *(AI 91)*
a) Chloramphenicol b) Clindamycin
c) Tetracycline d) Streptomycin

2150. Diazoxide is a - *(TN 91)*
a) Myocardial depressant
b) Centrally acting agent
c) Antihypertensive acting directly on blood vessels
d) Adrenergic blooking agent

2151. Hemodialysis is not useful in propranolol poisoing beacuseof- *(JIPMER91)*
a) Intra erythrocytic storage
b) High protein binding
c) Rapid metabolism
d) Extensive distribution

2152. Breast feeding is not contra indicated when the mother taking the following medications excepts-
a) Metronidazole *(JIPMER92)*
b) Cimetidine
c) Theophylline
d) Chloramphenicol

2153. Which of the following drugs is not effective on the treatment of motion sickness - *(AMC 91)*
a) Metoclopramide b)Cyclizines
c) Meclozine d) Hyoscine

2154. Which of the following antitussive is contraindicateed in patients with suspected glucoma-
a) Noscapine b) Codeine *(DNB 92)*
c) Benzonatate d) Carbetapentane

2155. Mazindole is a drug being investigated, reducing craving for - *(ARMS 82, 89)*
a) Food b) Alcohol
c) Benzodiazepines d) CNS stimulants

2156. Not metabolised in liver - *(ARMS 98)*
a) Cimetidine b) Phenytoin
c) Diazepam d) Penicillin G

2157. Antineoplastic activity is seen with - *(JIPMER 99)*
a) Retinoids
b) Saturated fatty acids
c) Fish proteins
d) Polyunsaturated fatty acids

2158. Drug monitoring (serem levels) is done *lor-(DNB 01)*
a) Salbutamol b) Theophylline
c) Corticosteroids d) Iepratropine

2159. Drugs derived from natural sources is/are-
a) Chloroquine b) Liquorice *(PGI 87)*
c) Digitalis d) Neostigmine

2160. Which of the following drugs do not cross the placenta - *(ARMS 82)*
a) Dilantoin b) Diazepam
c) Acinocoumarin d) Heparin

2161. Drug levels should be monitored in the treatment of- *(Jipmer 91)*
a) Diabetes b) Epilepsy
c) Status Asthmaticus d) Hypertension

2162. D-Penicilliamine is not used in the treatment of-
a) Erythropoietic porphyria *(ARMS 92)*
b) Rheumatoid arthritis
c) Wilsons disease
d) Mercury Poisoning

2138)b 2139)a,d 2140)d 2141)b 2142)a,b,c 2143)d 2144)d 2145)c 2146)a 2147)b 2148)b 2149)d 2150)c
2151)b 2152)d 2153)a 2154)d 2155)a 2156)a 2157)a 2158)b 2159)b,c 2160)d 2161)b,c 2162)a

2163. Drug most concentrated in collagen- *(PGI93)*
a) Sulfa b) Penicillin
c) Chloroquine d) Mepacrine

2164. Drug of choice of hepatolenticular degeneration-
a) Calcium disodium edetate *(DNB92)*
b) Penicillamine
c) Desferoxamine
d) Dimercaprol

2165. The following drugs are excreted in the bile except - *(NIMHANS 89)*
a) Erythromycin b) Novobiocin
c) Chloramphenicol d)Rifampicin

2166. Reversible leukopenia is most often detected following administration of of- *(AP 90)*
a) Tobramycin b) Trimethoprim
c) Nitrofiirantion d) Chloramphenicol

2167. A bactericidal drug would be preferred over a bacteriostatic drug in a patient with - *(DNB 89)*
a) Neutropenia b) Renal insufficiency
c) Cirrhosis d) Hemolytic anemia
e) Congestive heart failure

2168. A Patient with anosmia will rewpond to inhala lion of- *(AMC 82 DELHI 90)*
a) Clove oil b) Liquor ammonia
c) Tobacco d) All the above

2169. Best drug for stopping fibrosis - *(UPSC 88)*
a) Antibiotics b) Aspirin
c) Steroids d) Enzyme preparation

2170. All of following are example of gastric prokinetic drugs except- *(AI96)*
a) Metoclopramide b) Domperidone
c) Ampicillin d) Ciprofloacin

2171. Acetyl salicylate & Phenobarbitone are better absorbed from stomach because they are- *(PGI96)*
a) Weak acids remain non-ionic in gastric pH
b) Weak acids remain ionic in gastric pH
c) Strong acids fully ionised in gastric pH
d) Weak bases Which are ionised at gastric pH

2172. Hyperlipidemia is caused by- *(AIIMS96)*
a) Nifedipine b) Propranolol
c) ACE inhibitors d) Alpha methyl dopa

2173. Slow channel syndrome' is due to - *(JIPMER 98)*
a) Accumulation of Na^+ ions in channels
b) Accumulation of K^+ ions in channels
c) Accumulation of mg^ ions in channels
d) Accumulation of Ca^{++} ions in channels

2174. The following drug is not secreted in bile -*(Kerala 97)*
a) Penicillin b) Phenophthalein
c) Novobiocin d) Erythromycin

2175. Maximum tachycardia is seen with-*(ROTHAK98)*
a) Nifedipine b) Verapamil
c) Propanolol d) Amlodipine
e) Atenolol

2176. All of the following reduces bronchial secretions except- *(CUPGEE99)*
a) Alcohol b) Atropine
c) Phenothiazines d)Imipramine

2177. Troglitazone is the drug used in the tratmentof-
a) Petit mal epilepsy *(JIPMER2K)*
b) Type 2 diabetes mellitus
c) Hyperlipidaemia
d) Sea sickness

2178. Drug acting as a free radical scavenger is -
a) Finasteride b) Lamotrigine *(MP 2K)*
c) Cyclophosphamide d)Gugulip

2179. Cytoprotective drug- *(CALCUTTA2K)*
a) Misopristol b) Ranitidine
c) Omeprazole d) Ketoconazole

2180. Group of drugs likely to induce hyperglycemia and hypercalcemia- *(ORISSA98)*
a) Beta-adrenoreceptor blocker
b) Thiazides
c) MAO inhibitors
d) Tricyclic antidepressants

2181. Which of the following chelating agents is derived from a micro- organism? *(Kerala 2K)*
a) Dimercaprol b) EDTA
c) Desferoxamine d) Trientine
e) None of the above

2182. Acts on NMDA receptors - *(NIMHANS 01)*
a) Opiod b) Benzodiazepine
c) Non-benzodiazepine d) NS AIDS

2183. Which of these can be given intra nasally?-
a) Histrelin b)Naferelin *(CUPGEE02)*
c) Goserelin d) Synthetic progestogens

2184. Tizanidine is used in the treatment of-
a) Hypertension *(JIPMER 2002)*
b) Spasticity
c) Glaucnoma
d) Benign prostatic hyperplasia

2185. High hepatic extracion ratio is seen with -*(PGI02)*
a) Lidoaine b) Diazepam
c) Phenytoin d) Propranolol
e) Theophyline

2186. Recent anti-histaminics in allergic rhinitis are-
a) Azelastine *(PGI 03)*
b) Fexofenadine
c) Chlorpheniramine maleate
d) Desloratidine

2187. Most important side effect of dapsone is hemolytic anaemia, the next adverse effect - *(PGI 03)*
a) G - 6 - P D deficiency
b) Infectious mononucleosis like syndrome
c) Agranulocytosis
d) Lichenoid eruption
e) Skin pigmentation

2188. True about vitamin K - *(PGI 03)*
a) Ted synthesis of factor II, VII, IX & X
b) Does'nt require exposure to sunlight
c) Cause hemolytic anemia
d) T 7 is < 6 hour

2163)d 2164)b 2165)None 2166)d>c 2167)a 2168)b 2169)c 2170)d>c 2171)a 2172)b 2173)d 2174)a
2175)a 2176)a 2177)b 2178)d 2179)a 2180)b 2181)c 2182)c 2183)b 2184)b 2185)a,b,d 2186)a,b,d 2187)b,c,e
2188) a,c

2189. Treatment of parkinson's disease - *(PGI03)*
a) Levodopa b)Mazindol
c) Bromocriptine d) Acyclovir
e) Benserazide

2190. Bone marrow depressive drugs in the treatment of AIDS patient are - *(PGI 03)*
a) Didanosine b) Zalcitabine
c) Dapsone d) Cotrimoxazole
e) Gancyclovir

2191. Treatment of chorioretinitis in AIDS pt. - *(PGI 03)*
a) Valaciclovir b) Ganciclovir
c) Rivabirin d) Amantidine
e) Cidofovir

2192. True about Dezocine - *(PGI03)*
a) Slow acting morphine
b) Low potent morphine
c) Acts via GABA
d) Does'nt increase histamine release
e) Ted plasma catecholamines

2193. True about Esmolol- *(PGI03)*
a) It is a - blocker
b) It has no intrinsic activity
c) It has longer half life
d) It is a cardioselective
e) It precipitates heart failure

2194. True about Esmolol- *(PGI 03)*
a) It is a cardioselective
b) It increased the airway resistance
c) It causes tachycardia
d) Its $1^1/2$ is 4 hrs
e) It has no ionotropic activity

2195. SSRI are - *(PGI03)*
a) Citalopram b) Fluoxetine
c) Mirtazapine d)Imipramine
e) Sertraline

2196. Anticancer antibiotic - *(PGI 03)*
a) Vancomycin b) Actinomycin D
c) Bleomycin d) Mithramycin

2197. Best drug for anaerobic infections - *(PGI 03)*
a) Metronidazole b)Imipenem
c) Aztreonam d) Clotrimazole
e) Vancomycin

2198. Folic acid metabolism is inhibited by - *(PGI 03)*
a) Sulfonamides b)Mtx
c) N_20 d) Trimethoprim
e) 5-Flucytosine

2199. Hepatotoxic drugs are - *(PGI03)*
a) Chloroform b) Ether (diethly)
c) N_20 d) Halothane
e) Enflurane

2200. Antiarrhythmic drugs causing torsades pointes are-
a) Quinidine b) Dysopyramide *(PGI 03)*
c) Procainamide d)Lidocaine

2201. Side effect of timolol maleate- *(PGI 03)*
a) Hypertension b) Asthma
c) Depression d) Tachycardia
e) Hypotension

2202. True about Carvedilol- *(PGI 03)*
a) 0Cj blocker b)β blocker
c) p_2 blocker d) Antioxidant
e) Used in hypertension

2203. Prophylaxis of migraine is/are- *(PGI 03)*
a) Flunarizine b) Cinarizine
c) p blocker d) Sodium Valproate
e) Carbamazepine

2204. Which of the following are prodrugs- *(PGI 03)*
a) Mercaptopurine b)Dipivefrine
c) Enalapril d) Phenytoin
e) Linezolid

2205. First pass metabolism is seen in- *(PGI03)*
a) Lignocaine b) Propranolol
c) Salbutamol d) Dypyridamol
e) Erythromycin

2206. True about Quinidine - *(PGI03)*
a) It increases effective refractory period
b) Used in hypertension
c) Causes paradoxical techycardia
d) It decreases absolute refractory period
e) Cinchonism is seen

2207. Regarding Ritonavir in AIDS patient which of the following is/are true - *(PGI 03)*
a) Interacts with terfenadine
b) GI. symptoms are seen
c) Contraindicated in renal failure
d) It isNNRTI
e) Should not be used in AIDS patient with bleeding disorder

2208. Antihypertensive drugs beneficial or neutral role in Lipid metabolism - *(PGI 03)*
a) Prazocin b) Propranolol
c) Furosemide d) Losartan
e) Chlorthiazide

2209. Neurochemical mechanism of analgesia - *(PGI03)*
a) VR-1 b) Nicotinic cholinergic
c) Nocistatin pattern d) Nociceptin pattern
e) Anandomide

2210. Side effects of phenytoin are - *(PGI 04)*
a) Gum hypertrophy b) Alopecia
c) Subungal exostosis d) Onycholysis
e) Acne rosacea

2211. Ototoxicity of aminoglycoside is increased with concurrent use of which of the following drug (s)-
a) Cisplatin b)Furosemidef
c) Vancomycin d) Vincristin
e) Erythromycin

2212. Rx of penicilinase producing Neisseria gonorrhoeae is/are- *(PGI 04)*
a) Amoxycillin b)Ciprofloxacin
c) Cefotaxime d) Doxycycline
e) Azithromycin

2213. True about Pseudocholineesterase - *(PGI04)*
a) Present in neuromuscular junction
b) Level is increased in pregnancy
c) Succinylcholine is metabolized
d) Organophosphorus inhibit it

2214. Alkylating agents are- *(PGI04)*
a) Vincristin b)Actinomycin-D
c) Chlorambucil d) 5 - Fu
e) Cyclophosphamide

2215. Lignocaine and adrenaline; this Combination should be avoided in - *(PGI 04)*
a) Penile block b) Axillary block
c) On face d) In lower limb

2216. Budesonide is - *(J&K 05, Delhi 92)*
a) A new bronchodilator b) Used in AIDS
c) A new antiepileptic d) New antihypertensive

2217. Which of the following substances does not bind to activated charcoal - *(J&K 05)*
a) Methanol b) Carbamazepine
c) Dapsone d) Salicylates

2218. Which of the following drugs has covalent interaction with its target - *(AIIMS NO V 05)*
a) Aspirin b) Penicillin
c) Nitric oxide d) Bosentan

2219. Mechanism of action of sildenafil is - *(UPSC 05)*
a) A-adrenoceptor antagonist
b) Dopamine agonist
c) Phosphodiesterase Type 5 inhibitor
d) Direct action on vascular smooth muscles

2220. Mg^ administered in - *(PGI June 06)*
a) Eclampsia b) Cardiac arrhythmia
c) Seizure d) Tetani

2221. All of the following is the true about azithromycin except -
a) Inhibits microsomal enzyme
b) Macrolide
c) Long half life
d) First choice in legionnaires pneumonia.

2222. The drug used in the treatment of complications of multiple sclerosis is - *(Corned 07)*
a) Rifampicin b)Isoniazid
c) Ethambutol d) Streptomycin

2223. Metrifonate is effective against- *(Corned 08)*
a) Amoebiasis b) Leishmaniosis
c) Schistosomiasis d) Giardiasis

2224. The following drugs may be used in erectile dysfunction except - *(A107)*
a) Phenylephrine b) Apomorphine
c) Alprostidil d) PGE 1 analogues

2225. The following drugs are used in obesity except -
a) Orlistat b) Sibutaramine *(AI07)*
c) Olestra d) Neuropeptide Y agonist

2226. Nestritide is a - *(AI07)*
a) Brain natriuretic peptide analogue
b) Endothelin R antagonist
c) Gp lib / Ilia antagonist
d) TNF alpha antogonist

2227. Filgrastim is used in treatment of - **(***AI07)*
a) Anemia b) Neutropenia
c) Malaria d) Filarial

2228. Which of the following drugs is to be discontinued on the day of surgery - *(AIIMS Nov 0 7)*
a) Atenolol b) Amlodipine
c) Metformin d) Statins

2229. Drug causing hyperglycemia is - *(AlIMSNov 07)*
a) Beta blockers b) Glucocorticoid
c) Alcohol d) Indomethacin

2230. SIADH is caused by all except - *(AiimsMay08)*
a) Vincristine b) Vinblastine
c) Actinomycin D d) Cyslophosphamide

2231. Not used in erectile dysfunction ? *(Aiims May 08)*
a) PGE-2 b) Vardalafil
c) Phenylephrine d) Alprostadil

2232. Drug contraindicated in pregnancy - *(PGI June 08)*
a) Lithium b) Acetaminophen
c) Digoxin d) Cyclophosphemide
e) Prophylthiouracil

2233. Gastric irritation is least with NSAI*D-(PGIJune 08)*
a) Diclofenac b)Aminosalicyclicacid
c) Ibuprofen d) Naproxen
e) Indomethacin

2234. Anthraquinones cause - *(Manipal 08)*
a) Adenoma b) Lung Ca
c) Bladder Ca d) Oesophageal Ca

2235. Least plasma halflife ? *(APPG 08)*
a) Dehydroepiandrostendione
b) Aldosterone
c) Norepinephrine
d) Dapsone

2236. All are hepatotoxic drugs except - *(UP 08)*
a) Erythromycin b) Rifampicin
c) Tetracycline d)None

2237. Which of the following drug is contraindicated in pregnancy and lactation ? *(APPG08)*
a) Mebendazole b) Albendazole
c) Metronidazole d)None

2238. Which drug causes gynaecomazia ? *(APPG 08)*
a) Ketoconazole b) Fluconazole
c) Aspirin d) Diltiazem

2239. Which of the following is associated with renal stones ? *(APPG08)*
a) Tiagabine b)Zonasimide
c) Lamivudine d) Acyclovir

2240. Disease modifying agents in Rheumatoid arthritis are- *(PGINov09)*
a) Leflunomide b) Methotrexate
c) Abatacept d) Etanercept
e) Tacrolimus

2241. Drug NOT used in pulmonary hypertension -
a) Calcium channel blocker *(AIIMS May 10)*
b) Endothelin receptor antagonist
c) Alpha blocker
d) Prostacyclin

2213)c 2214)c,e 2215)a 2216)None 2217)a 2218)a 2219)c 2220)A11 2221)a 2222)b 2223)c 2224)a 2225)d 2226) a 2227) b 2228) c 2229) b 2230) c 223 l)c 2232)a,d,e 2233) b 2234) a 2235) c 2236) d 2237) c 2238) a 2239) b 2240) a,b 2241) c

2242. Serotonin syndrome may be precipitated by all of the following medications, Except - *(AI10)*
a) Chlorpromazine b) Pentazocine
c) Buspirone d) Meperidine

2243. Allopurinol is used in the treatment of - *(AI 10)*
a) Osteoarthritis
b) Gout
c) Rheumatoid arthritis
d) Ankylosing spondylitis

2244. Drugs used in migraine prophylaxis are all except-
a) Flunarazine b) Propranolol*(DPG10)*
c) Cyproheptadine d) Sumatriptan

2245. Erythropoietin is definitely indicated in -
a) Liver failure *(Jipmer 10)*
b) Heart failure
c) End stage renal failure
d) Polycystic kidney disease

2246. Which of the following are neutracceuticals -
a) Coq 10 b) Tryptophan *(PGI May 10)*
c) P- carotene d) Lycopene

2247. A person while driving a vehicle met with an accident. He was taking certain medications. Which of the following drugs he might be taking -
a) Fluoxetineb) Fexofenadine *(PGIMay 10)*
c) Tramadol d) Buspirone
e) Chlorzoxazone

2248. Peptides drugs are - *(PGIMay 10)*
a) PolymixinB b) Valinomycin
c) Streptomycin d) Gramicidin S
e) Nodularin

2249. Drugs which precipitates in renal tubule & cause obstruction- *(PGI May 10)*
a) Indinavir b) Ceftriaxone
c) Guaifenesin d) Atazanavir

2250. Drugs that crosses blood brain barrier -
a) Erythromycin b) Cotrimoxazole *(PGIMay 10)*
c) Ampicillin d) Aminoglycosides
e) Ceftriaxone

2251. Drugs used in chemotherapy induced nausea & vomiting- *(PGI Nov. 10)*
a) Dexamethasone b) Ondansetron
c) Palonosetrone d) Metoxantrone
e) Metoclopramide

2252. Which is used in overactive bladder -
a) Duloxetine b)Darfinacin *(AIIMSNov 10)*
c) Flavoxate d)Oxybutynin

2253. Which of the following drug is used in sickle cell anemia - *(AIIMS May 11)*
a) Hydroxyurea b)Carmustine
c) Paclitaxel d) Bleomycin

2254. All of the following statements about 'Aprepitant[9] are true, except - *(AI 11)*
a) Agonist at Neurokinin receptor (NK1)
b) Crosses the blood brain barrier
c) Metabolized by CyP3 A4 pathway
d) Ameliorates nausea and vomiting of chemotherapy

2255. Widest spectrum aminoglycoride is -
a) Amikacin *(NEET/DNB Pattern)*
b) Gentacucin
c) Kauacycin
d) Capreomycin

2256. Main mechanism of combined OCP ?
a) Feedback inhibition of pituitary (causing of LH sarge)
b) Change in camical mues *(NEET/DNB Pattern)*
c) Decreased motility and secretion of the fallopian tube
d) Preveelts impautiation

2257. Which of the following drug does not cause renal toxicity ? *(NEET/DNB Pattern)*
a) Cisplatin b) Cytarabine
c) Oxaliplatin d) Cladirabine

2258. Oseltanavir dose is - *(NEET/DNB Pattern)*
a) 75mgBDx5day b) 150 mg BD x 5 day
c) 75 mg OD x 5 days d)

2259. Size of inhalation steroid ? *(NEET/DNB Pattern)*
a) 1-5 b) 5-10
c) 10-15 d) 15-20

2260. Dapsone is used in - *(NEET/DNB Pattern)*
a) Dermatitis herpetifomis b) Pemphigus vulgaris
c) Acne d) SLE

2261. Least glucocoticoid action is seen with ?
a) Cortisone *(NEET/DNB Pattern)*
b) Hydrocortisone (cortisol)
c) DOC A
d) Fludrocortisone

2262. Which of the following anticonvulsant is not an enzyme inducer - *(NEET/DNB Pattern)*
a) Phenytoin b) Phenobarbitone
c) Carbamazepine d) Valproate

2263. Doxycycline - *(NEET/DNB Pattern)*
a) has narrow half life than other tetracyclines
b) has renal toxicity
c) can be used in renal failure
d) Food has no relation with absorption of doxycycline

2264. Longest acting statin ? *(NEET/DNB Pattern)*
a) Rosuvastatin b) Atorvastatin
c) Lovastatin d) Simvastatin

2265. Which of the following can cause change in iris colour - *(NEET/DNB Pattern)*
a) Latanoprost b) Brimonidine
c) Timolol d) Brinzolamide

2266. All are effects of prostaglandin except -
a) Natriuresis *(NEET/DNB Pattern)*
b) Hypokalemia
c) Vasodilation
d) Water retention

2267. Side effect of thiazide diuretics are all exacpt ?
a) Hyponatremia *(NEET/DNB Pattern)*
b) Hypokalemia
c) Erectile dysfunction
d) Hypocalcemia

2242)a 2243)b 2244)d 2245)c 2246)a,b,c,d 2247)c,e 2248)a,b,d 2249)a,c,d 2250)b,c,d 2251)a,b,c,e 2252)b,c,d 2253)a 2254)a 2255)a 2256)a 2257)b 2258)a 2259)a 2260)a 2261)c 2262)d 2263)c 2264)a 2265)a 2266)d 2267)d

2268. Which of the following drug does not cross BBB?
a) Aminoglycoside *(NEET/DNB Pattern)*
b) Corticosteroid
c) Albendazole
d)

2269. Drugs C/I in pregnancy - *(NEET/DNB Pattern)*
a) Enalapril b)CCB
c) (J-blockers d)

2270. Nevirapine is - *(NEET/DNB Pattern)*
a) NRTT b)NNRTI
c) ETI d)FI

2271. Toxic metabolite of acetaminophen ?
a) NAPQI *(NEET/DNB Pattern)*
b)
c)
d)

2272. Furesomide has following effect-
a) Hypercalcemia *(NEET/DNB Pattern)*
b) Hypernatremia
c) Hyperkalemia
d) Hyperuricemia

2273. Mechanism of action of lovastatin ?
a) HMG CoA reductase inhibitor
b) Decarboxylase inhibitor *(NEET/DNB Pattern)*
c)
d)

2274. Mode of action of azathioprine ?
a) TlL-2 *(NEET/DNB Pattern)*
b) T-cell blockade
c) Decreased lymphophagocytic activity
d)

2275. All of the following have interaction with warfarin except - *(NEET/DNB Pattern)*
a) Barbirate b) Oral contraceptive
c) Cephalosporins d) Benzodiazepens

2276. Which of the following is a synthetic estrogen ?
a) Estradiol *(NEET/DNBPattern)*
b) Estriol
c) Ethinyl estradiol
d) Estrone

2277. Extrapyramidal side-effect least seen with -
a) Clozapine *(NEET/DNBPattern)*
b) Haloperidol
c) Thioridazine
d) Fluphenazine

2278. Along with INH, which vitamin is given -
a) Riboflavin *(NEET/DNBPattern)*
b) Pyridoxine
c) Niacin
d) Cyanocobalamine

2279. Which antihistamine is not used due to this side-effect : torsades de points - *(NEET/DNB Pattern)*
a) Terfenadine
b) Astemizole
c) Ebastive
d)

2280. Toxic dose of li - *(NEET/DNB Pattern)*
a) 0.6 b) 1.2
c) 2.6 d)<0.6

2281. Mechanism of action of NO - *(NEET/DNB Pattern)*
a) PDE_5 b)PDE_6
c) PDE_4 d)PDE_3

2282. PGE_2 cause all except - *(NEET/DNB Pattern)*
a) Water retention b) Uterine contraction
c) Flushing

2283. Sulphonamides act by - *(NEET/DNB Pattern)*
a) Competitive inhibition
b) Non-competitive inhibition
c) Allosteric inhibition

2284. All are true about ciprofloxacin except -
a) C/I in pregnancy *(NEET/DNB Pattern)*
b) DNA gyrase
c) Most potent 1st generation fluoroquinolone
d) More active at acidic pH

2285. Ticlopidine acts by - *(NEET/DNB Pattern)*
a) Decreaseing ADP mediated interaction
b) Decrease COX enzyme irreversibly
c) Gp Ilb/IIIa antagoist

2286. Myelosuppression due to drug toxicity ?
a) > 2 weeks *(NEET/DNB Pattern)*
b) > 4 weeks
c) 7-10 weeks
d) < 7 days

2287. Steroid causes all except - *(NEET/DNB Pattern)*
a) Decreased healing of wound
b) Water retention
c) Ted bone matrix formation
d)

2288. Action of aspirin is due to - *(NEET/DNB Pattern)*
a) Decreased thrmboxaneA_2
b) i Adenyl cyclase
c) GP n_b/III_a dunear

2289. Clopidogrel action - *(NEET/DNB Pattern)*
a) Thromboxane A_2 decrease
b) Adenyl cyclase decrease
c) GP II_b/III_a alteration
d)

2290. *tVi* of digoxin is - *(NEET/DNB Pattern)*
a) 40 hr b)20hr
c) 5-7 days d) 14 days

2291. Which of the following is a selective serotonin & nor-epinephrine reuptake inhibitor ?
a) Fluoxetine *(NEET/DNB Pattern)*
b) Venalafexine
c) Sertraline
d) Escitalopram

2268)a 2269)a 2270)b 2271)a 2272)d 2273)a 2274)b 2275)d 2276)d 2277)a 2278)b 2279)a 2280)c 2281)a
2282)a 2283)a 2284)d 2285)a 2286)d 2287)c 2288)a 2289)b 2290)a 2291)b

2292. All of the following statements are true about ergometrine except - *(NEET/DNB Pattern)*
a) Causes increase in B.P.
b) Does not affect milk secretion
c) Useful in diagnosis of variant angina
d) Contracts uterus

2293. Which opoid does not require kidney & liver for metabolism ? *(NEET/DNBPattern)*
a) Remifentanil b) Pethidine
c) Morphine d) Fentanyl

2294. Centrally acting antihypertensive drugs -
a) Methyldopa *(NEET/DNBPattern)*
b) Prazosin
c) Captopril
d) Verapamil

2295. Calcineurin inhibitor ? *(NEET/DNB Pattern)*
a) Cyclosporine
b) Sirolimus
c) Azathioprine
d) Mycophenolate inhibitor

2296. Finesteride inhibits - *(NEET/DNBPattern)*
a) 5-a reductase
b) Phosphodiesterase
c) Na^+K^+AT Pase
d) CAMP inhibitor

2297. Which of the following stool softener does not interfere with fat absortion ? *(NEET/DNB Pattern)*
a) Docussats b) Phenolplenttali
c) Mineral oil d) Castor oil

2298. Which of the following antineoplastic drugs should not be given by rapid IV infusion -
a) Cyclophosphamide *(NEET/DNB Pattern)*
b) Busulfan
c) Carmustine
d) Dacarbazine

2299. Digoxin MOA - *(NEET/DNB Pattern)*
a) Na^+K^+ ATPasepump inhibition
b) Phosphodiesterase inhibitors
c) Calcium channel inhibitor
d)

2300. Which of the following does not cause insulin release? *(NEET/DNB Pattern)*
a) Rosiglitazone b) Glimepiride
c) Repaglinide d) Glibenclamide

2301. All of the following antiepileptic are inducers of enzyme except- *(NEET/DNB Pattern)*
a) Valproate b) Carbamazepine
c) Topiramate d) Tiagabine/ Phenytoin

2302. Dopamine all of the following is true except -
a) Cause **GI.** ischemia *(NEET/DNB Pattern)*
b) Decrease milk secretion
c) Does not penetrate blood brain barrier
d) Little effect on diastolic B.P.

2303. Guanethidine -MOA - *(NEET/DNB Pattern)*
a) Prevents exocytosis (impulse coupled release ofNA)
b) Blockade of vascular uptake
c) MAO-inhibitors
d) Receptor blockage

2304. Antiandrogen used in heart failure ?
a) Spironolactone *(NEET/DNBPattern)*
b) Danazol
c) Flutamide
d) Fineasteride

2305. Selective progestron modulator ?
a) Ulipristal *(NEET/DNBPattern)*
b) Tamoxifen
c) Raloxifen
d) Tibolome

2306. All are a-blocker except - *(NEET/DNB Pattern)*
a) Atenolol b) Phenoxybenzamine
c) Prazosin d)Tamsulosin

2307. Conivaptan ? *(NEET/DNBPattern)*
a) Vasopressin receptor agonist
b) Vasopressin receptor antagonist
c) Oxyotocin agonist
d) Oxytocint antagonist

2308. Stool softener not interefering with absorption of fat-
a) Docusate *(NEET/DNB Pattern)*
b) Liquid paraffin
c) Psyllium
d) methylcellulose

2309. Use of Buspirone is? *(NEET/DNB Pattern)*
a) Anxiolytic b) Sedative
c) Anaesthetic d) Respiratory depression

2310. Dose of VitK? *(NEET/DNB Pattern)*
a) 10 mg b) 20 mg
c) 30 mg d) 40 mg

2311. Which drug doesn't include DMARD ?
a) Vincristine *(NEET/DNB Pattern)*
b) Methotrexate
c) Azathioprine
d) Leflunomide

2312. Glipizide oral hypoglycemic drug -
a) Helps in insulin secretion *(NEET/DNB Pattern)*
b) Inhibit gluconeogenesis and glycogenolysis
c) Increase utilisation
d) Inhibit absorbtion of glucose

2313. Which of the following are true about ondansetron ?
a) $5HT_1$ agonist *(NEET/DNB Pattern)*
b) Dopamine agonist
c) $5HT_3$ antagonist
d) $5HT_4$ agonist

2314. Longest acting sulphonamide is ?
a) Sulphadoxine *(NEET/DNB Pattern)*
b) Sulphadiazine
c) Sulphamethoxazole
d) Sulphasalazine

2292)b 2293)a 2294)a 2295)a 2296)a 2297)a 2298)a 2299)a 2300)a 2301)a 2302)a 2303)a 2304)a 2305) a 2306)a 2307)b 2308)a 2309)a 2310)a 2311)a 2312)a 2313)c 2314)a

2315. Prostaglandins are used in all except -
a) Cervical ripening *(NEET/DNB Pattern)*
b) PPH
c) Erectile dysfunction
d) Emergency contraception

2316. Thiazide cause- *(NEET/DNBPattern)*
a) Metabolic alkalosis b) Hypocalcemia
c) Metabolic acidosisd) Hypernatremia

2317. Slidenafil mechanism of action ?
a) tCAMP formation by phosphodiesterase-4 inhibitors *(NEET/DNBPattern)*
b) tCAMP formation by phosphodiesterase-5 inhibitors
c) TDAG pathway
d) None

2318. Sumitanib is used in ? *(NEET/DNBPattern)*
a) AML
b) CML
c) GIST
d) Hepatocellular cancer

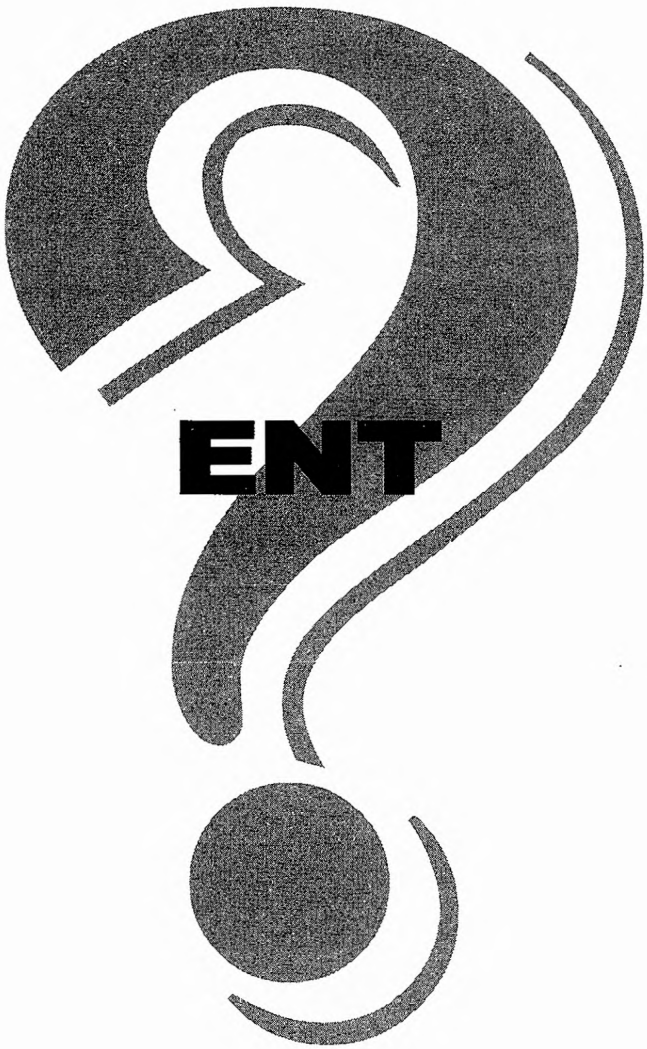
2319. S/E of long term ethinyl estradiol therapy ?
a) Weight gain *(NEET/DNBPattern)*
b) Acne
c) Ovarian dysgenesis of offspring
d) Mood swings

2320. Petracyoline is C/I in all except ?
a) Pregnancy *(NEET/DNB Pattern)*
b) Lactation
c) Children
d) Active bleeding

2321. Not used as t/t for lymphatic filariasis -
a) Ivermectin *(NEET/DNB Pattern)*
b) DEC
c) Albendazole
d) Pyrantel palmoate

2322. Low molecular weight heparin acts on -
a) Xa b) Ha *(NEET/DNB Pattern)*
c) Ila&Xa d) None

2323.5HT_3 antagonist ? *(NEET/DNB Pattern)*
a) Ondansetron b) Metoclopromide
c) Domperidone d) Tegaserod



2324. Steroid with 12-36 hrs life ? *(NEET/DNB Pattern)*
a) Prednisolone b) Hydrocortisone
c) Dexamethasone d) Betamethasone

2325. Clofazimine S/E ? *(NEET/DNB Pattern)*
a) Chrysiasis b) Fixed drug reaction
c) Hypotension d) Headache

2326. Drugs C/I in diabetic is - *(NEET/DNB Pattern)*
a) Mannitol b) Glycerol
c) Spironolactone d) Acetazolamide

***

ENT

ANATOMY OF EAR

1. Cartilagenous part of external auditory canal is -
a) Medial 1/3 b) Lateral 1/3 *(PGI97)*
c) Medial 2/3 d) Lateral 2/3

2. Dehiscence of anterior wall of the external auditory canal cause infection in the parotid gland via- *(SGPGI01)*
a) Fissure of santorini b) Notch of rimus
c) Petrous fissure d) Retropharyngeal fissure

3. Ceruminous glands present in the ear are -
a) Modified eccrine glands *(A1IMS May 05)*
b) Modified apocrine glands
c) Mucous gland
d) Modified holocrine glands

4. Nerve supply for external ear are all except -*(MAHE07)*
a) Greater occipital nerve
b) Greater auricular nerve
c) Auriculotemporal nerve
d) Lesser occipital nerve

5. All of the following nerves supply auricle & external meatus except - *(TN 03)*
a) Trigeminal nerve b) Facial nerve
c) Auditory nerve d) Vagus nerve

6. Sensory supply of external auditory meatus is by -
a) Pterygomandibular ganglion *(PGI June 07)*
b) Geniculate ganglion
c) Facial nerve
d) Auriculotemporal nerve

7. Pars flaccida of the tympanic membrance is also called-
a) Reissner's membrane *(MP 07)*
b) Shrapnel's membrane
c) Basilar membrane
d) Secondary tympanic membrane

8. "Cone of light" is du e to - *(AIIMS 96)*
a) Malleolar fold b) Handle of malleus
c) Anterior inferior quadrant d) Stapes

9. Which of the following is false about tympanic membrane-
a) Cone of light is antero- inferior *(Delhi 08)*
b) Shrapnel's membrane is also known as parsflaccida
c) Healed perforation has three layers
d) Anterior malleolar fold is longer than posterior

10. What is the colour of the normal tympanic membrane- *(CUPGEE 96)*
a) Pearly white b)Grey
c) Yellow d) Red

11. Nerve supply of tympanic memberane-/PG/ *Dec. 02)*
a) Auriculotemporal b) Auricular branch of vagus
c) Occipital nerve d) Great auricular nerve
e) Glossopharyngeal nerve

12. Nerve supply of the tympanic membrane is by -
a) Auriculotemporal *(AI95, NEET/DNB Pattern)*
b) Lesser occipital
c) Greater occipital
d) Parasympathetic ganglion

13. Narrowest part of middle ear is - *(PGI 97)*
a) Hypo tympanumb) Epitympanum
c) Attic d) Mesotympanum

14. Prussack's space is situated in - *(MAHE 02)*
a) Epitympanum b)Mesotympanum
c) Hypotympanum d) Ear canal

15. All are components of epitympanum except -
a) Body of incus b) Head of malleus
c) Chorda tympani d) Footplate of stapes

16. Tegmen separates middle ear from the middle cranial fossa containing temporal lobe of brain by -
a) Medical wall of middle ear *(Karn. 06)*
b) Lateral wall of middle ear
c) Roof of middle ear
d) Anterior wall of middle ear

17. Opening of Eustachian tube in middle ear -*(PGI 99)*
a) Medial wall b) Lateral wall
c) Anterior wall d) Posterior wall

18. Facial recess or the posterior sinus is bounded by -
a) Medially by the vertical part of VII nerve *(TN 03)*
b) Laterally by the chorda tympani c) Above by the fossa incudis
d) All of the above

19. Promontory seen in the middle ear \s-*(PGI June 98)*
a) Jugular bulge b) Basal turn of cochlea
c) Semicircular canal d) Head of incus

20. Stapes foot plate covers - *(AIIMSMay 03)*
a) Round window b) Oval window
c) Inferior sinus tympani d) Pyramid

21. Secondary tympanic membrane is present over- *(Delhi 2000)*
a) Round window b) Oval window
c) Lateral wall of middle ear d) Scala media

2 2. The distance between tympanic membrane and medial wall of middle ear at the level of center is -*(PGI 00)*
a) 3mm b)4mm c) 6mm d)2mm

23. Distance of promontory from tympanic membrane -
a) 2mm b)5mm c) 6mm d)7mm

24. The size of the Fenestra Vestibule on an average is-
a) 3.50 mm long and 2.50 mm wide *(DPG Mar. 09)*
b) 3.25 mm long and 1.75 mm wide
c) 3.75 mm long and 1.50 mm wide
d) 4.00 mm long and 2.00 mm wide

25. What is the type of joint between the ossicles of ear- *(AI08)*
a) Fibrous joint
b) Primary cartilaginous
c) Secondary cartilaginous
d) Synovial joint

26. Sensory nerve supply of middle ear cavity is provided by - V *(AI 95, NEET/DNB Pattern)*
a) Facial b) Glossopharyngeal
c) Vagus d) Trigeminal

l)b 2) a 3)b 4)a 5)c 6)c,d 7)b 8)b 9)c 10)b ll)a,b,e 12)a 13)d 14)a
15) d 16)c 17)c 18) d 19)b 20)b 21)a 22)d 23)a 24)b 25)d 26)b

27. **All of the following form the boundary ofMacEwen's triangle except -** *(Delhi 08)*
a) Temporal line
b) Posterosuperior segment of bony external auditory canal
c) Promontory
d) Tangent drawn to the external auditory meatus

28* **What forms lateral wall of mastoid antrum -**
a) Squamous temporal *(NEET/DNB Pattern)*
b) Tegmen Antri
c) SCC
d) None BpS?? gggjg

29. **About Eustachian tube -** *(PGI June 02)*
a) 24 mm in length
b) Outer l/3rds is cartilagenous
c) Inner 2/3rds is bony
d) Inner 2/3rds is cartilaginous
e) Opens during swallowing

30. **The length of Eustachian tube is -** *(AP 99, TN 06,*
a) 16 mm b)24mm *Punjab 11)*
c) 36 mm d)40mm

31. **Eustachian tube opens into middle ear cavity at-** *(UP 00)*
a) Anterior walls b) Hypotympanum
c) Superior surface d) Posterior wall

32. **TVue about Eustachian tube is / are -** *(PGI June 01)*
a) Size is 3.75 cm
b) Cartilagenous 1/3 & 2/3rd bony
c) Opens during swallowing
d) Nasopharyngeal opening is narrowest
e) Tensor palati helps to open it

33. **True about Eustachian tube -** *(PGI Nov 10)*
a) Length is 36 mm in adults and 1.6 mm to 3 mm in children
b) Higher elastin content in adults
c) Ventilatory function of ear better developed in infants
d) More horizontal in adults
e) Angulated in infants

34. **Which of the following causes opening of Eustachian tube?** *(Maharashtra 10)*
a) Salpingopharyngeus b) Levator veli palatini
c) Tensor veli palatini d) None of the above

35. **Inner ear is present in which bone -** *(PGI 97)*
a) Parietal bone
b) Petrous part of temporal bone
c) Occipital bone
d) Petrous part of squamous bone

36. **Inner ear bony labyrinth is -** *(Karn. 06)*
a) Strongest bone in the body
b) Cancellous bone
c) Laminar bone
d) Membranous bone

37. **Crus commune is in -** *(Jharkhand 2006)*
a) Cochlea b) Middle ear
c) Behind retina d) Part of lens

38. **Cochlear aqueduct -** *(PGI June 98)*
a) Connects internal ear with subarachnoid space
b) Connects cochlea with vestibule
c) Contains endolymph
d) Same as S media

39. **Infection of CNS spreads in inner ear through -**
a) Cochlear aqueduct *(AIIMS Nov 10, May 10)*
b) Endolymphatic sac
c) Vestibular aqueduct
d) Hyrtle fissure

40. **Most potential route for transmission of Meningitis from CNS to Inner ear is -** *(AI09)*
a) Cochlear Aqueduct b) Endolymphatic sac
c) Vestibular Aqueduct d) Hyrtle fissure

41. **Movement of stapes causes vibration in -** *(DNB 02)*
a) Scala media b) Scala tympani
c) Scala vestibuli d) Semicircular canal

42. **Organ of corti is situated in -** *(TN- 06)*
a) Basilar membrane b) Utricle
c) Saccule d) None of the above

43. **Hair cell of organ of corti supported by-** *(PGINov 09)*
a) Onodi cells b)Deitercell
c) Hensen cell d)Bullarcell
e) Heller cell

44. **Endolymphatic duct drains into -** *(JIPMER 98)*
a) subdural space b) Extradural space
c) Subarachnoidspace d) Sacculus

45. **Endolymphatic duct connects which structure -**
a) Scala media to epidural space *(Delhi 05)*
b) Scala vestibule to aqueduct of cochlea
c) Scala tympani to aqueduct of cochlea
d) Scala tympani to subdural space

46. **Endolymph in the inner ear -** *(AIIMSMay 10)*
a) Is a filterate of blood serum
b) Is secreted by Stria vascularis
c) Is secreted by Basilar membrane
d) Is secreted by Hair cells

47. **CSF is similar to -** *(Orissa 07, NEET/DNB Pattern)*
a) Endolymph b) Perilymph
c) Cortilymph d) Urine

48. **Fluid, which has high potassium and low sodium contents, is -** *(Jipmer 03)*
a) CSF b)Ectolymph
c) Endolymph d) Pleural fluid

49. **Site where endolymph is seen -** *(NEET/DNB Pattern*
a) Scala vestibuli b) Scala media *Kerala 97)*
c) Helicotrem d) Organ of corti

50. **Labyrinthine artery is a branch** *of-(NEET/DNBPattern*
a) Internal carotid artery *AIIMS 91)*
b) Basilar artery
c) Posterior cerebellar artery
d) Anterior inferior cerebellar artery

51. **Pinna develops from -** *(MH02)*
a) 1 st pharyngeal arch
b) 1 st and 3rd pharyngeal arch
c) 1 st and 2nd pharyngeal arch
d) 2nd pharyngeal arch

27) c 28) a 29)d,e 30) c 31) a 32)a,c,e 33) b 34) c 35) b 36) c 37) None >a 38) a 39) a
40) a 41)c 42) a 43)b,c 44)b 45)a 46)b 47)b 48)c 49)b 50)d 51)c

52. Eustachian tube develops from - *(PGI97)*
a) 2nd and 3rd pharyngeal pouch
b) 1st pharyngeal pouch
c) 2nd pharyngeal pouch
d) 3rd pharyngeal pouch

53. The following structure represents all the 3 components of the embryonic disc - *(IN 98)*
a) Tympanic membrane b) Retina
c) Meninges d) None of the above

54. All of the follwoing are of the size of adult at birth except- *(APPG 06, Punjab 11)*
a) Tympanic membrane b) Ossicle
c) Cochlea d) Mastoid process

55. Korner's septum is seen in - *(PGI99)*
a) Petrosquamous suture
b) Temporosquamous suture
c) Petromastoid suture
d) Frontozygomatic suture

56. The cough response caused while cleaning the ear canal is mediated by stimulation of -*(A1IMSDec 02)*
a) The V cranial nerve
b) Innervation of external ear canal by C_1 and C_2
c) The X cranial nerve
d) Branches of the VII cranial nerve

57. During ear examination, cough occurs due to stimulation of - *(NEET/DNB Pattern)*
a) Vagus b) Trigeminal
c) Hypoglossal d) Trochlear

58. Singular nerve is a - *(AP 07)*
a) Superior Vestibular nerve supplying posterior semiciruar canal
b) Inferior vestibular nerve supplying post semicircular canal
c) Superior Vestibular nerve supplying anterior semicircular canal
d) Interior vestibular nerve supplying anterior semicircular canal

59. Not correctly matched pair is - *(TN 0 7)*
a) Utricle and sacule- Semiciruclar canal
b) Oval window - Foot plate of staps
c) Aditus and antrum - MacEwen's triangle
d) Scala vestibule- Resissner's membrane

60. In carcinoma base of tongue pain is referred to the ear through - *(Kerala 94)*
a) Hypoglossal nerve b) Vagus nerve
c) Glosspharyngeal nerve d) Lingual nerve

PHYSIOLOGY OF EAR

61. Ear sensitive to - *(DPG 09, Jharkhand 03)*
a) 500-3500Hz b) 1000-3000 Hz
c) 300-5000 Hz d) 5000-8000 Hz

62£ Impedence matching occurs *dit-(NEET/DNB Pattern)*
a) Difference of surface area of tympanic membrane and foot plate
b) Semicircular canal fluid
c) Utricle & Saccule
d) None

63. Ossicles of middle ear are responsible for which of the following ? *(DNB04)*
a) Amplification of sound intensity
b) Reduction of sound intensity
c) Protecting the inner ear
d) Reduction of impedance to sound transmission

64. Impedance denotes- *(PGI99)*
a) Site of perforation b) Disease of cochlea
c) Disease of ossicles d) Higher function disorder

65. Function of ear ossicles is -*(NEET/DNB Pattern)*
a) Impedance matching b) Amplification
c) Equilibrium d) None

66. Mechanical advantage provided by lever action of malleus- *(UP01)*
a) 2:1 b) 1.3:1
c) 1.8:1 d) 1:1

67. Ossicular ratio is =_____ *(DNB06)*
a) 1.3:1 b) 1.2:1
c) 1.1:1 d) 1 :1

68. The effective diameter of the tympanic membrane -
a) 25 mm^2 b) 3 0 mm^2 *(UP-05)*
c) 40 mm^2 d)45mm^2

69. Surface area of tympanic membrance -*(Manipal 06)*
a) 55 mm^2 b)70mm^2
c) 80 mm^2 d)90mm^2

70. Ratio of tympanic membrane to oval window is -
a) 17 : 1 b) 22 : 1 *(NEET/DNB Pattern)*
c) 50 : 1 d) 25 : 1

71. Resonance of tympanic membrane-
a) 800 b) 800-1600 *(NEET/DNB Pattern)*
c) 3000K d) None

72. Sense organ for hearing is - *(PGI99)*
a) Organ of Corti b)Cristae
c) Macula d)None

73. Primary receptor cells *of hmring-(NEET/DNB Pattern)*
a) Supporting cell b) Tectorial membrane
c) Tunnel of corti d) Hair cell

74. All of the following are concerned with auditory pathway except - *(AT95)*
a) Trapezoid body
b) Medial geniculate body
c) Genu of internal capsule
d) Laeral leminiscus

75. Higher auditory centers detemine - *(AIIMSMay 09)*
a) Sound frequency b) Loudness
c) Speech discrimination d) Sound localization

76. Semicircular canals are stimulated by - *(MP 2K)*
a) Gravity b) Linear acceleration
c) Rotation d) Sound

77. Angular movement is sensed *by-(NEET/DNB Pattern*
a) Cochlea b) Saccule *(JIPMER 07)*
c) Utricle d) Semicircular canal

78. Static equilibrium is due to *-(NEET/DNB Pattern)*
a) Macula b) Cupula
e) End organ of corti d) Cristae ampulla

52) b >c 53) a 54) d 55) a 56) c 57) a 58) b 59) c>a 60) d 61) a 62) a 63) d 64) c 65) a
66) b 67) a 68) d 69) d 70) a 71) b 72) a 73) d 74) c 75) d 76) c 77) d 78) a

79. All are correctly matched except - *(TN07)*
a) Otolith- Made up of Uric acid crystals
b) Position of otolith - Changes with head position
c) Otoliths- Stretch receptors
d) Otolith organs - Stimulated by gravity and linear acceleration

80. Horizontal semicircular canal responds to-*(UP 05)*
a) Horizontal acceleration
b) Rotational acceleration
c) Gravity
d) Antero posterior acceleration

81. Angular movements are sensed by - *(JIPMER 93)*
a) Cochlea b) Saccule
c) Utricle d) Semicircular canals

ASSESSMENT HEARING LOSS

82. All are tuning fork test except -
(UP 02, DNB 02, NEET/DNB Pattern)
a) Schwaback test b) Grants test
c) Rinne's test d) Weber's test

83. Tuning fork of 512 FPS is used to test the hearing because it is - *(Kam 06)*
a) Better heard b) Better felt
c) Producesover tones d) Not heard

84. Rinne's test is - *(PGI97)*
a) For hearing b) For vestibular function
c) For cognitive function d) For vision

85. Rinne test is positive - *(PGI 03)*
a) Normal b) Sensorineural deafness
c) Conductive deafness d) All of the above

86. Positive rinne test indicates -*(NEET/DNB Pattern)*
a) AC > BC b)BC>AC
c) BC=AC. d) None

87. Threshold for bone conduction is normal and that for air conduction is increased in disease of -
a) Middle ear b) Inner ear *(AP 96)*
c) Cochlear nerve d) Temporal lobe

88. Rinne's test is negative if minimum deafness is -
a) 15-20 dB b) 25-30 dB *(SRMC 02)*
c) 35^0 dB d) 15-50dB

89. Weber test is best elicited by - *(AI02)*
a) Placing the tuning fork on the mastoid process and comparing the bone conduction of the patient with that of the examiner.
b) Placing the tuning fork on the vertex of the skull and determining the effect of gently occluding the auditory canal on the threshold of low frequencies.
c) Placing the tuning fork on the mastoid process and comparing the bone conduction in the patient
d) Placing the tuning fork on the forehead and asking him to report in which ear he hears it better

90. In the right middle ear pathology, weber's test will be- *(AI 04)*
a) Normal b) Centralized
c) Lateralised to right side d) Lateralised to left side

91. What should be the loss of hearing at least for Weber's test to lateralise - *(Rajasthan 04)*
a) 5dB b) 10 dB
c) 15dB d)20dB

92. A 38 year old gentleman reports of decreased hearing in the right ear for the last two years. On testing with a 512 Hz tuning fork the rinne's test without masking is negative on the right ear and positive on the left ear. With the weber's test the tone is perceived as louder in the left ear. The most likely patient has - *(AIIMS Nov 02)*
a) Right conductive hearing loss
b) Right sensorineural hearing loss
c) Left sensorineural hearing loss
d) Left conductive hearing loss

93. A middle aged women presented with right sided hearing loss Rinne's test shows positive result on left side and negative result on right side. Weber's test showed lateralization to left side, diagnosis is - *(AIIMS June 2k)*
a) Right sided conductive deafness
b) Right sided sensorineural deafness
c) Left sided sensorineural deafness
d) Left sided conductive deafness

94. One man had 30 decibel deafness in left ear with weber test showing more sound in left ear and BC (Bone conduction) more of left side and normal hearing in right ear, his test can be summarized as -
a) Weber's test left lateralized, Rinne-right positive, BC > AC on left side
b) Weber's right lateralized, Rinne-left positive, AC > BC on right side
c) Weber's-left lateralized, Rinne-false positive on right side, BC > AC on left side.
d) Weber's left lateralized, Rinne equivocal, BC > AC on right side

95. Patient with both ear Rinne's positive and Weber's test to lateralised to the left. Diagnosis is -
a) Left conductive deafness *(MAHE 01, AIIMS 02)*
b) Left sensory - Neural deafness
c) Right sensory - Neural deafness
d) Right conductive deafness

96. Test of detecting damage to chochlea -
a) Caloric test *(MHPGM CET 05 Jan, MH2K)*
b) Weber test
c) Rinnies test
d) ABC

97. For diagnosing middle ear deafness the following test is done -
a) Testing Babinski's reflex
b) Eliciting Bhvosted's reflex
c) Finger- nose test
d) Weber's test

79) a 80) b 81)d 82)b 83)a 84)a 85)a,b 86)a 87)a 88)a 89)d 90)c 91)a 92)b
93) b 94) a 95) c 96) d 97) d

98. An aged violin player can get a correct pitch only by touching his teeth to the vibrating instrument. He is most likely to damage - *(AIIMS 86)*
a) Inner ear b) Middle ear
c) Cochlear nuclei d) Medial geniculate body

99. All are subjective tests for audiometry except -
a) Tone decay b) Impedance audiometry
c) Speech audiometry d) Pure tone audiometry

100. Objective tests of hearing include all except:
a) Impedance audiometry *(DPGMar. 09,Jipmerll)*
b) Otoacoustic emissions
c) BERA
d) Pure tone audiometry

101. In pure tone autiogram the symbol X is used to mark-
a) Air conduction in right ear *(Jipmer 02)*
b) Air conduction in left ear
c) Bone conduction in right ear
d) No change in air conduction in right ear

102. The "O" sign in a pure Tone Audiogram indicates -
a) Air conduction of right ear *(AP 05)*
b) Air conduction of left ear
c) Bone conduction of right ear
d) Bone conduction of left ear

Pgg Trough shaped curve in audiometry is seen in - . *(NEET/DNB Pattern)*
a) CongenitalSNHL b) Otitis media
c) Otosclerosis d) Acoustic neuroma

Hi! I mpedance audiometry is for pathology of - *(^§Mf00^attern)*
£§t®p.
a) External ear b) Middle ear
c) Mastoid air cell d) Inner ear

105. Impedance audiometry is done using frequency probe of- *(Delhi 07)*
a) 220Hz b) 555 Hz
c) 440 Hz d) 1000 Hz

106. B-type tympanogram is seen*in-(NEET/DNB Pattern)*
a) Serous otitis media b) Ossicular discontinuity
c) Otosclerosis d) All of the above

107. Flat & dome shaped graph in tympanogram is found in- *(RJ03)*
a) Otosclerosis b) Ossicular discontinuity
c) TM perforation d) Middle ear fluid

108. Flat tympanogram is seen in - *(PGI00)*
a) A.S.O.M b) Otosclerosis
c) Serous otitis media d) Ossicular chain disruption

109. In osteogenesis imperfecta, the tympanogram is - *(DNB 03)*
a) Flat b) Non-compliance
c) High-compliance d) Low-compliance

110. A young man presents with an accident leading to loss of hearing in right ear. On otoscopic examination the tympanic membrane was into pure tone audiometry shows an Air-Bone gap of 55 dB in the right with normal cochlear reserve. Which of the following will be the like tympanometry finding - *(AI09)*
a) As type tympanogram b) AD type tympanogram
c) B type tympanogram d) C type tympanogram

111. Which of the following test assesses resistance in middle ear - *(MAHE 2K)*
a) Pure tone audiometry
b) Impedance audiometry
c) Caloric test
d) BERA (Brainstem evoked response audiometry)

112. Stapedial reflex is mediated by-*(NEET/DNB Pattern)*
a) V and VII nerves b) V and VIII nerves
c) VII and VI nerves d) VII and VIII nerves

113. Stapedial reflex is absent in - *(KamOl)*
a) Otosclerosis b) X nerve lesion
c) VIII nerve lesion d) V nerve lesion

114. Regarding stapedial reflex, which of the following is true - *(AI2K)*
a) It helps to enhance the sound conduction in middle ear
b) It is a protective reflex against loud sound
c) It helps in masking the sound waves
d) It is unilateral reflex

115. Stapedial reflex is mediated through -*(Jharkhand 06)*
a) 8th & 7th cranial nerve b) 7th & 9th cranial nerve
c) 6th & 8th cranial nerve d) 6th & 8th cranial nerve

116. Tone decay test is done for - *(Manipal 01)*
a) Cochlear deafness b) Neural deafness
c) Middle ear problem d) Otosclerosis

117. To distinguish between cochlear and post cochlear damage test done is - *(PGI Dec 9 7)*
a) Brainstem evoked response
b) Impedance audiometry
c) Pure tone audiometry
d) Auditory cochlear potential

118. Ib normal adidt wave Vis generated from -
a) Cochlear nucleus *(J &K 05, Delhi 08,*
b) Superior olivary complex *NEET/DNB Pattern)*
c) Lateral leminiscus
d) Inferior colliculus *y;* J

119. Brainstem evoked response audiometry useful in -
a) Can differentiate cochlear & retrocochlear lesion
b) Can not differentiate the site of lesion in sensorineural hearing loss *(PGI June 09)*
c) Can differentiate barbiturate poisoning from other cause of coma
d) As a screening procedure for infants
e) To diagnose brainstem pathology

120. In infant most sensitive audiometric screening is -
a) Electrocochleography *(PGIDec 98, NEET/DNB*
b) BERA *Pattern)*
c) Cortical evoked response
d) Tympanometry

121. Which is the investigation of choice in assessing hearing loss in neonates -
a) Impedance audiometry
b) Brainstem Evoked Response Audiometry (BERA)
c) Free field audiometry
d) Behavioral audiometry

98) b 99) b 100)d 101)b 102)a 103)a 104)b 105)a 106)a 107)d 108)a,c 109)d 110)b lll) b
112) d 113) a,c 114) b 115)a 116)b 117)a 118)c 119)a,b,e 120)b 121)b

122. Initial screening test for newborn hearing disorder - *(A1IMS May 12)*
a) ABR - Auditory Brainstem Response
b) Otoacoustic Emissions (OAE)
c) Free Field Audiometry
d) Visual reinforcement audiometry

123. True about otoacoustic emissions - *(PGI June 09)*
a) Are accousted by product of outer hair cell
b) Are accousted by product of inner hair cell
c) Used as a screening test of hearing in newborn infant
d) Useful in ototoxicity monitoring
e) Disappear in 8th nerve pathology

124. Otoacoustic emissions arise from -
a) Inner hair cells *(AIIMSMay05,AI 10)*
b) Outer hair cells
c) Both inner and outer hair cells
d) Organ of corti

125. High frequency audiometry is used in -
a) Otosclerosis *(AIIMS May 09)*
b) Ototoxicity
c) Non-organic hearing loss
d) Meniere's disease

HEARING LOSS

126. According to WHO classification, for severe degree of impairment of hearing is at - *(TN 04)*
a) 26-40dB b) 41-55 dB
c) 56-70 dB d) 71-79 dB

127. Sensorineural deafness seen in - *(PGI 02)*
a) Alport's syndrome
b) Pendred syndrome
c) Treacher - Collins syndrome
d) Crouzon's disease
e) Michel's aplasia

128. Sensorineural deafness may be feature of all, except-
a) Nail-patella syndrome *(Karn 01)*
b) Distal renal tubular acidosis
c) Bartter syndrome
d) Alport syndrome

129. Deafness is associated with all *except-(Manipal 09)*
a) Cockayne's syndrome b) Alstrom's syndrome
c) Alport's syndrome d) Abetalipoproteinaemia

130. All of the following can cause hearing loss except -
a) Measles b) Mumps *(UP 01)*
c) Chickenpox d) Rubella

131. Virus causing acute onset sensorineural deafness -
a) Corona virus b) Rubella, measles
c) Mumps d) Adeno virus
e) Rota virus *(PGI Dec 04)*

132. All are ototoxic drugs except - *(RJ 00)*
a) Streptomycin b) Quinine
c) Diuretics d)Propanolol

133. Following is an ototoxic drug - *(MP 98)*
a) Tetracycline b) Vincristine
c) Ampicillin d) Pencillin

134. All of the following will produce conductive hearing loss, Except - *(AI12)*
a) Otosclerosis
b) Serous otitis media
c) Endolymphatics Hydrops
d) Suppurative otitis media

135. Conductive deafness occurs in - *(UP 07)*
a) Travelling in aeroplane or ship
b) Trauma to labyrinth
c) Stapes abnormal at oval window
d) High noise

136. All are causes of sensorineural deafness Except -
a) Old age b) Cochlear otosclerosis
c) Loud sound d) Rupture of tympanic membrane

137. Post head injury, the patient had conductive deafness and on examination, tympanic membrane was normal and mobile. Likely diagnosis is -
a) Distortion of ossicular chain
b) Haemotympanum
c) EAC sclerosis
d) Otosclerosis

138. Commonest cause of hearing loss in children is -
a) CSOM *(AIIMS Dec. 95)*
b) ASOM
c) Acostic - neuroma
d) Chronic secretory otitis media

139. Commonest cause of deafness is - *(AP97)*
a) Trauma b) Wax
c) Acute mastoiditis d) Meniere's disease

140. Rinne's test is negative in - *(AIIMSNov. 94)*
a) Sensorineural deafness b) Acoustic neuroma
c) Tympanosclerosis d) Meniere's disease

141. Rinne's test negative is seen in - *(JIPMER 92)*
a) Presbycusis b)CSOM
c) Labyrinthitis d) Menieres disese

142. Positive Rinne test is seen in - *(JIPMER 91)*
a) Otosclerosis b) CSOM
c) Wax impacted ear d) Presbycusis

143. Rinne's test is positive in - *(AIIMS 91)*
a) Chronic suppurative otitis media
b) Normal individual
c) Wax in ear
d) Otomycosis

144. True about idiopathic sudden sensorineural loss -
a) Vertigo always present *(PGI 09)*
b) Carbogen (5% $C0_2$ + 95 % 0_2) is beneficial
c) Hearing loss occur within 24 hours
d) Hearing loss occur within 72 hours
e) Audiometric threshold changes occur over at least 3 frequencies

145. Voice induced impairment of hearing at - *(UP 08)*
a) 1000 Hz b) 2000 Hz
c) 3000 Hz d) 4000 Hz

122)b 123) a,c,d 124)b 125)b 126)d 127)A11 128)None 129)d 130)c 131)b,c 132)None 133)c 134)c
135) a,c,d 136) d 137)a 138)d 139)b 140)c 141)b 142)d 143)b 144)b,c,d,e 145)d

146. Acoustic dip occurs at - *(TN 95)*
a) 2000 Hz b) 4000 Hz
c) 500 Hz d) 1500 Hz

147. Prolonged exposure to noise levels greater than the following can impair hearing permanently - *(Kamat 96)*
a) 40 decibels b) 85 decibels
c) 100 decibels d) 140 decibels

148. Auditory fatigue is seen at - *(NEET/DNB Pattern)*
a) 90 dB, 4000Hz b) 110 dB, 4000Hz
c) 130 dB, 4000IIz d) 150 dB, 4000Hz

149. Presbycusis is - *(TN07, 05)*
a) Loss of accommodation power
b) Hearing loss due to aging
c) Noise induced hearing loss
d) Congenital deafness

150. 65 year old person with hearing loss with normal speech discrimination is suffering from-
a) Noise induced hearing loss *(NEET/DNB Pattern)*
b) Presbycusis
c) Ototoxic drug
d) NOHI.

151. Which one of the following test is used to detect malingering- *(TN 07)*
a) Stenger's test b) Buinge's test
c) Weber's test d) Rinne's test

152. After rupture of tympanic membrane the hearing loss is - *(PGIJune99)*
a) 10-40 dB b) 5-15 dB
c) 20 dB d) 300 dB

153. Which of the following conditions causes maximum hearing loss -
a) Ossicular disruption with intact tympic membrane
b) Disruption of malleus and incus with intact tympanic membrane
c) Partial fixation of the stapes footplate
d) Otitis media with effusion

154. Which of the following is a features of tympanic membrane perforation - *(UP 00)*
a) Tinnitus b) Vertigo
c) Conductive deafness d) Fullness in ear

155. Ototoxic drugs generally affect the hearing of what frequencies of sound - *(NEET/DNB Pattern)*
a) 500-1000 Hz b) 2000-3000 Hz
c) 3000-4000Hz d) 4000-5000 Hz

156. Hyperacusis is defined is - *(PGI Dec 97)*
a) Hearing of only loud soundy
b) Normal sounds heard as loud and painful
c) Completely deaf
d) Ability to hear in noisy surroundings

157. Nerve involved in hyperacusis - *(NEET/DNB Pattern)*
a) Facial nerve b) Glossopharyngeal
c) Vagus d) Hypoglossal

158. Intolerance to loud sound nerve affected-
a) 7th nerve b) 5th nerve
c) 10th nerve d) None

159. In monoaural displacusis the lesion is in the -
a) Cochlea b) Auditary nerve *(AT91)*
c) Brainstem d)Cerebrum

160. At which level sound is painful - *(Jharkhand 04)*
a) 100-120dB b)80-85dB
c) 60-65dB d)20-25dB

161. During nomalconversationspimd heardatl meter distance is - *(NEET/DNB Pattern)*
a) 80 dB b) 60 dB
c) 90 dB d) 120 dB

162. Normal conversation sound level- *(Bihar 05)*
a) 20-25 dB b) 60-65 dB
c) 80-85dB d) 90-100 dB

ASSESSMENT OF VESTIBULAR FUNCTION

163. Vestibular function is tested by - *(PGIDec 02)*
a) Galvanic stimulation test
b) Acoustic reflex
c) Fistula test
d) Impedance audiometry
e) Cold caloric test

164. Hallpike test is done for - *(DNB 02)*
a) Vestibular function b) Corneal test
c) Cochlear function d) Audiometry

165. Fistula test stimulates - *(AT 93)*
a) Lateral semicircular canal
b) Posterior semicircular canal
c) Anterior semicircular canal
d) Cochlea

166. A positive fistula test during Siegelisation indicates-
a) Ossicular discontinuity *(A1IMS95)*
b) Para-labyrinthitis due to erosion of lateral semicircular canal
c) CSF leak through the ear
d) Fixation of stapes bone

167. False positive fistula test is associated with - *(TN05)*
a) Perilymph fistula b) Malignant sclerosis
c) Congenital syphilis d) Cholesteatoma

168. On otological examination all of the following with have positive fistula test except - *(AT 02)*
a) Dead ear
b) Labyrinthine fistula
c) Hypermobile stapes footplate
d) Following fenestration surgery

169. A 38 year old male presented with a suspected diagnosis of suppurate labyrinthitis. A positive rinne's test and positive fistula test was recorded on initial examination. The patient refused treatment, and returned to the emergency department after 2 weeks complaining of deafness in the affected ear. On examination, fistula test was observed to be negative. What is the likely expected finding on repeating the Rinnie test - *(AT - 09)*
a) True positive Rinne's Test
b) False positive Rinne's Test
c) True negative Rinne's Test
d) False negative Renine Test

159) a 160) a 161)b 162)b 163)a,c,e 164)a 165)a 166)b 167)c 168)a 169)d

170. At what angle is hallpike thermal caloric test done -
a) 15° b)30° *(APPGI06)*
c) 45° d)60°

171. In Fitzgerald and Hallpike differential caloric test, cold-water irrigation at 30 degrees centigrade in the left ear in a normal person will include -
a) Nystagmus to the right side *(Karn 00)*
b) Nystagmus to the left side
c) Direction changing nystagmus
d) Positional nystagmus

172. In cold caloric stimulation test, the cold water, induces movement of the eye ball ipi the following direction -
a) Towards the opposite side *(AJ 99, NEET/DNB*
b) Towards the same side L *Pattern)*
,* c) Upwards ‘ ./ /. ' \ '!
!; d)• DownwardiS* ^ X / X X 'r-y-'V;-'), X } X ' X • ; /

173. Cold caloric test stimulates - *(AP 08)*
a) Cochlea
b) Lateral semi circular canal
c) Posterior semicircular canal
d) All

174. Stimulation of posterior semicircular canal produces- *(NEET/DNB Pattern)*
a) Horizontal nystagmus
b) Vertical nystagmus
c) Rotatory nystagmus " ’ 'M

175. Postitional vertigo is - *(UP 01)*
a) Lateral b) Superior
c) Inferior d) Posterior

176. What is the treatment for Benign Positional vertigo - *(APPG 06)*
a) Vestibular exercises b) Vestibular sedatives
c) Anthistamines d) Diuretics

177. Latest treatment in BPPV is- *(Kerala 03)*
a) Intralabrynthine streptomycin
b) Intralabrynthine steroids
c) Valsalva maneuver
d) None

178. Epleys maneuvear - *(NEET/DNB Pattern)*
a) Positional vertigo ^ b) Otosclerosis L;\;
c) ASOM : S^ CSOM

179. Vestibular Evoked Myogenic Potential (VEMP) detects lesion of - *(A1IMS May 12)*
a) Cochlear Nerve
b) Superior Vestibular Nerve
c) Inferior Vestibular N erve
d) Inflammatory Myopathy

180. Post traumatic vertigo is due to - *(PGI June 06,03)*
a) Perilymphatic fistula
b) Vestibulr neuritis
c) Secondary endolymphatic hydrops
d) Ossicular discontinuity
e) Benign Positional vertigo

181. Vertigo of vestibular origin, all except -
a) Meniener^sj disease *(NEET/DNB Pattern)*
b) BPV
c) Vertibrobasilar insufficiency
d) Vestibular neuronitis

182. True about central nystagmus - *(Kerala 01)*
a) Horizontal
b) Direction fixed
c) Direction changes
d) Not suppressed by visual fixation
e) Suppressed by visual fixation

183. Spontaneous vertical nystagmus is seen in the lesion of - *(Kolkata 05)*
a) Midbrain b) Labyrinth
c) Vestibule d) Cochlea

184. Site of lesion in unilateral past pointing nystagmus is-
a) Posterior semicircular canal *(AIIMS June 97)*
b) Superior semicircular canal
c) Flocculonodular node
d) Cerebellar hemisphere

185. Destruction of right labyrinth causes nystagmus to-
a) Right side *(DPG Feb. 09)*
b) Left side
c) Rotatory nystagmus
d) No nystagmus

186. Semicircular canal involved in Positive Romberg test with eyes closed detects defect in - *(AIIMS June 97)*
a) Proprioceptive pathway b) Cerebellum
c) Spinothaimic tract d) Peripheral nerve

DISEASES OF EXTERNAL EAR

187. External otitis is also known as - *(DNB 03)*
a) Glue ear b) Malignant otitis externa
c) Telephonist’s ear d)ASOM

188. Common causes of otitis externa - *(PGI08)*
a) Aspergillus b)Mucor
c) Candida d) Pseudomonas
e) Klebsiela

189. Haemorrhagic external otitis media is caused by -
a) Influenza b) Proteus *(PGI Dec 98)*
c) Staph d) Streptococcus

190. Myringitis bullosa is caused by - *(AJ 93)*
a) Virion b) Fungus
c) Bacteria d) Virus

191. Malignant otitis externa is caused by-*(AP 96, Corned 07,*
a) S. aureus b) S. albus *NEET/DNB Pattern)*
:c) P aeruginosa d) E. coli'Y!;YYY’\

192. Mailgnant otitis externa is due to - *(MAHE 05)*
a) Wax impaction b) Hypertesion
c) Diabetes d) None of above

193. A female diabetic having severe ear pain, granulation tissue in external auditary canal and facial palsy is due to- *(Bihar 04)*
a) Malignant otits externa b) Herpes zoster otitis
c) Otomycosis d)None

170)b 171)a 172) a 173)b 174)b 175)d 176)a 177)None 178)a 179)c 180)a,c,e 181)c 182)a,c,d
